the Chinese Academy of Sciences, Beijing 100093, China)

Subsection 4. *Angustifoliae* Tamura in Sci. Rep. Osaka Univ. 4:55. 1955 et 16(2):33. 1967; M. C. Chang in Fl. Reip. Pop. Sin. 28:156. 1980. — Sect. *Flammula* DC. sub-sect. *Angustifoliae* (Tamura) Tamura in Acta Phytotax. Geobot. 16:81. 1956 et 38:43. 1987; M. Johnson, Klematis 603. 1997; Grey-Wils., Clematis 113. 2000. — Sect. *Angustifoliae* (Tamura) Serov in Bot. Zhurn. 73(12):1740. 1988; Tamura in Heipko, Engler's Nat. Pflanzenfam., ed. 2, 17a(4):383. 1995. Type: *C. hexapetala* Pall.

Sect. *Fruticella* Tamura in Sci. Rep. Osaka Univ. 16(2):34. 1967, p. p.; M. C. Chang in Fl. Reip. Pop. Sin. 28:147. 1980, p. p.; Serov in Bot. Zhurn. 73(12):1739. 1988; Tamura in Heipko, Engler's Nat. Pflanzenfam., ed. 2, 17a(4):384. 1995, p. p.; M. Johnson, Klematis 651. 1997, p. p.; Grey-Wils., Clematis 126. 2000, p. p.; W. T. Wang in Acta Phytotax. Sin. 36(2):160. 1998, p. p.

Erect shrubs, half-shrubs, or perennial herbs. Seedling leaves opposite (known from one species, *C. hexapetala*). Leaves simple or once to twice pinnate; leaflets at margin entire or dentate, undivided or lobed. Flowers small or medium-sized, in terminal few–many-flowered cymes, rarely solitary, arising from tops of hornotinous branch. Sepals 4–6(–7–8), outside with hairs up to 1 mm long. Filaments not rugose; anthers narrowly oblong, rarely oblong or linear, at apex obtuse or obscurely minutely apiculate.

Seven species, wide-spread in Afghanistan, W to NE China, Iran, Kazakhstan, Kirghizstan, Mongolia, Nepal, N Pakistan, Russia (Siberia), Tajikistan, Turkmenistan.

### Key to species and varieties

1. Small shrubs or half-shrubs; leaves not reticulate.
  2. Flowers in terminal cymes, rarely solitary to hornotinous branches; lateral basal veins of sepals with a few veinlets externally.
    3. Leaves simple or ternate, or on the same plant simple and pinnatisect or pinnate.
      4. Leaves 2–4-paired concentrated to the lower part of stem; sepals 4–6 ..... 33. *C. lancifolia*
        5. Leaves simple ..... 33a. var. *lancifolia*
        5. Leaves ternate ..... 33b. var. *ternata*
      4. Leaves equally arranged from base to apex of stem.
        6. Leaves simple, 3-sect, 3-parted, and undivided ..... 34. *C. dingjunshanica*
        6. Leaves simple, undivided or pinnatisect, or pinnate.

Received: 27 August 2002

Supported by the National Natural Science Foundation of China (Grant Nos. 30070059, 39570051) and the Special Project for Taxonomic and Floristic Researches from the Chinese Academy of Sciences (国家自然科学基金资助项目(30070059, 39570051)和中国科学院生物分类区系特别支持项目).

7. Leaves simple, undivided or pinnatisect, with sessile or subsessile lobes; sepals 4–6, with rounded or subtruncate apexes ..... 35. *C. songarica*  
 8. Leaves all undivided ..... 35a. var. *songarica*  
 8. Lower leaves undivided, upper ones pinnatisect ..... 35b. var. *asplenifolia*  
 7. Leaves simple, undivided, or pinnate, with petiolulate leaflets; sepals 4, with acute apexes.....  
 ..... 36. *C. ispahanica*
3. Leaves all pinnate ..... 37. *C. delavayi*  
 9. Leaflets undivided.  
 10. Leaflets abaxially silvery-pannose ..... 37a. var. *delavayi*  
 10. Leaflets abaxially appressed-puberulous, gray-green.  
 11. Branches not spinescent; leaflets 8–20 mm long ..... 37b. var. *calvescens*  
 11. Branches many, at apex spinescent; leaflets smaller, 2–10 mm long ..... 37c. var. *spinescens*  
 9. Leaflets 2–3-lobed, abaxially silvery-pannose ..... 37d. var. *limprichtii*
2. Flowers solitary, terminal to hornotinous branches; lateral basal veins of sepals with numerous veinlets externally; leaves pinnate; sepals 5–7 ..... 38. *C. phlebantha*
1. Perennial herbs; leaves bipinnatisect with coriaceous reticulate lobes; sepals (4–)5–6(–8) ..... 39. *C. hexapetala*
12. Sepals outside on entire surface velutinous ..... 39a. var. *hexapetala*  
 12. Sepals outside only on margin velutinous, elsewhere glabrous ..... 39b. var. *tchefouensis*

Ser. 1. ***Songaricae*** Serov in Bot. Zhurn. 73(12):1739. 1988. — Subsect. *Songaricae* (Serov) M. Johnson, Klematis 653. 1997; Grey-Wils., Clematis 129. 2000. Type: *C. songarica* Bunge.

Ser. *Ispahanicae* Serov in l. c. — Subsect. *Ispahanicae* (Serov) M. Johnson, l. c. Type: *C. ispahanica* Boiss.

Small shrubs or half-shrubs. Leaves simple, ternate, or pinnate, not reticulate. Flowers in terminal pedunculate bibracteate cymes. Sepals 4–6, their lateral basal veins with 2–3 veinlets externally each. Anthers narrowly oblong, seldom linear.

Five species, occurring in Afghanistan, W China, Iran, Kazakhstan, Kirghizstan, Mongolia, N Pakistan, Russia (Siberia), Tajikistan, and Turkmenistan.

### 披针叶铁线莲

This species consists of two varieties endemic to Southwest China.

**33a. var. *lancifolia*** Fig. 14:A–C

Small shrub. Stem 35–100 cm tall, shallowly 10-sulcate, simple or branched, sparsely puberulous or subglabrous, below with 2–4 pairs of leaves, above naked. Leaves simple; leaf blade

coriaceous , lanceolate or linear-lanceolate ,  $4 - 14 \times 1 - 3.5$  cm , at apex obtuse or slightly acute , at base cuneate , broadly cuneate , or rounded , at margin entire , on both surfaces very sparsely puberulous or subglabrous , basal veins abaxially slightly prominent ; petioles  $0.4 - 2.5$  cm long . Cymes terminal , 3 – 5-flowered ; bracts foliaceous , or small , linear ,  $3 - 10$  mm long . Flower ca . 2 cm in diam . ; pedicel  $2 - 5.5$  cm long . Sepals 4 – 6 , white , narrowly oblong , ca .  $1 \times 0.3$  cm , at apex slightly acute , inside glabrous , outside on margin velutinous , elsewhere glabrous . Stamens  $5.5 - 8$  mm long , glabrous ; anthers narrowly oblong ,  $3.2 - 5.5$  mm long , at apex minutely apiculate or obtuse . Ovaries pubescent ; styles  $5 - 7$  mm long , densely villous . Achenes compressed , narrowly ovate or long elliptic ,  $4 - 5 \times 2.2 - 3$  mm , pubescent ; persistent styles  $1.4 - 3.3$  cm long , plumose . Fl. Jul. – Aug .

China ( SW Sichuan , CN & NE Yunnan ). In forests or in grassy places ; 1100 – 1900 m .

Additional specimens examined . **China . Sichuan (四川)** : Ning Yuan ( 接近盐源 ) , Schneider 813 ( G , K ) ; Miyi ( 米易 ) , T. P. Zhu 120 ( PE ) ; Xichang ( 西昌 ) , T. T. Yü 1163 , 1339 ( PE ) . **Yunnan (云南)** : Kunming ( 昆明 ) , Ducloux 4596 ( P ) , 6524 ( P , S ) ; Yuanmou ( 元谋 ) , Jinshajiang Exped. 63-6861 ( PE ) ; Qiaojia ( 巧家 ) , Ducloux 5673 ( P ) .

**33b.** var. **ternata** W. T. Wang & M. C. Chang in Fl. Reip. Pop. Sin. 28 : 152 , 356. 1980 ; L. Q. Li in Vasc. Pl. Hengduan Mount. 1 : 524. 1993 ; M. Johnson , Klematis 657. 1997 ; Grey-Wils. , Clematis 129. 2000 ; W. T. Wang & Barth. in Fl. China 6 : 361. 2001. Type : China . Sichuan ( 四川 ) : Miyi ( 米易 ) , 1963-07 , T. P. Zhu et al. s. n. ( holotype , PE ! ) .

### 竹叶铁线莲

Leaves ternate ; leaflets linear-lanceolate .

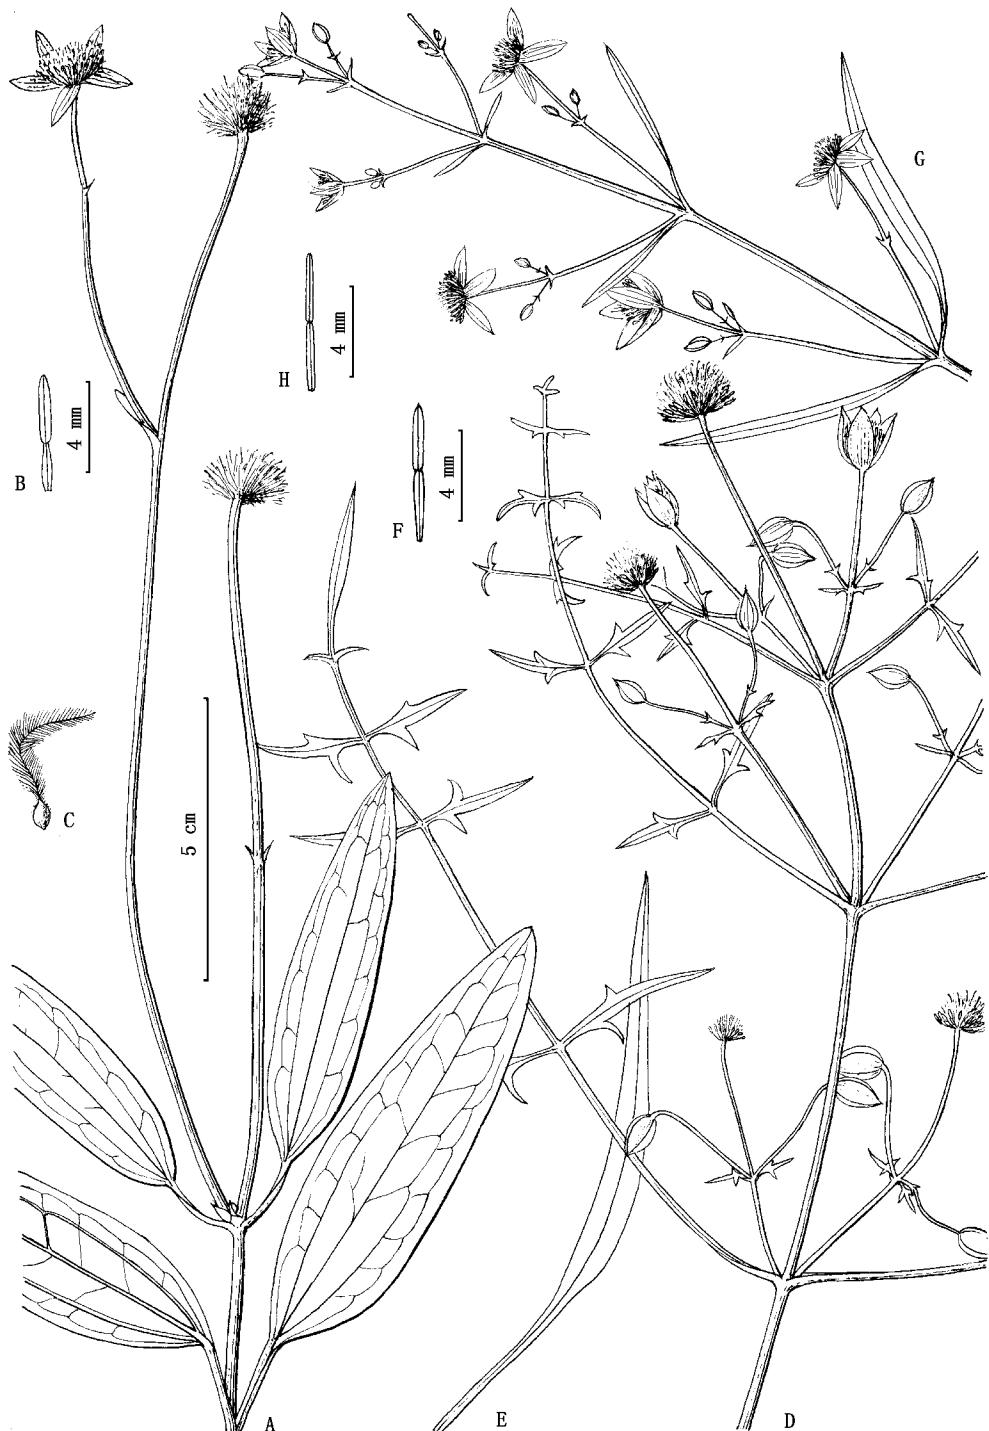

China ( SW Sichuan ). On slopes ; 1100 m .

**34. Clematis dingjunshanica** W. T. Wang , sp. nov. Type : China . Shaanxi ( 陕西 ) : Mian Xian ( 勉县 ) , Dingjunshan ( 定军山 ) , 1942-10-05 , K. T. Fu 3944 ( holotype , here designated , WUK ) ; same locality , 900 m , in shady places in valley , 1958-10-04 , P. Y. Li 319 ( paratype , WUK ) .

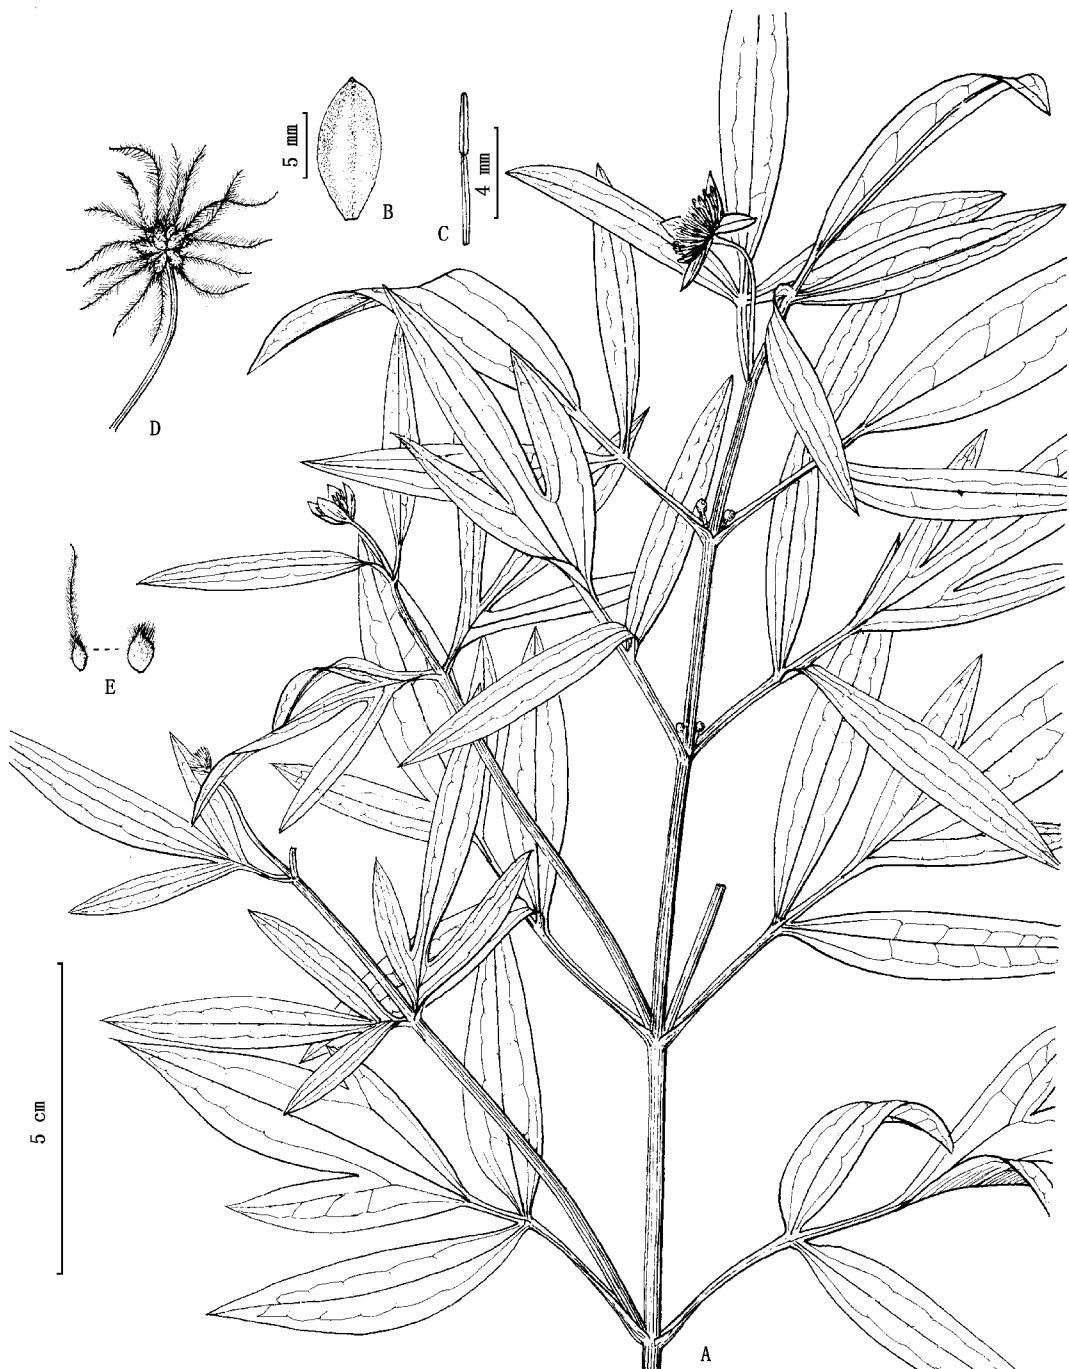

### 定军山铁线莲 Fig. 15

Fortasse affinis *C. songaricae* Bunge , a qua foliis simplicibus 3-sectis 3-partitis vel indivisis recedit .

Suffrutex parvus , ca . 35 cm altus . Caulis ca . 10 cm longus , 4 mm diametro , basi lignosus , glabrescens , ramis 4-jugatis ; rami  $20 - 30$  cm longi ,  $2 - 3$  mm diametro , inconspicue 6-angulati , vadoso  $8 - 10$ -sulcati , sparse puberuli , glabrescentes . Folia simplicia ; laminae subcoriaceae , 3-sectae , ambitu deltoideae ,  $6 - 8.5$  cm longae ,  $4 - 10$  cm latae , segmentis medianis petiolulatis anguste ovatis margine integris 3-lobatis , eis lateralibus sessilibus lanceolatis integris supra secus nervos basales pilis brevibus paucis tectis vel subglabris , nervis basalibus prominentibus vel fere planis , vel 3-partitae rhombico-ovatae , ca . 5 cm longae ,  $2.6$  cm latae , vel indivisiae lanceolatae ,  $4.2 - 5.5$  cm longae ,  $1 - 1.5$  cm latae , apice mucronatae , margine integrae ; petioli  $0.3 - 2.2$  cm longi , subglabri . Cymae terminales , ter ramosae , ca . 14-florae , fere paniculiformes , vel 1-florae , bracteae lanceolatae , indivisiae , vel 3-sectae , 3-branched . Flos ca . 2 cm diametro ; pedicellus  $0.8 - 2.8$  cm longus , adpresso puberulus . Sepala 4 , elliptico-oblonga , ca . 12 mm longa , 5 mm lata , apice obtusa , interdum inconspicue mucronata , intus glabra , extus dense puberula , ad marginem velutina . Stamina ca . 28 , 7 mm longa , glabra , filamentis linearibus , antheris linearibus vel anguste oblongis  $3 - 3.5$  mm longis apice obtusis . Carpella ca . 15 , ovaris puberulis , stylis ca . 6 mm longis dense villosis . Achenia compressa , elliptica , ca . 4 mm longa , 3 mm lata , puberula ; styli persistentes ca . 1.7 cm longi , plumosi .

**Fig. 14.** A – C , *Clematis lancifolia* Bur. & Franch. var. *lancifolia* . A , flowering plant ; B , stamen ;( from T. T. Yu 1339 ) C , achene( from Jinshajiang Exped. 63-6861 ). G , upper part of the flowering plant ; H , stamen. ( from K. C. Kuan 4114 )

**Fig. 15.** *Clematis dingjunshanica* W. T. Wang. A , flowering branch ; B , sepal outside ; C , stamen ( from K. T. Fu 3944 ) D , aggregate fruit ; E , achene. ( from P. Y. Li 319 )

Small half-shrub, ca. 35 cm tall. Stem ca. 10 cm long, 4 mm in diam., glabrescent, woody at base, with 4 pairs of branches; branches 20–30 cm long, 2–3 mm in diam., indistinctly 6-angular, shallowly 8–10-sulcate, sparsely puberulous, glabrescent. Leaves simple; leaf blade subcoriaceous, 3-sect, deltoid in outline, 6–8.5 × 4–10 cm, the central segment petiolulate, narrowly ovate, at margin entire, 3-lobed, the lateral segments sessile, lanceolate, entire, adaxially glabrous, abaxially along basal veins with a few short hairs or subglabrous, basal veins abaxially prominent or nearly flat; or leaf blade 3-parted, rhombic-ovate in outline, ca. 5 × 2.6 cm, or undivided, lanceolate, 4.2–5.5 × 1–1.5 cm, at apex mucronate; petioles 0.3–2.2 cm long, subglabrous. Cymes terminal, 3-branched, ca. 14-flowered, nearly panicle-like, or reduced to a single pedicelled flower; bracts lanceolate, undivided or 3-sect. Flower ca. 2 cm in diam.; pedicel 0.8–2.8 cm long, appressed-puberulous. Sepals 4, elliptic-oblong, ca. 12 × 5 mm, at apex obtuse, sometimes indistinctly mucronate, inside glabrous, outside densely puberulous, on margin velutinous. Stamens ca. 7 mm long; anthers linear or narrowly oblong, 3–3.5 mm long, at apex obtuse. Ovaries puberulous; styles ca. 6 mm long, densely villous. Achenes compressed, elliptic, ca. 4 × 3 mm, puberulous; persistent styles ca. 1.7 cm long, plumose. Fl. Sept.–Oct.

China (SW Shaanxi). In shady moist places in valley; 900 m.

### 准噶尔铁线莲

This species consists of two varieties confined to the arid regions of Asia Media.

**35a. var. *songarica*** Fig. 14:G, H

Small shrub or half-shrub. Stem 40–150 cm tall; branches shallowly 4–5-sulcate, glabrous or on nodes sparsely puberulous. Leaves simple; leaf blade subcoriaceous, linear, linear-lanceolate, or lanceolate, 2–8 × 0.2–2 cm, at apex acute or obtuse, at base attenuate, at margin entire or sparsely denticulate, undivided, on both surfaces glabrous, basal veins abaxially nearly flat or slightly

prominent ; petioles 0.5–2 cm long. Compound cymes terminal ; bracts foliaceous. Flower 1.6–2.8 cm in diam. ; pedicel 1–3.5 cm long, glabrous. Sepals 4–6, white, oblong-obovate or obovate, 5–15 × 3–9 mm, at apex rounded or subtruncate, inside glabrous or sparsely puberulous, outside puberulous or nearly glabrous, on margin velutinous. Stamens 5–7 mm long, glabrous; anthers narrowly oblong, (2–)2.6–3 mm long, at apex obtuse, occasionally minutely apiculate. Ovaries pubescent; styles 4–6 mm long, densely villous. Achenes compressed, ovate or obovate, 2.5–3.5 × 1.5–2 mm, densely pubescent; persistent styles 1.4–2.6 cm long, plumose. Fl. Jun.–Aug.

Afghanistan, China ( NW Gansu, SW Nei Mongol, Xinjiang ), Iran, E Kazakhstan, Kirghizstan, W & S Mongolia. On gravelly or rocky slopes or in grassy places; 450–2500 m.

Fig. 14 : D – F

Small shrub. Stem 50–100 cm tall, terete, shallowly 8–10-sulcate, glabrescent below, minutely puberulous above, branched. Leaves pinnatisect or upper leaves often pinnate, and those born on the basal parts of branches often simple; leaflets or lobes 2–4-paired, coriaceous, the terminal ones larger, lanceolate-linear,  $3.5-7.8 \times 0.3-2$  cm, at apex attenuate, at base cuneate, at margin entire, above base 3-lobulate or undivided, the lateral ones similar to the terminal ones, but smaller, petiolulate,  $1-4.5 \times 0.3-0.8$  cm, at margin entire or below few dentate, on both surfaces minutely puberulous, basal veins nearly flat, petiolules up to 2.2 cm long; the simple leaves often narrowly lanceolate, 3–7 cm long, entire; petioles 1.8–4.5 cm long. Cymes terminal, many-flowered; bracts foliaceous. Flower ca. 2 cm in diam.; pedicel 3–5 cm long, densely minutely puberulous. Sepals 4, white, lanceolate-oblong or narrowly oblong,  $9-11 \times 3-4$  mm, at apex acute, inside densely puberulous, outside puberulous, on margin velutinous. Stamens 5.5–7 mm long, glabrous; anthers narrowly oblong or linear, 1.8–3 mm long, at apex obtuse or minutely apiculate. Ovaries densely puberulous; styles 4–6 mm long, densely villous. Achenes compressed, narrowly ovate,  $3-4 \times 1.8-2$  mm, densely brown pubescent; persistent styles 2.5–3.5 cm long, plumose. Fl. Jun.–Oct.

Afghanistan, Iran, Turkmenistan. On dry slopes or by streams; 1700–3100 m.

Additional specimens examined. **Afghanistan.** Ghor, Heuer 1323 (LE). **Iran.** Amol, Heuer 1492 (G); Borujen, Riazi 10336 (K); Damavand, Panahi 2434 (K); Elbrus, Kotschy 578 (G, LE, P); Farsistan, Bornmüller 1981 (P); Kerman, Bornmüller 1982 (G-Bois, LE, P); 1985 (G, P); Horasan, Czerniakowska 131 (LE); Khorasan, Renz 56185 (G, K, MO, S); Ordougah, Athari 2550 (K); Shiraz, Grant 15851 (MO). **Turkmenistan.** Aschabad, Sintenis 1055 (G, G-Bois, P); Ashabadskaja Obl., Androsov s. n. (K).

### 银叶铁线莲

This species consists of four varieties endemic to Southwest China.

#### 37a. var. *delavayi* Fig. 16 : D – F

Small shrub. Stem up to 1.5 m tall ; branches densely puberulous. Leaves pinnate , 7 – 13-foliolate ; leaflets papery , ovate , narrowly ovate , or oblong , 0.8 – 4 × 0.4 – 1.6 cm , at apex acute , at base rounded or broadly cuneate , at margin entire , undivided , adaxially sparsely puberulous or glabrescent , abaxially densely silvery-pannose , basal veins abaxially slightly prominent ; petioles 0.2 – 1.8 cm long , densely puberulous. Cymes terminal , few- to many-flowered ; bracts foliaceous. Flower 1.7 – 2.3 cm in diam. ; pedicel 1.4 – 2 cm long , densely puberulous. Sepals 4 – 6 , white , obovate-oblong , 8 – 14 × 5 – 8 mm , at apex rounded or obtuse , inside glabrous , outside velutinous. Stamens 5 – 8 mm long , glabrous ; anthers narrowly oblong , 2 – 2.8 mm long , at apex inconspicuously minutely apiculate. Ovaries puberulous ; styles 4 – 6 mm long , densely villous. Achenes compressed , ovate , ca. 4 × 2 mm , puberulous ; persistent styles ca. 2.5 cm long , plumose. Fl. Jun. – Aug.

China ( SW Sichuan , E Xizang , NW Yunnan ). In bushes or on slopes ; 1800 – 3200 m.

Additional specimens examined. **China. Sichuan** ( 四川 ) : Muli ( 木里 ), Rock 17824 ( K , LE , P , S ), T. T. Yü 14705 ( PE ); Xiangcheng ( 乡城 ), Sichuan Exped. 72-1272 ( PE ); Daocheng ( 稻城 ), Sichuan Exped. 73-2095 ( PE ); Jiulong ( 九龙 ), T. S. Wang 58-361 ( PE ); Pee-lou-tze , 1884-01-01 , Delavay s. n. ( G ); Dengchuan( 邓川 ), R. C. Ching 24667 ( PE ); Yuanmou( 元谋 ), Jinshajiang Exped. 63-6869 ( PE ).

Ser. 2. **Phlebanthae**( M. Johnson ) W. T. Wang , st. et comb. nov. —— Sect. *Fruticella* Tamura subsect. *Phlebanthae* M. Johnson , Klematis 653. 1997 ; Grey-Wils. , Clematis 130. 2000. Type : *C. phlebantha* Williams .

Flowers solitary , terminal to hornotinous branches. Leaves pinnate , not reticulate. Sepals 5 – 7 ; lateral basal veins with numerous vinlets externally. Anthers oblong.

One species , endemic to Nepal.

**38. Clematis phlebantha** Williams in J. R. Hort. Soc. 93 : 345 , fig. 1 , 2 , t. 163. 1968 ; Brickell in Bot. Mag. 178 : t. 574. 1970 ; Hara in Hara & Williams , Enum. Flow. Pl. Nepal 2 : 15. 1979 ; M. Johnson , Klematis 662. 1997 ; Grey-Wils. , Clematis 130. 2000. Type : Nepal. Suli Gad , 2895 m , 1963-06-06 , Stainton 4281 ( holotype , BM ! ; isotypes , G ! , GH ! , K ! ); same locality , Polunin , Sykes & Williams 2152 , 3436 ( paratypes , BM ! ; isoparatypes , K ! ); Luma , Polunin , Sykes & Williams 4943 ( paratype , BM ! ; isoparatype , G ! ); Barbung Khola , Polunin , Sykes & Williams 1096 ( paratype , BM ! ; isoparatypes G ! , K ! ).

*C. limprichtii* auct. non Ulbr. : Tamura in Acta Phytotax. Geobot. 23 : 30. 1969.

Small shrub. Stem 30–60 cm tall, or procumbent, up to 150 cm long, shallowly 10-sulcate, glabrescent, with short velutinous branches. Leaves pinnate, 5–9-foliolate; leaflets papery, terminal leaflets larger, broadly ovate or rhombic, 7–12 × 7–13 mm, at apex acute, at base truncate or broadly cuneate, 3-parted; lobes dentate or lobulate, lateral leaflets smaller, broadly rhombic or obovate, 4–8 × 2–8 mm, 3-dentate or 3-lobulate, adaxially densely appressed-sericeous, abaxially velutinous, basal veins obscure; petioles 0.3–1.2 cm long. Flower solitary, terminal, 2.5–4.5 cm in diam.; pedicel 2–8 cm long, velutinous. Sepals 5–7, white, obovate or obovate-oblong, 1–2 × 0.5–1 cm, at apex acute, mucronate, inside glabrous, outside appressed-puberulous, on margin velutinous. Stamens 4–6 mm long, glabrous; anthers oblong, 1.5–2 mm long, at apex obtuse. Ovaries pubescent; styles ca. 5 mm long, densely villous. Achenes compressed, broadly elliptic, ca. 5 × 2.5 mm, pubescent; persistent styles 2.5–3 cm long, plumose. Fl. May–Jul.

Nepal. On cliffs or on gravelly slopes; 2590–3658 m.

Ser. 3. **Hexapetala** W. T. Wang, ser. nov. Type: *C. hexapetala* Pall.

Herbae perennes, erectae. Folia semel vel bis pinnatisecta, lobis coriaceis lanceolatis longe ellipticis vel linearibus utrinque reticulatis. Flores mediocres in magnitudine, in cymas terminales pedunculatas bibracteatas dispositi. Sepala (4–5–6–8), nervis basalibus lateralibus nervulos paucos gerentibus. Antherae anguste oblongae.

Erect perennial herbs. Leaves once or twice pinnatisect; lobes coriaceous, lanceolate, long elliptic, or linear, on both surfaces reticulate. Flowers medium-sized, in terminal, pedunculate, bibracteate cymes. Sepals (4–5–6–8), their lateral basal veins with a few veinlets externally. Anthers narrowly oblong.

One species, occurring in N & NE China, N Korea, Mongolia, and Russia (Siberia).

### 棉团铁线莲

This species consists of two varieties ranging from the Loess Plateau and northern East China northward to Siberia.

#### 39a. var. *hexapetala* Fig. 16 : A - C

Erect perennial herb. Stem 30 – 100 cm tall , shallowly 8 – 12-sulcate , sparsely pubescent , glabrescent , simple or branched. Leaves once or twice pinnatisect ; ultimate lobes coriaceous , linear-lanceolate , long elliptic , or linear , 1.5 – 10 × 0.1 – 2 cm , at apex acute or obtuse , at base cuneate , at margin entire , on both surfaces sparsely pubescent or subglabrous and reticulate , basal veins on both surfaces prominent ; petioles 0.5 – 2 cm long. Cymes terminal ; bracts foliaceous. Flower 2.5 – 4 cm in diam. ; pedicel 1 – 7 cm long , puberulous or subglabrous. Sepals ( 4 – ) 5 – 6 ( – 8 ) , white , narrowly obovate or oblong , 1 – 2.5 × 0.3 – 1 cm , at apex rounded or subtruncate , inside glabrous , outside velutinous or densely pubescent , on margin usually velutinous. Stamens 6 – 9 mm long , glabrous ; anthers narrowly oblong , 2.6 – 3.2 mm long , at apex minutely apiculate. Ovaries pubescent ; styles 5.5 – 8 mm long , densely villous. Achenes compressed , obovate , 2.5 – 3.5 × 2 – 3 mm , pubescent ; persistent styles 1.5 – 3 cm long , plumose. Fl. Jun. – Aug.

China ( E Gansu , Hebei , Heilongjiang , W Henan , Jilin , Liaoning , Nei Mongol , Ningxia , Shaanxi , Shanxi ) , N Korea , Mongolia , Russia ( E Siberia ). On dry slopes , in grassy places , in bushes , at forest edges , on dunes ; 100 – 1300 m.

Additional specimens examined. **China. Gansu** ( 甘肃 ) : Jingchuan ( 泾川 ) , S. Q. Zhong

Sect. *Flammula* auct. non DC. : M. Johnson , Klematis 599. 1997 , p. p. ; Grey-Wils. , Clematis 95. 2000 , p. p.

Woody vines , seldom half-shrubs. Seedling leaves opposite ( known in *C. meyeniana* , *C. chinensis* , *C. terniflora* , *C. kirilowii* , *C. recta* , and *C. flammula* ). Leaves ternate or once to twice pinnate , seldom simple or thrice pinnatisect ; leaflets at margin usually entire. Flowers small or medium-sized , in ( 1 – ) few – many-flowered cymes arising from leaf axils of hornotinous branch or from axillary buds of old branch. Sepals 4 ( – 5 – 6 – 7 ) , outside on margin velutinous , elsewhere puberulous or glabrous , with hairs 1 mm or less than 1 mm long , seldom on both surfaces entirely hairless. Filaments not rugose ( in *C. lathyrifolia* often rugose ); anthers linear , rarely broadly linear or narrowly oblong , at apex minutely apiculate or obtuse.

Thirty-four species , wide-spread in Asia , Europe and N & E Africa.

### Key to species and varieties

1. Sepals outside on margin velutinous , elsewhere puberulous or glabrous.

2. Hornotinous branch or inflorescence not with leaves arising from an axillary bud of old branch ; leaflets usually at margin entire.

3. Inflorescences arising from leaf axils of hornnotinous branch.
4. Achenes compressed, ovate, elliptic, or lanceolate.
5. Achenes compressed, but not flattened, not tumidly rimmed at margin.
6. Leaves simple (in *C. chekiangensis* sometimes ternate).
7. Leaf blade coriaceous, broadly lanceolate or ovate, at base subtruncate; petioles 1.5–2 cm long; anthers at apex obtuse ..... 46. *C. xinhuiensis*
7. Leaf blade papery, narrowly oblong or oblong-lanceolate, at base subcordate or rounded; petioles 3–6 cm long; anthers at apex minutely apiculate ..... 49. *C. chekiangensis*
6. Leaves compound (in *C. meyeniana* sometimes simple).
8. Leaves ternate.
9. Anthers at apex obtuse (in *C. sinii* occasionally apiculate).
10. Sepals 4, white, papery, on margin velutinous, elsewhere glabrous; cymes 10–many-flowered.
11. Leaflets coriaceous or subcoriaceous, reticulate; pedicels glabrous.
12. Branches glabrous, on nodes densely furfuraceous; leaflets coriaceous; petioles and peduncles glabrous, furfuraceous ..... 41. *C. napoensis*
12. Branches, petioles and peduncles sparsely puberulous, not furfuraceous; leaflets subcoriaceous ..... 42. *C. jialasaensis*
13. Sepals 10–13 × 2.6–3.8 mm ..... 42a. var. *jialasaensis*
13. Sepals 14–20 × 4–6 mm ..... 42b. var. *macrantha*
11. Leaflets papery or thinly papery; pedicels hairy.
14. Leaflets papery, on both surfaces indistinctly and finely reticulate; cymes 3-flowered, not panicle-like; sepals 13–19 × 5–9 mm ..... 43. *C. chengguensis*
14. Leaflets thinly papery, not reticulate; cymes 10-flowered, panicle-like; sepals ca. 11 × 4 mm ..... 44. *C. sinii*
10. Sepals 4(–6), reddish, coriaceous, on both surfaces densely puberulous; cymes 1–3-flowered ..... 45. *C. theobromina*
9. Anthers at apex minutely apiculate.
15. Branches densely puberulous or velutinous; leaflets at margin entire or few dentate, adaxially puberulous, abaxially velutinous or densely puberulous, reticulate ... 40. *C. thaiana*
15. Branches puberulous, glabrescent or subglabrous; leaflets at margin entire, on both surfaces glabrous or near base sparsely puberulous, not reticulate.
16. Pedicels puberulous.
17. Leaflets papery, narrowly ovate or long elliptic, at both ends more or less attenuate ..... 47. *C. pingbianensis*
17. Leaflets usually subcoriaceous, oblong-ovate, at apex acuminate, at base rounded or subcordate ..... 48. *C. meyeniana*
18. Leaflets not rugose.
19. Axillary cymes many-flowered ..... 48a. var. *meyeniana*
19. Axillary cymes 1-flowered ..... 48b. var. *uniflora*
18. Leaflets adaxially finely rugose ..... 48c. var. *granulata*
16. Pedicels glabrous ..... 50. *C. finetiana*
20. Axillary cymes not much branched, 1–7-flowered ..... 50a. var. *finetiana*
20. Axillary cymes often much branched, (5–)15–21-flowered ..... 50b. var. *lutchuensis*
8. Leaves 5-foliolately pedate, pinnate, or bipinnate.
21. Leaves 5-foliolately pedate ..... 50c. var. *pedata*

21. Leaves pinnate or bipinnate.
22. Leaflets adaxially on veins sparsely puberulous or subglabrous , abaxially densely puberulous , ovate ; leaves pinnate ; sepals 4( -5-6 ) ..... 51. *C. shensiensis*
22. Leaflets on both surfaces glabrous.
23. Leaves pinnate ; leaflets not reticulate ; petioles not connate.
24. Leaflets lanceolate or linear , at margin entire ; sepals 4-6 ..... 52. *C. quinquefoliolata*
24. Leaflets deltoid , ovate , or elliptic , at margin serrate or entire ; sepals( 5-6 ) ... ..... 53. *C. akoensis*
23. Leaves bipinnate or pinnate ; leaflets on both surfaces reticulate ; petioles of the same pair of leaves often connate at base ; sepals 5-6(-7) ..... 54. *C. dilatata*
5. Achenes strongly compressed , flattened , more or less tumidly rimmed , rarely narrowly rimmed ( *C. lathyrifolia* ) at margin( achenes unknown in *C. linearifoliola* , *C. papuligera* , and *C. tunisiatica* ).
25. Leaflets subcoriaceous , on both surfaces reticulate.
26. Leaves pinnate ..... 59. *C. pashanensis*
27. Anthers at apex obtuse ..... 59a. var. *pashanensis*
27. Anthers at apex minutely apiculate ..... 59b. var. *latisepala*
26. Leaves bipinnate ..... 60. *C. kirilowii*
28. Leaflets oblong , ovate , or lanceolate ..... 60a. var. *kirilowii*
28. Leaflets narrowly lanceolate or linear ..... 60b. var. *chanetii*
25. Leaflets papery , not reticulate , or abaxially slightly reticulate.
29. Woody vines.
30. Plants entirely or only sepals and stamens( *C. linearifoliola* ) turning black when drying.
31. Sepals 4( in *C. chinensis* var. *fujisanensis* sometimes 5 or 6 ), 6-15( -20-22 ) mm long ; leaves pinnate , seldom bipinnate.
32. Plants entirely turning black when drying ; leaflets ovate or lanceolate ..... 58. *C. chinensis*
33. Branches glabrous or sparsely puberulous ; leaflets on both surfaces only on basal veins very sparsely puberulous , glabrescent , or subglabrous.
34. Leaves pinnate.
35. Sepals 4 , 6-13 × 1.8-3( -4 ) mm ; axillary cymes usually many-flowered , panicle-like ..... 58a. var. *chinensis*
35. Sepals larger , ( 8- ) 10-22 × ( 2- ) 3-5 mm.
36. Axillary cymes 3-many-flowered ; sepals 4( -6 ), ( 8- ) 10-22 × ( 2- ) 3-5 mm ..... 58b. var. *fujisanensis*
36. Axillary cymes 1( -3 )-flowered ; sepals 4 , 10-20 × 4 mm ..... 58c. var. *anhweiensis*
34. Leaves bipinnate ; sepals 4 , 8-15 × 2-4 mm ..... 58d. var. *bipinnata*
33. Branches and leaflets abaxially more or less densely puberulous ; leaves pinnate ; sepals 4 , smaller , 6-9 × 2-3 mm ..... 58e. var. *vestita*
32. Stem and leaves not turning black , only sepals and stamens turning black when drying ; leaflets narrowly linear or lanceolate-linear ..... 62. *C. linearifoliola*
31. Sepals( 4- ) 5-6(-7) , larger , 12-26 × 4-8 mm ; leaves bipinnate or pinnate ..... 61. *C. obscura*
30. Plants including flowers and achenes not turning black when drying.
37. Leaflets abaxially on veins sparsely papillate ..... 64. *C. papuligera*
37. Leaflets abaxially not papillate.
38. Leaves pinnate ; leaflets usually ovate , at margin entire , undivided ; eastern Asiatic species.....

- ..... 63. *C. terniflora*
39. Pedicels puberulous.
40. Axillary cymes usually many-flowered ; pedicels 0.5 – 3 cm long ; sepals 5.5 – 15 ( – 20 ) × 2 – 5 ( – 6 ) mm ..... 63a. var. *terniflora*
40. Axillary cymes 3 – 9-flowered ; pedicels 1.5 – 5.4 cm long ; sepals 15 – 25 × 4 – 9 mm ... ..... 63b. var. *boninensis*
39. Pedicels subglabrous or glabrous.
41. Leaves 5 – 7-foliate ; sepals outside sparsely puberulous ; anthers linear , at apex minutely apiculate , seldom obtuse ; achenes broadly ovate or elliptic , 4 – 6 mm long ..... 63c. var. *mandshurica*
41. Leaves 5 – 11-foliate ; sepals outside densely puberulous ; anthers narrowly oblong , at apex obtuse ; achenes elliptic or suborbicular , 5 – 6 mm long ..... 63d. var. *garabiensis*
38. Leaves usually bipinnate , sometimes pinnate or thrice pinnatisect ; Mediterranean species ..... 65. *C. flammula*
42. Lower leaves similar to upper ones.
43. Leaves twice or once pinnate ; leaflets ovate , lanceolate , or linear-lanceolate.
44. Leaflets narrowly to broadly ovate.
45. Leaflets at apex acute or acuminate.
46. Leaflets undivided , seldom 2-lobed ; sepals usually 6 – 12 mm long.
47. Leaves twice or once pinnate ; leaflets up to 6 cm long ..... 65a. var. *flammula*
47. Leaves twice pinnate ; leaflets smaller , 0.9 – 2 ( – 3 ) cm long ..... 65c. var. *caespitosa*
46. Leaflets 1 – 2 cm long , usually 2 – 3-lobed or 2 – 3-fid ; sepals 4 – 8 mm long ... ..... 65d. var. *parviflora*
45. Leaflets at apex obtuse or rounded ; sepals ca. 7 mm long ..... 65b. var. *fragrans*
44. Leaflets narrowly lanceolate or linear-lanceolate , undivided ; leaves bipinnate ; sepals 9 – 12 mm long ..... 65e. var. *maritima*
43. Leaves thrice pinnatisect , ultimate lobes linear or narrowly linear , 3 – 22 × 1 – 2 ( – 4 ) mm , entire , seldom 1 – 2-denticulate ; sepals 9 – 13 ( – 16 ) mm long ..... 65f. var. *stenophylla*
42. Lower leaves with cordate or ovate leaflets , upper leaves thrice pinnatisect with linear or narrowly linear lobes ..... 65g. var. *heterophylla*
29. Erect small shrubs , half-shrubs , or perennial herbs.
48. Leaves all simple , lower ones undivided , upper ones 3-sect ; terminal cyme 3-flowered ; sepals 4 ..... 66. *C. tunisiatica*
48. Lower or lowermost leaves simple , upper ones ternate or pinnate , or leaves all pinnate or bipinnate ; terminal inflorescence many-flowered , panicle-like.
49. Lower leaves simple , upper ones ternate , sometimes uppermost ones 5-foliately pinnate ; sepals 4 ( – 6 ) ..... 67. *C. elisabethae-carolae*
49. Leaves most or all once or twice pinnate , sometimes the lowermost ones being simple ; sepals 4 , occasionally 5 in *C. recta*.
50. Leaves once pinnate ; leaflets 1.5 – 8.5 × 0.8 – 5 cm , undivided ; achenes tumidly rimmed at margin ; persistent styles ca. 1.8 cm long ..... 68. *C. recta*
50. Leaves once or twice pinnate ; leaflets smaller , 0.8 – 4.2 × 0.8 – 3.2 cm , undivided or 2 – 3-lobed ; achenes narrowly rimmed at margin ; persistent styles ca. 3.5 cm long ..... 69. *C. lathyrifolia*

4. Achenes less compressed, subulate-terete or narrowly lanceolate.
51. Branches glabrous; achenes subulate-terete; persistent styles 1.5–3 cm long ..... 70. *C. uncinata*
52. Ovaries and achenes glabrous.
53. Leaflets subcoriaceous or papery, abaxially less glaucous, slightly reticulate ..... 70a. var. *uncinata*
53. Leaflets coriaceous, abaxially glaucous, not reticulate ..... 70b. var. *coriacea*
52. Ovaries and achenes puberulous ..... 70c. var. *okinawensis*
51. Branches on nodes puberulous; achenes narrowly lanceolate, puberulous; persistent styles ca. 6 cm long ..... 71. *C. sigensis*
3. Inflorescences alone arising from axillary buds of old branch.
54. Leaves ternate; leaflets ovate or oblong.
55. Leaflets reticulate; sepals 4, 5–7 mm long ..... 55. *C. lingyunensis*
55. Leaflets not reticulate; sepals 4–6, larger, 12–47 mm long ..... 56. *C. armandii*
56. Inflorescences 7–many-flowered, usually panicle-like; sepals 4(–5), 12–24 mm long ..... 56a. var. *armandii*
56. Inflorescences 1–3-flowered, not panicle-like; sepals 4–6, 15–47 mm long.
57. Leaflets at apex acuminate; sepals 21–47 mm long.
58. Inflorescences 3-flowered; sepals 4–5, 21–40 mm long ..... 56b. var. *farquhariana*
58. Inflorescences 1–3-flowered; sepals 4–6, 37–47 mm long ..... 56c. var. *hefengensis*
57. Leaflets at apex retuse; sepals ca. 15 mm long; inflorescences 3-flowered ..... 56d. var. *retusifolia*
54. Leaves pinnate or ternate; leaflets narrowly lanceolate ..... 57. *C. zygophylla*
2. Hornotinous branch or sometimes inflorescence also with leaves together arising from an axillary bud of old branch; leaves bipinnate; leaflets at margin incised-dentate ..... 72. *C. zemuensis*
1. Sepals on both surfaces entirely hairless; leaves pinnate; leaflets at margin dentate or entire, 3-parted or 3-lobed ..... 73. *C. sichotealinensis*

Ser. 1. **Meyeniana** Tamura in Sci. Rep. Osaka Univ. 4:54. 1955; et in Acta Phytotax. Geobot. 16:81. 1956. — Sect. *Flammula* subsect. *Meyeniana* (Tamura) M. Johnson, Klematis 605. 1997; Grey-Wils., Clematis 104. 2000. Type: *C. meyeniana* Walp.

Woody vines. Hornotinous branches alone arising from axillary buds of old branch. Leaves ternate or once to twice pinnate, seldom simple; leaflets papery or coriaceous, at margin entire, seldom serrate or dentate, undivided. Flowers small or medium-sized, in (1–)few–many-flowered cymes arising from leaf axils of hornotinous branch. Sepals 4(–5–6). Achenes compressed, but neither flattened, nor tumidly rimmed.

Fifteen species, mostly occurring in eastern Asia, only one endemic to southern India.

**40. *Clematis thaiana*** Tamura in J. Phytogeogr. Taxon. 28(1):14. 1980; et in Thai For. Bull. Bot. 25:67. 1997. Type: Thailand. Chiang Mai: Doi Chiang Dao, 1979-10-27, Shimizu et al. T21172 (holotype, KYO); same locality, 2000 m, Smitinand & Abbe 6259 (paratype, K!); same locality, Smitinand & Anderson 7337 (paratypes, K!, KYO!); same locality, Smitiland, Poore & Robins 7792s (paratype, KYO!); same locality, Shimizu, Koyama & Nalampoon T10030 (paratype, KYO!).

Woody vine. Branches obscurely 10-sulcate, densely appressed-puberulous or tawny-velutinous. Leaves ternate; leaflets subcoriaceous or papery, narrowly ovate, broadly lanceolate, ovate, or oblong-ovate, 4–10 × 1.8–4.5 cm, at apex acuminate or attenuate, at base rounded,

subcordate, or subtruncate, at margin entire or coarsely 1–3-dentate, adaxially appressed-puberulous, abaxially velutinous or densely puberulous and reticulate, basal veins abaxially prominent; petioles 4–9.5 cm long. Cymes axillary and terminal, 5–many-flowered, often panicle-like; peduncle 1.8–6 cm long, with rhachis and pedicels tawny-velutinous; bracts petiolate, leaflet-like. Flower 1–2 cm in diam.; pedicel 3–14 cm long. Sepals 4, white, narrowly oblong or oblanceolate-oblong, 7–10 × 2–2.2 mm, at apex slightly acute, inside glabrous, outside velutinous. Stamens 4–6 mm long, glabrous; anthers linear, 2–3 mm long, at apex minutely apiculate. Ovaries pubescent; styles ca. 4 mm long, densely villous. Achenes compressed, ovate-elliptic or ovate, 3.5–4 × 2.5–3.5 mm, densely appressed-pubescent; persistent styles 1.2–2.5 cm long, yellowish-plumose. Fl. Sept.–Nov.

N Thailand. Among thickets or on limestone rocks; 1900–2175 m.

**41. *Clematis napoensis*** W. T. Wang in Acta Phytotax. Sin. 37(3):217, fig. 2:1–4. 1999; W. T. Wang & Barth. in Fl. China 6:354. 2001. Type: China. Guangxi (广西): Napo (那坡), near city, in bushes on a lime-stone hill, 1998-04-12, H. N. Qin et al. 442 (holotype, PE!).

### 那坡铁线莲

Woody vine. Branches shallowly 12-sulcate, glabrous, on nodes densely minutely white furfuraceous. Leaves ternate, glabrous; leaflets coriaceous, ovate or narrowly ovate, 10.5–14.5 × 4.8–8 cm, at apex slightly acute or acuminate, at base subcordate or truncate-rounded, at margin entire, on both surfaces finely reticulate, basal veins distinctly prominent; petioles ca. 8 cm long, at apex and base white furfuraceous. Cymes axillary, many-flowered, panicle-like, glabrous; peduncles ca. 8 cm long, at apex and base white-furfuraceous; bracts narrowly triangular, ca. 4 mm long. Flower 1.5–2 cm in diam.; pedicel slender, 0.8–1.8 cm long, glabrous. Sepals 4, white, oblanceolate or narrowly oblong, rarely narrowly obovate, 8–12 × 2.5–3.5 (–4.2) mm, at apex slightly obtuse, rarely truncate. Stamens 4.8–6 mm long, glabrous; anthers linear, 2.5–3 mm long, at apex obtuse. Ovaries pubescent; styles ca. 5 mm long, densely villous. Fl. Apr.

China (SW Guangxi). In bushes on lime-stone hill; 800 m.

**42. *Clematis jialasaensis*** W. T. Wang in Acta Bot. Yunnan. 8:268, fig. 3:1–2. 1986; Grey-Wils., Clematis 108. 2000; W. T. Wang & Barth. in Fl. China 6:354. 2001. Type: China. Xizang (西藏): Medog (墨脱), Jialasa (迦拉萨), between Lusangu (鲁三古) and Longle (隆勒), 2100 m, 1983-04-18, Z. C. Ni 73 (holotype, PE!).

This species is endemic to SW China, consisting of two varieties, one confined to SE Xizang, the other to NE Yunnan.

### 迦拉萨铁线莲

#### 42a. var. *jialasaensis*

Woody vine. Branches shallowly 10-sulcate, on nodes sparsely puberulous, elsewhere glabrous. Leaves ternate; leaflets subcoriaceous, narrowly ovate or ovate, 6–9.5 × 2.7–4.5 cm, at apex acute or acuminate, at base subcordate or cordate-rounded, at margin entire, on both surfaces glabrous and finely reticulate, basal veins on both surfaces prominent; petioles 6.5–7.4 cm long, sparsely puberulous. Cymes axillary and terminal, many-flowered, panicle-like; peduncles 3.5–7.5 cm long, sparsely puberulous; bracts narrowly triangular or subulate, 3.5–5.5 mm long. Flower 2–2.5 cm in diam.; pedicel 1.5–2.5 cm long, glabrous. Sepals 4, white, spatulate-linear or narrowly oblong, 10–13 × 2.6–3.8 mm, at apex acute, inside glabrous, outside on margin velutinous, elsewhere glabrous. Stamens 6–7.5 mm long, glabrous; anthers linear, 3.2–4.2 mm long,

at apex obtuse. Ovaries pubescent ; styles ca. 6 mm long , densely villous. Fl. Apr.

China( SW Xizang ). At forest margins in valley ; 2100 m.

**42b.** var. **macrantha** W. T. Wang in Acta Phytotax. Sin. 39( 1 ):4. 2001 ; W. T. Wang & Barth. in Fl. China 6 :354. 2001. Type : China. Yunnan( 云南 ) : Tchen-fang-chan , 1907-04-15 , Ducloux 2021 ( holotype , P !).

### 滇北铁线莲

This variety differs from var. *jalasaensis* in its larger flowers 2.5 – 3.7 cm in diam. , with sepals 14 – 20 mm long ,( 3 – )4 – 6 mm broad. Fl. Apr.

China( SW Sichuan , NE Yunnan ). At forest edges ; 1200 – 2000 m.

Additional specimen examined. **China. Sichuan**( 四川 ) : Leibo( 雷波 ), M. Y. He & Z. M. Tan 117028 ( SZ ).

**43. Clematis chengguensis** W. T. Wang , sp. nov. Type : China. Shaanxi( 陕西 ) : Chenggu( 城固 ), Panlong( 盘龙 ), Xinglong( 兴龙 ), in bushes in valley , fl. white , 1972-04-02 , S. M. Su 420 ( holotype , here designated , WUK ).

### 城固铁线莲 Fig. 17 : C , D

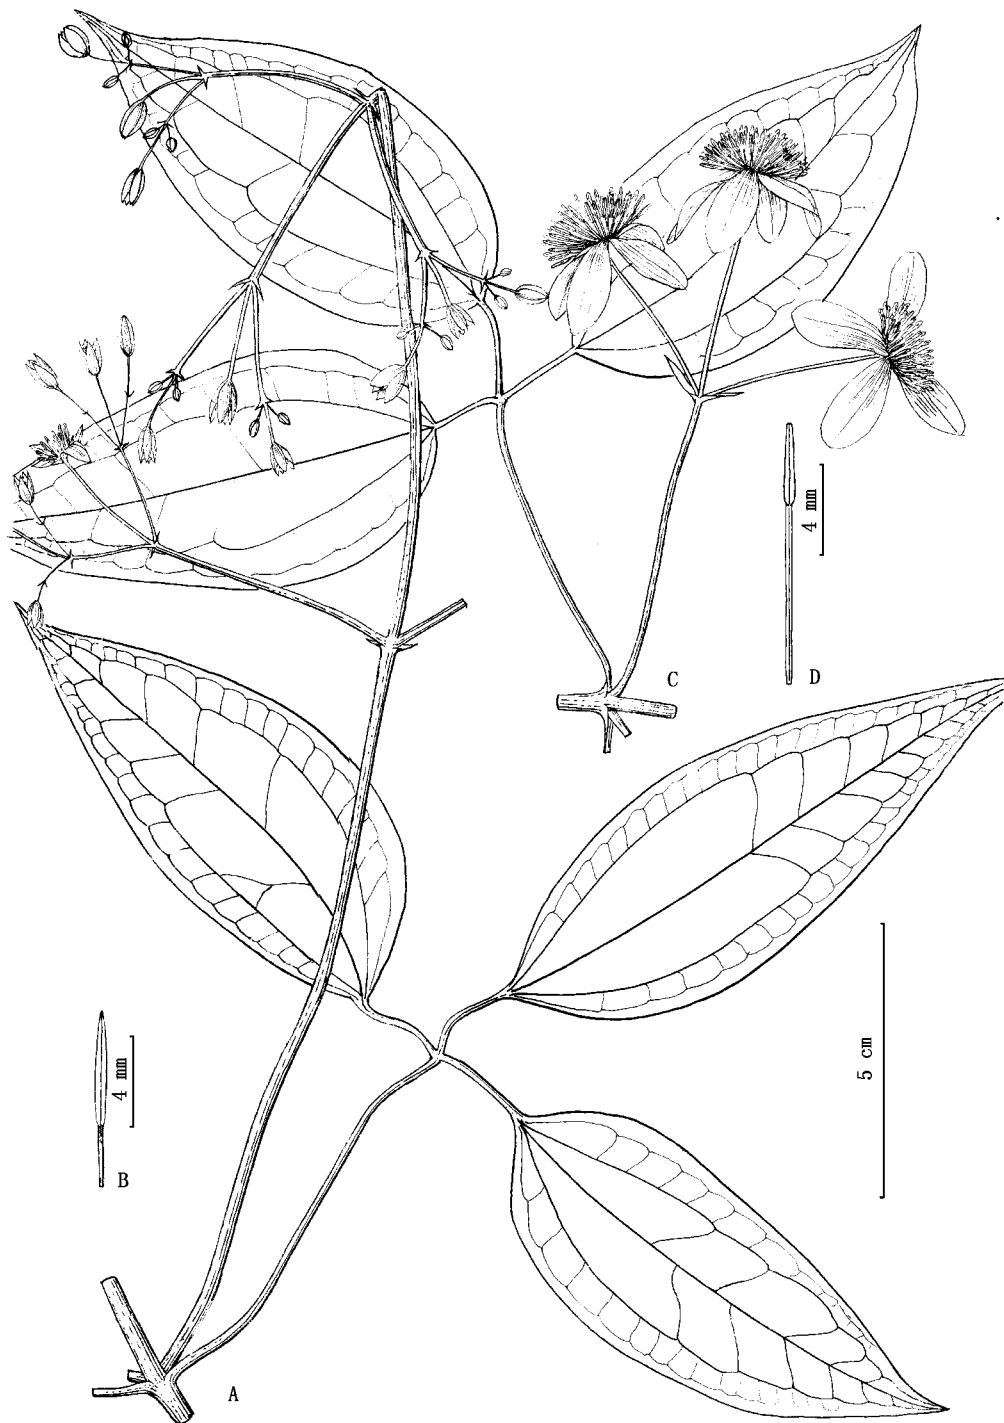

Arcte affinis *C. jalasaensi* W. T. Wang et *C. sinii* W. T. Wang , ab illa differt ramis sparse pubescentibus , foliolis papyraceis , cymis tantum axillaribus 3-floris , pedicellis sparse pubescentibus ; ab hac foliolis utrinque inconspicue subtiliterque reticulatis , cymis 3-floris haud paniculiformibus , sepalis majoribus 13 – 19 mm longis 5 – 9 mm latis .

Liana lignosa. Rami teretes , ca. 2.2 mm diametro , vadose 10-sulcati , sparse pubescentes. Folia ternata ; foliola papyracea , ovata , anguste ovata vel elliptica , 5.5 – 8.4 cm longa , 3 – 4 cm lata , apice acuta vel breviter acuminate , basi rotundata , margine integra , utrinque inconspicue subtiliterque reticulata , glabra , nervis basalibus subtus fere planis ; petioli 5 – 6 cm longi , sparse pubescentes. Cymae axillares , 3-florae ; pedunculi 3.5 – 6.5 cm longi , basi et apice sparse pubescentes vel glabri. Flos 2.5 – 3.5 cm diametro ; pedicellus 2.4 – 4.2 cm longus , sparse pubescens. Sepala 4 , white , oblongo-obovata vel oblanceolata , 13 – 19 mm longa , 5 – 9 mm lata , apice obtusa vel subtruncata , intus glabra , extus sparse adpresso-puberula vel subglabra , ad marginem velutina. Stamina 25 – 35 , 8 – 10 mm longa , glabra , filamentis linearibus , antheris linearibus 3 – 4 mm longis apice obtusis. Carpella ca. 16 , ovariis dense pubescentibus , stylis ca. 7 mm longis dense villosis .

Woody vine. Branches terete , ca. 2.2 mm in diam. , shallowly 10-sulcate , sparsely pubescent. Leaves ternate ; leaflets papery , ovate , narrowly ovate , or elliptic , 5.5 – 8.4 × 3 – 4 cm , at apex acute or shortly acuminate , at base rounded , at margin entire , on both surfaces indistinctly and finely reticulate , glabrous , basal veins abaxially nearly flat ; petioles 5 – 6 cm long , sparsely pubescent. Cymes axillary , 3-flowered ; peduncles 3.5 – 6.5 cm long , at base and apex sparsely pubescent or glabrous ; bracts lanceolate-linear , ca. 9 mm long. Flower 2.5 – 3.5 cm in diam. ; pedicel 2.4 – 4.2 cm long , sparsely pubescent. Sepals 4 , white , oblong-obovate or oblanceolate , 13 – 19 × 5 – 9 mm , at apex obtuse or subtruncate , inside glabrous , outside sparsely appressed-puberulous or subglabrous , on margin velutinous. Stamens 8 – 10 mm long ; anthers linear , 3 – 4 mm long , at apex obtuse. Ovaries densely pubescent ; styles ca. 7 mm long , densely villosus . Fl. Apr.

China( SW Shaanxi ). In bushes in valley.

**44. Clematis sinii** W. T. Wang in Acta Phytotax. Sin. 39( 4 ):314 , fig. 2 :1 – 2. 2001 ; W.

T. Wang & Barth. in Fl. China 6 : 354. 2001. Type : China. Guangxi ( 广西 ) : Dayaoshan ( 大瑶山 ), Kuchun , 1934-06-27 , S. S. Sin 23329 ( holotype , IBSC !).

### 辛氏铁线莲

Woody vine. Branches subterete , shallowly 8-sulcate , very sparsely puberulous or subglabrous . Leaves ternate ; leaflets thinly papery , narrowly ovate or broadly lanceolate ,  $7 - 8.8 \times 2.5 - 3.4$  cm , at apex long acuminate or attenuate , at base rounded , at margin entire , on both surfaces glabrous or abaxially near base on midrib very sparsely pilose , basal veins abaxially slightly prominent ; petioles  $5.5 - 6.8$  cm long. Cymes axillary , ca. 10-flowered , panicle-like ; peduncles  $4.4 - 4.8$  cm long , subglabrous ; bracts triangular , ca. 3.5 mm long , sparsely ciliolate. Flower ca. 1.2 cm in diam. ; pedicel slender ,  $1.2 - 2.2$  cm long , sparsely puberulous. Sepals 4 , oblong , ca.  $11 \times 4$  mm , at apex acute , on both surfaces glabrous except the outside velutinous margin. Stamens  $5 - 8$  mm long , glabrous ; anthers linear ,  $3.2 - 3.8$  mm long , at apex obtuse , seldom minutely apiculate. Ovaries densely puberulous ; styles ca. 6 mm long , densely villous. Fl. Jun.

China ( NE Guangxi ).

**45. *Clematis theobromina*** Dunn in Kew Bull. 1914 : 181. 1914 ; Gamble , Presid. Madras 1 : 3. 1915 ; Gupta in Bull. Nat. Bot. Gard. Lucknow 80 : pl. 44. 1963 ; Kapoor in l. c. 124 : 71. 1966 ; Rau in Sharma et al. , Fl. Ind. 1 : 77. 1993 ; M. Johnson , Klematis 525. 1997 ; Grey-Wils. , Clematis 58. 2000 ; W. T. Wang in Acta Phytotax. Sin. 38 ( 5 ) : 410. 2000. Type : India. Conoor : Nilgiri Hills , 1870-03-19 , Clarke 11080 ( lectotype , K ! ); same locality , Clarke 10987 ( syntype , K ! ).

Woody vine. Branches shallowly 8-sulcate , on nodes sparsely puberulous , elsewhere glabrous. Leaves ternate , glabrous ; leaflets papery , ovate or elliptic-ovate ,  $4.4 - 11.8 \times 3 - 6.8$  cm , at apex acuminate or acute , at base subcordate or subtruncate , at margin entire , basal veins  $5 - 7$  , abaxially slightly prominent ; petioles  $5 - 9$  cm long , at base slightly dilated and often connate with that of the opposite leaf. Cymes axillary , singular , often 3-flowered , or two together arising from a leaf axil of hornotinous branch , then one larger , long pedunculate ( peduncle  $3.5 - 10$  cm long ) , 3-flowered , with usually leaf-like bracts  $3.5 - 9$  cm long , the other one smaller , 1-flowered , shortly pedunculate ( peduncle  $0.9 - 1.2$  cm long ) , with subulate or elliptic bracts  $5 - 11$  mm long. Flower ca. 4 cm in diam. ; pedicel  $3.5 - 9$  cm long , glabrous. Sepals 4( - 6 ) , reddish , coriaceous , narrowly obovate or obovate-oblong , ca.  $19 \times 7 - 8$  mm , at apex slightly acute , on both surfaces densely appressed-puberulous , on margin velutinous. Stamens  $7 - 18$  mm long , glabrous ; anthers linear or narrowly oblong , ca. 3 mm long , at apex obtuse. Ovaries pubescent ; styles ca. 6 mm long , densely villous. Fl. Mar.

India ( Tamil Nadu , Nilgiri Hills ). In evergreen forests ; 1800 – 2400 m ( fide Rau , 1993 ).

**46. *Clematis xinhuiensis*** R. J. Wang in J. Trop. Subtrop. Bot. 7 ( 1 ) : 24 , fig. 1. 1999 ; W. T. Wang & Barth. in Fl. China 6 : 353. 2001. Type : China. Guangdong ( 广东 ) : Xinhui ( 新会 ) , Gudoushan Forestry Plantation , Wuzhishan Reservoir , 1981-09-11 , W. C. Ko & B. H. Chen 112 ( holotype , IBSC ! ).

### 新会铁线莲

Woody vine. Branches terete , shallowly sulcate , sparsely puberulous , glabrescent. Leaves simple ; leaf blades coriaceous , broadly lanceolate or ovate ,  $9 - 12.5 \times 4.5 - 5.5$  cm , at apex acuminate or acute , at base subtruncate , at margin entire , on both surfaces glabrous , basal veins  $3 - 5$  , prominent ; petioles  $1.5 - 2$  cm long. Cymes terminal , many-flowered , panicle-like ;

peduncles 10–18 cm long; bracts foliaceous. Flower ca. 1 cm in diam.; pedicel ca. 1 cm long. Sepals 4, white, oblong, 7–8 × 2–3 mm, at apex obtuse or rounded, inside glabrous, outside on margin velutinous, elsewhere glabrous. Stamens ca. 7 mm long, glabrous; anthers slightly longer than filaments, linear, ca. 4 mm long, at apex obtuse. Ovaries densely puberulous; styles ca. 6 mm long, densely villous. Fl. Sept.

China (S Guangdong).

**47. Clematis pingbianensis** W. T. Wang, sp. nov. Type: China. Yunnan (云南): Pingbian (屏边), Xinnong Village (新农乡), Shitouzhai (石头寨), 1380 m, in sparse forest, scandent shrub, fl. yellowish, 1953-07-14, P. Y. Mao 2471 (holotype, here designated, WUK); Guangan (广南), Ma-gei, hilly slope, fl. white, 1940-03-04, C. W. Wang 87416 (paratype, WUK).

屏边铁线莲 Fig. 17 : A, B

Arcte affinis *C. meyeniana* Walp., quae foliolis crassioribus vulgo subcoriaceis oblongo-ovatis apice acuminate basi rotundatis truncato-rotundatis vel subcordatis distinguitur.

Liana lignosa. Rami teretes, ca. 3 mm diametro, vadose 12-sulcati, sparse puberuli. Folia ternata; foliola papyracea, anguste ovata vel longe elliptica, 9–10.2 cm longa, 3.2–3.8 cm lata, apice et basi plus minusve attenuata, margine integra, utrinque glabra, nervis basalibus planis; petioli 6.5–7 cm longi, basi et apice sparse puberuli. Cymae axillares, (5–)9–30-florae, saepe paniculiformes; pedunculi 6–13 cm longi, sparse puberuli; bracteae triangulares vel trianguli-subulatae, 3–4.5 mm longae. Flos ca. 2 cm diametro; pedicellus 0.8–1.4 cm longus, puberulus. Sepala 4, alba vel luteola, lanceolato-oblonga vel anguste oblonga, 10–12 mm longa, 2.2–3.2 mm lata, apice acuta vel leviter obtusa, intus glabra, extus glabra vel sparse adpresso-puberula, ad marginem velutina. Stamina ca. 40, 4–8 mm longa, glabra, filamentis linearibus, antheris linearibus 3–4 mm longis apice minute apiculatis. Carpella ca. 15, ovariis dense pubescentibus, stylis ca. 4 mm longis dense villosa.

Woody vine. Branches terete, ca. 3 mm in diam., shallowly 12-sulcate, sparsely puberulous. Leaves ternate; leaflets papery, narrowly ovate or long elliptic, 9–10.2 × 3.2–3.8 cm, at both ends more or less attenuate, at margin entire, on both surfaces glabrous, basal veins flat; petioles 6.5–7 cm long, at base and apex sparsely puberulous. Cymes axillary, (5–)9–30-flowered, often panicle-like; peduncles 6–13 cm long, sparsely puberulous; bracts triangular or triangular-subulate, 3–4.5 mm long. Flower ca. 2 cm in diam.; pedicel 0.8–1.4 cm long, puberulous. Sepals 4, white or yellowish, lanceolate-oblong or narrowly oblong, 10–12 × 2.2–3.2 mm, at apex acute or slightly obtuse, inside glabrous, outside glabrous or sparsely appressed-puberulous, on margin velutinous. Stamens 4–8 mm long; anthers linear, 3–4 mm long, at apex minutely apiculate. Ovaries densely pubescent; styles ca. 4 mm long, densely villous. Fl. Mar.–Jul.

China (SE Yunnan). In sparse forests or on slopes; 1380 m.

### 毛柱铁线莲

This species consists of three varieties, occurring in southern subtropical regions of China and adjacent countries.

#### 48a. var. *meyeniana* Fig. 18 : D - F

Woody vine. Branches shallowly 10-sulcate, puberulous, glabrescent. Leaves ternate, seldom simple ; leaflets subcoriaceous or papery, ovate, elliptic-ovate, or narrowly ovate,  $7.5 - 12 \times 1 - 14$  cm  $\times 1.5 - 5(-9.5)$  cm, at apex acuminate or acute, at base rounded, subcordate, or broadly cuneate, at margin entire, on both surfaces near base sparsely puberulous, glabrescent, adaxially smooth, basal veins abaxially prominent ; petioles 2 - 11 cm long, sparsely puberulous. Cymes axillary and terminal, many-flowered, panicle-like ; peduncles 2.6 - 7.5 cm long, sparsely puberulous ; bracts subulate, 3.5 - 6 mm long. Flower 1.6 - 2.5 cm in diam. ; pedicel 0.6 - 1.6 cm long, puberulous. Sepals 4, white, narrowly oblong or lanceolate,  $8 - 13 \times 2.2 - 4$  mm, at apex obtuse, sometimes mucronate, inside glabrous, outside on margin velutinous, elsewhere glabrous. Stamens 5 - 9.5 mm long, glabrous ; anthers narrowly oblong or linear, 3 - 5.5 mm long, at apex minutely apiculate. Ovaries puberulous ; styles 5 - 9 mm long, densely villous. Achenes compressed, lanceolate or obliquely elliptic,  $5 - 7 \times 1.8 - 2.2$  mm, pubescent, slightly rimmed ; persistent styles 2 - 4 cm long, fulvous-plumose. Fl. Jun. - Aug.

China ( Fujian, Guangdong, Guangxi, S Guizhou, Hainan, Hong Kong, S Hunan, Jiangxi, Macao, Sichuan, Yunnan, S Zhejiang ), Laos, N Myanmar, Thailand, Vietnam. In bushes or sparse forests, or by streams ; 20 - 1800 m.

**Fig. 18.** A – C, *Clematis finetiana* Lévl. & Van. var. *finetiana*. A, flowering branch; B, stamen; C, achene (from Hunan Museum Exped. s. n.). D – F, *C. meyeniana* Walp. var. *meyeniana*. D, flowering branch; E, stamen; F, achene (from Bot. Inst. Exped. 485).

Quang-yen, Balansa 3375 (lectotype, P !) ; Mt. Bavi, Balansa 3374 (syntype, P !) ; Tu-Phap, Balansa 3376 (syntype, P !). China. Hainan (海南), 1889-11, Henry 8087 (syntype, K !).

### 沙叶铁线莲

This variety differs from var. *meyeniana* in its adaxially finely rugose leaflets. Its axillary cymes are many-flowered, panicle-like.

China (Guangdong, Guangxi, Hainan, Hong Kong, SE Yunnan), Laos, Vietnam. At forest margins, in bushes or forests, or by streams; 60–1300 m.

Additional specimens examined. **China. Guangdong** (广东) : Maoming (茂名), L. Deng 1728 (PE); Xuwen (徐闻), Xuwen Exped. 54-460 (PE); Gaozhou (高州), Y. ### 浙江铁线莲

Woody vine. Branches sparsely puberulous, glabrescent. Leaves simple, sometimes ternate; leaf blades papery, narrowly oblong or oblong-lanceolate, 4–12 × 2–5 cm, at apex attenuate or acuminate, at base subcordate or rounded, at margin entire, on both surfaces glabrous, basal veins flat; petioles 3–6 cm long. Cymes terminal, ca. 10-flowered; peduncles ca. 7 cm long; bracts petiolate, narrowly ovate. Flower ca. 1.5 cm in diam.; pedicel 1–2.5 cm long. Sepals 4, white,

oblong,  $8 - 10 \times 5 - 6$  mm, at apex rounded, inside glabrous, outside puberulous, on margin velutinous. Stamens ca. 4.8 mm long, glabrous; anthers broadly linear or narrowly oblong,  $3 - 3.2$  mm long, at apex minutely apiculate. Ovaries pubescent; styles ca. 6 mm long, densely villous. Achenes (immature) compressed, fusiform, ca.  $5 \times 2.5$  mm, puberulous; persistent styles ca. 2.5 cm long, plumose. Fl. Jun.

China ( S Zhejiang ). In forests on slopes.

### 山木通

This species consists of three varieties , wide-spread in the subtropical regions of China and Japan , with one of them from Taiwan Island southward extending to the Philippines .

**50a. var. *finetiana*** Fig. 18 : A – C

Woody vine. Branches shallowly 6 – 8-sulcate , near nodes puberulous , glabrescent. Leaves ternate ; leaflets subcoriaceous or coriaceous , ovate-lanceolate , narrowly ovate , or ovate ,  $3.5 - 10$  ( – 15 )  $\times$   $1.5 - 3.5$  – 6 cm , at apex acute or attenuate , at base rounded or subcordate , at margin entire , on both surfaces glabrous , basal veins abaxially slightly prominent ; petioles 2 – 7.8 cm long , subglabrous. Cymes axillary and terminal , the axillary ones 1 – 5( – 9 )-flowered , often raceme-like ; peduncles 1.5 – 9 cm long ; bracts triangular or subulate , 2 – 5 mm long. Flower 2 – 4 cm in diam. ; pedicel 1.5 – 6 cm long , glabrous. Sepals 4( – 6 ), white , narrowly oblong ,

obovate-oblong, or narrowly lanceolate,  $10 - 20 \times 2 - 5$  mm, at apex acute or slightly obtuse, inside glabrous, outside on margin velutinous, elsewhere glabrous. Stamens 7 – 12 mm long, glabrous; anthers linear or narrowly oblong, 4 – 6.5 mm long, at apex minutely apiculate. Ovaries pubescent; styles ca. 7 mm long, densely villous. Achenes compressed, falcate-fusiform, ca.  $5 \times 1.5$  mm, pubescent, at margin indistinctly rimmed; persistent styles 1.5 – 2.5 cm long, fulvous-plumose. Fl. Apr. – Jun.

China (S Anhui, Fujian, N Guangdong, N Guangxi, Guizhou, S Henan, Hubei, Hunan, S Jiangsu, Jiangxi, S Shaanxi, Sichuan, Taiwan, NE Yunnan, Zhejiang), S Japan. In sparse forests or bushes or by streams; 100 – 1200 m.

Additional specimens examined. **China. Anhui** (安徽): Qimen (祁门), M. B. Deng 4943 (PE); Huangshan (黄山), W. C. Cheng 3842, P. C. Tsoong 3432 (PE); Jiujuashan (九华山), R. C. **50b.** var. *lutchuensis* (Koidz.) W. T. Wang, st. et comb. nov. —— *C. lutchuensis* Koidz. in Bot. Mag. Tokyo 39 : 14. 1925. Type : Japan. Prov. Ohsumi : Ohshima Isl. , 1900-06 , Faurie 3830 (holotype, KYO!).

*C. meyeniana* auct. non Walp. : Merr. & Rolfe in Philip. J. Sci. Bot. 3 : 98. 1908 ; Ohwi , Fl. Jap. 443. 1965 ; Liu & Hsieh in Fl. Taiwan 2 : 486. 1976 ; T. Y. Yang & T. C. Huang in Taiwania 40 (3) : 228 , fig. 9. 1995 ; et in Fl. Taiwan, ed. 2 , 2 : 532 , pl. 249. 1995.

*C. meyeniana* var. *insularis* auct. non Sprague : H. Eichler in Bibl. Bot. 124 : 30. 1958 ; W. T. Wang in Acta Phytotax. Sin. 39 (1) : 5. 2001 , p. p.

### 多花山木通

This variety differs from var. *finetiana* in its usually much-branched , (5 – )15 – 21-flowered cymes .

China ( Taiwan ), S Japan , Philippines ( Luzon ).

Additional specimens examined. **China. Taiwan** (台湾) : Suitonka , Faurie 170 (P). **Japan.** Pref. Kagoshima , Tokunoshima Isl. , Murata 56216 , 56238 ( KYO ); Ohshima-gun , Okada 1036 ( KYO ), Murata & Endo 137 ( KYO , LE ). Ryukyu Isls. : Irimota Isl. , Murata & Tabata 712 ( KYO ); Irumti Isl. , Koidzumi s. n. ( KYO ); Izena Isl. , Tamura et al. 26759 ( KYO ); Yaeyama , Okoda & Ueda 2654 , 2771 ( KYO ). **Philippines.** Luzon : Mt. Santo Tomas , Sinclair & Edano 9716 ( K ).

In habit and in floral structure this variety is very similar to *C. meyeniana* . Thus , it has long been misidentified as that species. It differs mainly in its glabrous pedicels from *C. meyeniana* , of which the pedicels are puberulous. Judging by what mentioned above , I think that var. *lutchuensis* may be regarded as an intermediate form between *C. meyeniana* and *C. finetiana* var. *finetiana* , in which the axillary cymes are less branched and few flowered , and the pedicels are glabrous ( see above description ).

**50c.** var. *pedata* W. T. Wang in Acta Bot. Yunnan. 8 (3) : 269. 1986 ; et in Keys Vasc. Pl. Wuling Mount. 166. 1995 ; M. Johnson , Clematis 637. 1997 ; K. M. Liu in Fl. Hunan 2 : 687. 2000 ; Grey-Wils. , Clematis 109. 2000 ; W. T. Wang & Barth. in Fl. China 6 : 355. 2001. Type : China. Hunan (湖南) : Dayong (大庸) , Zhangjiajie (张家界) , 1984-09-16 , W Hunan Exped. 1256 (holotype , PE !).

### 鸟足叶铁线莲

This variety differs from var. *finetiana* in its 5-foliolately pedate leaves. Its axillary cymes are 3 – 5-flowered .

China ( NW Hunan ). On slopes ; 600 m.

**51.** ***Clematis shensiensis*** W. T. Wang in Acta Phytotax. Sin. 6 (4) : 378 , pl. 59 , fig. 6. 1957 ; Anonymous in Fl. Tsinling. 1 (2) : 295 , fig. 252. 1974 ; M. C. Chang in Fl. Reip. Pop. Sin. 28 : 171. 1980 ; Ding et al. , Fl. Henan. 1 : 455. 1981 ; Y. Z. Ling et al. , Fl. Shanxi. 1 :

### 舟柄铁线莲 Fig. 20:A, B

Woody vine. Branches shallowly 10-sulcate, puberulous, glabrescent. Leaves twice or once pinnate; leaflets subcoriaceous, narrowly ovate, ovate, ovate-orbicular, or oblong-lanceolate,  $3 - 10 \times 1.5 - 5.2$  cm, at apex acute or obtuse, at base rounded or subcordate, at margin entire, on both surfaces glabrous and conspicuously reticulate, basal veins slightly prominent; petioles 6.5–10 cm long, below toward base usually widened and connate with the base of opposite petiole, puberulous, glabrescent. Cymes axillary and terminal, 7–13-flowered; peduncles 3–8 cm long, puberulous; bracts linear or subulate, 7–10 mm long. Flower 3.4–5.5 cm in diam.; pedicel 2–5 cm long, densely puberulous. Sepals 5–6(–7), white tinged with pink, oblanceolate or oblong,  $1.8 - 3.5 \times 0.5 - 1$  cm, at apex acute, inside puberulous, outside velutinous or puberulous, on margin velutinous. Stamens 9–14 mm long, glabrous; anthers broadly linear or narrowly oblong, 3.2–4 mm long, at apex minutely apiculate. Ovaries puberulous; styles ca. 11 mm long, densely villous. Achenes compressed, narrowly ovate or lanceolate,  $5 - 5.5 \times 1.8 - 2$  mm, pubescent; persistent styles ca. 3 cm long, plumose. Fl. May.

China (C & S Zhejiang). In forests or by streams in ravines.

Additional specimens examined. **China. Zhejiang (浙江)**: Jingning (景宁), S. Y. Zhang 4933, 5175 (PE); Longquan (龙泉), Zhejiang Exped. 58-2170 (PE); Suichang (遂昌), Zhejiang Exped. 59-26547 (PE).

Ser. 2. **Armandiana** W. T. Wang in Acta Phytotax. Sin. 36(2):158. 1998. Type: *C. armandii* Franch.

Woody vines. Hornotinous branches alone arising from axillary buds of old branch. Leaves ternate or pinnate; leaflets coriaceous, at margin entire, undivided. Flowers small to large, in (1–) 3–many-flowered cymes arising singly or in pair from axillary buds of old branch. Sepals 4(–6).

Three species, occurring in subtropical regions of China and adjacent countries.

**55. Clematis lingyunensis** W. T. Wang in Acta Bot. Yunnan. 8(3):266, fig. 3:3, 4. 1986; M. Johnson, Klematis 639. 1997; Grey-Wils., Clematis 104. 2000; W. T. Wang & Barth. in Fl. China 6:360. 2001. Type: China. Guangxi (广西): Lingyun (凌云), Yuhong (玉洪), 1957-04-16, C. Wang 43033 (holotype, PE!).

### 凌云铁线莲 Fig. 21:E, F

Woody vine. Branches shallowly 15-sulcate, only on nodes sparsely puberulous; bud scales

deltoid or triangular, 5–12 mm long, brown-puberulous, undivided or 3-lobed. Leaves ternate; leaflets coriaceous, ovate,  $6.7 - 9.2 \times 3.7 - 5.8$  cm, at apex acuminate, at base subcordate, at margin entire, on both surfaces glabrous and finely reticulate, basal veins abaxially prominent; petioles 6–8 cm long, sparsely puberulous. Cymes ca. 3 arising from an axillary bud of old branch, the central one large, up to 20 cm long, many-flowered, panicle-like, the lateral ones smaller, 3.5–9 cm long, 5–9-flowered; peduncles 3–5 cm long, brownish puberulous; bracts linear-triangular or linear, ca. 9 mm long, undivided or 3-lobed, brownish puberulous. Flower 0.9–1.2 cm in diam.; pedicel 0.4–1.2 cm long, glabrous or very sparsely puberulous. Sepals 4, yellow, linear-lanceolate, broadly lanceolate, or long elliptic,  $5 - 7 \times 2 - 3$  mm, at apex slightly obtuse, on both surfaces except outside velutinous margin glabrous. Stamens 3–3.2 mm long, glabrous; anthers linear, 2.5–2.8 mm long, at apex minutely apiculate. Ovaries densely puberulous; styles ca. 4 mm long, densely villous. Fl. Apr.

China ( NW Guangxi, S Guizhou ). In sparse forests by streams.

Additional specimen examined. **China. Guizhou ( 贵州 )**: Chou-ly, Esquirol 4268 ( P ).

**Fig. 21.** A – C, *Clematis armandii* Franch. var. *armandii*. A, flowering branch; B, stamen; C, achene. (from S. X. Tan 123) D, *C. armandii* var. *farquhariana* (Rehd. & Wils.) W. T. Wang Inflorescence (from G. H. Yang 5762). E, F, *C. lingyunensis* W. T. Wang. E, flowering branch; F, stamen. (from C. Wang 43033)

This species consists of four varieties occurring in subtropical regions of China and adjacent countries.

**56a.** var. *armandii* Fig. 21 : A – C

Woody vine. Branches shallowly 10 – 16-sulcate, sparsely puberulous, glabrescent; bud scales ovate, triangular, or oblong, 0.8 – 2 cm long, puberulous. Leaves ternate; leaflets coriaceous, narrowly ovate, lanceolate, or ovate,  $5 - 16 \times 1.5 - 7$  cm, at apex acuminate or attenuate, at base rounded, subcordate, or broadly cuneate, at margin entire, on both surfaces glabrous, basal veins abaxially prominent; petioles 3.6 – 11 cm long, below sparsely puberulous or glabrous. Cymes usually 1 – 3 arising from an axillary bud of old branch, 7 – many-flowered, seldom singly from leaf axils of hornotinous branch and 1 – many-flowered; peduncles 0.4 – 8 cm long, puberulous or glabrous; bracts narrowly oblong or linear, 0.7 – 2 cm long, undivided, sometimes 3-lobed. Flower 2.5 – 4.5 cm in diam.; pedicel 1.8 – 7 cm long, sparsely puberulous or glabrous. Sepals 4 ( – 5), white, narrowly oblong, obovate-oblong, or oblong,  $1.2 - 2.4 \times 0.2 - 0.7$  cm, at apex obtuse or rounded, inside glabrous, outside sparsely puberulous or glabrous, on margin velutinous. Stamens 6 – 11 mm long, glabrous; anthers linear or narrowly oblong, 3 – 4.5 mm long, at apex minutely apiculate or obtuse. Ovaries pubescent; styles 6 – 8 mm long, densely villous. Achenes compressed, narrowly ovate or elliptic-ovate,  $4 - 5 \times 2 - 3$  mm, sparsely puberulous, slightly rimmed; persistent styles 1.6 – 4.8 cm long, plumose. Fl. Mar. – Apr.

China ( W Anhui, Fujian, S Gansu, N Guangdong, Guangxi, Guizhou, Hubei, Hunan, Jiangxi, S Shaanxi, Sichuan, E Xizang, Yunnan, S Zhejiang ), NE India, N Myanmar, Vietnam. On slopes, in bushes, at forest margins, or by streams; 100 – 2400 m.

### 安顺铁线莲

Woody vine. Branches shallowly sulcate ; bud scales lanceolate , 0.8 – 2 cm long , brownish velutinous . Leaves pinnate or ternate , glabrous ; leaflets subcoriaceous , narrowly lanceolate , 6 – 14 × 1 – 2 cm , at apex falcate-acuminate , at base cuneate or subrounded , at margin entire ; petioles 4 – 6 cm long. Cymes axillary , many-flowered , panicle-like , arising from axillary buds of old branch ; peduncles 8 – 9.5 cm long ; bracts linear-lanceolate , often 3-lobed , brownish puberulous. Flower 3 – 3.5 cm in diam. ; pedicel 1 – 2 cm long , glabrous. Sepals 4 , linear-lanceolate or oblanceolate , 1.5 – 1.8 × 0.2 – 0.5 cm , at apex obtuse or slightly acute , inside glabrous , outside on margin velutinous , elsewhere glabrous. Stamens 5 – 8 mm long , glabrous ; anthers linear or narrowly linear , 2.8 – 3 mm long , at apex obtuse. Ovaries pubescent ; styles ca. 5 mm long , densely villous .

China ( Guizhou : Anshun ). Known only from the type specimen.

Sect. *Flammula* DC. subsect. *Flammula* M. Johnson l. c. 602 ; Grey-Wils. , l. c. 95.

2000. Type : *C. flammula* L.

Woody vines or erect half-shrubs, small shrubs, or perennial herbs. Hornotinous branches alone arising from axillary buds of old branch. Leaves pinnate, ternate, or simple; leaflets papery, rarely subcoriaceous, at margin entire, usually undivided. Flowers small or medium-sized, in terminal and axillary cymes. Sepals 4(–6), outside on margin velutinous, elsewhere hairy or glabrous. Achenes strongly compressed, flattened, tumidly rimmed at margin, rarely narrowly rimmed.

Twelve species, wide-spread in E & SW Asia, Europe, and N Africa.

### 威灵仙

This species consists of five varieties wide-spread in the subtropical regions of China and adjacent countries.

**58a. var. chinensis** Fig. 20 : D – F ( see p. 131 )

Woody vine , turning black when drying. Branches 8 – 14-sulcate , glabrous or very sparsely puberulous. Leaves pinnate , usually 5-foliolate ; leaflets papery , ovate , narrowly ovate , or lanceolate , sometimes lanceolate-linear or orbicular-ovate ,  $1.5 - 9.5 \times 0.7 - 6.4$  cm , at apex attenuate , acuminate , or acute , seldom obtuse , at base rounded , broadly cuneate , or subcordate , at margin entire , adaxially on veins sparsely puberulous , glabrescent , abaxially glabrous or on veins sparsely puberulous , basal veins abaxially slightly prominent ; petioles 1.8 – 7.5 cm long. Cymes axillary and terminal , usually many-flowered , panicle-like ; peduncles 3 – 8.5 cm long ; bracts petiolate , elliptic or oblong , or sessile , small , linear. Flower 1.2 – 2.2 cm in diam. ; pedicel 1.4 – 3 cm long , sparsely puberulous. Sepals 4 , white , obovate-oblong , oblanceolate , or lanceolate ,  $6 - 13 \times 1.8 - 3 - 4$  mm , at apex acute , inside glabrous , outside near apex puberulous , on margin velutinous. Stamens 3 – 6 mm long , glabrous ; anthers narrowly oblong or linear , 2 – 3.5 mm long , at apex minutely apiculate or nearly obtuse. Ovaries pubescent ; styles 3 – 5 mm long , densely villous. Achenes compressed , elliptic ,  $5 - 7 \times 3.5 - 4$  mm , puberulous ; persistent styles 1.8 – 4 cm long , plumose. Fl. Jun. – Sept.

China ( S Anhui , Fujian , Guangdong , Guangxi , Guizhou , Hainan , S Henan , Hong Kong , Hubei , Hunan , S Jiangsu , Jiangxi , S Shaanxi , Sichuan , Taiwan , S Yunnan , Zhejiang ) , Japan ( Ryukyu Isls. ) , Vietnam. On slopes , in bushes , or by streams ; 140 – 1500 m.

### 巴山铁线莲

This species consists of two varieties endemic in C & E China.

**59a. var. *pashanensis*** Fig. 22:H–J

Woody vine, not or occasionally turning black when drying. Branches 4–6-angulate, shallowly sulcate, puberulous, glabrescent. Leaves pinnate; leaflets subcoriaceous or chartaceous, narrowly ovate, ovate, or lanceolate, 3–9 × 1–4.6 cm, at apex acute, attenuate, or obtuse, at base rounded or broadly cuneate, at margin entire, undivided, seldom 2–3-lobed, on both surfaces near base or on midrib puberulous or glabrous, seldom abaxially densely puberulous, conspicuously reticulate, basal veins prominent; petioles 2.2–4.8 cm long. Cymes axillary and terminal, (1–3–)5–many-flowered, often panicle-like; peduncles 1–4.8 cm long; bracts often petiolate, narrowly ovate or lanceolate, 0.9–2.5 cm long, or sessile, linear, ca. 6 mm long. Flower 1.4–2.6 cm in diam.; pedicel 1.2–3 cm long, puberulous. Sepals 4, white, narrowly obovate, obovate-oblong, suboblong, or oblanceolate, 7–14 × 3–5 mm, at apex obtuse or rounded, inside glabrous, outside sparsely puberulous, on margin velutinous. Stamens 4–6.5 mm long, glabrous; anthers linear, sometimes narrowly oblong, (1.5–)2–3.2 mm long, at apex obtuse. Ovaries densely puberulous; styles 2.5–4 mm long, densely villous. Achenes strongly compressed, elliptic, 5–7 × 3–3.2 mm, appressed-puberulous, tumidly rimmed; persistent styles 1.8–2.4 cm long, tawny-plumose. Fl. Jun.–Sept.

China (S Anhui, W & S Henan, W Hubei, S Jiangsu, S Shaanxi, S Shandong, E Sichuan). On slopes, in bushes, or by streams; 120–1000 m.

### 微尖巴山铁线莲

This variety differs from var. *pashanensis* mainly in its anthers being at apex minutely apiculate. Leaflets narrowly ovate or lanceolate, sometimes ovate, 2.5–10 × 0.6–4.5 cm, undivided, on both surfaces subglabrous or on basal veins sparsely puberulous, seldom abaxially more or less densely puberulous. Sepals 4(–6), obovate-oblong, 8–15 × 3–7 mm. Anthers linear, 2.2–3.2(–3.5) mm long, at apex minutely apiculate.

China (W Henan, W Hubei, SE Shaanxi, S Shanxi). On slopes, in bushes or on rocks; 350–2000 m.

Additional specimens examined. **China. Henan** (河南): Neixiang (内乡), Henan Exped. 60-871 (PE); Xixia (西峡), Henan Exped. 59-656, 59-734 (PE); Luanchuan (栾川), Loe.-Plat. ### 太行铁线莲

This species consists of two varieties endemic in N China.

**60a. var. kirilowii** Fig. 22 : E - G

Woody vine, turning black when drying. Branches shallowly 4 – 8-sulcate, sparsely puberulous. Leaves twice or once pinnate; leaflets coriaceous, oblong, elliptic, narrowly ovate, ovate, or lanceolate,  $1.5 - 6 \times 0.5 - 2.8$  cm, at apex acute, acuminate, obtuse, or sometimes emarginate, at base rounded, truncate, or cuneate, at margin entire, undivided or 2 – 3-fid, on both surfaces on veins very sparsely puberulous or subglabrous and conspicuously reticulate, basal veins prominent; petioles 1.4 – 4.5 cm long. Cymes axillary and terminal, ( 1 – ) 3 – many-flowered; peduncles 0.9 – 6.7 cm long; bracts sessile or petiolate, triangular, linear, or elliptic, 0.1 – 1.1 cm long. Flower 1.4 – 3 cm in diam.; pedicel 1 – 2.5 cm long, puberulous. Sepals 4( – 5 – 6 ), white, obovate-oblong,  $0.7 - 1.5 \times 0.35 - 0.6$  cm, at apex subtruncate, inside glabrous, outside appressed-puberulous, on margin velutinous. Stamens 4 – 7 mm long, glabrous; anthers narrowly oblong, 2 – 3 mm long, at apex obtuse. Ovaries puberulous; styles 3 – 5 mm long, densely villous. Achenes strongly compressed, elliptic or broadly elliptic,  $4 - 5 \times 3 - 4$  mm, appressed-puberulous, at apex pubescent, tumidly rimmed at margin; persistent styles 1 – 1.8 cm long, plumose. Fl. Jun. – Aug.

China ( N Anhui, W Hebei, W Henan, N Jiangsu, Shandong, S Shaanxi, SE Shanxi ). On grassy slopes or in thickets; 200 – 1700 m.

Gansu (甘肃): valle fl. Poipo, infra vicum Terga, 1885-07-12, Potanin s. n. (lectotype, here designated, LE!; isolectotype, PE!). Sichuan (四川): Oppido Nanping (南坪), 1885-07-19, Potanin s. n. (syntype, LE!; isosyntype, PE!).

### 秦岭铁线莲 Fig. 23: C–E

Woody vine, turning black when drying. Branches shallowly 8–10-sulcate, sparsely puberulous, glabrescent. Leaves twice or once pinnate, 5–11-foliolate; leaflets papery, ovate, triangular-ovate, or lanceolate, 1.2–7.8 × 0.5–3 cm, at apex acute, attenuate, or acuminate, at base cuneate, rounded, or subcordate, at margin entire, undivided or 2–3-lobed, on both surfaces on veins sparsely puberulous or subglabrous, basal veins abaxially slightly prominent; petioles 1.2–5.5 cm long. Cymes axillary and terminal, 1–3(-5)-flowered; peduncles 1–7.6 cm long,

**Fig. 23.** A, B, *Clematis linearifoliola* W. T. Wang. A, flowering branch; B, stamen. (from J. W. Wang & Z. C. Shi s. n.)  
 C-E, *C. obscura* Maxim. C, flowering branch; D, stamen; (from J. X. Yang 489) E, achene (from K. M. Liou 2593).

sparingly puberulous; bracts often petiolate, ovate, narrowly ovate, or long elliptic, 0.8–5 cm long, seldom ternate. Flower 2.5–4.8 cm in diam.; pedicel 3–8 cm long, subglabrous or sparsely puberulous. Sepals (4–)5–6(–7), white, oblong, obovate-oblong, or lanceolate, 1.2–2.6×0.4–0.8 mm, at apex acute or obtuse, inside glabrous, outside only on margin velutinous, elsewhere glabrous. Stamens 5–8 mm long, glabrous; anthers linear, 3.8–4.5 mm long, at apex minutely apiculate. Ovaries densely puberulous; styles ca. 4 mm long, densely villous. Achenes strongly compressed, flattened, broadly elliptic or ovate, 4.5–5×2.8–3 mm, appressed-puberulous, slightly tumidly rimmed; persistent styles up to 2.5 cm long, fulvous-plumose. Fl. Apr.–Jun.

China (S Gansu, W Henan, W Hubei, S Shaanxi, S Shanxi, NW Sichuan). On slopes or in bushes; 400–2600 m.

Additional specimens examined. **China. Gansu** (甘肃): Zhouqu (舟曲), S. Jiang 375 (PE); Hui Xian (徽县), Q. R. Wang 11434 (PE); Min Xian (岷县), T. P. Wang 15255 (PE); Wudu (武都), K. S. **62. Clematis linearifoliola** W. T. Wang, sp. nov. Type: China. Shaanxi (陕西): Baocheng (褒城), Lianchengshan (连城山), 650 m, in valley, fl. white, turning black when drying, 1977-08-23, J. W. Wang & Z. C. Shi s. n. (holotype, here designated, PE); Lantian (蓝田), Qinggang Village (青岗乡), 1300 m, on river bank, herb prostrate without flowers, 1958-10-04, G. X. Su 250 (paratype, WUK).

### 条形铁线莲 Fig. 23 : A, B

Ob sepala et stamina siccitate nigrescentia species nova fortasse affinis *C. chinensi* Osbeck et *C. obscurae* Maxim., a quibus caulibus et foliis siccitate haud nigrescentibus, foliolis anguste linearibus vel lanceolato-linearibus facile distincta.

Liana suffrutescens. Rami graciles, 1.4–1.8 mm diametro, vadoso 6-sulcati, ad nodos sparse puberuli, alibi glabri. Folia semel vel bis pinnata, pinnis 2-jugatis; foliola sessilia vel brevissime petiolulata, papyracea, anguste linearia vel anguste lanceolato-linearia, 2.2–6.6 cm longa, 1–3.2 mm lata, apice pungentia vel acuta, basi attenuata vel late cuneata, margine integra,

supra ad costam medium sparsissime puberula , subtus glabra , nervis basalibus 1 – 3 subtus leviter prominentibus vel fere planis ; petioli 1 – 2 cm longi , 4-angulati , basi et apice sparse puberuli . Cymae axillares et terminales , 7 – 9-florae , racemiformes ; pedunculi ca. 4 mm longi ; bracteae primariae parvae , triangulares , ca. 2.5 mm longae , secundariae foliaceae . Flos 1.2 – 2 cm diametro ; pedicellus gracilis , 1 – 1.8 cm longus , puberulus . Sepala 4 , alba , siccitate nigrescentia , anguste obovata vel oblongo-obovata , 6 – 11 mm longa , 3 – 5 mm lata , apice rotundato-obtusa , margine superne interdum erosa , intus glabra , extus sparse puberula , ad marginem velutina . Stamina 18 – 26 , siccitate nigrescentia , 3.2 – 4.5 mm longa , glabra , filamentis linearibus vel anguste oblongis , antheris linearibus vel anguste oblongis 2 – 2.2 mm longis apice obtusis . Carpella ca. 6 , ovaris dense pubescentibus , stylis ca. 2.8 mm longis dense villosis .

Suffrutescent vine . Branches slender , 1.4 – 1.8 mm in diam . , shallowly 6-sulcate , on nodes sparsely puberulous , elsewhere glabrous . Leaves once or twice pinnate , with 2 pairs of pinnae ; leaflets sessile or shortly petiolulate , papery , narrowly linear or narrowly lanceolate-linear , 2.2 – 6.6 × 1 – 3.2 mm , at apex pungent or acute , at base attenuate or broadly cuneate , at margin entire , adaxially on midrib very sparsely puberulous , abaxially glabrous , basal veins 1 or 3 , abaxially slightly prominent or nearly flat ; petioles 1 – 2 cm long , 4-angulate , at base and apex sparsely puberulous . Cymes axillary and terminal , 7 – 9-flowered , raceme-like ; peduncles ca. 4 mm long ; primary bracts small , triangular , ca. 2.5 mm long , secondary bracts foliaceous . Flower 1.2 – 2 cm in diam . ; pedicel slender , 1 – 1.8 cm long , puberulous . Sepals 4 , white , turning black when drying , narrowly obovate or oblong-obovate , 6 – 11 × 3 – 5 mm , at apex rounded-obtuse , at margin above sometimes erose , inside glabrous , outside sparsely puberulous , on margin velutinous . Stamens turning black when drying , 3.2 – 4.5 mm long ; anthers linear or narrowly oblong , 2 – 2.2 mm long , at apex obtuse . Ovaries densely pubescent ; styles ca. 2.8 mm long , densely villous . Fl. Aug.

China ( S Shaanxi ). In valley or on river banks ; 650 – 1300 m .

### 圆锥铁线莲

This species consists of four varieties occurring in eastern Asia.

#### 63a. var. *terniflora* Fig. 22: A – C (see p. 143)

Woody vine. Branches shallowly 4–10-sulcate, sparsely puberulous or only on nodes puberulous, glabrescent. Leaves pinnate, 5–7-foliolate; leaflets papery, ovate or narrowly ovate, sometimes ovate-lanceolate, 2.5–8 × 1–5 cm, at apex acute or obtuse, at base rounded, subcordate, or broadly cuneate, at margin entire, on both surfaces on veins sparsely puberulous or subglabrous, basal veins abaxially slightly prominent or nearly flat; petioles 2.5–4.5 cm long. Cymes axillary or terminal, usually many-flowered; peduncles 1–7 cm long; bracts linear, elliptic, or oblong, 0.8–3.5 × 5 cm long. Flower 1–3 cm in diam.; pedicel 0.5–3 cm long, puberulous. Sepals 4, white, oblong or obovate-oblong, 5.5–15 × 2–5 mm, at apex slightly acute or obtuse, inside glabrous, outside puberulous or glabrous, on margin velutinous. Stamens 3–7 mm long, glabrous; anthers linear or narrowly oblong, 2–3 mm long, at apex obtuse, rarely minutely apiculate. Ovaries puberulous; styles 4–7 mm long, densely villous. Achenes strongly compressed, orange-yellow, broadly elliptic, obovate, or rhombic, 5–9 × 3–6 mm, appressed-puberulous, tumidly rimmed; persistent styles 1.2–4 cm long, plumose. Fl. Jun. – Sept.

China (S Anhui, S Henan, C Hubei, S Jiangsu, N Jiangxi, Zhejiang), Japan, S Korea. On slopes, in bushes, or at forest edges; 50–800 m.

*C. paniculata* auct. non Thunb. : Hayata in J. Coll. Sci. Univ. Tokyo 30 : 18. 1911.

*C. terniflora* var. *robusta* auct. non (Carr.) Tamura : Liu & Hsieh in Fl. Taiwan 2 : 492. 1976.

### 鹅銮鼻铁线莲

This variety differs from var. *terniflora* in its 5–11-foliolate leaves, glabrous pedicels, outside densely puberulous pedicels, and narrowly oblong anthers. Achenes broadly elliptic or suborbicular,

5 – 6 mm long.

China ( S Taiwan ). In coastal areas.

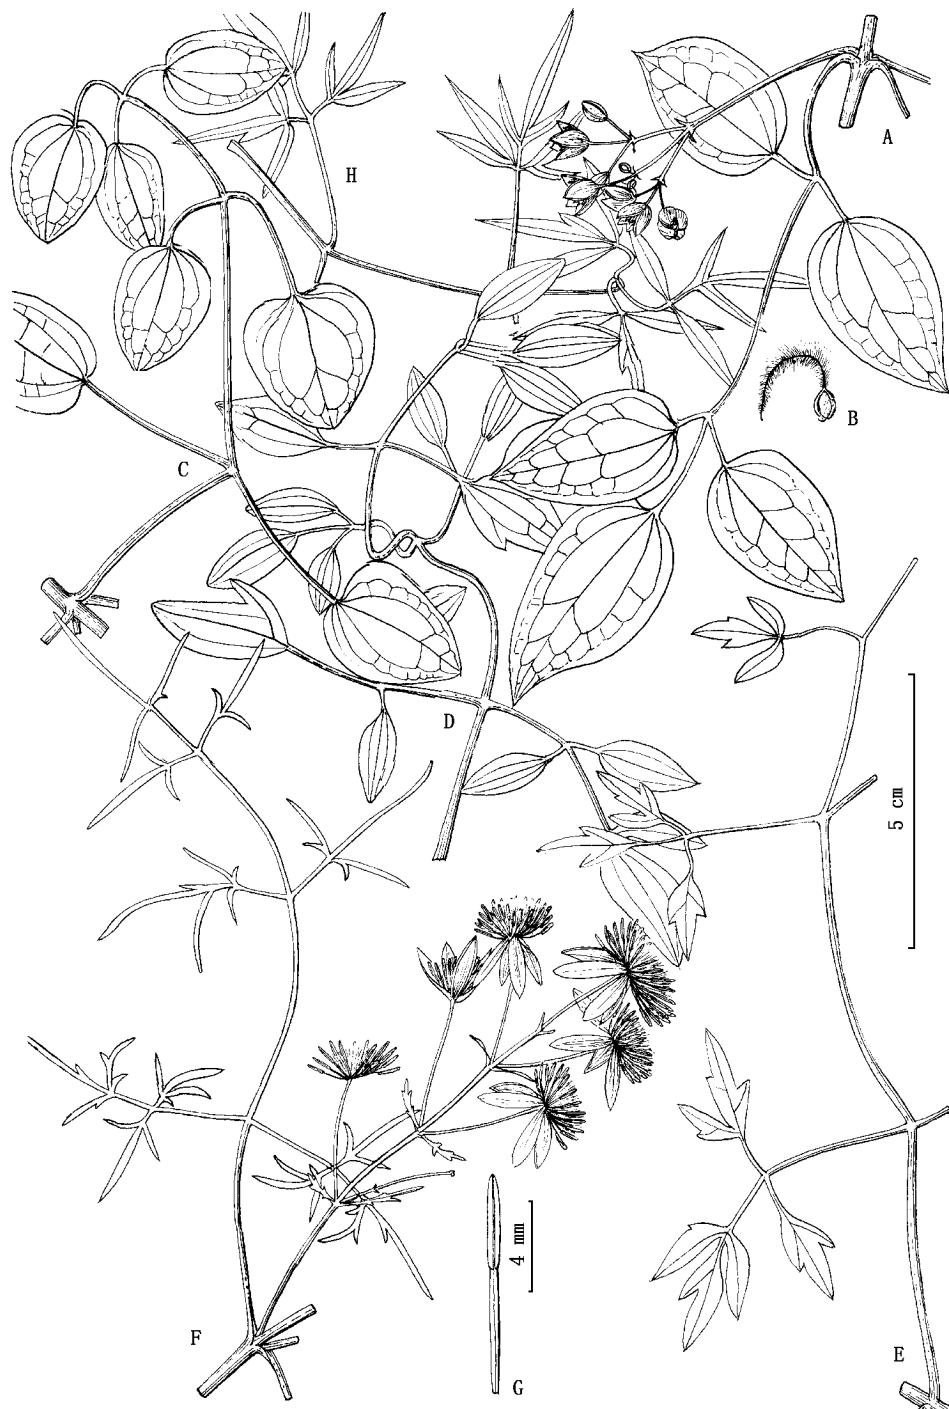

I have not seen any specimen of this variety except a photo of the holotype. Upon the excellent description written by Yang and Huang ( 1995 & 1996 , l. c. ) the above diagnosis is made.

Unclear infraspecific taxa : 1. *Clematis recta* L. var. *koreana* Nakai et f. *lancifolia* Nakai in J. Coll. Sci. Univ. Tokyo 26 ( 1 ) : 9 – 10. 1909 ; 2. *C. paniculata* Thunb. var. *denticulata* Nakai. See Y. N. Lee , Fl. Korea 168. 1996.

**64. Clematis papuligera** Ohwi in Acta Phytotax. Geobot. 7 : 44. 1938 ; M. Johnson , Klematis 616. 1997 ; Grey-Wils. , Clematis 104. 2000. Type : Korea. Kokaido : Chojusan Mt. , 1935-07-29 , Koidzumi s. n. ( holotype , KYO !).

Woody vine. Branches shallowly sulcate , glabrescent. Leaves pinnate , 5-foliate , upper ones ternate , glabrous ; leaflets papery , broadly ovate or elliptic , 5 – 10 × 4 – 7.6 cm , at apex acute , at base rounded or subtruncate , at margin entire , basal veins 3 – 5 , abaxially prominent ; petioles 2 – 5 cm long. Cymes axillary or terminal , many-flowered , panicle-like ; peduncles 3.5 – 8 cm long ; bracts subulate. Flower 2 – 2.5 cm in diam. ; pedicel 1 – 3 cm long , subglabrous. Sepals 4 , lanceolate-oblong , 9 – 14 × 3 – 4.8 mm , at apex acute , inside glabrous , outside on margin velutinous , elsewhere glabrous. Stamens ca. 7 mm long , glabrous ; anthers linear , 2 mm long , at apex minutely apiculate. Ovaries appressed-puberulous ; styles ca. 4 mm long , densely villous. Fl. Jul. Korea.

? *C. flammula* β *rubella* Pers. , Syn. 2 : 100. 1807 ; DC. , Syst. 1 : 134. 1818 ; et Prodri. 1 : 2. 1824. — *C. recta* L. ssp. *flammula* var. *rubella* ( Pers. ) Kuntze in Verh. Bot. Ver. Brand. 26 : 115. 1885. Type : unknown.

*C. flammula* var. *grandiflora* Pomel , Nouv. Mater. Fl. Atlan. 347. 1874. Type : unknown.

*C. flammula* is a greatly variable and polytypic species , and difficult to be dealt with taxonomically. In the present revision seven varieties are recognized , mostly confined in geographical distribution to the Mediterranean region , with one , var. *flammula* , northward extending to central Europe and Caucasus ( Grey-Wilson , 2000 ). Further study of the relationships among these varieties is needed.

### 65a. var. **flammula** Fig. 24 : A , B

Woody vine. Branches terete , shallowly 8 – 12-sulcate , subglabrous or sparsely puberulous. Leaves pinnate or bipinnate , seldom simple ; leaflets papery or thickly papery , ovate , narrowly ovate , or lanceolate , 1 – 6 × 0.6 – 3.5 cm , at apex acute or slightly acute , at base truncate , rounded , or broadly cuneate , at margin entire , undivided , sometimes 2 – 3-lobed , on both surfaces on midrib or basal veins below sparsely puberulous or glabrous , midrib abaxially prominent ; petioles 1.5 – 5 cm long. Cymes axillary and terminal , usually many-flowered , panicle-like ; peduncles 2.8 – 6 cm long ; bracts petiolate , ovate , up to 3 cm long , 3-lobed to 3-sect , or undivided , or small , sessile , subulate , ca. 4 mm long. Flower 1 – 2.5 cm in diam. ; pedicel 0.8 – 2.2 cm long , puberulous or subglabrous. Sepals 4 , white , seldom pink , narrowly oblong or oblong , 6 – 12 – 18 ) × 2 – 3 mm , at apex obtuse , inside glabrous , outside sparsely puberulous , on margin velutinous. Stamens 6 – 10 mm long , glabrous ; anthers linear , 2.2 – 4 mm long , at apex minutely apiculate or obtuse. Achenes strongly compressed , orange , broadly ovate or suborbicular , 4.5 – 5 × 4 – 4.5 mm , appressed-puberulous , tumidly rimmed ; persistent styles 1.8 – 3 cm long , plumose. Fl. Jun. – Sept.

SW Asia ( Iran , Lebanon , Syria , Turkey ) , S Europe ( Albania , Bulgaria , France , Greece , Italy , Portugal , Spain , Switzerland , Yugoslavia ) , N Africa ( Algeria , Morocco ). On slopes , in bushes , or by streams.

( G ). **Portugal.** Algarve , Rainha 5983 ( G ); Baixo Alentejo , Rainha 4830 ( G ). **Spain.** Barcelona , Teodoro 6746 ( G ). **Switzerland.** Vaud , Meylan 2458 ( G ).

**65f.** var. *stenophylla* Heldr. ex Kuntze in Verh. Bot. Ver. Brand. 26 : 114. 1885 ; Rouy & Fouc. , Fl. France 1 : 4. 1893 ; Halac. , Consp. Fl. Graec. 1 : 2. 1901. — *C. flammula* var. *maritima* f. *stenophylla* ( Heldr. ex Kuntze ) Asch. & Graebn. , Synop. Mitteleurop. Fl. 5 ( 3 ) : 60. 1935 ; M. Johnson , Klematis 609. 1997. Type : Syria , Libanon , Cephalonia , Montenegro , Dalmatia , Venezia , Nizza , Marseille , Montpellier , Huyères ' , no type specimen designated.

Fig. 24 : F , G

? *C. angustifolia* Jacq. , Enum. Stirp. Spont. Cresc. Agr. Vindobon. 310. 1762. — ? *C. flammula* β *angustifolia* ( Jacq. ) Arcan. , Comp. Fl. Ital. 226. 1894. Type : S Austria , Jacquin s. n. ( holotype , WU ).

*C. canaliculata* Lag. , Gén. et Sp. Nov. 17. 1816. Type : Spain : " in Murcia et Granatae Provinciis locis saxosis , petrosisque " , no type specimen designated.

*C. flammula* var. *bonifaciensis* Boy. , Fl. Sud. Corse 57. 1906. Type : France. Corse , no type specimen designated.

*C. flammula* var. *sancti-marini* Pamp. f. *angustissima* Pamp. in Nuov. Giorn. Bot. Ital. n. s. , 31 ( 3 ) : 211. 1924 ; et Prodri. Fl. Ciren. 203. 1930 ; M. Johnson , Klematis 609. 1997. Type : Libya. Cirenaica : Merg , 1922-05-28 , Maugini s. n. ( holotype , FI ; photo , PE ! ).

This variety differs from var. *flammula* in its thrice pinnatisect leaves with linear or narrowly linear ultimate lobes , and broader sepals. Leaf lobes 3 – 22 × 1 – 2 ( – 4 ) mm , at margin entire , seldom 1 – 2-denticulate. Sepals 9 – 13 ( – 16 ) × 3 – 4. 2 ( – 6 ) mm.

S Europe ( Croatia , Greece , Spain ) , N Africa ( Libya ).

Specimens examined. **Croatia.** Zengg , Dabiasch s. n. ( US ). **Greece.** Cephalonia , Heldreich 3644 ( G ). **Spain.** Cartagena , Jimenz s. n. ( S ); Murcia , Bourgeau s. n. ( G ); Barranca del Rio Seyura , Reverchon 1364 ( G ).

**65g.** var. *heterophylla* Vis. , Fl. Dalmat. 3 : 76. 1850 ; M. Johnson , Klematis 609. 1997 ; Grey-Wils. , Clematis 101. 2000. Type : Croatia. Dalmatia , no type specimen designated.

This variety differs from var. *flammula* and other varieties of *C. flammula* in its lower leaves with cordate or ovate leaflets and upper leaves being twice or thrice pinnatisect to linear or narrowly lanceolate ultimate lobes.

S Europe ( Croatia , Greece ).

Specimen examined. **Greece.** Achaias , Strid 30655 ( G ).

**66. Clematis tunisiatica** W. T. Wang , sp. nov. Type : Tunisia. Ain Draham , 1905-07 , Thibault s. n. ( holotype , here designated , G ).

Fig. 25 : D , E

Arcte affinis *C. elisabethae-carolae* Greuter , quae plantis suffrutescentibus , foliis superis ternatis vel pinnatis , inflorescentiis multifloris paniculiformibus , petiolis longioribus usque ad 2.6 – 2.8 cm longis , antheris minoribus 2.2 – 3 mm longis differt.

Herba perennis , erecta. Rhizoma robustum , ca. 6 cm longum , 6 mm crassum. Caulis e basi ramosus , ramo florifero unico ca. 20 cm alto 6-angulato ad nodos sparse puberulo alibi glabro folia 8-jugata gerente , ramis sterilibus duobus usque ad 3.5 cm longis folia 2-jugata gerentibus. Folia

**Fig. 25.** A - C , *Clematis recta* L. A , upper part of a flowering plant ; B , stamen ; C , achene. ( from Elisabethstrasse 9 ) D , E , *C. tunisiatica* W. T. Wang. D , flowering plant ; E , stamen. ( from Thibault s. n. )

opposita, simplicia, breviter petiolata; laminae foliorum inferorum chartaceae, triangulares vel anguste triangulares, 3–4.9 cm longae, 1.5–2.2 cm latae, apice acutae vel attenuatae, basi subtruncatae vel late cuneatae, margine integrae, indivisae, utrinque subglabrae, nervis basalibus 5 subtus leviter prominentibus, eae foliorum superorum minores 1.3–4 cm longae, 3-sectae, segmentis lanceolatis, utrinque basi pilosae, eae foliorum supremorum minimae, anguste ovatae, 7–8 mm longae, basi cuneatae, indivisae, utrinque prope basin pilosae; petioli 1.5–9 mm longi, subglabri. Cyma terminalis, 3-flora; bracteae anguste ellipticae, ca. 6 mm longae, 1.8 mm latae. Flos ca. 2.2 cm diametro; pedicellus 1.8–2.2 cm longus, glaber; bracteolae anguste ovatae vel lanceolatae, 1.1–1.8 mm longae. Sepala 4, patentia, anguste oblonga, 11 mm longa, 2.2–3 mm lata, apice obtusiuscula, intus glabra, extus ad marginem velutina alibi glabra. Stamina ca. 17, ca. 8 mm longa, glabra, filamentis anguste linearibus, antheris linearibus 3.2–3.8 mm longis apice obtusis. Carpella ca. 5, ovariis dense adpresso-puberulis, stylis ca. 5.5 mm longis dense villosis.

Erect perennial herb. Rhizome robust, ca. 6 cm long, 6 mm thick. Stem branched from base, with 1 flowering branch and 2 sterile branches which are up to 3.5 cm tall, with 2 pairs of leaves. Flowering branch ca. 20 cm tall, 6-angulate, with 8 pairs of leaves, on nodes sparsely puberulous, elsewhere glabrous. Leaves simple; leaf blades of lower leaves chartaceous, triangular or narrowly triangular, 3–4.9 × 1.5–2.2 cm, at apex acute or attenuate, at base subtruncate or broadly cuneate, at margin entire, undivided, on both surfaces subglabrous, basal veins 5, abaxially slightly prominent; leaf blades of upper leaves smaller, 1.3–4 cm long, 3-sect, with lanceolate segments, on both surfaces near base pilose; leaf blades of uppermost leaves very small, narrowly ovate, 7–8 mm long, at base cuneate, undivided; petioles 1.5–9 mm long, subglabrous. Cyme terminal, 3-flowered; bracts narrowly elliptic, ca. 6 × 1.5 mm. Flower ca. 2.2 cm in diam.; pedicel 1.8–2.2 cm long, glabrous; bracteoles narrowly ovate or lanceolate, 1.1–1.8 mm long. Sepals 4, narrowly oblong, 11 × 2.2–3 mm, at apex slightly obtuse, inside glabrous, outside on margin velutinous, elsewhere glabrous. Stamens ca. 8 mm long, glabrous; anthers linear, 3.2–3.8 mm long, at apex obtuse. Ovaries densely appressed-puberulous; styles ca. 5.5 mm long, densely villous. Fl. Jul.

Tunisia.

**67. *Clematis elisabethae-carolae*** Greuter in Candollea 20:213, fig. 12. 1965; Turland et al., Fl. Cret. Area 131, pl. 6, fig. 3. 1993; Tutin & Akeroyd in Fl. Europ., ed. 2, 1:267. 1993; Strid, Mount. Fl. Greece 1:208. 1995?; M. Johnson, Klematis 607. 1997; Grey-Wils., Clematis 101. 2000. Type: Greece. Crete: Prov. Sfakia: Valley Amudzara, 1800 m, 1962-07-02, Greuter 4848 (holotype, GR; isotype, G!).

Small evergreen half-shrub, ca. 2 m tall. Branches slender, ca. 2.2 mm thick, below 6-angulate, indistinctly longitudinally 6-ribbed, above shallowly 10-sulcate, on nodes pubescent, elsewhere subglabrous or glabrous. Lower leaves simple, leaf blades chartaceous, ovate, 4.2–6.8 × 3–4.9 cm, at apex acute, at base subcordate or truncate, often abruptly cuneate, at margin entire, adaxially glabrous, abaxially only near base sparsely pilose, with basal veins abaxially slightly prominent and petioles 2–2.6 cm long; upper leaves ternate, sometimes uppermost ones 5-foliolately pinnate, with leaflets ovate or narrowly ovate, sometimes lanceolate, 2–4.4 × 1–2.4 cm, at apex acute or attenuate, on both surfaces near base sparsely pilose and with petioles 1.6–2.8 cm long. Panicles terminal, many-flowered; bracts petiolate, simple or ternate. Flower 2.2–

2.8 cm in diam. ; pedicel 1.4–3 cm long, glabrous or subglabrous. Sepals 4(–6), white, obovate-oblong, 10–14 × 4.2–6.5 mm, at apex obtuse, inside glabrous, outside above sparsely pilose, on margin velutinous. Stamens 5–7.5 mm long, glabrous; anthers linear, 2.2–3 mm long, at apex obtuse. Ovaries densely puberulous; styles ca. 6.5 mm long, densely villous. Achenes strongly compressed, elliptic, ca. 5 × 2.8 mm, puberulous, tumidly rimmed; persistent styles ca. 3.2 cm long, plumose. Fl. Jul.

Greece ( Crete ). On rocks in valley; 1250–1850 m.

Additional specimen examined. **Greece.** Crete : Valley Amudzara, 1800 m, Greuter 7542 ( G ).

*C. recta* L. var. *flexuosa* Liev., var. *genuina* Liev., var. *heterophylla* Liev. et var. *homophylla* Liev. in Österr. Bot. Zeitsch. 21:116. 1871. Type: no type specimen designated.

*C. recta* L. var. *tarnopoliensis* Zapal., Consp. Fl. Galic. Crit. 2:246. 1908. Type: described from eastsouthern Poland, type specimen unknown.

Perennial herb. Stem 50–150 cm tall, terete, shallowly 10–20-sulcate, on nodes sparsely puberulous, elsewhere glabrous. Leaves pinnate, 5–7-foliolate, sometimes lowermost ones simple; leaflets papery, narrowly ovate, ovate, or lanceolate, 1.5–8.5 × 0.8–5 cm, at apex acute or attenuate, at base truncate, subcordate, or rounded, at margin entire, undivided, adaxially nearly glabrous, abaxially sparsely puberulous, basal veins abaxially prominent; petioles 1–7 cm long. Panicles terminal, usually many-flowered; bracts foliaceous. Flower 1–2 cm in diam.; pedicel 0.8–2.8 cm long, glabrous or sparsely puberulous. Sepals 4(–5), white, narrowly oblong, 6–12 × 1.8–4 mm, at apex rounded or obtuse, on both surfaces glabrous, outside on margin velutinous. Stamens 4–7 mm long, glabrous; anthers linear or narrowly oblong, 2–3 mm long, at apex obtuse. Ovaries densely puberulous; styles 3.5–5 mm long, densely villous. Achenes strongly compressed, ovate or broadly elliptic, ca. 5 × 4 mm, sparsely appressed-puberulous, tumidly rimmed at margin; persistent styles ca. 1.8 cm long, plumose.

C & S Europe (Austria, Bulgaria, Czech, France, Germany, Hungaria, Italy, Poland, Romania, S Russia, Slovakia, Slovenia, N Spain, Switzerland, Ukraine, Yugoslavia). On slopes, in thickets or bushes; 50–1900 m.

*C. pseudoflammula* Schmalh. ex Lipsky in Zap., Kievsk. Obshch. Estestv. 12:230. 1894; et in Acta Hort. Petrop. 13:276. 1894; Krash in Kom., Fl. URSS 7:319. 1937; Grossh., Fl. Kavkaza 4:43. 1950; M. Johnson, Klematis 617. 1997; Grey-Wils., Clematis 98. 2000. Type:

Caucasia : on the way to Tjategegorsk , 1886-05-31 , Lipsky s. n. ( holotype , LE ! ).

Small half-shrub. Stem 25 – 100 cm tall , shallowly 6 – 10-sulcate , glabrous or very sparsely puberulous , usually simplex. Leaves pinnate or bipinnate , the lowermost ones often simple ; leaflets papery , narrowly ovate or ovate ,  $0.8 - 4.2 \times 0.8 - 3.2$  cm , at apex slightly obtuse or acute , at base rounded or broadly cuneate , at margin entire , usually undivided , sometimes 2 – 3-lobed , adaxially on midrib puberulous or subglabrous , abaxially sparsely puberulous or subglabrous , basal veins abaxially prominent ; petioles 0.7 – 3 cm long. Panicle terminal , many-flowered , with leaf-like bracts. Flower 1.2 – 2 cm in diam. ; pedicel 0.7 – 2 cm long subglabrous or glabrous. Sepals 4 , oblanceolate-oblong , oblong , or narrowly oblong ,  $6 - 12 \times 2 - 4$  mm , at apex obtuse or rounded , inside glabrous , outside glabrous or very sparsely puberulous , on margin velutinous. Stamens 3.6 – 5.8 mm long , glabrous ; filaments often rugose ; anthers linear , 2 – 3 mm long , at apex obtuse or minutely apiculate. Ovaries densely puberulous ; styles ca. 4 mm long , densely villous. Achenes strongly compressed , elliptic , ca.  $4 \times 2.5$  mm , appressed-puberulous , narrowly rimmed at margin ; persistent styles ca. 3.5 cm long , plumose. Fl. Apr. – May.

Georgia , S Russia , Ukraine. On grassy slopes ; ca. 500 m.

Wang in Acta Phytotax. Sin. 36 ( 2 ) : 159. 1998. — Sect. *Flammula* subsect. *Uncinatae* ( Tamura ) M. Johnson , Klematis 606. 1997 ; Grey-Wils. , Clematis 112. 2000. Type : *C. uncinata* Champ. ex Benth.

Woody vines. Hornotinous branches alone arising from axillary buds of old branch. Leaves once to twice pinnate ; leaflets papery or coriaceous , at margin entire , undivided. Flowers medium-sized , in few – many-flowered cymes arising from leaf axils of hornotinous branch. Sepals 4 , outside at least on margin velutinous. Achenes subulate-terete or narrowly lanceolate.

Two species distributed in E Asia and E Africa.

### 柱果铁线莲

This species consists of three varieties wide-spread in subtropical regions of China and adjacent countries.

#### 70a. var. *uncinata* Fig. 26: A-C

Woody vine. Branches shallowly 10-14-sulcate, glabrous, slightly glaucous. Leaves once or twice pinnate, glabrous; leaflets subcoriaceous or papery, ovate-elliptic, ovate, narrowly ovate, or lanceolate, 3-13×1.5-5 cm, at apex acuminate, acute, or attenuate, at base rounded, broadly

cuneate, subcordate, or truncate, at margin entire, abaxially slightly glaucous and slightly reticulate, with veinlets more or less prominent; petioles 3–8.5 cm long. Cymes axillary and terminal, usually many-flowered, panicle-like, glabrous; peduncles 1–8 cm long; bracts sessile, subulate, 3–8 mm long, sometimes petiolate, lanceolate, up to 3.5 cm long. Flower 1.7–3 cm in diam.; pedicel 1–2.2 cm long. Sepals 4, white, narrowly oblong or narrowly obovate-oblong, 10–15 × 2–3.8(–5) mm, at apex acute, inside glabrous, outside on margin velutinous, elsewhere glabrous. Stamens (3–)8–11 mm long, glabrous; anthers linear or narrowly oblong, 2.8–3.2 mm long, at apex minutely apiculate. Ovaries glabrous; styles 5–8 mm long, densely villous. Achenes subulate-terete, 5–7 × 1.4–1.8 mm, glabrous, smooth; persistent styles 1.5–2(–3) cm long, plumose. Fl. Jun. – Jul.

China (S Anhui, Fujian, S Gansu, Guangdong, Guangxi, Guizhou, Hong Kong, Hunan, S Jiangsu, Jiangxi, S Shaanxi, Sichuan, Taiwan, SE Yunnan, Zhejiang), S Japan, Vietnam. In bushes, at forest edges, or by streams; 100–2500 m.

### 皱叶铁线莲

This variety differs from var. *uncinata* in its leaflets being thicker, coriaceous, after drying adaxially slightly rugose, abaxially strongly glaucous, not reticulate, with basal veins and veinlets not visible. Sepals 10–15 × 2–3.8 (–5) mm. Ovaries and achenes glabrous.

China (S Gansu, SW Henan, W Hubei, NW Hunan, S Shaanxi, Sichuan). On slopes, in bushes or forests, by streams; 550–2000 m.

Specimens examined. **China.** **Gansu** (甘肃): Wen Xian (文县), Z. Y. Zhang 15387 (PE); Kang Xian (康县), Z. Y. Zhang 16993 (PE). **Hubei** (湖北): Jianshi (建始), H. C.

Fig. 26: D – F

Woody vine. Branches shallowly 10–12-sulcate, near nodes sparsely puberulous. Leaves pinnate, 5-foliolate; leaflets thickly papery, narrowly ovate, ovate, or elliptic-ovate, 3.2–11 × 2–5.5 cm, at apex acuminate or acute, at base rounded, at margin entire, on both surfaces on basal veins very sparsely puberulous or subglabrous, finely reticulate, basal veins abaxially prominent; petioles 4.2–6.8 cm long, sparsely puberulous or subglabrous. Cymes axillary, (1–)5–12-

flowered ; peduncles 2.2 – 6 cm long ; bracts often ternate. Flower 2.2 – 3.4 cm in diam. ; pedicel 2 – 3.5 cm long , very sparsely puberulous. Sepals 4 , white , narrowly oblanceolate-oblong , narrowly oblong , or narrowly lanceolate , 12 – 18 × 3 – 8 mm , at apex obtuse or slightly acute , inside glabrous , outside sparsely appressed-puberulous , on margin velutinous. Stamens 6 – 8 mm long , glabrous ; anthers linear , 5 – 5.2 mm long , at apex obtuse , sometimes indistinctly minutely apiculate. Ovaries densely puberulous ; styles 7 – 9 mm long , densely villous. Achenes compressed , narrowly lanceolate , ca. 5.5 × 1.5 mm , appressed-puberulous ; persistent styles ca. 6 cm long , plumose. Fl. Jul. – Oct.

Kenya , Tanzania. In open slopes or in forests ; 370 – 1800 m.

Specimens examined. **Kenya.** Koiogwe District : Mnyussi , Sem Sei 1793 ( K ); Kwale District : Shimba Hills , Luke 1625 ( K ). **Tanzania.** Muheza District : Kawundagere , Ruffo 236 ( K ); Lushoto District : Sigi Valley , Zimmermann 6395 ( K , S ); Sibu , Zimmermann 6394 ( K ).

Ser. 5. **Zemuenses** W. T. Wang in Acta Phytotax. Sin. 38( 6 ):505. 2000. Type : *C. zemuensis* W. W. Smith.

Woody vines. Hornotinous branch with ca. 3 pairs of leaves together arising from an axillary bud of old branch. Leaves bipinnate ; leaflets thinly papery , up to 3 cm long , at margin incised-dentate , often 3-lobed or 3-parted. Flowers medium-sized , in 1 – 7 – many-flowered cymes solitarily with several leaves together arising from an axillary bud of old branch or solitarily from lower leaf axils of hornotinous branch. Sepals 4( – 5 ) , outside appressed-puberulous , on margin velutinous.

One species , endemic to the Himalayan region.

**72. Clematis zemuensis** W. W. Smith in Rec. Bot. Surv. Ind. 4 : 166. 1913 ; Mukerjee in Bull. Bot. Surv. Ind. 1( 1 ):140. 1959 ; Gupta in Bull. Nat. Bot. Gard. Lucknow 54 : pl. 21. 1961 ; Kapoor in l. c. 78 :4. 1962 et 124 :2. 1966 ; Hara in Hara & Williams , Enum. Flow. Pl. Nepal 2 : 16. 1979 ; Grierson & Long , Fl. Bhutan 1( 2 ):291. 1984 ; Rau in Sharma et al. , Fl. Ind. 1 : 80. 1993 ; M. Johnson , Klematis 450. 1997 ; Grey-Wils. , Clematis 44. 2000 ; W. T. Wang in Acta Phytotax. Sin. 38( 6 ):505. 2000. Type : Sikkim. Zemu Valley , 9000 ft. , 1909-07-20 , W. W. Smith & Cave 2671 ( holotype , E ! ; isotype , K ! ).

Fig. 27 : C – E

Woody vine. Branches 6-angulate , shallowly 6-sulcate , appressed-puberulous , glabrescent. Leaves bipinnate , sometimes pinnate ; leaflets thinly papery or herbaceous , narrowly to broadly ovate or rhombic-ovate , 1 – 3.2 × 1 – 2.2 cm , at apex long acuminate , sometimes acute , at base broadly cuneate or subtruncate , at margin incised-dentate , undivided or 3-lobed or 3-parted , on both surfaces appressed-puberulous , basal veins abaxially flat ; petioles slender , 1.5 – 5.2 cm long. Cymes ( 1 – ) 7 -flowered ; peduncles 2.2 – 4.4 cm long , puberulous ; bracts sessile , linear-lanceolate or oblanceolate , or sometimes shortly petiolate , with 2 oblong lobes , 3 – 5 mm long. Flower 2.2 – 3 cm in diam. ; pedicel slender , 2.5 – 6.5 cm long , appressed-puberulous. Sepals 4( 5 ) , white , obovate-oblong or oblong , 12 – 16 × 3 – 5.5 mm , at apex shortly cuspidate , inside glabrous , outside appressed-puberulous , on margin velutinous. Stamens 5 – 7.5 mm long , glabrous ; anthers linear or narrowly oblong , 2.8 – 3.2 mm long , at apex obtuse. Ovaries only above on margin puberulous , elsewhere glabrous ; styles ca. 5 mm long , densely villous. Fl. Jul.

Bhutan , Nepal , Sikkim. In bushes ; 2200 – 3000 m.

Additional specimens examined. **Nepal.** Lumsum , Stainton , Sykes & Williams 3514 ( G , GH ); Phulchoki , south of Kathmandu , Hara et al. 723354 ( GH ).

**Fig. 27.** A, B, *Clematis sichotealinensis* Ulanova. A, flowering branch; B, stamen. (from Ulanova & Gorovoi 6372) C-E, *C. zemuensis* W. W. Smith. C, flowering branch; D, flower; E, stamen. (from Stainton et al. 3514)

Ser. 6. **Sichotealinenses** W. T. Wang in Acta Phytotax. Sin. 38(6): 504. 2000. Type : *C. sichotealinensis* Ulanova.

Woody vines. Hornotinous branches alone arising from axillary buds of old branch. Leaves bipinnate ; leaflets papery or subcoriaceous , up to 2.8 cm long , at margin few dentate or entire , 3-parted or 3-lobed. Flowers small , in 3 – 5-flowered cymes arising from leaf axils of hornotinous branch. Sepals 4 , glabrous .

One species , endemic to Far East Region of Russia.

**73. *Clematis sichotealinensis*** Ulanova in Bot. Zhurn. 66(9): 1325. 1981 ; Serov in l. c. 73(12): 1739. 1988 ; M. Johnson , Klematis 620. 1997 ; Grey-Wilson , Clematis 96. 2000 ; W. T. Wang in Acta Phytotax. Sin. 38(6): 504. 2000. Type : Russia. Prov. Primorskij Kraj : Distr. Anuczino , Sichote-Aline Mts. , 1977-06-28 , Ulanova & Gorovoi 6372 ( holotype , LE !; isotypes , G !, GH !, MO !, S !).

Fig. 27 : A , B

Woody vine. Branches nearly terete , shallowly 10-sulcate , only on nodes pubescent , elsewhere glabrous . Leaves bipinnate , usually with 2 pairs of pinnae ; leaflets papery , narrowly to broadly ovate , rarely suborbicular or broadly obovate ,  $0.8 - 2.8 \times 0.5 - 1.6$  cm , at apex attenuate or acute , rarely obtuse , at base rounded or broadly cuneate , at margin few dentate or entire , 3-parted or 3-lobed ( terminal lobes lanceolate ), adaxially glabrous or near margin very sparsely pilose , abaxially only on midrib sparsely pilose or glabrous , basal veins abaxially slightly prominent ; petioles 1.4 – 2.5 cm long. Cymes axillary and terminal , 1 – 5-flowered ; peduncles 2.5 – 4.5 cm long , glabrous ; bracts similar to leaflets , or foliaceous. Flower ca. 2 cm in diam. ; pedicel slender , 2 – 3 cm long , glabrous . Sepals 4 , white , oblong-elliptic , ca.  $12 \times 6$  mm , at apex slightly obtuse and mucronate , on both surfaces glabrous . Stamens 5 – 6 mm long , glabrous ; anthers linear , 2 – 2.7 mm long , at apex minutely apiculate. Ovaries puberulous ; styles ca. 6 mm long , densely villous. Achenes compressed , broadly elliptic , ca.  $5 \times 4$  mm , appressed-puberulous , rimmed at margin ; persistent styles 1.6 – 2.7 cm long , plumose. Fl. Jun.

Russia( Far East Region ). On stony slopes .

Additional specimens examined. **Russia**. Prov. Pimorskij Kraj , Schischkin 668 , N894 , Vasiliev et al. s. n. , Karev 88 ( LE ).

**Acknowledgements :** I am most grateful to the directors and curators of ACM , ANUB , BM , E , FI , G , GH , HGAS , HHBG , HIB , HIMC , HNNU , HUTM , IBK , IBSC , K , KYO , L , LE , LINN , MO , NAS , P , S , SHM , SHTU , SZ , TI , UPS , US , WU , WUK , and ZJFC for kindly inviting me to visit their herbaria , or sending specimens on loan , or sending some phototypes ; to S.
