**POWER VISION**

- The quickest, most powerful flash tuner on the market
- The sophisticated, yet easy-to-use, 3.5" full-color touch-screen display mounts to handlebars with integrated Amps 4-hole threaded inserts; also mounts to most aftermarket accessory mounts that feature AMPs 4-mounting options
- The display's interface cable plugs directly to the bike's diagnostic connector
- NO COMPUTER REQUIRED; simply select the tune and follow the on-screen prompts to flash the bike; tunes can also be edited directly from the Power Vision
- Utilizes WinPV (Windows PC-based tuning application)
- Stores up to six different tunes that can be flashed to the bike
- Downloads and stores the stock calibration in case OEM restoration is needed; stock calibration can also be saved as an editable copy and used as a starting point
- Dynojet preconfigured tunes are preloaded on the unit; Power Vision will identify the bike's information and automatically sort hundreds of applicable, dyno-proven tunes
- Custom tunes can be loaded by a tuning shop or received via email and loaded onto the device
- Displays all J1850 H-D vehicle data, wide-band air fuel ratio<sup>2</sup> and various calculated channels (including MPG instant and trip MPG)
- AutoTune Basic and Pro<sup>3</sup> calculates and stores fuel trims to optimize fuel curve
- Checks and clears diagnostic codes
- Features adaptive trims and idle offset (with bike running)
- Black series features a flat black outer case

**NOTE:** The Power Vision "marries" to one individual ECM and may be used only on that bike for flashing the ECM. For this reason LeMans Corporation/Drag Specialties does not take back Power Visions for any reason, used or not. All returns and or adjustments must be made directly with Dynojet Research. The Power Vision may be used on any bike to read and clean trouble codes.

**POWER COMMANDER V**

- Fuel and timing control
- Rev Xtend increases Rev limit
- The Power Commander V can read the exact engine temperature through the bike's ECM, which allows the tuner to choose how much fuel to add during cold starts
- Cold starting on heavily modified engines should be more controllable and easy to adjust
- Software displays J1850 data from bike's stock ECU
- Reduced size from the PCIII USB
- Easy-to-install
- USB powered from computer
- Two position map-switching function built-in (switch not included)
- Can add any SPST switch and toggle between two different fuel/timing maps
- Gear/speed input allows for map adjustment based on gear
- Analog input allows user to install any 0-5 volt sensor
- Build an adjustment table based on analog input, such as boost or temperature
- Power Commander V is capable of allowing each cylinder to be mapped individually and for each gear with the gear position input connected
- Ten throttle position columns
- World's largest dyno tested map database
- Enhanced "accel pump" utility
- Made in the U.S.A.

## POWER COMMANDER III USB

- USB (Universal Serial Bus) port provides an instant, problem-free way to connect your Power Commander to a computer
- Provides precise information for fine-tuning a fuel-injected motorcycle when changing an air filter, installing a new exhaust system or doing additional engine performance modifications
- Each unit includes a built-in microprocessor and a specific map designed to improve engine performance over stock; Dynojet continuously maps new calibrations for each bike, which are available for downloading at their website ([www.powercommander.com](http://www.powercommander.com))
- If you do not have a computer, you can change the settings with three touch-buttons on the faceplate
- OEM-style wiring connectors with improved harness protection are supplied; no wiring modifications required
- Includes easy-to-follow instructions
- Direct injector control technology manages the fuel curve
- Features an expansion port for future add-on modules from Dynojet
- Software is compatible with Windows 98se and newer; opens all maps with .djm extension
- USB special cable and 9V battery power adapter are included
- Adapters allow you to activate a Power Commander for changing or altering maps while disconnected from the bike
- Professional adapter is ideal for service/parts department applications, consumer adapter is for limited use
- Made in the U.S.A.

## AUTOTUNE KIT FOR POWER VISION

- Plugs directly into the Power Vision with a single cable
- Includes 18mm O<sub>2</sub> sensors and power connector that plugs into the bike's harness
- Provides real-time AFR feedback to the Power Vision
- Allows for semi-automated fuel corrections
- User can specify what air/fuel ratio to make each rpm and throttle position percentage combination
- Makes it possible to adjust cruise for best fuel economy as well as larger throttle openings for peak power
- Base settings included for air/fuel ratios, but are fully adjustable if need be
- Made in the U.S.A.

**NOTE:** Because of possible clearance issues, some aftermarket exhaust systems may require modifications or relocation of their sensor bungs.

## MULTI-FUNCTION HUB ACCESSORY FOR POWER COMMANDER USB/USB-EX

- The Multi-Function Hub allows access to advanced expansion features of the Power Commander USB
- Compatible with the LCD display, but the display is not required
- Four separate functions can be accessed with the Multi-Function Hub
- The Map Selection Switch (7/8" bar mount) allows the rider to switch between two different maps in the Power Commander. This allows a map for economy, and a separate map for performance
- The Gear Position/Speed function allows fuel and timing adjustments to be made depending on the gear selected and the position of the throttle, up to +/-50% fuel and +/-10 degrees of timing
- Pressure input allows the fuel to be increased, along with the boost level on turbocharged installations. The change of boost level does not require a re-mapping of the Power Commander
- Relay outputs allow up to two warning lights or relays to be triggered independently to activate items such as shift lights, nitrous systems, or air shifter. The trigger can be by throttle percent, rpm, or both
- Comes complete with installation instructions, wiring diagrams and CD with the required software updates
- Made in the U.S.A.

## LCD ACCESSORY FOR POWER COMMANDER III USB/USB-EX AND POWER COMMANDER V

- Connects to any Power Commander USB via a "quick-disconnect" cable
- Designed to remain on the bike at all times
- Displays all available data from the Power Commander when connected
- Stores and switches between multiple maps in the on-board memory; maps can be sent to the Power Commander "on the fly"
- Adjust maps using the controls on the display screen
- Logs data for later analysis
- Data storage for maps and logging by adding an SD Memory card; sold separately
- Can be easily removed from the bike to be programmed with a desktop computer
- USB programmable and upgradable
- Uses an active matrix TFT LCD 240 x 320 16-bit screen
- Made in the U.S.A.

**FUELPAK FP3**

- The Fuelpak FP3 will revolutionize fuel management for all new Harley-Davidson models now using the HDLAN system
- Connecting wirelessly by Bluetooth® to any iPhone® or Android Smartphone, Fuelpak FP3 uses Flash technology to recalibrate engine parameters and mapping for exhaust systems and other performance upgrades downloaded from the expansive library of calibrations developed by Vance & Hines
- Also standard for the Fuelpak FP3 is an Autotune feature, making use of all factory sensors to add another layer of precision tuning for specific requirements, whether tuning for unique components or different grades of fuel
- With the Fuelpak FP3 module plugged-in, Live Sensor Data can be viewed through the smartphone to display speed, RPM, cylinder head temperature, voltage, gear selection and other vital information

**FUELPAK**

- Available in original version which is not legal for sale in CA or California A.R.B; approved version with all the same features as the original
- Throttle position sensor-based system simplifies the process of fuel-injection tuning
- Enables you to fine-tune the fuel mixture throughout the entire rpm range with the touch of a button
- Increases power and improves throttle response
- Very user friendly; plugs into the existing harness on the bike
- No computer or software is required; simply punch in the values provided on the V&H website
- Values provided are for use with Vance & Hines exhaust systems
- Fuelpak will also work with other exhaust systems (contact V&H tech support for tuning information)
- Includes all necessary mounting hardware

**NOTE:** Not legal for sale or use on pollution controlled vehicles (Original Fuelpak/LCD Fuelpak).

**NOTE:** EO #D-632-1 (C.A.R.B. Fuelpak).

### PRECISION™ ENGINE MANAGEMENT SYSTEM

- Not like any other "self-tuning" controller, Revolution Performance's Precision EMS™ is a true self-optimizing system; adjusts almost instantly with little additional adjustment
- Simply set it up and ride; no laptop, no dyno and no downloads
- Delivers instant results instead of "a little better with each ride"; while most systems require the system to "learn" more than 2000 fuel cells over a tremendous number of rides, the Precision EMS factors in air/fuel ratio, timing parameters, load and temperature ranges, then adjusts to them instantly
- Will benefit everyone, from the owner of a stock bike to a full-blown 135"
- Takes full advantage of, and retains, the stock Delphi ECU
- Maintains OEM safeguards and features, like ion-sensing knock protection
- Only system with engine-load-based timing control
- Utilizes wide band O<sub>2</sub> sensors to constantly monitor and adjust
- Includes Precision EMS controller, two wide-band O<sub>2</sub> sensors, ECU shipment box and customer information sheet
- Requires 18mm sensor bungs in the exhaust system for proper installation
- Made in the U.S.A.

NOTE: ECU will be calibrated by Revolution Performance. Pre-paid, next-day-air package included.

NOTE: Not legal for operation on public highways in the state of California.

### Fi2000 POWRPRO WITH CVT TECHNOLOGY

- Continuously Variable Tuning (CVT) is the key to the remarkable performance the Fi2000 PowrPro delivers
- PowrPro uses electronic control technology that calculates the bike's rate of acceleration by reading crankshaft rotation at the flywheel and changes in load just as a dynamometer measures acceleration at the rear wheel
- PowrPro measures and adjusts fuel flow during acceleration to the injectors in microseconds for super-fast fuel tuning – continuously and automatically; net result: precise EFI tuning now happens in the real world in real time, nonstop, up to 80 times per second
- New patented technology unlike any other system on the market
- PowrPro tunes to precise air-fuel mixture to create maximum power 80 times per second (does not tune to a predetermined arbitrary AFR)
- Creates that adjustment to maximum power on every squirt of the injector
- It's like having the best custom map writing, dyno operator tuning your fuel every time you crank the throttle
- Tunes every gear, every roll on, every environmental change, every engine mod, lugging the engine, winding it out to redline: it reacts, verifies and adjusts when the bike is accelerating
- Provides perfect acceleration fuel settings in any condition, with any exhaust system with any engine modifications
- No matter what kind of new hardware you install on your bike – a new exhaust system, a freer-flowing air filter setup or even a big-bore hop-up kit with high-performance cams – PowrPro continues to analyze and tune your engine for peak performance
- No external adjustments needed
- No dyno needed
- No additional components needed
- Does not require wide band oxygen sensors

**NOTE:** Not legal for operation on public highways in the state of California.

& GENERAL**Fi2000****Fi2000R PLUG-IN FUEL PROCESSOR**

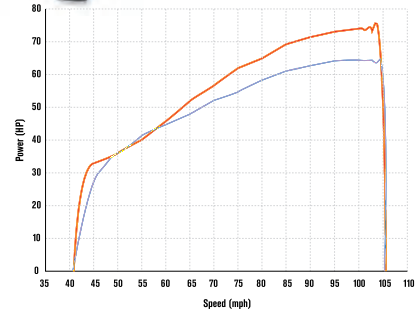

- Proven Fi2000R comes with leads that snap directly into the bike's injector bodies
- Standard open-loop design for 06 Dyna and all 07-08 models can use exhaust systems that do or do not have O<sub>2</sub> sensor bungs
- More advanced tuning for modified bikes
- Think of third tuning pot as an electronic main jet while thinking of the entire Fi2000R as a digital jet kit
- Full range of fuel adjustment (0-10 settings) across all rpm ranges
- Three easily identifiable lights: green – Fi2000R is adding more fuel to the air/fuel ratio approx. 14:1; green and yellow lights – these lights will be on in unison when throttle is open more quickly and air/fuel mixture is approx. 12.5:1; red – light comes on and stays on as long as the Fi2000R follows the fuel curve while adjusting to approx. 12.8:1 air/fuel ratio, which is where the engine will produce its best full-throttle power
- Step-by-step instructions
- Improves rideability by smoothing out the powerband and giving the bike more throttle response
- Corrects lean air/fuel mixture problems; eliminates overheating, hesitation on acceleration or an uneven cruising rpm
- Waterproof circuit board
- No fuel map adjustments or computer downloads required

NOTE: Standard models not legal for operation on public highways in the state of California.

NOTE: Exempt per C.A.R.B. E.O. # D-633-1.

**Fi2000****Fi2000R O<sub>2</sub> STANDARD MODEL FUEL PROCESSORS**

- The Fi2000R O<sub>2</sub> digital fuel processor is designed to work with all H-D exhaust systems (stock or aftermarket) equipped with oxygen sensors in place (closed-loop design)
- Works much like a carburetor jet kit with adjustments similar to the air-mixture screw, the needle and clip positions and the main jet
- The Fi2000R increases horsepower and torque by optimizing stock lean air/fuel mixtures (helps cool the engine temps as well)
- Quick and simple installation with plug-and-ride technology with OEM-style connectors
- No confusing computer downloads to install
- No expensive dyno-testing required
- Pre-configured from the factory for your make and model, but easy to adjust should your specific application need it
- Improves overall rideability

NOTE: Standard models not legal for operation on public highways in the state of California.

NOTE: Exempt per C.A.R.B. E.O. # D-633-1.

**Low-Speed Screw**  
This control functions similar to the air mixture screw on a carburetor, controlling off-idle fuel demands and steady cruising.

**Mid-Speed Screw**  
This is the equivalent of the needle and clip position on a carburetor. Two increments correspond to dropping the clip on a needle one position. One increment is the same as adding a shim. This is where you get the proper fuel mixture under load and acceleration.

**High-Speed Screw**  
This is the electronic counterpart to your main jet. Each numbered increment is the same as going up one main jet size starting with the stock size at zero. This adjusts your fuel at full throttle.

# THUNDER MAX

## THUNDERMAX ECM WITH INTEGRAL AUTO TUNE SYSTEM

- ThunderMax ECM with Auto-Tune module mounts conveniently in place of the factory ECM and plugs in to the existing harness
- Utilizes wide-band O<sub>2</sub> sensors and works as a closed-loop control system to continuously self-adjust and properly tune the motorcycle's air/fuel ratio for all riding conditions
- Easy installation: replace the factory ECM, install new O<sub>2</sub> sensors and harness, load the correct map for your bike, and ride
- Includes ThunderMax ECM with Auto-Tune Module, plug-in harness and two wide-band sensors, TMax software and communication USB cable, Quick-Start Easy Install and Comprehensive User's Manual, technical support and free software and updates
- Hundreds of maps available to download for your bike (based on model, engine size, exhaust system air cleaner, pistons, cams, etc.) – load the map of your choice and the integral auto-tune will do the rest
- Improves throttle response, exhaust sound and driveability
- Does not require dyno tuning
- Rider can adjust idle speed, rev limit and speedometer calibration
- Adjustable front and rear cylinder AFR maps, ignition timing (spark) maps, and startup maps
- Works with all popular exhaust systems and is compatible with high-performance camshafts
- Supports turbo, nitrous and supercharger applications
- Software program allows live monitoring, recording and examination of diagnostic codes and datalogs including number of starts, engine temperature and rpm operation
- New maps, software, firmware updates, map analysis and tech support available online at no charge
- Made in the U.S.A.

**NOTE:** Because of possible clearance issues, some aftermarket exhaust systems may require modifications or relocation of their O<sub>2</sub> sensor port bungs.

**NOTE:** Legal in California only for racing vehicles which may never be used upon a highway. Some products may not be legal for sale or use on pollution-controlled vehicles; check your local laws and the manufacturer's information.

MAX****THUNDERMAX NARROW BAND ECM FOR USE WITH BASSANI EXHAUST SYSTEMS**

- Loaded with custom-tuned maps specifically for Bassani exhaust systems
- ECM with integral auto-tune system utilizes the factory O<sub>2</sub> sensors and works as a closed-loop control system to continuously self-adjust and tune the motorcycle air/fuel ratio for all riding conditions
- Simple installation – replace the factory ECM, select the proper pre-loaded map for your motorcycle, and ride
- Improves power, torque and throttle response
- Maintains excellent fuel economy
- Does not require a computer – rider programming mode allows for map selection, idle speed adjustment, and speedometer calibration
- Upgradeable to wide-band version
- Made in the U.S.A.

**NOTE:** Legal for use in California only for racing vehicles which may never be used on a public highway.

- Fully programmable plug-in replacement for the 36-pin controller with CAN data bus used on 12-13 Softail and Dyna models (not compatible with 2011 Softail that uses a different size controller)
- Quickly auto-tune fuel curves for front and rear cylinders on a dyno or on-road with new WEGO IIID dual-channel wide-band oxygen sensor interface
- Robust alpha-N (throttle position and rpm-based) fuel control eliminates problems with long duration/high overlap camshafts
- Extended data logging and diagnostics – DataFLASH memory stores full 60 minutes of operating data at 10 samples/second
- Powerful Windows software for custom programming and data analysis
- Programmable user input for functions such as two stage rpm limiter, nitrous retard and shift kill
- Programmable user output for functions such as shift light, nitrous activation, and electric shifter
- Billet aluminum housing with black anodized finish
- Easy plug-in installation
- Kit includes TCFI Gen 5 plug-in fuel injection controller, USB interface for PC link, software, WEGO IIID dual-channel wide-band exhaust gas oxygen sensor interface, two Bosch LSU 4.2 wide-band exhaust gas oxygen sensors and two 18 x 1.5mm weld nuts for exhaust pipes

**TWIN TUNER FUEL-INJECTION CONTROLLER**

- Allows easy adjustments to OEM Delphi fuel-injection systems to improve performance and match the requirements of performance parts
- Mode and up/down pushbutton switches make fuel trim adjustments in the rpm and throttle position ranges required by most applications; fuel trim value is displayed on a bright daylight-readable LED display
- Advanced mode (using optional USB Interface PART #2101-0075 and PC Link Tuner software) allows precise fuel adjustments and independent adjustments to the front and rear cylinders
- May be compatible with other controller maps
- Easy plug-in installation and setup
- Compact size – only 4" L x 2" W x .5" H
- Compatible with Twin Scan II+ Tuning Aid – install the Twin Scan II+ and ride the bike, then copy the air/fuel ratio corrections calculated by the Twin Scan II+ into the PC Link Tuner software
- Made in the U.S.A.

**NOTE:** Not legal for sale or use on pollution-controlled vehicles.

PART #	DESCRIPTION	SUG. RETAIL
1020-1813	For 12-13 Softail and Dyna models w/ CAN data bus (except FXSB/SE)	\$254.95
1020-0358	For 01-11 Big Twin w/ 36-pin Delphi EFI (except 11 Softail, 08-11 Touring models) and 08-09 Buell XB, 1125R w/ DDFI fuel-injection system	229.95
1020-0939	For 08-13 FLHT, FLHR, FLTR and FLHX models w/ 73-pin Delphi EFI	254.95
1020-0951	For 11 Softail, 07-13 XL w/ 36-pin Delphi EFI	229.95
1020-0834	For 03-07 Buell w/ DDFI fuel-injection system	229.95

**TWIN TUNER II**

- Twin Tuner II has all the features of the original Twin Tuner and includes ignition timing control capability
- Easily adjusts the OEM Delphi fuel-injection and ignition to match the requirements of performance parts including high-compression pistons/heads, camshafts, free-flowing exhausts, and low-restriction air filters – add 30% or subtract 20% fuel and retard spark timing up to 10°
- You can use the mode and up/down pushbutton switches to make fuel trim adjustments in the rpm and throttle position ranges required by most applications. The fuel trim value is displayed on a bright daylight readable LED display
- The Twin Tuner also has an advanced mode, using the optional USB Interface and PC Link Tuner software to make precise fuel adjustments and allows independent adjustments to the front and rear cylinders
- May be compatible with other controller maps
- Easy plug-in installation and setup, with no splicing, cutting, crimping or bulky interconnections
- Compact size – only 4" L x 2" W x 1/2" H
- Compatible with Twin Scan II+ Tuning Aid – install the Twin Scan II+ and ride the bike, then copy the air/fuel ratio corrections calculated by the Twin Scan II+ into the PC Link Tuner software

**NOTE:** Not legal for sale or use on pollution-controlled vehicles.

1020-1794

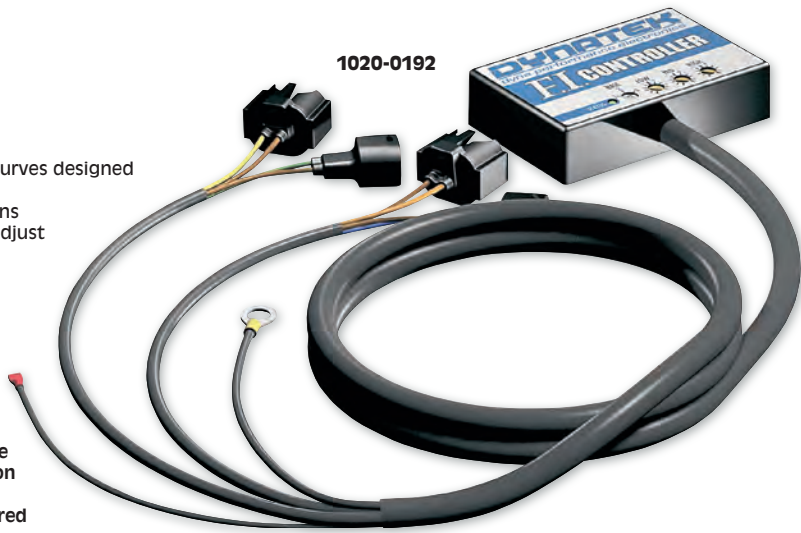

**DYNATEK DYNA TUNE AUTO TUNE KITS**

- By installing the included 18mm Wide Band O<sub>2</sub> sensor in the exhaust the Dynatune kit monitors the fuel mixture
- Send information to Dynatek control module, automatically correcting it as you ride
- Rider can feel the changes as they occur
- Each map has preset air/fuel ratio target values
- Allow the DynaTune to find the best overall settings
- For more advanced users the air/fuel ratios are fully adjustable from the baseline
- Each throttle opening/rpm combination is fully adjustable
- Allow the rider fuel economy and peak output at larger throttle openings
- Configure to run and make adjustments at all times or by using the "map switch port" on the Dynatek control module
- Switch back and forth between the tuning mode and the base map settings
- Also allow rider to configure the kit to wait until the bike is at a certain operating temperature before beginning to make adjustments

**NOTE:** This product is intended to be used only on racing vehicles on closed courses, and not for use on roads or vehicles otherwise subject to emission control requirements. In California, this product should not be used on any vehicle that is registered or licensed for use on public roads.

PART #	DESCRIPTION	SUG. RETAIL

1020-1795	For 11-12 Softails, 12 Dynas	\$99.95

1020-0192

**FI CONTROLLER**

- Plug-in module offers three user-selectable base fuel curves designed to improve engine operation on fuel-injected models
- Can be configured to suit a wide variety of modifications
- Adjustments are made via three potentiometers that adjust the fuel curve in the proper ranges for the application
- Fuel mixture can be enriched or leaned as required
- Uses factory connectors for easy installation – there is no PC required for tuning or adjusting the fuel curves
- No modifications to the stock ECU
- Removing the FI controller returns vehicle to factory configuration
- Made in the U.S.A.

**NOTE:** This product is intended to be used only on racing vehicles on closed courses, and not for use on roads or vehicles otherwise subject to emission control requirements. In California, this product should not be used on any vehicle that is registered or licensed for use on public roads.

**RCX-CELERATOR CLOSED-LOOP FUEL MANAGEMENT SYSTEMS**

- Self-learning computer automatically adjusts the fuel/air mixture as you ride and compensates for changes in engine load conditions
- Automatically recalibrates for specific modifications made to your motorcycle – exhaust pipes, pistons, head work, cams, air cleaner, etc.
- Maximizes performance and engine efficiency while decreasing emissions and fuel consumption
- Quick-connect plugs for easy installation
- No downloads or adjustments required
- No dyno tuning required
- Works in conjunction with factory and race tuner downloads
- Quicker throttle response on TBW models
- Made in the U.S.A.

NOTE: Not for sale or use on California emissions-equipped motorcycles.

**"CHEAP SHOT" FUEL TUNER**

- An economical solution to add needed fuel after installing exhaust and air cleaner performance upgrades
- Simple splice-in design saves money by eliminating costly plug-and-play connectors
- Load-based technology senses load on the engine in any riding situation to provide optimal fuel to the engine
- Adjusts like a carburetor
- Installation instructions included
- Made in the U.S.A.

NOTE: Not legal for road use in California.

**FUEL MANAGEMENT CONTROLLERS**

- Simple to use and understand system provides easy air/fuel ratio adjustment
- No computer or dyno required
- Tuning capabilities superior to Alpha N type controllers
- Easily adjusts for modifications – intake, exhaust, cams, etc.
- Easy push-button operation
- Load-based operation
- Three basic zones of operation, similar to a carburetor – one zone sets the “pilot jet” for idle and cruise, another sets the “needle jet” for acceleration and a third zone sets the “main jet” for heavy loading and wide-open throttle
- Plug and play installation
- Uses OEM base code; does not scramble base code
- Made in the U.S.A.

**ADJUSTABLE O<sub>2</sub> ENRICHMENT DEVICES**

- Enrichment devices are intended to give riders the proper fuel mixture when adding performance mufflers, pipes and high flow air filter upgrades
- Adjustable version allows external adjustment of the air-fuel ratio in closed-loop mode
- Cheaper than other fuel management programmers or auto tuners
- Reduces engine temperature between 20-30 degrees
- Recommended for models with high-flow air intakes and exhaust
- PART #1020-1715 includes AFR display
- Made in the U.S.A.

**MAXFLOW™ THROTTLE BODIES**

- Large plenum design maximizes mid- and high-rpm power
- Specifically designed for larger cubic inch motors that require substantial airflow
- Fully machined and ported internally for unparalleled flow
- Feature a natural finish with split shaft design and stainless steel spring
- Equipped with a sealed double roller bearing for smooth throttle operation
- Brass throttle blade and shaft resist deflection, which helps maintain throttle position accuracy
- Completely replaces OEM throttle body and manifold; fully compatible with OEM components
- Made in the U.S.A.

**18 MM O<sub>2</sub> SENSORS**

- Precision manufactured with a ceramic body made of stabilized zirconium dioxide, surface coated with gas-permeable platinum electrodes and a porous ceramic to help prevent erosion due to contamination and particulates in the exhaust gases
- Slow reading oxygen sensors can cause a drop in fuel economy of 10-15%, excessive exhaust emissions and poor drivability
- Life expectancy of an average oxygen sensor in a properly tuned engine is typically 30,000-50,000 miles
- Narrow band O<sub>2</sub> sensors available in 12.5", 16.25" and 22.25" overall lengths
- Replacement Wide Band O<sub>2</sub> sensor for aftermarket ignition tuners also available; overall length is 30.25"
- All sensors meet or exceed OE specifications

## SUPER E AND G SHORTY CARBURETOR KITS

•Each carb kit includes an S&S Super E or Super G gas carburetor with updated fuel delivery pots and idle screw, S&S teardrop air cleaner assembly, manifold (unless noted), mounting hardware, fuel line, clamps, overflow line, one extra intermediate jet and two main jets, VOES tubing (when applicable), installation and jetting instructions

•Super E has a 1.875" throat at the butterfly and a 1.5625" venturi and is recommended for use on Big Twin or Sportster engines up to 100-cubic-inch

•Super G has a 2.0625" throat at the butterfly and a 1.75" venturi and is recommended for use on 90-cubic-inch and larger high-performance and modified engines

•2.0625" G is not recommended for smaller, lower compression engines

•If there is a doubt as to which carburetor to use, we suggest the 1.875" Super E

•Individual carburetors also available

•Made in the U.S.A.

**NOTE:** S&S Super E & G carburetors require the use of a two-cable, pull open/pull close throttle assembly; S&S kits are compatible with stock cables except as noted.

**NOTE:** Recommended for racing only, this carburetor is not legal for use in California on motor vehicles operated on public highways or in other states where similar pollution laws may apply. User must determine the suitability of the product for his or her use and assumes all risk and liability in connection therewith.

- Fittings can be rotated 360° so that hoses can be routed as necessary
- Hose sold separately

PART #	DESCRIPTION	SUG. RETAIL
DS-289055	For 93-15 Big Twin and 91-15 XL models	\$49.95

**BRAIDED HOSE CRANKCASE BREATHER KIT**

- This kit provides the best looking alternative to black rubber hoses when mounting a crankcase breather system
- Features a 3/8" i.d. stainless steel braided hose crimped onto chrome banjo fittings
- Outlet side of assembly is long enough to custom-route the hose and mount the breather filter in an inconspicuous location
- Includes breather filter (with mounting stud), hardware and instructions
- Air cleaner and carb support bracket must be purchased separately

**NOTE: Not recommended for stock applications. Make sure the braided line does not contact anything (i.e. the gas tank, carb or wiring) as damage may result.**

PART #	DESCRIPTION	SUG. RETAIL
DS289118	For 93-15 Big Twin custom applications only	\$69.95

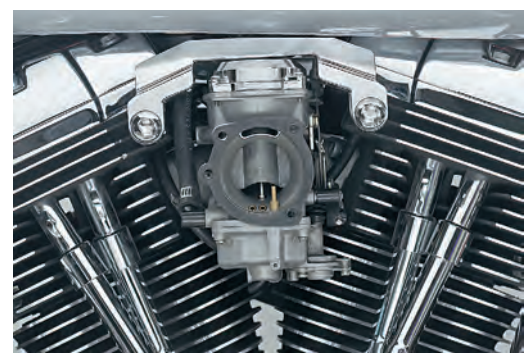

**CHROME CRANKCASE BREATHER**

- With this breather, as oil-laden air condenses in the breather body, the excess oil now runs back down into the engine rather than into the air cleaner
- A really clean setup

**NOTE: Not for use on fuel-injected models.**

### TWIN VELOCITY™ PLUS AIR CLEANER KITS

- Slots on both sides and enlarged openings at bottom of housing allow more air to enter the filter
- Large, round breather element underneath cover allows air to enter the end of the filter
- Teardrop center of cover provides improved airflow and a clean look
- Internal crankcase vent system directs gasses and oil droplets into the carburetor induction module, eliminating a mess on the outside of the engine
- The result is improved airflow for better performance
- Carb adapter and replacement K&N air filter elements sold each
- Available with a chrome finish

**NOTE:** Not legal for street use on pollution-controlled vehicles.

**"BILLET SUCKER" AIR CLEANER ASSEMBLIES**

- Available in Stage I and Stage II
- Both feature an oversized exposed filter design for tremendous airflow
- One-piece aluminum backing plate with patented hidden breather technology and radius air inlet for maximum airflow
- Breather passages exit at the mouth of the carb/throttle body, creating a virtually closed-loop system
- Eliminates the need for any external banjo fittings, hoses, and breather filters for an ultra clean look
- Kits include a high-flow air filter, outer cover, backing plate/support bracket and all necessary hardware
- Made in the U.S.A.

NOTE: Not legal for street use on pollution controlled vehicles.

**SUPER STOCK™ STEALTH AIR CLEANER KITS**

- For stock and S&S fuel system applications
- Kits include backing plate, filter and hardware
- Built-in stinger cone directs air smoothly into the bore of the carburetor or EFI throttle body and reduces turbulence and increases flow
- Optional high-flow (1" taller) filter and pre-filter/rain sock also available
- Made in the U.S.A.

NOTE: Kits do not come with covers. Must use with stock Twin Cam 88®, 96™, or 103™ "football-style" air cleaner cover, or can be used with S&S Stealth air cleaner covers (sold separately).

NOTE: Exempt per CARB EXECUTIVE ORDER (E.O.) No. D-355-11. E.O. applies to 01-15 EFI models only.

NOTE: Stealth air cleaner kits for 01-15 EFI applications come with a special sticker and instructions for applying it to an inconspicuous location on the frame.

NOTE: Not legal for street use on pollution controlled vehicles (except per the E.O. above).

### DRYCHARGERS

- Specially designed filter wrap made to extend the service interval of your K&N air filter when used in severe dusty or wet conditions
- Made from durable polyester material containing uniform micron openings, the DryCharger® will stop small dirt particles and is water repellent, yet adds little restriction to the airflow of your filter
- Feature double-stitched elastic openings to secure drycharger in place
- Designed to be run dry and can be cleaned with K&N filter cleaner
- Custom fit to each application
- Made in the U.S.A.
