## Cost Effective and Easy-to-use Iris Recognition for Biometric Enrollment

### Product Description

The CMITech BMT-20 is a binoculars-type iris biometrics imaging device that simultaneously and quickly captures highest quality iris biometric images. Easy to use, the system can be reliably positioned by the subject with minimal instructions, or by an operator with the aid of positioning feedback LEDs on the top of the imager's housing.

The patent-pending optical design of the BMT-20 features expanded depth of field and a very large tolerance for interpupillary distance, which provide superior tolerance for the positioning of all subjects' eyes. The BMT-20 is ideal for enrollment programs of all sizes, including those involving very young children.

Designed with the latest in optical and system control technology by one of the leaders in the industry, the BMT-20 is physically robust, highly reliable and durable. Meeting the elevated IP64 intrusion protection standard, this system is sealed against dust and other airborne particles to provide extended life in harsh environmental conditions.

Dedicated to building trust with end-users and partners alike, CMITech's products and technology are intended to improve processes, mechanisms and quality within all enrollment programs, large and small.

### Key Features

Feature	User Advantages
• <b>State-of-the-art optical design</b>	The optical design includes utilizing highest quality optics and long internal optical path, which allows the BMT-20 to exceed industry standards for image quality as specified by ISO in the 19794-6 document. The standard is 4.0 lp/mm at 60% contrast ratio.
• <b>Single sensor design</b>	The proprietary and patented single sensor design interleaves left and right iris images for simultaneous capture. By utilizing only a single sensor, power consumption through the USB connection is minimized. This allows for optimized NIR illumination, resulting in the shortest exposure times possible, thereby minimizing any potential for motion blurring.
• <b>Long internal optical path</b>	The optical design is folded within the BMT-20 system, providing the longest optical path of any binoculars-type iris recognition imager. At 365 mm ( +/- 15 mm), the long optical path provides much greater depth of field while minimizing optical distortions.

## Feature

- **Dedicated, on-board image processor supports very high speed, simultaneous capture of subjects irises**
- **Extended depth of field**
- **Wide inter-pupillary distance tolerance**
- **All solid-state design-no moving parts**
- **Meets IP64-6 specifications for particulate intrusion prevention**
- **Internal white LED**
- **Near-real time off-axis gaze detection**
- **Motion detection**

## User Advantages

In real-time coordination with the host PC software, the on-board image processor facilitates very high speed image capture, resulting in the fastest and most robust capture of both of the subject's irises at the same time. Typically, both irises are captured within one (1.0) second from the time that the subject places the system on his/her forehead.

The BMT-20 is capable of imaging over a depth of 30 mm, making the system highly tolerant of a) subject positioning in the "Z" dimension and b) how deep the subject's eyes are relative to his/her forehead. The BMT-20 therefore offers highly robust iris imaging across the widest range of people, including small children.

The BMT-20 can capture iris image pairs from subjects with inter-pupillary distances as small as 4.0 cm, which is the minimum distance for a child of 5 years old. This makes the BMT-20 ideal for enrollment of all subjects within all national identity programs.

The superior optical design of the BMT-20 provides the widest inter-pupillary distance and depth of field without needing any moving components. Reliability and durability are optimized with an all solid-state design.

Meeting this very high standard means that the BMT-20 is highly resistant to contamination by very small airborne particles such as dust and dirt, such as would be commonly found in harsh non-conditioned enrollment environments. Stringently tested against this standard, this feature will provide extended life and high reliability. Other systems only meet the lesser IP54 specification.

Internal, white light emitting diodes (LEDs) are turned on just prior to imaging to constrict the subject's pupil for iris biometric image capture, providing ideally sized pupils for optimal iris biometric identification and authentication.

In dark rooms, the pupils of most subjects will dilate, shrinking the amount of iris area, which diminishes the effectiveness of the iris biometric image. By making the iris area larger, the iris biometric images are optimized.

Detection of subject gaze angle (i.e. whether the subject is looking directly ahead at the imager), which is the correct position of the eyes for optimal iris biometrics. If the subject is looking away, the system will automatically wait to capture a valid iris biometric image until the subject does look straight ahead.

System calculates eye motion relative to the system, and waits until subject meets motion threshold (which is adjustable) in order to assure there is no adverse motion blurring of images.

Feature	User Advantages
<ul style="list-style-type: none"> <li>• <b>Foldable side visors and forehead positioning rest</b></li> </ul>	<p>Side visors and the forehead positioning aid on the BMT-20 combine to block bright light, such as sunlight, from entering the optical path of the system during imaging. In this way, the BMT-20 can be utilized outdoors and still deliver ideal iris biometrics imaging.</p>
<ul style="list-style-type: none"> <li>• <b>External color LED positioning indicators</b></li> </ul>	<p>The BMT-20 can be operated in two modes: first by the subject himself after being given short and easy to understand instructions. The system can also be operated by a trained operator, who will position the device based on external color LED's to center the system over the subject's eyes.</p> <p>Red : Device is too high            Blue : Device is too low            Green : Device position is OK</p>
<ul style="list-style-type: none"> <li>• <b>Position sensor</b></li> </ul>	<p>A position sensor detects if the system is upside down, preventing capture of images that can be reversed, left and right. This assures that all iris biometric samples are exactly as intended.</p>
<ul style="list-style-type: none"> <li>• <b>High temperature range</b></li> </ul>	<p>The tested and certified operating temperature range of the BMT-20 is a full 0 to 50 degrees Celsius, making the system fully useable in non-conditioned environments in the hottest of summer days.</p>
<ul style="list-style-type: none"> <li>• <b>Powered by USB 2.0 cable</b></li> </ul>	<p>The BMT-20 is fully powered by the USB 2.0 connection (maximum 500 mA at 5.0 V), which means that it operates without an independent power supply.</p>

# DACTYSCAN84c

BIOMETRIC SYSTEMS

THE DACTYSCAN84c IS A COMPACT AND FBI APP. F CERTIFIED 10-PRINT LIVESCAN IN FULL COMPLIANCE WITH THE "10-PRINT CAPTURE SCANNER & SOFTWARE USER GROUP REQUIREMENTS" SUITABLE FOR ALL APPLICATIONS IN NEED OF 4-SLAPS AND ROLLED ACQUISITION. MAIN APPLICATIONS ARE E-ID DOCUMENT ISSUING AND CRIMINAL IDENTIFICATION.

The DactyScan84c is a 3.2" x 3.0" 10-prints and rolls Livescan at 500 dpi certified by the FBI according to FBI IAFIS IQS App. F. as Livescan System as well as for Identification Flats.

## FBI APP. F CERTIFIED

With up to 25 frames per second for 4-slaps and up to 27 frames per second for rolled prints acquisition the DactyScan84c is unique in terms of acquisition speed. An ergonomic design combined with an easy-to-integrate SDK architecture makes the DactyScan84c the perfect choice for system integrators and solution providers.

## 10-PRINTS AND ROLLED ACQUISITION

A user interface based on 12 LEDs facilitates the acquisition procedure by indicating the fingerprint(s) to be acquired and providing quality feedback thus eliminating the necessity for skilled operators thus increasing workflow efficiency.

## HIGH SPEED ACQUISITION: 25 FPS FOR 4-SLAPS 27 FPS FOR ROLLS

High reliability and low maintenance costs since the DactyScan84c is not using silicon pads/coatings or a heated platen to overcome image quality issues due to halo or skin conditions.

## LINUX OS COMPATIBLE

The DactyScan84c is available as OEM module as well for all system integrators looking for a compact 10-print Livescan to be physically integrated in embedded solutions.

## MULTISCAN SDK FEATURES

**AUTOMATIC SEQUENCE CHECKING:**  
guarantees a correct scanning sequence.

**ROLLED FINGERPRINT CAPTURING:**  
display in real-time, self-adaptive to rolling speed and directions, seamless composite image generation, automatic stop detection.

**SEGMENTATION:**  
automatic segmentation of four- slap and two thumbs fingerprint images in single flat images.

**CORRECT POSITION AND SLAP COMPLETENESS CHECK:**  
Checks for correct finger placing; checks for incomplete slaps due to missing fingers.

**SLIDE DETECTION FOR FLAT PRINTS:**  
detects deformations of fingerprints due to sliding during acquisition.

**STANDARD OUTPUT FORMAT:**  
Creation of "ANSI/NIST-ITL-1-2007" type 1, 2, 4 and 14 records - EFTS71 output format support.

**ELIMINATION OF LATENT PRINTS:**  
elimination of latent prints originated from recent scans.

**AUTOMATIC ACQUISITION START AND STOP:**  
sensing of finger placement and automatic acquisition of the image with the highest quality. Quality thresholds for images can be set through the Multiscan SDK.

**HALO ELIMINATION:**  
elimination of halo due to moist fingerprints during acquisition.

**IMAGE QUALITY CHECKING:**  
dynamic estimation of fingerprint image quality during scanning process; NISTIR7151 quality check.

**ANTI-FAKE "LITE" :**  
distinguishes between real human finger patterns and other surfaces with relief structure (e.g. gloves, tissue).

**IMAGE COMPRESSION:**  
FBI certified WSQ compression; further compression formats available are jpeg and jpeg2000.

**FINGER ALLOCATION CHECK:**  
checks presence of finger core, and basic/ distal flows.
