

CenTraVac™ Chillers CVHH & CDHH

With Next-Generation Refrigerant, R-1233zd

Simplex Chiller (Single Circuit)

900 to 2000 tons (3150 to 7000 kW) – 60 Hz
850 to 2000 tons (3000 to 7000 kW) – 50 Hz

Model CVHH

Duplex™ Chiller (Dual Circuit)

1800 to 4000 tons (6300 to 14000 kW) – 60 Hz
1500 to 4000 tons (5300 to 14000 kW) – 50 Hz

Model CDHH

With this product line expansion, we leverage not only a new refrigerant, but also the design advantages of the traditional CenTraVac chiller to deliver the efficiency and reliability that make Trane the global leader in centrifugal chillers.

CenTraVac Chiller Design Advantages

Our focus on reliability, efficiency and system versatility is enabled by our fundamental design choices.

The **direct drive** compressor delivers reliability through simplicity of design and fewer moving parts, while enabling industry-leading efficiencies and the lowest sound and vibration levels. The **semi-hermetic** motor operates in a cool and clean environment, extending the life of the chiller and eliminating the heat that would otherwise impact the mechanical room. The **multi-stage** compressor provides stable and reliable operation across a wider range of operating conditions, and the **low pressure** design enables a near-zero refrigerant leak rate.

For larger cooling capacities, the CDHH model extends the proven CenTraVac design to more than 4000 tons. Duplex CenTraVac chillers utilize a series counterflow design with two independent refrigerant circuits that leverage thermodynamic staging to deliver unmatched efficiency. The Duplex design reduces energy consumption by 13 percent compared to a single compressor unit; and – when paired in a series configuration – increases the energy savings to 19 percent.

Next-Generation Refrigerant

Trane has always taken a balanced approach to selecting refrigerants, considering factors such as safety, sustainability, efficiency, sound, reliability and overall lifecycle impact. With the selection of low pressure R-1233zd, Trane continues this commitment as the industry transitions from HCFCs and HFCs to next-generation, low-GWP refrigerants. Classified as an “A1” refrigerant per ASHRAE Standard 34, R-1233zd has a GWP of 1 and is one of the few non-flammable olefin options available today.

The CVHH and CDHH models maintain the CenTraVac chiller’s best-in-class efficiencies. Additionally, a 35 percent capacity gain with R-1233zd enables performance enhancements for our CenTraVac portfolio, delivering an expanded capacity range and an efficiency shift to better serve larger, district cooling applications, plus heat recovery capabilities up to 140°F (60°C).

Energy-Saving Options

The CenTraVac chiller offers energy-saving options like integrated full or partial heat recovery, heat pump capabilities, thermal storage down to 18°F (-7.8°C) and integrated free cooling. These options are good for the environment and can often pay for themselves through reduced water consumption, reduced heating and ancillary power consumption and lower total operating costs.

Low Voltage (<600V) Options

Unit- and remote-mounted wye delta or solid state starters, or unit-mounted Adaptive Frequency™ drives.

Medium Voltage (2.3-6.6kV or 10-13.8kV) Options

Unit- and remote-mounted across-the-line, primary reactor or auto transformer starters, or remote-mounted Adaptive Frequency drives.

Tracer AdaptiView™ Controls

Trane Adaptive Control™ strategies respond to a variety of conditions to maintain efficient chiller plant operation using patented control algorithms to maximize performance in variable primary flow systems. The open protocol design works with any building automation system without the need for gateways (BACnet®, Modbus RTU and LonTalk®).

EcoWise™

CenTraVac chillers are part of the Trane Technologies EcoWise™ portfolio of products designed to lower environmental impact through high efficiency operation and the use of a next-generation, low global warming potential (GWP) refrigerant.
