## Overview

The Cisco Fabric Extender for HP BladeSystem (Model B22HP) provides an extension of the Cisco Nexus switch fabric to the HP server edge. Logically, it behaves like a remote line card to a parent Cisco Nexus 5000/6000/7000 series switch with the Fabric Extender and the parent Nexus together forming a distributed modular system. The Cisco Fabric Extender for HP BladeSystem forwards traffic to the parent Cisco Nexus Series Switch over eight 10 Gigabit Ethernet uplinks.

Low-cost uplink connections up to 10 meters can be made with copper Twin-ax cable, and longer connections up to 100 meters can use the Fabric Extender Transceiver. Standard 10Gb optics such as SR and LR are also supported.

Downlinks to each server are auto-negotiating and work with all HP Ethernet and CNA modules allowing customers a choice of Ethernet, FCoE or iSCSI connections. Being a seamless extension of the Nexus Switch allows traffic to be switched according to policies established by the parent Nexus Series Switch with a single point of management.
