

UTDX.DE

Utility - Frequency-List

Edition 2023 / 2024

A cooperative effort of the UDXF and UTDX.DE communities

This frequency list is divided into the following columns:

1. "QRG": Frequency in kilohertz (kHz) with an accuracy of 10 hertz where possible and known. Basically, the window frequency is specified, which is to be set on the receiver. With certain types of modulation (motly FSK), this deviates from the center frequency. See note below.
2. "Call": If known, the call sign, the call name or another ID of the following station is given here (e.g. ALE-ID etc.)
3. "Station": The name of the station in a term already used in many other, mostly European, publications.
4. "ITU": According to the nomenclature of the ITU, the identifier of the country or region.
5. "Modulation": The modulation used by the station. The designations are based on information from various sources (e.g. SIGIDWIKI, RADIOREFERENCE etc.).
6. "Details": Specific data on the listed station, e.g. B. Broadcast times, area codes, etc. Any time, timeslots or timeframes are in UTC/ZULU.

Note: With frequency-modulated signals (STANAG 4481, FSK, FAX), the window frequency corresponds to the center frequency. In the case of signals modulated in its phase (e.g. MIL-STD 188-141, STANAG-4285 etc.), it deviates from the window frequency (USB/LSB) accordingly. Please do the same with your loggings so they can make their way into this frequency list.

This frequency list does not pretend to be complete or correct in any way. Due to changing propagation and frequencies that change regularly, there is no guarantee that you will always hear something on the stated frequencies.

Should you find inaccuracies, please send changes and corrections to either UDXF or UTDX.DE

73
