

Residential Central Air Conditioners and Air-Source Heat Pumps Product List

List Current as of October 27, 2005

* Disclaimer: When considering the purchase of an ENERGY STAR qualified split system central air conditioner or heat pump, please note that this list includes only the condensing unit (i.e., the outdoor component) for split heating and cooling systems. This note does not apply to packaged systems. In a split system, there are two major components: a condensing unit and an evaporator coil. The units below will meet the current ENERGY STAR specification of 13 SEER, 11 EER (HSPF of 8 for heat pumps) with a combination of condenser and evaporator certified by the Air-Conditioning and Refrigeration Institute (ARI) to meet these efficiency levels. For more information on matching components, please check with your heating and cooling contractor or see the online database of certified equipment developed by the Consortium for Energy Efficiency (CEE) and the American Refrigeration Institute (ARI) at: <http://www.ceeHVACdirectory.org/>

Manufacturer Name	Product Family Name	Product Type	Capacity	Model Series
