

Hydraulic Hose CATALOG

MEMBERS OF THE INTERPUMP GROUP

Muncie Power Products is a leading manufacturer and distributor of power take-offs and fluid power components for the work truck industry. Since the company was founded in 1935, Muncie Power Products has taken great pride in providing unparalleled service to each and every customer.

As a member of the Interpump Group, Muncie Power Products is excited to expand its hydraulics offering by bringing the Interpump Fluid Solutions line of hose, fittings and crimpers – ***Built to INTERconnect*** – into North America. For more than 30 years, Interpump Fluid Solutions has been a leading producer of high-quality hose and fittings. With inventory available from locations in Indiana and Texas, Muncie Power Products is ready to meet the needs of the North American market.

APPLICATIONS:

TYPE APPROVAL:
MSHA.

APPLICABLE SPECS.:

EXCEEDS EN 853 1SN - SAE 100R1AT - ISO 1436

No-Skive hose. Burst pressure exceeds EN standards. Impulse tested up to 2x EN standard.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 1 high tensile steel wire braid.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Mineral and biological oils, glycol-water based, water, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C) Continuous; -40°F to +248°F (-40°C to +120°C) Intermittent; -40°F to +158°F (-40°C to +70°C) for water based fluids; +32°F to +158°F (0°C to +70°C) for water.

(*) Available no-skive solutions with ferrule BMC2-12, BMC1-16, BMC2-20.

Available with steel plated braided sleeve version (Use order code TFCM4SP) or stainless steel braided sleeve version (Use order code TFIM4SP).

Compatible with Biological Oils.

Note: Approved for use with "X" Series One-Piece, No-Skive Fittings in sizes 3/4" through 2".

INTERPUMP Hypress 4SH

TFDM4SH

PREMIUM
LINE

APPLICATIONS:

TYPE APPROVAL:

MSHA, ABS, MED, DNV - GL, BV.

APPLICABLE SPECS.:

EXCEEDS EN 856 4SH - ISO 3862 4SH

Exceeds EN standard. Impulse tested up to 1,000,000 impulse cycles.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 4 steel wire spirals.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions. MSHA cover.

Recommended fluid: Petroleum-based hydraulic fluids (mineral oils), glycol-water based, water, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C) Continuous; -40°F to +248°F (-40°C to +120°C) Intermittent; -40°F to +158°F (-40°C to +70°C) for water based fluids; +32°F to +158°F (0°C to +70°C) for water.

ih INTERPUMP Hy-Vacuum SAE 100 R4 - DN 19 I.D. 3/4" - W.P. 21 BAR/300 PSI

SAE 100R5

TFS0005

APPLICATIONS:

APPLICABLE SPECS.:

SAE 100R5

Abrasion resistant textile braid cover. No-Skive solution available.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 1 high tensile steel wire braid.

Covering: Textile braided cover.

Recommended fluid: Petroleum-based hydraulic fluids (mineral oils), glycol-water based, water, lubricants.

Operating temperature: from -40 to +100° C petroleum based fluids (Intermittent 120°C),
from -40 to +70°C for water based fluids, from 0 to +70°C water.

** SAE Dash Size is the same as the OD of tubing having approximately the same ID as the hose, expressed in 1/16's of an inch.

INTERPUMP Hypress R17 BFSM017

APPLICATIONS:

TYPE APPROVAL:

MSHA, ABS.

APPLICABLE SPECS.:

SAE 100R17 - SAE J 517 - ISO 11237 R17

Isobaric pressure rating 210 bar/3000 psi.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: High tensile steel. 1 braid up to size 1/2", 2 braids from size 5/8" onwards.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Mineral and biological oils, glycol-water based, water, lubricants.

Operating temperature: -40°F to +248°F (-40°C to +120°C); -40°F to +158°F (-40°C to +70°C) for water based fluids; +32°F to +158°F (0°C to +70°C) for water.

APPLICABLE SPECS.:

EN 853 2SN - SAE 100R2AT

Suitable for very cold environments.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 2 high tensile steel wire braids.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Mineral and biological oils, glycol-water based, water, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C) Continuous; Minimum acceptable external temperature: -58°F (-50°C).

INTERPUMP HyOzone

TFEM02KN

APPLICATIONS:

TYPE APPROVAL:

MSHA.

APPLICABLE SPECS.:

EXCEEDS EN 857 2SC - SAE 100R16

Compact hose with low bend radius. Outstanding ozone resistance. Superior weather and UV resistance.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.
Reinforcement: 2 high tensile steel wire braids.
Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.
Recommended fluid: Mineral and biological oils, glycol-water based, water, lubricants.
Operating temperature: -40°F to +248°F (-40°C to +120°C) Continuous; -40°F to +275°F (-40°C to +135°C) Intermittent; -40°F to +158°F (-40°C to +70°C) for water based fluids.

INTERPUMP Marathon 2SC

BHEMM2K

APPLICATIONS:

TYPE APPROVAL:

MSHA, ABS, BV.

APPLICABLE SPECS.:

IMM - EXCEEDS EN 857 2SC - ISO 11237 2SC

No-Skive hose. Exceeds EN specification. Impulse tested up to 1,000,000 cycles.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 2 high tensile steel wire braids.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Mineral and biological oils, glycol-water based, water, lubricants.

Operating temperature: -40°F to +248°F (-40°C to +120°C) Continuous; -40°F to +275°F (-40°C to +135°C) Intermittent; -40°F to +158°F (-40°C to +70°C) for water based fluids; +32°F to +158°F (0°C to +70°C) for water..

Bio-Flex

THDB4SH

APPLICATIONS:

APPLICABLE SPECS.:

EXCEEDS EN 856 4SH - ISO 3862 4SH

Compatible with biological oils. Impulse tested up to 1,000,000 cycles. Reduced bend radius. High abrasion resistance. High ozone resistance.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 4 steel wire spirals.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Biological and mineral oils, glycol-water based, water, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C) Continuous; -40°F to +248°F (-40°C to +120°C) Intermittent; -40°F to +158°F (-40°C to +70°C) for water based fluids; +32°F to +158°F (0°C to +70°C) for water.

APPLICATIONS:

APPLICABLE SPECS.:

EXCEEDS EN 857 1SC - ISO 7751

No-Skive hose. Safety factor exceeds ISO 7751. Product designed for pressure wash applications. Any other use may reduce service life.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 1 high tensile steel wire braid.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Water, water-soap based, glycol-water based.

Operating temperature: -40°F to +275°F (-40°C to +135°C) Continuous; -40°F to +311°F (-40°C to +155°C) Intermittent.

INTERPUMP Jet Plus 2SN

THN0021 THB0021

APPLICATIONS:

APPLICABLE SPECS.:

EXCEEDS EN 857 2SN - ISO 7751

No-Skive hose. Safety factor exceeds 4:1. Product designed for pressure wash applications. Any other use may reduce service life.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 2 high tensile steel wire braids.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Water, water-soap based, glycol-water based.

Operating temperature: -40°F to +275°F (-40°C to +135°C) Continuous; -40°F to +311°F (-40°C to +155°C) Intermittent.

INTERPUMP LongLife Dual 1SC

T2E101K

APPLICATIONS:

APPLICABLE SPECS.:

EXCEEDS EN 857 - ISO 11237 1SC

No-Skive hose. High abrasion resistance. Pressure rating exceeds standards. Smooth cover.

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: 1 high tensile steel wire braids.

Covering: Smooth synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Mineral and biological oils, glycol-water based, water, lubricants.

Operating temperature: -40°F to +248°F (-40°C to +120°C) Continuous; -40°F to +275°F (-40°C to +135°C) Intermittent; -40°F to +158°F (-40°C to +70°C) for water based fluids; +32°F to +158°F (0°C to +70°C) for water.

Also available in twin version. Use order code T2S0007.

Also available in "non-conductive" version. Use order code TFS0NC7.

Also available in "Neptune" version for marine applications. Use order code TFS00M7.

Also available in "Nautilus" version for off-shore equipment. Use order code TFS00V7.

Also available in "Solvent" version. Use order code TFS00V7.

SAE 100R8

TFS0008

APPLICATIONS:

TYPE APPROVAL:

MSHA.

APPLICABLE SPECS.:

EXCEEDS SAE 100R8 - ISO 3949 R8

Light, flexible and abrasion resistant. Pinpricked cover.

Internal hose: Polyester elastomer.

Reinforcement: 1 or 2 braids of Aramid fiber.

Covering: Polyurethane, black, pinpricked, white ink-jet branding.

Recommended fluid: Petroleum based hydraulic fluids, glycol-water based, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C); -40°F to +158°F (-40°C to +70°C) for water based fluids.

One High Tensile Steel Wire Braid

TFS00H1

APPLICATIONS:

TYPE APPROVAL:

MSHA.

APPLICABLE SPECS.:

SAE 100R1 - MEETS OR EXCEEDS PRESSURE LEVEL OF EN 853 15N - EN 857 15C

Slim line construction for compact installation and flexibility. Lightweight. Steel braid offers low volumetric expansion and optimum in length characteristics. Abrasion resistant.

Internal hose: Polyester elastomer.

Reinforcement: 1 high tensile steel wire braid.

Covering: Polyurethane, black, white ink-jet branding.

Recommended fluid: Petroleum based hydraulic fluids, glycol-water based, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C); -40°F to +158°F (-40°C to +70°C) for water based fluids.

Two High Tensile Steel Wire Braids

TFS00H2

APPLICATIONS:

TYPE APPROVAL:

MSHA.

APPLICABLE SPECS.:

MEETS OR EXCEEDS SAE 100R2 PERFORMANCE

Rugged construction for HD applications and prolonged lifetime. Abrasion resistant.

Internal hose: Polyester elastomer.

Reinforcement: 2 high tensile steel wire braids.

Covering: Polyurethane, black, white ink-jet branding.

Recommended fluid: Petroleum based hydraulic fluids, glycol-water based, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C); -40°F to +158°F (-40°C to +70°C) for water based fluids.

Also available in twin version. Use order code T2S00H2.

Also available in "Solvent" version. Use order code TFS00V2. NO MSHA.

INTERPUMP HyUltra TFS00HP

APPLICATIONS:

TYPE APPROVAL:
MSHA.

Combined Aramid and steel braid construction for compact design. Lightweight and flexible. Smaller bend radius for use on hose reels and in confined spaces. Anti-abrasion cover.

Internal hose: Polyester elastomer.

Reinforcement: 1 or 2 braid of Aramid fiber plus 1 high tensile steel wire braid.

Covering: Polyurethane, black, white ink-jet branding.

Recommended fluid: Petroleum based hydraulic fluids, glycol-water based, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C); -40°F to +158°F (-40°C to +70°C) for water based fluids.

Also available in twin version. Use order code T2500HP.

Also available in "non-conductive" version. Use order code TFSNCHP. NO MSHA.

R18 Low Pressure

TFS0018

APPLICATIONS:

APPLICABLE SPECS.:

MEETS OR EXCEEDS SAE 100R18

Special polyester cover for use in cold environments.

Internal hose: Polyester elastomer.

Reinforcement: 1 or 2 braids of synthetic fiber.

Covering: Special polyester, pinpricked.

Recommended fluid: Petroleum based hydraulic fluids, glycol-water based, lubricants.

Operating temperature: -67°F to +212°F (-55°C to +100°C); -67°F to +158°F (-55°C to +70°C) for water based fluids.

Also available in twin version. Use order code T250018.

Mini-Flexible

TFS00MP

APPLICATIONS:

Very flexible and lightweight. Kink resistant. Non-stick cover allows use of hose bundles for easy routing.

Internal hose: Polyester elastomer

Reinforcement: 1 braid of Aramid fiber.

Covering: Non-stick polyurethane, black, pinpricked.

Recommended fluid: Petroleum based hydraulic fluids, glycol-water based, lubricants.

Operating temperature: -40°F to +212°F (-40°C to +100°C); -40°F to +158°F (-40°C to +70°C) for water based fluids.

INTERPUMP HyFire TI00CO2

APPLICATIONS:

TYPE APPROVAL:

MSHA.

APPLICABLE SPECS.:

MEETS OR EXCEEDS EN 853 15N - EN 854 15C
SAE 100R1 PERFORMANCE LEVEL

One steel wire braid design for increased mechanical and pressure resistance. Operating temperatures from -60°C to +93°C. Pinpricked cover. Also suitable for connections between bottles/valves and manifolds for CO2 fire extinguishing systems. Resistance to low temperature increases hose lifetime.

Internal hose: Polyester elastomer.

Reinforcement: 1 high tensile steel wire braid.

Covering: Polyurethane, black, pinpricked, white ink-jet branding.

Operating temperature: -76°F to +200°F (-60°C to +93°C).

P.T.F.E. Type THP

TF00THP

APPLICATIONS:

APPLICABLE SPECS.:

SAE 100 R8 - SAE 100 R9 - MIL. H38360

Compatible with standard inserts.

Internal hose: Smooth P.T.F.E. thin wall.

Covering: 1 high-tensile stainless steel (AISI 304) wire braid.

Operating temperature: -94°F to +500°F (-70°C to +260°C).

Part number	ID		OD	Max WP(23C°)		Min BP(23C°)		Min BR		Weight		Ferrule

(* Call our customer service team. For impulse pressure, reduce the operating pressure by 69 bar. For use at a constant temperature of + 204 ° C, the max operating pressure for all diameters is 207 bar.

P.T.F.E. Corrugated Type LTC

TF00LTC

APPLICATIONS:

Compatible with standard inserts.

Internal hose: Corrugated P.T.F.E. thin wall.

Covering: 1 high-tensile stainless steel (AISI 304) wire braid.

Operating temperature: -94°F to +500°F (-70°C to +260°C).

FLUID SOLUTIONS

MEMBERS OF THE INTERPUMP GROUP

Muncie Power Products is a leading manufacturer and distributor of power take-offs and fluid power components for the work truck industry. Since the company was founded in 1935, Muncie Power Products has taken great pride in providing unparalleled service to each and every customer.

As a member of the Interpump Group, Muncie Power Products is excited to expand its hydraulics offering by bringing the Interpump Fluid Solutions line of hose, fittings and crimpers – ***Built to INTERconnect*** – into North America. For more than 30 years, Interpump Fluid Solutions has been a leading producer of high-quality hose and fittings. With inventory available from locations in Indiana and Texas, Muncie Power Products is ready to meet the needs of the North American market.

INTERPUMP
FLUID SOLUTIONS 

MEMBERS OF THE INTERPUMP GROUP

Muncie Power Products is a leading manufacturer and distributor of power take-offs and fluid power components for the work truck industry. Since the company was founded in 1935, Muncie Power Products has taken great pride in providing unparalleled service to each and every customer.

As a member of the Interpump Group, Muncie Power Products is excited to expand its hydraulics offering by bringing the Interpump Fluid Solutions line of hose, fittings and crimpers – ***Built to INTERconnect*** – into North America. For more than 30 years, Interpump Fluid Solutions has been a leading producer of high-quality hose and fittings. With inventory available from locations in Indiana and Texas, Muncie Power Products is ready to meet the needs of the North American market.

Introduction and Technical Information

We also have the following catalogs:

**Hydraulic Hose
One-Piece Fittings
Accessories**

EVIDENCE OF TECHNICAL SPECIFICATIONS

Fitting Solutions:

- a. Interpump supplies fittings in both one-piece and two-piece solutions, highlighting the absolute ability to meet the demands of different markets globally.
- b. Interpump fittings can also be supplied in the stainless steel version as a proof of the ability to provide high value added solutions for the most demanding applications.

Surface Treatments on Fittings:

Interpump can provide different surface treatments according to clients' request, and also in this case highlight an important range of possible solutions:

- a. **Standard plating process:** high corrosion resistance, even in the presence of operating temperatures up to 212°F (100°C);
- b. **ir-zn-ir plating process:** used in automotive sector when a black color with high corrosion resistance is required;
- c. **Zinc Nickel Plating:** this coating is used when high corrosion resistance under heavy exposure is required;
- d. **E-Coat:** this coating is applied on the metal parts in order to protect them from corrosion and from the aggressive action of atmospheric agents.

Product Qualification:

All our products are qualified in accordance with the related construction standards and technical specifications. All required tests are performed in our test laboratory with the latest generation machines. In ongoing collaboration with the market, we provide dedicated testing solutions for all projects developed for our customers.

CERTIFICATION AND INTERPUMP MARKET

Along with certified Environment, Quality and Safety Management Systems, we also focus on Type Approvals, for example, Certification of International Organizations for Specific Products. This allows us to provide strategic and highly selective specialization in markets such as Mining, Naval, Offshore and Automotive. We understand market dynamics and needs through our strong, specialized and reliable team with wide-reaching distribution channels. We supply products and service to all industries requiring fluid line components and hose fittings, through our widespread network of centers across the world.

APPLICATIONS:

5

TYPE APPROVAL:

MED, DNV - GL, RINA, BV, LLOYD'S.

6

APPLICABLE SPECS.:

IMM - EXCEEDS DIN EN 857 2SC - ISO 11237 2SC

4

No -Skive hose - Exceed EN specification - Impulse tested up to 1.000.000 cycles MED certificate (ISO 15540/15541)

2

Internal hose: Synthetic rubber, extruded whole without joints, of uniform thickness.

Reinforcement: two high tensile steel wire braids.

Covering: Anti-abrasive synthetic rubber, resistant to oils, fuels and atmospheric conditions.

Recommended fluid: Hydraulic fluids petroleum based, glycol-water based, lubricant

Operating temperature: from -40° C to +120° C (Intermittent), from -40° C to +70° C for water based fluids

The background features a light gray gradient. In the upper portion, there are several overlapping, semi-transparent dark gray shapes: a large circle on the left, a horizontal bar on the right, and a larger, irregular shape that encompasses the text. The text is white and centered within the dark gray area.

Technical Information Introduction

PIECE BY PIECE, STEP BY STEP

Interpump Hydraulics fittings are made of carbon steel (11SMnPb37) or stainless steel AISI 316L controlled and certified.

At the end of their production process, carbon steel fittings undergo an iridescent trivalent zinc plating (minimum thickness 8 microns) - Black zinc plating is also available, if required.

To order a stainless steel insert and/or a stainless steel adapter, insert the letter "X" at the beginning of the part number.

*, ** According to hose datasheet

Connections can be classified in different groups which depend on the final configuration which guaranon of the thread.

Sealing Features:

- a. **Sealing thread:** the sealing is achieved via the flattening of the thread edges as the male fitting is tightened into the female fitting or port.
- b. **With O-Ring:** with O-Ring: the sealing is achieved by the compression of an O-Ring. This connection is better suited for high pressure applications and systems where vibrations are present.
- c. **Metal to metal:** the sealing is achieved via two angled faces being wedged into one another by tightening a threaded nut.
- d. **Metal to metal combined with O-Ring:** metal to metal combined with O-Ring: the sealing is achieved via a combination an O-Ring and angled sealing faces. When the threaded nut is tightened, the sealing faces are wedged together while also compressing the O-Ring.

On the following page are the main connection types with corresponding standards. The choice of the correct connection type depends on several aspects such as combination type, working pressure, temperatures, chemical compatibility, corrosion resistance, vibrations presence, etc.

Metric Connections (1)

Known as DIN or metric fittings, the seal is achieved via angled sealing faces (metal-to-metal) or through a combination of metal-to-metal with O-Ring compression. The sealing faces are at a 24° angle with or without an O-Ring.

60° Conical Connections (2)

Known as BSP connections (British Standard Pipe) or known as a "Whitworth thread", which can be parallel (BSPP) or tapered (BSPT).

The sealing is achieved via angled sealing faces (metal-to-metal) or through a combination of metal-to-metal with O-Ring compression. The sealing faces are at a 60° angle, with or without an O-Ring.

BSPT Connections (3)

Known as BSPT connections (British Standard Pipe Taper), the sealing is achieved via thread deformation. Since sealing depends only upon thread deformation, the use of a sealant is suggested.

BSPT connections have a 55° thread angle, whereas NPT connections have a 60° thread angle.

JIC 37° Cone - SAE J1514 (4)

Known as JIC connections (Joint Industrial Council), the seal is achieved via angled sealing faces (metal-to-metal). The sealing faces are at a 37° angle. The threads are UNF straight threads.

Flat Sealing with O-Ring - SAE J1435 (5)

Known as JIC connections (Joint Industrial Council), the seal is achieved via angled sealing faces (metal-to-metal). The sealing faces are at a 37° angle. The threads are UNF straight threads.

DKOL/DKOS

BSP

JIC

ORFS

SAE with O-Ring – SAE J516 Type BOSS

Male fittings known as ORB (Male O-Ring Boss) that achieve sealing via an O-Ring at the top of the threads which is compressed against a flat sealing face on the port. The threads are UNF straight threads.

These fittings are only compatible with SAE J1926 BOSS ports.

NPTF/NPSM - SAE J516

Known as NPTF connections (National Pipe Taper - Fuel), the sealing is achieved via thread deformation. These fittings are compatible with both NPFT and NPSM connections. NPTF male fittings achieve sealing on NPSM female fittings through metal-to-metal contact on 30° angled sealing faces.

These fittings are not compatible with BSPT threads, as they have a 60° thread angle, whereas BSPT fittings have a 55° thread angle.

24° Gas Cone - French Series

These fittings are similar to DIN fittings, but with thinner threads. The sealing is achieved via metal-to-metal contact on 24° angled sealing faces. The threads are metric straight threads.

JIS (Japanese Industrial Standard)

The sealing is achieved via metal-to-metal contact on 30° angled sealing faces. JIS fittings can be divided into the following types:

- **JIS Toyota:** BSPP thread connections with inverted sealing cones
- **JIS Komatsu:** Similar to JIS Toyota fittings, but with metric straight threads
- **JIS Nissan:** Similar to BSPP connections, but with slightly different cone dimensions

SAFETY INDICATORS, ATTENTION AND NOTES

This section explains three important safety indicators, listed in decreasing order of importance.

WARNING: This symbol is used in order to highlight potentially dangerous and life-threatening situations and/or procedures for the operator.

ATTENTION: This symbol is used in order to highlight situations and/or procedures that can cause potential damage to equipment.

NOTE: This symbol is used in order to highlight important information or references to International Standards.

The purpose of this handbook is to supply useful instruction and suggestions for the correct choice, installation, and maintenance of the assembly in order to assure a long service life.

SAFETY WARNINGS

WARNING: The following will endanger the safety of all persons near the hose assembly(s):

- An improper choice of product
- Incorrect assembly or installation
- Damage to the hoses

This handbook's intended use is to aid in the training, installation, operation, and maintenance of the hose assembly(s) to fundamentally avert potential dangers.

This handbook makes reference to SAE J1273 or ISO/TR 17165-2 "Practical Recommendations to Use Assembled Hoses", specifically paragraph 4, which lists increased risks to hydraulic systems and connections under pressure.

HOSE ASSEMBLY SELECTION

REMINDER: SAE J1273 clearly states that "...fittings of a producer are not generally compatible with hose supplied from another producer".

Normative reference: ISO 17165-2, SAE J1273, EN 982.

"Assembled hose" is defined as the complete hose assembly consisting of hydraulic hose with fittings and connectors. The characteristics of an assembly must include:

- **Flexibility:** resistance to bending and torsional stresses of mechanical machines
- **Stability:** for correct power transmission and flow control, the lowest volumetric expansion/process forming is necessary
- **Minimal flow resistance:** the choice of the correct assembly (hose and fittings) and the layout must guarantee the maximum efficiency of the hydraulic circuit

WARNING: Any hydraulic under pressure is extremely dangerous and may cause serious lesions or other life-threatening injury to the operator.

In order to select the appropriate hose for the application, consider the information below:

Application:

It is necessary to clearly define:

- type of application required (high pressure line, suction line, pilot line with etc.)
- where the hose will be installed (installation difficulty, heat source presence, external mechanical loads, delivery pump with etc.)
- type of machinery (presence of pressure spikes, vibrations, flexibility etc.)
- special required performances (electric conductivity, abrasion resistance, flame-retardant, etc.)
- required connections and thread types
- type of fluid and chemical compatibility
- temperature and environmental conditions (salt water, presence of chemical agents, direct and extended exposure to sunlight with etc.)
- eventual standard and/or local safety obligations

Pressure Lines:

- Working pressure up to ~ 5800 PSI and above (400 bar and above)
- High fluid speed up to ~ 26ft/sec (8 m/s)
- Severe working conditions, with possible pressure spikes (especially in delivery pump) and vibrations
- Generally medium to high pressure hoses are required.

Return Lines:

- Working pressure up to 725-1100 PSI (50-70 bar)
- Moderate fluid speed ~ 9.8-13.1 ft/s (3.0-4.0 m/s)

Suction Lines:

- Generally large diameter hoses are used to reduce pressure drops
- Low pressure: max. ~ 145 PSI (10 bar)
- Moderate fluid speed to avoid cavitation ~ 4.9 ft/s (1.5 m/s)
- Required load-less resistance up to 11.6 – 13.1 PSI (0.8 - 0.9 bar)
- Optimum solution is the chafing strip with steel spiral (ref. SAE 100 R4)

Pilot Lines:

- Average pressure line up to 1450 PSI (100 bar)
- Average fluid speed ~ 16.4 ft/s (5 m/s)
- Compactness and high flexibility are critical for installation

HOSE SIZE AND FLOW RATE

The component's dimension must be uniform to ensure a regular fluid flow rate in order to reduce the number of pressure drops and to avoid excessive speed of the conveyed fluid. For the hose diameter selection, it is possible to refer to the diagram on the following page. Proper selection of hose may be made if the maximum fluid speed and the flow rate of fluid is known.

The maximum speed advised for fluids depends on the application:

- Suction lines: 1.6 – 4.9 ft/s (0.5 – 1.5 m/s)
- Return lines: 4.9 – 11.5 ft/s (1.5 – 3.5 m/s)
- Pressure lines: 9.8 – 26.2 ft/s (3.0 – 8.0 m/s)
- Pilot lines: ~ 16.4 ft/s (~ 5.0 m/s)

The internal diameter measurement of the hose indicates the hose size. There are different ways to indicate the measure of internal diameter:

DASH SIZE	SAE DIMENSION	NOMINAL DIAMETER (MM)	REFERENCE DN
-03	$\frac{3}{16}$ "	4.8	5
-08	$\frac{8}{16}$ " OR $\frac{1}{2}$ "	12.7	12
-10	$\frac{10}{16}$ " OR $\frac{5}{8}$ "	15.8	16

If it is necessary to replace an assembly already installed on the hydraulic system, it is considered to be properly sized for the application.

If you have to define a new system or verify the efficiency of an existing one, it is possible to refer to the diagram on the following page and proceed as follows.

If it is necessary to replace an assembly already installed on a hydraulic system, it is considered to be properly sized for the application.

If it is necessary to design a new hydraulic system, or to verify the efficiency of an existing one, refer to the nomograph below and proceed as follows:

Recommended Fluid Velocity:

Pressure Lines: 9.8 - 26.2 ft/s (3 - 8 m/s)

Return Lines: 4.9 - 9.8 ft/s (1.5 - 3 m/s)

Suction Lines: 1.6 - 4.9 ft/s (0.5 - 1.5 m/s)

Pilot Lines: max 16.4 ft/s (5 m/s)

PRESSURE

To properly select the correct flexible hose and fittings, consider that the maximum working pressure for these components must be higher than the maximum system pressure of the application. It is necessary to consider both the static working pressure and the dynamic or "pulsing" pressure when pressure variations occur within a dynamic application.

SAE J1927 gives a method to define the reduction of the life of the flexible hose according to a specific hydraulic application when measuring pressure peaks and pulsing frequencies.

WARNING: Hose selection must be made according to the maximum pressure reached by the system.

Pressure spikes and drops can be verified through a device capable of recording sudden pressure changes. A hydraulic system can be calibrated by checking the safety valve placed in the circuit in order to protect against eventual pressure spikes and drops.

Hydraulics system classification can be made according the following pressure range:

- **Low pressures:** up to 1000 - 1600 PSI (70 - 110 bar)
- **Medium-high pressures:** 3000 - 5000 PSI (210 - 245 bar)
- **High to very high pressures:** up to 6000 PSI and above (420 bar and above)

FLUID TO CONVEY

Fluid type: chemical identification, concentration, temperature, etc. Flexible hose selection must consider chemical compatibility of the fluid being conveyed.

The enclosed summarizing sheet provides information regarding the rubber compound type used in Interpump's flexible hoses. Using this chart, chemical compatibility can be confirmed for Interpump hoses with different fluid types.

As a precaution for applications which emit fumes or use dangerous or aggressive fluids, an evaluation of the fluid will be required to determine if it is necessary to pin-prick the cover to allow permeability of the fluid through the hose.

TEMPERATURE

The internal temperature of the conveyed fluid must not exceed the stated temperature range on the hose data sheet. Temperatures higher than the stated maximum temperature will accelerate rubber aging and compromise the life of the flexible hose. Temperatures lower than the suggested minimum can greatly reduce the flexibility of the hose, causing the rubber to become brittle and crack.

Generally, most Interpump rubber compounds can work within a temperature range -40°F to +212°F (-40°C to +100°C) with possible intermittent temperature peaks of up to +257°F (+125°C).

The wide variety of variables in service can significantly alter the projected life of the hose assembly.

ATTENTION: Continuous operation at temperatures close to the stated minimum and maximum temperature limits will reduce hose life (SAE J1273, DIN 20066).

Special rubber compounds may allow for a greater temperature range.

For hoses used in extreme-temperature applications, refer to Interpump High- and Low-Temperature product lines.

NOTE: As clearly detailed in the preceding paragraphs, the temperature of the external environment greatly influences the life of the hose assembly. Avoid installation of the product(s) near heat sources or provide proper heat shielding. An increase of 50°F (10°C) above the maximum stated temperature may decrease expected hose life by as much as half. Cracks in the rubber cover can also be caused by flexing, especially as excessively low temperatures

CONNECTION TYPES

In order to achieve a long service life of a hose assembly, it is necessary to select the correct connection types.

It is critically important to follow the information contained in this catalog to select the correct connections. Each hose page lists the suggested ferrule and insert combination (or one-piece fitting configuration) as recommended through testing conducted by Interpump Fluid Solutions. Interpump, nor any of its subsidiaries or affiliates, does not guarantee any hose and fitting combinations which do not follow the recommendations listed in this catalog.

In accordance with SAE J1273, which states that components from two different manufacturers are not typically compatible, Interpump does not guarantee, nor will supply, any combinations of flexible hose and fittings which do not adhere to the suggested solutions listed in this catalog.

When choosing the correct connections, verify the following:

- the sealing capability at the required working pressure
- the corrosion resistance, fluid, and/or environmental conditions
- the presence of vibration (flanges and O-Rings are suggested where vibrations are present)
- in the case of O-Ring fittings, the working temperature(s) must be considered (specific O-Ring materials may be required to achieve proper sealing at certain temperatures)

ADDITIONAL INFORMATION

External Environment

Ozone, UV radiation, heat, or chemical agents can cause damage to flexible hoses and fittings, reducing service life. It is important to evaluate the characteristics of the external environment (in terms of temperature, ozone, chemical agents, and/or solvents) in order to select the proper external hose covering.

For particular requirements such as fire resistance, conductivity, etc., where the catalog information is not detailed enough to select the correct hose, contact Muncie Power Products' customer service team for assistance.

Vibrations

Vibrations can also reduce hose life.

Where necessary, perform tests for hose vibrations to check vibration amplitude and frequency. In the case of vibration, the use of collars or other similar systems may reduce the effects of vibration on the hose assembly.

HOSE ASSEMBLY PREPARATION

Hose Assembly Length:

Hose cut must be performed correctly with a proper device in order to ensure:

- A square cutting surface, perpendicular to the hose axis
- Avoiding damage to the hose reinforcement

ATTENTION: Remember, a cut that is not square will always cause:

- A lack of proper sealing and assembly leakage
- Irregular rubber compression during the swaging and possible ferrule fracture

When cutting spiral hose, use a lower cutting speed than is used for a braided hose (applies to both the cutting blade rotation speed and cutting speed).

Hose assembly length has to be calculated according the following indication: (refers to SAE J 517 – 10):

Several Standards (DIN 20066, EN 853 – 857, etc.) define the hose assembly length tolerances referring to the hose size and the total assembly length.

The following chart is an indication of hose length tolerances according to DIN20066:

LENGTH	UP TO -16 (DN 25)	-20, -24, & -32 (DN 32 - DN 50)	-38 AND LARGER (DN 60 - DN 100)
UP TO 24.803" (630 MM)	+0.275" / -0.118" (+7 MM / -3 MM)	+0.472" / -0.157" (+12 MM / -4 MM)	+0.984" / -0.236" (+25 MM / -6 MM)
24.842" – 49.212" (631 – 1250 MM)	+0.472" / -0.157" (+12 MM / -4 MM)	+0.787" / -0.236" (+20 MM / -6 MM)	+0.984" / -0.236" (+25 MM / -6 MM)
49.251 - 98.425" (1251 – 2500 MM)	+0.787" / -0.236" (+20 MM / -6MM)	+0.984" / -0.236" (+25 MM / -6 MM)	+0.984" / -0.236" (+25 MM / -6 MM)
98.464" - 314.960" (2501 – 8000 MM)	+1.5% / -0.5%	N/A	N/A
315.000" AND LARGER (>8001 MM)	+3% / -1%	N/A	N/A

Refer to the following picture to define the correct fitting orientation:

Refer to the following picture to define the correct fitting orientation:

NOTE: Always consider the natural hose bend in order to avoid unnatural stress on the hose and its reinforcement.

ROUTING

Use precaution when installing the hose assembly in order to avoid unnecessary hose damage and the seal being compromised:

1-Hose Assembly Length

Provide the right length for the assembly. Over length will cause pressure loss. Short length could cause hose traction. Always consider some slack in the hose to allow shortening or elongation.

Provide the correct length for the assembly. Too long of length will cause a pressure loss.

Hose length has to go along with the machine movement, in order to avoid kinks and stress.

Consider hose length variation and define the correct length and the correct clamping position to fix the assembly.

2 - Minimum Bend Radius:

Always consider the recommended minimum bend radius and provide sufficient hose so that the hose is not being stressed.

Installation with a tighter bend will reduce hose life.

A minimum length of 1.5 times the external hose diameter is required (D) between hose fittings and the bend.

Use proper adapters and hose fitting terminations, in order to avoid a tight bend.

Too tight of a bend may kink the hose, restrict or stop the fluid flow, or damage the hose reinforcement.

3 - Hose Protection:

Protect the hose against damage, abrasion and avoid contact with sharp and hard objects.

Insulate the hose assembly from heat source(s), using a shield, a fire sleeve, and/or metal protection.

4 - Hose Movement:

Take into consideration the relative movement between the two connected parts. Avoid hose torque: during the application the hose has to flex in one single plane.

Do not install hose with a twist. Always consider the use of the correct adapter, swivel nut or swivel adapter to avoid twist.

To avoid torsion, use the branding line as a straight guide.

5 - Routing:

If the hose is linked at two different angles, fix the assembly at the point of the angle change, restricting movement to only one angle.

Always consider the use of 90° or 45° adapters in order to have a better layout. The system will result in an easier set up, easier maintenance, and easier inspection.

Always use clamps and wrappers to support long length assemblies.

Fix long length assemblies properly, with suitable clamps in order to avoid hose whipping and unnatural stress on the fittings.

A misalignment between sealing cone and thread causes "leakage."

In reference to the warning above, always remember when tightening to:

- First, fasten the end without tightening
- Rotate the hose according to the natural bend
- Tighten the end avoiding twisting
- Mount the ends without damaging the thread (follow the suggested crimp specifications to guarantee the conformity of the thread)
- Always verify that the surface is dry (additional torque will be required if surface is wet)
- Verify the lubrication and cleanliness of the sealing surface
- Verify the presence of the O-Ring where it is requested

TESTING AND INSPECTION

Inspect the hose to verify the cut angle and any areas of abrasion or wear on the hose cover.

Perform the requested test if necessary (Ref. ISO 1402).

Clean the assembly using a "pig" and sponge or flushing the assembly to reach an optimal cleanliness level.

Once the installation is completed, let the air out, increase the pressure to the working rate and verify the fitting seal of the assembly.

In order to avoid injury during the final test:

- Do not touch any part of the system during the proof test
- Keep away from the test area
- Decrease the pressure until the system is discharged before loosening the connection.

CLEANING HOSE

Be sure that the assembly is cleaned to the level fit for the application.

Impurities and pollution could damage the system by:

- Blocking the hydraulic components, thus reducing efficiency
- Tube wear may cause a premature failure
- Lower heat dissipation

It is possible to use a special machine to flush the assembly using a filtered, water-based fluid. It is possible, in this way, to gain a high level of cleanliness (refer to international Standard NAS 1638, ISO 4406, SAE479, BS5540/4).

NOTE: After assembling the hose and performing the necessary test(s), remove all possible contamination.

The entire assembly should be protected by means of a proper vessel to avoid environmental pollution.

HANDLING AND STORING

Rubber and plastic products can alter their characteristics during time. It is necessary to store hoses in order to control their aging, implementing the FIFO (first-in, first-out), the manufacturing date of the hose and/or the assembly will give the priority.

Several Standards give useful indication on the storing:
ISO 2230 e ISO 8331, BS 5244, SAE J1273, DIN 7716, DIN 20066.

SAE J 517:

- Flexible rubber hose or a hose assembly has a total operative life of 40 quarters (ten years) depending upon inspection and pressure testing to verify the conformity.
- Thermoplastic hoses are often considered to have an unlimited operating life.

Maximum hose storage life depends on several parameters:

Area – Temperature – Humidity

Goods must be stored in a dry and fresh area, without dust.

Temperature should be between 41°-77° F (5°-25°C) (do not exceed 100° F or 38°C) and humidity should not exceed 65%.

Keep Far from Heat Sources

- Oxygen and ozone

Hose should be protected from the circulating air and placed in a closed box or covered by means of polyethylene cover. High voltage electrical equipment should be avoided because of the harmful effect of ozone.

- Oil, solvents, fumes

Avoid contact with corrosive agents, detergents, and other organic liquids. Some metals may also affect the rubber (manganese, iron, copper).

- Narrow spaces and bending

The internal diameter of the coil/bobbin must be higher than double the minimum bending radius of the product (according to the manufacturer indication). Do not bend or pile the hose. Avoid every mechanical stress (tension, compression) which can speed up the aging process.

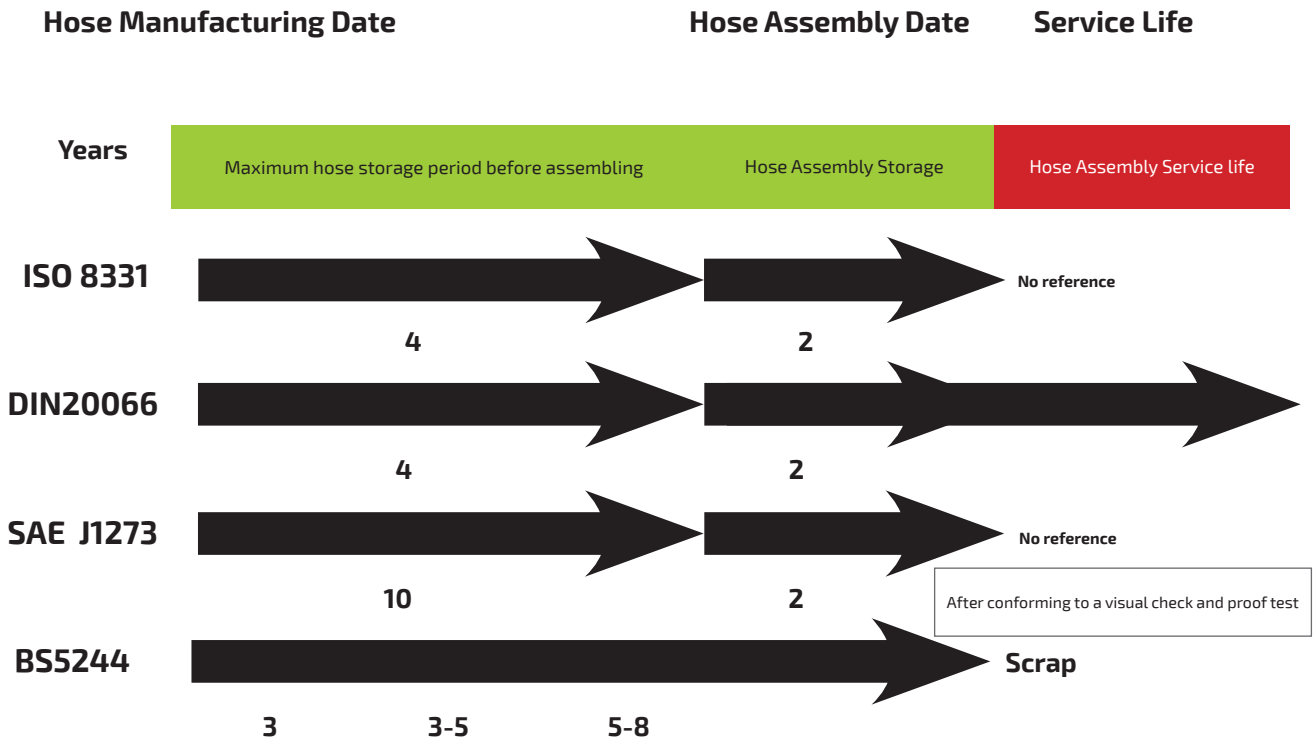

- Protect the hose from insects and rodents.

- Sunlight and rain

Hose should be protected from sunlight and UV sources.

NOTE: Always check the hose integrity before delivery. It is recommended to perform further tests on the hose in cases of long periods of storage.

Hose: perform a proof test assembly - perform proof test on all the assemblies

PREVENTIVE MAINTANANCE - ACCORDING TO SAE J1273

A good preventative maintenance program can help to ensure reliable equipment function, avoid potential injuries, and keep the hydraulic system operating at its maximum efficiency.

Frequency of Inspection

The frequency of inspection is dependent upon all factors linked to the application and the past history of the machine.

Visually Check (hose and fittings)

Visual inspect hose and fittings to evaluate:

- a. Leakage
- b. Cover damage, cuts or abrasions
- c. Exposed Reinforcement
- d. Hose dents, bends under the specified minimum bend radius, or hoses in torsion
- e. Hose stiffening with a hard or burnt cover
- f. Cover slipping from reinforcement, or with a low adhesion to the reinforcement
- g. Fittings damaged or badly corroded
- h. Fittings not properly tightened
- i. Other possible nonconformities

Whenever a nonconformity has been detected, verify the assembly and replace it.

During hose and fittings inspection, verify all hydraulic components on the system are in order by checking:

- a. Connection seals
- b. Damage to the assembly due to missing guide(s), clamp(s), or guard(s)
- c. Excessive dirt and debris around hose
- d. Fluid: level, type, clearing ed absence if air

If any of these conditions are present, correct the problem(s) before starting the hydraulic circuit.

Functional Test

A functional test will determine if the system is functioning properly.

Perform a function test of the hydraulic circuit at normal working pressures to ensure that the system is operating according to the manufacturer's specifications.

SAFETY INSTRUCTIONS - SAE J1273- AUGUST 2004

WARNING: Improper selection, fabrication, installation, or maintenance of hose and hose assemblies for fluid-power systems may result in serious personal injury or property damage. These recommended practices can reduce the likelihood of component or system failure, thereby reducing the risk of injury or damage. It is important to consider all the aspects related to the application and to respect the following technical indications and suggestions inside this manual.

Listed are some potential conditions and situations that may lead to personal injury and/or property damage:

Fluid Injections

Fine streams of escaping pressurized fluid can penetrate skin and enter a human body. These fluid injections may cause severe tissue damage and loss of limb. Consider various means to reduce the risk of fluid injections, particularly in areas normally occupied by operators.

Consider careful routing, adjacent components, warnings, guards, shields, and training programs. Relieve pressure before disconnecting hydraulic or other lines. Tighten all connections before applying pressure.

Avoid contact with escaping fluids. Treat all leaks as though pressurized and hot enough to burn skin. Never use any part of your body to check a hose for leaks.

If a fluid-injection accident occurs, see a doctor immediately.

Do not delay or treat as a simple cut! Any fluid injected into the skin must be surgically removed within a few hours or gangrene may result.

Doctors unfamiliar with this type of injury should consult a knowledgeable medical source.

Whipping Hose

If a pressurized hose assembly blows apart, the fittings can be thrown off at high speed, and the loose hose can flail or whip with great force. This is particularly true in compressible-fluid systems.

When this risk exists, consider guards and restraints to protect against injury.

Fire and Explosions from Conveyed Fluids

Most fluid-power media, including fire-resistant hydraulic fluids, will burn under certain conditions. Fluids which escape from pressurized systems may form a mist or fine spray which can flash or explode upon contact with an ignition source.

Consider selecting, guarding, and routing hose to minimize the risk of combustion (ref to Section 5 ISO 3457).

Fire and Explosions from Static-Electric Discharge:

Fluid passing through hose can generate static electricity, resulting in a static-electric discharge.

This may create a spark that can ignite system fluids or gases in the surrounding atmosphere.

When this potential exists, select hose specifically designed to carry the static-electric charge to ground.

Electrical Shock:

Electrocution could occur if hose conducts electricity through a person. Some applications may require a non-conductive hose in order to avoid electricity (ref. ISO 3949).

Some applications may require a hose with sufficient conductivity to carry the static-electric charge to ground.

Mechanisms Controlled by Fluid Power:

Mechanisms controlled by fluids in hoses can become hazardous when a hose fails.

- Always install protective shield between operator and the mechanical device
- Do not work next to pressurized equipment
- Do not touch system under pressure
- Always use proper safety equipment, including eye protection, breathing apparatus, and adequate ventilation
- Staff should always be appropriately trained in the preparation, assembly and use of equipment
- The user should design and implement a maintenance program that suits the specific application and each specific hose in that application.

LIABILITY STATEMENT

Interpump hoses are designed as an engineered solution to be used only in conjunction with Interpump fittings. The use of Interpump fittings on hose supplied by other manufacturers and/or the use of Interpump hose with fittings supplied by other manufacturers may result in the production of unreliable and unsafe hose assemblies; which can lead to equipment damage, personal injury, or death. The use of Interpump fittings on hose supplied by other manufacturers and/or the use of Interpump hose with fittings supplied by other manufacturers is neither recommended nor authorized by Muncie Power Products or any of its affiliates. Muncie Power Products and the Interpump Group disclaim all liability for any hose assembly produced using hose-fitting combinations not specified in this catalog, incorrect fitting insertion depths, and/or final crimping specifications.

UNILOCK - ASSEMBLY INSTRUCTIONS

Cut the hose at a right angle using a sharp, non-serrated blade. If necessary, use a lubricant (water/soap solution of 5% soap and 95% water) for easier assembly.

Insert fitting into the hose, past the first barb on the fitting. Place the end of the fitting against a supported flat object (workbench, door, wall, etc.). Apply steady force while gripping the hose approximately one inch from the end until the fitting is fully inserted into the hose (the red plastic collar will cover the cut end of the hose).

During assembly, remember that Unilock fittings are ready for use after full insertion into the hose, where the end of the hose is cut square and completely covered by the plastic collar on the fitting.

UNILOCK - DISASSEMBLY INSTRUCTIONS

Cut lengthwise along a line, approximately one inch in length, at a 20° angle from the centerline of the hose. Be careful not to cut or nick the barks of the fitting while cutting the hose.

Firmly grip the hose and give a sharp downward tug to remove the fitting.

Before reusing a Unilock fitting, check for any signs of damage. A damaged fitting will cause leakage.

INTERPUMP COVER SOLUTIONS

The hose cover is a critical aspect of correctly meeting the customer needs and application requirements.

Interpump provides the following cover options:

Abrasion Resistant Cover Options

Cover

Super cover

Extra cover

Mega cover

Standard Cover

Competitive and reliable solution for general hydraulic applications where the hose is not exposed to direct sunlight or abrasion (hose-to-hose or hose-to-metal). The standard cover performs well at low temperatures. NOTE: this cover is not stocked in North America.

Super Cover

Solution with twice the ozone and abrasion resistance compared to standard cover. Suitable for potential aggressive conditions like ground movement and pressure washer applications.

NOTE: This cover is not stocked in North America.

Low Temperature Cover

This special blend of polymers and additive allows this rubber compound to perform well in cold environments and extreme conditions (minimum operating temperatures of -58°F (-50°C)).

Extra Cover

This cover can be used in applications requiring better abrasion and ozone resistance, such as:

- continuous flexing, even when small bend radius is combined with high abrasion (forklift masts and telescopic arms)
- direct exposure to sunlight (the hydraulic line mounted outside of the machine body)
- hose bundles subject to flexing and impulse at different pressure levels (hoses connecting excavator arms)
- hose exposed to hose-to-metal abrasion and impact with an external body

This cover is not recommended for applications with a very low external temperature. This cover is not stocked in North America.

MSHA Approved Cover

Interpump's MSHA cover performance in terms of abrasion and ozone resistance make this cover a perfect solution for any underground or open mining applications. This cover compound has been certified to meet the Flame-Resistance Designation "U.S. MSHA" by the U.S. Department of Labor, Mine Safety and Health Administration.

The combination of the high elasticity, extreme ozone and UV resistance makes the MSHA cover reliable in applications where exposure to direct sunlight and ozone are present, even when the hose is installed at a low bend radius.

NOTE: Hydraulic hoses stocked in North America feature the MSHA cover.

High Temperature Cover

This cover was developed as a solution for hoses exposed to ambient temperatures in excess of 212°F (100°C). The HT cover is recommended for these applications:

- applications in the engine compartment of trucks (e.g. power steering)
- injection molding heating circuits
- foundries

The special rubber compound used in the HT cover is not recommended in applications experiencing high ozone concentration and/or direct exposure to sunlight.

Mega Cover

Interpump's Mega cover (UHMWPE - Ultra-high Molecular Weight Polyethylene) is the best solution to protect against hose abrasion. This cover helps to eliminate both hose-to-hose and hose-to-external body abrasion.

In many applications, the use of the Mega cover can be a replacement for external hose protection (PU sleeves, Thermoplastic or steel wire springs), resulting in cost savings.

The favorable chemical stability, ozone, UV, and water resistance make this cover a good choice in extreme working environments, such as subsea applications, oil field applications, and snow gun applications.

A new MSHA-approved UHMWPE cover is available upon request.

IMM Cover Key Features

Abrasion Resistance according to
ISO 6945 (F= 25N – 2000 cycles):

EN std. Target: 0.50 g loss

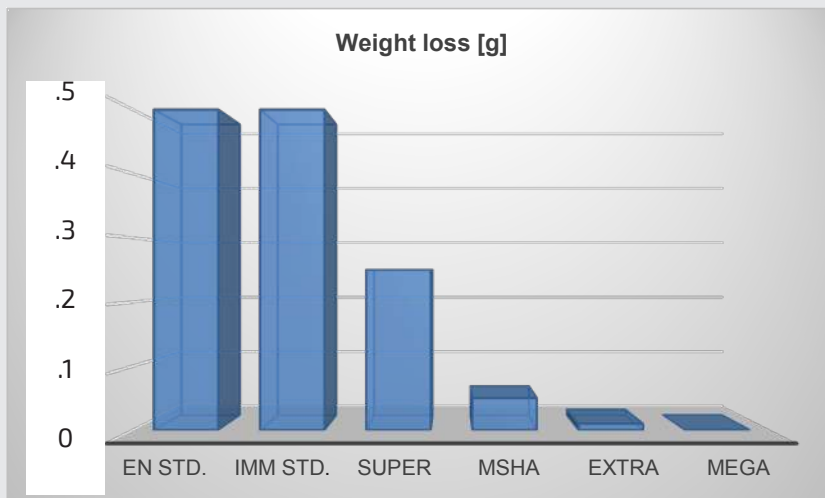

IMM std. Cover: EN std.

IMM Super Cover: x 2 EN std.

IMM Extra Cover: x 50 EN std.

IMM MSHA Cover: x 10 EN std.

IMM Mega Cover: not measurable

Ozone Resistance according to
ISO 7326 (50 pphm – T=104°F (40°C))

EN std. Target: 72 h

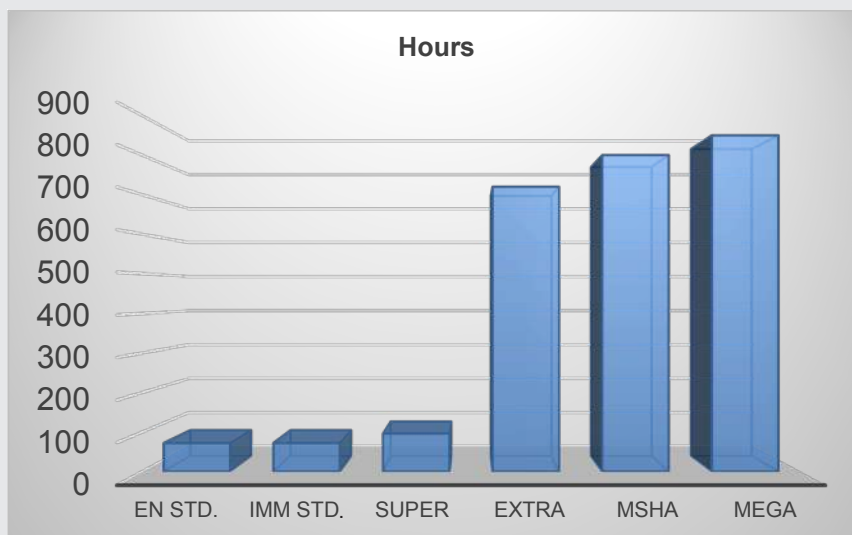

IMM std. Cover: EN std.

IMM Super Cover: better than EN std.

IMM Extra Cover: x 10 EN std.

IMM MSHA Cover: > 10 EN std.

IMM Mega Cover: > 10 EN std.

These values are for guidance only and they are related to the hose liner. Several factors in working operations could affect hose service life. For details concerning specific fluid, contact Muncie Power Products Technical Department. The outer cover of the hose is intended to protect the reinforcement layer(s) from mechanical influences (abrasion, weathering, etc), cover compounds are not designed to exhibit the same chemical resistance as the tube compounds. Interpump Hydraulics should be consulted about the compatibility of the cover, should the application involve the extended exposure or immersion in a liquid. In general, the hydraulic hoses of the Interpump Fluid Solutions product range are not designed for immersion in the service fluid. These types of special applications should be avoided or carefully analyzed, taking care to provide additional external protections for the hoses or by selecting special types of hoses (e.g. hoses with a thermoplastic cover which have been validated for the specific application). The turbulence of the fluid, the high temperature and nature of the fluid as well as other elements may impact the properties or integrity of the hose cover material (the cover compound of the hose is designed to resist to oil drops and external agents, not immersion in the service fluid). For more detailed information or for any technical questions, contact Muncie Power Products.

Solution for applications

- 1-Refer to dedicated section for extended Temperature Range information
- 2-UNMWPE cover available as alternative (MEGA COVER)
- 3-Ask technical office for cover different configuration request

Built to INTERconnect.
