# MFJ 1500 Watt Legal Limit IntelliTuner™

Full 1500 watts SSB/CW...Digital & Analog SWR/WattMeter . . . All features of MFJ IntelliTuners™-- Ultra-fast, Safe Automatic Tuning . . . Wide Tuning Range (12-1600 Ohms from 1.8 to 30 MHz) . . . Radio Interfaces . . . Built-in Antenna Switch for two coax/long wire . . . Automatic Bypass protects your amplifier . . . Field Upgradeable Software . . . Compact!

MFJ-998  
**\$699<sup>95</sup>**  
 Ship Code D

The MFJ-998 Full Legal Limit 1500 Watt IntelliTuner™ takes you to the final level in automatic antenna tuners. With a capability of 1500 watts SSB and CW, coupled with automatic tuning, your high-power station can now operate essentially hands-free even when frequency and band changes are made.

### Fast Automatic Tuning

The MFJ-998 instantly matches impedances from 12-1600 Ohms using MFJ's exclusive IntelliTune™, AdaptiveSearch™ and InstantRecall™ algorithms with over 20,000 VirtualAntenna™ Memories. When you key your transmitter, MFJ's InstantRecall™ checks to see if that frequency has been used before. If so, tuning is instantaneous. If not, MFJ's IntelliTune™ algorithm (based on MFJ's efficient SWR Analyzer technology) measures the impedance, snaps the necessary components in place, and then fine-tunes the SWR. If the antenna impedance is outside the tuner's measurement range, MFJ's Adaptive Search™ algorithm measures the frequency and determines only relevant component values -- which are then searched for fast tuning.

### Safe Automatic Tuning and Amplifier Protection

The MFJ-998 includes MFJ's Amplifier Bypass Control™ -- an MFJ exclusive feature! When used with a transceiver interface cable, tuning is safe and "stupid-proof"! When a tuning cycle is initiated, the MFJ-998 first bypasses any in-line amplifier. Next, the MFJ-998 initiates a low-power CW tuning carrier from your transceiver. When tuning is complete, the MFJ-998 reverts your transceiver to its prior power and mode, and re-enables the amplifier. This entire cycle typically takes less than a second! Finally, if the MFJ-998 cannot find a match better than a pre-set amplifier SWR trip-point, the amplifier stays bypassed to provide automatic SWR

MFJ-998 is the smallest full legal-limit automatic antenna tuner in the world! Just 13Wx4Hx15D inches will fit easily into your ham station. Weighs just 8 pounds -- giving great portability! Requires 12-15VDC at 1.4 amps maximum or 110 VAC with optional MFJ-1316, \$21.95.

protection for your amplifier -- another outstanding MFJ exclusive!

### Analog SWR/Wattmeter

A large super-bright LED lighted analog Cross-Needle SWR/Wattmeter displays selectable 300/60 watt or 3000/600 watt forward/reflected full-scale ranges. You can even select automatic power ranging -- best power range automatically selected for you.

### Digital LCD SWR/Wattmeter

A two-line, 16-character backlit LCD meter displays SWR, forward/reflected power, frequency, antenna selected, an auto-ranging bargraph power indication, and much more. You can even read the final matching inductor and capacitor values should you want to build your own fixed matching network. Simple menus determine displayed information - no complex button combinations to remember!

### MFJ VirtualAntenna™ Memory

**World's First dual power level 300/150 Watts SSB/CW Tuner --**

MFJ-993B  
**\$269<sup>95</sup>**

Select 300 Watt SSB/CW power level and match 6-1600 Ohm antennas Or . . . select 150 Watt SSB/CW power level and match extra wide-range 6-3200 Ohms!

The MFJ-993B IntelliTuner™ lets you tune any antenna automatically balanced or unbalanced -- ultra fast.

It's a comprehensive automatic antenna tuning center complete with SWR/Wattmeter, antenna switch for two antennas and 4:1 current balun for balanced lines.

MFJs exclusive IntelliTuner™, Adaptive Search™ and InstantRecall™ algorithms give you ultra fast automatic tuning with over 20,000 VirtualAntenna™ Memories.

You get a highly efficient L-network, 6-1600 ohm matching at 300 Watts SSB/CW or extra-wide 6-3200 Ohm matching at 150 Watts SSB/CW, 1.8-30 MHz coverage, Cross-Needle and digital meters, audio SWR meter, backlit LCD, remote control port, radio interface, heavy-duty 16 amp/1000V relays.

**It learns while you're having fun**

As you're ragchewing, contesting or DXing, your MFJ-993B is learning!

When you transmit, the MFJ-993B automatically tunes for minimum SWR and remembers your frequency and tuner settings. The next time you operate on that frequency and antenna, these tuner settings are instantly restored and you're ready to operate in milliseconds!

MFJ new VirtualAntenna™ Memory system gives you 4 antenna memory banks for each of 2 antenna connectors. Select up to 4 antennas on each antenna connector. Each antenna has 2500 memories, 20,000 total.

**Intelligent ultra fast tuning**

MFJs InstantRecall™ first checks its memory to see if you have operated this frequency before. If so, tuning is instantaneous and you're ready to operate.

If not, MFJs IntelliTuner™ algorithm -- based on MFJ's famous SWR Analyzer technology -- kicks in. It measures the complex impedance of your antenna. Next, it calculates the components it needs and instantly snaps them in. Then, it fine tunes to minimize SWR -- you're ready to operate.

Ship Code C  
It's all done in a fraction of a second.

When the impedance is within its measurement range, the MFJ-993B is the fastest automatic antenna tuner in the world.

If it can't accurately determine impedance, MFJ's AdaptiveSearch™ algorithm goes into action. Frequency is measured and relevant components values are determined. Only those values are searched for ultra-fast tuning.

For even faster searches, you can set the target SWR to 2 (settable 1.0-2.0).

You can manually tune when you can't transmit (for listening out of ham bands).

**LED Lighted Cross Needle plus Digital SWR/Wattmeters**

LED lighted Cross-Needle and digital meters let you accurately read SWR, forward and reflected power at a glance.

An audio SWR meter lets you hear the tuned SWR when you can't see/read meters.

Turn on a highly visible, instant response SWR LCD bargraph when you need it.

**Backlit LCD Display**

An easy-to-read backlit LCD displays SWR, forward/reflected power, frequency, antenna 1 or 2, L/C tuner values, on/off indicators and other information.

The MFJ-993B is a compact 10Wx2¼ Hx9D inches. Use 12-15 VDC/1 amp or 110 VAC with MFJ-1316, \$21.95.

**Tune any Antenna**

MFJ-929 gives you 256 values each of capacitance and inductances for 131,072

MFJ-929

### Highly intelligent, ultra-fast tuning!

Don't be fooled by competing products claiming fast search times -- if you have a quarter of the matching solutions, of course, it takes less time to finish but it's *not* faster.

MFJ's faster speed comes from advanced technology and software algorithms *not* from fewer matching solutions.

MFJ's IntelliTuner-Compact™ actually measures complex impedance -- R and X -- of your antenna, computes the L-network values needed and snaps in those components to give you an *instant* match.

If the load is out of measurement range, AdaptiveSearch™ determines the *smaller* subset from all solutions that can match a safe load -- and then searches *only* that subset -- others search through far more solutions.

### Digital LCD SWR/Wattmeter

An easy-to-read, two-line, 16-character backlit LCD displays SWR, peak or average forward/reflected power, frequency, antenna 1 or 2, L/C tuner values, on/off indicators and other info. They are selected from easy-to-understand menus -- *not* complex combinations of buttons you can't remember.

A fast-response, high-resolution bargraph gives you an auto-ranging 20/200 Watt power meter. You get 60 segments each for forward and reflected power and 36 segments for SWR -- *try that with an 8 segment bargraph that makes you change power ranges and doesn't even give you reflected power!*

You can read inductance and capaci-

matching solutions. That's 4 times the 32,768 matching solutions of competing products with only 128 L/C values each!

tance *directly* in uH and pF. This turns you into an expert L-network designer! Match your load, read the resulting L/C values, then use them to build your fixed L-network.

Or, knowing the L/C values you can determine R and X of the load impedance.

### Plus Much More!

StickyTune™ mode gives you one-hand tuning by locking the TUNE button -- just transmit to tune regardless of SWR.

Has audio SWR meter and audio feed back. Competing products don't.

Built-in 50 MHz frequency counter.

Its built-in radio interface lets you use a simple wire cable to compatible rigs. Others require a cable with expensive electronics.

Binding post for random wire. Self-test.

Highly efficient L-network. 10 Amp/1000V relays, RF duty silver mica capacitors. 6 1/2 Wx2 7/8Hx8 3/8D in. 2.4 lbs. 12-15 VDC/1Amp or 110 VAC with MFJ-1316, \$21.95.

### Pre-wired Rig Interface Cables for MFJ-929 series

These cables work with the following MFJ Automatic tuners: MFJ-929, MFJ-928, MFJ-925, and the MFJ-998.

MFJ-5114K, \$19.95. Prewired Rig Interface cable for Kenwood TS-590 and other compatibles.

MFJ-5114I, \$19.95. Prewired Rig Interface cable for Icom and other compatibles.

### Highly intelligent, ultra-fast tuning!

As you're ragchewing, contesting or DXing, the MFJ-939 is learning your antenna and the way you operate and storing all this in its 20,000 memories. The more you use it, the more it learns.

### Measure & Compute = Instant Match

MFJ-939 uniquely measures your antenna's complex impedance (R, X), computes the L-network and snaps in needed components for *instant* matching.

### AdaptiveSearch™

# Plug & Play Auto Tuner

for Icom, Yaesu, Kenwood, Alinco and others

AdaptiveSearch™ determines a sub-set of all solutions that can provide a safe match and searches *only* that subset giving you an ultra fast match. Others search slowly through *all* solutions.

### InstantRecal™

InstantRecal™ first checks its memory to see if you have operated this frequency before. If so, tuning is instantaneous and you're ready to go!

### MFJ VirtualAntenna™ Memory

MFJ exclusive VirtualAntenna™ Memory system gives you 8 antenna memory banks of 2500 memories each.

You can use an antenna switch to select up to 8 antennas and assign each antenna its own 2500 memories!

# MFJ KW Differential-T™ Antenna Tuner

... Gives absolute minimum SWR ... Simple 2-knob tuning ... Lighted Cross-Needle SWR/Wattmeter ... AirCore™ Roller Inductor ... 6-position antenna switch ... Balun for balanced lines ... 1.8-30 MHz coverage

MFJ-986

**\$369<sup>95</sup>**

Ship Code E

MFJ's innovative *Differential-T™* tuner has a differential capacitor that makes tuning easier than ever. Gives minimum SWR at only *one* setting. Broadband design ends constant retuning.

MFJ-986 is a rugged roller inductor antenna tuner that handles 3 KW PEP SSB amplifier input power (1500 Watts PEP SSB output). Tunes 1.8-30 MHz *continuously*, including MARS and all the WARC bands.

MFJ's exclusive *AirCore™* Roller Inductor gives *absolute minimum* SWR -- something tapped inductors just can't do.

**3-digit** turns counter plus a spinner knob gives precise inductance control so you can quickly retune your frequency.

A super-bright LED *lighted* peak/average reading cross-needle meter shows SWR, forward and reflected power at a single glance!

You get a 6-position antenna switch that lets you select two coax lines and/or random wires (direct or through tuner), balanced line and external dummy load.

The *MFJ TrueCurrentBalun™* for balanced lines minimizes feedline radiation that causes field pattern distortion, TVI and RF in your shack. *Ceramic* feedthru insulators for balanced lines withstand high voltages and temperatures.

*Differential-T Tuner™* ...  
A new twist on proven technology

Replacing two variable capacitors with a *single* differential capacitor gives wide range T-network tuning with just two controls -- a tuning capacitor and a roller inductor.

The compact 10<sup>3</sup>/<sub>4</sub> x 4<sup>1</sup>/<sub>2</sub> x 1<sup>5</sup>/<sub>8</sub> inch all-aluminum cabinet has plenty of room to mount the roller inductor away from metal surfaces for highest Q -- you get high efficiency and more power into your antenna. *Wide-spaced* tuning capacitor plates let you run high power without arcing.

**TrueActive™ Peak Reading**

**New! True-Active™ Peak Reading SWR/Watts LED Meter!**

Simple 2-knob tuning makes it easier than ever. Get minimum SWR at only *one* setting and a broadband response that ends constant retuning. You'll spend your time QSO'ing instead of fooling with your tuner.

**MFJ AirCore™ roller inductor**

MFJ's exclusive *super heavy duty AirCore™* Roller Inductor has an air core that can't burn up! Get ultra high-Q, lowest loss, highest efficiency and highest power handling of any roller inductor in ham radio.

MFJ's exclusive *Self-ResonanceKiller™* keeps potentially damaging self-resonances away from your operating frequency.

**Large**, self-cleaning wiping contact gives excellent low-resistance connection without contact arcing or burning.

**Solid** 1/4" brass shaft with self-align bearings gives smooth non-binding rotation.

**SWR/Wattmeter**

*New TrueActive™* peak reading *SWR/Wattmeter* lets you read *true* peak or average power on all modes. Large, easy-to-read *super-bright* LED lighted Cross-Needle meter lets you read SWR and forward/reflected (2000/200 Watt ranges) power at a single glance. Uses 9-Volt battery and/or 12 VDC or 110 VAC with MFJ-1312D, \$15.95. Lamp on/off switch.

**MFJ TrueCurrentBalun™**  
*reduces feedline radiation*

**Most** tuners use a *voltage* balun that forces equal voltages on the two antenna halves. It minimizes unbalanced currents only if the antenna is perfectly balanced -- not the case with practical antennas.

The MFJ-986 uses a *true* current balun to force equal *currents* in the two antenna halves -- even if the antenna is not perfectly balanced!

The *MFJ TrueCurrentBalun™* gives superior balance over voltage baluns and minimizes unbalanced current. This reduces field pattern distortion, concentrates your power for a stronger signal -- plus reduces TVI and RF in your shack caused by feedline radiation.

continuous carrier output on all modes and all HF bands into most unbalanced antennas – even on 160 Meters where even the best antenna tuners fail!

The MFJ-9982 gives you every feature you'll ever want in a high power tuner -- wide matching range, 1.8 to 30 MHz coverage, 6-position antenna switch, 4-core balun, dummy load, true peak/average lighted SWR/Wattmeter, 6:1 reduction drives with detailed logging scales, 3-digit turns counter, extra large knobs.

### New Components, New Technologies

The Heart and Soul of the MFJ-9982 is its roller inductor and variable capacitors.

MFJ's high power, high-Q continuous current AirCore<sup>TM</sup> roller inductor is no ordinary roller inductor! It's edge wound from thick .06-inch silver-plated solid copper strap.

It can carry huge circulating RF currents and withstand tremendous heat that'll melt or burn up ordinary roller inductors.

Self-insulating construction reduces stray capacitance -- keeps self-resonant frequencies high and out-of-the-way. Dual, silver-plated compression wheels give ultra low-resistance contacts. New fast-tune crank knob.

High-current, high-capacitance 1000 pF and 500 pF air variable capacitors have low minimum capacitance and are self-insulating.

These newly developed capacitors and MFJ's patent pending innovation gives you very high efficiency on 160/80 Meters and extremely wide matching range on 10/12/15 Meters at 2500 Watts -- a feat only the MFJ-9982 has achieved.

### Hi-Voltage/Current Antenna Switch

The antenna switch is completely isolated to handle high-voltage high impedance antennas. High-current, low impedance antennas are handled by parallel sets of high-current contacts of two ceramic switches.

### MFJ Artificial RF Ground

Places your rig near earth ground potential!

MFJ-931  
**\$109<sup>95</sup>**  
Ship Code B

Create an artificial ground with this MFJ-931!

It effectively places your rig near actual earth ground potential even if your rig is on the second floor or higher with no earth ground possible! It electrically places a far away RF ground at your rig.

How's your RF ground? Do you have RF "hot spots" that "bite" you when you transmit? Do you have RF feedback that causes your rig to quit working on some bands? Do you have TVI/RFI that makes your neighbors hard to live with? Do you get weak signal reports because of extreme ground losses or radiation pattern distortion?

These problems could be caused by poor RF grounding, especially if your rig is on a second floor with no ground at all. Even if you have a good ground, a long connection wire can ruin its effectiveness by isolating true RF ground from your rig.

### 4 Foot Ground Rod

Durable four foot copper bonded steel earth ground rod is a tough 3/8 in. diameter that will last. MFJ-1934 **\$9<sup>95</sup>** Ship Code B

Pointed end makes it easy to drive into the ground. Use it to tie your equipment to a single earth ground to help bleed off static and RFI and prevent RF hot spots. Use several to form a good RF ground for random, long wire and vertical antennas.

Continued . . . MFJ-931 creates an artificial ground! It resonates a random length of wire thrown along the floor and produces a tuned counterpoise. This artificial ground effectively places your rig near actual earth ground potential with no earth ground possible. Reduces the electrical length of the ground connection wire to virtually zero by tuning out its reactance. MFJ-931 connects between your rig and a random length of wire or a connecting ground wire. It's tuned for maximum ground current using the built-in RF ammeter. 1.8 to 30 MHz. 7½Wx 3½Hx7D in. RF tight alu. cabinet.

The frustratingly narrow bandwidth of mobile antennas can be greatly broadened with this tuner.

Of course, this diminutive tuner can be used to tune coax-fed home station antennas of all kinds, too, as well as random wires.

The cross needle meter shows SWR, forward, and reflected power -- at a glance.

It reads forward/reflected power in 300/60 and 30/6 watt ranges. **\$139<sup>95</sup>**

The ON/ OFF lamp switch is handy for changing light conditions in your vehicle; the meter lamp is 12 VDC powered with optional MFJ-1312D, \$15.95.

Covering 1.8 to 30 MHz, this T-match tuner can match coax-fed antennas, as well as those fed with balanced feedline, and random wires. Built-in 4:1 toroid balun for balanced lines.

From the factory, the MFJ-971 offers forward power readings of 30 watts maximum or 300 watts, on its cross needle meter. You can monitor forward power, reflected power, and SWR simultaneously.

For dedicated QRP operation, swapping of a jumper plug internally converts the maximum forward reading on the meter to 6 watts. Great for use with MFJ's 90/94 series of CW and SSB individual band transceivers.

The meter lamp may be powered by an external 12 VDC

As in all good antenna tuners, three controls give flexibility in matching: Inductance (12 positions), Transmitter, and Antenna. Once you find the proper setting on each band, just record it for future "instant band changing."

Rear panel includes SO-239 coaxial jacks for transmitter and antenna; 2 sturdy binding posts for balanced line; another binding post for a random wire; ground post; 12 VDC input jack for meter lamp; and low/high power meter range switch.

The MFJ-971 is backed by MFJ's *No Matter What*™ warranty. Measures a tiny 6X6X2.5 inches.

## MFJ 300-Watt Super Value Versa Tuner Covers 160-10 Meters

It's not just a tuner, it's an 8-position antenna switch.

The photo tells the story: you can select among two coaxial-fed antennas, a balanced line (4:1 toroid balun included) or random wire or an external dummy load, and for each you can select "direct" (bypassing the tuner) or "tuned."

This tuner is rated at 300 watts and can match dipoles, vees, random wires, and balanced and coax feedlines, from 1.8 to 30 MHz. You get a lighted cross needle

SWR/wattmeter with on/off switch (lamp uses 12 VDC or 110 VAC with MFJ-1312D, \$15.95).

The meter shows SWR, and forward and reflected power in 300/60 and 30/6 watt ranges selected at the front panel. An efficient 12 position airwound inductor gives low losses for more power out. Uses 1000 Volt capacitors.

**MFJ-974B.** Same as MFJ-974HB but for 6-80 Meter operation (no 160 Meters).

**Johnson Matchbox**  
 For decades, the Johnson Matchbox has been the standard of comparison for balanced line tuners. But, it had a severely limited matching range and covered only 80, 40, 20, 15 and 10 Meters.

The MFJ-974HB is its successor. It meets today's needs and even surpasses the Johnson Matchbox outstanding performance.

### Everything You Need

The MFJ-974HB gives you excellent current balance, very wide matching range (12-2000 Ohms) and covers 1.8 through 54 MHz *continuously* including all WARC bands, 160 Meters, 6 Meters and the new 60 Meter band. Handles 300 Watts SSB PEP and 150 Watts CW.

**Tuning** is fast and easy - - just three tuning controls. You can even adjust for highly efficient broadband low-Q operation or use higher Q when you encounter extreme loads.

A large three-inch lighted Cross-Needle SWR/Wattmeter lets you read SWR, peak or average forward and reflected power *all at a glance* on 300 or 30 Watt ranges.

A ground post is provided to ground one output terminal so you can also tune random wires and coax fed antennas.

**Compact** 7½Wx6Hx8D inches fits anywhere.

### Tunes any Balanced Line

The MFJ-974HB tunes any balanced

lines including 600 Ohm open wire line, 450/300 Ohm ladder lines, 300/72 Ohm twin lead - - shielded or unshielded.

**Superb** current balance minimizes feed-line radiation that can cause troublesome TVI and RFI, painful RF bites, mysterious RF feedback problems and radiation pattern distortion.

### Excellent Balance, Excellent Design

The MFJ-974HB is a *fully balanced* wide range T-Network using four gear driven 1000-Volt air variable capacitors and high-Q air wound tapped inductor for 80-10 Meters and separate inductors for 6 and 160 Meters. The tuning components are mounted symmetrically to insure electrical balance.

A 1:1 current balun is placed on the low impedance 50 input side to convert the balanced T-Network to unbalanced operation. The balun is made of 50 ferrite beads on RG-303 Teflon™ coax to give exceptional and efficient isolation. It stays cool even at maximum power.

**Balanced Line = Extremely Low Loss**  
 Balanced lines give extremely low loss.

Drape a wire around a bookcase or window and attach both ends to this new MFJ Small Loop Tuner™.

It instantly turns into a small, high efficiency multi-band transmitting loop antenna!

You can operate 5.3 to 30 MHz with a full 150 Watts. No ground, radials or counterpoises needed.

The excellent performance of a high-efficiency small loop antenna is legendary

and well proven by users all over the world. You'll radiate a low angle DX signal that literally rivals full size dipoles and work incredible DX!

It's a very quiet receiving antenna -- you'll hardly notice static crashes. Its high-Q reduces QRM, overloading, harmonics.

It's perfect for apartments, antenna restricted areas and portable operation -- it really gets out!

A 13 foot wire formed into a loop operates 30-20 Meters (4 foot for 17-10 M; 7 foot for 20-15 M; 28 foot for 60-40 M).

You can tune any shape loop -- circle, square, rectangle, any odd shape. A quarter wavelength wire shaped as a circle is the most efficient.

A given wire length covers about 1.5 to 1 frequency range (i.e. 7-10/18-28 MHz, etc.). Exact frequency coverage depends on wire length, loop shape, surroundings and height above ground.

- Sign of reactance
- Amazing accuracy with OSL (Open-Short-Load) calibration.

MFJ

New MFJ-226 introduces the MFJ Times Technology™ series of advanced Antenna Analyzers!

MFJ-226  
**\$339<sup>95</sup>**  
Ship Code B

This groundbreaking VNA antenna analyzer -- MFJ-226 Antenna Expert™ -- delivers OSL calibration and true reactance including its sign from 1 MHz to 230 MHz with a 1-Hz frequency resolution!

### Incredibly Powerful

MFJ-226 is the first and only low-cost handheld VNA (Vector Network Analyzer) to feature OSL (open/short/load) calibration for super accuracy and sign of reactance to positively identify inductive or capacitive reactance.

These two features, normally only found on lab instruments, place incredible diagnostic power in the palm of your hand.

With it, you'll measure impedance plus many other critical load parameters directly, through feedline or test cable with exceptional accuracy, correcting for line loss and phase angle.

### Single Frequency Mode

Presents an unusually wide range of load information including . . . SWR, Frequency, Impedance Magnitude, Series and Parallel Impedance ( $R \pm jX$ ), S11 (Rectangular and Polar), Capacitance and Inductance

### Swept-Frequency Mode

Generates, displays, and captures accurate plots versus frequency of SWR, Impedance (Z), Resistance (R), Reactance ( $\pm X$ ), Return Loss (S11), Phase Angle and Smith Chart

Smith Chart plot shows S11 magnitude and phase angle over any frequency span you specify.

### 32 Memories

32 memories let you capture screens made in the field for download into your PC via mini USB port for later storage and use.

### Store OSL Calibrations

You can run OSL calibrations through your test cable or feedline or at different frequencies and store them for future use.

### Fits Your Hand Perfectly

Better doesn't mean bigger! The MFJ-226's compact and virtually indestructible molded case fits your hand perfectly with real backlit keys that depress to give you tactile feedback.

### Easy-to-read Backlit LCD

Bright 2 1/2 inch LCD backlit screen is easy-to-read, even in direct sunlight.

### Use two AA batteries

Use disposable Alkaline or rechargeable NiMH AA batteries (not included). Firmware upgradeable via USB port. Includes N-to-SO-239 adapter and 48-inch mini USB to USB cable. 3 1/4 W x 6 1/2 H x 1 D inches. 9.3 ounces.

### Looks, Feels, Performs Like a Professional Instrument

MFJ-226 has both the hefty feel and advanced performance of professional field-service instruments costing hundreds, even thousands of dollars more.

If you've ever wished for accuracy and flexibility of a professional-grade S11 VNA without the boat-anchor packaging and prohibitive price, your search ends here. The MFJ-226 pulls together the latest advances in RF technology and delivers them to you at a price you can't afford to pass up!

### Commercial Grade VNA

New! MFJ-227, \$339.95.

Like MFJ-226 but covers 88 to 228 MHz in VHF range and 330 to 500 MHz in UHF range. Has all features of MFJ-226.

### Here's a few Screen Shots

Main Menu selects these modes: Single Frequency, Swept Frequency, Calibration Screen (manages OSL calibrations), Settings Screen (basic analyzer setup) and PC Mode (dumps data in computer).

Single Frequency Mode. First screen shows SWR in BIG 3/4 inch digits and the Frequency reading in a single glance.

Smith Chart plot. Moveable cross-hair tracks plot over any frequency span. Displays S11 magnitude, phase angle at any frequency.

Swept Impedance plots (Z) displays impedance magnitude and shows the selected frequency at the top of the graph.

Return Loss plot (RL) shows shape of curve and presents the return loss value in -dB at your selected frequency.

Phase plot also presents RL data and phase angle, but the plot depicts the Phase Shift across the selected frequency span.

# MFJ-225 HF/VHF Two-Port Graphic Antenna Analyzer

Take RF testing to the next level with the new MFJ-225! All the basic analyzer functions you've come to depend on plus a host of advanced features like built-in LCD graphics, two-port VNA measurement, PC-Interface using IG-miniVNA freeware, precise DDS frequency control, self-calibrating . . . easy-to-use!

**Two Analyzers in One** MFJ-225  
Out in the field, MFJ-225 is a **\$299<sup>95</sup>**  
compact completely self-contained handheld analyzer. On  
Ship Code A

the bench it becomes a full-fledged two-port (S21) desktop machine when teamed up with your PC. Using powerful IG-miniVNA freeware, you'll run detailed data analysis and then print out stunning color-graphic plots to document your work!

## Seeing is Believing

Get a big picture every time with MFJ-225's built-in back-lighted 3-inch LCD graphic display. Make fine circuit adjustments using full-screen easy-to-view SWR bar graph, capture vivid swept displays for SWR, impedance, return loss, phase angle, more! Operation is simple, you can adjust the center frequency, tuning step, and sweep width instantly while viewing your plot, literally shaping it before your eyes.

## Continuous HF-VHF Coverage

Tunes from 1.5 MHz to 179.9 MHz with rock-solid stability and no gaps. That's because the MFJ-225's VFO is a state-of-the-art programmable DDS (direct digital synthesis) generator with pin-point 1-kHz frequency resolution. DDS control means no mechanical band switches or tuning elements, just a reliable velvet-smooth optical encoder to glide across the spectrum.

## Powerful Clean Signal Source

The MFJ-225 DDS stimulus generator also gives you a leveled -5 dBm signal source for driving mixers, low-power amplifiers, filters, networks, diplexers, and antennas on the test range. And, your test signal is always clean, with over -50 dBc of harmonic and spur suppression. That's better than many precision lab generators costing thousands of dollars! Connect an external step attenuator, and it becomes a high-quality signal generator for peaking sensitive receivers and preamplifiers.

## Information Powerhouse

The MFJ-225 simultaneously compiles and displays all important parameters you need on a single screen, giving you a wider range of results at a glance. You'll work faster and smarter without the inconvenience of scrolling through menus or making tedious conversions to get your data.

### What the MFJ-225 Measures:

- SWR (1:1 to 9.9:1)
- Complex Impedance (R+jX)
- Impedance Magnitude (Z)
- Return Loss (RL, 0-30dB)
- Phase (0-180°)
- Capacitance (0-9999pF)
- Inductance (.1uH-80uH)
- Cable Length (0.5-45m)
- Cable Loss (0-30dB)

## Two-Port Flexibility

In addition to traditional single-port (S11) reflected-power measurements, MFJ features an invaluable advantage of making two-port (S21) forward-power measurements, essential for optimizing filters, di-

plexers, matching networks, etc. It bridges the gap between a simple scalar analyzer and true vector-analysis performance.

frequency control knob conveniently positioned for your right hand. Everything is located where it needs to be for intuitive operating and unobstructed screen view!

## Easy To Power

MFJ-225 can be powered by four AAA alkaline batteries or four AAA Ni-MH rechargeable batteries (batteries not incl.). Optional MFJ-1312D, \$15.95 or any external 12 VDC power is required for the built-in recharging circuit with charge indicator LED. LED will light while charging and turn off when cycle is completed. On the bench, power it through the USB power port using any USB power source. Optional USB cable, MFJ-5430, \$2.95.

## Self-Calibrating

In order to maintain out-of-the-box accuracy, all analyzers require periodic calibration checks -- a potentially time-consuming operation that may require special RF loads and step-by-step procedures. However, the MFJ-225 uses built-in firmware to perform its entire calibration routine in less than a second! Simply initiate the "calibrate" command and you're done!

## Specifications

MFJ-225 requires 4 NiMH AAA cells or optional power adapter MFJ-1312D, \$15.95. PC interface requires a USB Type-B cable.

# MFJ in-line Calibrated RF Ammeters

... for tuning your antenna tuner/xmtr/amp for maximum radiated power, for determining antenna feedpoint impedance, for comparing antennas and tuners, for trouble shooting, checking for changes ...

**MFJ-834 Coax In-Line Calibrated RF Ammeter**  
 MFJ-834 \$79.95  
 Ship Code A

Connect the MFJ-834, \$79.95 Coax In-Line RF Ammeter between your antenna and tuner/ transmitter/amplifier and measure antenna feedline current in 3 calibrated ranges.

Use it ... for tuning your antenna tuner/transmitter/amplifier for maximum radiated power ... for determining antenna feedpoint impedance... for comparing antennas and tuners ... for trouble shooting ... and for checking for changes.

Tuning for maximum feedline current for any given antenna always gives maximum radiated power!

Any adjustment -- transceiver or amplifier tuning/loading controls, antenna tuner settings, whatever -- that increases feedline current improves power transfer and gives you a stronger radiated signal.

Radiated power increases rapidly because power increases as the square of the current.

Minimum SWR does not always mean maximum radiated power -- your tuner or lossy coax may be dissipating power -- and you may not get peak output power even if your tuner or amplifier is properly tuned.

Use the MFJ-834 to determine best antenna tuner settings and to compare various tuners.

Calculate antenna feedpoint impedance by dividing your applied power by square of feedpoint current.

**MFJ-836 all-in-one RF Ammeter/SWR/Wattmeter**  
 MFJ-836 \$139.95  
 Ship Code A

The MFJ-836, \$139.95 is an all-in-one RF Ammeter/SWR/Wattmeter! You can quickly determine feedpoint impedance and monitor antenna system for detrimental changes under power.

Read RF current in three calibrated ranges -- 1, 3, 10 Amperes. A large 3-inch lighted easy-to-read Cross-Needle meter lets you read SWR, forward (300/3000W) and reflected power (60/600W) simultaneously.

MFJ's exclusive TrueActive™ circuit gives you true peak or average power readings. SO-239 connectors. Use 9 Volt battery and/or 12 VDC or 110 VAC with MFJ-1312D, \$14.95. 6Wx3½Hx4½D inches.

MFJ-836H, \$149.95. Like MFJ-836 but 3, 10, 30 Amps high current ranges.

*Continued from left*

Your antenna can change when you apply power -- insulators break down, traps heat up, capacitors leak -- and your feedpoint impedance may be drastically different from your SWR Analyzer measurements.

MFJ RF ammeters are rugged, read accurately over 1-30MHz in three linear ranges (.3, 1, 3 Amps) and barely perturb the antenna.

Large 3-inch lighted meter. Use 12 VDC or 110 VAC with MFJ-1312D, \$15.95. SO-239 connectors. 6Wx3½Hx4½D inches.

MFJ-834H, \$89.95. Like MFJ-834, but 3, 10, 30 Amps high current ranges.

**MFJ-835 Balanced Line RF Ammeter**  
 MFJ-835 \$129.95  
 Ship Code A

How do you detect imbalance in open-wire or ladder line? By measuring and comparing each feedline wire current -- your feedline is balanced if the currents are equal.

MFJ-835, \$129.95 BalancedLine RF Ammeter™ is two identical calibrated RF ammeters using an MFJ Cross-Needle meter.

Feedline currents are simultaneously displayed on separate calibrated scales in three ranges (.3, 1, 3 Amperes).

Balance is clearly revealed on MFJ's exclusive BalancedBar™ -- when currents are balanced, the dual needles cross in the center -- no matter the actual current.

If the needles cross within the vertical BalancedBar™ the balance is within 10%. If not, you know which line is unbalanced and by how much.

Equal currents in the feeder wires minimize feedline radiation and reduces pattern distortion, RFI, TVI and wasted power. You could lose up to 10% of your power.

Imbalance is due to feedline not being perpendicular to antenna, if one side runs close to metal or is shorter or closer to ground.

The MFJ-836 helps you solve all your unbalanced problems.

Heavy-duty 5-way binding posts for feedlines. Use 12 VDC or 110 VAC with MFJ-1312D, \$15.95. 6Wx3½Hx4½D in.

## Calibrated Clamp-On RF Ammeter

**MFJ-854**  
 \$119.95  
 Ship Code A

MFJ-854 Clamp-On RF Ammeter quickly snaps over wires and cables to measure RF currents flowing in antenna elements, radials, ground wires and on outside of coax.

Tune counterpoises, radials and ground systems. Balance your radials. See how much signal is radiating from your antenna, feedline or ground wire. Study/optimize your antennas for peak performance. Find current peaks/nulls on antennas/ feedlines. Plot current profile, measure and tweak current flow at each antenna element in phased arrays.

Determine your antenna feedpoint impedance, radiated power, power losses and efficiency. Track down RFI-causing currents on coax shield, rotator cable, guy wires, house wiring, telephone and television cables.

Has five calibrated ranges to 3 Amperes including sensitive 30 mA range with linearity compensation to assure accuracy at low currents. It's sensitive enough to use an MFJ SWR Analyzer as the source to drive your antennas.

Less than 1 mA on super-sensitive Variable Range yields usable meter deflection for tracking RFI on household wiring and cables. 1-30 MHz plus. ½ inch diameter cables. 2 ½ Wx5½Hx1½D in.

## Calibrated mini Clamp-On RF Ammeter

**MFJ-853**  
 \$59.95  
 Ship Code A

MFJ-853 calibrated mini Clamp-On RF ammeter accurately measures RF current in antenna elements, radials, ground wires, coax shield. Non-metallic lightweight case minimizes electric field disturbances for accurate

readings -- clamp on mobile whip/vertical. Adjust for maximum radiated current. Determine radiated power/losses. Profile its current distribution -- it's maximum at base and tapers to zero at end.

Use like MFJ-854 to do many of its tasks. 0.3, 1, 3 Ampere ranges. Small 2¼Wx3¾Hx1D in.

MFJ-853H, \$69.95. Like MFJ-853, but has 3, 10, 30 Ampere high-current ranges.

**MFJ-805**  
 \$99.95  
 Ship Code A

MFJ-805 works with mobile installations, ferreting out alternator hash, ignition pulses and microprocessor noise on feedlines and power leads. Isolate cables picking up RFI and

know when you've suppressed the problem. Easy-to-use. Clamp current transformer over suspected cable or wire (up to ¼ in. dia.) to detect RFI causing common-mode currents. 2¼Wx4¾Hx1D inches fits in shirt pocket. Use 9 Volt battery. Usable VLF to VHF. Gain adjustable over 50 dB range.

## Find Power Line Noise Fast!

**Choose** the highly directional 3 element **Yagi (MFJ-856, \$159.95)** for pinpoint accuracy or the compact telescoping **dipole (MFJ-852, \$119.95)** for quick noise finds.

**Walk** or drive around with these **handheld** power line noise meters to search out leaky insulators, loose hardware and corroded ground lines quickly. Track noise right down to the pole, transformer or insulator, or other source.

**Operates** in the 135 MHz region where activity is a minimum and radiation from corona and arcing is far more localized. 0.3 uV sensitivity and wide-range AGC for

noise level meter -- **over 70 dB!** Plug in headphones and hear noise you're tracking or plug in a tape recorder. 2Wx4Hx1.5D in.

Use this ultra-sensitive pocket-sized RFI Detector to track down and eliminate RFI caused by radiating cables and wires. It'll tell exactly which cable is radiating RFI so you can eliminate it with a simple toroid or clamp-on filter.

**Find** RFI generated by consumer devices, computers and office equipment. Eliminate the RFI source and hash, birdies, whistles and transient noises amazingly disappear.

**MFJ-1767, \$79.95.** Add this 3-element beam to your MFJ-852, and turn it into an RFI finder.

# New! MFJ SDR T/R Protection Switch

Turn your SDR into a panadapter to see entire bands on frequency/waterfall displays . . .

An inexpensive wide-band SDR dongle receiver lets you see entire bands on frequency/waterfall computer displays!

**MFJ-1708B-SDR \$99.95** If you want to know where the activity is, who's generating splatter, what's in the DX window, how wide your audio is or what frequencies are clear, it's all right there! While receiving on your transceiver, MFJ-1708B-SDR switches your SDR to your antenna showing the entire band. On transmit your SDR is switched out and grounded to protect your SDR. PTT and a failsafe RF sense switches MFJ-1708B-SDR. For HF/VHF/UHF. Monitor multiple bands with multiple SDRs and a multi-coupler. **MFJ-1708B-SDR-S, \$104.95.** SMA connector for your SDR. **MFJ-1708SDR, \$79.95.** Original model for HF/VHF.

## New B series improvements . . .

The original MFJ-1708 series used one relay and wires to connect the SO-239s. The new B-series uses four relays and connectors on a single pc board. This gives you > 50 dB isolation

at 300 MHz and > 68 dB at 50 MHz. SWR < 1.16:1 at 50 MHz and < 1.75:1 at 450 MHz at the transmit port. Mute output is a selectable short or open to ground. Use "boat anchors" or modern receivers or key a linear amplifier. Receiver input protection prevents

overload from nearby high power signals and from receive to transmit. A hybrid splitter on SDR models reduces loading effect and gives > 15 dB isolation between the SDR REC and XCVR ports to reduce interference. The original MFJ-1708 series is still available.

**MFJ RF Sense Transmit/Receive Switch**  
Switches your antenna from receiver to transmitter using a relay. Shorts your receiver to ground during transmit. Use RF sensing with adjustable delay or PTT line. Has selectable open/short mute.  
**MFJ-1708B \$99.95.**

**Auto switch XCVR between 2 antennas**  
Automatically switches separate transmit and receive antennas on transceivers with only one antenna port. Example: Efficient 75M dipole for XMIT and low noise MFJ loop for receive -- no static crashes!  
**MFJ-1707B \$99.95.**

**MFJ Xcvr/Antenna RF Safety Switch**  
New! MFJ-1703B keeps your expensive transceivers safe from transmitting into absolutely nothing! No more burning up your radio because you forgot to change your antenna switch to the proper setting! Covers 1.8 to 54 MHz. Your transceiver is always hooked up to one of two antennas! Connect two rigs and two antennas and switch to different combinations. Handles 300 watts PEP SSB, handles 150 watts CW. Handy mounting tabs for wall mounting. All metal construction, switches 50-75 Ohm unbalanced lines.  
**MFJ-1703B \$29.95**

**MFJ 2-Position Remote Antenna Switch**  
MFJ's 2-position remote antenna switch uses a single coaxial feedline to feed two antennas, DC power and control signals -- no power/control cable needed. Perfect for switching from HF to VHF -- no more unplugging coax from antennas just to switch frequencies. Covers 1.8 MHz-150 MHz, 1500 Watts. 50-75 Ohms. 4Wx2 5/8"H x 1 1/2"D" Outside Box fully enclosed, weather Ship Code B protected. SO-239 connectors for XCVR, antenna 1/2. Stainless 1 1/2" tall bracket with U-bolt fits masts to 1 1/2 in. O.D. Inside remote control unit is a tiny 2 1/4"Wx2 1/2"Hx1 1/4" inches.  
**MFJ-4712 \$79.95**

**MFJ-4716 \$89.95** A simple rotary switch lets you select 1 of 6 antennas. All unused inputs are grounded. You can connect a sense line to your transceiver so when it's off, all inputs are automatically grounded. In the OFF position, all inputs are grounded or control is transferred to the MFJ-4716RC, \$39.95, Remote Control.

**MFJ-4726 \$159.95** Select one of six antennas and one of six transceivers in any combination with just 2 easy-to-use rotary switches. Plug in antenna tuner, SWR/Wattmeter or other into its common ports, so it is always connected to the antenna and radio selected. All unused inputs are grounded. When rotary switches are in OFF position, all inputs are grounded or control is transferred to MFJ-4726RC, \$59.95, remote control. Automatically grounds all inputs when you turn off transceiver.

## MFJ Ultrasonic Receiver with parabolic reflector pinpoints power line noise

HF and VHF operation can be affected by noise which makes it hard to hear weaker stations and adds to your fatigue.

Often, the noise is coming just outside your door, from power lines. Power companies are usually very willing to help out with noise issues, but not all companies have the necessary equipment or trained personnel to properly locate nearby noise sources.

MFJ-5008 aids you in locating the noises generated by corona discharge and arcing components. It's an acoustic receiver tuned to the ultrasonic range of 40 KHz -- lets you hear ultrasonic noises generated by arcing connections and corona discharge.

An 18-inch diameter plastic dish gives a narrow beamwidth to pin-point noise sources to less than 12 inches at 50 feet. A short focal point makes the overall front-to-back depth just seven inches. The handle is mounted close so the center of gravity reduces fatigue on the hand from the weight pulling down in front.

An ultrasonic transducer is mounted in a sturdy metal support--reduces dish bending/warping. Target holes built into the dish and aligned with the beam helps pinpoint the noise sources on the pole.

Receiving electronics are mounted on the handle for convenient operation. Use 9-Volt battery (not incl.). Receive noise generated by power lines from several hundred feet away. 3.5 mm jack for stereo/mono headphones. 20 1/2 W x 19 1/2 H x 7 D". Weighs 2.5 lbs.

MFJ-392B, \$24.95. MFJ's Communication Headphones are the perfect companion for your MFJ-5008.

Not only can you use MFJ-5008 to find power line noises, you can also listen to a wide range of nature! In ultrasonic range bats, birds, and insects can be heard.

MFJ SoundGUN™ Parabolic Audio Receiver New! MFJ-5007, \$199.95. MFJ SoundGUN™. Like MFJ-5008 but for audio, includes MFJ-392B. For professional surveillance.

**signal.** Signals used for measurement can come from an antenna analyzer or any other generator that will supply at least 1 Volt peak output into the load. It has a built-in switchable 50 Ohm load (250 mW max) so the use of an external load and BNC TEE is not needed in most tests. MFJ-222 will read the frequency of the signal so generators with only a coarse or no frequency readout can even be used. Set-up is simple. Plug in the signal generator output to IN, connect the Reference OUT to the input of the network and the output of the network to UNKNOWN IN. Turn it on and read the phase shift and the frequency. A bright two line LCD display allows precision readout of the phase from -180 to +180 degrees without interpreting an analog meter or guessing at the phase polarity. With low power components, it will operate many hours on a single 9V battery or with optional AC adapter MFJ-1312D, \$15.95. # MFJ-4416C Super Battery Booster

Keeps your transceiver operating at full efficiency and performance by eliminating low or marginal voltages in the mobile environment . . .

MFJ-4416C  
**\$179<sup>95</sup>**  
 Ship Code A

MFJ-4416C includes Anderson PowerPole™ connectors and high-current 5-way binding posts for both the DC input and regulated output. An internal 30-amp input fuse protects the unit from excess output current demands.

There are also selectable limits on the minimum voltage that the unit will accept: 9-volts, 10-volts (default), and 11-volts. This protects you from over-discharging a battery and possibly damaging it. Also includes output over-voltage crow-bar protection should regulation be lost.

The external boost enable Input allows remote enabling of the MFJ-4416C. You can either ground a line or connect the line to 4-13 Volts. You can also use an amp key line or ignition source to enable.

The second efficiency enhancement feature is a user-adjustable output voltage control which lets you set the output voltage anywhere between 12- and 13.8-volts.

When setting the output at 12-volts, input voltages greater than 12V will pass through, but the efficiency of the regulator is higher. And lower input voltage means your transceiver will run cooler!

Typically save over 30 watts in heat dissipation during transmit, and even 3-4 watts during receive. So it can actually be good to

let the voltage sag to 12V, then let MFJ-4416B protect from lower voltages. Just 7 1/4"Wx4Hx2 1/8"D" and lightweight at 1.3 lbs.

## Battery Booster Remote Control

Get full remote control capability of your MFJ-4416C Super Battery Booster!

Plus MFJ-4416BRC allows you to monitor battery voltage, battery booster output voltage. You can place the battery booster near your battery or other convenient location.

MFJ-4416BRC lets you turn booster and has a low battery alert on/off. Front panel also features *boosting* and *low battery* LEDs. Four mounting holes make it easy to install. Just plug in Cat-5 cable to connect to battery booster. 5Wx2Dx3H inches.

Today's compact 100-watt HF rigs are designed to operate from about 12-16 volts, with output signal distortion, output power problems, and transceiver reset often occurring when voltage drops below 12 volts.

In the mobile environment, low voltage is caused in two ways:

**First** - even low resistance DC wiring can result in a noticeable voltage drop. For a 100-watt transceiver with a 20-amp typical current requirement, just 1/10th of an ohm resistance in your DC cable and connectors results in a 2-volt drop!

**And second** - when you turn your car off, battery voltage drops from around 13.8 volts to close to 12V after a short period of time. Couple this with any voltage drop in the cables, you suddenly have a problem.

MFJ's Super Battery Booster eliminates low voltage problems by boosting input

## MFJ-4403 Transceiver Voltage Conditioner

MFJ-4403  
**\$119<sup>95</sup>**  
 Ship Code A

### Transceiver Voltage Conditioner

provides reverse, over-voltage, voltage transient and short circuit protections.

MFJ-4403 gives superb noise and ripple filtering and power supply buffering for your base, portable or mobile transceiver.

If you accidentally reverse your voltage connection, the MFJ-4403 protects your transceiver against instant destruction and alerts you with a bright warning LED. Once DC polarity is corrected, MFJ-4403 recovers and operates normally.

Heavy-duty transient suppressor handles

peak currents up to 200 Amps -- it safely protects your transceiver from vehicle and poorly regulated power supply start-up voltage spikes.

Four Farads of ultra high-value capacitors filters off virtually all power supply noise and ripple, and provides power supply buffering so even underrated and marginal power supplies will run your HF transceiver to its full capacity.

For temporary mobile operation -- rental car, weekend trips, vacations, etc. Run your transceiver a full 100 Watts SSB from your 10-15 Amp cigarette lighter socket.

Standard Anderson Powerpole™ connectors are used for the DC input and output. Compact 4Wx3Hx2D inches.

## MFJ Mobile Transceiver Protector

MFJ-4402  
**\$79<sup>95</sup>**  
 Ship Code A

MFJ-4402 protects your mobile rig from many unseen operating problems found in vehicles today. A built-in surge protection diode reduces the chance a high voltage spike will damage your rig due to an alternator failure or jumping off from other vehicles, and it has reverse polarity protection.

Sagging voltages on your vehicle start-up can cause your radio to not power up correctly, to lose memory channels and possibly corrupting your service and set-up menus in your transceiver. When

your vehicle is shut off there are still many circuits that have power on them, so issues like distortion, frequency shifting with modulation or no vehicle start-up happen.

MFJ-4402 will cut your rig off if the voltage gets too low for proper vehicle operation. A delay timer, which is controlled off of the ignition sense line insures that your rig doesn't turn on until the vehicle starts up and normal voltage is reached.

MFJ-4402 connects to your rig with Anderson PowerPoles™ for high-current lines and a bayonet lug to the ignition sense line. A 30A (maximum) fuse protects for over-current or reverse voltages.

Compact 2 1/8"Wx4Hx1 1/2" inches that fits nicely into your vehicle installation.

Everything you need to send great CW from this MFJ Curtis Keyer™ -- easy access front panel controls, all keyer

modes, dot-dash memories, jam-proof spacing, weight control, sidetone, built-in speaker and more. Speed, weight, tone and volume controls, and tune, semi-auto and on/off switches are on the front panel.

A dual paddle key such as the MFJ-564, lets you use the iambic mode. In this mode, you can insert a dot before a dash finishes or insert a dash before a dot finishes. Also, squeezing both paddles generates alternating dots and dashes. This lets you send characters such as C, K, and R with a single squeeze. It turns an inexperienced fist into a professional.

You can use the automatic mode with a single or dual paddle. You automatically generate dots and dashes by pressing the paddle.

You can switch into a semi-automatic "bug" mode to generate dots automatically and dashes manually. Or you can use a "straight key" and manually generate your own dots and dashes.

You get dot-dash memory, self-completing dots and dashes, jam-proof spacing and instant start keying.

Select Type A or Type B keying to match your sending style.

Weight control lets you adjust your dot-dash space ratio to

# Save Your Voice with the MFJ Contest Voice Keyer

Use 8-pin modular or 8-pin round microphone plug!

Let this MFJ Contest Voice Keyer™ call CQ, send your call and do contest exchanges for you in your own natural voice!

Store frequently used phrases like "CQ Contest this is AA5MT", "You're 59" ... "QTH is Mississippi" and more! Contest by pressing a few buttons and save your voice.

You can record and play back five natural sounding messages in a total of 75 seconds. EEPROM technology keeps messages stored for up to 100 years -- no battery backup needed.

You can repeat messages continuously and vary the repeat delay from 3 to 500 seconds. Makes a great voice beacon and calling CQ is so easy. A receive audio jack lets you record and play back off-the-air signals -- great help if you didn't get it right the first time! No more "Please repeat".

A playing message can be halted by pressing the Stop Button, your PTT mic button or by your VOX PTT line. A closure to ground

via remote control or computer also halts messages. **MFJ-434B**

Has jack for remote or computer control (using CT, NA, TR or other program and its interface). Lets you select, play and cancel messages.

The MFJ-434B is transparent to your microphone -- your mic's audio characteristics do not change when your MFJ-434B is installed. Dual controls make it easy to tailor audio level to match your voice.

All audio lines are RF filtered to eliminate RFI, audio feedback and distortion. An audio isolation transformer totally eliminates hum and distortion caused by ground loops.

It's easy to use -- just plug in your 8 pin microphone cable and plug the MFJ-434B shielded cable into your transceiver's mic connector. Internal jumpers let you customize it to Kenwood, Icom, Yaesu, Alinco or Radio Shack rigs. Use your station or built-in microphone for recording.

# MFJ Speech Intelligibility Enhancer

...makes barely understandable speech highly understandable!

MFJ

MFJ-616  
**\$189<sup>95</sup>**  
Ship Code B

300, 600, 1200 and 2400 Hz. You can boost or cut each by nearly 20 dB.

**"What did you say?" Can you hear but... can't always understand what they're saying?**

As we get older, high frequency hearing loss reduces our ability to understand speech. Here's why...

**Research** shows that nearly *half* the speech intelligibility is contained in 1000 to 4000 Hz range, but contains a miniscule 4% of total speech energy. On the other hand, the low frequencies, 125 to 500 Hz have most of the speech energy (55%) but contribute very little to intelligibility -- only 4%.

To dramatically improve your ability to understand speech, you must:

**First**, drastically increase the speech energy above 500 Hz, where 83% of the speech intelligibility is concentrated.

**Second**, drastically reduce speech energy below 500 Hz where only 4% of speech intelligibility lies.

The **MFJ-616** splits the audio speech band into four overlapping octave ranges centered at

control and separate 2 1/2 Watt amplifiers let you equalize perceived loudness to each ear so both ears help.

By boosting high and cutting low frequencies and adjusting the balanced control, speech that you can barely understand become highly understandable!

Even if you *don't* have high frequency hear-

ing loss, you'll dramatically improve your ability to understand speech.

*QST* for April, 2001 said...

*"I expected a subtle effect at best, but I was astonished... The result was remarkably clean, understandable speech without hissing, ringing or other strange effects... made a dramatic improvement..."*

# MFJ Noise-Canceling Filters Wipe Out Interference

MFJ-1026  
**\$199<sup>95</sup>**  
 Ship Code B

*Wipe out noise and interference before it gets into your receiver with a 60 dB null!*

Eliminate all types of noise -- severe power line noise from arcing transformers

and insulators, fluorescent lamps, dimmers, touch controlled lamps, computers, TV birdies, lightning crashes, electric drills, motors, industrial processes.

It's more effective than a noise blanker because interference much stronger than your desired signal can be completely removed without affecting your signal.

Works all modes -- SSB, AM, CW, FM, frequencies from BCB to lower VHF.

Null out strong QRM on top of weak rare DX! You can null out a strong local ham or AM broadcast station to prevent receiver from overloading.

Use MFJ-1026 as adjustable phasing network. You can combine two antennas to give you various directional patterns.

Null out a strong interfering signal or peak a weak signal at a push of a button.

**Easy-to-use!** Plugs between transmitting antenna and transceiver. To null, adjust amplitude and phase controls for minimum S-meter reading or lowest noise. To peak, push reverse button.

Use built-in active antenna or an external one. MFJ's exclusive *Constant Amplitude Phase Control™* makes nulling easy.

RF-sense T/R switch automatically bypasses your transceiver when you transmit. Adjustable delay time. 12 VDC or 110 VAC with MFJ-1312D, \$15.95. Measures 6½x1½x6¼ inches.

## MFJ Tunable, Programmable Brick Wall DSP Filter

MFJ's tunable super DSP filter automatically eliminates heterodynes, reduces noise and interference simultaneously on SSB, AM, CW, packet, Amtor, PACTOR, RTTY, SSTV, WeFAX, FAX, weak signal VHF, EME, satellite.

You get MFJ's tunable FIR linear phase filters that minimize ringing, prevent data errors and have "brick wall" filter response with up to 57 dB attenuation 75 Hz away.

Only MFJ gives you 5 tunable DSP filters. You can tune each lowpass, highpass, notch, and bandpass filter including optimized SSB and CW filters. You can vary the bandwidth to pinpoint and eliminate interference.

Only MFJ gives you 5 factory pre-set filters and 10 programmable pre-set filters that you can customize. Instantly remove QRM with a turn of a switch!

MFJ's automatic notch filter searches for and eliminates multiple heterodynes.

You also get MFJ's advanced adaptive noise reduction. It silences background noise and QRN so much that SSB signals sound like FM.

The automatic notch and adaptive noise reduction can be used with all relevant tunable pre-set filters.

Automatic gain control (AGC) keeps audio level constant during signal fade.

### Tunable bandpass filters

Narrow band signals like CW & RTTY jump out of QRM when you switch in MFJ's tunable FIR bandpass filters.

You can tune the center frequency from 300 to 3400 Hz, and vary the bandwidth from 30 Hz to 2100 Hz -- from super-tight CW filters to wide razor-sharp Data filters.

You can use two tunable filters together.

For example, tune one to mark, one to space and set bandwidth tight for a super sharp RTTY filter.

You can tune the lower cutoff frequency 200 to 2200 Hz and the upper cutoff frequency 1400 to 3400 Hz. This lets you create custom filters for voice, data and other modes. Signals just 75 Hz away literally disappear -- they are reduced 57 dB!

### Automatic notch filter

MFJ's automatic notch filter searches for and eliminates multiple heterodynes in milli-seconds. It's so fast, that even interfering CW and RTTY signals can also be eliminated. Selectively remove unwanted tones using the two manually tunable notch filters -- an MFJ exclusive. Knock out unwanted CW stations while you're on CW.

### Adaptive Noise Reduction

Noise reduction works in all filter modes and on all random noise -- white noise, static, impulse, ignition noise, power line noise, hiss.

The LMS algorithm gives you up to 20 dB of noise reduction. Noise reduction is adjustable to prevent signal distortion.

### 15 Pre-set filters, or customize

Select from 15 pre-set filters. Use for SSB, AM, CW, packet, Amtor, Pactor, RTTY, SSTV, WeFAX, FAX or any mode.

If you don't like our pre-set filters, you can program your own -- an MFJ exclusive! Save center frequency/bandwidth,

lowpass/highpass cutoffs, auto/manual notch, noise reduction -- all filter settings -- in 10 programmable filters.

**More MFJ DSP Filter Features** MFJ's tunable Spotting Tone™ -- accurately tunes even the narrowest CW filter.

MFJ's exclusive Adaptive Tuning™ -- tuning rate automatically becomes finer as you narrow bandwidth -- makes narrow filters super easy-to-use.

MFJ's exclusive FilterTalk™ -- sends precise filter settings in Morse code.

Automatic notch with variable aggressiveness, quieter 2½ Watt audio amplifier, speaker switch keeps phones always active.

Manual and auto notch can be used together. Noise reduction, automatic notch & custom filter saved in memory is selected.

Accurate easy-to-use input level indicator, improved manual notch in the CW mode, adjustable line level output, more Mark-Space frequencies and baud rates for data filters and automatic bypass during transmit for monitoring CW sidetone, voice/data by sensing the PTT line.

A push-button bypasses your filter -- lets you hear the entire unfiltered signal. 2½ Watt amplifier, volume control, input level control, speaker jack, Push-to-talk sense line, line level output. Measures a compact 9½x2½x6 inches.

Plugs between your Xcvr or receiver and external speaker or headphones. 12 VDC or 110 VAC w/MFJ-1312D, \$15.95.

Cable Pack, MFJ-5184, \$9.95.

# Indoor Tuned Active SWL Antenna Covers 0.3 to 40 MHz

MFJ invented the tunable active antenna! New technology uses cascode FET/bipolar transistor and a gigahertz bandwidth buffer

MFJ invented the tunable active antenna! Numerous copies have been made without success -- including most recent ones.

**Why?** Because MFJ has made continuous improvements where others have not. MFJ-1020C has been completely redesigned and new technology.

New technology uses a cascode FET/ bipolar transistor and a gigahertz bandwidth buffer.

It improves gain and selectivity, reduces noise and intermod, and is NOT prone to self-oscillations that can severely

damage your receiver.

With the MFJ-1020C tuned indoor active antenna you'll rival reception of outside wire antennas hundreds of feet long and pick up signals loud and clear from all over the world.

**World Radio TV**

**Handbook** says MFJ-1020 is a "fine value . . . fair price . . . best offering to date . . . performs very well

**\$99<sup>95</sup>**

indeed."

MFJ's unique tuned circuitry minimizes intermod, improves selectivity and reduces noise outside the tuned band. You can also use it as a tuned preselector with an external antenna.

Covers 0.3 to 40 MHz including VLF, AM broadcast, all shortwave and all amateur radio bands.

Has Tune, Band, Gain, On-Off/Bypass controls and SO-239 coax connectors. Use 9 volt battery, or 12 VDC or 110 VAC with MFJ-1312D, \$15.95. 6Wx2Hx5D inches. Includes telescoping whip.

## 54" Active Outdoor Antenna

MFJ-1024  
**\$159<sup>95</sup>**  
Ship Code B

**World Radio TV Handbook** says MFJ-1024 is a "first rate, easy-to-operate active antenna . . . quiet . . . excellent dynamic range . . . good gain . . . very low noise factor . . . broad frequency coverage . . . excellent choice . . ."

Mount it outdoors away from electrical noise for maximum signal and minimum noise. Has convenient mounting holes for easy installation.

MFJ-1024 covers 50 KHz to 30 MHz. 20 dB attenuator, gain control, ON LED.

Switch selects two receivers and auxiliary or active antenna. Control unit measures a compact 6Wx3Hx5D inches.

Remote unit has a 54-inch telescopic whip, 50 feet of coaxial line and PL-259

connector. Measures 3Wx2Hx4D inches. Use 12 VDC or 110 VAC with MFJ-1312D, \$15.95.

## Compact 0.3 to 200 MHz antenna

Your ham band only antenna does great on the ham bands . . . but this MFJ all band active antenna will help you hear strong signals from all over the world from 300 KHz to 200 MHz -- including low, medium, shortwave and VHF bands.

Enjoy shortwave newscasts, ship-to-shore, airline, commercial RTTY and others.

It also improves weak noisy scanner radio reception from high to low band VHF -- hear signals you couldn't hear before.

A J-310 FET handles strong signals and noiseless feedback circuit gives you excellent low noise reception. 4.5 GHz MRF-901 transistor lets you receive weak signals well into VHF.

On/off switch, power on LED, SO-239 coax connector and detachable 20 inch telescoping antenna. 9 volt battery or 110 VAC with MFJ-1312D, \$15.95. Measures 3Wx1 1/4Hx4D inches.

## High Dynamic Range Passive Preselector Can't Overload

MFJ-1046  
**\$119<sup>95</sup>**  
Ship Code A

MFJ's new Passive Preselector has extremely high dynamic range! Improves performance of nearly any HF or shortwave receiver/transceiver. Vastly improves most expensive receivers. Especially helpful to broadband front-ends prone to overload.

Protects sensitive receivers from damage (including switching diodes, attenuator resistors) from very strong signals: multi-transmitter, multi-band ops -- contests, field-day, hams, CBers, TV/FM/AM stations.

Eliminates phantom signals by sup-

pressing out-of-band signals causing intermod, blocking, cross modulation. Completely eliminates 2nd order intermod.

MFJ's unique Hi-Q series tunable circuit gives you superb performance.

The tunable series tuned circuit works into a very low impedance formed by broadband toroid transformers.

Has narrow bandwidth, excellent stop-band attenuation, very low loss, constant bandwidth and gain over each band.

Excellent attenuation in adjacent bands.

The entire 1.6 to 33 MHz HF band is covered in five overlapping bands.

An air variable tuning capacitor, 1.8 to 1 tuning range and a vernier reduction drive gives you precision tuning.

Measures 7 1/2x2 1/2x3 1/4 inches.

## Preselector with T/R Relay

Like MFJ-1046 but adds an RF sense transmit and receive switch with adjustable time delay to automatically bypass your MFJ-1048 when you transmit.

Also adds PTT line Transmit and Receive switching. MFJ-1048 connects between antenna and transceiver. Measures 7 1/2x2 1/2x3 1/4 inches.

Use 12 VDC or 110 VAC with optional adapter, MFJ-1312D, \$15.95.

open the band is to different parts of the world.

The more dashes you hear per beacon, the better the quality of propagation and the more robust the band is. If you hear the 100 milliwatt dashes from many beacons you know *it's wide open!*

*In just three minutes* you'll know how band conditions are worldwide.

You don't have to copy CW at 22 wpm to identify a beacon. As you hear a beacon, an LED instantly lights on a world map to show you its location. You can positively identify each beacon -- even if the signal is weak, fluttery or distorted.

The MFJ DX Beacon Monitor has a built-in WWVB atomic clock receiver to provide ultra precise synchronization with the GPS-synchronized beacons. You also may manually sync the Monitor (the Monitor is not a receiver).

MFJ-890 is a self-contained standalone unit. 6<sup>3</sup>/<sub>4</sub>"Wx5<sup>1</sup>/<sub>4</sub>"Hx3D". Use 12 VDC or 110 VAC w/optional MFJ-1312D, \$15.95. No antenna/radio connection required.

MFJ-890UK, \$119.95 (for England).

MFJ's DX Beacon Monitor shows you which beacon you're hearing on your transceiver -- an LED lights on a world map to show you the beacon location and where to point your antenna.

It's fascinating to hear and watch each beacon location light up as they become active across the world. Great for DXers, contesters, ragchewers and SWLers.

The International Beacon Network provides a reliable source of signals for determining HF propagation 24 hours a day.

It consists of 18 beacons around the world. Each beacon transmits on 14.1, 18.11, 21.150, 24.93 and 28.2 MHz. The transmit sequence moves westward from New York across North America, Asia, Pacific to Africa, Europe, South America.

On each frequency, each beacon trans-

mits for ten-seconds -- its call sign at 22 wpm CW and a one-second dash at 100 watts and three one-second dashes at 10, 1, and 0.1 watts.

When each beacon completes a transmission it goes silent on that band and switches to the next higher band.

For more information see Oct/Nov, 1994, Sept, 1997 *QST* and Jan 1999, Sept/Dec 2001, Jan 2002 *Practical Wireless* of U.K.

This super high performance amateur radio ATV

transmitter module is capable of putting out a whopping 4.5 Watts! The RF power output is controlled by an analog potentiometer from near zero output to 4.5 Watts maximum. Current draw varies with power level selected.

Frequency control is provided by means of a digital integer-N, phase locked loop. Dual PLLs provide a frequency locked video carrier and an audio sub-carrier. Transmit frequency is selected via a four position dip switch. Four standard US ATV frequencies 426.25, 427.25, 434.00, and 439.25 MHz on channels 58, 59 and 60.

Video modulation is accomplished by a 12-bit digitally controlled DAC-digital to analog controller. A specially embedded software algorithm controls the modulation depth and pre-distortion level to deliver an ultra-clean video signal to the final RF amp.

High power transmitting over 0.5 Watt

output requires an external heatsink. When provided with an external heatsink, MFJ-8709 can be used for extended key down operation. Reverse polarity protected.

**Excellent Selectivity:** 8 poles of tight IF filtering cuts adjacent chatter and focuses transmitter power where needed.

**Smooth VFO:** No annoying synthesizer jump or obscure keypad commands! Effort-less tuning, custom reduction-drive ball-bearing capacitor.

**Powerful audio:** Big audio -- even in noisy locations from a special Signetics audio chip and rugged 3 inch speaker. One Watt

# TNC-X -- An Inexpensive TNC for VHF Packet and APRS!

MFJ

TNC-X is a low-cost, low power TNC currently deployed in thousands of locations all over the world. Just connect your FM radio and your computer and the world of digital packet radio is yours to enjoy. TNC-X is a self-contained TNC, not a computer sound card interface that ties up your computer's resources.

MFJ-1270X  
**\$129<sup>95</sup>**  
 Ship Code B

TNC-X is a KISS mode TNC. It works with every packet radio software program that supports KISS mode. These days, that makes it compatible with almost everything in packet radio. And unlike some other TNCs, you never have to worry about it "accidentally" falling out of KISS mode. KISS mode makes it extremely simple to use. There are no complicated menus of parameters to adjust. You just plug it in and it works!

TNC-X is a genuine USB TNC, not a TNC with an outboard serial to USB converter added to it. As a result, when you plug it into a USB port on your computer, it derives its power from the USB port. You need not provide a separate power connection. For those who want to use it with older computers, it also supports a separate conventional serial port. You can even switch back and forth between USB and serial if you like. TNC-X's USB port works with all major computer operating systems including Windows (all versions after 95, including 64-bit), Mac OS X (as well as Mac OS 8 and 9), and Linux.

TNC-X beats the competition in decoding packets from poorly adjusted transmitters. You get a built-in active audio filter in front of the TNC's modem to clean up analog signals before they are digitized, substantially improving demodulation performance. TNC-X also supports true software DCD. You can leave the squelch of the radio connected to TNC-X open for very fast transmit/receive turnaround times.

TNC-X is a natural for emergency communications and is being used in this application across the country and around the world. It is fully compatible with Winlink 2000 both on the server side and

TNC-X is perfect for APRS™. It is fully supported by virtually every APRS™ mapping program in use today. It provides a truly low cost mechanism for mapping the locations of other amateur radio stations.

TNC-X contains an expansion header that allows you to add daughter boards to provide entirely new capabilities. Add an X-Digi board and convert TNC-X into a modern, remotely configurable digipeter (see below). With TNC-X, you only buy the capabilities you need. You don't pay for features that you will never use. Measures 5 1/8" x 1 1/2" x 3 1/4" AD".

**Plug-and-play** . . . it's compatible with all of MFJ's TNC to radio cables (below), as well as MFJ's A to B USB cable.  
**MFJ-1270DG, \$29.95.**

**X-Digi** is an inexpensive board that plugs into TNC-X's expansion header and makes it into a stand-alone full-featured digipeter. It supports the new WIDEN-N paradigm for APRS™ digi-peters, or can act as a general purpose digipeter.

**When** operating as an APRS™ digipeter, X-Digi has the capability to trap and eliminate duplicate position reports, substantially reducing congestion on APRS™ frequencies. It has the capability of sending up to four different beacons, each with its own text, and each at its own transmission interval.

**Together** TNC-X and X-Digi consume very little power (less than 25 mA). In a pinch, you can power TNC-X and X-Digi all day long on a 9-Volt battery

**X-Digi** is remotely configurable over the air. You can change virtually every digipeter parameter without ever having to revisit your remote site. Password protection ensures that no one else will tamper with your digi's settings.

**Your** X-Digi will never be obsolete. New firmware will be made available for free by the internet. No special equipment is required to flash the updated code into your X-Digi.

# Ultra-Strong Stainless Steel Telescopic Antennas

## 5 models . . . 17, 12, 10, 8 or 4.5 ft. Extended

**The tough, rigid base makes the difference, extra durable! 7/8 Diameter x 2 3/4 long base Solid Chrome-plated brass with 3/8-24 threaded stubs**

MFJ's premium stainless steel telescopic whips are the perfect choice for building collapsible multi-band dipoles, mobiles, portable and base antennas.

They are great for traveling, mini DXpeditions, vacations, etc.

They can also be used to replace your current automatic screwdriver whip for a more highly efficient fixed mobile operation.

Rigidly collared at the base, stronger than plated brass, and impervious to rust and corrosion, they stand up to the forces of nature and the rigors of portable operation where others might fail.

With four models to choose from, select the ideal length for the frequencies you need to cover.

The base of each whip features a standard 3/8-24 threaded mounting stud for installation on mobile or fixed antenna mounts like MFJ's lip mounts, magnet mounts, tripods and dipole mounts. The tough, rigid base makes the difference for an extra-durable and long-lasting antenna system.

For 1/4 Wave verticals, use MFJ-342T or MFJ-344 mounts. For dipoles, use two whips with the MFJ-347 dipole mount.

See pg. 61 for 3/8-24 mounts.

## HF Portable/Mobile Manual Screwdriver Antennas

**MFJ's Manually Tuned Screwdriver Antennas let you operate all bands between 80 and 6 Meters continuously including all WARC bands and the new 60 Meter bands (\*depends on model). It far outperforms other HF compact antennas!**

MFJ's new **Manually Tuned Screwdriver Antennas** let you operate all bands 80-6 M continuously including all WARC bands and new 60 Meter bands (depends on model).

An extra long 10 foot (19" collapsed) whip lets you really get out and work rare DX! 4 1/2 foot (23" collapsed) stainless steel whip is included for mobile. Each unit has a highly efficient loading inductor.

For highest Q, the coil is wound with heavy gauge wire with wide spaced turns on a mostly-air core. A tuning sleeve electrically removes turns to eliminate detrimental self-resonance effects. The tuning sleeve is on the low impedance side of the coil to minimize power robbing and detuning stray or hand capacitance. Frequency stays put after you tune it. A separate movable sleeve adjusts frequency. A nylon-tipped thumb-screw locks sleeve. Wing nut lets you connect a matching capacitor or inductor for 1:1 SWR.

Use 3/8x24 mount. 200Watts PEP. Add coax, connect ground/counterpoise.

### Portable Manual Screwdriver Antennas

MFJ-1661 covers 40-2M with 10 foot whip. Covers 6-20 Meters with 4 1/2 foot whip. 12 inches long by 2 inches in diameter. Weighs one pound.

**TH-100A-HP . . . 3.4-28 MHz . . . 1.5 kW PEP . . . Pittman 12V Commercial Motor . . .**

**TH-100AHP** provides continuous coverage from 3.4 to 28 MHz with the 6' whip. **TH-100A-HP** provides continuous coverage from 3.4 to 28 MHz with the 6' whip. This is, without a doubt, the best built, best looking, best performing and highest power motorized antenna for its size and design on the market.

Pre-installed sensors lets you add one of the auto controllers below.

All CNC machined antenna components are either aircraft aluminum or stainless steel and blue-printed -- (you can take 100 antennas apart, mix them up and then reassemble them and they will all work the same!).

**Get the Package Deal!**  
**TH-100A-HPKG . . . \$579.95**

Includes 100A-HP antenna, 6' whip, MT-1 bracket with whip quick-twist disconnect, 21' RG8X coax, seal, 20' control cable, manual switch, ferrite decoupling core, matching coil, fuseholder/fuse, 3/8-24-1/4 stud and silicone dielectric compound.

Our coil form is 2" diameter and made of fiberglass. Other antenna builders know fiberglass is better but they choose not to use it because of expense and difficulty in machining.

We use 14 gauge wire for high power capability wound at eight turns an inch for maximum efficiency. The decoupler is CNC machined for tight tolerances with custom fingerstock designed to contact three turns of coil all the time with over 25 pounds of combined contact pressure. You can run up to 1.5 kW PEP trouble-free.

**TH-100A-HP** comes with the Pittman 12 Volt commercial grade gear motor for the best performance. The motor is very durable and extremely quiet while receive tuning.

**TH-100A-HP** has a Lexan™ Weather Shield -- this is the same stuff used on racecar windshields and even used to make bulletproof win-

dows. Uses Powder Coat Paint System -- Folks this is not spray paint in a can. You get a finish that looks as glossy and will last as long as the paint on a new vehicle!

That's just some of the effort going into a Tarheel. You won't be disappointed -- we GUARANTEE it!

**TH-MT1, \$119.** Stainless steel outing bracket kit includes: bracket with SO-239 and three U-bolt sets.

The Little Tarheel, when properly installed on your vehicle, will provide continuous coverage from 7.0 to 54 MHz with the supplied whip. The Little Tarheel II will provide continuous coverage from 3.5 to 54 MHz with the supplied whip.

Both antennas, like all of our motorized antenna models are built to meet the highest standards but in a much smaller size. In this case, Dynamite really comes in small packages!

Sensors are already preinstalled so you can add one of the auto controllers below. Little Tarheels are designed for the ham who wants to enjoy HF mobile but not interested in a huge antenna on the car.

## Portable 3-element 2-Meter beam

MFJ-1763 **\$54.95**  
Ship Code B

Unique design lets you set it up or take it down in seconds! Elements simply screw into the boom. Easy to store and sturdy enough to use as your base antenna.

Center mount it and use it vertically on FM or horizontally for SSB. By rotating it you can minimize QRM. You can also mount it vertically or horizontally on the leg of a tower . . . great for Packet and *PacketCluster™*.

Compact 2 3/4 foot boom gives you calculated gain within 1 dB of a four element Yagi with a boom nearly twice as long. Extra thick elements maintain high gain and directivity over virtually the whole 2-Meter band. Ferrite choke balun gives excellent feedline decoupling. Coax coupling is further reduced by mounting the SO-239 connector behind the reflector.

Weights just 2 lbs. Boom is 30 1/2"x1 3/4"x1 1/4" in. Mounts easily to mast or tower leg with single included U-bolt. Mast not included.

## Stacked 2-Meter 5/8 Wave

# Collinear Array and End-Fed Zepp Antennas

2-elements, 2 dB gain ... 4-elements, 4.5 dB gain ... Very Quiet ... Handle 1500 Watts ...

## When Radio was King ...

These classic high-performance antennas give you a powerful, booming signal, need just two trees are updated with stronger, more durable materials, adapted to simple, direct coax feed to make them hang-and-play.

### Two and Four Element Arrays

**MFJ-62XX** single band two half-wave element collinear array gives you nearly 2 dB gain -- about 150% power gain -- and twice the receiving capture area of a half-wave dipole. They have direct coax feed and low SWR across the entire band.

The **MFJ-64XX** four half-wave element collinear array gives you a whopping 4.5 dB gain -- about 300% power gain. You get four times the receiving capture area of a half-wave dipole -- you'll hear DX you've never heard before! They require a balanced line tuner or a tuner with balun.

## Hang and Play™!

Virtually hang and play™ when you receive them. No cutting, soldering, tuning, or trimming needed. Follow easy set-up instructions and you're on-the-air!

They are completely assembled and include super strong custom fiberglass center insulators, authentic glazed ceramic end insulators, heavy duty 7-strand, 14 gauge hard copper element wire and an extremely strong, solderless, crimped construction.

With larger capture area and power gain, you'll hear & work more DX than ever before!

A pair of these at right angles can provide worldwide coverage. These arrays radiate bi-directional perpendicular to the wire and handle full 1500 Watts and reduce noise up to three S-units below verticals.

**Feedline** and stub simply hangs from antenna and is bent at the bottom or pulled away at an angle to make it convenient.

## 1/2 Wave End-Fed Zepps

When an end-fed antenna is desirable or when a center-fed antenna is not possible or convenient, these hang and play™ end-fed Zepp antennas provide excellent no-compromise performance. MFJ's end-fed Zepp is a completely assembled single band half-wave antenna. Designed for direct coax feed and handles a full 1500 Watts legal limit with low SWR. Hang and Play! Just follow the easy installation instructions -- no cutting, soldering, tuning, or trimming. They radiate in a wide broadcast pattern. Feedline/stub can be "bent" at bottom, pulled away at an angle. Super-strong fiberglass feed point insulator, glazed ceramic insulator, heavy-duty 7-strand, 14 gauge hard copper wire, extremely strong solderless crimped-construction. Super-strong custom fiberglass SO-239 mount provides stress-relief for the ladder line.

**Engineered** from the ground up, innovative new antennas by K1BQT break traditional OCFD design barriers to deliver wider bandwidth, lower SWR, solid gain, and full-frequency agility without a tuner!

**How good are they?** W4ILV bought an MFJ-2012 and wrote EHAM, "... the best wire antenna I've ever used!" **We think you'll agree, and here's why:**

**Highest Efficiency.** Full-sized radiator with Matchmaker™ feed block that tests over 98-percent efficient. *All your power gets radiated!*

**Best Match.** NEC-modeled element delivers the same feed-point impedance on every band. Innovative new transformer designs

yield exact ratio needed for a great match.

**Super Balun.** OCFDs need good baluns to block feedline radiation. Built-in bifilar-wound Guanella current-choke has over 30-dB of common-mode rejection on all bands. Kills pattern irregularities, RFI, noise.

**Real Gain.** Delivers a 6-dBi ground-reinforced dipole pattern on the fundamental and a 9-dBi full-wave cloverleaf on the second harmonic. You get an amazing (up to) 11.5 dBi peak gain on higher bands.

**Height Compensation.** Element feedpoints are compensated for typical mounting height, so you always get the lowest possible SWR on all bands!

**Frequency Compensation.** Normally, a OCFD cut for 3.85 MHz resonates on 7.7 MHz. Our unique OCFD element design resonates at mid-band on both 75 and 40!

**Built to Last.** UV-resistant marine-ABS feedblocks, stainless hardware, and Teflon® SO-239 connector ensure maximum protection from the environment.

**Easy-to-Install.** Installs in flat-top or inverted-V set-up, feedblock has attachment points for tower or tree support. Suggested installation height is 35-70 feet.

**Low Cost.** Outperforms multi-band vertical antennas by a wide margin for an unbelievable fraction of the cost!

If you're headed for the hills or off to the shore, MFJ's BigEAR™ portable HF antenna sets a new standard for toughness, simplicity and QSO grabbing!

Efficiency is the key to launching a big signal in remote areas and BigEAR™ does it so well you might forget you left home!

The secret lies in MFJ's incredibly strong and weather-resistant stainless-steel telescopic whips -- a whopping 34' span, twice the length of other portables.

Add a robust 45-degree center block and our unique Hi-Q matching system and you have a "pair of ears" that digs out the weak ones that the other guys miss.

# MFJ Telescopic Fiberglass Masts

## Lightweight Telescopic Portable Masts -- 20-43 feet!

Just pull out each section and twist to lock. These portable, temporary telescopic fiberglass masts extend to the sky! Select from 20 to 43 feet, 5 models.

Each mast collapses to an acceptable height for true portability. These fiberglass masts are also super lightweight and with high strength. Weight is not a factor -- the largest mast, MFJ-1917 weighs just 7.7 lbs. Twist and Lock sections allow quick pull-up and take-down.

Use them while traveling, camping, from hotels, hamfests, field day, DX-peditions. MFJ-1917, the largest mast can be used for a full-time permanent wire installation or small, lightweight beam or vertical.

Put up a full size inverted Vee, dipole or vertical antenna in minutes and get full size performance and the height you need to QSO with anyone, anywhere.

Use multiple telescopic masts to construct other types of antennas like loops, quads, rotatable dipoles even beams. The ideas are endless!

### MFJ-915 RF Isolator

#### Stop RF from traveling on coax lines

MFJ-915

\$29.95

Ship Code A

MFJ-915 RF Isolator prevents unwanted RF from traveling on the outside of your coax shield into your expensive transceiver.

This unwanted stray RF can cause painful RF "bites" when you touch your microphone or volume control, cause your display or settings to go crazy, lock up your transceiver or even turn off your power supply. In mobile installations, stray RF can be even more drastic and harmful -- it could cause your car to do funny things or even (tragically) blow your automobile's computer system. Clear up these problems, plug an MFJ-915 RF Isolator between your antenna and transceiver and then relax. Heavy-duty weather protected PVC housing is just 5"Wx2 inches in diameter. Handles full legal limit, 1.5 kW. Covers 1.8-30 MHz.

# MFJ 160-6 Meter Antenna

MFJ

*Operate all bands 160 through 6 Meters at full 1500 Watt with this self-supporting, 43 feet high performance vertical! Assembles in less than an hour -- low-profile blends in with the sky. Neighbors won't even know it's there!*

Entire length radiates to provide exceptional low angle DX performance on 160-20M and very good performance 17-6 M. Shorten by telescoping down for more effective low angle radiation on higher bands.

Wide-range automatic or manual tuner at your rig easily matches this antenna for 160-6M. There's no physical tuning adjustments on antenna -- simply put it up!

Optimized balun design allows direct coax feed with negligible coax loss (typically less than 1/2 dB from 60 to 6 Meters, less than 1 dB 160-80 Meters with good quality low-loss coax).

With just 2 square feet wind load, the fully self-supporting MFJ-2990 -- no guy

wires needed -- has the lowest wind-loading and lowest visibility of any vertical antenna! The key is a six foot section of tapering diameter stainless steel whip that flexes in strong wind instead of stressing the bottom sections. Its 2-inch O.D. and .120 inch thick walled tubing bottom section makes it incredibly strong -- it'll stay up!

Weights 20 lbs -- easily put it up by yourself because its corrosion resistant 6063 aircraft aluminum tubing and stainless steel construction make it light and super-strong.

You can easily assemble it in an hour! Ground mounting lets you completely hide its antenna base in shrubbery. Includes ATB-65 high-strength antenna mount. Requires ground system -- at least one radial. More extensive ground system will give much better performance.

This very low-profile antenna is perfect for stealth operation in antenna restricted areas. Hide it behind trees, fences, buildings, bushes. Use it as a flagpole. Telescope it down during the day. Put it up at night and take it down in the morning before the neighbors even notice!

Quick and easy installation makes it great for DXpeditions, field day and other portable operations.

## MFJ 50-75 Ohm Transformers

Dipoles raised above close proximity to ground become 75-Ohm antennas. Tempting as it is to correct this mismatch in the shack with a tuner, why not fix it at the source? These low-cost, no-tune 50-75 Ohm transformers can also be used to match equipment into low-loss 75-Ohm cable-tv coax, or reverse connect them to match 35-Ohm verticals and yagis. 1500 Watts PEP SSB/CW, ICAS 1.8-50 MHz. 100% shielded indoor.

Low insertion loss (0.05 dB), large binocular ferrite core, silver plated Teflon<sup>®</sup> jacked winding, Teflon<sup>®</sup> SO-239s. Use weatherproof MFJ-2924R for outdoors. "Must have" additions to your RF tool kit!

## MFJ All-band Ground Radial Kit

All-band ground radial system kit for the MFJ-1932

\$34.95  
Ship Code A

MFJ-2990 and other vertical antennas requiring a radial system. Convenient and effective, it provides the necessary return path for ground currents to reduce ground losses.

Consists of 2 sets of 4 radial wire assemblies giving a total of eight 14 foot radial wires. Each has a 1/4" ring lug for attaching to the antenna ground point. Each end of the radial wires has a solder lug for staking the wire end.

## 1.5kW 80/160M high-efficiency Matching Network

MFJ-2910 improves efficiency on 160 and 80 Meters for the popular new 43-foot all band vertical antennas by eliminating SWR-related coax and unun mismatch losses. When fed with a 1:4 unun, the 43' antenna has a reasonable compromise SWR on 60-10 Meters. However, at 160/80 Meters it is virtually impossible to match this antenna because of the low radiation resistance. If you are using low loss coax, you will lose much power in the coax and unun due to bad antenna mismatches. Installed at the base of the 43' vertical, AV-6110 will significantly eliminate these losses and put 160 and 80 Meters back within the tuning range of the tuner inside the shack. Includes high-voltage insulated base tube, remote power injector with switch for 160, 80 Meters and off positions. Handles 1.5kW. Matching box mounted in a rugged, weather-resistant PVC housing. Fits at forty-three foot antenna base, just 3Wx16Hx3D inches.

### 600 Watts 80/160 Meter Matching Network

MFJ-2908, \$249.95. Has all features of the AV-6110, but handles 600 Watts on 80, 300 Watts on 160M. 3Wx11Hx3D".

## 160 Meter Tuner Range Extender for 43' Verticals

MFJ-2904 43" vertical antennas are very popular. However, on 160M, these antennas have a very high reactance and high voltage at the feedpoint. Tuning with a tuner results in maximum efficiency 80-10M, but conditions at 160M present a challenge for most tuners. To get around this problem, add the range extender to the base of the antenna to increase 160M matching capabilities. Reduces reactance and puts antenna in range of the auto or manual tuner. Damaging high-voltage currents are reduced -- preventing tuner damage. 1.5 kW. Weather-resistant PVC, ceramic feedthroughs for input/output. 3 1/2"Wx3 1/2"Hx11D". Use MFJ-998RT/MFJ-994BRT or other tuners.

MFJ-2902, \$59.95. Like AV-6104, 300 Watts, 5-way binding posts for in/out. 3 1/2"W x 3 1/2"Hx7D". Use with MFJ-926B/927/993BRT auto tuners or manual tuners.

## Universal Vertical Tilt Base

A unique design allows this tilt base to fit most vertical antennas with or without base bracket. Pre-punched hole makes it easy to mount many different type of verticals. Fits Hygain's AV18VS/ 14VS/18AVQ/680/640/620/AV-6160, Cushcraft R8/R9, MFJ-1796/1798/2990 and others with tube bases or masts up to 2 1/4" OD. Mount one side of the tilt base to the mast and the other to the base. No climbing a ladder -- raise antenna up/down easily before severe weather by yourself -- just walk it up or walk it down. Ground radial holes also provided. 1/8" thick aluminum. Includes (4) 2 1/4" U-bolts, (4) 1 1/2" U-bolts, mast saddles and stainless steel nuts/bolts.

## MFJ HexBeam Antenna

**New!**

**Six stacked Monobanders!**

**MFJ-1856**  
**\$649<sup>95</sup>**

6 feet tall, 17 feet turning radius

**The only three element hexbeam in the world that hams can buy!**

**Run with the big guns and pay far far less!**

The MFJ-1856 is **six** individually stacked monoband yagis -- *all* on a single feedline!

Each yagi is optimized for maximum performance. You'll get the same high gain and nearly equal front-to-back ratio at far, far less than half the price.

Works great as low as 20 feet.

Full size elements, no lossy traps or coils, wide bandwidth and low swr across each band gives you the best possible performance -- no tuner needed.

A single feedline lets you instantly jump to where the action is on any band! Never switch antennas or tune -- save valuable time and increase your contest score.

QSO on one band and monitor many other bands with multiple receivers or SDRs and a multi-coupler!

It weighs only 30 pounds and

has a short 17 foot turning radius.

Its small windload, light weight and small footprint makes it ideal for a small rotator like hy-gain's CD-45II.

Instead of an expensive tower, all you need is a guyed push-up-pole.

Exceptionally strong *symmetrical fiberglass construction* withstands the harshest weather conditions. This lessens the effect of rain, wind, snow and ice -- gives you years of reliable DX.

See [www.mfjenterprises.com](http://www.mfjenterprises.com) for full performance specifications.

Exclusive distributor of

M&P Pro grade connectors available

**Do it for engineering excellence** and superior attention to detail in the best European tradition! *State-of-the-art manufacturing facility* specializes in premium-grade products for most demanding installations.

**Advanced M&P product features include:**

- \***Exclusive 24-spool braiding machines** lay down 50% more conductor crossovers per inch than normally available. This innovation yields lower leakage specs and exceptionally tight bend-radius performance.
- \***PE-coated copper-foil shielding** delivers much greater conductivity, physical flexibility and industry-leading leakage suppressed -105 dB or more. Noise is a huge problem, and we go the extra mile to lock it out!
- \***M&P's exclusive foam-expanded three-layer PE dielectric** seals out moisture to prevent loss and to ensure low SRL across the cable's entire operating range for years to come.
- \***Select from 99.99% pure electrolytic annealed bare copper** center conductors for fixed applications, or go with annealed copper-clad aluminum when weight is a factor (*Airborne Series*).
- \***Choose between highly flexible UV-resistant PVC jacketing** for easy handling or trample-resistant UV protected PF for more difficult environments. Robust, flooded, dual-jacketed cables are also available for direct-burial or above-ground runs in difficult terrain.

## M&P versus LMR Isolation, Copper Foil and PE Dielectric Comparison

<b>Isolation</b>	M&P Cables have greater than 105 dB of isolation shielding.	LMR <sup>®</sup> cables have greater than 90 dB of isolation shielding
<b>Copper Foil Shielding</b>	M&P uses copper foil with Polyethylene coating and copper outer braid which does not set up galvanic corrosion problems over time. PE coating also reduces the chance of the copper foil breaking when flexing during install and over time.	LMR <sup>®</sup> uses aluminum tape and tinned copper. Galvanic corrosion can form over time between aluminum and tin plating that can cause deterioration of the aluminum, tin and tin plated copper wire. Deterioration can cause noise to be generated in the cable.
<b>Polyethelene Dielectric</b>	M&P Foam PE Dielectric: High pressure dry nitrogen gas, physical injection dielectric allows high expansion, high velocity factor up to .87 and resists aging well. Foam between 2 protective layers, bonded Polyethylene greatly prevents moisture incursion.	LMR <sup>®</sup> Foam Dielectric: Closed cell, dry nitrogen. Multi-laminar aluminum composite tape bonded dielectric is a second moisture barrier unlike M&P's superior triple layer skin foam skin dielectric.

LMR<sup>®</sup> is a registered trademark of Times Microwave Systems.

### What is the RemoteShack™ controller?

RBC-212 is a remote base controller equipped with two link input ports, one radio control port and two multifunction ports each on the AUX and RS-232 ports. The TELCO link port allows connectivity from VOIP services such as Vonage, MagicJack, AT&T or a standard telephone line.

Audio in/out link port allows connection to an audio source such as Skype, or an FM radio link. Both links can be connected simultaneously for redundancy.

With the optional plug&play cable kit, installation is accomplished in minutes with only mic gain to adjust. Simply connect the radios' serial and accessory ports to the RBC.

Connect a telephone line to the RBC. Call the telephone number connected to the RBC with your cell phone. The RBC will auto-answer and connect you to your radio. It's that easy!

When RBC answers, you will be greeted with a high quality female voice. "Enter your passcode". After you enter your 4-digit DTMF passcode, you will be informed of the remote base status . . . "Welcome. Remote Base Ready! 14.1875 USB".

At this point you will be in receive mode and monitoring the frequency. You can directly change the frequency at any time or scan the bands using different scan speeds.

Each RBC comes with a code "cheat-sheet" to operate your radio and other equipment remotely.

### Send DTMF commands from your cell phone or laptop remotely

Receive high quality voice confirmation responses.

AMERITRON's new ALS-1306 is a 1.5-54 MHz solid state near legal limit™ FET no-tune Amplifier -- get 1200 Watts PEP output on all bands, including 6-Meters. Instant automatic bandswitching! No tuning, warm-up or tubes to baby, no fuss!

ALS-1306 reliability is insured by using eight rugged MRF-150 power FETs. They are mounted on the dual heavy duty heat sink and properly arranged to spread out the heat over a large surface. This is something that other amplifiers using a single power device cannot do. Some FETs actually are a package of several transistors in one large case. This concentrates all of the heat in one small package. They not only are more difficult to cool, if one transistor fails, they all have to be replaced.

The ALS-1306 RF deck operates at 50 Volts for efficient, low distortion linear RF power service. It's cooled by a whisper quiet cooling fan. Fan speed is regulated by temperature sensors, assuring minimum noise for adequate cooling.

**1200 Watts SSB Output Power Covers 1.5-54 MHz (HF+ 6 Meters!)**

ALS-1306 runs up to 1200 Watts of clean SSB output power (just 100 Watts drive gives you the full rated 1200 Watts output) for continuous coverage between 1.5-54 MHz. 10/12 Meters is already included.

Operator-friendly layout fits nearly any station configuration. The attractive desk-top amplifier unit weighs only 22 pounds. Compact 10Wx6½Hx18½D inches.

SWR Protection prevents amplifier damage if you switch to a wrong band, use the wrong antenna or have a high SWR. Over-power protection enables if output forward power or reflected power exceeds a safe level.

Output power is automatically reduced to prevent amplifier damage by controlling ALC to exciter.

Be prepared to be amazed at the beautiful workmanship of this finely crafted piece of electronic art! It's another beautiful, yet powerful Ameritron Amplifier!

LED-illuminated Cross-Needle SWR/Wattmeter lets you read SWR, forward and reflected peak power simultaneously. You also get ALC, SWR, PA balance and current metering with LED backlight. An Operate/ Standby switch lets you run "barefoot", but you can instantly switch to full power if needed.

# AL-811 . . . 600 WATTS . . . \$999!

*More hams use Ameritron AL-811 amplifiers than any other amplifier in the world . . . The AL-811 has earned a worldwide reputation for legendary quality, flawless performance, proven reliability and superb customer service . . .*

**Now with LED Lights!**

Ameritron's AL-811 linear amplifier gives you plenty of power to bust through QRM!

You get a quiet desktop linear that's so compact it'll slide right into your operating position -- you'll hardly know it's there . . . until QRM sets in. And you can conveniently plug it into your nearest 120 VAC outlet -- no special wiring needed.

You get three tough 811A transmitting tubes, extra heavy duty power supply, all HF band coverage, pressurized ventilation, tuned input, dual illuminated meters, adjustable ALC and much more for an incredible \$999!

*The First 600 Watts makes the difference*

The AL-811 gives you 600 Watts PEP output -- that's nearly 2 full S-units over your bare-foot rig. That could mean the difference between hearing, "You're Q-5 armchair copy" and "Sorry, can't copy you, too much QRM."

Now you won't have to stand aside while the big guns steal your DX. You'll log some of those stations first.

*All band, all mode Coverage*

AL-811 covers all HF bands. No compromise on WARC and most MARS bands -- you get a 100% rated output.

Operate AL-811 on all modes. Get 600 Watts output PEP SSB and 500 Watts output CW. You even get 300 Watts on continuous carrier modes like RTTY, SSTV, and FM.

The low cost 811A tubes resist failure because . . . First, they're constructed with widely spaced elements that minimize the chance of elements touching and causing a short -- even if the plate gets hot enough to melt.

Second, they use a directly

heated thoriated tungsten filament cathode that prevents the electron emitting layer from instantly stripping off -- even if mistuning causes a sudden, severe current overload.

The Ameritron AL-811 is excellent for the newcomer

load. That's excellent high voltage regulation!

Rectifier diodes are rated for a massive surge current of 200 amps-- won't blow even if you accidentally short the high voltage supply.

Wire wound, 7 Watt, 50 K Ohm equalizing resistors safely protect each filter capacitor -- not 2 Watt, 100 K Ohm carbon composition resistors that can open and cause filter capacitors to explode or fail.

Ameritron's AL-811 power supply is built tough so you get peak performance year after year.

*Tuned input provides excellent load for any rig*

A Pi-Network tuned input provides a 50 Ohm load for your rig. Even fussy solid state rigs can deliver their full drive to the AL-811.

with efficiencies close to 70%. Even a 3:1 SWR load won't damage tubes/tank components.

A ball bearing vernier reduction drive makes plate tuning safe, precise and easy.

A quiet blower pressurizes the cabinet with a large volume of air flow. It keeps the 811A tube temperature well below the tube manufacturer's rating -- even with a key down carrier at 400 Watts output -- without the overwhelming noise of oversized fans.

*Two illuminated LED meters*

Two illuminated LED meters give you a clear picture of your operating conditions so you can tell right away if something is wrong. Long-lasting LED lamps.

The Grid Current meter continuously checks for improper loading. The other meter switches between high voltage and plate current to warn of abnormal conditions.

*Exclusive Adapt-A-Volt™ power transformer*

Too high of line voltage stresses components and causes them to wear out and fail. Too low line voltage causes a "soft tube" effect -- low output and signal distortion.

Ameritron's exclusive Adapt-A-Volt™ power transformer has a special buck-boost winding that lets you compensate for stressful high line voltage and performance robbing low line voltage. Your components last longer and gives you peak performance -- regardless of your line voltage.

*Plus much, much more . . .*

An Operate/Standby switch lets you run barefoot, but you can instantly switch to full power if needed. A transmit LED tells you when your rig is keying your AL-811. A 12 VDC keying relay makes it compatible with all solid state and tube rigs.

Back-pulse cancelling diode protects the rig keying circuit. Shielded RF compartment. One year limited warranty.

Compact 16Dx13<sup>3</sup>/<sub>4</sub>Wx8 H". 30 lbs. UPS shippable, has transformer installed and wired for 120 VAC. Draws 8 amps at 120 VAC. Export model is AL-811X wired for 240 VAC.

because it's tough enough to withstand momentary mistuning. And the tubes are so inexpensive that you can replace one for mere pocket change.

*Extra heavy duty power supply gives you peak performance year after year*

The heart of the AL-811 power supply is its heavy duty power transformer with a high silicon steel core weighing a hefty 17 pounds.

A full wave bridge using 67.5 mfd of total capacitance (four 270 ufd, 450 volt capacitors) produces 1500 Volts under full load and 1700 Volts no

Low loss slug tuned coils -- tunable from the rear panel -- let you optimize performance. High quality low drift silver mica capacitors maintain proper tuning.

The result is peak performance over each band, wide impedance matching range and exceptionally smooth tuning

The AL-80B's exclusive *Dynamic ALC™* gives you high-level low-distortion RF processing. It can more than double your average SSB power for up to 6 dB improvement in intelligibility, maximizing talk power without distortion/splatter.

A convenient front panel control lets you adjust output power level.

AL-80B's exclusive *Instantaneous RF Bias™* turns off the classic 3-500G tube (except filaments) between words and dots and dashes, eliminating hundreds of watts wasted as heat for cooler operation and longer component life.

The guts of the AL-80B is its heavy duty power supply. A 26 pound transformer using a high silicone steel core, computer grade capacitors, heavy duty bleeders and ten 3 amp, 1000 volt power rectifiers give you a stiff 2700 volts fully loaded. Many amps using two 3-500Gs use such small power supplies they don't deliver much more power than the AL-80B.

The AL-80B is built on a rugged steel chassis with a separate fully-shielded RF compartment to minimize RF and TVI.

A whisper quiet internal fan draws in cool air over power supply components and pressurizes the classic 3-500G tube compartment to remove heat for longest life.

### *Tuned input lets your rig deliver full output*

50 Ohm broadband Pi-Network tuned input is used. Even fussy solid state transmitters will deliver full power!

A carefully designed Pi/Pi-L output network using the optimum Q for each band gives exceptionally smooth tuning, extremely wide matching range, full band coverage, and peak

performance at all power levels. *Step-Start Inrush Protection™* stops damaging inrush current with a start up sequence that's easy on your tube and power supply components.

Our exclusive *Multi-Voltage Power Transformer™* lets you optimize for 14 different primary line voltages. The high voltage secondary can be wired to reduce plate voltage for efficient operation below 400 watts for use outside the USA.

AMERITRON's dual LED illuminated cross-needle meters give you four separate meters to monitor your operating conditions -- you can tell right away if something is wrong. Grid and plate current and forward output power are monitored for improper loading and abnormal conditions.

The fourth meter can be switched to monitor your 3-500G tube DC plate voltage, reflected PEP power, antenna system SWR, ALC voltage to your rig, and the grid current that starts ALC action -- get a clear picture of your AL-80B.

The T/R (transmit/ receive) relay in the AL-80B switches nearly as fast as some vacuum relay QSK T/R switches.

You can match your AL-572 to your AC line voltage so you'll get peak performance and long component life -- regardless of your line voltage.

An Operate/Standby switch lets you run barefoot, but you can instantly switch to full power if you need it. Transmit LED: 12 VDC. 200 mA accessory jack; 12 VDC keying relay for solid state/tube rigs; tough, nearly indestructible Lexan-over-aluminum front panel. Shipped with transformer installed. Draws 16 A at 120 VAC.

For lightning fast QSK operation use the optional Ameritron electronic PIN diode QSK switch. Shipped wired for 120 VAC. Weighs 40 lb. Power required: 120 VAC, 16 amps. Made in the USA.

Ameritron's compact AL-800 /AL-800H amps are both desktop linears with plenty of muscle!

At 14.25Wx8.5Hx14.5D inches, the more compact AL-800 uses a single 3CX800A7 to provide 1250 Watts PEP SSB and 850 Watts CW with 85 Watts typical drive level.

AL-800HF  
**\$2745**

And the AL-800 will even run from a 20-Amp 120 VAC line source if desired. AL-800 typically draws 17 Amps peak current at 120VAC, or 8 Amps

at 240 VAC and weighs just 51 lbs.

For more power and headroom, the AL-800H uses a pair of 3CX800A7 tubes to easily provide 1500 Watts PEP/CW with a typical drive level of just 55 Watts.

The AL-800H draws 14 Amps peak current at 240 VAC (1500 Watts CW output) and weighs just 52 lbs.

Other than power differences, these amplifiers are very similar in features and operation. Both cover 160-15 Meters, and are modifiable to cover 12/10 M with proof of your FCC license.

Both include a Step-Start™ input power circuit, a time delay circuit to allow for tube warm-up, thermal overload protection, grid current limiting to protect your tube(s), a DynamicBias™ circuit and a built-in multi-voltage (14 user-selectable AC line voltages from 90-140; 200-250 VAC) heavy duty power transformer. Hefty 32 lb. grain orientated silicone steel core transformer.

Front panel monitoring and tuning functions are also virtually identical. Both amplifiers include a Standby/Operate switch for barefoot or full power operation, an ALC SET control, Transmit and Fault LEDs.

Dual LED illuminated Cross-Needle

meters provide detailed monitoring of amplifier performance. The left meter continuously measures grid and plate currents, and the right meter continuously measures peak RF output power on one scale, and plate voltage, Reflected power and SWR, ALC voltage, and ALC adjustment set.

Quiet pressurized ventilation keeps tubes safely cooled. A Pi/Pi-L output network gives you smooth tuning and wide matching range. Vernier reduction drives make tuning and loading adjustments smooth and easy.

Feel the need for maximum legal HF output power? AMERITRON's AL-1500 will give it to you. Using the Herculean 3CX1500A/ 8877 ceramic tube with its high power gain, the AL-1500 needs only 65 watts of drive from your exciter to deliver the goods-- transceivers and other exciters just loaf at 1500 watts out.

Cool, efficient operation is provided by a forced-air system with tube chimney, using a commercial grade die-cast ball bearing blower for maximum tube life. The tube is further protected by time delay starting and automatic over-current shutoff to remove drive power if the amplifier is mis-tuned.

You get full legal power output from a whisper quiet desktop linear. Measures 18 1/2 D x 17 W x 10 H inches, and covers all bands, 160-15 Meters, including WARC and MARS (80% of full output set to nearest amateur band). 10/12 Meters modifiable.

You get 1500 watts output (1/2 hour continuous carrier) and 2500 watts (30 second continuous carrier and 2500 minute PEP two-tone test). You get all

this power, plus, 65% efficiency, pi-network tuned input, Pi/Pi-L output, inrush current protection, multi-voltage transformer, QSK compatibility, and a one-year warranty.

The guts of the AL-1500 is its heavy duty power supply, with a 32 lb. Hypersil<sup>®</sup> transformer using a high silicone steel core, computer grade capacitors (33 mfd total), heavy duty bleeders and twenty 3 amp, 1000 volt power rectifiers give you a stiff 3300 volts fully loaded.

The AL-1500 is built on a rugged steel chassis with a separate RF compartment fully shielded to keep RF from leaking out,

keeping RFI and TVI to a minimum.

Superb RF design and layout, Hi-Q tank circuit and commercially rated RF power components give you 65% plate efficiency over the entire operating range. Power goes into the antenna instead of into heat.

50-ohm broadband Pi-Network tuned input with slug-tuned coils is used. Even fussy solid state transmitters deliver full power!

A carefully designed Pi/Pi-L output network using the optimum Q for each band with vernier ball drives gives smooth tuning, wide matching range, full band coverage, and peak performance at all power levels.

The AL-1500's grid overload circuit pro-

TECTS the tube from excessive grid current; if 175 mA of peak grid current is reached, the "OPR" LED will no longer light and the amplifier will go into a bypass condition until reset by the operator.

### Transformer provides many options

Since excessive line voltage stresses components (low line voltage causes a "soft tube" effect, for example), Ameritron's exclusive Multi-Voltage Power Transformer<sup>™</sup> lets you optimize for different line voltages. Select from 4 different primary voltage ranges, from 205-219 VAC to 252 to 265 VAC. The amplifier comes wired from the factory for 240 VAC.

The AL-1500 has two illuminated panel meters. Grid Current meter provides continuous reading of the critical grid current and indicates proper, safe amplifier operation.

The other meter can be selected to read Plate Voltage, Plate Current, Peak RF Watts, or ALC. A SSB/CW selector switch chooses bias voltage for best linearity on SSB or lowest dissipation on CW.

The Operate/Standby switch, in Standby, maintains the tube's filament and plate voltages while allowing "barefoot" operation.

Includes 12 volt DC auxiliary jack and an "XMT" LED to provide indication of proper amplifier keying by the exciter.

Power required: 240 VAC, 15 amps.

### Frequency coverage:

1.8, 3.5, 7, 14, 21 MHz & Warc bands. User-modifiable for 28 MHz (FCC license required). Size: 18 1/2 D x 17 W x 10 H". 77 pounds. UPS shippable, 3 boxes.

**AMERITRON ALS-1300 is a solid state near legal limit™ FET no-tune Amplifier. Get instant bandswitching, no tuning, no warm-up, no tubes to baby and no fuss!**

Reliability of the ALS-1300 is insured by using eight rugged MRF-150 power FETs. Ameritron's eight FETs are mounted on the dual heavy duty heat sink. They are properly arranged to spread out the heat over a large surface, something that other amplifiers using a single power device cannot do. Some FETs actually are a package of several transistors in one large case. This concentrates all of the heat in one small package. They not only are more difficult to cool, if one transistor fails they all have to be replaced.

The ALS-1300 RF deck operates at 50 Volts for efficient, low distortion linear RF power service. It's cooled by a whisper quiet cooling fan. Fan speed is regulated by temperature sensors, assuring minimum noise for adequate cooling.

ALS-1300 runs up to 1200 Watts of clean SSB output power (just 100 Watts drive gives you the full rated 1200 Watts output) for continuous coverage between 1.5-22 MHz. 10/12 Meters available to licensed amateurs with an optional kit (MOD-10MK, \$39.95). Must present FCC license at time of sale.

The operator-friendly layout fits nearly any station configuration. The attractive desktop amplifier unit weighs only 22 pounds. Compact 10Wx 6 1/2Hx18D inches.

SWR Protection prevents amplifier damage if you switch to the wrong band, use the wrong antenna or have a high SWR. Over-power protection enables if output forward power or reflected power exceeds a safe level.

Output power is automatically reduced to prevent amplifier damage by controlling ALC to exciter.

LED illuminated Cross-Needle SWR/Wattmeter lets you read SWR, forward and reflected peak power simultaneously. You also get ALC, SWR, PA balance and current metering with LED backlight. An Operate/Standby switch lets you run "barefoot", but you can instantly switch to full power if needed.

Front-panel ALC control! This exclusive Ameritron feature lets you adjust output power on the convenient front panel display.

You also get front panel Operation, Band,

and error LED indicators like reflected power and bandswitch errors.

from your amp. This terrible inrush current stresses all your power supply components to their limits. Your cold tube filament suffers abusive thermal shock.

**Protects your amplifier, tubes and power supply components . . .**

Eventually, this massive inrush current will damage your amplifier.

Ameritron's Step-Start Inrush Current Protector™ stops damaging inrush current. Momentary high-voltage "spikes" in the AC line can also cause damage to your amp. The ICP-120/240 has built-in varistors to absorb these spikes before they can cause damage. Works with nearly all linear amplifiers.

By starting your linear amplifier through a high power current limiting resistor and then

# AMERITRON Amplifier-to-Transceiver Interface

Protects expensive radio from damage by keying line transients and steady state current and voltages

ARB-704 will work with most any transceiver without need of the plug-and-play pre-wired cable.

The ARB-704 advanced interface is compatible with all common radios and amplifiers even though radios and amplifiers do not have standardized voltages, accessory plugs, or wiring. It's designed to work with any amplifier/radio combination.

The input is designed to be compatible with any transmitter or transceiver, and the output is compatible with AC control lines or DC positive or negative amplifier control lines having up to 200 Volts peak open circuit voltage and 300 mA of operating current.

### Why you need the ARB-704

Amplifiers can damage radios if the amplifier has too much relay control voltage, voltage spikes, or excessive current on the relay control line. Such damage often appears as "stuck" or "sticky" transmit relays in exciters or shorted transistors on transmit control lines. In most cases where the radio is damaged, the system transmits normally but the external amplifier stays locked in a "transmit" mode. This pre-

ARB-704 INTERFACE BUFFER

**\$59<sup>95</sup>**

ARB-704I2 for IC-706 series radios (Includes PNP-13D)

vents receive signals from coming through the amplifier with normal levels when-

ever amplifier is in "ON"/"OPERATE" position. The ARB-704 has many electrical advantages over conventional relay buffer systems. The ARB-704 has no moving parts, switches almost instantaneously. It is noiseless, has very long life, and will not develop dirty contacts. It operates with negative, AC, or positive amplifier relay control lines.

It works with any relay voltage (AC, positive, or negative) up to 200 peak volts and any relay current up to 300 mA. The ARB-704 is fully compatible with conventional amplifier relay systems. It is especially suited for buffering vacuum relay QSK amplifiers, since the ARB-704 does not affect attack or release times in a deleterious manner.

The ARB-704 operates with transmitters or transceivers that pull amplifier control lines to

ground, or output a wide range of positive or negative control voltages. The transmitter only switches currents under 0.35 milliamperes and very low voltages when using the ARB-704. Measures a super compact 4 1/4"Wx1 1/4"Hx2 3/4"D".

### PLUG-AND-PLAY CABLES

Cables are \$17.95 each.

ARB-704 is supplied with the following: One power connector cord and plug with red wire (+12 Volts) and black wire (neg. and ground).

Three phono (RCA) cords with connectors on each end are also supplied for relay, ALC and amplifier control lines.

## AMERITRON QSK-5 High Power High Speed Transmit/Receive Switch

This self-contained AMERITRON QSK-5 Transmit/Receive Switch uses electronic PIN diode switching to give you lightning fast QSK operation from nearly any HF linear amplifier.

It lets you use your linear amplifier for high power QSK CW, for packet, AMTOR and any mode requiring extremely fast switching between transmit and receive.

Installation is simple. Just plug in a few cables to start enjoying QSK -- there's no complicated internal wiring.

The world's most advanced QSK switch has new technology that'll make your amplifier last longer and prevent TVI, RFI and key clicks.

AMERITRON's exclusive AmpSaver™ (available in QSK-5PC) completely turns off your power amplifier tube current between dots, dashes and words! This new QSK technology gets rid of unwanted power dissipation that causes damaging heat. Your expensive amplifier

QSK-5

runs cooler so every component in your amplifier lasts longer.

Our exclusive SureSwitch™ handshaking prevents "hot switching" RF power. Prevents TVI, RFI, key clicks and possible damage to your amp.

The QSK-5 is six times faster than a typical mechanical vacuum relay "QSK" switch that can just barely keep up with QSK transceivers. As radios get faster and better, mechanical switching just won't be able to switch fast enough. Unlike

noisy mechanical vacuum relays, the QSK-5 is extremely quiet -- there's no relay chatter keeping you from enjoying QSK.

You won't have to pay for QSK again if you buy another amplifier. Unplug the QSK-5 and use it with your new amp.

Handles 2500 Watts PEP and 2000 Watts CW in normal amateur service when SWR is below 1.5:1. Handles 750 Watts on continuous carrier modes such as RTTY, SSTV, and FM. Optional cooling fan (CF-5, \$39.95) allows sustained operation at 1500 Watts in any mode. Use with positive voltage keying up to +25 Volts. 6Dx4Hx9 1/2"W".

Internal QSK Available for the following AMERITRON models: AL-80B, AL-1500, AL-1200, AL-82, AL-800, and AL-800H.

Contact Ameritron for installation details on the QSK-5PC internal switch.

## Tune-up your linear amplifier perfectly! No overheating, tube damage, power supply stress, arc over

ATP-102  
**\$79<sup>95</sup>**  
Suggested Retail  
The ATP-102 Amplifier

Saver™ lets you safely tune up your linear amplifier perfectly for full power output and best linearity. This deluxe version tuning pulser has Duty Cycle and Pulse Rate Controls on its front panel for easy performance testing of Wattmeters, QSK systems, and other equipment.

It protects your expensive amplifier from overheating, tube damage, power supply stress and arc-over during tune-up. It prevents premature failure and costly component replacements.

AMERITRON's innovative pulse tuning technology lets you tune your amplifier at full peak output power for best linearity. It keeps average power to a low safe level to prevent overheating and power supply stress.

"Why can't I just tune up at low power to reduce overheating and component stress?" you ask yourself. Well you can . . . but if you don't

re-tune at high power (which causes overheating) you can create severe splatter and abuse your tube grids because of excessive grid current.

If your linear uses tubes that are easily damaged by normal tune-up, the ATP-100 could extend tube life.

"Sniff-out" RFI or TVI caused by rusty guy wires, rain gutters, clotheslines and others by generating full peak power without amp damage. Also use to test wattmeters and QSK systems.

Set and forget internal trimpots let you tailor duty cycle and pulse rate precisely for your rig and amplifier. Plugs into your rig CW key jack. Simply press Pulse Tune button and tune your amplifier normally for maximum power output.

Locking Pulse Tune and momentary Carrier Tune buttons. Fully shielded all metal case. 3 1/4"Wx1 1/4"Hx4D inches. Uses 9 Volt battery.

## Ameritron TRP-150 Transceiver Front-end Protector

TRP-150  
**\$59<sup>95</sup>**  
Suggested Retail

TRP-150 protects your receiver front-end from high level RF signals. Use this for added safety when operating in a multi-station contest environment and when another station is nearby.

Close proximity of a high power transmitter on one antenna can result in a potentially damaging RF signal being applied to a receiver on a nearby antenna. If both transmitters are on the same band, the filter on the receiver won't help and receiver damage can occur. Connecting between transceiver and antenna, TRP-150 protects the rig during receiving and automatically bypasses it during transmitting. SO-239 for RF In/Out and phono jacks for radio and amp keys. Requires 12VDC for power. Tiny 2 1/4"Wx2 1/2"Hx1 1/4"D inches.

## AMERITRON HF Mobile "Screwdriver" Antenna 1.2 kW... 3.5-30 MHz continuous ...1.5:1 VSWR...more!

SDA-100  
**\$489<sup>95</sup>**  
Ship Code D

AMERITRON's SDA-100 is the best built, best looking, best performing HF mobile screwdriver antenna in the world! Properly installed on your vehicle this antenna covers 80-10 Meters with a 6 foot whip. Remove the whip for 40-6 Meters.

What makes our antennas stand above all the rest is that our CNC machined components are from aircraft aluminum or stainless steel and blueprinted, meaning you can take the antennas apart and mix them up, then reassemble and they work the same.

Our fiberglass coil form is approximately 2 inches in diameter. Other antenna builders know fiberglass is better but they choose not to use it because of the expense and difficulty in machining. We use 14 gauge wire for high power capability, wound at eight turns an inch for maximum efficiency. We machine groove our coils so they will not loosen up or jam -- they won't wear out, for years of trouble free service!

# AMERITRON Automatic Remote Antenna Coax Switch

Automatically reads data from your transceiver and selects up to 8 pre-programmed antennas . . .

The RCS-12 is an automatic remote antenna switch. It reads information from the transceiver and selects the pre-programmed antenna automatically. Programming is as easy as a push of a button. It works with most Icom, Yaesu, Kenwood and other rigs that have a band data output line. It has a manual/automatic switch that will allow manual selection of antennas as well. It has eight LEDs to indicate which antenna is selected.

When the radio changes bands the RCS-12 goes to the last antenna used for that band.

RCS-12 makes it impossible to put the radio on the wrong antenna. It's impossible to switch relays while the amplifier is on, whether you are switching stacks, directions, or antenna arrays or any combination of the three.

RCS-12 works with four-squares, stacking systems, directional arrays and other combos of up to 8 antenna selections.

not let them make an antenna switching mistake. Ameritron's RCS-12 is compatible with virtually any antenna switching system. It works with BCD or one-of-eight outputs, and is fully compatible with 12 or 24 volt relay systems.

RCS-12 can handle directional control of two four-squares, or one four-square along with an assortment of other antennas. It can handle up to eight individual antennas. Any single position or combination of positions can be programmed for any particular band. The operator pushes an antenna selector button and the RCS-12 takes over.

The RCS 12 monitors the amplifier keying line. It prohibits antenna relay transfers while your amplifier is active. Simultaneously, it remembers what antenna function the operator called for. It switches at the first amplifier drop. It holds the amp off until switching is complete and relays are settled.

It monitors the band data from radios. The internal band decoder knows which groups of switch positions are allowed on each band. It prevents a distracted operator from picking the wrong switch position.

**Stops** expensive antenna switching damage. No HOT switching with RCS-12! It's late at night, there's a run of stations, and the operator pushes a button. SWR shoots up! Even if the SWR Watch Protection kicks in, you still lose your run frequency while you look to see what happened, if you notice at all! At best you only lose your run frequency; at worse you lose an amplifier or antenna switch.

You've learned a painful lesson! Cost of a blown bandswitch or antenna relay pales in comparison to the price of a contest. You'll never know if this was your year because a split-second error turned you from a winner to loser. Another year before you try again.

With a properly connected and programmed RCS-12 it is impossible to pick the wrong antenna. It is impossible to damage equipment by switching antennas while transmitting.

You no longer have to hover over guest operators like a mother hen; RCS-12 will

The R9 is super easy to assemble, installs just about anywhere, and its low profile blends inconspicuously into the background in urban and country settings alike.

**Compact Footprint:** Installs in an area about the size of a child's sandbox -- no ground radials to bury with all RF-energized surfaces safely out of reach.

**Rugged Construction:** Thick fiberglass insulators, all-stainless steel hardware and 6063 aircraft-aluminum tubing is double or triple walled at key stress points to handle anything Mother Nature can dish out.

R9 is 31.5 feet tall, 25 lbs. Mounting mast 1.25 to 2 inches. Wind surface area is 4 square feet. Wind survivability is 60 MPH.

R8, \$539.95. Like R9, but less 75/80 Meters.

**R-8TB, \$79.95.** Tilt-base lets you tilt your antenna up and down easily by yourself. Makes it easy to work on by yourself, no need to call your ham buddies over to help take it down and lift back up.

**R-8GK, \$59.95.** 3-point guy kit for vertical antenna or antenna mast.

Consists of guy brackets, thimbles, galvanized steel stakes, 150' Danscord rope.

Everything needed to secure your antenna/mast safe in high winds.

## MA-6B 6-Band Beam

**Small Footprint -- Big Signal 2-Elements on 20/17/15/12/10/6 Meters!!!**  
 Cushcraft's latest MA-6B gives you 2-elements on six bands! You get solid signal-boosting directivity in a bantam-size and weight. It mounts on your roof or mast using standard TV hardware. It's perfect for exploring exciting DX without the high cost and heavy lifting of installing a large tower and a full-sized array. Its 7 foot 3-inch boom has less than 9 feet of turning radius. Contest tough -- handles 1500 Watts. The unique MA-6B is a two-element Yagi on 20/17/15/12/10/6 Meters. It delivers solid power-multiplying gain over a dipole on all bands. You get automatic band switching and a super easy installation in a compact 26-pound package. When working DX, what really matters are the interfering signals and noise you *don't* hear. That's where the MA-6B's impressive side rejection and front-to-back ratio really shines.

## The MA-5B, Compact HF Multi-Band Beam

### Small Footprint -- Big Signal

## Cushcraft 2, 6 and 10 Meter "SQUALO" Antennas

Cushcraft ASQ-2 \$119.95

Cushcraft's SQUALO is a full half-wave, horizontally polarized omnidirectional antenna. Outstanding all-around performance is achieved through a 360 degree pattern with no deep nulls. The square shape allows full electrical length in compact dimen-

sions. Direct 52 Ohm Reddi-Match feed provides ease of tuning and broad band coverage. Squalo is well suited for horizontally polarized mobile or fixed operation on SSB, CW, and legacy AM. The omni-directional pattern is great for DX beacons and spotting, and elements may be stacked for added gain. Squalo is completely universal for mounting anywhere. A horizontal mast support is included for mast or tower mounting. Cushcraft Squalos

are ideal for net-control, monitoring or as a general coverage antenna. Minimum SWR. Handles 200 Watts PEP CW/SSB.

This process means more gain and cleaner patterns with excellent front-to-back ratios. S-models have very broad bandwidth so they will not detune in bad weather. They feature stainless steel hardware for long trouble-free life. Enjoy the new popularity and exciting contacts on the 6 meter band with one of the S-series Laird Yagis. The A50-3S, A50-5S and A50-6S may be mounted vertically for FM use.

## TEN-3 10 Meter Yagi

Looking for a lightweight, economical alternative to the 10 meter big boys? Choose the TEN-3. Although it's popular with novices and technicians, this antenna is for any ham who wants more gain with a good front to back ratio on 10 meters. This antenna has an 8 foot boom (2.4m) making it easy to install on a very simple mount with only a light rotator. The matching system is our proven Reddi-Match for 50 Ohm no balun feed and SO-238 connector. Make more positive contacts with the TEN-3.

## Hy-Gain® Multi-Band PATRIOT Vertical Antennas

### 9-band vertical covers 80/40/30/20/17/15/12/10/6 Meters

- No radials • No traps • No ground • No tuning • Handles 1500 Watts

hy-gain's PATRIOT HF vertical antennas are the best built, best performing and best priced multiband verticals on the market today. Make full use of your sunspot cycle with PATRIOT's low angle signal.

Instead of typical traps, hy-gain's resonators are placed in parallel not in series. End loading of the lower HF bands allows efficient operation with a manageable antenna height.

Introducing the new Hy-Gain **PATRIOT-PLUS** AV-680 with a fully tunable 3.5-4.0 MHz coverage!

With the AV-680, you get the same great traditional performance of the AV-640 on 6 through 40 Meters plus top-to-bottom capability on 80 and 75 Meters.

It's a great way to join new local nets and roundtables, explore the 75-Meter DX window, or add exciting digital frequencies to your operating repertoire.

Simply pick the band segment you wish to use, set the 80/75 Meter resonator, and you're in business.

- **No ground or radials needed** -- Effective counterpoise replaces radials, end fed with broadband matching unit.
- **Automatic bandswitching** -- Single coax cable feed, each band is individually tunable, wide VSWR bandwidth.
- **Sleek and low-profile** -- Low wind surface area, small area required for mounting, mounts easily on decks, roofs and patios.
- **Built-to-last** -- Hy-gain's Patriot series antennas boast a high wind survival due to its sleek, but sturdy frame. The matching unit is made from all Teflon® insulated wire.
- **Top Loading:** Parallel resonators -- best vertical-element efficiency
- **Full ground independence:** No unsightly wire add-on radials
- **Top-to-bottom 3.5 to 4.0 MHz coverage:** Pin-point fine-tuning accuracy for rock-bottom SWR on any frequency you choose.
- **Single coax feed . . .** and with 100% automatic band selection!
- **Low profile:** Most compact ground-independent antenna available!
- **Legal-limit 1500-Watt PEP:** Power handling on SSB and CW\*

Adding 75/80 Meter coverage without compromising the Patriot's classic performance, ground independence, and tiny footprint was no small task. Yet, the AV-680 size, weight, and wind loading are nearly identical to the AV-640 with no unsightly radial extensions, traps, or top-heavy vertical structures to render it less attractive or unsafe.

Band selection remains fully automatic, all components handle maximum legal power, and you won't need a tuner with your solid-state rig.

The AV-680's Expanded-Frequency Matchbox™ circuit ensures low SWR readings on every band, along with an upgraded balun design that concentrates all of your power in the antenna where it belongs!

If space is a premium at your QTH and appearance matters, let Hy-Gain® open the door to one of ham radio's most attractive and popular bands with the new AV-680. This is your best choice for unparalleled versatility and band coverage from 6-80 Meters!

**AV-640, \$449.95.** Like AV-680 vertical antenna but just 25.5 feet tall and weighs only 17.5 lbs. It covers all bands 6 through 40 Meters with no traps, no coils, no radials yielding an uncompromised signal across all bands. AV-640 uses 1/4 wave stubs on 6, 10, 12 and 17 meters and efficient end loading coil and capacity hats on 15, 20, 30 and 40 meters.

**AV-620, \$349.95.** Like Hy-Gain's famous AV-640 Vertical Antenna but just 22.5 feet tall, weighs only 10.5 lbs. Covers all bands 6 thru 20 Meters with no traps, no coils, no radials yielding an uncompromised signal across all bands.

Tailtwister is the most popular rotator in the world. It has been the standard to what competing rotators try to match up to for well over many years. Ask a ham who owns one.

The T2X Tailtwister Series II Rotator is for large medium antenna arrays up to 20 sq. ft. wind load. Wind load with mast adapter is 10 sq. ft. It has 1000 inches - pounds in turning power and 9000 inches-pounds in brake power. The effective movement in the tower is 3400 feet - lbs.

A new automatic 5-second brake delay insures that the rotator is fully stopped before the brake is engaged. No more accidentally engaging the brake while the rotator is in movement.

T2X features a new low temperature grease which permits normal operation to -30° F. New alloy ring gear has tensile strength of 100,000 psi for max reliability.

Water-tight AMP detachable twist-and-lock connectors at the rotator base and an 8-pin plug at the control box make it easy to hook up. Rotator has a triple bearing race with 138 ball bearings for large load bearing strength. Electric locking steel wedge brake prevents wind induced antenna movement.

Control box features a North or South center of rotation scale on meter and low voltage control for safe operation.

Clamp plate, stainless steel mounting hardware included. Use 2 1/16 inch maximum mast. Use 110 VAC. Order T-2XX for 220 VAC. Optional lower mast, **MSHD, \$109.95.**

**T2XD, \$1229.95** has DCU-1 Pathfinder. DCU-1 features automatic operation of brake and rotator, computer control RS-232 passthrough with 1 degree heading accuracy.

Compatible with many logging/contest programs and has six pre-sets for favorite beam headings. Has automatic 8-sec-

ond brake delay and 360 degree choice for center of rotation. Use 110 VAC. Order T-2XDX for 220VAC operation.

### New! T2X and HAM-IV Pulse Rotator Improvement

T-2XD3P  
**\$999<sup>95</sup>**  
Pulse Rotator  
with DCU-3P  
controller

HAM and T2X series of rotators have been improved adding a digital pulse counter to the rotators and digital controllers. Older rotators used a specially designed potentiometer to determine antenna heading. Over time the pot wiper contacts get intermittent and noisy. This new design uses a special high temperature rare earth magnet and a reliable reed

switch to count the rotations of one of the gears in the drive assembly. DCU-2 and DCU-3 have circuitry built-in to count the pulses and accurately determine the heading of the rotator to +/- 1 degree with repeatable accuracy. With the new pulse mode the noise and intermittent pot problems are no longer an issue. Older rotators can be retrofitted with the new gear and pulse board. Older DCU2 and DCU3 controllers will need a modification to the wiring and a firmware update that can be done in the field. The pulse mode is not compatible with the DCU-1 or the older controllers that have analog meters in them. Call Hy-Gain for more details! 662-323-9538.

HAM IV is for medium communications arrays up to 15 sq. feet wind load area (7.5 sq. ft. with mast adapter). 800 inches-lbs. turning power, 5000 inches-lbs. brake power.

**Automatic** 5-second brake delay insures rotator fully stops before brake is engaged. No accidentally engaging the brake while the rotator is in movement.

**Test/Calibrate** function

allows you to check system. Low temperature grease permits normal operation down to -30° F. Alloy ring gear gives extra strength to 100,000 PSI for maximum reliability.

**Detachable** 8 pin latching Cinch connectors make easy removal at rotator and 8 pin plug at controller. Dual 98 ball bearing race for load bearing strength and electric locking steel wedge brake prevents wind induced antenna movement. North or South center of rotation scale on meter, low voltage control, max mast size 2 1/16". 110 VAC.

**Optional** lower mast support, **MSHD, \$109.95.**

**HAM-IV, \$649.95.** HAM-IV rotator with standard analog controller. Order HAM-IVX for 220 VAC operation.

**HAM-V, \$1099.95.** Like HAM-IV rotator but with DCU-1 plasma display controller. Order HAM-VX for 220 VAC operation.

**HAM-VI, \$749.95.** Like HAM-IV but has DCU-2 automatic controller which has many of the same features of the DCU-3, but no programmable memories. Order HAM-VIX for 220 VAC.

**HAM-VII, \$799.95.** Like HAM-IV, but has DCU-3 digital automatic controller with six programmable memories, point and shoot and manual control. Order HAM-VIIX for 220 VAC operation.

**Mast Support: MSHD, \$109.95.**  
 Heavy duty mast support for T2X, HAM-IV, HAM-V. Accepts 1 7/8 to 2 3/8 inch OD pipe. Centers on 2 1/2".

**New! T2X and HAM-IV Pulse Rotator Improvement**

HAM and T2X series of rotators have been improved adding a digital pulse counter to the rotators and digital controllers. Older rotators used a specially designed potentiometer to determine antenna heading. Over time the pot wiper contacts get intermittent and noisy. This new design uses a special high temperature rare earth magnet and a reliable reed switch to count the rotations of one of the gears in the drive assembly. DCU-2 and DCU-3 have circuitry built-in to count the pulses and accurately determine the heading of the rotator to +/- 1 degree with repeatable accuracy. With the new pulse mode the noise and intermittent pot problems are no longer an issue. Older rotators can be retrofitted with the new gear and pulse board. Older DCU2 and DCU3 controllers will need a modification to the wiring and a firmware update that can be done in the field. The pulse mode is not compatible with the DCU-1 or the older controllers that have analog meters in them. *Call Hy-Gain for more details! 662-323-9538.*

### DCU-3 Programmable Rotator Controller

6 Programmable memories; Point & shoot and manual control!

DCU-3  
\$449<sup>95</sup>

back of DCU-3

DCU-3 Digital Controllers feature six presets for beam headings, 1 degree accuracy and gives you fully automatic or manual control of your HAM or Tailtwister Rotators. Dial in your beam heading and press the rotate button or let Ham Radio Deluxe (or other) control your DCU-3. Your antenna automatically rotates to desired direction precisely and safely. First, DCU-3 makes sure your antenna is free and safely unlocked before turning begins and then turns off your motor before your antenna reaches its final destination. Your antenna gently coasts to a stop before the brake locks. Greatly reduces potentially damaging overshoot. Fine tuning and full manual control is effortless with automated Left and Right direction buttons - no more worrying about manually releasing and relocking the brake. Brake automatically releases before fine tuning begins and relocks after fine tuning is completed. Bright blue LCD displays actual, dial-in beam, and computer controlled beam headings in one degree increments and your call sign. *AutoBrake Release* - no need to remember to release brake or release too soon - release time is auto-matic 0-8 seconds. *Coast* feature allows antenna to gently stop before brake locks. Adjustable coast delay (0-10 degrees) turns off motor before antenna reaches its final des-

## Hy-Gain LongJohn 10/12 Meter Beams

LJ-115 . . . 5-Elements . . . 9.7 dB Forward Gain . . .

The Hygain LJ-115 is a five element 10/12 Meter beam antenna designed to give maximum performance.

It has a *whopping* forward gain of 9.7 dB and a great front-to-back ratio of 25 dB.

LJ-115 is constructed of the best quality aluminum tubing and uses a new *swaged* (tapered) design for maximum strength and lightest weight. It boasts an 80 MPH wind survivability.

This powerful beam features Hy'Gain's exclusive *Beta-Match™* system which matches the antenna to a 50

Ohm feedline and puts the driven element at DC ground for *noise-free* operation and lightning protection.

LJ-115 is easily rotated with a Hygain rotator for 360 degree coverage. See popular Hygain models AR-40 and CD-45II on page 119. Feed this antenna with any standard 52 Ohm coaxial cable.

Expect a 1.05:1 SWR at resonance if the antenna is mounted in the clear and care is taken in attaching the feedline. The SWR will remain below 1.5:1 over the entire 10 Meter frequency range.

LJ-113 . . . 3-Elements . . . 8.2 dB Forward Gain . . .

## Hy-Gain 5/8 Wave 10/12 Meter

### Super-Penetrator™

### Vertical Antenna

SPT-500  
\$149.95

This fantastic *true full-size* 5/8 Wave 10/12 Meter vertical antenna from Hy-Gain was a *legend* in the 70's . . . now it's back to prove its legendary status once again!

A Full-size radiator with lower radiation angle concentrates power closer to the ground, where you want it. Measures 22 foot, 9.5 inches. Larger diameter, heavy wall ply-tubular construction makes the new *Super-Penetrator™* the absolute top omnidirectional antenna around! Four full-length radials and special machine-formed brackets give extra talk-power and overall strength.

Electrical performance has been increased to a new standard by the use of a longer radiator and *double-matching tuning* with linear phasing techniques that provide low SWR and more radiated energy. The *double-matching* also provides a DC path to ground to drain off precipitation static, giving an extremely low noise antenna capable of high power.

SPT-500 is specifically designed to accept AM-FM-SSB-DSB signals with low loss. Handles 1.5 killowatts. This antenna is illegal for 11 Meters use.

## Hy-Gain 20/15/10/6 Meter Rotatable Dipole

TH-1 is a full-size *high-efficiency* 26', 20-15-10-6 Meter full legal limit rotatable dipole that is super low-profile -- almost invisible from across the street! With a 13-foot turning radius and tiny 9 lb. weight, it fits on small roofs, apartments and condos -- easily turned by a lightweight TV rotator like *Hy-Gain®* AR-35.

Mount in the attic for antenna restricted neighborhoods. *But it is no wimp!* Its bidirectional pattern can help reduce QRM and/or noise while maximizing your signal in the directions that you want -- so you can work some real DX. Handles up to a full 1500 Watts SSB/CW on all HF bands and Six Meters.

## Hy-gain 6M Add-On Dipole Kit

Adds 6-Meter capability to most HF yagis or rotatable dipoles.

Mounted to driven element of most HF rotatable dipoles or HF single-band/multi-band beams without affecting antenna's performance. Handles 1.5 kW. Adds less than 1 lb. weight and essentially no increase in wind-loading to the existing antenna. HF beam must be direct-fed with coax, or a 1:1 balun that handles 1.5 kW. Power may be limited by the power handling of the installed balun on HF beam.

# Hy-Gain<sup>®</sup> 160-6 Meters Self-Supporting Vertical Antenna

## Full 1500 Watts, 43 feet, includes base mount, great for stealth

AV-6160  
\$399<sup>95</sup>  
Ship Code E

AV-6160 includes this base mount and legal limit balun!!!

Operate all bands 160-6 Meters at full 1500 Watt with this self-supporting, 43 feet high performance vertical!

It assembles in less than an hour and its low profile blends in with the sky and trees -- you can barely see it . . .

### Exceptional Performance

The entire length radiates to provide exceptional low angle radiation 160-20 Meters and very good performance on 17-6 Meters.

You can shorten it by telescoping it down for more effective low angle radiation on higher bands.

Just talk with automatic tuner!

A wide-range automatic or manual antenna tuner at your rig easily matches this antenna for all bands 160-6 Meters.

There's no physical tuning adjustments on the antenna -- you

## 1.5kW 80/160M high-efficiency Matching Network

AV-6110 improves efficiency on 160 and 80 Meters for the popular new 43-foot all band vertical antennas by eliminating SWR-related coax and unun mismatch losses. When fed with a 1:4 unun, the 43' antenna has a reasonable compromise SWR on 60-10 Meters. However, at 160/80 Meters it is virtually impossible to match this antenna because of the low radiation resistance. If you are using low loss coax, you will lose much power in the coax and unun due to bad antenna mismatches. Installed at the base of the 43' vertical, AV-6110 will significantly eliminate these losses and put 160 and 80 Meters back within the tuning range of the tuner inside the shack. Includes high-voltage insulated base tube, remote power injector with switch for 160, 80 Meters and off positions. Handles 1.5kW. Matching box mounted in a rugged, weather-resistant PVC housing. Fits at forty-three foot antenna base, just 3Wx16Hx3D inches.

**New! 600 Watts 80/160 Meter Matching Network**

AV-6108, \$249.95. Has all features of the AV-6110, but handles 600 Watts on 80 and 300 Watts on 160M. 3Wx11Hx3D".

## 160 Meter Tuner Range Extender for 43' Verticals

43" vertical antennas are very popular. However, on 160M, these antennas have a very high reactance and high voltage at the feedpoint. Tuning with a tuner results in maximum efficiency 80-10M, but conditions at 160M present a challenge for most tuners. To get around this problem, add the range extender to the base of the antenna to increase 160M matching capabilities. Reduces reactance and puts antenna in range of the auto or manual tuner. Damaging high-voltage currents are reduced -- preventing tuner damage. 1.5 kW. Weather-resistant PVC, ceramic feedthroughs for input/output. 3 1/2"Wx3 1/2"Hx11D". Use MFJ-998RT/MFJ-994BRT or other tuners.

AV-6102, \$59.95. Like AV-6104, 300 Watts, 5-way binding posts for in/out. 3 1/2"Wx3 1/2"Hx7D". Use with MFJ-926B/927/993BRT auto tuners or manual tuners.

simply put it up! Includes ATB-65 base mount. See below.

An optimized balun design allows direct coax feed with negligible coax loss (typically less than 1/2 dB 60-6 Meters and less than 1 dB 160-80 Meters with good quality, low-loss coax).

### Extremely low wind loading

With just 2 square feet wind load, the AV-6160 has the lowest wind-loading and lowest visibility of any vertical antenna!

Its 2-inch O.D. and .120 inch thick walled tubing bottom section makes it incredibly strong.

Just 20 lbs., uses super-strong 6063 aircraft aluminum tubing. Stainless steel hardware.

### Assembles in an hour

Ground mounting lets you hide antenna base in shrubbery. Requires ground system -- at least one radial. More extensive ground systems work even better. Optional GRK-6160, \$34.95. All-band ground radial kit. See bottom right.

### Stealth Operation

Low profile. Hide behind trees, fences, buildings, bushes. Use it as a flagpole. It easily telescopes down during the day.

## 64', 11-Sect. Telescopic Aluminum Mast

Includes one size of each slitted tube listed above and ten hose clamps. This is a super-strong heavy duty telescoping MAST, not a flimsy pole! Mast is made of .120 inch thick wall aluminum tubing. ATM-65 is 64 feet fully extended and 6 feet collapsed without clamps. Guying is required if mast is extended beyond 30 feet. Top section is .625" OD. Bottom section is 2 inches OD x .120 wall.

### Base Mount for Fiberglass and Aluminum Masts

Convenient and effective, it provides the necessary return path for ground currents to reduce ground losses. Consists of 2 sets of 4 radial wire assemblies giving a total of eight 14' radial wires. Each 1/4" ring lug for attaching to the antenna ground point. Each end of the radial wires has a solder lug for staking the wire end.

# ROHN™ Steel Telescopic Masts & Vertical Mounting Accessories

## 20/30/40/50 foot Telescoping Masts

Telescoping masts are pre-galvanized and come preassembled with hardware. Erecting mast is made by simply connecting guys and brackets to the attached heavy duty rolled edge guy rings and clamps, extending the sections, inserting locking cotter pins, rotating tubes to locked position and tightening the clamps. # MIRAGE VHF/UHF Repeater Amplifiers

*Dedicated Repeater Amplifiers for **Continuous Duty Service***

**10 models to choose from** -- continuous duty all mode FM/SSB/CW repeater amplifiers for 6, 2, 450 MHz, and ATV service.

### 50, 144 and 220 MHz Models FEATURES:

**Cool Running** - A 10" high by 19" wide full finned rack-mounted heatsink keeps the transistor temperatures low for long life. The chassis cover is perforated so air convection will keep the circuit board area cool.

**Dual Protection** - The amplifiers have two temperature sensors; one on the heatsink and one on the circuit board. If conditions cause either to overheat, the amplifier will shut off until it cools down to a safe temperature.

**Bypass Mode** - These models will feed the exciter output straight through to the antenna in an over-temperature condition.

The bypass mode can also be remotely

**Reduced Relay Wear** - The amps have a selectable long release time (adjustable up to 5 seconds) for the RF change-over relay. This prevents unnecessary action during repeater operation.

**On-site Control** - The bypass mode and

selected by proper interfacing to the repeater controller. Either a relay contact or a TTL logic can be used to select the bypass mode or amplified mode of operation.

relay release time can be selected with built-in switches. The operational MIRAGE RC-1 remote control box can be used to switch these functions up to 18 feet away from the amplifier.

### 440 MHz and ATV Models FEATURES

**Cool Running** - A 10" high by 19" wide full finned rack-mounted heatsink keeps the transistor temperatures low for long life. The chassis cover is perforated so air convection will keep the circuit board area cool. The RF board is low loss *Teflon*<sup>®</sup> for minimum dielectric heating.

**Reliable** - The RF change-over relay has been eliminated on this model to provide the highest order of reliability.

**Teflon**<sup>®</sup> connectors are standard on this well-designed unit.

**Protection** - The amplifier will shut off if conditions cause the heatsink temperature to rise to an unsafe level of operation.

**All Mode Operation** - Class AB linear operation is rated for FM, SSB, CW and ATV operation.

### 1 YEAR WARRANTY ON ALL REPEATER AMPLIFIERS

**Warranty** - Mirage repeater amplifiers are guaranteed for one year against failure due to defective workmanship or materials.
