Liquid Handling

Connected Electronic Pipettes

Evolve your electronic pipette with the VisioNize® pipette manager

Be part of a new generation of pipette managers. Boost your individual pipetting skills while bringing teamwork up to a new level. The VisioNize pipette manager is a standalone touch server that reacts in real-time with Eppendorf Xplorer® and Eppendorf Xplorer® plus connected pipettes via WiFi technology.

What Connectivity can do for You:

- > Transmit settings and other parameters quickly to connected electronic pipettes and start pipetting right away
- > Get guidance from the software-embedded Liquid Manager when working with liquids of different viscosity, volatility or foam building liquids
- > Choose from predefined Eppendorf liquid types (e.g. Acetone) or create your own
- > Manage your pipette fleet more effectively within your working group and enhance collaboration (e.g. through sharing created liquid types)

And this is only the beginning!

Apart from the operation via the VisioNize pipette manager, users can connect tablets enabling access to the software plus the usage of its features.

The embedded software is based on the VisioNize touch interface concept that has been extensively tested by customers to reduce learning and adjustment time. It is used across different Eppendorf instruments, like the CryoCube® F740hi ULT freezer or the Mastercycler® X50.

SafeCode Tubes

How often do you puzzle about tube labels while working at the bench?

A clean and stable label on the side or on the top of the vessel can make scientific life so much easier. Eppendorf microtubes and conical tubes are available with SafeCode - a well-designed barcoding system. Take advantage of the pre-labeled and durable 2-level coding of the SafeCode system (datamatrix code and clear coding) to enable safe sample identification.

The tube range covers different volumes from 1.5 mL to 50.0 mL for a broad range of applications at the bench. This set of vessels expands your safe sample identification solution from the existing SafeCode CryoStorage Vials at -80 °C storage towards daily work at the bench.

Product features

- > 2-level coding for safe sample identification
- > ECC 200 error correction function enables safe code reading with up to 30 % damaged codes
- > Temperature range: -86 °C to +121 °C
- > Manufactured from high-quality polypropylene for highest sample purity
- > Off-the-shelf availability for comfortable handling
- > ID-specific tube information like lot numbers digitally available via Eppendorf dataport and website for comprehensive documentation
- > Direct import of codes and all data into eLABInventory and eLABJournal® software for convenient handling

Piezo-ICSI – Background Information

Degeneration of oocytes after intracytoplasmic sperm injection (ICSI) has been related to numerous influencing factors. One key factor is the exact pattern of breaking the oolemma in the process. Variations in this pattern also seem to explain significant differences in between various labs. To increase standardization, a method called Piezo-ICSI was established for animal ICSI as an alternative method of intracytoplasmic sperm injection - with impressive results regarding degeneration rates, fertilization rates, and blastocyst rates. Furthermore, advantages for fragile oocytes with low oolemma elasticity have been reported for Piezo-ICSI compared to conventional ICSI.

More about the PiezoXpert®
www.eppendorf.com/piezoxpert

Main differences Piezo-ICSI vs. Conventional ICSI

- > several studies have shown significantly higher fertilization rates, lower degeneration rates, and higher blastocyst rates due to use of Piezo-ICSI
- > avoids accidental rupture of the oolemma and disruption of organelles
- > oolemma rupture and oocyte activation possible without ooplasm aspiration and mixing of ooplasm with chemicals like PVP
- > faster injection process
- > shortened training phase due to easier penetration technique
- > involves a specialized Piezo-actuator to generate high-frequency, low-amplitude mechanical pulses
- > use of a blunt microcapillary to ensure optimal mechanical force transfer

CellXpert® C170 with 4-Segmented Inner Door

Minimize atmosphere disruptions and change gas cylinders less often

A segmented inner door minimizes fluctuations of the atmosphere inside the CO₂ incubator because less gas escapes when only a small inner door is opened compared to an unsegmented inner glass door. Additionally, a segmented inner door significantly reduces gas consumption, thus reducing the frequency of gas cylinder changes.

The CellXpert C170 is now available with a 4-segmented inner door and reduces the gas consumption to roughly 25 % of an unsegmented door.

CellXpert® C170i with 0.1 % - 20 % O₂ Control

Save costs for cell cultivation under severe hypoxic conditions, e.g. in stem cell or cancer research

Hypoxia incubators suppress oxygen by injecting significant volumes of (often costly) nitrogen. The CellXpert is now available in two hypoxia variants (1 - 20 % and 0,1 % - 20 % O₂) that significantly reduce nitrogen consumption and costs (up to € 7,300 / \$ 8,200 in five years) by smart gas control, accurate door construction, and quality sealings.

Coming Soon: Universal Stacking Stand

Combine your CellXpert with CO₂ incubators of other brands

Do you consider buying a CellXpert in addition to a CO₂ incubator of another manufacturer? Space is limited in your cell culture lab and you want to stack devices? The new Universal Stacking Stand enables safe stacking of your CO₂ incubator on top of your CellXpert. Contact your Sales Representative for more info on compatibility and order details.

ISO 8655

ISO 8655 lays out the standard criteria by which a pipette should be calibrated and what error limits should be used at each volume. ISO 8655 criteria includes measurements at 3 volumes, 10 measurements at each volume, and controls for room environment.

Manufacturer Standard

In addition to ISO 8655 specifications, many manufacturers make pipettes that work within a tighter set of error limits than required by ISO 8655. It is important to calibrate using manufacturer error limits to ensure the pipette works according to manufacturer specifications.

ISO 17025

The ISO 17025 accreditation certifies the high level of competence and compliance with strict quality rules. ISO 17025 criteria include a traceability chain for measurement equipment, measurement uncertainty values, and approved quality standards.

We ensure our stringent and validated procedures are followed to the highest standards possible, for Eppendorf and other brand pipettes.
