ORDINANCE NO. 5163.

AN ORDINANCE PRESCRIBING THE MANNER OF MAKING CONNECTIONS TO PUBLIC SEWERS IN THE CITY OF SAN DIEGO, CALIFORNIA.

BE IT ORDAINED, By the Common Council of the City of San Diego, as follows:

Section 1. That hereafter it shall be unlawful for any person other than the City of San Diego, its agents and employes, to connect any pipe, drain or sewer with, or to open or penetrate any public sewer, in the City of San Diego, California, or to injure, break, remove, or open any portion of any man-hole, flush-tank, inspection pipe, or any other part of, or appurtenance to, any public sewer. But all laterals from all sewer mains shall be laid by the Sewer Department to the property line of any such person as may lawfully require a connection with any public sewer.

In addition to a permit fee of \$2.50, which the city ^{charges} ~~makes~~ for connecting with the public sewer, the owner or person making application for such connection shall pay to the City for the construction and laying of the lateral, the sum of twenty-five (25) Dollars for street lateral, and for a lateral in an alley, the sum of fifteen (15) Dollars; except for the installation of deep line sewer laterals, where, for street laterals a charge of fifty (50) Dollars will be made in addition to the permit fee, and for alley laterals, a charge of

twenty (20) Dollars, in addition to the permit fee, In case a connection is made to a sewer where it crosses private property, the plumber shall install the pipe to the main sewer, and shall uncover the main sewer so that a connection can be properly made, and the Sewer Department will make such connection. No charge, except for permit, will be made for such connection.

When it is necessary to make a run of more than forty-five (45) feet on a street lateral, or of more than fifteen (15) feet on an alley lateral, an estimate of cost for any work in excess of the above named distances will be furnished by the Sewer Department, and an amount covering such estimate must be deposited with the Clerk of the said Department when the permit is taken out.

For the installation of a six inch (6") lateral, the difference in cost of four (4) inch and six (6) inch pipe will be charged.

Section 2. That it shall be, and it is hereby declared to be, unlawful for any person to connect any pipe on private property with any pipe in the street that is connected with the public sewer of said city, or to construct any sewer in said city, without first obtaining a permit to do so from the Superintendent of the Department of Sewers of the City of San Diego, as hereinafter provided.

The application for such permit must first be filed with the said Department of Sewers, in writing, by the owner of the property to be sewered, or his agent, before opening any street or alley, giving the correct number of the lot and block, and the place where it is desired to connect with the sewer, and shall give the name of the owner of the property. The Superintendent of the Department of Sewers shall designate the location of the nearest "Y", and the connection shall be made with such sewer at the "Y" so pointed out by said Superintendent of the Department of Sewers.

Where the laterals have been installed to the curb line the plumber must bring the soil pipe to the property line at a point opposite to, or not more than five (5) feet above where such lateral is installed, and in no case must pipe be brought to the property line below where such lateral is installed.

Where the property owner excavates outside of property lines into street for basement purposes, and wishes to connect with sewer across such excavation, he shall install soil pipe to the outside line of such excavation at his own expense, the city making the installation from that point to the main in the street.

It will be necessary to take out sewer permit prior to the installation of any plumbing fixtures.

Every house and building must be separately and independently connected with the city sewer, except in cases where there may be a house in the rear of the lot. In this case it may be connected with the sewer of the house in front, provided the old sewer will satisfactorily stand the test, and the property is owned by the same parties.

Where property which faces on one street and has a sewer main, either in the street or alley, to serve such property as originally subdivided, is re-subdivided, thus facing a cross street, the sewer necessary to serve such lots as are not adjacent to the sewer already installed, may be installed on the lot line at the rear of said property, or in the street. Said sewer shall be installed by the city, and the cost of such installation shall be paid by the property owner, the city reserving the right to make extensions or connections to said sewer at any time.

Where a sewer line is installed at the cost of property owners, on or over any street, alley, or any ground dedicated to the city for street purposes, or across private property, and where said sewer is connected to any city main, or is run to any outfall or septic tank which may be on city property, or which will ever be connected with the city sewers, or may become a part of the city sewer system, the same shall be installed under city supervision, and the city shall have the right to make extensions and connections to said sewer at any and

all times. Before any lateral connection is made to any such sewer installed by property owners, a permit for such connection must be taken out and the regular permit fee paid.

Section 3. All fees and other moneys collected by the Superintendent of the Department of Sewers shall be paid by him into the Sewer and Drainage Fund of the City of San Diego.

Section 4. Every soil pipe and private drain connected with any sewer, running from the property line to the sewer, shall be at least four inches in diameter, inside measurement, and, whether of cast iron or vitrified stone, must be sound and impervious in all its parts, and jointed in the best manner. All runs of soil or vitrified sewer pipe shall be not less than one-fourth inch fall to the foot. Where the grade of the main sewer permits, all sewer pipes must be laid at a depth of not less than twenty-four inches below established grade at the property line, and thirty inches at the curb line, measured from the bottom of the ditch.

Every soil pipe and private drain, inside the property line, connected with the public sewer in said city, or connected with any pipe or private sewer that is connected with said public sewer, shall be of cast iron, and must be sound and impervious in all its parts, and jointed in the best manner. For cast iron pipe, the gaskets must be of clean, tarred oakum, twisted and rammed into place. The lead used in making the joint must be of the best quality, pure and soft, and must be caulked securely and properly into place. Before making the joint, the bell and spigot must be wiped clean and dry, and the joints must be run in at one pouring of the molten lead. The caulking must be faithfully executed, and the lead driven flush with the face of the work. All vitrified stone pipe shall be of the best quality of salt glazed, vitrified pipe, perfectly true to pattern, and sound. All joints shall be completely filled with cement mortar, wiped off on the outside to a neat bevel, after each joint of pipe has been laid and cemented; and each joint of pipe must be swabbed out with a scraper as it is laid. No fresh laid pipes or sewers shall be used, and no water shall be permitted within said pipes until the cement has had at least six hours in which to set. All cement mortar used in connecting said pipes shall be of one part Portland cement and one part sand.

Section 5. That any licensed plumber engaged in any work provided for in this ordinance shall be held responsible for any injury to any sewer or to any public street, or to any public or private property, and for all other damages. Each master plumber and his bondsmen shall be liable in damages to the city, or to any party injured, to the extent of such injury, on such bond, for any violation of any provisions of this ordinance, and such liability shall extend to any act of any agent, servant or employe of such licensed plumber while acting as such agent, servant or employe in the line of his employment.

Section 6. Any person who shall do or cause to be done, any work provided for in this ordinance, shall be liable personally, and upon his bond, if he shall have given one, for any injury to any sewer, or to any public street, or to any other public property; which damage may be recovered in a civil action, brought in the name of the City of San Diego.

Section 7. That every pipe which is not connected with the public sewer, or with any sewer connected with the public sewer, and which pipe is provided for conducting the sewerage from any building, or for conducting the discharge of a water closet, shall not be less than four inches in diameter, inside measurement, and inside the property line and to a point two feet outside the curb line, shall be of cast iron. Where the house sewer connects with the alley sewer, the cast iron pipe shall extend fully five feet outside the property line. From this point the lateral may be constructed of either cast iron or vitrified stone; and no other material than vitrified stone or cast iron pipe shall be permitted in the construction of such sewer outside the property line; nor shall any pipe be connected by any person with any pipe not constructed, or that is connected with any pipe not constructed, of the material required by the provision of this ordinance.

The words, "outside the property line" shall be construed to mean the line separating

private property from a public street, avenue, lane, alley, road or highway. No person shall connect with any public sewer or any private sewer or drain laid for surface, roof or yard drainage, nor shall exhaust from steam engine, blow-off from steam boiler, or water above 140 degrees Fahrenheit in temperatur, be discharged in any public sewer, or private sewer, or drain connected with the same, in said city.

When it is necessary for the sewer department to relieve stop-ups in laterals, and the obstruction is found to be on the property, or the obstruction, if in the street between the main and property, is due to wast~~2~~matter which should not have been placed in the sewer, the owner of said property shall pay to the Sewer Department the cost of the removal of such obstruction.

Section 8. Any person who shall willfully violate any of the provisions of this ordinance shall be deemed guilty of a misdemeanor, and upon conviction, shall be fined in any sum not exceeding two hundred dollars (\$200.00), or imprisoned in the city jail not exceeding one hundred (100) days, or he may be both fined and imprisoned; and in addition, any plumber who shall violate any of the provisions of this ordinance shall, on a hearing before the Common Council, forfeit any license that may have been granted him, and he shall not receive another license as a plumber except upon the vote of such Common Council granting the same to him.

Section 9. That all ordinances and parts of ordinances in conflict herewith are, and each of them is, hereby repealed.

Section 10. This ordinance shall take effect on the thirty-first day from and after its passage and approval.

The work herein provided for is to be done in accordance with the plans, profiles and cross-sections on file in the office of the City Engineer of the City of San Diego, and all work shall, during its progress and on its completion conform to the lines and levels which may, from time to time be given by said City Engineer.

2. WORK. The pavement is to consist of a Portland cement concrete base, a binder course, and a wearing surface, the thickness of each of which shall be as shown upon the cross-section adopted for the work.

3. SUB-GRADE. The sub-grade for that portion of the roadway which is to be paved with asphalt pavement shall be such distance below and parallel to the finished surface thereof as is shown upon said adopted cross-section.

4. GRADING. Grading shall include all filling, the removal of all earth, stone or all other material of whatever nature it may be that may be encountered in preparing the street, and shall also include all trimming and shaping required to bring the surface of the street to grade and cross-section.

When mud or other soft material is encountered, it shall be taken out and the space filled with good earth or gravel, which shall be rolled until the surface of the foundation ceases to sink under or creep in front of the roller. The contractor, however, will not be required in such cases to excavate the mud or other soft material to a greater depth than two feet below grade. All filling shall be done with good sound earth. The embankments shall be carried up of full width, in horizontal layers not to exceed one foot each in thickness, and the teams shall be made to travel as evenly as possible over the whole surface of each layer, both in coming and going. The formation of well defined ruts is specially prohibited. No material of a spongy nature shall be used for filling. The space over which fills are to be made shall first be cleared of all brush and timber and all other perishable material.

After a block or section has been graded as above specified, the surface shall be rolled with a steam roller weighing not less than 400 pounds to the inch width of tire until

the surface is unyielding. Whenever practicable, the street shall be cross rolled as well as rolled longitudinally. Depressions made by rolling shall be leveled up with good earth and again rolled. Such portions of the street as cannot be reached by the roller, and all places excavated below sub-grade and refilled, and all pipe trenches and other places that cannot be properly compacted by the roller, shall be tamped solid and in cases of wet weather or soft or muddy ground, making the use of the roller unsafe or impracticable, the rolling shall not be undertaken until the ground has become sufficiently dry.

5. CONCRETE BASE. Upon the sub-grade prepared as above described and thoroughly dampened, there shall be laid a Portland cement concrete base of the thickness shown on the typical cross-section, composed of the following materials and proportions, to-wit:

(1) One original commercial sack of Portland cement weighing not less than ninety-four (94) pounds.

(2) Three (3) cubic feet of sand by volume.

(3) Six (6) cubic feet of broken stone or gravel by volume.

6. CONCRETE MATERIALS. All cement used shall be Portland cement and must conform to the following requirements and be subject to the following tests which will be open to contractors. Samples for tests may be taken from every package delivered or proposed to be used upon the work, and unless they meet the requirements herein specified, such package or packages of cement will be rejected. No cement will be accepted, tested or permitted to be used unless delivered in the original, unopened packages with the manufacturer's name and the brand of cement thereon.

All samples of Portland cement required by the City Engineer or his authorized agent, shall be given him free of charge and he shall have authority at any time to take such samples as he or his agent may desire. All tests made will be made in the cement testing room provided by the City of San Diego for that purpose. A period of at least twelve (12) days shall be allowed for inspection and the necessary tests. Cement failing to meet the seven (7) day requirements may be held awaiting the twenty-eight (28) day test before rejection. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified.

SPECIFIC GRAVITY. The specific gravity of cement shall not be less than 3.10. Should the test of the cement as received fall below this requirement, a second test may be made upon a sample ignited at a low red heat. The loss in weight of the ignited cement shall not exceed four per cent.

FINENESS. The cement must be evenly ground and when tested with the following standard sieves, must pass at least the following percentages by weight.

No. 100 sieve having 100 mesh per lineal inch, 92%.

No. 200 sieve having 200 meshes per lineal inch, 75%.

TENSILE STRENGTH. Neat briquettes one inch square in section shall attain a minimum tensile strength as follows:

At 24 hours in moist air, 175 pounds.

At 7 days (1 day in moist air, 6 days in water) 500 pounds.

At 28 days (1 day in moist air, 27 days in water) 600 pounds.

Briquettes one inch square in section, made of one part of Portland cement to three parts of standard testing sand, shall attain a minimum tensile strength as follows:

At 7 days (1 day in moist air and 6 days in water) 175 pounds.

At 28 days (1 day in moist air and 27 days in water) 250 pounds. Cement testing neat below 700 pounds at 28 days and showing a retrogression below the seven day tests, will be rejected.

The sand test must in all cases show an increase in strength at twenty-eight days over the seven-day tests.

SOUNDNESS. Pats of neat cement about three (3) inches in diameter, one-half ($\frac{1}{2}$) inch in thickness at the center and tapering to a thin edge, shall be kept in moist air for a period of twenty-four (24) hours. A pat will then be kept in air of normal temperature and opened at intervals for at least twenty-eight (28) days.

Another pat will be exposed in an atmosphere of steam above boiling water, in a loosely closed vessel for five (5) hours. These pats to satisfactorily pass the requirements must remain firm and hard and show no signs of distortion, checking, cracking, blotching or disintegration.

Neat briquettes shall develop initial set in not less than thirty (30) minutes, but must not develop hard set in less than one (1) hour nor more than ten (10) hours.

No cement will be permitted to be used in the work until after the seventh day test as above prescribed.

SAND. All sand must be fresh water sand, clean and sharp, and contain not more than two (2) per cent of foreign matter of any kind. Not less than ninety (90) per cent by volume of the sand shall pass a screen having four (4) meshes to the lineal inch; at least fifty (50) per cent but not more than eighty-five per cent by volume shall be retained on a screen having thirty (30) meshes to the lineal inch.

BROKEN STONE. Broken stone shall be the run of the crusher, except, however, that not more than five (5) per cent of its volume shall be material which will pass a $\frac{1}{4}$ -inch mesh screen and not less than thirty (30) per cent of its volume shall be material which will pass a $\frac{3}{4}$ -inch mesh screen, and shall range in size from the minimum noted above to two (2) inches in greatest dimension maximum. All stone shall be clean, hard and durable in quality. No soft or weathered stone shall be used.

GRAVEL. Gravel shall be clean, hard, free from more than five (5) per cent by weight, of sand, and shall have sizes ranging from a quarter ($\frac{1}{4}$) inch minimum up to such size as will pass a 2-inch ring. Not less than thirty (30) per cent of its volume shall be material which will pass a three-quarter ($\frac{3}{4}$) inch screen.

All gravel shall be screened free of sand before being brought upon the work.

7. **MIXING AND PLACING CONCRETE.** All proportions shall be obtained by actual measurement in boxes, and no material shall be used that has not been thus measured. All mixing shall be done in suitable boxes or upon tight platforms or in batch-mixers of an approved type.

In the process of mixing the concrete, unless a mixer be used, the broken stone or gravel shall be spread in a regular layer not over ten (10) inches in depth on the platform; upon this stone shall be uniformly spread the proper amount of sand or stone screenings, and upon the sand or stone screenings shall be evenly spread the required amount of cement. The whole mass shall then be thoroughly mixed by turning at least three (3) times dry. Water shall then be added in a fine spray and the mass turned twice wet, after which it shall be immediately placed in position on the roadbed and tamped and rammed until it is thoroughly compacted and until free mortar appears on the surface. The sub-grade or foundation shall be well sprinkled just before the depositing of the concrete. No concrete shall be used that shows evidence of having set or that has become unfit for good work from standing too long, or from any other cause, and no retempering of concrete will be allowed.

The surface of the concrete shall be thoroughly watered for at least five (5) days, after which sufficient time shall be allowed for the surface to become thoroughly dry before receiving the asphaltic layer.

Under no circumstances shall any concrete be put upon the work after the initial set has taken place. At no time shall any asphalt be laid where the surface upon which it is proposed to deposit it is wet or damp.

8. **BINDER COURSE.** Upon the concrete foundation previously prepared and thoroughly

swept free from all rubbish shall be laid a binder course composed of a mixture of broken stone and asphaltic cement. The stone shall be clean, hard and of durable quality. No soft weathered stone shall be used. It shall be broken to such a size that not less than five (5) per cent or more than ten (10) per cent shall be material which will pass a $\frac{1}{4}$ -inch screen. At least thirty (30) per cent and not more than forty (40) per cent shall be material which will be retained on a $\frac{1}{4}$ -inch screen and rejected by a $\frac{1}{2}$ -inch screen. The remainder shall be retained on a $\frac{1}{2}$ -inch screen, and shall range in size up to 1 $\frac{1}{4}$ -inches in its greatest dimension. The broken stone shall be heated in a suitable heater to a temperature of between 250 and 300 degrees Fahrenheit.

Asphaltic cement shall be of the quality and consistency specified hereinafter. It shall be heated to a temperature of between 250 and 325 degrees Fahrenheit, and shall then be thoroughly incorporated with the heated stone in a suitable mixer in such proportions that each particle of stone shall be thoroughly coated with a sufficient quantity of asphaltic cement to bind the particles of stone firmly together when the mass is laid upon the street and firmly compressed.

Binder which appears dull from the lack of cement or over-heating or which contains an excess amount of cement, will be rejected.

The binder mixture prepared as above, shall be hauled to the street in covered wagons while still hot, and carefully and uniformly spread upon the foundation with hot iron rakes and shovels, to such depth, that after receiving its final compression, it shall be of the thickness shown upon the cross-section. It shall then be immediately rolled with a steam roller having an effective compressive weight of not less than 240 pounds to the lineal inch width of tire. The rolling shall be continued while the binder is in a hot, plastic condition. All places that are inaccessible to the roller must be thoroughly tamped with hot iron tampers to an even and true surface. The upper surface of the binder course shall be made exactly parallel with the required surface of the finished pavement, and the whole course when finished must be thoroughly compacted and the particles bound firmly together. No more of the binder shall be laid than can be covered with the surface mixture within ten (10) hours after being spread.

9. ASPHALT WEARING SURFACE. Upon the binder course, prepared and laid as above described and thoroughly swept free from all rubbish, shall be laid an asphalt wearing surface composed of asphaltic cement, fresh water sand, limestone dust or Portland cement, the different ingredients being mixed in such proportions that the percentage composition by weight of the wearing surface shall be within the following limits:

(1) Bitumen, soluble in carbon bisulphide, between 10 per cent and 13 per cent.

(2) Sand, stone dust and other inorganic ingredients, as follows: Passing screen of 200 mesh to the inch, between 10 per cent and 14 per cent. Passing screen of 80 mesh to the inch and rejected by screen of 200 mesh to the inch, between 20 per cent and 28 per cent. Passing screen of 50 mesh to the inch and rejected by screen of 80 mesh to the inch, between 20 per cent and 26 per cent. Passing screen of 30 mesh to the inch and rejected by screen of 50 mesh to the inch, between 18 per cent and 24 per cent. Passing screen of 20 mesh to the inch and rejected by screen of 30 mesh to the inch, between 4 per cent and 8 per cent. Passing screen of 10 mesh to the inch and rejected by screen of 20 mesh to the inch, between 2 per cent and 5 per cent. At least 10 per cent and not more than 18 per cent of the wearing surface mixture shall be limestone dust or Portland cement.

If the composition contains the ingredients aforesaid, and within the percentages above fixed, it will be accepted as in compliance with this paragraph.

10. PAVEMENT MATERIALS. The asphaltic cement must be a mixture of refined liquid asphalt with a refined solid asphalt, or be an oil asphalt and must be free from admixture with the residues obtained by the artificial distillation of coal, coal tar or paraffine oil.

The asphaltic cement must be homogeneous and the consistency at the time of its use must fall within the limits of sixty (60) degrees and seventy-five (75) degrees penetration by the District of Columbia Standard. It must be adhesive and ductile, and also slightly elastic at a temperature of thirty-two (32) degrees Fahrenheit. When twenty (20) grammes are heated in an oven to a temperature of three hundred ^{twenty-five} (325) degrees Fahrenheit for five (5) consecutive hours in an uncovered cylindrical glass dish three and one-half ($3\frac{1}{2}$) centimeters high by five and one-half ($5\frac{1}{2}$) centimeters in diameter, it must not lose more than one (1) per cent in weight and its penetration must not be reduced as a result of such heating more than fifty (50) per cent.

It must, when ready for use, contain at least ninety-nine and five tenths (99.5) percent of bitumen, soluble in carbon bisulphide. It must be soluble in carbon tetrachloride to the extent of at least ninety-seven and one-half ($97\frac{1}{2}$) per cent when two hundred (200) cubic centimeters of the solvent are poured on one gramme of the asphaltic cement and the mixture is allowed to stand for eighteen (18) hours at a temperature of twenty-five (25) degrees Centigrade, and filtered at twenty-five (25) degrees Centigrade. Not less than seventy (70) per cent shall be soluble in eighty-six (86) degrees naphtha when one hundred and fifty (150) cubic centimeters of the solvent are poured on one-half ($\frac{1}{2}$) gramme of the finely divided asphaltic cement and the mixture is allowed to stand for eighteen (18) hours at a temperature of twenty-five (25) degrees Centigrade and filtered at twenty-five (25) degrees Centigrade. It shall not contain more than fifteen (15) per cent of fixed carbon on ignition.

When the asphaltic cement is prepared by mixing a solid oil asphalt with a liquid asphalt, the solid oil asphalt shall be prepared by distilling the crude oil until the asphaltic residuum has a penetration of not less than fifty (50) degrees by the District of Columbia Standard, and shall not be prepared by mixing or fluxing a more solid asphalt with a liquid or softer asphalt.

The refined liquid asphalt used in the softening of a solid asphalt must be a stiff residuum of petroleum oil with an asphalt base. It must be free from water and light oils volatile at less than two hundred and fifty (250) degrees Fahrenheit. When twenty (20) grammes are heated in an oven to a temperature of three hundred and twenty-five (325) degrees Fahrenheit for five (5) consecutive hours in an uncovered cylindrical glass dish three and one-half ($3\frac{1}{2}$) centimeters high by five and one-half ($5\frac{1}{2}$) centimeters in diameter, it must not lose more than three (3) per cent in weight. It must contain not less than ninety-nine and five tenths (99.5) per cent of bitumen soluble in carbon bisulphide.

SAND. The sand for the wearing surface shall be clean, fresh water sand, hard grained and sharp, and shall contain not more than one (1) per cent of loam, clay or other earthy impurities; it must all pass a ten (10) mesh to the inch screen, and not less than (75) seventy-five per cent of its volume shall pass a forty (40) mesh to the inch screen.

STONE DUST. The stone dust may be a finely powdered limestone or Portland cement, as the contractor elects, and shall be of such fineness that all of it will pass a fifty (50) mesh to the inch screen and at least seventy (70) per cent will pass a two hundred (200) mesh to the inch screen.

SAMPLES. The contractor shall furnish to the City Engineer for tests, whenever called for and free of charge, samples of all of the materials entering into the composition of the pavement, the asphalt and asphaltic cement to be furnished in boxes, and the City Engineer shall have access at all times to all branches of the work. All tests shall be open to the contractor.

11. **PREPARING THE WEARING SURFACE.** The sand shall be heated in suitable dryers to a temperature between three hundred (300) and three hundred and seventy-five (375) degrees

Fahrenheit. The hot sand and cold stone dust shall then be thoroughly mixed together in a suitable mixer. The necessary quantity of asphaltic cement (previously heated to between two hundred and fifty (250) and three hundred (300) degrees Fahrenheit, shall then be added, and the whole mass shall then be mixed until every particle of the sand and stone dust is thoroughly coated with a thin layer of asphaltic cement. In no case, after refining, shall the asphaltic cement be heated above three hundred and twenty-five (325) degrees Fahrenheit.

The material so produced must leave the mixer at a temperature of between two hundred and sixty (260) and three hundred and twenty-five (325) degrees Fahrenheit, and must be fine grained and capable of producing a compact pavement. Proper sand and sufficient asphaltic cement and dust must be used in order to secure this result.

12. LAYING THE WEARING SURFACE. To prevent radiation, heavy duck tarpaulin shall cover the asphaltic material from the time it leaves the ovens until it is deposited upon the work.

The surface mixture, prepared as above, shall be brought to the work in suitable carts or dump wagons and shall not be colder than two hundred and fifty (250) degrees Fahrenheit nor hotter than three hundred and twenty-five (325) degrees Fahrenheit when it reaches the street.

It shall at once be uniformly spread over the binder course with hot shovels and hot rakes to such a depth that, after receiving its ultimate compression, the finished asphalt wearing surface will be of a thickness not less than that shown upon the cross-section adopted for the work and uniform in density throughout its entire thickness. Rakes used for this purpose shall have strong teeth of a length sufficient to penetrate through the entire thickness of the wearing surface. It shall be immediately compressed by a hand roller weighing not less than twenty (20) pounds to the lineal inch width of tire, and it will then immediately be thoroughly rolled by a steam roller having an effective compressive weight of not less than 240 pounds to the lineal inch width of tire. This rolling shall be continued for not less than five (5) hours for each one thousand (1000) square yards of pavement. Diagonal or cross rolling shall be done wherever possible. A small amount of hydraulic cement or infusorial earth shall then be swept on the surface of the pavement. All places that are inaccessible to the roller must be tamped with hot iron tampers. The resulting pavement must show a close grained, even and smooth surface, true to grade and cross-section and free from all hollows and inequalities. When a straight edge five (5) feet long is laid on the finished surface of the roadway and parallel with the line of the street, the surface shall in no place vary more than one-quarter ($\frac{1}{4}$) of one inch from the lower edge of the straight edge.

No traffic shall be allowed on the street until the pavement is thoroughly cooled and set. No binder or wearing surface shall be laid in rainy weather or when the foundation or binder is wet from the rain or other causes. All cold joints shall be painted with hot asphaltic cement.

Where stone, brick or cement gutters are not provided for, the street shall be paved to the curb and the surface for a distance of six (6) inches next to the curb shall be coated with hot, pure asphalt and smoothed with hot smoothing irons, in order to saturate the pavement to a certain depth with an excess of asphalt and make the gutters impervious to water.

13. CULVERTS. Culverts shall be placed wherever designated on the profiles or plans of the street on file in the office of the City Engineer. They shall be of the character and dimensions shown on the profile or plan and described in the specifications named in the ordinance or Resolution of Intention.

Cement concrete shall be of the same quality as specified above for concrete base. Steel shall be first quality and free from cracks and flaws. Workmanship shall be first class in every respect. The contractor shall notify the City Engineer when a block or section has been brought to sub-grade when the latter will check the elevations of the same and

if the work is found to be in accordance with the specifications and grades given, the contractor shall proceed as hereinbefore mentioned.

14. GENERAL REQUIREMENTS. All work shall be executed in every respect in a thorough and workmanlike manner. The contractor shall preserve all stakes set for lines, levels or measurements of the work in their proper places until authorized to remove them by the City Engineer and any expense incurred in replacing said stakes which the contractor or his subordinates may have failed to preserve, shall be borne by the contractor.

Any overseer, superintendent, laborer or other person employed on the work by the contractor, who shall perform his work in a manner contrary to these specifications, shall be discharged immediately, and such person shall not again be employed on the work. All loss or damage arising from any unforeseen obstruction, or difficulties that may be encountered in the prosecution of the work, or from any action of the elements, or from any act or omission not authorized by these specifications, ~~will be considered as accepted in consequence of the~~ on the part of the contractor or any agent or person employed by him, shall be sustained by the contractor.

No work which may be defective in its construction, or deficient in any of the requirements of these specifications, will be considered as accepted in consequence of the failure of any officer of the city or any inspector connected with the work to point out said defects or deficiencies during construction, and the contractor shall correct any imperfect work whenever discovered before the final acceptance of the work. The contractor assumes all risk of variance in any computation or statement of amounts or quantities necessary to complete the work required by this contract, and agrees to furnish all necessary labor and materials and to fully complete said work in accordance with the plans and specifications, and to the satisfaction of the Superintendent of Streets.

Bidders must examine and judge for themselves as to the location of the proposed work, the nature of the excavations to be made and the work to be done.

The contractor shall give twenty-four (24) hours notice in writing when he will require the services of the City Engineer for laying out any portion of the work. He shall dig all stake holes necessary to give lines and levels. The contractors shall not disturb any monuments or stakes found on the line of the improvements until ordered by the City Engineer, and he shall bear the expense of resetting any monuments or stakes which may be disturbed without orders.

The contractor shall remove at his own expense all obstructions such as trees, stones, debris, etc., that may be in the way of making the proposed improvements.

No more than one cross-street shall be closed at any one time.

The contractor shall be required to observe all the ordinances of the City of San Diego, in relation to the obstruction of streets, keeping open passage ways, and protecting the same where they are exposed and would be dangerous to public travel.

He shall also erect and keep erected by day and by night, a fence or proper barrier along the line of the work and across the ends of the same in order to guard the public effectively from danger of falling into trenches, or from upsetting their vehicles against the earth thrown up during the progress of the work, and he shall post all proper notices and signals to the public of the state of the street while the work is in progress.

A red light must be maintained at night at each end of the barriers from sunset until sunrise.

In case it should be necessary to move the property of any owner of a public utility or franchise, such owner will, upon application by the contractor, be notified by the Superintendent of Streets to move such property within a specified reasonable time, and the contractor shall not interfere with said property until after the expiration of the time specified.

The right is reserved to the owners of public utilities and franchises to enter upon the street for the purpose of making repairs or changes of their property that may become necessary by the work. The city shall also have the privilege of entering upon the street for the purpose of repairing sewers or making house drain connections therewith, or repairing culverts or storm drains.

The contractor shall remove all surplus material and rubbish from the work after its completion, and before he makes application for the acceptance of the work. The contractor shall notify the Superintendent of Streets when he desires a final inspection of the work, when the latter will, as soon as possible, make the necessary examination, and if the work is found in compliance with the above specifications, the Superintendent of Streets will furnish the contractor with a certificate to that effect.

When in the specifications, a maximum and minimum, either in size, percentage or thickness, or relating to quality or character, or other matter, is allowed or prescribed, the work shall be accepted as in compliance therewith, if within such maximum or minimum so allowed hereby.

Whenever the word "contractor" is used in these specifications it refers to the party or parties of the second part in the agreement for the construction of the work herein specified.

Whenever the words "Superintendent of Streets", "City Engineer" are used in these specifications they refer, respectively to the Superintendent of Streets and the City Engineer of the City of San Diego, California.

Section 1. That all sidewalking and curbing in the City of San Diego, California, shall be hereafter done in accordance with the following specifications, viz:

The sidewalks and curbs provided for herein are to be constructed according to plans, drawings and cross-sections approved by the Common Council of said city on file in the office of the City Engineer of said city, and to conform to the lines, levels and official grade of the street upon which said work is to be constructed; said lines and levels shall be shown on the ground by stakes to be set by the City Engineer of said city.

WORK: The work to be done shall be as follows: (a) preparing the foundation for the sidewalk and digging the trench for the curb; (b) constructing and laying the curb prescribed in the Resolution of Intention; (c) constructing and laying a Portland cement concrete pavement; (d) furnishing all material and labor necessary to perform said work and to complete the same; (e) Removing from the street and sidewalk adjacent to the work, all surplus material and debris.

GRADING: The foundation upon which the sidewalk and curb is to rest shall be brought to the proper sub-grade, as indicated by stakes set by the City Engineer. All soft or spongy material shall be removed to a depth of at least six inches below said sub-grade and replaced with good material, and the whole foundation shall be tamped or rolled until it is solid.

The material to be supplied in case of a fill shall be good earth, which shall be built up in horizontal layers not to exceed one foot each in thickness, each layer to be well packed by rolling or tamping. The fill shall be flooded with water in order to thoroughly settle it, and the whole foundation shall be well wet down just before the concrete is laid thereon.

In all cases where the soil upon which the cement work is to be laid is adobe, it shall be removed to the proper depth, as specified hereinafter, below the sub-grade, and the space filled to sub-grade with the material described hereinafter, which shall be thoroughly compacted by rolling or tamping.

When sand or gravel is used for filling to sub-grade, the extra excavation shall be not less than two (2) inches. When sandy or non-swelling soils are used, the extra excavation shall be not less than four (4) inches.

DIMENSIONS: Unless otherwise shown upon the plans, concrete curb shall be eight (8) inches in thickness, sixteen (16) inches in depth, and shall be constructed with a batter of one (1) inch. The face of the curb for a depth of at least fourteen (14) inches shall be plastered with a coat of cement mortar not less than one-quarter (1/4) inch in thickness, and the top of said curb shall have a finish coat of cement mortar not less than one-half (1/2) inch in thickness. The radii of all curbs shall be ten (10) feet at street intersections and two (2) feet at alley intersections, unless otherwise shown on plans.

Sidewalks shall be constructed with a concrete base not less than three (3) inches in thickness, with a cement mortar wearing surface not less than one-half ($\frac{1}{2}$) inch in thickness.

All sidewalks within that portion of the said City of San Diego, shall extend from the curb line to the property line within the following described districts; Beginning at the intersection of the west line of Second Street with the north line of L Street; thence east along the north line of L Street to an intersection with the east line of Seventh Street; thence north along the east line of Seventh Street to an intersection with the north line of B Street; thence west along the north line of B Street to an intersection with the east line of Sixth Street; thence north along the east line of Sixth Street to an intersection with the north line of A Street; thence west along the north line of A Street to an intersection with the west line of Second Street; thence south along the west line of Second Street to the point or place of beginning.

Outside of the limits of the above described district, the cement walks shall be five feet (5 ft.) wide. In blocks where cement walks have already been constructed any new work shall be located to conform to same; and in blocks where there are no cement walks constructed, they shall be located with reference to the property line as follows: 10 foot walks, inner edge to be on property line; 12 foot walks, inner edge to be 2 feet from property line; 14 foot walks, inner edge to be 4 feet from property line; 16 foot walks, inner edge to be 5 feet from property line; and 20 foot walks, inner edge to be 7 feet from property line, provided, however, that the cement walks at street intersections shall cover all that portion of said intersection bounded by the extension of the two property lines to the curb and the inside of the curb line, unless otherwise shown on plans.

MATERIALS: (a) Cement: All cement used shall be Portland cement, and must conform to the following requirements and be subject to the following tests which will be open to the contractor. Samples for tests may be taken from every package delivered or proposed to be used upon the work, and unless they meet the requirements herein specified, such package or packages of cement will be rejected. No cement will be accepted, tested or permitted to be used unless delivered in the original unopened packages with the manufacturer's name and the brand of cement thereon. All samples of Portland cement required by the City Engineer or his authorized agent, shall be given him free of charge and he shall have authority at any time to take such samples as he or his agent may desire. All tests made will be made in the cement testing room provided by the City of San Diego for that purpose. Briquettes for testing tensile strength of cement will be made both of neat cement and of cement and sand in the proportions hereinafter specified.

The specific gravity of cement shall not be less than 3.10. Should the test of the cement as received fall below this requirement, a second test may be made upon a sample ignited at a low red heat. The loss in weight of the ignited cement shall not exceed four per cent.

Fineness: The cement must be evenly ground and when tested with the following standard sieves must pass at least the following percentages by weight.

No. 100 sieve, having 100 mesh per lineal inch, 92%.

No. 200 sieve, having 200 mesh per lineal inch, 75%.

Tensile Strength: Neat Briquettes one inch square in section shall attain a minimum tensile strength as follows:

At 24 hours in moist air, 175 pounds.

At 7 days (1 day in moist air and 6 days in water) 500 pounds.

At 28 days (1 day in moist air and 27 days in water) 600 " .

Briquettes one inch square in section made of one part of Portland Cement and three parts of standard testing sand, shall attain a minimum tensile strength as follows:

At 7 days (1 day in moist air and 6 days in water) 175 lbs.

At 28 days (1 day in moist air and 27 days in water) 250 lbs.

Cement testing neat below 700 pounds at 28 days and showing a retrogression below the seven day test, will be rejected.

The sand test must in all cases show an increase in strength at twenty-eight days over the seven day tests.

Soundness. Pats of neat cement about three inches in diameter; one-half inch in thickness at the center and tapering to a thin edge, shall be kept in moist air for a period of twenty-four hours. A pat will then be kept in air of normal temperature and opened at intervals for at least twenty-eight days. Another pat will be exposed in an atmosphere of steam, above boiling water, in a loosely closed vessel for five hours. These pats to satisfactorily pass the requirements must remain firm and hard and show no signs of distortion, checking, cracking, blotching or disintegration.

Neat cement shall develop initial set in not less than thirty minutes, but must not develop hard set in less than one hour nor more than ten hours. No cement will be permitted to be used in the work until after the seventh day test as above prescribed.

(b) Sand: All sand shall be fresh water sand, clean and sharp, with grains varying in size, but with coarse grains predominating, and shall be free from sticks, excess mica or other foreign matter.

(c) Stone Screenings; Stone screenings shall be such as are obtained in the crushing of clean, hard and durable stone, and shall be that portion which has passed through a one-quarter ($\frac{1}{4}$) inch screen.

(d) Gravel: Gravel shall be composed of clean pebbles, free from more than five (5) per cent of sand, and shall be of hard and durable stone, graduated in size from one-quarter ($\frac{1}{4}$) inch minimum to two (2) inches maximum. All gravel shall be screened to meet the above mentioned requirements before being brought upon the work.

(e) Broken Stone: Broken stone shall be clean, hard and durable, and shall be graduated in size from one-quarter ($\frac{1}{4}$) inch minimum to two (2) inches maximum.

(f) Water shall be fresh and clean.

PROPORTIONING MATERIALS:

Concrete shall be composed of one (1) part of Portland cement; three (3) parts of sand or stone screenings; and five (5) parts of screened gravel or broken stone.

Should a deficiency of mortar exist in the concrete mixture, it shall be remedied by varying the proportion of gravel or broken stone, and not by adding a greater proportion of sand.

Cement mortar finishing coat shall be composed of one (1) part of Portland cement and one and one-half ($1\frac{1}{2}$) parts of coarse, sharp, screened sand.

Lamp black shall be added to the cement mortar in the proportion of one-quarter ($\frac{1}{4}$) pound to each cubic foot of cement.

All proportions shall be obtained by actual measurements in boxes or wheel-barrows, and no material shall be used which has not been thus measured.

All mixing shall be done upon tight platforms or in mixers.

A sack of cement in the original package, weighing not less than 94 pounds shall be considered to have a volume of one cubic foot.

FORMS: Forms shall be substantial and unyielding, set true to line and grade and properly braced.

MIXING CONCRETE: Tight platforms shall be provided by the contractor of sufficient size to accommodate men and materials for the progressive and rapid mixing of at least two batches of concrete at the same time. The cement; sand, or stone screenings; gravel or broken stone; in the specified proportions, shall be spread evenly upon the platform and turned with shovels, twice dry. Water shall then be added in a fine spray and the whole mass shall be turned until every stone is coated with mortar.

A machine mixer may be used, at the option of the contractor, the necessary requirements for the machine mixer shall be that a precise and regular proportioning of the product as delivered shall be of the required consistency and be thoroughly mixed.

CONSISTENCY: The consistency of the concrete shall be what is known as a "wet mixture", sufficient water being used to make a plastic but not a fluid mass, and when tamped water will flush freely to the surface.

PLACING OF CONCRETE: All surface on or against which concrete is to be laid shall be thoroughly watered just previous to placing concrete.

Concrete, after the addition of water to the mix, shall be handled rapidly in as small masses as is practicable, from the place of mixing to the place of final deposit, and shall be deposited and manipulated in a manner that will permit the most thorough compacting and to prevent pockets. It shall be leveled off with a template and tamped to not less than one-half ($\frac{1}{2}$) inch below the finished grade.

CEMENT MORTAR: The cement, sand and lamp-black in the specified proportions shall be thoroughly mixed dry on a tight platform or in a box, with shovels or hoes, until no streaks of cement are visible. Water shall then be added to the sand and cement, mixed in accordance with the foregoing directions, in sufficient quantity to produce a mortar of the desired consistency and the whole thoroughly mixed with shovels or hoes until a homogenous mass is produced.

RETEMPERING: Retempering of concrete or mortar will not be permitted, and mortar or concrete that has begun to set before ramming is completed shall be removed from the work.

FINISHING: The surface of the finish coat shall be well floated and thoroughly trowled into the body of the concrete before the latter has set so as to form one compact mass, free from voids. The finished walk and curb shall be trowled to a true, smooth surface. The edge of the walk and curb shall be finished with an edging tool made for the purpose. The walk shall be marked off into squares of approximately twenty-four (24) inches, and top and face of the curb shall be marked into sections approximately four (4) feet in length, the grooves to be cut not less than one-quarter ($\frac{1}{4}$) inch in depth.

contraction of the concrete in setting shall be provided for by constructing walks and curbs in sections of not more than twenty (20) feet in length.

CONTRACTOR'S NAME: The concrete sidewalk and the concrete curbing shall be legibly stamped with letters not less than two (2) inches long, with the name of the contractor constructing the same, and the month and the year of such construction.

STREET NAMES: All returns of concrete sidewalk shall be plainly and legibly stamped with letters not less than three (3) inches long with the names of the streets and avenues upon which the return fronts and with arrows showing the course of the street.

All stamping herein provided for shall be done by and at the expense of the contractor and no cement sidewalk or concrete curbing will be accepted by the Superintendent of Streets unless stamped as herein provided for.

PROTECTION FROM WIND AND SUN: All concrete, after setting, shall be thoroughly watered, after which it shall be protected from wind and sun by a covering of earth not less than two (2) inches in thickness, which shall be kept thoroughly wet for a period of seven (7) days.

Section 3. The Fire Limits shall be that section of San Diego defined as the Fire Limits by other ordinance of the City of San Diego, California.

Section 4. Within the inside fire district, no dumping of material of any description will be allowed on the streets except as hereinafter provided, and one-half (1/2) of the width of the sidewalk or a width equal to six (6) feet in the clear must be kept open at all times except as hereinafter provided. Material may be dumped in the street close to the curb provided that it is not allowed to remain there longer than two (2) hours. The sidewalk may be completely blocked if work is being done on such walk, between the hours of 6:00 p m and 8:00 a m. During the time of excavating when such excavation extends underneath the sidewalk the sidewalk may be blocked for one period not to exceed five (5) consecutive days provided that a permit for blocking such walk is obtained from the Building Inspector as hereinafter provided and provided further that at the time such sidewalk is blocked there shall be no material of any description dumped in the street at any time. During all times that building operations are being carried on, or excavations made, a temporary sidewalk, at least six (6) feet wide shall be maintained in front of the premises, when it is not possible to use a permanent walk. Such temporary sidewalk shall be not more than four feet above the level of the street and must be properly protected with railings, and when building operations are being carried on in the building adjacent to such sidewalk above the level of the same, this temporary sidewalk must be protected by a suitable canopy as hereinafter provided.

Section 5. When it is necessary within the Inside Fire District to block the sidewalk during building operations in such a manner that a six (6) foot walk is not left clear, or it is necessary to use the street in connection with such work, a permit for such blocking of walk or use of street shall be obtained from the Building Inspector upon the payment of a

fee of five (5) dollars for each day or fraction thereof for each fifty (50) feet or fraction thereof of walk or street so effected, provided however, that under no condition shall a permit be issued to block such walk or street for a longer period than fifteen consecutive days and provided further that under no condition shall more than one-third of the width of a street or alley be used where there is no car track on the street or alley, or more than one-half (1/2) of the street between the curb and car track where there is a car track on the street.

Section 6. Outside of the inside fire district, but inside of the fire limits, when any excavation is completed, which occupies sidewalk area of a public street or when building operations are being carried on which tend to block the sidewalk or render passage thereon dangerous, it shall be compulsory that there be a substantial temporary walk so constructed and maintained at all times as to afford safe and free and unobstructed passage for pedestrians. This sidewalk must be maintained at a not greater elevation than four (4) feet above the street and must be not less than six (6) feet in width and be maintained between the curb line and the building line. Around any excavation which fronts directly on the street, a substantial fence or railing must be maintained on such street frontage, but no fence, signs or similar obstructions shall be placed higher than six (6) feet unless inside the center line of the sidewalk next the property line. When necessary for public safety, in the opinion of the Building Inspector, the sidewalk must be protected with a suitable canopy as hereinafter provided.

When necessary within the Fire Limits but outside of the Inside Fire district, the use of the street will be allowed under the following conditions:

A walk at least six (6) feet wide in the clear and not less than ten (10) feet of the width of any alley must be left unobstructed and clear in every way at all times, and it shall be unlawful to occupy more than one-fourth of the width of the roadway of any street in connection with any building operation. If there be a car track on any street, there must be a clear space at least four (4) feet wide left alongside of such track. A canopy must be maintained over such walk, as hereinafter provided, when building operations are being carried on above the second floor of adjacent building.

Section 7. Outside of the fire limits where the street is used in connection with the building operations an unobstructed walk must be kept clear at all times, or if it is necessary to block the sidewalk a walk at least four (4) feet wide must be kept clear around through the street next to the curb and if the street is in such condition that this walk will not remain dry and clear, it will be compulsory for the builder to erect a temporary sidewalk in such a manner as to provide a dry and safe passage at all times.

Section 8. It shall be unlawful at any time to mix mortar, plaster, concrete or any similar material upon any street, pavement or paved street inside the City limits or to dump or store such material upon such streets or pavements.

Section 9. When building operations are being carried on on a corner no building material, rubbish or other material may be dumped directly on the corner but such material must be kept back beyond the extension of the building line in each case.

Section 10. The provisions of this Ordinance shall not apply in any part of the City where the Streets are ungraded provided that in any case where material is placed on the street an open roadway at least ten feet wide must be maintained.

Section 11. When any material is stored on any street, sidewalk, alley or other public place, a red light must be maintained at each end of such pile of material during the entire night from sunset to sunrise.

Section 12. No material of any description shall be placed within twenty-five (25) feet of any fire-hydrant on any street, alley, or other public thoroughfare and when canopies, temporary sidewalks or any obstruction or material is placed on the sidewalk a clear space

Section 13. When a canopy is required over a temporary sidewalk it must be of substantial construction subject to the approval of the Building Inspector. The top must be made of material at least two (2) inches thick or two (2) thicknesses of one (1) inch material. When such canopy shall shade the sidewalk below in such a manner as to leave the walk dark at night or unilluminated by the street lights, then lights must be installed in such a manner as to illuminate all parts of the walk. The number and location of such lights shall be subject to the approval of the Building Inspector.

Section 14. It shall be unlawful to place or allow to be placed, any material taken from any excavation, or any debris or refuse taken from any building or excavation, upon any street, alley, sidewalk or other public place except that where one-half (1/2) of the width of the sidewalk has been fenced off in front of the building in process of construction, such material may be deposited on the one-half (1/2) of the sidewalk not used by the public, if such material is handled in such a manner as not to be a nuisance in the opinion of the Building Inspector.

Section 15. The Building Inspector is hereby given authority to revoke for cause any permit issued under the provisions of this ordinance.

Section 16. The Building Inspector is hereby given authority to cause the removal of any building material, debris, or material from any excavation, deposited in violation of the provisions of this Ordinance. The cost of such removal to be paid for by the owner of the property and such cost will constitute a lien against the property until paid.

Section 17. Any person, firm or corporation violating or causing to be violated any of the provisions of this ordinance shall be deemed guilty of a misdemeanor and upon conviction shall be punishable by a fine not less than twenty-five (25) dollars or more than two hundred (200) dollars or by imprisonment in the city jail not more than one-hundred (100) days or by both such fine and imprisonment. Each day in which any of the provisions of this ordinance are violated shall be deemed a separate offense.

Section 18. All ordinances and parts of ordinances in conflict herewith, are hereby repealed.

ORDINANCE NO. 5293.

An ordinance requiring dogs running at large to be muzzled.

Be it ordained by the Common Council of the City of San Diego, as follows:

Sec. 1. It shall be unlawful for any person owning, harboring, or having the charge, care, control, custody or possession of any dog to allow or permit such dog to go free or run at large in or upon any public street, alley or other public place, or in or upon any uninclosed lot or premises, unless such dog is so muzzled as to prevent the same from biting any person or animal.

Sec. 2. The work "dog" as used in this ordinance shall be deemed to mean a female as well as a male dog.

The term "uninclosed lot or premises" as used in this ordinance is hereby defined to be any lot, land or premises not enclosed in such a manner as to prevent any dog confined therein or thereupon from escaping therefrom.

Sec. 3. It shall be the duty of every pound-master and of every police officer of the City of San Diego, to take up every dog not muzzled as required by this ordinance found going free or running at large in or upon any public street, alley or other public place, or in or upon any uninclosed lot or premises within the said City. If any such dog is taken up by any person other than a pound-master, such dog shall be delivered to the Pound-Master and he shall impound in the public pound all dogs taken up pursuant to the provisions of this ordinance.

Sec. 4. Upon receipt by the Pound-Master of any such dog, if the said Pound-Master shall have reason to believe that the same is afflicted with rabies or hydrophobia, or has been bitten by any dog afflicted with or suspected of being afflicted with rabies or hydrophobia, or that has been exposed to the infection of rabies or hydrophobia, the said Pound-Master shall separately confine and keep so confined such dog, and shall immediately notify the Health Officer or his deputy thereof. The Health Officer or his deputy shall thereupon

make such examination of such dog as the said Health Officer or his deputy may deem necessary. If, upon such examination, the Health Officer or his deputy shall determine that such dog is afflicted with rabies or hydrophobia, he shall so notify the Pound-Master and the said Pound-Master shall thereupon immediately kill such dog and shall cause the remains and carcass thereof to be cremated in the City Incinerator.

It shall be the duty of the Pound-Master to keep every such dog suspected of having rabies or hydrophobia so confined for such time as the Health Officer or his deputy may direct, and such dog shall not be redeemed or released except upon an order, in writing, signed by the said Health Officer or his deputy.

Sec. 5. The Pound-Master shall keep confined at the public pound, properly provided with food and water, all dogs delivered to him pursuant to the provisions of this ordinance, and in the event that there is attached to any such dog so delivered, a license tag of the City of San Diego, for the year in which such dog shall have been so delivered, issued pursuant to the ordinances of the said city, it shall be the duty of the Pound-Master to give notice of the impounding of such dog to the owner of or the person claiming to own such dog and to whom such ^{tag} shall have been issued, as shown by the record thereof. Such notice shall be given by mailing to such person, postage prepaid, a notice in writing, stating the fact that such dog has been impounded, which notice shall be addressed to such person at the address shown by such record.

Any person owning or claiming to own any dog so impounded may redeem the same by the payment of the sum of One (\$1.00) Dollar and also Twenty-five (25¢) cents a day for keep to the Pound-Master. Such person shall also secure a proper license tag if a license tag has not been issued for such dog as provided by the ordinances of the said city.

Every dog which is not redeemed within the time specified in this ordinance for such redemption, shall be killed, unless otherwise disposed of as provided by this ordinance and the remains or carcass of such dog shall be cremated in the City Incinerator; provided, however, that after the notice required by this ordinance shall have been given, the Pound-Master may dispose of any unredeemed dog by gift or sale to any person who will pay the pound fee and procure the necessary license tag for the current year.

Nothing, however, in this ordinance contained shall be construed as permitting the redemption, sale or giving away of any dog having or suspected of having or having been infected with rabies or hydrophobia.

Sec. 6. It shall be the duty of the Pound-Master and of each of the deputy poundmasters and of every police officer and special officer of the City of San Diego to kill any dog found in or upon any public street, alley or other public place, or in or upon any lot or premises, known to have rabies or hydrophobia, or known to have been bitten by any dog having rabies or hydrophobia.

Sec. 7. It shall be unlawful for any person to interfere with, oppose or resist any poundmaster, or any police officer or any special officer of the said city or the Health Officer, his assistants, deputies or inspectors or any employe of the Health Department while engaged in the performance of the duties prescribed by the provisions of this ordinance.

Sec. 8. The Health Officer, his assistants, deputies and inspectors and the employes of the Health Department are hereby empowered to enter upon private property for the purpose of ascertaining whether any dog kept or harbored thereon is afflicted with rabies or hydrophobia.

Sec. 9. That any person, firm or corporation violating any of the provisions of this ordinance shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punishable by a fine of not more than Five Hundred (\$500.00) Dollars, or by imprisonment in the city jail for a period of not more than six months, or by both such fine and imprisonment.

Each such person, firm or corporation shall be deemed guilty of a separate offense for every day during any portion of which any violation of any provision of this ordinance is committed, continued or permitted by such person, firm or corporation, and shall be punishable therefor as provided by this ordinance.
