

Build FC SAN solutions with 16GFC QXP-16G2FC & 32GFC QXP-32G2FC

Fibre Channel Cards on QuTS hero NAS

QXP FC adapters for QuTS hero NAS

- Fibre Channel benefits
- QNAP dual-port 32GFC QXP-32G2FC & 16GFC QXP-16G2FC Fibre Channel adapters
- Use QNAP QuTS hero NAS for block-based FC SAN applications
- QNAP QTS & QuTS hero NAS solutions for FC

The benefits of businesses using FC SAN

Good connectivity

In a Fibre Channel Storage Area Network (SAN) architecture, any server can be directly connected to any storage device, and any storage device can be directly connected to each other.

Good expandability

Enterprises can easily expand storage without increasing the load on the server and the local area network.

Good data sharing ability

Since the storage device is no longer connected to a specific server, resources can be shared by many servers and the main network performance is not affected when a large number of files are transmitted.

Fast and stable performance

Continue to use the same video editing software with FC SAN storage as a local drive for high and stable performance.

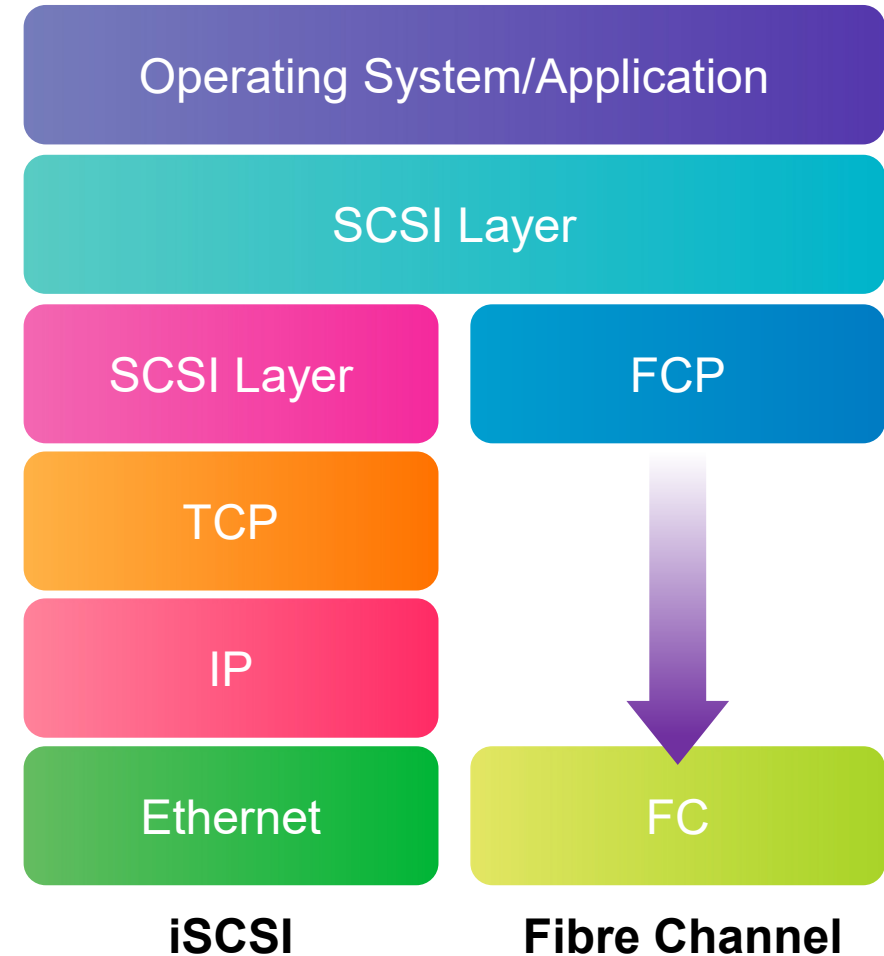

iSCSI vs. Fibre Channel Architecture

- Fibre Channel does not need to pass through Ethernet, and the physical layer in the system is less than iSCSI. When expanding the block-level storage network, Fibre Channel can be used to avoid network load.

(FC fibre cable)

- iSCSI needs to expand the block-level storage network via Ethernet. (fibre or ethernet cable)

QXP-32G2FC dual-port 32Gbps fibre channel HBA

Part number:

QXP-32G2FC

2 x 32Gbps FC ports

- Gen 6 fibre channel HBA, supporting 32Gbps/16Gbps/8Gbps speed.
- Low profile 10.68 x 6.89 cm (4.20 x 2.71 inches) .
- Bundled with 2 x 32Gbps SFP+ short wavelength short distance multi-mode fibre channel transceivers.
- Not supported on non-QNAP NAS QTS and QuTS hero operating systems such as Windows and Linux.

FC LC cables are not included.

Includes the necessary brackets for all NAS models.

QXP-16G2FC dual-port 16Gbps fibre channel HBA

Part number:

QXP-16G2FC

2 x 16Gbps FC ports

- Enhanced Gen 5 fibre channel HBA, supporting 16Gbps/8Gbps/4Gbps speed.
- Low profile 10.68 x 6.89 cm (4.20 x 2.71 inches).
- Bundled with 2 x 16Gbps SFP+ short wavelength short distance multi-mode fibre channel transceivers.
- Not supported on non-QNAP NAS QTS and QuTS hero operating systems such as Windows and Linux.

FC LC cables are not included.

Includes the necessary brackets for all NAS models.

Replace the bracket for a different NAS Model

LED indicators for various status display

	LED 1 (Green)	LED 2 (Green / Amber)
Speed: High	On/Flashing*	Off
Speed: Mid	Off	Green /Flashing*
Speed: Low	Off	Amber/Flashing*
FW not initialized	On	On (Both)
FW initialized	Flashing	Flashing (Both)

*Note: LED flashing occurs during I/O activity.

32Gbps and 16Gbps FC transceiver accessories

You can buy additional FC transceivers if the included ones are broken or missing.

32Gb fibre channel SFP+ transceiver

Part number:

TRX-32GFC SFP-SR

- Tri-speed: 28.05Gbps/14.025Gpbs/8.5Gbps
- Support multimode LC FC cables with 32Gbps up to 100 meters (328.08 ft.)

16Gb fibre channel SFP+ transceiver

Part number

TRX-16GFC SFP-SR

- Tri-speed: 14.025Gbps/8.5Gpbs/4.25Gbps
- Support multimode LC FC cables with 16Gbps up to 125 meters (410.10 ft.)

How to choose the right FC cable

Speed	Multimode optic cable and distance (m)			
	OM1	OM2	OM3	OM4
4GFC	70	150	380	400
8GFC	21	50	150	190
16GFC	---	35	100	125
32GFC	---	20	70	100

LC (Little Connector)

QuTS hero for the optimal FC SAN performance

- QuTS hero NAS are optimized for FC operation with advanced features that ensure the best performance with exceptional user experience for enterprise requirements.

iSCSI and Fibre Channel Manager in QuTS hero

You can easily add your NAS to a SAN environment. Once a Marvell®, ATTO® or QNAP Fibre Channel card has been installed in the QNAP NAS, you can set a Fibre Channel Target using the iSCSI & Fibre Channel app. In addition, the LUN Masking and Port Binding features provide an additional layer of security for your data.

The screenshot displays the 'iSCSI & Fibre Channel' management interface. The left sidebar contains navigation options: iSCSI (with sub-items iSCSI Storage and Remote Disk), Fibre Channel (with sub-items FC Ports, FC Storage, and FC WWPN Aliases), and LUN Import/Export. The main content area is divided into two sections: 'FC Port Groups' and 'FC Ports'.

FC Port Groups

FC Port Groups	WWPN	Port	Action
Default	All FC ports		

FC Ports

Adapter	Manufact...	Status	Speed	WWPN	Alias	Initiators
FC Adapter 1 Port 1	QNAP	Connected	16 Gbps	21:00:00:24:5e:be:00:06	QXP-16G2FC-P1	1
FC Adapter 1 Port 2	QNAP	Disconnected	0 Gbps	21:00:00:24:5e:be:00:07	QXP-16G2FC-P2	0

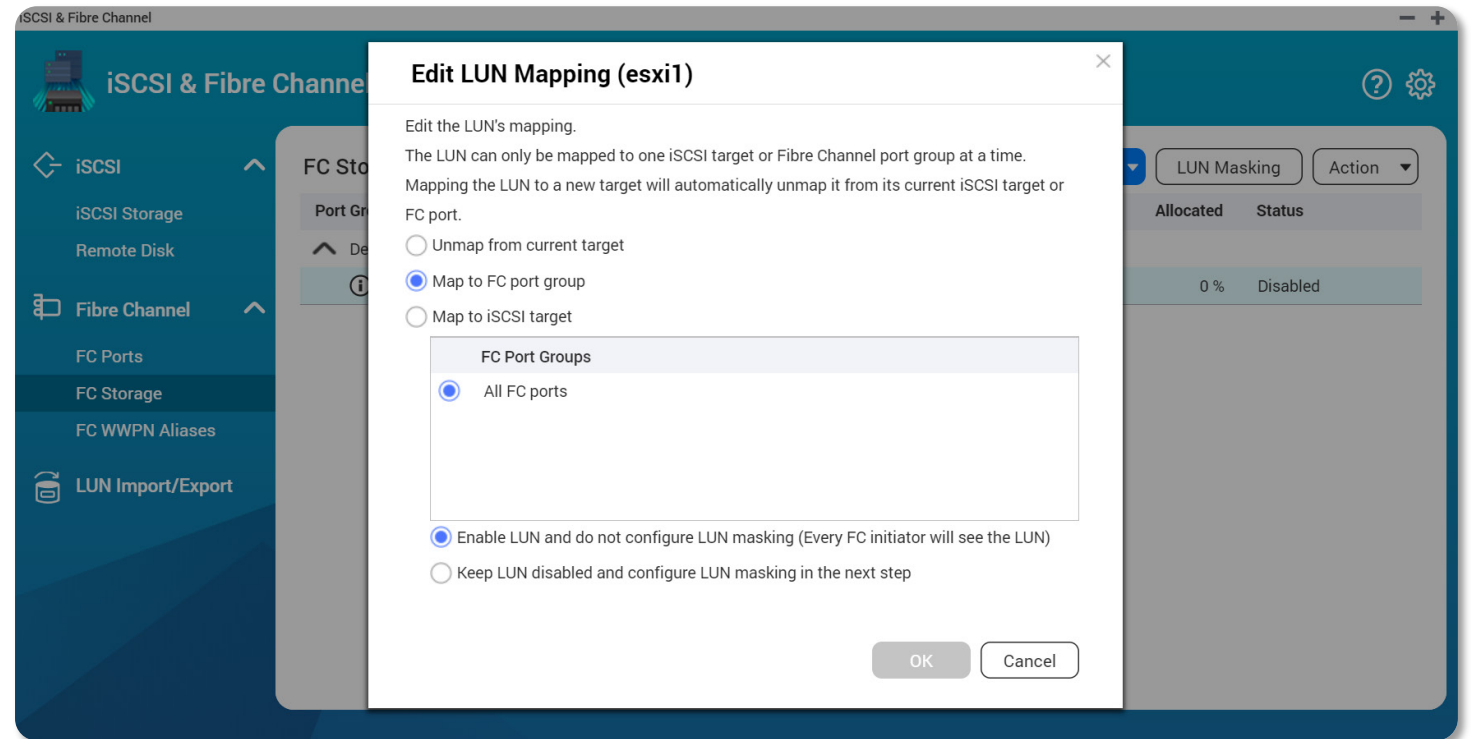

Set up the FC Connection on NAS QTS

- **Flexible settings**

1. LUN Mapping : LUN can be mapped to iSCSI or FC.
2. LUN Masking: Set which server access LUN.
3. FC Port Binding: which server can access which ports.

- **Easy to identify**

You can edit Fibre Channel's WWPN aliases.

Set LUN Masking

- **LUN masking:**
Specify which server can access which LUN.

LUN Masking

Select one or more initiators to add to the list of authorized initiators.

Search:

<input type="checkbox"/>	Alias ^	WWPN
<input type="checkbox"/>	qnap16p1	21:00:00:24:5e:be:00:0a
<input type="checkbox"/>	qnap16p2	21:00:00:24:5e:be:00:0b
<input type="checkbox"/>	server1p1	21:00:f4:e9:d4:58:32:46
<input type="checkbox"/>	server1p2	21:00:f4:e9:d4:58:32:47

Add multiple WWPNs (1 per line)
Format: XXXXXXXXXXXXXXXX or XX:XX:XX:XX:XX:XX:XX

WWPN

Authorized Initiators List.
Only the FC initiators in the list can access the LUN. If the list is empty, all initiators are allowed to access the LUN.

<input type="checkbox"/>	Alias ^	WWPN
<input checked="" type="checkbox"/>	server2fc16p1	10:00:00:10:9b:1b:cc:98
<input checked="" type="checkbox"/>	server2fc16p2	10:00:00:10:9b:1b:cc:99

Add unknown WWPNs to the FC WWPN Aliases List
 Enable LUN

Set up FC port binding for better security

- **FC port binding:**
Set which server can bind which ports.

Fibre Channel Port Binding

Select one or more initiators to add to the list of authorized initiators.

Search:

<input type="checkbox"/>	Alias ^	WWPN
<input type="checkbox"/>	qnap16p1	21:00:00:24:5e:be:00:0a
<input type="checkbox"/>	qnap16p2	21:00:00:24:5e:be:00:0b
<input type="checkbox"/>	server1p2	21:00:f4:e9:d4:58:32:47
<input type="checkbox"/>	server2fc16p1	10:00:00:10:9b:1b:cc:98

Add multiple WWPNs (1 per line)
Format: XXXXXXXXXXXXXXXX or XX:XX:XX:XX:XX:XX:XX

WWPN

Authorized Initiators List.
Only the FC initiators in the list can connect to the FC port. If the list is empty, all initiators are allowed to connect.

<input type="checkbox"/>	Alias ^	WWPN
<input type="checkbox"/>	server1p1	21:00:f4:e9:d4:58:32:46

Add unknown WWPNs to the FC WWPN Aliases List

Identify the server and fibre channel connections through the alias list

- **Edit alias:**

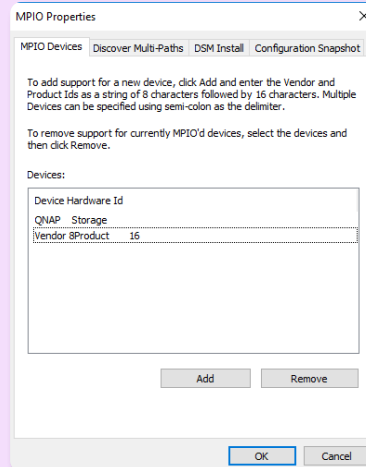

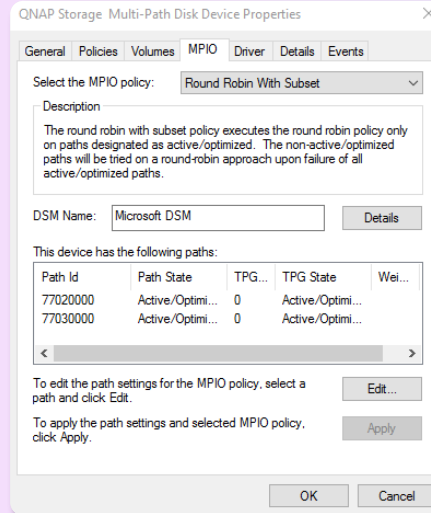

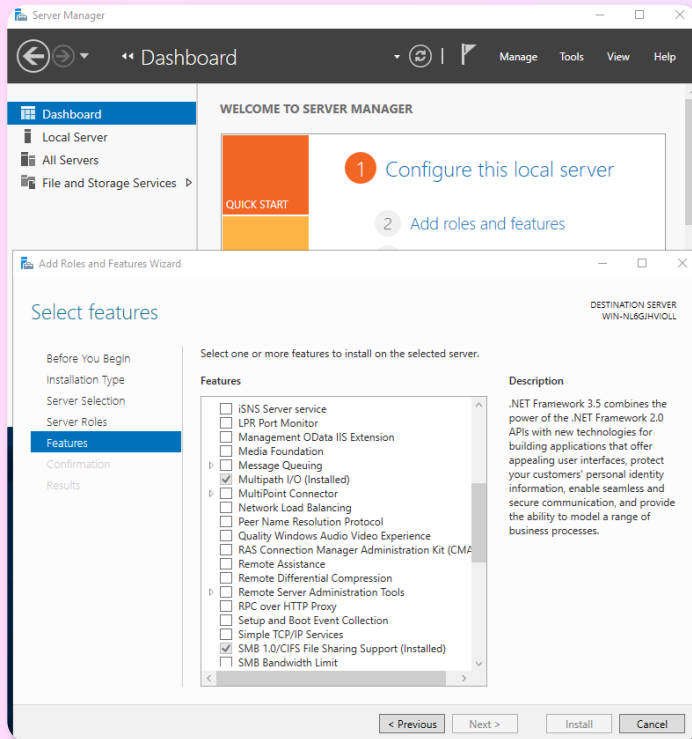

Specifies a list of WWPN aliases for Fibre Channel. The user can easily identify the server and Fibre Channel ports in the storage area network.

The screenshot displays the 'iSCSI & Fibre Channel' management interface. The left sidebar shows a navigation menu with 'FC WWPN Aliases' selected. The main panel shows the 'FC WWPN Aliases List' with a table of entries. Each entry includes a 'Type', an 'Alias' field with a delete icon, and a 'WWPN' value. Buttons for 'Add', 'Remove', 'Export', and 'Import' are visible at the top right of the table, and a 'Save' button is at the bottom.

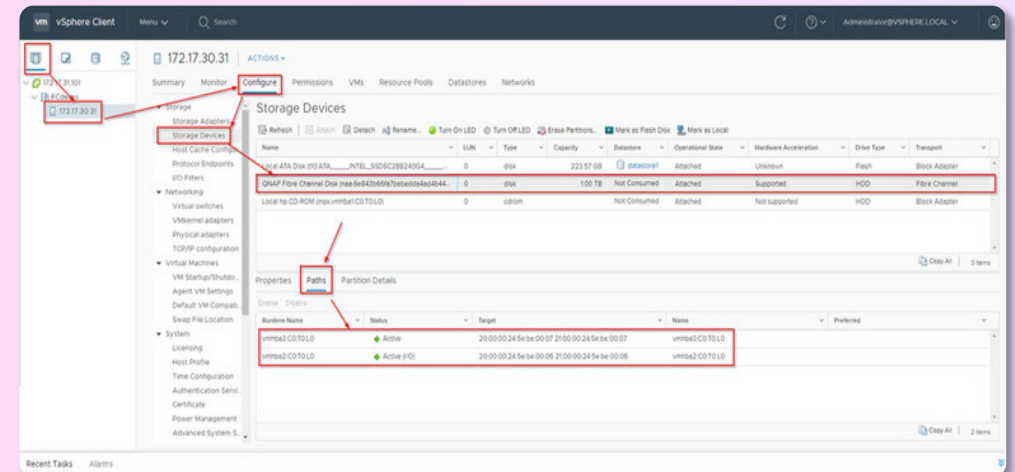

Type	Alias	WWPN
FC Adapter 1 Port 1	tv882fc32gport1	21:00:f4:e9:d4:58:31:bc
FC Adapter 1 Port 2	tv882fc32gport2	21:00:f4:e9:d4:58:31:bd
	tv882fc16gport1	21:00:24:5e:be:00:00:06
	tv882fc16gport2	21:00:24:5e:be:00:00:07
	server1p2	21:00:00:24:5e:be:00:06
	server1p1	21:00:00:24:5e:be:00:07
Connected devices	server2fc32p2	21:00:f4:e9:d4:58:32:47
Connected devices	server2fc32p1	21:00:f4:e9:d4:58:32:46
