Brembo is a worldwide leader in the engineering, development and production of braking systems and components for automobiles, motorcycles and commercial vehicles in the Original Equipment, Aftermarket, Racing and High Performance market segments.

Since the 1960's, Brembo has concentrated all its effort and expertise in becoming one of the leading global suppliers of braking systems. The challenge for change has accompanied expansion, resulting in industrial and commercial operations in 15 countries and 12 plants around the world.

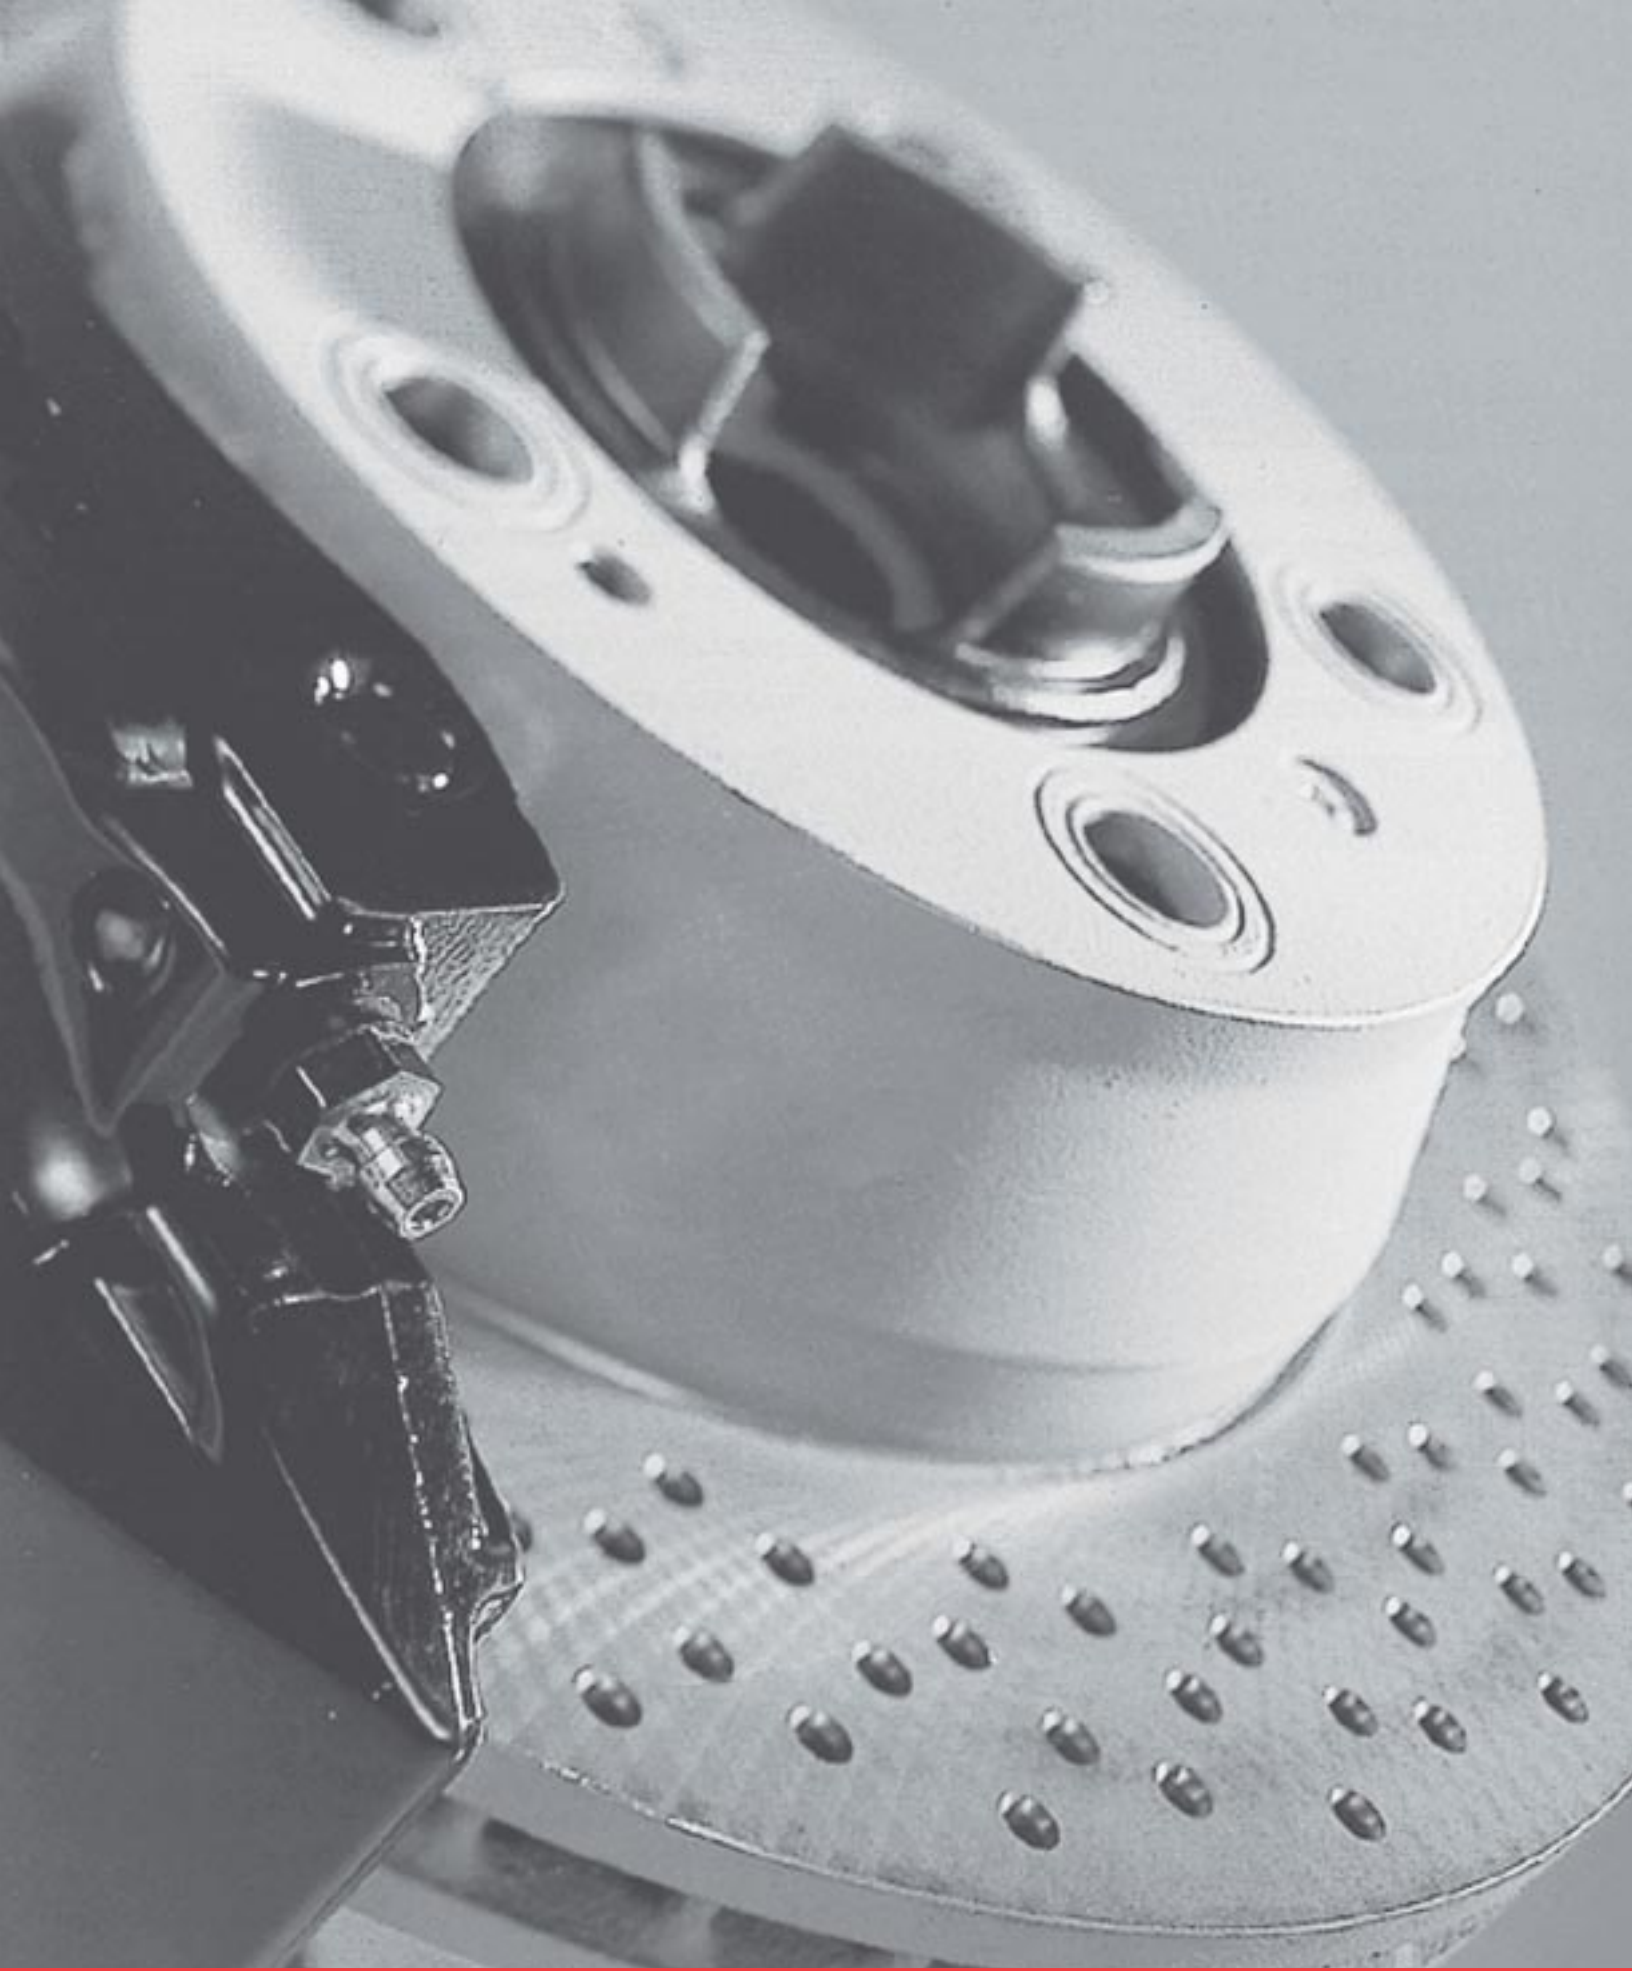

Research and development remain a focal point for our company: we have always strived for excellence in developing products on the cutting edge of technology, while constantly improving on the safety for the entire braking system. Brembo dedicates its investments to this area, staffing over 10% of engineers in research and development alone.

This dedication to quality has led Brembo to develop and produce braking systems in the original equipment market for the most prestigious automobiles and motorcycles; BMW, Ducati, Ferrari, Mercedes-Benz, Porsche.

For more than 30 years, we continue to push the envelope in the motorsports arena as well; capturing championships at all levels of racing: CART, Formula 1, NASCAR, World Championship Rally, Sportscar, AMA and Superbike.

This rich experience spanning the decades only solidifies that Brembo is synonymous with quality. Our dedication to innovation coupled with technological leadership and backed by successes in the demanding arenas of OEM and professional motorsports; all equate to Brembo premium products.

Brembo
More than brakes.

Upgrading Your Brake System

Recognizing our passion for excellence has driven Brembo engineers to develop the finest replacement brake systems available in the market today. Seeing the need for systems that either optimized the original equipment brake systems, or replaced their major components for a more significant upgrade, Brembo designed, tested and manufactured these systems to provide the highest levels of quality, style and performance available.

To upgrade the braking capabilities of your street vehicle, there is no better source than Brembo. Consider the following: when leading premium, high performance automotive manufacturers develop new vehicles, their choice for braking systems is Brembo. Now you can apply the same race-inspired braking solutions to your own vehicle—whether you drive a domestic or import vehicle, a sports car, sedan, compact, SUV or full-size truck—you can benefit from increased stopping performance as well as improved appearance, through the installation of a Brembo High Performance Brake System. No matter if your goal is to simply improve the overall performance of your vehicle's original braking system, or you're ready to step up to a complete high performance braking system package for weekend racing, Brembo has the systems best engineered to meet your needs.

section

2

The Brembo *Gran Turismo* High Performance Braking System offers significant advantages over the OE manufacturer's system - advantages far beyond what's simply known as "big brakes." As the braking system's primary function is to dissipate heat, larger, more sophisticated discs are used in order to increase the fade resistance of the system. These discs are directionally vented for enhanced cooling, as well as drilled or slotted for improved consistency, continuously cleaning and refreshing the pad surface.

In most applications, a two-piece "floating" disc assembly is used, with a cast-iron disc specially mounted to a billet aluminum hat. One of the advantages of this type of construction is reduced weight. By making the center-section of the disc out of aluminum, a great deal of weight can be saved in a key location, as it is both unsprung and rotating. The greatest advantage, however, lies in the float itself. The brake discs must cope with extreme temperature levels. In the case of a non-floating disc, thermal stresses develop which lead to warping of the disc and cupping of the braking surface. With the full floating system, the disc is free to grow relative to the bell, and can remain straight and true.

On nearly all the vehicles for which there is a *Gran Turismo* system available, the OEM caliper is of a sliding design, with the piston or pistons on only the inboard side of the disc. While this type of caliper is inexpensive to manufacture, it is generally extremely heavy, and inherently flexible, both of which are to be avoided on a performance braking system. Conversely, Brembo's calipers are fixed mount, opposed piston calipers cast from aluminum alloy. Despite being much larger and many times stiffer than the original caliper, they are also much lighter. The calipers are equipped with differential piston bores in order to eliminate pad taper. Without this feature, the leading edge of the pad will wear more quickly. This can cause problems such as cocking the pistons in their bores, which can damage or seize them.

Each *Gran Turismo* system comes with high performance brake pads, aircraft quality hardware, DOT and TÜV-approved Goodridge stainless steel braided brake lines, instruction manual and dye cut stickers for your car.

The net result is a braking system, developed specifically for each vehicle application by Brembo's immense technical resources, that insures high quality as well as high performance.

For those seeking to improve upon the OEM braking system, the Brembo *Sport* High Performance Braking System is the answer.

The Brembo *Sport* discs are premium Brembo OEM replacement units that meet or exceed all vehicle manufacturers' specifications and tolerances. They are fully compatible with stock calipers, wheels and other chassis components, easily mounting onto the vehicle. The rotors are available either drilled or slotted—a practice common on racing rotors. These slots or drillings provide a path to disperse built-up heat and gasses that result from the pads acting on the rotors, as well as help to clean and refresh the pad surface. The rotors are then plated for corrosion resistance and for a bold, aggressive appearance.

The end result is a braking system that provides excellent stopping power ranging from everyday traffic conditions to more spirited high performance driving, and fits into the budget of any enthusiast.

Sport Product Line

- 1 High Performance Friction Material:** Aggressive pads that provide the highest level of performance.
- 2 Cross-Drilled or Slotted Discs:** Clears gasses, cleans pads for better "bite".
- 3 Mounting Brackets and Assembly Hardware:** Aircraft quality included and pre-torqued specifications.
- 4 Goodridge Stainless Steel Braided Brake Line:** DOT/TÜV approved.
- 5 Multi-Use Street, Performance Driving, Track Events Derived from Race-Based Components:** Increased stopping on the street, at drivers' schools and at club events with proven on-track performance at the highest levels of racing.
- 6 "Floating" Disc Mounting System with Billet Aluminum Hat:** Reduce "Unsprung Weight" for better handling and reduces heat-related stress; increases brake performance and pedal feel.
- 7 Four or Eight Piston Cast Aluminum Calipers:** Provide maximum braking force without the flex of sliding calipers.

- 1 Fully Compatible with Stock Calipers, Wheels and Other Chassis Components:** Easily fitted onto customer's vehicle.
- 2 Cross-Drilled or Slotted Rotors:** Clears gasses, cleans pads for better "bite".
- 3 Attractive, Anti-Corrosive Finish:** For a bold, aggressive appearance.
- 4 Provides a Complimentary Appearance:** On all four corners of the vehicle and with open wheels.

- 5 TÜV/ABE Certification:** Most *Sport* disc applications are ABE approved, a TÜV certification granted by the Federal Ministry of Transportation in Germany. A stringent approval process, Brembo has obtained this certification due to the wholly-owned and operated integrated foundry and production process that is implemented worldwide.
- 6 High Carbon Compound:** High carbon cast iron metallurgy insures top performance, noise reduction and improved comfort due to higher dampening coefficients.

note legend

- * Requires minor modification to the OEM steering knuckle
- ** Requires minor modification to the OEM steering knuckle and use of custom hubs which are included in system
- *** 1995 E36 M3 models require minor modification to the lower control arm outboard of the ball joint
- **** This system consists only of two-piece disc assemblies which directly replace the OEM discs
- ***** Requires significant modification to the OEM knuckle

general info

- Systems are Front Only and feature four-piston calipers unless otherwise noted.
- Many of the *Gran Turismo* systems require modification to, or removal of the OEM dust shield or backing plate.
- All 2-piece disc systems with the exception of those using 313x28mm discs are available either drilled or slotted. The third digit in the part number denotes disc type.
1 = drilled, 2 = slotted
- Add 1, 2, or 3 to end of part number for caliper color.
1 = black, 2 = red, 3 = silver

Caliper Clearance Guide

section

00

Wheel Measurement

General Note:

Dimensions listed are of brake system, Brembo recommends a minimum of 3mm clearance between the caliper and the wheel spoke or rim.

Example:

1B1.8006A for the Chevrolet C5 Corvette

- With a straight edge measure from the middle of the wheel center bore out to 122 mm for the location of the bottom of the caliper.
- Now measure down from the straight edge to the back of the wheel spoke for the system's "A" measurement. This system needs 49 mm or more to leave sufficient caliper clearance.
- Repeat these (2) steps for the caliper clearance through to the top of the caliper.
