Industrial Switches | Product Information

IE200 Series

Industrial Ethernet Layer 2 Switches

Our ruggedized IE200 Industrial Ethernet switches provide enduring performance in harsh environments, such as those found in manufacturing, transportation and physical security. Offering high throughput, rich functionality and advanced security features, IE200 switches deliver the performance and reliability demanded by industrial deployments in the age of the Internet of Things (IoT).

Overview

0011001

The IE200 Series wirespeed Layer 2 switches are ideal for industrial Ethernet applications. With a wide operating temperature range of between -40°C and 75°C, they tolerate harsh and demanding environments, such as those found in industrial and outdoor deployment.

Device management is provided via an Industry-standard CLI, SNMP, Telnet, SSH, and the Allied Telesis Autonomous Management Framework™ (AMF). AMF is unique to Allied Telesis managed devices, offering simplified device provisioning, recovery, and firmware upgrade management.

Performance

These high-performing, costeffective switches meet the stringent requirements of today's industrial networks. The robust IE200 series provides network managers with several key features—including portbased VLANs, IEEE 802.1p, QoS, port trunking/link aggregation, port mirroring, priority queues, and IEEE 802.1x security support.

With support for up to 2K MAC addresses, the IE200 Series is the ideal option for integrating management into any network solution.

Securing the network edge

Ensuring data protection means controlling network access. Protocols such as IEEE 802.1X port-based authentication guarantee that only known users are connected to the network. Unknown users who physically connect can be segregated into a pre-determined part of the network. This offers network guests Internet access, while ensuring the integrity of private network data.

Gigabit and fast Ethernet support

The IE200 Series SFP ports support both gigabit and Fast Ethernet Small Form-Factor Pluggables (SFPs). This makes the IE200 Series ideal for environments where gigabit fiber switches will be phased in over time. This allows for connectivity to the legacy 100FX hardware until it is upgraded to gigabit Ethernet.

Support for both speeds of SFPs allows organizations to stay within budget as they migrate to faster technologies.

High network resiliency

The IE200 Series supports highly stable and reliable network switching with a recovery time of less than 50ms. You can customize the IE200 with the most appropriate mechanism and protocol to prevent network connection failure. Choices include Allied Telesis Ethernet Protection Switched Ring (EPSRing[™]), and the standard ITU-T G.8032.

Dual power inputs

The IE200 Series provides redundant power inputs for higher system reliability; the power inputs are protected against reverse polarity and over-current.

The integrated voltage regulator allows a wide input voltage range and ensures the PoE output voltage always stays at the rated value, regardless the fluctuation on input voltage.

Configurable power budget

On the IE200-6FP and IE200-6GP, you can configure both the overall power budget and the power feeding limit on a per-port basis, to establish a close relationship between the power

- Allied Telesis Autonomous Management Framework[™] (AMF) node
- Industry-leading QoS
- Active Fiber Monitoring (AFM)
- Ethernet Protection Switched Ring (EPSRing[™])
- Ethernet Ring Protection Switching (ITU-T G.8032)
- ▶ IEEE 802.3at PoE+ sourcing (30W)
- Continuous PoE
- Enhanced Thermal Shutdown
- Dual power inputs with voltage boost converter
- ▶ Alarm input/output
- ► USB port for image/configuration backup, restore, and upgrade

sourcing feature and the real capabilities of the external Power Supply Unit (PSU).*

* Power supply must be compliant with local/national safety and electrical code requirements. Select the supply with the most appropriated output power derating curve.

Allied Telesis

Key Features

Allied Telesis Autonomous Management Framework™ (AMF)

- AMF is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- AMF secure mode encrypts all AMF traffic, provides unit and user authorization, and monitors network access to greatly enhance network security.

High Availability

- ► EPSRingTM and ITU-T G.8032 enable a protected ring capable of recovery within as little as 50ms. These features are perfect for high performance and high availability.
- Spanning Tree Protocol-compatible, RSTP; MSTP; static Link Aggregation Group (LAG), and dynamic Link Aggregation Control Protocol (LACP) support.

Industry-leading Quality of Service (QoS)

Comprehensive low-latency wirespeed QoS provides flow-based traffic management with full classification, prioritization, traffic shaping and min/max bandwidth profiles. Enjoy boosted network performance and guaranteed delivery of business-critical Ethernet services and applications. Time-critical services such as voice and video take precedence over non-essential services such as file downloads, maintaining responsiveness of your applications.

Active Fiber Monitoring

Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

UniDirectional Link Detection (UDLD)

UDLD is useful for monitoring fiber-optic links between two switches tusing two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link, by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

Link Layer Discovery Protocol – Media Endpoint Discovery (LLDP – MED)

 LLDP-MED extends LLDP basic network endpoint discovery and management functions. LLDP-MED allows for media endpoint specific messages, providing detailed information on power equipments, network policy, location discovery (for Emergency Call Services) and inventory.

Voice VLAN

Voice VLAN automatically separates voice and data traffic into two different VLANs. This automatic separation places delay-sensitive traffic into a voice-dedicated VLAN, which simplifies QoS configurations.

Security (Tri-Authentication)

Authentication options on the IE200 Series also include alternatives to IEEE 802.1X port-based authentication, such as web authentication to enable guest access, and MAC authentication for endpoints that do not have an IEEE 802.1X supplicant. All three authentication methods— IEEE 802.1X, MAC-based and Web-based—can be enabled simultaneously on the same port for tri-authentication.

Access Control Lists (ACLs)

AlliedWare Plus delivers industry-standard access control functionality through ACLs. ACLs filter network traffic to control whether routed packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way.

Dynamic Host Configuration Protocol (DHCP) Snooping

DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks against this DHCP snooping database to ensure only clients with specific IP and/or MAC address can access the network. DHCP Snooping can be combined with other features, like dynamic ARP inspection, to increase security in layer 2 switched environments. It also provides a traceable history which meets the growing legal requirements placed on service providers.

PoE and PoE+

IE200 is a Power over Ethernet Power Sourcing Device (PoE PSD), which is compliant with IEEE802.3af, IEEE802.3at standards. Each port provides either 15.40W PoE with 12.95W available to the powered device (IEEE802.3af, IEEE802.3at Type 1), or 30.00W PoE+ with 25.50W available to the powered device (IEEE802.3at Type 2). Practical use is to support PTZ cameras with heater/blowers for outdoor application, enhanced infrared lighting, lighting controller and LED lighting fixtures, remote Point of Sale (POS) kiosks, network switches, and many other devices. IE200 allows the configuration of the overall power budget as well as the power feeding limit on a per-port basis. This establishes a close relationship between the power sourcing feature and the real capabilities of the external PSU.

Continuous PoE

- Enabling the unique Continuous PoE feature, the switch retains PoE sourcing during restart events, such as those due to operator command, software exception, watchdog timeout or diagnostic failures.
- The restart event is not propagated to the end devices, and camera operation is not affected.

Alarm Input/Output

Alarm Input/Output are useful for security integration solution. They respond to events instantly and automatically using a pre-defined event scheme, and send alert messages to the monitoring control center. The two-pin terminal blocks may be connected to sensors and actuator relays. Alarm Input receives signals from external devices, like motion sensors or magnets, and these will trigger subsequent actions if something changes. Alarm output controls external devices in the case of an event for example sirens, strobes, and Pan-Tilt-Zoom (PTZ) cameras.

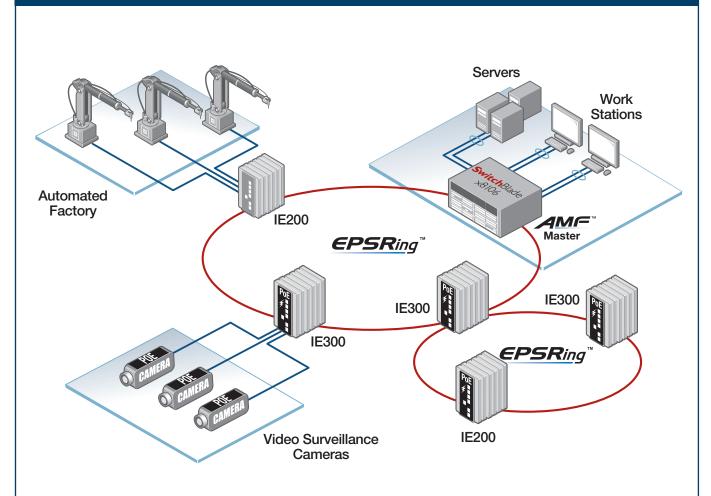

Enhanced Thermal Shutdown

- The enhanced Thermal Shutdown feature acts when the switch exceeds the safe operating temperature. It functions in a set of stages to preserve services and prevent damage.
- If the operating temperature reaches critical levels, the system cuts the PoE sourcing to non-critical interfaces first, then to critical interfaces. If the temperature continues to rise, all services are disabled and the system enters standby mode. The system restores operation when the temperature returns to an acceptable level.

Premium Software License

 Included in the IE200 Series is a comprehensive layer 2 feature set, which includes IPv6 management features. This feature set can be upgraded very easily by using premium software licenses.

Key Solutions

EPSRing[™] ITU-T G.8032 provide high speed resilient ring connectivity; this diagram shows the IE Series in a double ring network topology.

The IE Series operates at a large -40°C to +75°C temperature range and allows deployment in outdoor and harsh industrial environments.

PoE models feed 30 Watts per port and support remotely controlled Pan, Tilt and Zoom (PTZ) video cameras.

The PoE models of IE200 feed 30 Watts per port and support remotely-controlled PTZ cameras.

Management can be automated with the Allied Telesis Autonomous Management Framework[™] (AMF).

Reliability

- ▶ Modular AlliedWare[™] operating system
- Redundant power input
- Full environmental monitoring of temperature and internal voltages. SNMP traps alert network managers in case of any failure
- ► Enhanced thermal shutdown

Flexibility and Compatibility

▶ Gigabit SFP ports supports any combination of Allied Telesis 10Mbps, 100Mbps and 1Gbps SFP modules, as listed in this document under Ordering Information

Diagnostic Tools

- Active Fiber Monitoring detects tampering on optical links
- Automatic link flap detection and port shutdown
- Built-In Self Test (BIST)
- Cable fault locator (TDR)
- ► Connectivity Fault Management (CFM)
- ► Continuity Check Protocol (CCP) for use with G.8032 ERPS

- Event logging via Syslog over IPv4
- Find-me device locator
- Optical Digital Diagnostic Monitoring (DDM)
- ▶ Ping polling and TraceRoute for IPv4 and IPv6
- UniDirectional Link Detection (UDLD)

IPv4 Features

DHCP client

IPv6 Features

- DHCPv6 client
- IPv6 hardware ACLs
- Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6

Management

- Front panel 3 LED provides at-a-glance PSU status and fault information
- ▶ Allied Telesis Autonomous Management Framework (AMF) node
- Console management port on the front panel for ease of access
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- Industry-standard CLI with context-sensitive help ►
- Powerful CLI scripting engine ►
- Built-in text editor ►
- Event-based triggers allow user-defined scripts to be executed upon selected system events
- SNMPv1/v2c/v3 support
- Comprehensive SNMP MIB support for standards • based device management
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices
- Recessed Reset button

Quality of Service

- ▶ 4 priority queues with a hierarchy of high priority queues for real-time traffic, and mixed scheduling, for each switch port
- ▶ Limit bandwidth per port or per traffic class down to 64kbps
- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- Policy-based storm protection
- Extensive remarking capabilities

- Taildrop for queue congestion control
- Strict priority, weighted round robin or mixed scheduling
- IP precedence and DiffServ marking based on layer 2, 3 and 4 headers

Resiliency Features

- ► Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ► Ethernet Protection Switched Rings (EPSRingTM) with SuperLoop Protection (SLP)
- Ethernet Ring Protection Switching (ITU-T G.8032)
- ► Loop protection: loop detection
- Link Aggregation Control Protocol (LACP)
- Multiple Spanning Tree Protocol (MSTP)
- PVST+ compatibility mode
- Rapid Spanning Tree Protocol (RSTP)
- ▶ Spanning Tree Protocol (STP) with root guard

Multicasting

- ► Internet Group Membership Protocol (IGMPv1/v2/v3)
- IGMP snooping with fast leave and no timeout feature
- IGMP static groups
- Multicast Listener Discovery (MLDv1/v2)

Security Features

- Access Control Lists (ACLs) based on layer 3 and 4 headers
- ▶ Configurable ACLs for management traffic
- Authentication, Authorization and Accounting (AAA)
- Bootloader can be password protected for device security
- BPDU protection
- DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- Dynamic VLAN assignment
- Network Access and Control (NAC) features manage • endpoint security
- Secure Copy (SCP)
- Strong password security and encryption
- TACACS+authentication and accounting
- Tri-authentication: MAC-based, web-based and IEEE 802.1X
- Auth-fail and guest VLANs

MLD snooping

* The Max Power consumption at full PoE load includes PD's consumption and margin. The cooling requirements of the switch are smaller than the power draw, because most of the load is dissipated at the PoE powered device (PD) and along the cabling.

Use these wattage and BTU ratings for facility capacity planning.

The DIN rail and wall mount kits are included.

AT-IE200-6FP-80 4x 10/100T, 2x 100/1000X SFP, Industrial Ethernet, Layer 2 Switch, PoE+ Support

AT-IE200-6FT-80 4x 10/100T, 2x 100/1000X SFP, Industrial Ethernet, Layer 2 Switch

AT-IE200-6GP-80 4x 10/100/1000T, 2x 100/1000X SFP, Industrial Ethernet, Layer 2 Switch, PoE+ Support

AT-IE200-6GT-80 4x 10/100/1000T, 2x 100/1000X SFP, Industrial Ethernet, Layer 2 Switch

Supported SFP Modules

Refer to the installation guide for the recommended Max. Operating Temperature according to the selected SFP module.

1000Mbps SFP Modules

AT-SPBD10-13 10 km, 1G BiDi SFP, LC, SMF (1310Tx/1490Rx)

AT-SPBD10-14 10 km, 1G BiDi SFP, LC, SMF (1490Tx/1310Rx)

AT-SPBD20-13/I 20 km, 1G BiDi SFP, SC, SMF, I-Temp (1310Tx/1490Rx)

AT-SPBD20-14/I 20 km, 1G BiDi SFP, SC, SMF, I-Temp (1490Tx/1310Rx)

AT-SPBD20LC/I-13 20 km, 1G BiDi SFP, LC, SMF, I-Temp (1310Tx/1490Rx) AT-SPBD20LC/I-14 20 km, 1G BiDi SFP, LC, SMF, I-Temp (1490Tx/1310Rx)

AT-SPEX 2 km, 1000EX SFP, LC, MMF, 1310 nm

AT-SPEX/E 2 km, 1000EX SFP, LC, MMF, 1310 nm, Ext. Temp

AT-SPLX10 10 km, 1000LX SFP, LC, SMF, 1310 nm

AT-SPLX10/I 10 km, 1000LX SFP, LC, SMF, 1310 nm, I-Temp

AT-SPLX10/E 10 km, 1000LX SFP, LC, SMF, 1310 nm, Ext. Temp

AT-SPLX40 40 km, 1000LX SFP, LC, SMF, 1310 nm

AT-SPLX40/E 40 km, 1000LX SFP, LC, SMF, 1310 nm, Ext. Temp

AT-SPSX 550 m, 1000SX SFP, LC, MMF, 850 nm

AT-SPSX/I 550 m, 1000SX SFP, LC, MMF, 850 nm, I-Temp

AT-SPSX/E 550 m, 1000SX SFP, LC, MMF, 850 nm, Ext. Temp

AT-SPTX¹ 100 m, 10/100/1000T SFP, RJ-45

AT-SPTX/I 100 m, 10/100/1000T SFP, RJ-45, I-Temp

AT-SPZX80 80 km, 1000ZX SFP, LC, SMF, 1550 nm

100Mbps SFP Modules

AT-SPFX/2 2 km, 100FX SFP, LC, MMF, 1310 nm

AT-SPFX/15 15 km, 100FX SFP, LC, SMF, 1310 nm

AT-SPFXBD-LC-13 15 km, 100FX BiDi SFP, LC, SMF (1310 Tx/1550 Rx)

AT-SPFXBD-LC-15 15km, 100FX BiDi SFP, LC, SMF (1550 Rx/1310 Tx)

¹ IE200 Series supports this SFP module at 1Gbps only.
