

## ADDENDUM 1

DATE: November 23, 2016  
PROJECT: Aruba Equipment for Network Refresh  
RFP NO: 744-B1705  
OWNER: The University of Texas Health Science Center at Houston  
TO: Prospective Bidders

**Below are responses to questions received by the deadline for questions on Wednesday, November 23, 2016 at 11:00 AM:**

**Question 1:** I have a question about the excel sheet for the Aruba products. The sheet lists both J9829A and J9829A#ABA, and next to J9829A its description says **Aruba 5400R** and J9829A#ABA says **power cord**.

The problem is that the J9829A is a power cord and the Aruba 5400R's part# appears to be J9827A. Can you confirm that UT Health does want the Aruba 5400R and that the part# should be J9827A?

**Answer:** The question statement "The problem is that the J9829A is a power cord and the Aruba 5400R's part# appears to be J9827A" is not correct. J9829A is a "power supply" not a power cord. J9829A#ABA is a "power cord" to match the power supply. It is listed correctly in the spreadsheet. Also, part number J9827A is a supervisory management module, a card which goes into the switch, it is not the switch itself. The correct part number for the switch is correctly listed as J9822A. When you purchase an HP switch (J9822A) it comes with an included J9827A.

To better clarify, I have shown lines 5-9 below with more detailed explanation.

BASEMENT-G.00		
BASEMENT-G.01	J9822A	Aruba 5412R z12 <b>Switch (includes J9827A Spuv Man Module)</b>
BASEMENT-G.02	J9829A	Aruba 5400R 1100W PoE+ z12 PSU <b>(POWER SUPPLY)</b>
BASEMENT-G.03	J9829A ABA	INCLUDED: Power Cord - U.S. localization <b>(POWER SUPPLY CORD)</b>
BASEMENT-G.04	J9991A	Aruba 20p PoE+ 4p 1/2.5/5/XGT v3 z12 Mod <b>(interface card)</b>
BASEMENT-G.05	J9990A	Aruba 20p PoE+ / 4p SFP+ v3 z12 Mod <b>(interface card)</b>
