Section 341.20 Definitions

As used in this Part, the following definitions apply:

"A<sub>(1)</sub>" means the maximum activity of special form radioactive material permitted in a Type A package as listed in 49 CFR 173.435 or as derived from 49 CFR 173.433.

"A<sub>(2)</sub>" means the maximum activity of radioactive material, other than special form radioactive material, permitted in a Type A package. Values for A<sub>2</sub> are listed in 49 CFR 173.435 or can be derived from 49 CFR 173.433.

AGENCY NOTE: ~~These values are either listed in Appendix A, Table A, or may be derived in accordance with the procedure prescribed in Appendix A of this Part. Values for A<sub>1</sub> and A<sub>2</sub> are listed in the U.S. Department of Transportation (U.S. DOT) regulations, 49 CFR 173.435 or can be derived from 49 CFR 173.433, published October 1, 1992, exclusive of subsequent amendments or editions.~~

DEPARTMENT OF NUCLEAR SAFETY  
NOTICE OF PROPOSED AMENDMENT

"Carrier" means a person engaged in the transportation of passengers or property by land or water as a common, contract, or private carrier, or by civil aircraft.

"Exclusive use" (also referred to in regulations of the U.S. Department of Transportation as "sole use" or "full load") means the sole use of a conveyance by a single consignor and for which all initial, intermediate, and final loading and unloading are carried out in accordance with the direction of the consignor or consignee.

"Fissile material" means any special nuclear material\* consisting of or containing one or more fissile radionuclides. Fissile radionuclides are plutonium-238, plutonium-239, plutonium-241, uranium-233, and uranium-235. Neither natural nor depleted uranium is fissile material.

\*AGENCY NOTE: Department of Nuclear Safety (Department) jurisdiction extends to special nuclear material only if quantities are not sufficient to form a critical mass as defined in 32 Ill. Adm. Code 310.

Fissile Class I: A package which may be transported in unlimited numbers and in any arrangement, and which requires no nuclear criticality safety controls during transportation.

Fissile Class II: A package which may be transported together with other packages in any arrangement but, for criticality control, in numbers which do not exceed an aggregate transport index\* of 50. These shipments require no other nuclear criticality safety control during transportation. Individual packages may have a transport index not less than 0.1 and not more than 10.

\*AGENCY NOTE: A transport index is not assigned for purposes of nuclear criticality safety but may be required because of external radiation levels.

"Low specific activity material" means any of the following:

Uranium or thorium ores and physical or chemical concentrates of those ores;

Unirradiated natural or depleted uranium or unirradiated natural thorium;

DEPARTMENT OF NUCLEAR SAFETY  
NOTICE OF PROPOSED AMENDMENT

"Package" means the packaging together with its radioactive contents as presented for transport.  
"Packaging" means the assembly of components necessary to ensure compliance with the packaging requirements of this Part. It may consist of one or more receptacles, absorbent materials, spacing structures, thermal insulation, radiation shielding, and devices for cooling or absorbing mechanical shocks. The vehicle, tie down system, and auxiliary equipment may be designated as part of the packaging.  
"Regulations of the U.S. Department of Transportation (U.S. DOT)" means the regulations in 49 CFR 100-189, revised as of October 1, 1986, exclusive of subsequent amendments or editions. A copy of 49 CFR 100-189 is available for public inspection at the Department of Nuclear Safety.  
"Special form radioactive material" means radioactive material which satisfies the following conditions:  
it is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;  
the piece or capsule has at least one dimension not less than 5 millimeters (0.197 inch); and  
All special form radioactive material must meet the requirements of the U.S. Nuclear Regulatory Commission (NRC) regulations 10 CFR 71.75 and 71.77, revised as of January 1, 1987, exclusive of subsequent amendments or editions, except that special form radioactive material designed or constructed prior to July 1, 1985 need only meet the requirements of 10 CFR 71.75 and 71.77 in effect on June 30, 1983. A copy of 10 CFR 71 is available for public inspection at the Department of Nuclear Safety.

"Specific activity" of a radionuclide means the radioactivity of the radionuclide per unit mass of that nuclide. The specific activity of a material in which the radionuclide is essentially uniformly distributed is the radioactivity per unit mass of the material.  
"Transport index" means the dimensionless number (rounded up to the decimal place) placed on the label of a package to designate the degree of control to be exercised by the carrier during

Tritium oxide in aqueous solutions provided the concentration does not exceed 5.0 milliliters (185 MBq) (5 mCi) per milliliter;  
Material in which the radioactivity is essentially uniformly distributed and in which the estimated average concentration per gram of contents does not exceed:  
0.0001 millirem (3.7 kBq) (100 nCi) of radionuclides for which the  $A_2$  quantity in Appendix A of this Part 49 CFR 173.433 or 173.435 is not more than 0.05 curie (1.85 GBq) (50 mCi);

Section 341.140 Preliminary Determinations

Prior to the first use of any packaging for the shipment of radioactive material:

- a) The licensee shall ascertain that there are no defects in the packaging which could impact on compliance with the standards specified in 10 CFR 71, Subparts {E} and {F}, ~~revised as of published~~ published January 1, ~~1985~~ 1992, exclusive of subsequent amendments or editions;
- b) Where the maximum normal operating pressure will exceed 34.3 kilopascal (5 psi) gauge, the licensee shall test the containment system at an internal pressure at least 50% percent higher than the maximum normal operating pressure to verify the capability of that system to maintain its structural integrity at that pressure.

AGENCY NOTE: One generally acceptable technique is to perform one wipe per square meter of surface area of the package. Appropriate locations for wipes include the areas where the package might leak through sealing gaskets or a location where water might stand on the container.

In the case of packages transported as exclusive use shipments by rail or highway only, the non fixed radionuclide contamination at any time during transport must still not exceed ten (10) times the levels prescribed in subsection 21.150(h)(1) above.

AGENCY NOTE: One generally acceptable technique is to perform one wipe per square meter of surface area of the package. Appropriate locations for wipes include the areas where the package might leak through sealing gaskets or a location where water might stand on the container.

Experimental radiation levels around the package and around the vehicle, if applicable, will not exceed 200 mR/hr from 2 m SV (200 mrem) per hour at any point on the external surface of the package at any time during transportation. The transport index shall not exceed ten (10).

For a package transported as exclusive use by rail, highway, or water, radiation levels external to the package may exceed the limits specified in subparagraph subsection (1) above but must shall not exceed any of the following:

- e) Any pressure relief device is operable and set in accordance with the certificate of compliance;
- f) The package has been loaded and closed in accordance with written procedures;
- g) Any structural part of the package which could be used to lift or tie down the package during transport is rendered inoperable for that purpose unless it satisfies design requirements specified in accordance with 10 CFR 71.45, revised as published January 1, 1992, exclusive of subsequent amendments or additions;
- h) The package meets the following requirements for removable contamination:

- 1) The level of non fixed (removable) radioactive contamination on the external surfaces of each package offered for shipment is as low as reasonably achievable. The level of non fixed radioactive contamination may be determined by wiping an area of 100 square centimeters of the surface (conducted with an absorbent material, using moderate pressure, and measuring the activity on the wiping material. Sufficient measurements must be taken in the most appropriate locations to yield a representative assessment of the non fixed contamination levels. Except as provided under the subsection herein 21.150(h)(2) below, the amount of radioactivity measured on any single wiping material when averaged over the surface wiped, must shall not exceed the limits given in subsection (h)(1) of this part. This subsection at any time during transport. Other methods of assessment of equal or greater efficiency may be used, when other methods are used, the deletion efficiency of the method used must shall be taken into account and in no case may the non fixed contamination on the external surfaces of the package exceed ten (10) times the limits listed as follows:

NOTICE OF PROPOSED AMENDMENT

ILLINOIS REGISTER

Section 341. APPENDIX A DETERMINATION OF  $A_1$  and  $A_2$  (Repealed)

DEPARTMENT OF NUCLEAR SAFETY  
NOTICE OF PROPOSED AMENDMENT

- a) ~~Single radionuclides:~~
- i) ~~For a single radionuclide of known identity, the values of  $A_1$  and  $A_2$  are taken from Table A-1 if listed there. The values of  $A_1$  and  $A_2$  in Table A-1 are also applicable for radionuclides contained in alpha neutron or gamma neutron sources.~~
- 2) ~~For any single radionuclide whose identity is known but which is not listed in Table A-1, the values of  $A_1$  and  $A_2$  are determined according to the following procedure:~~
- A) ~~If the radionuclide emits only one type of radiation,  $A_1$  is determined according to the rules in paragraphs (i), (ii), (iii), and (iv) of this paragraph. For radionuclides emitting different kinds of radiation,  $A_1$  is the most restrictive value of those determined for each kind of radiation. However, in both cases,  $A_1$  is restricted to a maximum of 1000 Ci (37 TBq). If a parent nuclide decays into a shorter-lived daughter with a half-life not greater than ten (10) days,  $A_1$  is calculated for both the parent and the daughter, and the more limiting of the two (2) values is assigned to the parent nuclide.~~
- i) ~~For gamma emitters,  $A_1$  is determined by the expression:~~
- $$A_1 = \frac{K}{9} \text{ curies}$$
- where  $K$  is the gamma-ray constant, corresponding to the dose in R/h at 1 m per Ci; the number 9 results from the choice of 1 cm/h at a distance of 3 m as the reference dose-equivalent rate.
- ii) ~~For X-ray emitters,  $A_1$  is determined by the atomic number of the nuclide:~~
- for  $Z$  less than or equal to 55,  $A_1 = 1000 \text{ Ci}$  (37 TBq)
- for  $Z$  greater than 55,  $A_1 = 200 \text{ Ci}$  (7.4 TBq)
- b) ~~Mixtures of radionuclides, including radioactive decay chains:~~
- i) ~~For mixed fission products the following activity limits may be assumed if a detailed analysis of the mixture is not carried out:~~
- $$A_1 = 10 \text{ Ci (370 GBq)}$$
- $$A_2 = 0.1 \text{ Ci (14.8 GBq)}$$
- 2) ~~A single radioactive decay chain is considered to be a single radionuclide when the radionuclides are present in their naturally occurring proportions and no daughter nuclide has a half-life either longer than ten (10) days or longer than that of the parent nuclide. The activity to be taken into account and the  $A_1$  or  $A_2$  value from Table A-1 to be applied are those corresponding to the parent nuclide of that chain. When calculating  $A_1$  or  $A_2$  values, radiation emitted by daughters must be considered. However, in the~~
- 3) ~~For any single radionuclide whose identity is unknown, the value of  $A_1$  is taken to be 2 Ci (74 GBq) and the value of  $A_2$  is taken to be 0.002 Ci (74 MBq). However, if the atomic number of the radionuclide is known to be less than 82, the value of  $A_1$  is taken to be 10 Ci (370 GBq) and the value of  $A_2$  is taken to be 0.1 Ci (14.8 GBq).~~
- a) ~~The corresponding  $A_1$  and  $A_2$  values:~~
- i) ~~The corresponding  $A_1$  and  $A_2$  values:~~
- ii) ~~The value  $A_1$  obtained from Table A-3:~~
- 3) ~~For any single radionuclide whose identity is unknown, the value of  $A_1$  is taken to be 2 Ci (74 GBq) and the value of  $A_2$  is taken to be 0.002 Ci (74 MBq). However, if the atomic number of the radionuclide is known to be less than 82, the value of  $A_1$  is taken to be 10 Ci (370 GBq) and the value of  $A_2$  is taken to be 0.1 Ci (14.8 GBq).~~
- b) ~~Mixtures of radionuclides, including radioactive decay chains:~~
- i) ~~For mixed fission products the following activity limits may be assumed if a detailed analysis of the mixture is not carried out:~~
- $$A_1 = 10 \text{ Ci (370 GBq)}$$
- $$A_2 = 0.1 \text{ Ci (14.8 GBq)}$$
- 2) ~~A single radioactive decay chain is considered to be a single radionuclide when the radionuclides are present in their naturally occurring proportions and no daughter nuclide has a half-life either longer than ten (10) days or longer than that of the parent nuclide. The activity to be taken into account and the  $A_1$  or  $A_2$  value from Table A-1 to be applied are those corresponding to the parent nuclide of that chain. When calculating  $A_1$  or  $A_2$  values, radiation emitted by daughters must be considered. However, in the~~

DEPARTMENT OF NUCLEAR SAFETY  
NOTICE OF PROPOSED AMENDMENT

~~case of radioactive decay chains in which any daughter nuclide has a half life either longer than ten (10) days or greater than that of the parent nuclide, the parent and daughter nuclides are considered to be mixtures of different nuclides.~~

- 3) ~~In the case of a mixture of different radionuclides, where the identity and activity of each radionuclide are known, the permissible activity of each radionuclide  $R_1, R_2, \dots, R_n$  is such that  $F_1 + F_2 + \dots + F_n$  is greater than unity, where~~

$$F_1 = \frac{\text{Total activity of } R_1}{A_1(R_1)}$$

$$F_2 = \frac{\text{Total activity of } R_2}{A_1(R_2)}$$

$$F_n = \frac{\text{Total Activity of } R_n}{A_1(R_n)}$$

~~$A_1(R_1, R_2, \dots, R_n)$  is the value of  $A_1$  or  $A_2$  as appropriate for the nuclide  $R_1, R_2, \dots, R_n$ .~~

- 4) ~~When the identity of each radionuclide is known but the individual activities of some of the radionuclides are not known, the formula given in subparagraph (3) is applied to establish the values of  $A_1$  or  $A_2$  as appropriate. All the radionuclides whose individual activities are not known (their total activity will, however, be known) are classed in a single group and the most restrictive value of  $A_1$  or  $A_2$  applicable to any one of them is used as the value of  $A_1$  or  $A_2$  in the denominator of the fraction.~~
- 5) ~~Where the identity of each radionuclide is known but the individual activity of none of the radionuclides is known, the most restrictive value of  $A_1$  or  $A_2$  applicable to any one of the radionuclides present is adopted as the applicable value.~~
- 6) ~~When the identity of none of the nuclides is known, the value of  $A_1$  is taken to be 2 Ci (74 GBq) and the value of  $A_2$  is taken to be 0.002 Ci (74 MBq). However, if alpha emitters are known to be absent, the value of  $A_2$  is taken to be 0.4 Ci (14.8 GBq).~~

390.1010	Amend
390.1020	Amend
390.1030	Amend
390.2000	Amend
- 4) Statutory Authority: Ill. Rev. Stat. 1991, ch. 95 1/2, pars. 18b-100 et seq. [625 ILCS 5/18b-100 et seq.]
- 5) A complete description of the subjects and issues involved: By this Notice of Proposed Amendments, the Department proposes to update statutory citations to reference the Illinois Compiled Statutes and to update the date of incorporation by reference of 49 CFR 390 as of October 1, 1992 to include the federal rulemaking adopted at 58 FR 6726, February 2, 1993. By incorporating this rulemaking by reference, the Department's regulations will incorporate changes made in rulemaking Docket:

MC-90-2 and MC-92-12 [58 FR 6726, (February 2, 1993)]

Docket MC-90-2 and MC-92-12 added a requirement for motor carriers to maintain a register of all accidents which meet the definition of an accident. All accidents must be listed on the register for a period of one year after they occur.

Section 390.1010(f) is amended to add a reference to the Illinois Vehicle Code (IVC). The additional language is added to clarify that Illinois Motor Carrier Safety Regulations are not to be interpreted as Illinois Vehicle Code exceptions.

Additionally, definitions for "Accident," "Direct Assistance," "Disabling Damage," "Emergency," "Emergency Relief and "Fatality" were added to Section 390.1020 to reflect new definitions that are part of 58 FR 6726 (February 2, 1993), but are incorporated by reference. Also, "Health care professional" is defined and added to Section 390.1020 and "Farm Machinery" is defined as a cross-reference to "Special agricultural movement equipment."

The Department is not incorporating 49 CFR 390.15(a) by reference and substitutes Section 390.2000(b)(2) in its place. This subsection requires that motor carriers provide all records and information pertaining to an accident to an authorized representative of the Department or the Federal Highway Administration.

- 2) When the individual resampling is complete and the test indicates high pesticide, herbicide or mycotoxin residue levels equal to or above action level another sample will be taken within 15 days to determine whether this adulteration is continual or has been a one-time situation.
- 3) If the second sample under Section 775.140 subsection (a)(2) of this Section shows an action level equal to or greater than those contained in subsection 775.140 (b) of this Section, then all of the producer's milk will be removed from the market and not offered for sale for human consumption until an official sample test shows the residue falls below the action level.
- 4) The milk supply will then be provisionally reinstated for human use and samples will be taken on a monthly basis. Should the next sample be above action level, the milk will again be removed from the market and not offered for sale for human consumption.
- 5) When two consecutive monthly samples are below the action level, the producer's supply shall be fully reinstated.

  - 1) If the analysis of a sample from a bulk milk pickup tanker or milk received directly from the farm bulk tank shows any drug residue at or above the tolerances and/or safe levels of drug residues as established by Appendix N of the PMO, then the individual sample collected from each producer's milk that was in the bulk milk pickup tanker is tested to determine which producer or producers have created or contributed to the drug residue.
  - 2) When the individual sample testing is complete and the tests indicate a violative drug residue, the producer's or producers' Grade A permit will be summarily suspended. Another sample will be taken from milk produced after a 48 hour withholding period to determine whether this adulteration is continual. On the second and third occurrence of the violative drug residue in a 12 month period, the producer's Grade A permit will be summarily suspended. Another sample will be taken from milk produced after a 96 hour withholding period to determine whether this adulteration is continual. For the third occurrence of a drug residue in any 12 month period the Department shall initiate administrative procedures pursuant to revocation of the producer's permit.
  - 3) If the resample taken after 48 or 96 hours, as applicable, shows no violative drug residue, the suspended Grade A permit will be conditionally reinstated for up to 30 days. The producer and a licensed veterinarian must complete a quality assurance (QA) program, within the 30 day conditional reinstatement of the Grade A permit.

SUBPART B: ILLINOIS QUALITY REQUIREMENTS FOR MILK FOR MANUFACTURING PURPOSES

Section 785.200 Basis

Raw milk for manufacturing purposes from all individual producers shall be based on the following: organoleptic examination (appearance and odor), quality control tests for sediment content, bacterial estimate, somatic cell count, and drugs antibiotics.

(Source: Amended at 17 Ill. Reg. 14027, effective August 15, 1993)

Section 785.290 Abnormal Milk

a) Mastitic Milk

1) A laboratory examination for the presence of somatic cells shall be made on all producers milk at least 4 times in each 6-months period at irregular intervals. Samples shall be analyzed at an official laboratory or at a laboratory approved by the Department.

2) Confirmatory testing will be done on milk when a herd milk sample exceeds any of the following screening test results:

A) California Mastitis Test -- Weak positive (CMT 1+)

B) Modified Whiteside Test -- Positive (1+).

C) Wisconsin Mastitis Test -- WMT value of 18 mm.

3) A confirmatory test for somatic cell count shall be made on that sample using any of the following methods:

A) Direct Microscopic Somatic Cell Count (Single Strip Procedure). Pyronin Y - methyl green stain shall be used for goats milk.

B) Electronic Somatic Cell Count.

C) Optical Somatic Cell Count.

D) Membrane Filter DNA Somatic Cell Count - The results of the confirmatory test shall be the official result.

4) Whenever the confirmatory somatic cell count indicates the presence of more than 1,000,000 somatic cells per ml., the following procedures shall be applied:

A) The producer shall be notified in writing by the milk plant with a warning of the excessive somatic cell count.

B) Whenever records reveal two of the last four consecutive somatic cell counts exceed 1,000,000 per ml the Department shall send a written notice to the producer. This notice shall be in effect so long as two of the last four consecutive samples exceed 1,000,000 per ml.

5) A third milk sample shall be taken after a lapse of 3 days and within 21 days. If this sample also indicates a high somatic somatic cell count, the patron's milk shall be rejected until compliance is obtained. A temporary license shall be approved by the Department whenever an additional sample of herd milk is tested and found to conform to requirements. The producer shall be fully reinstated when three out of four consecutive tests have counts of 1,000,000 or less somatic cells per ml. The samples shall be taken at a rate of not more than two per week on separate days within a 3-week period.

b) Drugs Antibiotics:

1) At least four times in 6 months, at irregular intervals, a separate or commingled sample of each producer's milk shall be tested for drug antibiotic residues. Whenever a producer's milk shows a violative drug residue, positive test the this

milk shall be removed from all markets and the Department immediately notified by the industry certified laboratory. The producer's license He shall not be reinstated until provisions of Section 785.1220, Drug Residue Monitoring and Farm Surveillance, are met, a subsequent test of the milk is negative.

- 2) All bulk milk pick-up tankers or milk received directly from the farm bulk tank shall be sampled and tested in accordance with Section 785.1220. Methods which have been evaluated by Association of Official Analytical Chemists and recommended by the Food and Drug Administration at currently referenced levels shall be used for regulatory action for each drug of concern. FDA shall review the AOAC evaluations for each test kit and make a determination as to the acceptability of the use of the method. Regulatory action shall be taken on all violative results (see Section 785.1220). A result shall be considered violative if it has been obtained by using a method which has been evaluated and deemed acceptable by FDA at levels established in memoranda transmitted periodically by FDA as required by Section 785.1220(c) and the test completed by a qualified individual as approved by the Department.
- c) Radionuclides: When notified by Illinois Department of Nuclear Safety, composite milk samples shall be collected from selected areas and tested for biologically significant radionuclides.

Part 193 and 40 C.F.R. Part 180) procedures set forth in Section 785.1210 shall be followed.~~
- e) Added Water: The presence of added water in raw or pasteurized milk constitutes adulteration. The presence of added water is indicated by a milk cryoscope reading of  $-0.524$  Hortvet or  $-0.507$  Centigrade or higher when tested. After two occurrences of adulterated milk within a six-month period, the plant or producer will be required to show cause and reason for the addition of water. After a third occurrence, the Department will institute administrative proceedings to revoke the plant or producer's permit. Individual producer milk samples shall be tested for added water from each producer monthly. If the results show more than 3% added water the producer is notified in writing by the Department and another sample collected within 10 days.

Section 785.1210 Pesticide, Herbicide and Mycotoxin Residue Control Program

- a) The following describes the Department's Pesticide, Herbicide and Mycotoxin Residue Control Program for raw milk under Section 785.290.
  - 1) If the analysis of a sample from a bulk tank truck shows a level of any of the pesticides, herbicides or mycotoxins above the action levels contained in subsection (b) of this Section, then an individual sample is collected from each producer's milk that was in the tank truck to determine which producer or producers have created or contributed to the problem.
  - 2) When the individual resampling is complete and the test indicates high pesticide residue levels equal to or above action level, another sample will be taken within 15 days to determine whether this adulteration is continual or has been a one-time situation.
  - 3) If the second sample under subsection (a)(2) of this Section shows an action level equal to or greater than those contained in subsection (b) of this Section, then all of the producer's milk will be removed from the market and not offered for sale for human consumption until an official sample test shows the residue falls below the action level.
  - 4) The milk supply will then be provisionally reinstated for human use and samples will be taken on a monthly basis. Should the next sample be above action level, the milk will again be removed from the market and not offered for sale for human consumption.
  - 5) When two consecutive monthly samples are below the action level, the producer's supply shall be fully reinstated.

b) The following action levels have been established for the Pesticide, Herbicide and Mycotoxin Residue Control Program (PPM=parts per million; PPB=parts per billion):

- 1) Aldrin - 0.3 PPM
- 2) Dieldrin - 0.3 PPM
- 3) Endrin - 0.3 PPM
- 4) Lindane - 0.3 PPM

Section 785.1220 Drug Residue Monitoring and Farm Surveillance

The following describes the Department's Drug Residue Monitoring and Farm Surveillance Program. It is established to reference safe levels and/or tolerances and to assure milk supplies are in compliance with these safe levels or established tolerances for drug residues in milk.

- a) Industry Responsibilities
  - 1) Monitoring and Surveillance
    - A) Industry shall screen all bulk milk pick-up tankers for beta lactam drug residues. Additionally, other drug residues shall be screened for by employing a random sampling program on bulk milk pick-up tankers. The random bulk milk pick-up tanker sampling program shall represent and include, during any six months, at least four (4) samples collected in at least four (4) separate months. Samples shall be analyzed as specified by the Department.
    - B) Bulk milk pick-up tanker testing shall be completed prior to processing the milk. Bulk milk pick-up tanker samples found to have a violative drug residue shall be retained as determined necessary by the Department. Industry shall also record all sample results and retain such records for a period of six months.
  - 2) Reporting and Farm Traceback
    - A) When a bulk milk pick-up tanker is found to have a violative drug residue, the Department shall be immediately notified of the results and the ultimate disposition of the raw milk.
    - B) The individual sample collected from each producer's milk that was in the

DEPARTMENT OF PUBLIC HEALTH  
NOTICE OF ADOPTED AMENDMENTS

D) When the field representative has transmitted to the Department a copy of the quality assurance program completion certificate signed by the producer and a licensed veterinarian, the producer's manufactured permit shall be fully reinstated.

c) Established Tolerances and/or Safe Levels of Drug Residues

1) Tolerances for drugs which may result in residues in milk are set forth in 21 CFR 556 (1991).

2) "Safe levels" are used by the Department for prosecutorial discretion. They do not legalize residue found in milk that are below the safe level. Safe levels as established by the Federal Food and Drug Administration will be transmitted by the Department via Technical Releases.

(Source: Added at 17 Ill. Reg. 14027, effective August 15, 1993 )

bulk milk pick-up tanker that was found to have a violative drug residue shall be immediately tested to determine which producer or producers have created or contributed to the drug residue.  
Further pickups of the violative individual producer or producers shall be immediately discontinued until such time that subsequent tests no longer indicate violative drug residues and enforcement requirements of subsection (b)(2) of this Section have been met.

b) Department Responsibilities

1) Monitoring and Surveillance

A) The Department shall monitor industry surveillance activities by making unannounced on-site inspections to collect samples from bulk milk pick-up tankers and to review industry records of the random sampling program.

B) The Department shall also perform routine sampling and testing for drug residues determined to be necessary.

2) Enforcement

A) If testing reveals violative drug residues, the milk shall be disposed of in a manner that removes it from the human or animal food chain except where reconditioned under Department approval.

B) When the individual testing as required in subsection (a)(2)(B) of this Section is complete and the tests indicate any drug residue at or above the tolerance and/or safe levels, the producer's permit will be summarily suspended. Another sample will be taken from milk produced after a 48 hour withholding period to determine whether this adulteration is continual. On the second and third occurrence of the violative drug residue in a 12 month period, the producer's Grade A permit will be summarily suspended. Another sample will be taken from milk produced after a 96 hour withholding period to determine whether this adulteration is continual. For the third occurrence of a drug residue in any 12 month period the Department shall initiate administrative procedures pursuant to revocation of the producer's permit.

C) If the resample shows no violative drug residue, the permit will then be conditionally reinstated until such time as the producer and a licensed veterinarian have completed a quality assurance program, but in no case for greater than 30 days.
