# Foreword

The 2019 crop year is one to be celebrated by the 69,900 farms and ranches that make up California's remarkable agricultural community. However, as we release the 2019-2020 California Agricultural Statistics Review, we're all still dealing with the devastating impacts of the COVID-19 pandemic. While I am grieved by the tremendous amount of loss and hardship created by this pandemic, I am heartened and grateful to recognize the countless examples of resiliency and perseverance that transpired within this essential industry. Members of California's agricultural community responded and adapted incredibly quickly to instances of serious need, from protecting essential farmworkers based on the latest expert medical guidance to shifting deliveries of fresh perishables to food banks. These efforts served in assuring a continued safe supply of food and in keeping this state, nation and world fed.

Thinking back to the 2019 crop year, we were meeting face-to-face here and abroad with our trade partners and researching new and improved cultural practices in pursuit of even greater gains in sustainable agricultural practices. These efforts will continue remotely for as long as necessary and remain priorities given the challenges associated with natural resource allocation and climate change, not to mention a pandemic.

California's agricultural output for 2019 was more than \$50 billion in cash receipts, which was slightly higher than the previous year's output. Exports totaled approximately \$21.7 billion, which represents a 3.4 percent increase from 2018's exports. When looking at the statistics, keep in mind that each year's agricultural output represents incredible human effort on the part of farmers, ranchers, farmworkers, processors, distributors, civil servants, university staff and many others who collaborate and devote their creative energy and industry towards shepherding this extraordinary state's agricultural bounty.

Thank you for your interest in this report and in California agriculture. The California Agricultural Statistics Review is the result of a joint effort between the U.S. Department of Agriculture's National Agricultural Statistics Service – Pacific Regional Office, and the California Department of Food and Agriculture. Thank you to all who call agriculture their professional career, and especially to the staff who collect, analyze and publish this important data.

Yours truly,

Karen Ross, Secretary  
California Department of Food and Agriculture

# Agricultural Statistical Overview

The sales value generated by California agriculture increased by more than 1 percent between the 2018 and 2019 crop years. The state's 69,900 farms and ranches received \$50.1 billion for their output, up from the \$49.6 billion received in 2018. California's revenue was led by the dairy industry followed by almonds and grapes.

Grape production generated \$5.4 billion in cash receipts in 2019, down 13.6 percent from 2018. Production decreased by 9.1 percent from 2018, and prices received by growers decreased from \$878 per ton of grapes in 2018 to \$846 per ton in 2019. Almond cash receipts were \$6.1 billion, up 8.8 percent from 2018. While the almond bearing acres increased by 90,000 acres, the price per pound fell from \$2.50 in 2018 to \$2.43 in 2019. Revenue generated from cattle was \$3.1 billion, showing a decrease of 3.9 percent from the reported revenue of \$3.2 billion in 2018.

The dairy industry, California's leading commodity in cash receipts, generated \$7.3 billion for milk production in 2019, up 15.2 percent from 2018. Milk production increased by 0.4 percent and milk prices received by producers increased from \$15.78 per hundredweight of milk sold in 2018 to \$18.11 per hundredweight in 2019. As the leading dairy producing state in the country, California produced about 19 percent of the nation's supply in 2019.

California remained the leading state in cash farm receipts in 2019 with combined commodities representing over 13 percent of the U.S. total. California's leading crops remained fruits, nuts and vegetables.

California accounts for 40 percent of all organic production in the U.S. and organic sales continue to grow in the state. In 2019, sales of organic products in California totaled more than \$10.4 billion, which represents an increase of 3.5 percent from 2018.

## Notable Increases in California Production:

Garlic .....	-20%

## Farm Facts

In 2019, 69,900 farms operated in California, up 0.7 percent from 2018. Almost 29 percent of California farms generated commodity sales over \$100,000, greater than the national average of 18.5 percent. The amount of land devoted to farming and ranching in California was 24.3 million acres in 2019, the same as in 2018. The average farm size was 348 acres in 2019, down slightly from the 2018 average farm size and below the national average of 444 acres.

## Land Values/Cash Rents

The average value of California farm real estate increased in 2019 to \$10,000 per acre, up 7.0 percent from 2018. During the year, the value of irrigated cropland increased 5.6 percent to \$15,100 per acre and non-irrigated cropland increased 6.1 percent to \$5,400 per acre. The value of all cropland increased 5.4 percent, compared to the previous year, to \$12,830 in 2019. The value of pastureland increased 7.1 percent during the year to \$3,010 per acre in 2019. The rental rate of irrigated cropland increased to \$543 per acre in 2019, up from \$528 per acre in 2018. Pastureland rental rates were \$13.00 per acre in 2019, the same as in 2018.

## Top Commodities

California's top 20 crop and livestock commodities accounted for \$42.6 billion in value in 2019. Eleven commodities exceeded \$1 billion in value in 2019. The cash receipts of eleven of the top twenty commodities increased in value between 2018 and 2019. The growth in the cash receipts of walnuts, tangerines, and carrots were the largest percentage gains of the top 20 commodities. Grower returns are subject to change and could result in an updated dollar amount in next year's report.

## Weather Highlights for 2019

January began warm and dry across the state. January began with a battery of Pacific Northwest winter storms that impacted the northern reaches of the state. High winds knocked down trees and power lines in Northern California, while the Sierras highways were closed in part to low visibility and strong winds. Midmonth the wet ride continued as a powerful wet storm pummeled the entire state, causing flooding and in some areas burned in 2018, mudslides. The three-day drenching put a dent in California's drought, dumping as much as 10 inches of rain in parts of Southern California, and between 3 and 6 inches in Los Angeles. Snow in the Tehachapi Mountains forced the closure of Interstate 5 over the Grapevine. Blizzard conditions blanketed the higher elevations of the Sierra Nevada with as much as 4 feet of snow. Waves of moisture continued through the remainder of January from Kern County north. The monthly statewide average temperature was 45.2°F, which is 1.8°F above the long-term average. The statewide precipitation totaled 5.51

## Top 5 Agricultural States in Crop Cash Receipts, 2019

Rank	State	Crop Cash Receipts <sup>1</sup> \$1,000
	United States	370,636,400
1	California	50,116,898
2	Iowa	27,535,876
3	Nebraska	21,594,555
4	Texas	21,117,057
5	Minnesota	16,858,883

<sup>1</sup> Based on USDA Economic Research Service cash receipts, September 2020 release.

inches, 128 percent above the thirty-year (1981-2010) norm. Despite early winter storms in 2019, the Sierra Nevada snowpack on the 3rd of January was only 67 percent of average. By February 2nd, the second annual snowpack survey showed the impact of January's storms, with 100 percent of the average water content.

February continued the wet pattern of January with above average precipitation over the entire State, excluding the Mojave and Colorado Deserts. A very cold Pacific Storm system dropped out of the Gulf of Alaska bringing moderate to heavy precipitation to the San Joaquin Valley and heavy snow at elevations as low as 2,000 feet in the southern Sierra Nevada. Between 4 and 6 feet of new snow fell above 5,000 feet. This was followed by another cold but less wet Pacific storm system. On the heels of this came an atmospheric river storm that dumped extremely heavy rainfall and raised the snow level to 9,000 feet. The snowmelt and precipitation caused flooding and mudslides. A cold air mass plunged snow levels down to 1,500 feet and a second wave of moisture dumped record snowfall to parts of the Sierras and foothills. A low-pressure system dropped southward through the Great Basin on February 20. This system resulted in brief periods of strong winds, cold air and light precipitation. The month ended with frost in the San Joaquin Valley as cold air remained and the storm moved off to the east. The snowpack began the month at about 70 percent of the April 1 average, normally the date of maximum accumulation. By March 1st, the snowpack was 150 percent of the April 1 average. The Sugar Bowl ski resort near the Donner Summit reported a February record 22 feet of snow for the month. After the five-year dry spell of 2012 to 2017, February pushed the state out of the drought. At the end of the month, the National Drought Monitor designated only 2

percent of the state under drought conditions, the lowest amount since 2011. The state saw 25 days of high temperatures at or below average, making it the coldest February in half a century. In Downtown Los Angeles, the temperature never reached 70 degrees, the first time that has occurred in over 130 years of record keeping. The statewide average temperature, 39.8°F, was -5.8°F below the norm and the sixth coolest February since 1895. There were 8.99 inches of precipitation statewide for the month, 218 percent of the norm and the third wettest February in 125 years.

A large cold low-pressure area dropped southeast from the Gulf of Alaska to off the Pacific Northwest coast by the morning of March 1. Several bands of precipitation associated with this system pushed through Central California dropping significant rainfall with some locals reporting 5 inches of rain and between 2 and 4 feet of snow over the higher elevations. The following week a system moved through Central and Southern California bringing some light rains to the Tehachapi's and north into the San Joaquin Valley. A deep upper trough slowly

pushed heavy rains east across the region resulting flash flooding and mudslides near foothill burn scars in Mariposa County. Several locations in the southern Sierra Nevada measure between one to two inches of rainfall. Several inches of new snow fell over the higher elevations of the Southern Sierra Nevada and Tehachapi Mountains with the snow level lowering to 5,000 feet. After a brief break between systems, another low-pressure system brought widespread precipitation. The most significant precipitation was in Mariposa County and in the Yosemite Park area where several reporting stations measured over an inch of rainfall. One to two feet of new snow fell above 6,000 feet in Yosemite Park. Several other reporting stations in the area picked up between a quarter and half an inch of rainfall. A warm plume of moist tropical air brought a very active period of weather to the San Joaquin area resulting in widespread heavy rainfall, flooding, rockslides and debris flows. Several feet of new snow fell above 9,000 feet. Below the snow line, much of the Southern Sierra Nevada measured between 4 and 8 inches of rainfall while most of the San Joaquin Valley picked up between

<sup>1</sup> Total value is based on USDA Economic Research Service cash receipts, September 2020 release.

<sup>2</sup> Includes nursery/greenhouse crops (excluding Floriculture), Christmas trees, seed crops, and miscellaneous field, vegetable, berry, tree fruit, and nut crops.

1 and 3 inches of rainfall. Reservoir storage ended the month at about 110 percent of average compared to 105 percent one year ago at that time. As a result of the snowstorms for March, the April 1 snowpack was about 175 percent of average, slightly exceeding that of 2017 and well above the 2018 snowpack of 60 percent of average. The statewide precipitation percentage was 130 percent of average. For the prior year the percentage was 70 percent, and it was 175 percent in 2017.

April was drier and warmer than normal. The month started with some light precipitation in the very north end of the state as a low-pressure system moved across the Pacific Northwest. A post-frontal unstable air mass moved in behind the cold front bringing localized hail and strong winds to the central valleys and foothills. A strong low pushed in from the Pacific Northwest and dropped southeast into the Great Basin. This storm drenched northern California while the front's strong gusts knocked out power and toppled trees in the San Joaquin Valley and Tehachapi before the rain hit the southern end of the state. This was followed by another front bringing some rain to the San Joaquin Valley and snow mostly above 7,000 feet in the Sierras. The cold air associated with this front allowed nine inches of snow to accumulate in Yosemite Valley. The month ended with a system moving inland over southern California. This low-pressure system wrapped moisture northward into central California and produced scattered showers and thunderstorms mostly over Kern County. Rainfall amounts from this last storm were generally light with most locations picking up less than a tenth of

an inch. Rainfall during April was less than average except in the North Coast region. Almost one-third of the year's large April 1 snowpack melted during the month, but it still left a robust 160 percent of the May average snowpack. This sharply contrasts with the 25 percent of average snowpack on May 1, 2018. Precipitation during April was about 75 percent of average for the month. The statewide April average temperature was 57.6°F, 3.6°F above the norm.

May began dry with a Great Basin upper level system that interacted with a pressure ridge over the northeast Pacific driving dry strong gusty winds. Mojave airport had gusts nearing 60 mph. During the second week of May, a cold low system backed into the state from the northern Rocky Mountains producing showers and thunderstorms across central California. The storm moved down the San Joaquin Valley and over Southern California causing localized flooding and mudslides, as well as light snow over 8,000 feet in the Southern Sierra Nevada Mountains. Wrap around moisture from this system spread westward over Kern County resulting in thunderstorms, heavy precipitation and mud slides in the southern half of the state. Mid-month a cold storm dropped down from the Gulf of Alaska to blanket northern California with significant precipitation and up to a foot of snow down to 6,000 feet in Yosemite National Park. The rain hit the San Joaquin Valley and foothills and severely impacted the cherry crop. Heavy hail from this system damaged cotton, pistachios, and tomatoes in the Central Valley. The series of fronts continued as another low swung over the

Source: California County Agricultural Commissioners' Reports

state bringing some record setting precipitation to some locations. Cold unstable air followed the low and brought thunderstorms and strong winds, and a small tornado near Huron in the San Joaquin Valley. Lows followed by cold unstable air continued bringing showers primarily to the northern half of the state and the Sierras, and scattered thunder, hail and localized downpours and flooding to the Central Valley. May drew to a close with warm temperatures and some river flooding from the snow melted by rain and rising temperatures. The monthly average statewide temperature was 57.8°F, 3.5°F below the norm. The statewide precipitation was 2.74 inches, 257 percent of the norm. This was the state's sixth wettest May in 125 years. By late May, the major reservoirs were near capacity and above average.

June started with an upper level low-pressure system over southern California that brought showers, thunderstorms, and localized hail, heavy rainfall, and some flash flooding. A high-pressure system built up over the state resulting in triple digit temperatures. The hot weather accelerated snowmelt and contributed to increased runoff and some flooding. The high temperatures persisted for much of the month. A trough over the Great Basin drove strong winds across much of the southern half of California. Before June ended, a wave of moisture from the Rocky Mountains backed into the central Sierras with some light precipitation. The month ended warm and dry. The snowpack on June 3 was 187 percent of average and by midmonth, the major reservoirs were at or near capacity. The statewide average temperature for the month was 70.3°F, 1.7°F above the norm.

July began with warm dry days, but the first week average temperatures were only near or below the 30-year average at many locations. The moderate temperatures were overtaken as a high-pressure system over Southern California brought excessive heat to the deserts and Inland Empire while the rest of the state saw seasonal temperatures. Mid-month monsoonal moisture was pulled up into the state resulting in some localized flooding in southern California, and thunderstorms along the Sierra Crest. As the month closed, strong high pressure built over the four corners region causing temperatures to rise to triple digits and break records across the state. Despite the hot close to the month, the statewide average temperature was 74.9°F, the 30-year norm.

August took off hot and stayed hot for much of the month. From the northernmost reaches of the Sacramento Valley down to the desert, triple digit

temperatures were recorded. Mid-month a high over the desert southwest pushed the heatwave into the San Francisco area breaking records. A brief respite of cooler weather followed as an upper trough pushed into the Pacific Northwest and broke the large area of high pressure. This was followed by a high-pressure loft driving a thermal trough near the coast to move inland bringing hot and dry conditions across the state. The high-pressure area dominating the region nudged temperatures into the triple digits for the San Joaquin Valley and southern Sierra foothills. The statewide average temperature was 76.3°F, 2.0°F above the 30-year average.

Continuing the trend of August, September began hot and dry with above normal temperatures across most of the state. An upper level high-pressure area over the Four Corners briefly ushered in some monsoonal thunderstorms and hail to Riverside and San Diego Counties. The high over the Great Basin brought heat, high winds and low relative humidity to much of the state. Triple digit temperatures were reported across the Inland Empire. Santa Ana winds exacerbated wildfires. Mid-September a series of cold upper level disturbances dropped down from the Pacific Northwest. These brought showers, thunderstorms and high elevation snow. Before the month drew to a close, temperatures quickly rose up to above normal with some all-time daily records. A cooling trend ended the month as a low-pressure system moved down the coast. As the low moved inland, it triggered high winds, and some light showers and snowfall above 8,000 feet. The statewide average temperature for the month was 68.9°F, 0.3°F below the norm. The statewide average precipitation for the month was 0.67 inches, or 138 percent for the normally dry month of September.

October began chilly as a cold air mass and clear skies caused sub-freezing temperatures in parts of northern California. Warmer and dry conditions developed over the state along with offshore winds as a high-pressure system prevailed for a brief period. A dry cold front pushed south across the state, plunging daytime highs 10 to 15 degrees and driving strong winds. A weak Pacific high warmed up the state for a few days, before a series of cold fronts brought more cold dry winds for the remainder of the month. The statewide average temperature for the month was 58.0°F, down 2.0°F from the October norm. The statewide average low for the month was 2.7°F below normal.

The first days of November were cool, but as a dry high-pressure system spread over the region, the

state was unseasonably warm and dry for the first half of the month. An upper level trough pushed into central California. This combined with remnants of tropical storm moisture to douse the state with several inches of rain, primarily in Southern California, and some scattered snow showers in the Sierras. Thanksgiving weekend saw a pattern change with an unseasonably cold winter storm pushing snow levels down to 1,500 feet and leaving 2 to 3 feet at higher elevations. The Holiday's cold unstable system brought widespread heavy rain, localized flooding, thunderstorms and snow to the Tehachapi Mountains. The month ended on the heels of the winter storm with lows in the San Joaquin Valley dipping below freezing. The statewide average temperature for the month was 52.8°F, up 3.3°F from the norm, resulting in the tenth warmest November in 125 years. Although the holiday storm only put the statewide average precipitation at 1.55 inches, or 59.4 percent of normal, it brought an abrupt end to the fire season.

The wet pattern continued in December. An atmospheric river driven by a low moving down from the Gulf of Alaska and seeded with tropical moisture, brought heavy rainfall across the state and one to two feet of snow above 7,000 feet in the Sierras. The deserts saw up to half an inch of rain and San Diego County had some local flooding. With little break a salvo of storms brought rain and snow to the state. Midmonth a strong high-pressure system pushed into

central California and strengthened to develop strong offshore winds with gusts exceeding 60 mph in the San Joaquin Valley. Cold air settled in behind the wake of the departing system and lead to widespread frost and freezing temperatures in the valley and coastal areas. A frontal system displaced the chill with wind and widespread precipitation, mainly falling as snow with accumulations over a foot. On Christmas Day, a low slid down the coast depositing light precipitation inland to central California, before swinging inland over southern California and leaving moderate to heavy rain in some locations and snow down to 2,500 feet in the southern Sierras and Tehachapis. The month ended with a high off the coast that kept the skies clear overnight allowing short-lived morning fog to form in the valleys. The statewide average temperature for the month was 43.6°F, up 0.7°F from the norm. The statewide precipitation was over 33 inches, or nearly 116 percent of the 30-year average. At the end of the month, eight of the twelve major reservoirs were at or above historic average levels, ending the year on a high note after recent drought years.

## Global Marketplace

California continues to set the pace for the rest of the nation as the country's largest agricultural producer and exporter. In 2019, California exported approximately 28 percent of its agricultural production by volume. In dollar terms, California's agricultural exports reached \$21.71 billion for 2019.

Significantly, California is the nation's sole exporter of many agricultural commodities, supplying 99 percent or more of the following: almonds, artichokes, dates, figs, garlic, kiwifruit, olives and olive oil, pistachios, prunes, raisins, table grapes, tomatoes for processing, and walnuts.

California's agricultural export values have realized tremendous gains in the past decade. While 2019 exports showed an increase of 3.4 percent over the prior year, the annual growth

### California's Top 10 Agricultural Export Markets, 2019

Rank	Country	Export Value \$1 Million	Leading Exports
1	European Union	3,658	Almonds, Pistachios, Walnuts
2	Canada	3,211	Wine, Almonds, Strawberries
3	China/Hong Kong	1,931	Pistachios, Almonds, Dairy and Products
4	Japan	1,595	Rice, Almonds, Beef and Products
5	South Korea	1,057	Almonds, Oranges and Products, Dairy and Products
6	Mexico	1,019	Dairy and Products, Table Grapes, Almonds
7	India	969	Almonds, Cotton, Pistachios
8	United Arab Emirates	537	Almonds, Walnuts, Pistachios
9	Taiwan	394	Dairy and Products, Table Grapes, Almonds
10	Turkey	376	Almonds, Walnuts, Pistachios

Source: University of California, Agricultural Issues Center

rate for the last 10 years for California's agricultural exports averaged 6.0 percent.

### California Agricultural Products Export Values and Rankings, 2017-2019

2019 Rank	Product	2017	2018	2019	Change in Value 2018 to 2019 (In Percent) <sup>1</sup>
		\$1 Million	\$1 Million	\$1 Million	
1	Almonds <sup>2</sup>	4,482	4,531	4,901	8.2
2	Pistachios	1,518	1,736	2,010	15.8
3	Dairy and Products <sup>3</sup>	1,599	1,618	1,805	11.5
4	Wine	1,401	1,327	1,253	-5.6
5	Walnuts <sup>2</sup>	1,370	1,280	1,250	-2.4
6	Rice	637	629	765	21.7
7	Table Grapes <sup>2</sup>	795	803	743	-7.4
8	Tomatoes, Processed	649	599	623	4.0
9	Oranges and Products <sup>2,4</sup>	673	642	541	-15.7
10	Cotton <sup>2</sup>	377	449	438	-2.5
11	Beef and Products <sup>5</sup>	375	414	404	-2.3
12	Strawberries	414	439	402	-8.3
13	Hay	346	334	339	4.4
14	Seeds for Sowing <sup>2,4</sup>	374	335	333	-0.8
15	Lettuce	317	297	292	-1.7
16	Raisins	307	283	257	-9.2
17	Lemons <sup>2</sup>	219	299	206	-31.1
18	Raspberries and Blackberries <sup>6</sup>	130	135	162	20.4
19	Prunes	140	142	126	-11.3
20	Cauliflower	127	134	125	-7.0

<sup>1</sup> Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

<sup>2</sup> Export values for 2018 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>3</sup> Dairy and product export values were updated for 2017 and 2018 using improved estimation methods.

<sup>4</sup> Export values for 2017 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>5</sup> Hides and skins are included in the heading "Beef and Products".

<sup>6</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>1</sup> Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

<sup>2</sup> A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

# County Statistical Data

California's counties reported an increase of 0.3 percent in the value of agricultural production (excluding timber) for 2019, compared to the previous year. Six counties reported agricultural production exceeding \$3.0 billion each. Fourteen counties reported a value of production in excess of \$1.0 billion. Fresno County was the leading county in 2019 with an agricultural production value of \$7.71 billion, a decrease of 2.9 percent from its 2018 value. Kern County was second in value of production for the year with \$7.69 billion, a 3.0 percent increase from 2018. Tulare County was third in value in 2019, with an increase of 5.6 percent in production to \$7.5 billion. Monterey remained fourth in value for the year with \$4.4 billion, an increase of 3.9 percent from 2018.

## Gross Value in Agricultural Commissioners' Reports

The gross value of production published in this report includes all farm production, whether sold into usual marketing channels or used on the farm

where it is produced. Values placed on pasture and range feed are included and fresh fruit and vegetable crop values are based on the Free-On-Board (F.O.B.) packed price. Values are recorded for all products grown during the calendar year, regardless of when they are marketed. The California County Agricultural Commissioners' Reports publication also provides statistics on a broader range of commodities than estimates prepared by other agencies.

Because of these concepts, the state total for gross dollar values summarized in this report differs from the cash receipts to farmers estimated by USDA's National Agricultural Statistics Service, Pacific Region-California. The larger total value reported by Agricultural Commissioners results from the different definitions used in estimating total value of production rather than cash receipts to producers.

### Highlights by Rank and County Percentage of Total State Totals, 2019

Rank	Commodity	County Percentage of State Totals
1	Almonds	Kern leads with 21.1 percent of the state total, followed by Fresno with 20.1 percent.
2	Grapes (All)	Kern leads with 20.7 percent of the state total, followed by Fresno with 13.9 percent.
3	Milk and Cream	Tulare leads with 27.5 percent of the state total, followed by Merced with 15.5 percent.
4	Cattle & Calves (All)	Tulare leads with 17.3 percent of the state total, followed by Imperial with 13.1 percent.
5	Nursery Products	San Diego leads with 28.2 percent of the state total, followed by Stanislaus with 7.0 percent.
6	Pistachios	Kern leads with 38.3 percent of the state total, followed by Fresno with 28.6 percent.
7	Berries, Strawberries	Monterey leads with 31.9 percent of the state total, followed by Santa Barbara with 24.9 percent.
8	Lettuce	Monterey leads with 61.9 percent of the state total, followed by Imperial with 12.5 percent.
9	Oranges	Tulare leads with 57.5 percent of the state total, followed by Kern with 21.9 percent.
10	Walnuts (English)	San Joaquin leads with 19.3 percent of the state total, followed by Butte with 14.2 percent.
11	Tangerines	Tulare leads with 40.0 percent of the state total, followed by Kern with 35.4 percent.
12	Alfalfa Hay	Imperial leads with 21.3 percent of the state total, followed by Kern with 13.8 percent.
13	Silage, All	Tulare leads with 29.0 percent of the state total, followed by Merced with 14.7 percent.
14	Rice (Excl. Seed)	Colusa leads with 29.4 percent of the state total, followed by Sutter with 22.5 percent.
15	Tomatoes (Processing)	Fresno leads with 33.3 percent of the state total, followed by Kings with 13.9 percent.

Some counties include timber as a part of their crop report, following the pattern set by the California County Agricultural Commissioners and Sealers Association (CACASA). Since it is not comparable to earlier county summaries, timber has not been made a part of the main tables of this summary. The total 2019 value of production reported by the counties, including timber, was \$62.1 billion, down slightly from last year. At a value of \$98.5 million, Humboldt County led the state in timber production in 2019 and accounted for 27.0 percent of the state's total timber value.

## County Agricultural Commissioners' Reports

Information presented in this section is based on annual crop reports compiled by the California County Agricultural Commissioners. These reports provide detailed annual data available on agricultural production by county.

Reports were received from 51 of the 58 counties for 2019. Seven County Agricultural Commissioners' Reports, Alameda, Del Norte, Humboldt, Lassen, Mariposa, San Francisco, and Trinity counties, were not available at the time of publication. Therefore, 2018 data was used for

Alameda county, data for Lassen and Mariposa counties came from their 2017 publications, reports from 2016 were used for Humboldt and Trinity counties, and data for Del Norte and San Francisco counties came from their 2015 publications.

Copies of individual County Agricultural Commissioners' Reports may be requested or obtained directly from each County Agricultural Commissioner's office, or found at <https://www.cdfa.ca.gov/exec/county/CountyCropReports.html>.

Basic data collected by the Agricultural Commissioners and their staff members are compiled from many sources. Sources vary from county to county. Examples of data sources include grower surveys, regulatory and inspection data, shipment data, and industry assessments.

The amount of detail varies by county. For instance, one county may list all grapes; another may show grapes by raisin, table, and wine; and another may list a further breakdown, such as canned, crushed, dried, fresh, and juice. The data were coded at the detail level.

Credit is due to the County Agricultural Commissioners and their staff members for preparing the annual county crop reports upon which this compilation is based.

California's Leading Timber Counties, 2019 <sup>1</sup>						
Timber Rank	County	Timber Volume Million Bd. Ft.	Total Agricultural Value (Including Timber) \$1,000	Timber Value \$1,000	Timber Percentage of Total Agricultural Value Within County Percent	
					Percent	Percent
1	Humboldt	216,136	354,133	98,452	27.8	
2	Mendocino	120,288	271,029	61,539	22.7	
3	Shasta	219,265	121,902	42,355	34.7	
4	Siskiyou	206,364	348,583	28,953	8.3	
5	Plumas	106,451	42,147	20,610	48.9	

<sup>1</sup> Timber volume and value data are from the State Board of Equalization, Timber Tax Division.

County Rank by Gross Value of Agricultural Production, 2018-2019 <sup>1</sup>

<sup>1</sup> 2019 data is unavailable. Data has been pulled forward from the county's most recent Crop Report publication. For further information, see the California County Agricultural Commissioners' Reports Crop Year 2018-2019.

# Field Crops

The total value of California field crop production for 2019 amounted to \$3.25 billion, representing a decrease of 3 percent from the prior year. Field crops experiencing large increases in value for 2019, as compared to the prior year, included barley, potatoes, hay (other than alfalfa), and cotton seed. Field crops with notable decreases in value for 2019 included oats, winter and Durum wheat, safflower, and all rice. Field crops showing mild decreases in value for 2019 included corn for grain and alfalfa hay.

The total crop value for potatoes increased in 2019 by more than 39 percent from the prior year. Additionally, during the year, the potato crop experienced a 9 percent increase in acreage planted, a 10 percent increase in yield, and a 16 percent increase in price per hundredweight.

Seventy-two percent of the total California barley crop was harvested for grain in 2019. Barley was planted on 60,000 acres, of which 43,000 were harvested for grain. Overall, barley production increased 58 percent for the year and the value of the crop increased by 50 percent. The 2019 price of \$191.67 per ton of barley, however, represented a decrease of 5 percent from the prior year.

Of the field crops that decreased in value for 2019, as compared to the prior season, the all wheat crop experienced the sharpest decline at 42 percent. This loss in crop value was caused by a 17 percent decrease in acres harvested for grain, a 27 percent decrease in yield per acre, and a 5 percent reduction in price per ton. A total of 420,000 acres of wheat were planted during 2019, and 122,000 acres of this total were harvested for grain. The total crop value for winter wheat declined by 44 percent compared to 2018, while both production and value of Durum wheat decreased by 36 percent for the same time period.

Production of hay (other than alfalfa) in California increased in 2019 to nearly 1.7 million tons. The total crop value of \$253 million for hay (other than alfalfa) was 19 percent over the prior year. For alfalfa hay in 2019, total production decreased by 4 percent from the previous year to 4.1 million tons and total value dropped by 3 percent to \$844 million. For all hay for 2019, the total crop value increased by 1 percent, price realized an increase of 1 percent, and harvested acres rose by 3 percent, compared to the prior year.

The total value of rice production in California for 2019 was \$776 million, representing a decrease of 16 percent from 2018. Total rice plantings decreased by 2 percent, with 498,000 acres planted in 2019. Medium grain rice represented 91 percent of the total rice acreage and 93 percent of the total production. The yield for long grain rice increased by 22 percent, while the yield for the short and medium grain rice varieties decreased slightly, compared to the prior year. This resulted in an overall decrease in production for all rice of 3 percent from the previous year.

California corn for grain production was valued at \$46 million for 2019, representing a 7 percent decrease from 2018. Harvested acreage for corn for grain was 60,000 acres, down 8 percent from 2018. The yield for corn for grain production decreased by 3 percent, and the price increased by 3 percent from the previous year. Production of corn for silage increased 8 percent over the prior year, amounting to 10.7 million tons for 2019.

## Notable Increases in Production:

Barley .....	58%
Potatoes, All .....	20%
Hay, Other .....	19%
Rice, Long .....	11%

## Notable Decreases in Production:

Oats .....	-71%
Wheat, Winter.....	-41%
Wheat, All .....	-40%
Wheat, Durum .....	-36%
Haylage and Greenchop, Alfalfa.....	-23%
Safflower.....	-22%
Rice, Short.....	-18%
Sunflower, Non-Oil.....	-13%
Cotton, American-Pima .....	-11%
Corn For Grain.....	-10%
Cotton, All .....	-10%
Sugar Beets.....	-10%

<sup>1</sup> Area planted includes preceding fall.

<sup>2</sup> Production is on a clean basis.

<sup>3</sup> Missing data has not been published due to the estimate being discontinued, not estimated, or not available.

<sup>4</sup> Includes varieties not listed separately. Excludes beans grown for garden seed.

<sup>5</sup> Beginning in 2019, garbanzo beans are excluded.

<sup>6</sup> Planted acreage is for all purposes.

<sup>7</sup> Price and value derived from County Agricultural Commissioner data. Report from 2019 is not yet available.

<sup>8</sup> Production ginned. Cotton bales are 480 lbs. net-weight.

<sup>9</sup> Preliminary Marketing Year Average Price.

<sup>10</sup> All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

<sup>11</sup> All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

<sup>12</sup> Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.

<sup>13</sup> Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

<sup>14</sup> Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

<sup>15</sup> Estimates discontinued in 2019.

<sup>16</sup> Includes sweet rice.

<sup>17</sup> Excludes wild rice.

<sup>18</sup> Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California. Data for 2019 is not yet available.

D Withheld to avoid disclosure of individual operations.

NA Not available.

## Floriculture

California's floriculture crop ranked second in the nation with crops valued at \$1.02 billion in sales, comprising 23 percent of the U.S. total wholesale value. California sales decreased 17 percent from the 2018 value. California producers decreased from 850 in 2018 to 532 in 2019.

For operations with more than \$100,000 in sales, California accounted for 16 percent of the total value of Total Bedding and Garden plants, leading the country in the highest-valued crop category in the 17-state program. The wholesale value of California-grown bedding and garden plants at \$223 million in 2019 was up 8 percent from 2018.

California ranked second in the country in potted flowering plant value for 2019, with a total value of \$277 million wholesale, down 7 percent from 2018. California accounted for 29 percent of the 17-state total wholesale value reported for potted flowering plants.

California was the leading state in cut flower production, accounting for about 74 percent of the total U.S. cut flower wholesale value. The wholesale value of cut flowers produced in California in 2019 was \$242 million, which represents a 16 percent decline from the prior year.

# Fruit and Nut Crops

In 2019, California accounted for 54 percent of the United States' fruit and nut production, 69 percent of the nation's acres, and 73 percent of the nation's value. Of the citrus crops, California accounted for 52 percent of the U.S. citrus production and 63 percent of the nation's citrus value. In total, the state produced 15.8 million tons of fruits and nuts in 2019. The state's total value of all fruits and nuts in 2019 was nearly \$21.5 billion.

Almonds surpassed grapes this year for the number-one valued fruit or nut crop in California, totaling \$6.1 billion in production value for 2019, up 9 percent from the previous season. Grapes were second at \$5.4 billion, dropping 14 percent from the previous year. California is the number-one producer of grapes in the U.S., accounting for 94 percent of the total tonnage produced and nearly 95 percent of the production value.

For almonds, California grows all the domestic production and 77 percent of the global production. For nuts, California accounted for all the nation's production of almonds, pistachios, and walnuts. For fruit, California grew all the national production of kiwifruit, nectarines, olives, Clingstone peaches, plums, prunes, and raisins. California also accounted for a significant share of many other fruit crops. The state produced over 92 percent of the nation's production of avocados, grapes, lemons, and mandarins.

# Grape Crush

## Grape Crush Report Overview

Information contained in this Report was supplied by processors to fulfill the reporting requirements of Section 55601.5 of the Food and Agricultural Code.

The Errata to the Final Grape Crush Report includes all grape tonnage crushed during the 2019 season. It also includes purchased tonnage and pricing information for grapes with final prices prior to January 10, 2020. The Errata to the Final Grape Crush Report, published on August 16, 2020, contains any late reports or corrections to the final report.

Details of the crushed tonnage, degrees Brix, and weighted average prices were reported by grape type and variety, as well as by grape pricing districts. The 17 districts refer to the area in which the grapes were grown as defined in the Administrative Code.

## Summary of Grape Tonnages and Prices

The 2019 crush totaled 4,115,413 tons, down 8.7 percent from the 2018 crush of 4,506,010 tons. Red wine varieties accounted for the largest share of all grapes crushed, at 2,157,692 tons, down 11.8 percent from 2018. The 2019 white wine variety crush totaled 1,762,195 tons, down 3.9 percent from 2018. Tons crushed of raisin type varieties totaled 61,056, down 26.0 percent from 2018, and tons crushed of table type varieties totaled 134,470, down 5.6 percent from 2018. (See chart on next page.)

The Grape Crush Report includes the total number of tons crushed for concentrate production. In determining grape tonnage crushed for concentrate production, each processor was required to report the estimated equivalent tons of grapes crushed for grape concentrate. For the 2019 season, this total was 409,307 tons, 9.9 percent of the 2019 grape crush total. This report provides only the aggregate figure for grapes crushed for concentrate production and does not include information by district, type, or variety.

The 2019 average price of all varieties was \$811.22, down 2.5 percent from 2018. Average prices for the 2019 crop by type were as follows: red wine grapes, \$1,019.89, nearly the same as 2018; white wine grapes, \$589.51, down 7.2 percent from 2018; raisin grapes, \$245.05, down 18.9 percent; and table grapes, \$262.66, up 36.8 percent.

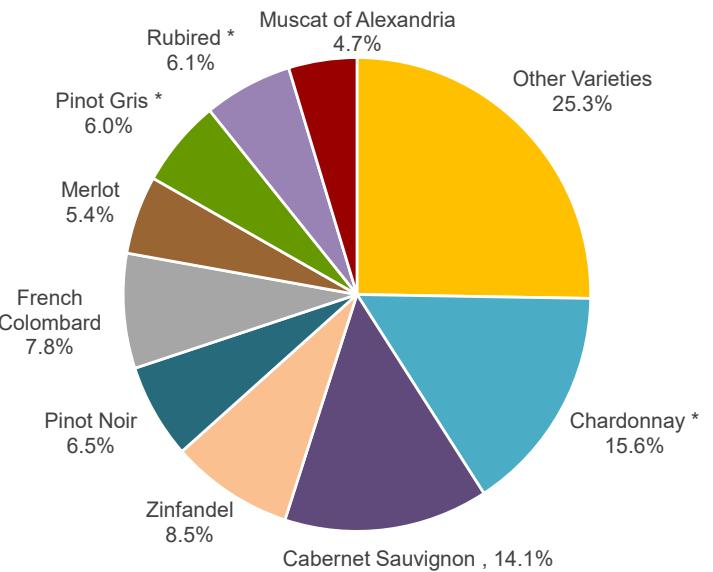

## Leading Grape Varieties and Districts

In 2019, Chardonnay continued to account for the largest percentage of the total crush volume with 15.6 percent. Cabernet Sauvignon accounted for the second leading percentage of crush with 14.1 percent. Thompson Seedless, the leading raisin grape variety crushed for 2019, was only 1.1 percent of the total crush.

District 13, (Madera, Fresno, Alpine, Mono, Inyo Counties; and Kings and Tulare counties north of Nevada Avenue (Avenue 192)), had the largest share of the State's crush, at 1,307,574 tons. The average price per ton in District 13 was \$301.11.

Grapes produced in District 4 (Napa County) received the highest average price of \$5,769.20 per ton, up 3.4 percent from 2018. District 3 (Sonoma and Marin counties) received the second highest return of \$2,846.50, up 1.0 percent from 2018. The 2019 Chardonnay price of \$912.75 was down 6.0 percent from 2018 and the Cabernet Sauvignon price of \$1,770.86 was up 5.2 percent

## Leading Varieties Crushed Percentage of Total 2019 Crush

from 2018. The 2019 average price for Zinfandel was \$583.37, down 2.7 percent from 2018, while the Pinot Noir average price was down 6.3 percent from 2018 at \$1,570.00 per ton.

Black Prince *-Rose of Peru	Negrette *-Pinot St. George	Refosco *-Mondeuse
Blaufraenkisch *-Lemberger	Nero D'Avola *-Calabrese	Ribolla Gialla *-Rebolla
Burger *-Monbadon	Other Red Wine – Alvarelhao, Canaiolo Nero, Carmine,	Rubired *-Tintoria
Chardonnay *-Pinot Chardonnay, Chardonnay Musque	Colorino, Corvina, Early Burgundy, Lenoir, Gros Verdot,	Ruby Seedless *-King Ruby
Cinsaut *-Black Malvoisie, Black Malvasia	Mencia, Peloursin, Pfeffer Cabernet, Ribolla	Sangiovese *-Sangioveto,
Crimson Seedless *-Red Crimson	Nera, Ruby Royal, Schioppettino, St Laurent, St Macaire,	Sauvignon Vert *-Muscadelle
Emerald Seedless *-Black Seedless	Terrett Noir, Tinta Amarella, Tinta Barroca,	St. Emilion *-Ugni Blanc, Trebbiano
Flame Seedless *-Red Flame	Tinta Negra Mole, Touriga, Francesca, Zweigelt	Syrah *-French Syrah, Shiraz, Syrah Noir
Gamay (Napa) *-Gamay, Valdiguié	Other White Wine -Aligote, Arinto, Bacchus, Bourboulenc,	Tempranillo *-Tinta Roriz, Valdepenas
Gray Riesling *-Trousseau Gris	Chasselas Dore, Clairette Blanche, Coda di Volpe,	Touriga Nacional *-Touriga
Grenache *-Grenache Noir	Falaghina Greco, Garnacha Blanca, Greco, Kerner,	Trousseau *-Bastardo
Italia *-Muscat Italia	Montonico, Petit Manseng, Peverella, Rkatsiteli,	Vermentino *-Vennentino
Meunier *-Pinot Meunier	Scheurebe, Verdicchio, Vidal	White Riesling *-Johannisberg Riesling, Riesling
Moscato Giallo *-Muscat Yellow	Palomino *-Golden Chasselas	
Mourvedre *-Mataro	Pinot Gris *-Pinot Grigio	

# Livestock and Dairy

California's total livestock and livestock products cash receipts exceeded \$12.3 billion in 2019, up about 4.5 percent from 2018. Dairy and dairy products receipts showed an increase of 15.2 percent in 2019, compared to the previous year, with all other livestock categories showing a decrease in cash receipts for the year. Dairy and dairy products accounted for over 59 percent of the total livestock and livestock products receipts, while cattle and calves accounted for slightly more than 25 percent of the state's livestock receipts.

For 2019, California continued to lead the nation in total milk production with 40.6 billion pounds, representing a 0.4 percent increase from the previous year. Since producing a record 42.3 billion pounds in 2014, the state's annual production has averaged close to 40.7 billion pounds per year. The average number of milk cows in 2019 was 1.73 million, down 0.5 percent from 2018 and 3 percent from the record production in 2014. The total value for milk produced in the state was \$7.3 billion, up 15.2 percent from the previous year. After a

brief slump in milk prices as the year began, the monthly average price received climbed through the remainder of the year. The 2019 average price per hundredweight was \$18.11, up from the prior year's average price of \$15.78 per hundredweight.

Total production of cattle and hogs was 2.4 billion pounds for 2019, down 3.6 percent from 2018. Total marketings of these meat species declined by 5.4 percent during the year to 2.8 billion pounds. Of this total, cattle and calf marketings were 2.75 billion pounds, while hog and pig marketings accounted for 44.4 million pounds. Cattle and calves marketed from California feedlots totaled 692,000 head, which represents a 3.6 percent increase over 2018.

Poultry and egg receipts dropped 19.2 percent in 2019, compared to the prior year, and accounted for 10.6 percent of the state's total livestock cash receipts. Egg production in 2019 reached 3.9 billion eggs, which represents a decrease of 9.2 percent from 2018. Egg value per dozen for 2019 was \$0.99, compared to \$1.41 per

dozen for the prior year. The Virulent Newcastle disease that started in May 2018 in Los Angeles County persisted into 2019, restricting bird and egg movements and forcing some flock depopulation. Turkey production decreased 16.2 percent, compared to the previous year, to 254 million pounds in 2019. The overall value for turkey decreased by nearly 5 percent during the year to \$147 million. A very large turkey producer closed its doors in January 2019, contributing to the year-over-year change in turkey production.

In the miscellaneous livestock category for 2019, the total number of bee colonies held constant from the prior year at 335,000 hives. Honey production was up 17.1 percent compared to the prior year, to 16.1 million pounds, while receipts were down by 13.4 percent from the year before. New for 2019, all apiaries are required to be registered with the state and report their movement. This is a significant achievement for the industry, as over

Source of Income	California Livestock Cash Income, 2018-2019		
	2018 \$1,000	2019 \$1,000	Percent Change

2017	89	71	138	177	4	23	95
2018	95	64	162	202	3	15	101
2019	101	59	144	181	3	14	106

<sup>1</sup> For feeding or breeding, excludes stock brought in for immediate slaughter.

<sup>2</sup> Includes custom slaughter for use on farms where produced and state out-shipments, but excludes inter-farm sales within the State.

<sup>3</sup> Excludes custom slaughter for farmers at commercial establishments.

Goats by Class as of January 1, 2010-2019			
Year	Angora Goats	Milk Goats Head	Meat and Other Goats
2010	3,500	38,000	93,000
2011	3,500	38,000	100,000
2012	3,500	41,000	96,500
2013	3,500	40,500	98,500
2014	3,600	38,000	85,000
2015	3,400	40,000	85,000
2016	3,600	39,000	90,000
2017	3,400	41,000	87,000
2018	3,500	40,000	85,000
2019	3,000	42,000	90,000

Grazing Fee Annual Average Rates, 2010-2019 <sup>1</sup>			
Year	Per Animal Unit <sup>2</sup>	Cow-Calf	Per Head
		Dollars Per Month	
2010	16.40	20.50	17.00
2011	17.30	21.50	18.20
2012	19.40	23.00	20.00
2013	19.50	23.50	21.00
2014	20.00	25.10	22.50
2015	19.10	25.50	23.50
2016	23.00	23.50	21.50
2017	20.60	28.00	19.50
2018	22.40	29.00	21.00
2019	21.40	25.00	18.50

<sup>1</sup> The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

<sup>2</sup> Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf \*0.833).

Sheep and Lambs by Class as of January 1, 2010-2019

<sup>1</sup> Preliminary data.

<sup>2</sup> Excludes processed cheese and cottage cheese.

<sup>3</sup> Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

<sup>4</sup> Includes all cheeses not included in the above categories.

<sup>5</sup> Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

<sup>6</sup> Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

<sup>7</sup> Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink".

Contains less than 10 percent milk-fat required for ice cream.

<sup>8</sup> Not shown when fewer than three plants reported or individual plant operations could be disclosed.

<sup>9</sup> Frozen products in 1,000 gallons.

# Vegetables and Melons

California continued as the leading vegetable producing state in 2019, accounting for 41 percent of the U.S. harvested vegetable acres, 61 percent of the nation's production, and 56 percent of the value for the 26 selected vegetables and melons estimated.

The total value of California's 2019 fresh and processing vegetable and melon production was \$7.9 billion, up from 2018's revised total of \$7.3 billion. Lettuce remained the leading vegetable crop in value of production at more than \$1.8 billion, followed by tomatoes with almost \$1.2 billion for processing and fresh market combined.

Squash had the largest increase in production of all the vegetable crops. Total production in 2019 totaled 1.46 million cwt, up 41 percent from the 2018 total. Planted area was estimated at 7,400 acres, up 7 percent from the previous year. The value of the squash crop totaled \$58 million, 88 percent more than the previous season.

California's acreage harvested for processing tomatoes decreased by 3 percent in 2019, and production decreased by 9 percent. Rainy weather and cooler temperatures delayed planting and slowed crop growth in early spring. Reports of hail damage in Fresno County during May lowered expected yields. There were also concerns that high temperatures in July and August, as well as disease pressure, has adversely impacted the crop.

Vegetable crops that recorded a notable increase in production included squash, spinach, cabbage, leaf lettuce, Agaricus mushrooms, carrots, and cauliflower. Crops that realized decreased production included chili peppers, cucumbers, honeydew melons, snap beans, fresh market tomatoes, watermelons, garlic, pumpkins, and bell peppers.

## Notable Increases in Production:

Squash .....	41%
Spinach.....	27%
Cabbage .....	23%
Lettuce, Leaf.....	22%
Carrots.....	12%

## Notable Decreases in Production:

Peppers, Chili .....	-63%
Cucumbers .....	-35%
Melons, Honeydew .....	-26%
Snap Beans .....	-22%
Tomatoes, Fresh Market.....	-21%
Melons, Watermelon.....	-21%
Garlic .....	-20%
Peppers, Bell .....	-11%
Pumpkins.....	-11%

<sup>1</sup> The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

<sup>2</sup> Includes both fresh market and processed vegetables.

<sup>3</sup> 2010 to 2015 data is for fresh market only, 2016 to 2019 data is for fresh and processed.

<sup>4</sup> 2011 to 2019 data are not published to avoid disclosing data for individual operations.

<sup>5</sup> Harvested area is in thousand square feet.

<sup>6</sup> Primarily dehydrated and other processing. Production includes quantity harvested. Total Values equals production minus summer storage shrinkage and loss (250,000 cwt per year).

<sup>7</sup> Included in summer storage onions.

<sup>8</sup> 2013 to 2018 data are not published to avoid disclosing data for individual operations.

D Withheld to avoid disclosure of individual operations.

NA Not available.

<sup>1</sup> On the basis of "paid for tonnage" purchased from growers as reported by processors dockage not included.

<sup>2</sup> To avoid disclosure of individual operations, "Other Counties" includes: Butte, Madera, San Benito, Santa Clara and Tulare.

# California Agricultural Exports

In 2019, California's agricultural exports totaled \$21.7 billion in value, representing an increase of more than 3 percent compared to the previous year. As indicated in the table below, California's agricultural exports have grown substantially over the past 10 years, despite slight contractions in 2015 and 2016.

California's top valued agricultural export commodity continues to be almonds, with a value of more than \$4.9 billion in foreign sales in 2019. This figure represents a change of 8 percent from the previous year. Pistachios ranked number two in export value at just over \$2 billion. California dairy and dairy products recorded an export value of \$1.8 billion in 2019, representing 12 percent growth over the prior year.

The principal 57 export commodities accounted for \$18.5 billion in export value in 2019, or 85 percent of the total value of California's agricultural exports, while the remaining 15 percent of exports were associated with "Other Products and Mixtures". Of the principal 57 commodities exported, 17 showed an increase in export value of 5 percent or more, compared to the previous year, while 25 experienced a decrease in export value of 5 percent or more.

California's share of total U.S. agricultural exports for 2019 was nearly 16 percent, which is up slightly compared to the share reported last year. California's top 10 export destinations – the European Union, Canada, China/Hong Kong, Japan, South Korea, Mexico, India, United Arab Emirates, Taiwan, and Turkey – accounted for 68 percent of the 2019 export value. United Arab Emirates showed the largest growth in total export value with a 47 percent increase compared to the previous year.

## Methodology

Data to compute agricultural exports are derived from official government sources, published industry sources and unpublished information from the government and the industry. Export quantities and values of the whole U.S. and California port districts are from the Department of Commerce (DOC) trade data posted on the United States International Trade Commission (USITC) online database (<http://dataweb.usitc.gov/>). Canadian import (value) data are from Strategis Canada's online database (<http://strategis.ic.gc.ca/engdoc/main.html>). If the California export price is not available for a particular product, the U.S. average export price for that commodity is used in order to provide a dollar value for exports.

Production quantities and values are from various National Agricultural Statistics Service (NASS), Economic Research Service (ERS), and Agricultural Marketing Service (AMS) publications. A share of the raw data provided in these USDA service publications are released as a preliminary report early in the calendar year followed by a more accurate final report released at a later date. For accuracy, The University of California Agricultural Issues Center (AIC) export estimates use data from final USDA reports.

California Agricultural Export Values, 2009-2019

Year	Export Value
	\$1 Billion
2019	\$21.71
2018	\$21.00
2017	\$20.78
2016	\$19.98
2015	\$20.81
2014	\$21.55
2013	\$21.55
2012	\$18.77
2011	\$17.23
2010	\$14.75
2009	\$12.44

AIC exports estimates use different methods from other sources, such as ERS. The ERS estimates are based on a state's national share of production of the exported commodity. The ERS method assumes that, for any particular commodity, a state's share of U.S. production equals that state's share of U.S. exports. Other sources use geographic port data, without direct links to where the product originated. The AIC export figures correspond to commodities that have been produced on farms and ranches within California. Products originated in another state and exported via California ports are not included in these statistics.

In most cases, AIC reports exports at the individual commodity level. For instance, exports of a given fruit in fresh, canned, and dried forms are summed and listed under the name of the fruit, although the method for fresh fruit exports may differ from the method used for canned and dried fruit. The ratio of quantity exported to quantity produced is given on a farm weight basis. That means, for example, that wine is converted back into fresh grapes. Standard conversion factors published by the USDA are applied.

### California Agricultural Products Export Values and Rankings, 2017-2019

2019 Rank	Product	2017	2018	2019	Change in Value 2018 to 2019 (In Percent) <sup>1</sup>

<b>Total Principal Commodities<sup>7</sup></b>		<b>17,895</b>	<b>18,001</b>	<b>18,540</b>	<b>3.0</b>	
<b>Total Other Products and Mixtures<sup>8,9</sup></b>		<b>2,887</b>	<b>2,997</b>	<b>3,167</b>	<b>5.7</b>	
<b>Total All Agricultural Exports<sup>10</sup></b>		<b>20,782</b>	<b>20,998</b>	<b>21,707</b>	<b>3.4</b>	

<sup>1</sup> Total export values for each year are rounded to the nearest million dollars. More precise values are used in the percent change calculations.

<sup>2</sup> Export values for 2018 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>3</sup> Dairy and product export values were updated for 2017 and 2018 using improved estimation methods.

<sup>4</sup> Export values for 2017 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>5</sup> Hides and skins are included in the heading "Beef and Products".

<sup>6</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>7</sup> "Total Principal Commodity" values for 2017 and 2018 were revised based on updates to USDA NASS production data.

<sup>8</sup> "Total Other Products and Mixtures" is composed of (a) highly processed products that are difficult to attribute to a specific commodity such as mixtures of fruits, nuts and vegetables and other processed foods; (b) categories for which the listed item does not provide data on individual commodities and (c) animal and plant products marketed in such small quantities that they are not included in the top 57 leading commodities.

<sup>9</sup> "Total Other Products and Mixtures" values for 2017 and 2018 were revised based on updates to USDA NASS production data.

<sup>10</sup> "Total All Agricultural Exports" values for 2017 and 2018 were revised based on updates to USDA NASS production data.

<sup>1</sup> Hides and skins are included in the heading "Beef and Products".

<sup>2</sup> Product category "Olives and Olive Oil" is equal to the product category "Olives and Products" found in previous years' data tables.

<sup>3</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>4</sup> Total other products and mixtures is equal to total U.S. agricultural exports minus total California principal commodity exports.

<sup>5</sup> Total U.S. agricultural export values come from USDA. USDA defines agriculture to include: live animals, meat, and products of livestock, poultry, and dairy products; hides and skins (not leather products); animal fats and greases; food and feed grains and grain products; oilseeds and oilseed products; fruits, nuts, and vegetables and products of these; juices, wine, and malt products; beverages (not distilled spirits); essential oils; planting seeds; raw cotton, wool, and other fibers (not manufactured products of these); unmanufactured tobacco (not manufactured tobacco products); sugar and sugar products; coffee, cocoa, tea, and products of these; rubber and allied products; and stock for nurseries and greenhouses, spices, and crude or natural drugs. Fish, shellfish, and forestry products are not included in "agriculture".

<sup>1</sup> This table shows destinations that receive shares of total exports greater than or equal to 5 percent of each commodity in either 2018 or 2019 for which reliable data are available. The commodities are listed in order of export value and the numbers in parentheses correspond to the 2019 ranking in Table "California Agricultural Products Export Values and Rankings, 2017-2019."

<sup>2</sup> Accurate export destination data are only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat".

<sup>3</sup> Hides and skins are included in the heading "Beef and Products".

<sup>4</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

	Other EU Members <sup>5</sup>	94	20	16	8	4	29	171	
	Total <sup>3</sup>	1,610	428	532	453	42	308	3,373	

<sup>1</sup> The EU-28 members to which California exports are shipped reflect only the initial destination of the product, not the EU country of consumption. Many products are distributed throughout the EU after the initial entry.

<sup>2</sup> "Other Principal Products" are those that individually account for less than \$100 million in export value to the EU.

<sup>3</sup> Accurate export destination data is only available for 50 of the top 57 commodities. The commodities for which export destinations are not included are "Apples", "Chickens", "Eggs", "Mushrooms", "Seeds for Sowing", "Turkey" and "Wheat". Totals may not equal due to rounding.

<sup>4</sup> The other 18 EU members in 2019 include Austria, Bulgaria, Cyprus, Croatia, Czech Republic, Finland, Greece, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Romania, Slovak Republic, and Slovenia. These countries combined account for just over 6 percent of California agricultural exports to the EU in 2019.

<sup>5</sup> The other 18 EU members in 2018 include Austria, Bulgaria, Cyprus, Croatia, Czech Republic, Estonia, Finland, Greece, Hungary, Ireland, Latvia, Lithuania, Luxembourg, Malta, Portugal, Romania, Slovak Republic, and Slovenia. These countries combined account for just over 5 percent of California agricultural exports to the EU in 2018.

<b>Weighted Average<sup>7</sup></b>			<b>0.26</b>			<b>0.28</b>

<sup>1</sup> Export quantities of processed goods were converted to farm fresh quantities using conversion factors published by USDA ERS (<https://www.ers.usda.gov/publications/pub-details/?pubid=41881>) or annual conversion factors published by USDA NASS in annual crop summaries.

<sup>2</sup> Quantities for 2018 were revised based on updated production data from the U.S. Department of Agriculture/National Agricultural Statistics Service.

<sup>3</sup> Hides and skins are included in the heading "Beef and Products".

<sup>4</sup> Farm quantity exported for "Dairy and Products" is calculated by converting cheese, condensed milk, fluid milk, ice cream, nonfat dry milk, and whole dry milk to their fluid milk equivalents.

<sup>5</sup> "Grapes, All" includes grape juice, raisins, table grapes, and wine.

<sup>6</sup> "Raspberries and Blackberries" category also includes exports of mulberries and loganberries.

<sup>7</sup> The weighted average is based on each of the 53 commodity's share of production value. Values for "Chickens", "Flowers and Nursery Products", "Mushrooms" and "Seeds for Sowing" are not included because reliable data on export quantity is not available.

# Organics

The California Department of Food and Agriculture's State Organic Program (SOP) is committed to upholding the integrity of products produced and/or sold in California as organic. California is the most agriculturally productive state in the U.S., and its organic farmers and ranchers produce a diverse variety of products. California accounts for 40 percent of all organic production in the U.S. and organic sales continue to grow in the state. Organic production has increased 44 percent from 1,796,080.49 acres in 2014 to 2,590,328.41 acres in 2019. In 2019, sales of organic products in California totaled more than \$10.4 billion, which represents an increase of 3.5 percent from 2018. Statewide producer, handler, and processor gross sales were \$4,089,542,095, \$5,195,541,099, and \$1,130,930,587, respectively. Additionally, in 2019, there were 5,452 producers, 1,295 handlers, and 216 processors registered with CDFA's SOP<sup>1</sup>. The top five counties in terms of overall gross sales for 2019 were Monterey County, Santa Cruz County, Kern County, Los Angeles County, and Merced County, while the top five counties in terms of overall gross sales for 2018 were Monterey County, Los Angeles County, Kern County, Santa Cruz County, and Sonoma County.

California follows the United States Department of Agriculture's National Organic Program (NOP) guidelines and enforces the Organic Food Production Act of 1990 and the California Organic Food and Farming Act, formerly the California Organic Products Act of 2003. The SOP assumes the NOP's oversight and enforcement authority in the state, and California is the only state in the U.S. with an NOP authorized state organic program. The laws and regulations in place protect consumers, producers, handlers, processors, and retailers by establishing standards for agricultural products and foods that are labeled and/or sold as organic.

The SOP also works with industry leaders and the California Organic Products Advisory Committee, where it receives insight from boots-on-the-ground representatives, such as organic growers, distributors, USDA accredited certifying agencies, trade associations, county agricultural commissioners, and more.

The SOP's priorities are to protect the integrity of organic products sold in California and to enhance outreach and education to organic stakeholders. The SOP works to ensure that the organic food supply chain is free of fraud, deception, and mislabeling in order to maintain and build consumer confidence in the organic industry.

## Methodology

Data for gross sales is derived from 2018 and 2019 gross sales data reported to the CDFA SOP, from California SOP registrants, which includes USDA Certified Organic Operations and operations exempt from certification for the following scopes of operation: producer, handler, and processor.

Data for commodity harvested acreage per county is derived from January 1, 2019 to December 31, 2019 harvested acreage data reported to the SOP, from California SOP registrants, which includes USDA Certified Organic producers and producers exempt from certification.

Data for commodity producers per county is derived from January 1, 2019 to December 31, 2019 commodity producer's data reported to the SOP, from California SOP registrants, which includes USDA Certified Organic producers and producers exempt from certification.

<sup>1</sup> Total producers, handlers, processors do not equal total number of operations. Operations may have various operation types.

All statewide data is derived from the summation of the following SOP reports: 2019 Gross Sales Report, 2019 Commodity Harvested Acreage per County Report, and the 2019 Commodity Producers per County Report.

For the purposes of registration, organic products are reported in accordance with the following regulation specified categories:

(1) Citrus

(2) Fruits, excluding citrus: strawberries (fresh market); all other berries; pome fruit; stone fruit; grapes, table; grapes, wine; grapes dried, raisins; all other fruits

(3) Livestock or dairy: fluid milk, cow; all other dairy and dairy products; cattle, beef; chicken, broilers; chicken, layers; all other poultry/livestock and products

(4) Nuts: almonds; all other nut crops

(5) Vegetables: lettuce (head, leaf, spring/salad mixes); broccoli; carrots; spinach (fresh and processed); celery/celeriac; tomatoes; all other vegetables

(6) Other, which includes, but is not limited to, apiculture, organic fallow ground, herbs, mushrooms, cut flowers, and nursery: propagation; seed crops; all other field crops (includes pasture and rangeland); all other not previously reported or listed; fallow.

The California Agricultural Statistics Review is a compilation of data from various sources (USDA NASS, USDA ERS, County Agricultural Commissioners, UC Agricultural Issues Center, and CDFA), each having a separate methodology. As such, direct comparisons cannot be made of the data presented in this section of the report to the data presented in another section of the report.
