Integrated Billing Version 2.0

User Guide

April 2021

Department of Veterans Affairs

Office of Information and Technology (OIT)

Revision History

Initiated on 12/29/2004.

| Date | Revision | Description | Author |
|-------------------|----------|--|---|
| April 2021 | 3.18 | Patch IB*2*668 updates: Edited Insurance Company Editor screens changes are directly related to the 'Payer' section. Redacted some additional data on a few of the sample screen shots. | MCCF EDI TAS elnsurance |
| December 2020 | 3.17 | Patch IB*2.0*685 Added Former OTH Patient Eligibility Change Report and Former OTH Patient Detail Report to Patient Billing Reports Menu [IB OUTPUT PATIENT REPORT MENU] to allow the CPAC / Billing user to review Former Service Member's past treatments occurred during pending VBA adjudication. (Page 83) | Liberty IT Solutions SHRPE Team |
| November 2020 | 3.16 | Patch IB*2*664 updates: Added information regarding the Date of Death report (PDOD) and Source of Information Report (SOUR) | MCCF EDI TAS elnsurance |
| October 2020 | 3.15 | Patch IB*2.0*682 Modifies the Cancel a Charge (CC) action within the IB CANCEL/EDIT/ADD CHARGES option to allow a user to re-bill a previously cancelled bill. | CC IBAR Enhancements |
| September 2020 | 3.14 | Patch IB*2.0*678 Limits the list of Cancellation reasons to display when performing a ?? when cancelling an Urgent Care (UC) copay. Allow users the option to cancel a duplicate Medical copayment. | CC IBAR Enhancements |
| August 2020 | 3.13 | Patch IB*2.0*677 Allows the IB CANCEL/EDIT/ADD CHARGES option to properly identify the retroactive award period when determining the Enrollment Priority Group when processing Urgent Care (UC) Copayment Charges. Changes the IBUC VISIT MAINT options Security Access Key from IB AUTHORIZE to IB EDIT to properly limit the access to the UC Visit Maintenance Utility. | Urgent Care / COVID IBAR Enhancements |

| Date | Revision | Description | Author |
|-----------|----------|--|------------------|
| | | Removes any Urgent Care visits with a REMOVED status from counting towards the total number of UC visits when displaying the total number of UC visits in the IB CANCEL/EDIT/ADD CHARGES Option | |
| | | Prevents erroneous "Patient not found at site" error messages from displaying in the IBUC COPAY exceptions report. | |
| | | Added a new Cancellation Reason, "PANDEMIC RESPONSE" to the IB CHARGE REMOVE REASON FILE (#350.3). | |
| | | Allows the RELEASE CHARGES 'ON HOLD' report to update a UC Visit Charge that was ON HOLD with its Bill Number when releasing multiple charges that are ON HOLD for a single patient. | |
| | | Allows the IB CANCEL/EDIT/ADD CHARGES Option to link Community Care (CC) Long Term Care (LTC) with a previously filed Patient Treatment File (PTF) so that the CC LTC copay may be charged to the patient correctly. | |
| | | Modified the text displaying to the user when linking CC LTC Copays to a PTF. | |
| | | Adds a warning message when a user attempts to access the AC (Add A Charge) Action in the IB CANCEL/EDIT/ADD CHARGES Option and the user does not have the IB EDIT Security Key assigned to them. | |
| June 2020 | 3.12 | Patch IB*2.0*675 | Urgent Care IBAR |
| | | Updates to prevent the error currently occurring at UPDUCDB+2^IBRREL when running the RELEASE CHARGES 'ON HOLD' report [IB MT RELEASE CHARGES]. | Enhancements |
| | | Updated IBUC VISIT MAINT option to allow Facility Revenue Managers to enter Free Urgent Care Visits for a Veteran if the Veterans Urgent Care visit occurred between the day an Enrollment Group change was awarded and the Date the Enrollment Change is considered effective. | |

| Date | Revision | Description | Author |
|----------|----------|---|----------------------------------|
| May 2020 | 3.11 | Patch IB*2.0*674 Updates the IBUC URGENT CARE EXCEPTIONS Mail Group from Private to public so that the mail group members will receive the emails sent to this group. Updates the IBUC ELIG GROUP Function so that it correctly identifies a patient's Enrollment Group so that the patient Urgent Care Visit data at other facilities the patient is enrolled at will update correctly. Modifies the IBUC MULTI FAC COPAY SYNCH nightly process option to assign a user to the Option so that the task will correctly file patient Urgent Care Visit updates at remote facilities. | Urgent Care IBAR Enhancements |
| May 2020 | 3.10 | Patch IB*2.0*669 Updated LIST ALL BILLS FOR A PATIENT to allow the user to filter out either Third Party insurance bills or First Party Copays if they wish to. Updated LIST ALL BILLS FOR A PATIENT to allow the user to limit the amount of data on the report to a user defined range of dates. Updated LIST ALL BILLS FOR A PATIENT to allow the output of the report to be in a delimited format for import into a spreadsheet. Updated IB CANCEL/EDIT/ADD CHARGES to allow certain existing Cancellations Reasons to cancel CC URGENT CARE Copay charges. Inactivated the UC - ENTERED IN ERROR and UC - CHANGE IN ELIGIBILITY Cancellation Reasons and adds the UC - PG6 REVIEWED in the IB CHARGE REMOVE REASON file (#350.3) Updated the IB CANCEL/EDIT/ADD CHARGES to allow only holders of the IB EDIT Security Key access to the AC (Add Charges) function. | Urgent Care IBAR Enhancements |

| Date | Revision | Description | Author |
|------------------|----------|--|---|
| March 2020 | 3.9 | Patch IB*2.0*671 Updated Cancel / Edit / Add to use the Veteran PG status in effect on the Date of Service. 1. Introduction

The release of Integrated Billing (IB) version 2.0 introduces fundamental changes to the way Medical Care Cost Recovery (MCCR) related tasks are done. This software introduces three new modules:

- 1. Claims Tracking
- 2. Encounter Form Utilities
- 3. Insurance Data Capture

There are also significant enhancements to the two previous modules, Patient Billing and Third-Party Billing. IB has moved from a package with the singular purpose of identifying billable episodes of care and creating bills, to a package responsible for the whole billing process through to the passing of charges to Accounts Receivable (AR). Functionality has been added to assist in capturing patient data, tracking potentially billable episodes of care, completing utilization review (UR) tasks, and capturing more complete insurance information.

This version of IB has been targeted for a much wider audience than previous versions.

- The Encounter Form Utilities module is used by MAS ADPACs or clinic supervisors to create and print clinic-specific forms. Physicians use the forms and consequently provide input into form creation.
- A separate Claims Tracking User Manual has been created and Claim Tracking module information can be located in that document. This new User Guide can be utilized by UR nurses within MCCR and Quality Management (QM) to track episodes of care, do precertifications, do continued stay reviews and complete other UR tasks.
- Insurance verifiers use the Insurance Data Capture module to collect and store patient and insurance carrier-specific data.
- Billing Clerks will see substantial changes with the enhancements provided in the Patient Billing and Third-Party Billing modules.

The following is an overview of the major functions of the Integrated Billing software, excluding the Encounter Form functionality. That information can be found in the IB User Manual, Encounter Form Utilities Module.

1.1. Patient Billing

• Updates the Cancel/Edit/Add option to identify retroactive award periods when determining the Enrollment Priority Group for Urgent Care (UC) charges, links Community Care (CC) Long Term Care (LTC) charges to filed Patient Treatment File (PTF) entries, updates the language to reflect PTF entries vice inpatient periods and adds a warning message when users do not have the correct security key assigned. Changed the IBUC VISIT MAINT option to utilize the IB EDIT security key for access. Added a new Cancellation Reason of PANDEMIC RESPONSE. Allows the RELEASE CHARGES ON HOLD report to update bill numbers for a single patient when multiple charges are released at the same time. Updated the UC visit count parameter to display the number of visits that are not in a REMOVED status.

- Prevents erroneous "Patient Not Found at Site" messages from displaying in the IBUC URGENT CARE EXCEPTIONS report.
- Updates the Release Charges on Hold report so that users are not 'kicked out' when releasing multiple charges at the same time and updates the Urgent Care Visit Tracking Maintenance option to allow Facility Revenue (FR) supervisors to enter Free visits for Veterans that have a date discrepancy related to retro-active Priority Group changes via an override option.
- Updates the Urgent Care Visit Tracking functionality to automatically update all sites a patient where a patient receives care, ensures the nightly job runs appropriately, and changed the Vista Urgent Care Exceptions mail group to public.
- Updates the List All Bills for a Patient report to allow users to filter by 1st or 3rd Party, define a date range for data, export the data to a MS Excel spreadsheet and ensures only one patient's data appears. Updates the 1st party Cancellation Reasons in the IB Charge Remove Reason file to inactivate UC-Entered in Error and UC-Change in Eligibility and activate UC-PG6 Reviewed. Updates the IB Cancel / Edit / Add Charges module to only allow changes with the IB EDIT security key.
- Incorporates the ability to add Urgent Care (UC) copayments in the Cancel / Edit / Add screens, provides functionality to track, modify and report UC visits, and automatically update all stations where a Veteran is enrolled with UC data in accordance with the MISSION Act of 2018.
- Automates billing of pharmacy, inpatient, Nursing Home Care Unit (NHCU), and outpatient copayments; inpatient and NHCU per diem charges; and passing charges to Accounts Receivable (AR).
- Automatically exempts patients who are eligible for VA Pension, Aid and Attendance, or House Bound benefits from the Medication Copayment requirement.
- Provides for manual assignment of hardship exemptions from the copayment requirement and the ability to track those exemptions.
- Integrates with the checkout functionality released in the PIMS V. 5.3 package. Patients who claim exposure to Agent Orange and environmental contaminants, and who are treated for conditions not related to this exposure, are billed automatically.
- Allows patient charges to be added, edited, or deleted if there is no automated charge or the automated charge is incorrect.
- Creates subsistence charges for Civilian Health and Medical Program of the Department of Veterans Affairs (CHAMPVA) patients and passes to Accounts Receivable. This functionality will not be activated until the AR package releases a patch that allows AR to process CHAMPVA receivables.
- Allows Means Test billing data to be transmitted between facilities in conjunction with PDX V. 1.5.
- Automatically creates Means Test charges when a verified Means Test is electronically received from the Income Verification Match (IVM) Center.

- Exempt Medal of Honor (MOH) recipients from medication copayments.
- Allows cancellation of medication copayment charge using the reason, Medal of Honor.

1.2. Third Party Billing

- Updated the Third-Party Follow-Up report to correctly report Community Care.
- Automates the creation of third-party billing forms (UB-82, UB-92, Health Care Finance Administration [HCFA-1500]), allowing for the entry, editing, authorizing, printing, and canceling of bills.
- Provides the ability to add prescription refills and prosthetic items to bills.
- Expands the UB-92 functionality to include ability to add / edit all unlabeled form locators (except 49), additional diagn.
- Provides a check-off sheet (can be replaced by the Encounter Form depending on local needs) that can be printed in a variety of site configurable formats to be used in clinics to identify Current Procedural Terminology (CPT) codes.
- Allows the transfer of CPT codes between the billing screens and the SCHEDULING VISITS file.
- Provides reports to identify billable episodes of care, patient and insurance inquiries, and statistical data.
- Provides the ability to create CHAMPVA bills. The user will not be able to transfer bills to Accounts Receivable until the AR package releases a patch that allows AR to process CHAMPVA receivables.
- Provides an employer report, which lists uninsured patients who are employed.
- Allows printing of all authorized bills in user-specified order.
- Provides an Automated Biller that will automatically generate reimbursable insurance bills for inpatient stays, outpatient visits, and prescription refills. With site parameters, sites can specify which types of events are billed using the Automated Biller.
- Provides an expanded HCFA-1500 claim form to include inpatient bills, user-specified charges, and multiple pages.
- Provides an addendum sheet to HCFA-1500 claim form to list the bill's prescription refills and prosthetic items.

1.3. Insurance Data Capture

- Stores multiple addresses (main mailing, outpatient claims, inpatient claims, prescription claims, appeals, inquiries) for each insurance carrier.
- Provides insurance company-specific billing parameters so bills can reflect local insurance company requirements.

- Provides the ability to establish group plans that will be pointed to by each patient with a policy attached to the plan. This saves re-entry of the same policy data for each patient.
- Stores annual benefits associated with group plans.
- Provides tools to maintain and / or clean up the INSURANCE COMPANY file.
- Allows patient insurance information to be updated and verified.
- Stores benefits used by a patient, such as deductibles and lifetime maximums.
- Provides an insurance worksheet for use by the insurance verifier.

1.4. Additional Functionality

- Purges data from selected IB files.
- Provides the medical centers flexibility in implementing the package functionality through site parameters.
- Provides the ability to enter new billing rates and VA pension income thresholds.
- Produces management reports to provide workload, productivity, statistical, and historical data.

Related materials include the IB User Manual, Encounter Form Utilities Module, IB Technical Manual, Package Security Guide, Installation Guide, and Release Notes. The Technical Manual assists the site manager in maintenance of the software. The Package Security Guide provides information concerning security requirements for the package. The Installation Guide helps in installation of the package while the Release Notes describe modifications and enhancements to the software that are new to this version.

2. Orientation

How to Use This Manual

This manual is presented in an online format, but it may also be printed; however, because its intent is for online viewing, and it is not anticipated that is will be printed in its entirety, it has not been formatted for double-sided printing.

The best way to navigate through this manual is by using the Table of Contents (for Word format) and Bookmarks (for pdf format). In later versions of Word, the user may also use the Navigation pane.

The Table of Contents and Bookmarks are presented in a format like the exported menu structure.

3. Package Management

Data in the INTEGRATED BILLING ACTION file should not be added to, edited, or deleted. This data is designed to provide an audit trail of transactions. If the charges for a copayment are removed, a separate transaction that is a cancellation type will be created and cause the decrease

adjustment to be made. If charges are to be changed, the original (or last) charges are cancelled and the new charges are set-up as an update type transaction. Data in this file is maintained through documented routine calls from the Outpatient Pharmacy and MAS packages to Integrated Billing. Data in other Integrated Billing files should be maintained through package options.

Instructions to enter new billing rates and VA pension income thresholds will be provided by VA Central Office (VACO) and / or the Albany ISC.

The automated billing of Category C veterans for outpatient copayments, inpatient copayments, and per diems happens automatically through links to the scheduling event driver, the MAS movement event driver, and the nightly background job.

There are numerous parameters in the IB SITE PARAMETERS file that affect the functional and technical operations of the billing software.

There are several options that contain parameters that affect the operation of the IB package. The MCCR Site Parameter Enter/Edit option parameters affect the operation of the Patient and Third-Party Billing modules. The Select Default Device for Forms option affects where forms will print. The Claims Tracking Parameter Edit option affects the operation of the Claims Tracking module. The Enter/Edit Automated Billing Parameters option allows the site to determine when and which bills the Automated Biller generates. The Enter/Edit IB Site Parameters option on the System Manager's IB Menu affects many of the technical aspects of the IB package.

Per Veterans Health Administration (VHA) Directive 10-93-142, many of the IB routines, data dictionaries, and data files are not to be modified. Only the routines for Encounter Form utilities and selected outputs may be modified.

An electronic signature code is required for users of the Manually Change Copay Exemption (Hardships) option under the Medication Copayment Income Exemption Menu and the Purge Update File and Archive Billing Data options under the Purge Menu.

4. Package Operation

On-line Help

When the format of a response is specific, a Help message is usually provided for that prompt. Help messages provide lists of acceptable responses or format requirements that provide instruction on how to respond.

A Help message can be requested by typing one or two question marks. The Help message will appear under the prompt, then the prompt will be repeated.

For example:

```
BILLING LOCATION OF CARE: 1//
```

and the user needs assistance answering. Enter ?? and the Help message will appear.

```
BILLING LOCATION OF CARE: 1// \ref{eq:condition}?
This identifies the type of facility at which care was administered.
```

```
Choose from:

1 HOSPITAL (INCLUDES CLINIC) - INPT. OR OPT.

2 SKILLED NURSING (NHCU)

3 CLINIC (WHEN INDEPENDENT OR SATELLITE)

BILLING LOCATION OF CARE: 1//
```

For some prompts, the system will list the possible answers the user can select. Any time choices appear with numbers, the system will usually accept the number or the name.

A Help message may not be available for every prompt. If the user enters question marks at a prompt that does not have a Help message, the system will repeat the prompt.

```
NOTE: Users with "QUME" Terminals:

It is very important that the user set up the Qume terminal properly. After entering access and verifying codes, the following prompt will appear:

Select TERMINAL TYPE NAME: {type}//
```

Please make sure that C-QUME is entered here. This entry will become the default and then enter <RET> for all subsequent log-ins. If any other terminal type configuration is set, options using the List Manager utilities will not display nor function properly on the terminal.

5. Billing Clerk's Menu

5.1. Third Party Joint Inquiry (TPJI)

This option provides information needed to answer questions from insurance carriers regarding specific bills or episodes of care. This information is presented in List Manager Screens. Because the same actions are available on most screens, and most screens can be accessed from any other screen; these "Common Actions" are listed first and are not repeated under each screen description. Only actions specific to a screen are included with that screen description.

```
NOTE: When viewing the TPJI main screen, the user must have already selected a specific Claim # for which to see additional information.
```

The user may QUIT from any screen; it will bring the user back one level or screen. EXIT is also available on most screens. EXIT returns the user to the menu. For more information on the use of the List Manager utility, please refer to the appendix at the end of this manual.

Table 1: Common Actions

| Acronym | Description | Action |
|---------|---------------------|---|
| ВС | Bill Charges | Accesses the Bill Charges screen. |
| DX | Bill Diagnoses | Accesses the Bill Diagnoses screen. |
| PR | Bill Procedures | Accesses the Bill Procedures screen. |
| СВ | Change Bill | Accesses the Change Bill screen. |
| ED | EDI Status | Accesses the EDI Status screen. |
| RX | ECME Information | Accesses the EDI Information screen. |
| AR | Account Profile | Accesses the Account Profile screen. |
| СМ | Comment History | Accesses the Comment History screen. |
| IR | Insurance Reviews | Accesses the Insurance Reviews screen. |
| HS | Health Summary | Displays a Health Summary report. The information displayed on the Health Summary is site specified through the MCCR Site Parameter Display / Edit option. |
| AL | Go to Active List | Returns the user to the Third-Party Active Bills screen if that screen was accessed upon entering this option; otherwise, this action returns the user to the menu. |
| EP | ERA/835 | Accesses the ERA / 835 screen. |
| VI | Insurance Company | Accesses Insurance Company Screen. |
| VP | Policy | Displays the same information and action options as when selecting the same action option from TPJI Main Screen and returns the user to the ERA / 835 screen. |
| AB | Annual Benefits | Accesses the Annual Benefits screen. |
| EL | Patient Eligibility | Displays the same information and action options as when the same action option is selected from the TPJI Main Screen and returns the user to the ERA/835 screen. |
| EB | Expand Benefits | Displays detailed information on patient benefits. |
| EX | Exit | Exit the TPJI Claim Information screen. |

| Acronym | Description | Action |
|---------|--------------------|---|
| CI | Go to Claim Screen | Returns the user to the Claim Information screen from any of the common actions screens and is available on all screens that may be opened from the Claim Information screen. |

5.2. Third Party Active Bills Screen

This is the first screen displayed if the user enters a patient name at the first prompt of this option. It lists all active third-party bills for the specified patient in order of date created. All bills created in the Integrated Billing Third Party Billing module can be found on this screen or the Inactive Bills screen.

Table 4: Common Actions

| Acronym | Description | Action |
|---------|-------------|--|
| СВ | Change Bill | Allows the user to change the bill being displayed. If the user entered a patient name at the first prompt of this option, only bills for that patient may be selected. If the user entered a bill number at the first prompt, any bill may be selected. |

5.6. Bill Charges Screen

This screen displays a bill's charge information as it would print on the bill. For UB-92 bills, this closely corresponds to Form Locators 42 - 49; therefore, any prosthetic items, Rx refills, or additional diagnoses and procedures are included. For HCFA 1500 bills, this closely corresponds to Block 24.

5.12. Insurance Reviews / Contacts Screen

This screen displays all insurance reviews and contacts for the episodes of care on a bill. It is based on the Insurance Reviews / Contacts screen of the Claims Tracking Insurance Review Edit option. The primary difference between the two screens is that this screen consolidates all contacts for each episode being billed on a claim, while the Claims Tracking screen displays the contacts for a single episode of care.

Insurance Reviews / Contacts Sample Screen

Table 7: Common Actions

| Acronym | Description | Action |
|---------|-----------------|--|
| VR | Reviews/Appeals | Displays expanded information on a selected insurance contact. The screen accessed by this action will depend on the type of contact selected. If the contact is an appeal or denial, the Expanded Appeals / Denials screen is opened; otherwise, the Expanded Insurance Reviews screen is opened. |

5.13. Expanded Appeals / Denials Screen

This screen displays expanded information on insurance appeals and denials listed on the Insurance Review / Contacts screen. This screen is based on the Expanded Appeals / Denials screen of the Claims Tracking Appeal/Denial Edit option.

5.16. Patient Policy Information Screen

This screen displays extended information on insurance policies. It is based on the Patient Policy Information screen of the Patient Insurance Info View/Edit option. This screen may be entered from either the Patient Insurance screen or from any of the bill specific screens. Once a bill is selected, this screen will only display information related to the insurance policies assigned to the bill.

The PT action is used to view Patient Policy Comments history. This action does not allow one to add, edit, or delete comments.

NOTE: The user will NOT be able to view the Patient Policy Comments history if TPJI was entered using a bill number at the first prompt of the option.

5.18. Patient Eligibility Screen

This screen displays the current information on the patient's eligibility for care and service connection status. It is loosely based on the Eligibility Inquiry for Patient Billing option. This screen is available from the Third-Party Active Bills screen and the bill specific screens.

If this screen is accessed from one of the bill specific screens, such as the Claim Information screen, the standard list of bill screen actions will be available from this screen.

If this screen is accessed from the Patient Insurance screen, no other screens are available as actions from this screen; and the user must return to a previous screen to access other screens.

Patient Eligibility Sample Screen

5.19. Enter / Edit Billing Information

The IB EDIT security key is required to access this option.

The Enter / Edit Billing Information option is used to enter the information required to generate a third-party bill and to edit existing billing information. A new bill can be entered, or an existing bill can be edited, if the existing bill has not been authorized or cancelled. Once a bill has been filed (billing record number established), it cannot be deleted. The bill can be cancelled through the Cancel Bill option.

If the selected patient's eligibility has not been verified and the ASK HINQ IN MCCR parameter is set to YES, the user will have the opportunity to enter a HINQ (Hospital Inquiry) request into the HINQ Suspense File. This request will be transmitted to the Veterans Benefits Administration to obtain the patient's eligibility information. If Means Test data such as category, Means Test last applied, and date Means Test completed is available, it will be displayed after the patient name or bill number has been entered.

When entering a new bill, the system will prompt for EVENT DATE. When billing for multiple outpatient visits, the date of the initial visit is used. For an inpatient bill, the date of the admission is used. If an interim bill is being issued, the EVENT DATE should be the date of admission for that episode of care.

The Medical Care Cost Recovery data is arranged so that it can be viewed and edited through various screens. The data is grouped into sections for editing. Each section is labeled with a number to the left of the data items. Data group numbers enclosed by brackets ([]) can be edited while those enclosed by arrows (<>) cannot. The patient's name, social security number, bill number, the bill classification (Inpatient or Outpatient) and the screen number appear at the top of every screen. A <?> entered at the prompt that appears at the bottom of every screen will provide the user with a HELP SCREEN for that screen. The HELP SCREEN lists the data groups found on that screen and provides the name and number of each available screen in the option. Please see the Supplement at the end of this section for descriptions and samples of the billing screens.

The bill mailing address appears on this screen. Please see the Supplement at the end of this section for important information on how this is determined.

NOTE: In September 2015, the Inpatient Bill / Claim was updated to accommodate the expanded number of ICD-10 diagnosis and procedure codes available in the Patient Treatment File (PTF). Enter/Edit Billing Information displays and allows selection of all diagnoses and procedures in the PTF record within the date range of the bill, and the screen displays the Present On Admission (POA) indicator associated with the diagnosis, if present in PTF. The screen also displays an asterisk "*" before each PTF ICD procedure that matches a procedure and date already assigned to the bill. It is possible that the same procedure may be completed multiple times on the same date. These duplicate ICD procedures are displayed in the list of PTF ICD procedures as separate line items, and duplicates can be added to the bill.

When insurance companies are entered into the INSURANCE COMPANY file, the system prompts for whether this company will reimburse VA for the cost of the patient's care. Entry of an insurance company that has been designated as "will not reimburse" is not allowed at this screen. For bills where the payer is the insurance company and the patient has <u>one</u> insurance company that will reimburse the government, that company will be stored as the primary insurance company. Inactivating the insurance company has no effect on the insurance carriers associated with the bill.

Selection of insurance companies is limited to the primary, secondary, and tertiary insurance companies that are billable for the event date. A provider number can be entered for each of the three possible insurance carriers. This field will be loaded from the Hospital Provider Number if one has been entered for the insurance carrier.

Insurance company addresses can only be edited through the Insurance Company Entry/Edit option.

Any bill with a CHAMPVA rate type requires the primary insurance carrier to have a type of coverage defined as CHAMPVA; otherwise, the bill cannot be authorized.

If the MULTIPLE FORM TYPES site parameter is set to YES, a form type prompt will appear. The UB-82 and UB-92 are considered a single form, so for a site to have multiple forms it would have to use one of the UB forms and the HCFA-1500.

Changing the form type to HCFA-1500 will cause the CODING METHOD field to default to CPT-4 if it has not already been defined. Changing the primary insurance carrier or responsible institution will cause the revenue codes to be rebuilt and charges to be recalculated.

If the MCCR site parameter USE OP CPT SCREEN is set to YES, the Current Procedural Terminology Code Screen will appear when editing procedure codes. The screen will list CPT codes for the dates associated with the bill.

An associated diagnosis (diagnosis responsible for the procedure being performed) must be entered for each procedure for HCFA-1500s. the user can enter from one to four associated diagnoses. The associated diagnosis must match one of the first four diagnoses entered.

Adding a BASC procedure or an OP VISIT DATE will cause the revenue codes to be rebuilt and charges recalculated for both UB-82 / 92 and HCFA-1500 form types. Only one visit date is allowed on a UB-82 / 92 that also has BASC procedures. This restriction does not apply to HCFA-1500s.

A print order can be specified for each procedure / diagnosis entered. If no print order is specified, the procedures / diagnoses will print in the order entered. The six procedures and nine diagnoses with the lowest print order will be printed in the boxes on the form and the remainder will print as additional procedures / diagnoses.

If the TRANSFER PROCEDURES TO SCHED? parameter is set to YES, any ambulatory surgery entered on the bill can be transferred to the Scheduling Visits file and stored under a 900 stop code. An associated clinic must be entered for all procedures that are to be transferred to the SCHEDULING VISITS file.

Several site parameters and two security keys affect the prompts that will appear at the end of this option. Please see the Supplement at the end of this section for an explanation of how these site parameters and security keys affect the option.

A mail group can be specified (through the site parameters) so that every time a bill is disapproved during the authorization phase of the billing process, all members of this group are notified via electronic mail. If this group is not specified, only the billing supervisor, the initiator of the billing record and the user who disapproved the bill will be a recipient of the message. An example of this message can be found in the Supplement.

The UB-82, UB-92, and HCFA-1500 billing forms are the output that can be produced from this option. The data elements and design of these forms has been determined by the National Uniform Billing Committee and has been adapted to meet the specific needs of the Department of Veterans Affairs. The billing forms must be generated (printed) at 80 characters per line at 10 pitch. Copies of the billing forms are included in the Print Bill option documentation.

The UB-82, UB-92, and HCFA-1500 billing forms are the output that may be produced from this option. The data elements and design of these forms has been determined by the National Uniform Billing Committee and has been adapted to meet the specific needs of the Department of Veterans Affairs. The billing forms must be generated (printed) at 80 characters per line at 10 pitch. Copies of the billing forms are included in the Print Bill option documentation.

5.20. Automated Means Test Billing Menu

5.20.1. Cancel / Edit / Add Patient Charges

The IB AUTHORIZE security key is required to access this option. Only holders of the IB EDIT Security Key have access to the AC (Add Charges) function and the IBUC VISIT MAINT option so that Separation of Duties can be maintained.

The Cancel/Edit/Add Patient Charges option allows the user to manually cancel, edit, or add per diem and copayment patient charges or Community Care services for a specified patient and date range. When a charge is edited, the original charge is canceled, and a new charge is added. Once added or edited, the charges are passed to Accounts Receivable. The user may receive Accounts Receivable mail messages when editing / canceling through this option.

The user cannot add medication copayment charges for patients determined to be exempt from the medication copayment requirement.

The user can choose whether to include pharmacy copay charges. Only pharmacy charges that have been added through this option can be edited or deleted through this option.

The user can also choose to bill CHAMPVA inpatient subsistence charges for past admissions. (Current and future admissions will be billed automatically at discharge). The CHAMPVA inpatient subsistence charge may be canceled through this option, but it will be canceled **only** in IB. The user **must** go into the AR module to decrease the receivable to zero (\$0).

Charges are displayed for the specified patient and date range and several "actions" can be taken against these charges. The user can add/edit/cancel a charge, pass a charge to Accounts Receivable, change to another patient or date range, update an event by changing the event status, or change the date used to record the last date for which Means Test charges were billed for the admission.

List Manager actions are also available (e.g., First Screen, Last Screen, Up a Line, Down a Line, etc.). If the user needs help utilizing the List Manager functionality, please refer to the Appendix of this user manual.

Once action has been taken on a charge, the screen is redisplayed showing the new data. If the user has edited a charge, the status of the original entry is changed to CANCELLED, and two new entries are added. The first entry offsets the original charge (the amount appears in parentheses indicating a credit) and the new charge is shown.

Charges added or edited through this option are added / edited to the INTEGRATED BILLING ACTION file (#350). When adjustments are made through this option that affect the number of inpatient days or inpatient amount, the user is prompted to choose whether the user wishes to make the adjustment to the Means Test Billing Clock.

Public Law 114-315 dated December 16, 2016, the Jeff Miller and Richard Blumenthal Veterans Health Care and Benefits Improvement Act of 2016, makes Medal of Honor recipients eligible for Veterans Affairs: (1) hospital, nursing home, and domiciliary care; (2) extended care services for non-service-connected disabilities, with no copayment; and (3) medications, with no copayment. Outpatient Pharmacy Copayment charges can be cancelled using the reason, Medal of Honor.

Public Law 115-182 dated June 6, 2018, the Maintaining Internal Systems and Strengthening Integrated Outside Networks (MISSION) Act of 2018 ends the Veterans Choice Program and established a new Veterans Community Care benefit allowing Veterans to receive Urgent Care services through VA's network of community providers.

5.20.1.1. Canceling Duplicate Copay Charges from Within Add A Charge

Occasionally, the user may encounter a scenario where a patient already has a Medical (either an Inpatient, Outpatient, or LTC) copay for the day, the user is entering the copayment for. The Add A Charge action will allow the user to cancel the duplicate copayment if an existing copayment is smaller than the copayment attempting to be entered.

```

In addition, the Cancel a Charge (CC) action within the IB CANCEL/EDIT/ADD CHARGES option allows the user to re-bill a previously cancelled bill. In the example below, a \$15 copay was cancelled because a \$50 specialty visit was billed at the higher tier rate for the same day. If the user cancels the \$50 specialty visit, the system will allow the user to re-bill the original \$15 copay (for the same day) that was cancelled.

NOTE: The user cannot add an outpatient visit copay charge for a patient with an active National Category 1 High Risk for Suicide flag.

5.20.2. Adding Prescription Copay Charges for Patients with a National Category 1 Patient Record Flag

When adding an outpatient prescription copay charge for a patient with an active National Category1 High Risk for Suicide flag, enter the prescribed days' supply of medication at the "DAYS SUPPLY:" prompt. The prescription copay charge will be prorated for a Days Supply of less than 30 days, including refills for a 30-day period.

```

Rx Date: T (JUL 02, 2018)
ENTER THE COPAY TIER: (1-3): 2//
DAYS SUPPLY: (1-90): 30// 15
Units: 1
Charge to be billed --> $4.00

Okay to add this charge?
```

5.20.3. Canceling Copay Charges for Patients with an Urgent Care Visit

The user can use the Cancel/Edit/Add Patient Charges option to manually cancel the outpatient visit copay charges for a patient with an Urgent Care visit. There are six regular cancellation reasons and three UC cancellation reasons available, select the appropriate reason code of; PATIENT DECEASED, RECD INPATIENT CARE, BILLED AT HIGHER TIER RATE, ENTERED IN eRROR, cHANGE IN ELIGIBILITY, PANdEMIC RESPONSE, UC-Duplicate Visit, UC-Sequence Update and UC-PG6 REVIEWED from the list of cancellation choices at the "Select CANCELLATION REASON:" prompt.

A UC copay can ONLY be cancelled using the cancellation codes listed. The UC visit tracker will be updated when a UC cancellation reason is selected.

- PATIENT DECEASED Removes the copayment and visit from tracking. The letter (R) signifying the visit was Removed is appended to the Date of Service (DOS) listed in the UC Visit Tracking Maintenance report.
- RECD INPATIENT CARE Removes the copayment and lists the encounter as Visit
 Only in the UC Visit Tracking Maintenance report. The letter (V) signifying the visit as
 Visit Only is appended to the Date of Service (DOS) listed in the UC Visit Tracking
 Maintenance report.

- BILLED AT HIGHER TIER RATE Removes the copayment and lists the encounter as Visit Only in the UC Visit Tracking Maintenance report. The letter (V) signifying the visit as Visit Only is appended to the visit in the UC Visit Tracking Maintenance report.
- Entered in Error Removes the copayment and visit from tracking and being counted. The letter (R) is appended to the to the Date of Service (DOS) listed in the UC Visit Tracking Maintenance report. This will impact patients with Free visits.
- Change in Eligibility Does not remove the visit from tracking. May provide a patient with Free visits if the eligibility is moved to a higher Priority Group. The letter (F) signifying the visit as a Free visit is appended to the to the Date of Service (DOS) listed in the UC Visit Tracking Maintenance report.
- UC PG6 REVIEWED Removes the copayment and lists the encounter as Visit Only in the UC Visit Tracking Maintenance report. The letter (V) signifying the visit as Visit Only is appended to the Date of Service (DOS) listed in the UC Visit Tracking Maintenance report.
- UC-Duplicate Visit Removes the copayment and visit from tracking and being counted. The letter (R) signifying the visit was Removed is appended to the Date of Service (DOS) listed in the UC Visit Tracking Maintenance report. This will impact patients with Free visits.
- UC-Sequence Update Does not remove the visit from tracking. May provide a patient with Free visits if a visit from a different station precedes a visit at the home station. May be used to ensure collection credit is provided to the correct facility. The letter (F) signifying the visit as a Free visit is appended to the to the Date of Service (DOS) listed in the UC Visit Tracking Maintenance report.
- PANDEMIC RESPONSE Removes the copayment and visit from tracking and being counted. The letter (R) signifying the visit was Removed is appended to the Date of Service (DOS) listed in the UC Visit Tracking Maintenance report. This will impact patients with Free visits.

5.20.4. Patient Billing Clock Maintenance

The IB AUTHORIZE security key is required to access this option.

This option allows adding or editing of patient billing clocks. Most often this option will be used to add or edit clocks of patients transferred from other facilities. The following fields are editable: clock begin date, status, 90-day inpatient amounts, and number of inpatient days. A free text field is also provided to include a reason for the update.

The fields contained in this option are used to determine, and directly affect, the copayment charges billed to the patient for care received. These fields can also be affected by other options such as the Cancel/Edit/Add Patient Charges option. For further details, please see that option documentation.

The clock will automatically be closed after 365 days or on the date the patient is no longer Category C, whichever is earlier. Billing clocks that may have been "left open" due to a lack of billable activity will be closed during the nightly compilation job that is run automatically. Billing clocks that must be deleted for any reason will have a status of CANCELLED.

5.20.5. Estimate Category C Charges for an Admission

This option is used to estimate the Means Test / Category C charges for an episode of hospital or nursing home care for a proposed length of stay. It can also be used to estimate charges to be billed to a current inpatient for the remainder of his/her stay.

The report will indicate whether the patient has an active billing clock, the start date, and the number of inpatient days of care within that clock.

If a patient has an active clock and has already been charged a copayment for the current 90 days of inpatient care, that amount billed is shown. Also provided is the amount of copay and per diem that would be billed for this proposed episode of care.

The following table provides a description of the fields.

Table 8: Field Descriptions

| Field | Description |
|---|--|
| Clock Date | Date the current billing clock began for this patient. |
| Days of Inpatient Care within Clock | Number of days of inpatient care within the current billing clock. |
| Copayments made for Current 90 days of Inpatient Care | Total amount of copayment made for the current 90 days of inpatient care for the current billing clock. |
| Copayment Charges for (type of care) | Amount of the copayment charge for this proposed inpatient stay. The copayment charge differs depending on the type of inpatient care; however, it will not exceed the current Medicaid deductible. Once the deductible is met, the patient is covered for a 90-day period. For the second, third and fourth 90 days of hospital care, the copayment charge is half of the current Medicaid deductible. For other than hospital care (i.e., NHCU), the full deductible applies for each 90 days of care. |

| Field | Description |
|-------------------------------------|---|
| Billing Dates (from/to) | Date(s) the copayment occurred. If the proposed episode of care was for a total of five days $(2/1/92 - 2/5/92)$ but the deductible was met the first day, the billing dates (from and to) would reflect the first day only $(2/1/92)$. |
| Inpatient Days (1st/Last) | On which days of the current 90 days of inpatient care this copayment occurred. If the patient previously had two days of inpatient care in the current 90 days and the deductible was met the first day of this proposed episode of care, the "inpatient days" would reflect day three as the days (1st and last) this copayment was incurred. |
| Clock Days (1st/Last) | On which days of the current billing clock this copayment was incurred. If the current billing clock began on 2/1/92 and the copayment for this proposed episode of care was incurred on 2/15 and 2/16/92, the "clock days" would reflect day 15 for the 1st and day 16 for the last. |
| Charge | Amount of the copayment or per diem charge for this proposed episode of care. |
| Per Diem Charges for (type of care) | A daily charge for the inpatient stay. No charge is incurred for the day of discharge (i.e., if the proposed inpatient stay is 2/1/92 thru 2/5/92 and the per diem rate is \$10.00, the total per diem charge would be \$40.00). |
| Total Estimated Charges | Total of the copayment and the per diem charges for the proposed inpatient stay |

5.21. Urgent Care Visit Tracking Menu

5.21.1. Urgent Care Visit Tracking Maintenance

This report lists all Urgent Care visits for a patient during a calendar year that have a status of Free, Billed, Removed or Visit Only. The report provides the ability to Add/Edit visits to accurately record the patient's UC visits and assigned copayments.

Table 9: Status Descriptions

| Status | Definition | | | |
|------------|---|--|--|--|
| Free | Per the MISSION Act of 2018, a PG 1-5 and certain PG 6 Veterans receive three (3) Free visits for UC services before being charged the copayment. | | | |
| Billed | A UC visit that is billed the required copayment. | | | |
| Removed | A UC visit that is not counted in the Veteran's visit total. | | | |
| Visit Only | A UC visit counted for the total number of visits, but a copayment was not assigned. | | | |

5.21.4. Urgent Care Pull Request by Patient

The Urgent Care Pull Request by Patient allows Facility Revenue to request an account update for a single patient that has not received care through the facility previously. The option is only to be used if the normal nightly update is not completed or data is required immediately. This is a real-time request and will engage the VISTA session until completed.

This report lists all charges identified as once being ON HOLD (after the installation of patch IB*2*70) that currently have a status of BILLED, and the DATE LAST UPDATED is within the specified date range.

5.22.2. Count / Dollar Amount of Charges on Hold

This option produces the Count and Dollar Amount of Charges on Hold Report. The report provides a subtotal and sub count, by action type, of each patient charge with an ON HOLD status. These charges have not been passed to Accounts Receivable. Accounting is responsible for supplying these figures to FMS on a monthly basis.

5.22.3. Days on Hold Report

This option produces the "Days on Hold Report". The report lists all Integrated Billing charges that have had a status of ON HOLD for an extended period.

Sample Output

5.23. Held Charges Report

The Held Charges Report provides the user with a list of all charges with a status of ON HOLD. Charges for Category C patients with insurance are placed on hold until the patient's insurance company bill is resolved. When payment is received from the insurance carrier, the status of the charge is updated through the Release Charges 'On Hold' option.

This report can be used to ensure that there is an insurance bill established for each charge on hold, and to identify charges that should be released when payments are received from insurance carriers.

5.23.1. History of Held Charges

This option provides a count and dollar amount of charges that have been on hold for a specified date range. This report sorts charges by current status. The user will be able to keep track of how many charges are cancelled, released (billed), or remain on hold. This report only counts charges with an ON HOLD DATE defined.

5.23.2. Release Charges 'On Hold'

The IB AUTHORIZE security key is required to access this option.

The Release Charges 'On Hold' option is used to release Means Test Category C charges, with a status of ON HOLD, to Accounts Receivable. This option is also available on the Agent Cashier's Menu in Accounts Receivable.

If the HOLD MT BILL W/INS parameter is set to YES, inpatient and outpatient copayments for Category C patients with insurance will automatically be placed on hold. These charges will not be passed to Accounts Receivable until released through this option.

NOTE: The \$5/\$10 hospital/NHCU per diem charges are not placed on hold.

If the original bill number is no longer open when the charge is passed to Accounts Receivable, a new bill number is assigned.

5.23.3. List Charges Awaiting New Copay Rate

The List Charges Awaiting New Copay Rate option is used to generate a list of all Means Test outpatient copayment charges that have been placed on hold because the copay rate is over one year old.

New billing rates are scheduled to be released from VA Central Office at the beginning of each fiscal year (10/1). However, there may be a delay in the release of these new rates. If the rate on file for the Means Test outpatient copayment charge is over one year old at the time the bill is created, these charges will be held until the new copay rate is entered. When the rate is entered, the user is given the opportunity to release the charges to Accounts Receivable at that time or released through the Release Charges Awaiting New Copay Rate option.

| IBpatient, five | (5555) | 10/05/93 | \$33 | | | | |

5.23.4. Send Converted Charges to A/R

The IB AUTHORIZE security key is required to access this option.

This option is designed for use after the Integrated Billing conversion is completed. After the conversion, certain inpatient and outpatient charges will have a status of CONVERTED. This option allows the user to choose which converted charges are passed to Accounts Receivable.

During the conversion, the BILLS/CLAIMS file (#399) is checked to ensure that each outpatient visit has been billed. For each visit without an established bill, one is established and given a status of CONVERTED. The conversion cannot determine whether an episode of care has been billed for inpatients; therefore, all billable inpatient episodes are provided a status of CONVERTED and the user must determine which ones should be passed.

The user can choose to pass the charges by patient or date. If patient is selected, all billing actions with a status of CONVERTED are displayed. The user can then select which actions will be passed to accounts receivable. If date is selected, all outpatient copay and fee service billing actions that were created on or before the selected date are passed to accounts receivable.

If the HOLD MT BILL W/INS parameter at the site is set to YES, inpatient and outpatient copayments for Category C patients with insurance will automatically be placed on hold. These charges will not be passed to Accounts Receivable until released through the Release Charges 'On Hold' or Cancel/Edit/Add Patient Charges options. The user may wish to set this parameter to NO until all charges that should be passed to A/R are passed.

This option is being distributed as "out of order" as it is no longer needed and will probably be deleted in the next release of Integrated Billing.

5.23.5. Release Charges 'Pending Review'

The Release Charges 'Pending Review' option is used to review charges that have been created when an Income Verification Match (IVM) verified Means Test has been received and filed at the medical facility. If such a Means Test results in changing the patient's Means Test status from Category A to Category C, copayment and per diem charges for previous episodes of care will automatically be created. The charges will not be automatically passed to Accounts Receivable but will be held in Billing until a review of the charges is complete. A mail message is sent to the Category C Billing mail group notifying users that the charges have been created and are pending review.

After review, the user may pass on the charges to Accounts Receivable for billing or cancel the charges. If passed to AR, the billing information will also be passed to the IVM software that will in turn transmit it to the IVM Center in Atlanta.

Since the billing clock was updated when the charge was originally built, the user may need to update the billing clock if the charge is cancelled. This can be accomplished through the Patient Billing Clock Maintenance option.

5.23.6. List Current / Past Held Charges by Pt

This option lists all IB Actions for a patient that are currently on hold or were on hold for a specified date range. The report lists IB Action ID, Rate Type, Bill #, AR status, IB Status and information related to corresponding Third-Party Claims. Only charges placed on hold since the installation of patch IB*2*70 will appear on this report.

5.23.7. Release Charges Awaiting New Copay Rate

The Release Charges Awaiting New Copay Rate option is used to release charges that have been placed on hold because the outpatient copay rate is over one year old.

New billing rates are scheduled to be released from VA Central Office at the beginning of each fiscal year (10/1). However, there may be a delay in the release of these new rates. If the rate on file for the Means Test outpatient copayment charge is over one year old at the time the bill is created, these charges will be held until the new copay rate is entered. When the rate is entered, the user is given the opportunity to release the charges to Accounts Receivable at that time or released through this option. The user will be prompted to task off a job that will automatically update the dollar amount and bill all such charges. The user will receive a message when the tasked job has completed.

If the copay rate currently in the Billing Table is too old to use, the following message will appear.

"The current copay rate (effective [date]) is still too old to use. Please be sure that you have entered the most current rate in your Billing Rates table."

5.23.8. Patient Billing Clock Inquiry

This option allows the user to display data contained in the patient billing clock. It can be used to view the number of inpatient days and amount billed for inpatient copayments for Category C patients.

When the patient is selected, all billing clocks for that patient are displayed. The reference number, patient name, and the cycle begin date are provided. Once a clock is selected, information such as the clock status, primary eligibility code, cycle begin and end dates, number of inpatient days, and 90-day inpatient amounts are displayed.

5.23.9. Category C Billing Activity List

The Category C Billing Activity List option is used to list all Means Test/Category C charges within a specified date range. The list is alphabetical by patient name.

This output provides the patient name and ID, a brief description, the status and the billing period for the bill, the units (the number of days a charge occurred), and the amount of the charge. For inpatient copay charges, the description includes the treating specialty for the episode of care.

As stated above, the units reflect the number of days a charge occurred. For inpatient copay charges the unit will always be one, even if the patient accrued the charges over several days before the Medicaid deductible was met.

5.23.10. Single Patient Means Test Billing Profile

The Single Patient Means Test Billing Profile option provides a list of all Means Test/Category C charges within a specified date range for a selected patient.

The user will be prompted for patient name, date range, and device. The default at the "Start with DATE" prompt is October 1, 1990. This is the earliest date for which charges can be displayed.

This output displays the date the Means Test billing clock began, bill date, bill type (including the treating specialty for inpatient copay charges), the bill number, bill to date (for inpatient charges), amount of each charge, and the total charges for the selected date range.

5.23.11. Disposition Special Inpatient Billing Cases

The Disposition Special Inpatient Billing Cases option is used to enter the reason for not billing inpatient billing cases for veterans whose care is related to an exposure to Agent Orange, ionizing radiation, or environmental contaminants. This option can also be used to edit the reason on cases that have already been dispositioned.

Inpatient bills created for veterans who claim exposure to Agent Orange, ionizing radiation, or environmental contaminants are automatically placed on hold. Once the veteran's treatment has been completed and s/he is discharged, a determination needs to be made if in fact the care rendered was related to the claimed exposure. If the case was not related, charges will have to be entered through the Cancel/Edit/Add Patient Charges option and passed to Accounts Receivable for billing. If the care was related, the patient will not be billed, and the case will be dispositioned after the reason for not billing is entered through this option.

The user will be prompted for the patient name. The following information will be displayed for the case record: patient name, type, admission date, discharge date, care related to exposure (yes / no), case dispositioned (yes / no), date record last edited, and edited by. The user will then be prompted for the reason the case was not billed. This is a free text field allowing up to 80 characters.

5.23.12. List Special Inpatient Billing Cases

The List Special Inpatient Billing Cases option is used to provide a listing of all special inpatient billing cases, both dispositioned and un-dispositioned. Special inpatient billing cases are those where the veteran has claimed his need for treatment is related to exposure to Agent Orange, ionizing radiation, or environmental contaminants.

Inpatient care for NSC Category C veterans who claim exposure to Agent Orange, ionizing radiation, or environmental contaminants is not automatically billed. Once the veteran's treatment has been completed and s/he is discharged, a determination needs to be made if in fact the care rendered was related to the claimed exposure. If the care was related, the patient should not be billed, and the case should be dispositioned through the Disposition Special Inpatient Billing Cases option. If the case was not related to exposure, charges will have to be entered manually through the Cancel/Edit/Add Patient Charges option and passed to Accounts Receivable for billing. If the case is billed, the system automatically dispositions the special case.

The following information may be displayed for each case record on the output: patient name, type, admission date, discharge date, care related to exposure (yes / no), case dispositioned (yes / no), date record last edited, and edited by.

5.24. CHAMPUS Billing Menu

5.24.1. Delete Reject Entry

This option allows the user to delete individual entries from the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) PHARMACY REJECTS (#351.52) file. Entries are automatically deleted from this file when a rejected transmission is re-submitted and subsequently approved. However, there will be instances when rejected transmissions will not be re-submitted. Therefore, this option may be used to purge unwanted reject transactions from the file.

5.24.2. Reject Report

The Reject Report allows the user to view all the entries in the CHAMPUS PHARMACY REJECTS (#351.52) file and determine the reason(s) for the rejected entries. Rejected entries for transactions that will not be re-submitted and continue to be displayed on this report may be deleted using the Delete Reject Entry option.

Sample Output

5.24.3. Resubmit a Claim

This option is used to re-submit a transaction that was originally rejected by the FI (Fiscal Intermediary – the company with which a Tricare patient holds Tricare insurance coverage). The user can select a prescription that has not been submitted for billing or was submitted and then rejected. The prescription is then placed in the queue to be processed by the IB background filer, and it is processed in the same manner as prescriptions that are queued by the foreground processor. If the prescription was previously submitted and rejected, the reject entry in file #351.52 will automatically be deleted if the prescription is authorized for billing.

5.24.4. Reverse a Claim

This option may be used to reverse or cancel a claim for a prescription that was submitted in error. The user can select a prescription that was previously billed. The prescription is then placed in the queue to be processed by the IB background filer. The filer creates a cancellation-type transaction message that is transmitted to the RNA package. When the receipt confirmation has been received by Veterans Health Information System and Technology Architecture (VistA) from the Fiscal Intermediary (FI), through RNA, another job is queued that cancels the patient copayment charge and the claim for the FI.

5.24.5. Transmission Report

The Transmission report allows the user to view a list of pharmacy transmissions for prescriptions that were filled during a specified date range.

5.24.6. IB MT FIX / DISCH SPECIAL CASE

This option will update records in the Special Inpatient Billing Cases File (#351.2) with discharge dates, if any exist in the Patient Movement File (#405).

5.25. Patient Billing Reports Menu

5.25.1. Catastrophically Disabled Copay Report

The Catastrophically Disabled Copay Report option provides a list of charges for a specified date range that may need to be cancelled due to a patient's Catastrophically Disabled status. The Catastrophically Disabled legislation effective date is May 5, 2010. The user should not enter a date prior to that date, any date entered before that will be automatically changed to May 5, 2010. It should be queued to a printer off hours as it can take some time to run with at least a margin of 132 columns. The report is based on the Date of Decision date stored in the Patient (#2) file. Even though charges may be cancelled, the report may continue to show \$0 charges. If the charge in IB is cancelled but there are still charges on the AR side on the same bill number, it will continue to appear on the report. This is because there is no way of determining which charges on an AR bill are cancelled vs. not cancelled. Sites should not expect to see a clean report; the report is for informational purposes for review. After review of a specified timeframe is completed it is recommended sites use subsequent timeframes for review.

5.25.2. Patient Currently Cont. Hospitalized since 1986

This option allows the user to print a list (from the IB CONTINUOUS PATIENT file) of current inpatients continuously hospitalized at the same level of care since 1986. This report can be used to verify that all continuous patients are correctly identified. The margin width for this report is 132 columns.

Patients continuously hospitalized since 7/1/86 are exempt from the Medicare deductible copayments but may still be subject to per diem charges. Facilities are authorized to charge inpatients a per diem charge of \$10.00 a day for each day of inpatient care or \$5.00 for each day of NHCU care.

5.25.3. Print IB Actions by Date

The Print IB Actions by Date option provides a list of the Integrated Billing actions for a specified date range. Although totals are included, this output should not be used for statistical reporting. The Statistical Report option is provided for that purpose.

This output can be sorted by a specified field. <??> can be entered for a list of appropriate fields for selection and additional commands that may be used to customize the report. If the user opts to sort by a certain field, the user will be prompted to enter a range for that field. If the user accepts the default of FIRST, the system will:

5.25.4. Employer Report

The Employer Report option is used to provide a listing of patients and spouses' employers for patients without active insurance that can be used by billing clerks to confirm insurance coverage with those employers.

The report is sorted by employer name and is run for a selected date range. The user can run the report for inpatient admissions or outpatient visits. One, many, or all divisions can be chosen. For outpatients, patients are included on the report if the patient has an event within the specified date range, do not have active insurance on the event date, and the patient or spouse's employment status is one of the following:

- EMPLOYED FULL TIME
- EMPLOYED PART TIME
- SELF EMPLOYED
- RETIRED

Events include admissions for inpatients and scheduled / unscheduled visits and dispositions that are not Application without Exam for outpatients.

Deceased veterans do not appear on the report.

The following information may appear on the output: employer name, address, phone number, patient name, Social Security Number (SSN), occupation, employment status, home and work phone numbers, primary eligibility, admission date, transaction type, appointment date, and appointment type. This report requires a 132-column margin width.

5.25.5. Episode of Care Bill List

The Episode of Care Bill List option is used to list all bills related to an episode of care. The bills are listed by event date in reverse date order. The bill number, rate type, bill classification, event date, statement from and to dates, bill status, and time frame of bill will be displayed for each bill on the list.

The user may enter the bill number, event date, or patient name at the bill selection prompt. If the event date or patient name is entered, all bills with that event date or for that patient will be listed for selection. Only patients with bills on file may be entered.

The output produced by this option must be generated at a 132-column margin width.

5.25.6. Estimate Category C Charges for an Admission

This option is used to estimate the Means Test / Category C charges for an episode of hospital or nursing home care for a proposed length of stay. It may be used to answer patient inquiries pertaining to estimated charges to be billed for an inpatient stay.

The report will indicate whether the patient has an active billing clock, the start date, and the number of inpatient days of care within that clock.

If a patient has an active clock and has already been charged a copayment for the current 90 days of inpatient care, the amount billed is shown. Also provided is the amount of copay and per diem that would be billed for this proposed episode of care.

The table below provides a description of the fields:

Table 10: Field Descriptions

| Fields | Description |
|------------|--|
| Clock Date | Date the current billing clock began for this patient. |

| Fields | Description |
|---|--|
| Days of Inpatient Care within Clock | Number of days of inpatient or nursing home care within the current billing clock. |
| Copayments made for Current 90 Days of Inpatient Care | Total amount of copayments made for the current 90 days of inpatient care for the current billing clock. |
| Copayment Charges for (type of care) | Amount of the copayment charge for this proposed inpatient stay. The copayment charge differs depending on the type of inpatient care; however, it will not exceed the current Medicare deductible. Once the deductible is met, the patient is covered for 90 days of hospital care. For the second, third, and fourth 90 days of hospital care, the copayment charge is half of the current Medicaid deductible. For other than hospital care (i.e., NHCU), the full deductible applies for each 90 days of care. |
| Billing Dates (from/to) | Date(s) the copayment occurred. If the proposed episode of care was for a total of five days $(2/1/92 - 2/5/92)$, but the deductible was met the first day; the billing dates (from and to) would reflect the first day only $(2/1/92)$. |
| Inpatient Days (1st/Last) | On which days of the current 90 days of inpatient care this copayment occurred. If the patient previously had two days of inpatient care in the current 90 days and the deductible was met the first day of this proposed episode of care, the "inpatient days" would reflect day three as the days (1st and last) this copayment was incurred. |
| Clock Days (1st/Last) | On which days of the current billing clock this copayment was incurred. If the current billing clock began on 2/1/92 and the copayment for this proposed episode of care was incurred on 2/15/92 and 2/16/92, the "clock days" would reflect day 15 for the 1st and day 16 for the last. |
| Charge | Amount of the copayment or per diem charge for this proposed episode of care. |
| Per Diem Charges for (type of care) | A daily charge for the inpatient stay. No charge is incurred for the day of discharge (i.e., if the proposed inpatient stay is 2/1/92 thru 2/5/92 and the per diem rate is \$10.00, the total per diem charge would be \$40.00). |
| Total Estimated Charges | Total of the copayment and the per diem charges for the proposed inpatient stay. |

5.25.7. Outpatient / Registration Events Report

In Integrated Billing V. 1.5, the Outpatient / Registration Events Report was used primarily to list potentially billable outpatient activity (for Category C veterans) for the purpose of billing charges that were not automatically billable by the system. As IB V. 2.0 completes the automation of Means Test billing for all outpatient activity, this report becomes a validation tool.

This option lists all episodes of outpatient care for Category C veterans within a user specified date range; appointments, stop codes, and registrations. For each visit, the clinic, appointment time, type, and status are provided. Clinics with a default type of "research" are flagged on the report to assist sites in determining if regular appointments are being scheduled in clinics where the primary intent is research. For each patient listed, the report indicates whether the patient has claimed exposure to Agent Orange, ionizing radiation, or environmental contaminants and whether the patient has active insurance. If exposure is claimed, the responses to the Classification questions answered during the checkout process are displayed. Any charges associated with the episode of care are included.

A separate page will print for each date within the date range; therefore, the user can limit the date range selected; run this report during off hours, as it may be quite time consuming.

5.25.8. Held Charges Report

The Held Charges Report provides the user with a list of all charges with a status of ON HOLD. Charges for Category C patients with insurance are placed on hold until the patient's insurance company bill is resolved. When payment is received from the insurance carrier, the status of the charge is updated through the Release Charges 'On Hold' option.

This report may be used to ensure that there is an insurance bill established for each charge on hold, and to identify charges that should be released when payments are received from insurance carriers.

5.25.9. Manually Added HPIDs to Billing Claim Report

This report generates a list of Health Plan (HPID) numbers that have been added directly to claims. It allows billing staff to track the instances when an HPID number is added to a third-party claim and to generate an ad-hoc report of authorized claims with this entry information. Only HPIDs that have been manually added will appear on this report.

The user will be prompted for date range, report format, and device. The date range pertains to when the HPID was manually added to the claim.

This output displays patient name, last 4 of SSN, payer, HPID, claim number, username, date HPID added, Professional ID and Institutional ID.

5.25.10. Patient Billing Inquiry

The Patient Billing Inquiry option allows the user to display/print information on any reimbursable insurance bill, Pharmacy Copay, or Means Test bill. The information provided differs depending on the bill type.

For reimbursable insurance bills, the information provided includes bill status, rate type, reason cancelled (if applicable), admission date (for inpatients), all outpatient visits (for outpatients), charges, amount paid, statement to and from dates, each action that was taken on that bill, and the user who performed it. If the user opts to view the full inquiry, address information from the PATIENT file (#2) and the bill is also provided.

The information provided in a brief inquiry for Pharmacy Copay charges includes date of charge, type of charge (syntax: patient eligibility - action type - status), brief description (syntax: prescription # - drug name - # of units), amount of charge or credit, and an explanation of any charge removed, if applicable. A full inquiry, in addition to the information provided in the brief inquiry, provides information from the PRESCRIPTION file (#52), as well as address information on the patient.

The display / output for Means Test bills is very similar to the brief inquiry for Pharmacy Copay. It includes the date of charge, charge type, brief description, units, and amount of charge. A full inquiry also includes address information on the patient.

The medication copayment exemption status and reason are displayed for medication copayment and Means Test bills.

Medication Copayment charge cancellation can be displayed in the Brief and Full output (Public Law 114-315).

5.25.11. List all Bills for a Patient

The List all Bills for a Patient option is used to print a list of all bills on file for a selected patient. The patient may be selected by name or social security number.

The List all Bills for a Patient includes three options:

- 1. First Party Bills Only
- 2. Third Party Bills Only
- 3. Both Bill Types

This allows the user to view bills for a certain bill type, filter the bills for a specified time period, and add a starting date of care and ending date of care.

The bills are listed by date of care in reverse date order. The bill number, date printed, action/rate type, classification, date of care, statement from and to dates, amount collected, status, and timeframe of the bill will be displayed for each bill on the list.

The table below provides a brief explanation of some of these data elements:

Table 11: Data Element Descriptions

| Data Element | Description |
|--------------------|--|
| Bill Number | If IB action is incomplete, "pending" is displayed. If IB action is converted, this field will be blank. |
| Date Printed | Date bill generated. |
| Action/Rate Type | Action for IB actions; rate type for insurance bills. |
| Date of Care | Admission date for inpatients; opt visit date for outpatients; date medication dispensed for Pharmacy Copay. |
| Amount Collected | Not applicable to patient bills; amount from Accounts Receivable for insurance bills. |
| Time frame of Bill | Null if IB action. |
| Reject Indicator | The "c" indicates a rejected bill. A reject is defined to be a billing reject that is on the Claim Status Awaiting Resolution (CSA) or Medicare Remittance Advice Worklist (MRW) report. |

- The user will be prompted for a patient name and prompted to include or not include Pharmacy Copay charges on the report.
- The user will also be prompted for an option to export the report to Microsoft Excel.
- The output produced by this option must be generated at a 132-column margin width.

5.25.12. Category C Billing Activity List

The Category C Billing Activity List option is used to list all Means Test / Category C charges within a specified date range. The list is alphabetical by patient name.

This output provides the patient name and ID, a brief description, the status and the billing period for the bill, the units (the number of days a charge occurred), and the amount of the charge. For inpatient copay charges, the description includes the treating specialty for the episode of care.

As stated above, the units reflect the number of days a charge occurred. For inpatient copay charges the unit will always be one, even if the patient accrued the charges over several days before the Medicare deductible was met.

Sample Output

| Category C Billi | | F | EB 26, 199 | 2009:14:2 | 2.8 | Page: 1 |

5.26. Third Party Output Menu

5.26.1. Veterans w/Insurance and Discharges

The Veterans w/Insurance and Discharges option is used to produce a list of all patients who have reimbursable insurance and who were discharged from the medical center during a selected date range. For dates of care prior to 10/1/90, service-connected veterans with insurance who were treated for a non-service-connected condition (from the PTF record) will be included on the list. This list may be used to help ensure that a bill exists for all billable inpatient episodes of care for that date range.

The user may include unbilled patients, previously billed patients, or both on the report. If the user opts to print ALL (both unbilled and previously billed), the report is sorted by these two categories. The unbilled patients portion displays the patient ID#, patient name, SSN, eligibility status, date of care (event date), and the patient's insurance companies. The previously billed list displays the same data plus every bill within the selected date range for each patient showing the bill number, bill rate type, statement from and to dates, and the debtor.

The lists are printed in alphabetical order by patient name or numerically by terminal digit (8th and 9th digit of the SSN, then 6th and 7th, etc.). For multidivisional sites, the user may print a list for each division.

It is recommended the report be queued to print during non-peak user hours.

5.26.2. Veteran Patient Insurance Information

The Veteran Patient Insurance Information option provides insurance information on veteran inpatients. This includes such information as insurance company, insurance number, group number, and insurance expiration date. Medical information is also shown. Dates of admission and discharge and status of the PTF records are provided. The report is broken down by patient, with information on length of stay for each bed section, diagnoses, and diagnostic codes. The total length of stay is shown with the primary diagnosis.

The form indicates whether the policy shown will reimburse VA for the cost of medical care. If the REIMBURSE field of the INSURANCE COMPANY file is set to NO for any of the companies that cover the applicant, an asterisk (*) will be shown next to the insurance company name and the following message will appear.

```
* - Insurer may not reimburse!!
```

All this information is used in billing the insurance companies for the cost of the veteran's care.

The report may be sorted sequentially by discharge or admission date. The user will be prompted for a date range and device. Depending on the number of applicable admissions and the size of the date range specified, generation of this report could be time-consuming. The user may opt to queue the report to print during non-peak user hours.

5.26.3. Veterans w/Insurance and Inpatient Admissions

The Veterans w/Insurance and Inpatient Admissions option is used to produce a list of all patients who have reimbursable insurance and who had admissions to the medical center during a selected date range. For dates of care prior to 10/1/90, service-connected veterans with insurance who were treated for a non-service-connected condition (from the PTF record) will be included on the list. This list may be used to help ensure that a bill exists for all inpatient billable episodes of care for the selected date range.

The user may include unbilled patients, previously billed patients, or both on the report. If the user opts to print ALL (both unbilled and previously billed), the report is sorted by these two categories. The unbilled patients portion displays the patient ID#, patient name, SSN, eligibility status, date of care (event date), and the patient's insurance companies. The previously billed list displays the same data plus every bill within the selected date range for each patient showing the bill number, bill rate type, statement from and to dates, and the debtor.

The lists are printed in alphabetical order by patient name or numerically by terminal digit (8th and 9th digit of the SSN, then 6th and 7th, etc.). For multidivisional sites, the user may print a list for each division.

Depending on the size of the database and the date range selected, this report could be quite lengthy. It is recommended the report be queued to print during non-peak user hours.

5.26.4. Veterans w/Insurance and Opt. Visits

The Veterans w/Insurance and Opt. Visits option is used to produce a list of all patients who have reimbursable insurance and who had outpatient visits to the medical center during a selected date range. For dates of care prior to 10/1/90, service-connected veterans with insurance will be included on the list.

Non-count clinics and unbillable appointment types are excluded from the list. This list may be used to help ensure that a bill exists for all outpatient billable episodes of care for that time frame.

This report includes patients who have either add / edit stop codes, 10-10 registrations, or scheduled appointments during the selected date range. The stop code, registration type, or clinic is included on the output for each entry. This information may be used to aid in determining how a charge should be billed.

The user may include unbilled patients, previously billed patients, or both on the report. If the user opts to print ALL (both unbilled and previously billed), the report is sorted by these two categories. The unbilled patients portion displays the patient ID#, patient name, SSN, eligibility status, date of care (event date), and the patient's insurance companies. The previously billed list displays the same data plus every bill within the selected date range for each patient showing the bill number, bill rate type, statement from and to dates, and the debtor.

The lists are printed in alphabetical order by patient name or numerically by terminal digit (8th and 9th digit of the SSN, then 6th and 7th, etc.). For multidivisional sites, the user may print a list for each division.

It is recommended the report be queued to print during non-peak user hours.

5.26.5. Patient Review Document

The Patient Review Document option is used to print the Third-Party Review Form by patient name and admission date specifications. This form is used in connection with veteran patients admitted to the hospital who have private medical insurance. The form provides patient's name, patient ID#, admission date, diagnoses, and ward location. Insurance information provided includes insurance company name, address and phone number, policy number, and group number. The insurance data is not displayed if the insurance has expired.

The form is then divided into four sections. Section one concerns pre-admission certification. It shows whether pre-admission certification is required. If required, it provides information concerning the decision made by the insurance company regarding the admission. Information includes number of days certified, whether medical information is insufficient, and whether outpatient care is more appropriate. Section two concerns the need for a second surgical opinion, if required, and results of the second opinion. Section

three provides information concerning the length of stay review; if further stay was approved or if disapproved, the reasons for denial. Section four shows bill status – denied in full, denied in part, or paid in full. If denied, the reasons for denial are given. The bill number is also shown.

5.26.6. Inpatients w/Unknown or Expired Insurance

This option allows the user to print a list of veteran inpatients with no insurance, expiring insurance (expired or will expire within 30 days), or unknown insurance. The user may include any or all these categories. The output may then be used to obtain insurance information from the veterans while current inpatients.

If the site is multidivisional, one, many, or all divisions may be included. A subtotal is provided for each division.

The report may be printed for the current date or a specified date range. When the user selects a date range, all patients who were admitted during that date range are included. If the user opts to display for the current date, all patients who are currently inpatients are included. The report may be further sorted by ward.

Producing this output may be very time consuming. It is recommended to queue this option and run during off hours. The required margin width is 132 columns.

5.26.7. Outpatients w/Unknown or Expired Insurance

This option allows the user to print a list of veteran outpatients with no insurance, expiring insurance (expired or will expire within 30 days), or unknown insurance for a specified date range. The user may include any or all these categories.

One, many, or all divisions (if the site is multidivisional) and clinics may be included. A subtotal is provided for each division / clinic.

This option may be used to identify those patients who should be interviewed for insurance information while visiting a specified clinic. This report may be printed for a specified date or range of dates and sent to the appropriate clinic for follow-up.

This output may be very time consuming and should be queued. The margin width is 132 columns.

5.26.8. Single Patient Means Test Billing Profile

The Single Patient Means Test Billing Profile option provides a list of all Means Test / Category C charges within a specified date range for a selected patient.

The user will be prompted for patient name, date range, and device. The default at the "Start with DATE" prompt is October 1, 1990. This is the earliest date for which charges may be displayed.

This output displays the date the Means Test billing clock began, bill date, bill type (including the treating specialty for inpatient copay charges), the bill number, bill to date (for inpatient charges), amount of each charge, and the total charges for the selected date range.

5.26.9. Former OTH Patient Eligibility Change Report

This option will allow the CPAC user to identify Former Service Members whose Primary Eligibility changed from EXPANDED MH CARE NON-ENROLLEE to a new Primary Eligibility with a VERIFIED eligibility status post VBA adjudication.

This output may be very time consuming and should be queued. The margin width is 132 columns.

Sample Output

Integrated Billing v2.0 User Guide

70 April 2021

5.27. Third Party Billing Menu

5.27.1. Print Bill Addendum Sheet

This option is used to print the addendum sheets that may accompany HCFA-1500 prescription refill or prosthetic bills. The addendum contains information that could not fit on the bill form.

Prescription refill data provided on the addendum sheet may include prescription number, refill date, drug, quantity, # of days' supply, and the National Drug Code (NDC) #. Prosthetic data will include the date delivered to the patient and the item.

In order for the bill addendums to automatically print for every HCFA-1500 bill with prescription refills or prosthetic items, the billing default printer for the BILL ADDENDUM form type must be set through the Select Default Device for Forms option found on the System Manager's Integrated Billing Menu.

Sample Output

5.27.2. Authorize Bill Generation

The Authorize Bill Generation option is used to authorize the printing of third-party bills and the release of the information to Fiscal Service.

When a billing record is selected, the system performs a check to determine if another user is currently processing the same record. If not, the system will lock the record. If the lock is unsuccessful, it means another user already has that record locked and the following message will be displayed.

"No further processing of this record permitted at this time. Record locked by another user. Try again later."

A final review/edit of the information in the billing record may be performed through this option. The data is arranged so that it may be viewed and edited through various screens. The data is grouped into sections for editing. Each section is labeled with a number to the left of the data items. Data group numbers enclosed by brackets ([]) may be edited while those enclosed by arrows (<>) may not. The patient's name, social security number, bill number, the bill classification (Inpatient or Outpatient), and the screen number appear at the top of every screen. A <?> entered at the prompt that appears at the bottom of every screen will provide the user with a HELP SCREEN for that screen. The HELP SCREEN lists the data groups found on that screen and provides the name and number of each available screen in the option. For more detailed documentation on editing a bill, please see the Enter/Edit Billing Information option documentation.

For a detailed explanation of all screens, please see the Supplement at the end of this section.

The CAN INITIATOR AUTHORIZE? site parameter and the IB AUTHORIZE security key affect the prompts that appear at the end of this option.

CAN INITIATOR AUTHORIZE?

If set to YES, the user who initiated the bill can authorize generation of billing form (if required security key held). If this parameter is set to NO, the initiator of the bill will not be allowed to authorize its generation.

IB AUTHORIZE

Allows the holder to authorize generation of bills. The user must hold this key to access this option.

The UB-82, UB-92, and HCFA-1500 billing forms are the output that may be produced from this option. The data elements and design of these forms has been determined by the National Uniform Billing Committee and has been adapted to meet the specific needs of the Department of Veterans Affairs. The billing forms must be generated (printed) at 80 characters per line at 10 pitch. Copies of the billing forms are included in the Print Bill option documentation.

5.27.3. Enter / Edit Billing Information

The IB EDIT security key is required to access this option.

The Enter / Edit Billing Information option is used to enter the information required to generate a third-party bill and to edit existing billing information. A new bill may be entered, or an existing bill can be edited. Only existing bills that have not been authorized or cancelled may be edited. Once a bill has been filed (billing record number established), it cannot be deleted. The bill may be cancelled through the Cancel Bill option.

If the selected patient's eligibility has not been verified and the ASK HINQ IN MCCR parameter is set to YES, the user will have the opportunity to enter a HINQ (Hospital Inquiry) request into the HINQ Suspense File. This request will be transmitted to the Veterans Benefits Administration to obtain the patient's eligibility information. If Means Test data such as category, Means Test last applied, and date Means Test completed is available, it will be displayed after the patient name or bill number has been entered.

When entering a new bill, the system will prompt for EVENT DATE. When billing for multiple outpatient visits, the date of the initial visit is used. For an inpatient bill, the date of the admission is used. If an interim bill is being issued, the EVENT DATE should be the date of admission for that episode of care.

The Medical Care Cost Recovery data is arranged so that it may be viewed and edited through various screens. The data is grouped into sections for editing. Each section is labeled with a number to the left of the data items. Data group numbers enclosed by brackets ([]) may be edited while those enclosed by arrows (<>) may not. The patient's name, social security number, bill number, the bill classification (Inpatient or Outpatient) and the screen number appear at the top of every screen. A <?> entered at the prompt that appears at the bottom of every screen will provide the user with a HELP SCREEN for that screen. The HELP SCREEN lists the data groups found on that screen and provides the name and number of each available screen in the option.

5.27.4. Cancel Bill

The IB AUTHORIZE security key is required to access this option.

The Cancel Bill option allows the user to cancel a bill at any point in the billing process. Once the bill is cancelled, there is no way to view the data contained in that bill.

If the user selects a bill that has been previously cancelled, certain prompts will appear with defaults.

A mail group may be specified (through the site parameters) so that every time a bill is cancelled, all members of this group are notified through electronic mail. If this group is not specified, only the billing supervisor and the user who cancelled the bill will be recipients of the message. An example of this message may be found in the Example Section of this option.

When a bill is cancelled, it is removed as a Prior Bill Number from previous bills in the Primary / Secondary / Tertiary Series.

Sample Mail Message

5.27.5. Copy and Cancel

The IB AUTHORIZE security key is required to access this option.

The CAN INITIATOR AUTHORIZE? site parameter affects this option.

This option is used to cancel a bill, copy all the information into a new bill, and edit the new bill where necessary. The status of the new bill is ENTERED / NOT REVIEWED. This process prevents having to use the Enter/Edit Billing Information option to create a new bill that would require re-entry of ALL data. Bills returned from Accounts Receivable with minor inconsistencies can quickly and easily be corrected through this option.

The Medical Care Cost Recovery data is arranged so that it may be viewed and edited through various screens. The data is grouped into sections for editing. Each section is labeled with a number to the left of the data items. Data group numbers enclosed by brackets ([]) may be edited while those enclosed by arrows (<>) may not. The patient's name, social security number, bill number, the bill classification (Inpatient or Outpatient), and the screen number appear at the top of every screen. A <?> entered at the prompt that appears at the bottom of every screen will provide the user with a HELP SCREEN for that screen. The HELP SCREEN lists the data groups found on that screen and provides the name and number of each available screen in the option.

A mail group may be specified (through the site parameters) so that every time a bill is disapproved during the authorization phase of the billing process, or suspended during the generation phase, all members of this group are notified via electronic mail. If this group is not specified, only the billing supervisor, the initiator of the billing record, and the user who disapproved or generated the bill will be recipients of the message. Examples of messages may be found in the Enter / Edit Billing Information documentation. An explanation of how the bill mailing address field is determined is provided in the Supplement at the end of this option documentation.

The UB-82, UB-92, and HCFA-1500 billing forms are the output that may be produced from this option. The data elements and design of both forms has been determined by the National Uniform Billing Committee and has been adapted to meet the specific needs of the Department of Veterans Affairs. Both must be generated (printed) at 80 characters per line at 10 pitch. Copies of the billing forms are included in the Print Bill option documentation.

Please see the Supplement found at the end of this section for descriptions of the parameter and security key as well as a description of most fields included on the billing screens.

5.27.6. Delete Auto Biller Results

This option is used to delete entries from the Automated Biller Errors / Comments report prior to a user-selected date for any entry not associated with a bill.

The auto biller checks a variety of data elements concerning an event before a bill is created. The auto biller will only create reimbursable insurance bills, so the patient must be a veteran with active insurance. The disposition prior to the event date is checked and if the need for care was related to an accident or the veteran's occupation, the auto biller will not create a bill. Since dental is usually billed separately, any event with a dental clinic stop will also be excluded. The auto biller also checks to ensure that the event has not already been billed.

Entries are removed from the Automated Biller Errors / Comments report in two ways. If a bill was created for the event, the bill's entry is removed from the report when the bill is either printed or cancelled. If a bill was not created, this option must be used to delete the entry.

The user will be prompted for a date. The default value provided is three days before the current date.

5.27.7. Print Bill

The Print Bill option is used to print third party bills on the appropriate form (UB-82/92 or HCFA-1500) after all required information has been input and the billing record has been authorized. The user may also reprint a previously printed bill.

A final review of the information in the billing record may be performed through this option. The data is arranged so that it may be viewed through various screens. The patient's name, social security number, bill number, the bill classification (Inpatient or Outpatient), and the screen number appear at the top of every screen. A <?> entered at the prompt that appears at the bottom of each screen will provide the user with a HELP SCREEN for that screen. The HELP SCREEN lists the name and number of each available screen for the working bill and the data groups for that screen.

74

No editing of the data is allowed in this option. Data can be edited through the Enter / Edit Billing Information option, if necessary.

The UB-82, UB-92, and HCFA-1500 billing forms are the output that may be produced from this option. The data elements and design of these forms has been determined by the National Uniform Billing Committee and has been adapted to meet the specific needs of the Department of Veterans Affairs. The billing forms must be generated (printed) at 80 characters per line at 10 pitch.

5.27.8. Patient Billing Inquiry

The Patient Billing Inquiry option allows the user to display/print information on any reimbursable insurance bill, pharmacy copay, or Means Test bill. The information provided differs depending on the bill type.

For reimbursable insurance bills, the information provided includes bill status, rate type, reason cancelled (if applicable), admission date (for inpatients), all outpatient visits (for outpatients), charges, amount paid, statement to and from dates, each action that was taken on that bill, and the user who performed it. If the user opts to view the full inquiry, address information from the PATIENT file and the bill is also provided.

The information provided in a brief inquiry for Pharmacy Copay charges includes date of charge, type of charge (syntax: patient eligibility - action type - status), brief description (syntax: prescription # - drug name - # of units), amount of charge or credit, and an explanation of any charge removed, if applicable. A full inquiry, in addition to the information provided in the brief inquiry, provides information from the PRESCRIPTION file, as well as address information on the patient.

The display / output for Means Test bills is very similar to the brief inquiry for Pharmacy Copay. It includes the date of charge, charge type, brief description, units, and amount of charge. A full inquiry also includes address information on the patient.

5.27.9. Print Auto Biller Results

This option is used to print the Automated Biller Errors / Comments report. The results of the execution of the auto biller are listed on this report. For Claims Tracking events for which the auto biller attempted to create a bill, this report will list either the reason a bill was not created or the bill number and any comments on the bill.

The auto biller checks a variety of data elements concerning an event before a bill is created. The auto biller will only create reimbursable insurance bills, so the patient must be a veteran with active insurance. The disposition prior to the event date is checked and if the need for care was related to an accident or the veteran's occupation, the auto biller will not create a bill. Since dental is usually billed separately, any event with a dental clinic stop will also be excluded. The auto biller also checks to ensure that the event has not already been billed.

Entries are removed from the Automated Biller Errors / Comments report in two ways. If a bill was created for the event, the bill's entry is removed from the report when the bill is either printed or cancelled. If a bill was not created, the Delete Auto Biller Results option must be used to delete the entry.

The bills will be grouped on the output by the date entered. The following information may appear on the report: patient name, event type, episode date, bill number, bill status, timeframe of bill, and statement covers from and to dates. Comments relating to individual bills may also be provided.

The user will be prompted for a date range, a patient range, and a device.

5.27.10. Print Authorized Bills

The Print Authorized Bills option will print all bills with a status of AUTHORIZED in a user-specified order. The bills may be sorted by zip code, insurance company name, and patient name.

The user may enter <??> at the "Begin printing bills?" prompt to see a list of all the bills that will print when this option is utilized. The list will show bill number, patient name, event date, inpatient or outpatient bill, bill type, bill status (AUTHORIZED), and bill form type. If this list is quite lengthy, queue the output to print during off hours.

The user is not prompted for a device in this option. Each bill form type will print on the billing default printer specified through the Select Default Device for Forms option on the System Manager's Integrated Billing Menu. Any form type not set up there, will not print when utilizing this option.

5.28. Return Bill Menu

5.28.1. Edit Returned Bill

The IB EDIT security key is required to access this option.

The Edit Returned Bill option is used to correct bills with a status of RETURNED FROM AR (NEW) that have been returned to MAS from Accounts Receivable. Generate the returned bill report through the Returned Bill List option before utilizing this option. That report contains a listing of all bills that have been returned to MAS providing the reason returned for each. This information is required to make the appropriate corrections to each bill. The bill number appears on that report preceded by the station number. The station number should not be entered when selecting the bill for editing.

After editing, return the bill to Accounts Receivable and print the bill if the required security key is held. It should be noted that returned bills with a status of RETURNED FOR AMENDMENT cannot be edited through this option and must be corrected through the Copy and Cancel option.

Supplemental information such as sample billing screens is provided in the Supplement at the end of this section.

NOTE: It is possible to edit a returned bill if it is not an "electronically transmittable" bill. For returned electronically transmittable bills/claims, the IB COPY AND CANCEL option will need to be used.

5.28.2. Returned Bill List

The Returned Bill List option prints a listing of all bills that have been returned to MAS from Accounts Receivable. When the user logs onto the Billing System, the following message appears:

"You have {#} bill(s) returned from Fiscal (New Bill)."

When this occurs, the user needs to generate the output produced by this option to obtain a listing of the returned bills.

The following data items may be provided for each bill on the list: bill number, payer, previous and current status of bill, original bill amount, service which approved bill and when, returned by, reason returned, and date returned. The bill number appears on this report preceded by the station number. The station number should not be entered when selecting the bill for editing.

The user will need this report when using the Edit Returned Bill option to determine why the bill was returned and what needs to be corrected. Once bills have been corrected and sent back to Accounts Receivable, these no longer appear on the Returned Bill List.

 RETURNED FOR CORRECT INS ADDRESS
```

5.28.3. Return Bill to A/R

The IB AUTHORIZE security key is required to access this option.

The Return Bill to A/R option is used to send bills that have been returned to MAS back to Accounts Receivable after correction. Editing is not allowed in this option. All editing is done through the Edit Returned Bill option; however, all billing screens associated with the bill may be displayed for viewing.

5.28.4. UB-82 Test Pattern Print

The UB-82 Test Pattern Print option is used to print a test pattern on the UB-82 billing form so that the form alignment in the printer may be checked. This will ensure that each data item prints in the correct block on the form.

The test pattern displays which data element should appear in the different blocks of the billing form. For example, in Block 3 - Patient Control Number, "BILL NUMBER" will be printed in that block when this option is utilized.

```

5.28.7. Outpatient Visit Date Inquiry

The Outpatient Visit Date Inquiry option allows the user to display information on any outpatient insurance bill for a selected patient. The user will be prompted for a patient name and an outpatient visit date. Select any patient with billed outpatient visits. <??> may be entered at the second prompt for a list of billed visits for the selected patient.

The information provided includes bill status, rate type, reason cancelled (if applicable), outpatient visit date, charges, amount paid, statement from and to dates, each action that was taken on that bill, the date, and the user who performed it.

6. Patient Insurance Menu

6.1. Patient Insurance Info View / Edit

The Patient Insurance Info View/Edit option is used to look at a patient's insurance information and edit that data, if necessary. The system groups information that is specific to the insurance company, specific to the patient, specific to the group plan, specific to the annual benefits available, and the annual benefits already used. This option also displays eIV Response data. Inactive policies will be listed if the patient has not been repointed from that inactive policy to an active policy.

About the Screens

In the top left corner of each screen is the screen title. On some screens, the following line is a description of the information displayed. A plus sign (+) at the bottom of the screen indicates there are additional screens. Left or right arrows (<<< >>>) may be displayed to indicate there is additional information to the left or right of the screen. Available actions are displayed below the screen. <??> entered at any "Select Action" prompt displays all available actions for that screen.

The user can QUIT from any screen; this will bring the user back one level or screen. EXIT is also available on most screens. When EXIT is entered, the user is prompted "Exit option entirely?". A YES response returns the user to the menu. A NO response has the same result as the QUIT action. For more information on the use of the List Manager utility, please refer to the appendix at the end of this manual.

The following sections display screens under this option, with a brief action description. Once an action has been selected, <??> may be entered at most of the prompts that appear for lists of acceptable responses or instruction on how to respond.

6.2. Patient Insurance Management Screen

Once a patient is selected, this screen is displayed listing all the patient's insurance policies. Information provided for each policy may include type of policy, group name, holder, effective date, and expiration date.

| Acronym | Description | Action | |
|---------|--|---|--|
| AP | Add Policy | Allows the user to add an insurance policy for the selected patient. | |
| VP | Policy Edit / View (accesses Patient Policy Information screen) | Allows the user to view and edit extensive insurance policy data. | |
| DP | Delete Policy | Allows the user to delete an insurance policy for the selected patient. IB INSURANCE SUPERVISOR security key is required. | |

Table 12: Common Actions

| Acronym | Description | Action |
|---------|---|--|
| АВ | Annual Benefits - (accesses Annual Benefits Editor screen) | Used to enter annual benefits data for the selected policy. IB GROUP PLAN EDIT security key is required for editing. |
| EA | Fast Edit All | A quick way to enter portions of the patient insurance information. IB GROUP PLAN EDIT security key is required for editing. |
| BU | Benefits Used (accesses the Benefits Used by Date Editor screen) | Used to enter policy benefits already used. |
| VC | Verify Coverage | Allows the user to enter the system verification that the insurance coverage exists, and the information is correct. |
| RI | Personal Riders | Displays current riders and allows addition of new riders. |
| СР | Change Patient | Allows the user to change to another patient without returning to the beginning of the option. |
| WP | Worksheet Print | Used to print the standard worksheet showing the data for the benefit year within the past 12 months. If no benefit year on file, will print the standard form without the data. Must be printed at 132 column margin width. |
| PC | Print Insurance Cov. | Similar to worksheet. Used when bulk of information is already in the computer. Will show two most recent benefit years. If no benefit years on file, will offer WP action (see above). |

6.3. Patient Policy Information Screen

This screen is displayed listing expanded policy information for the selected company. Categories include utilization review data, subscriber data, subscriber's employer information, effective dates, plan coverage limitations, last contact, and comments on the patient policy or insurance group plan. The sections on user information and insurance company information are not editable.

Table 13: Common Actions

| Acronym | Description | Action |
|---------|-------------------|--|
| PI | Change Plan Info | Allows entry / edit of group plan information. IB GROUP PLAN EDIT security is required to change plan information. |
| UI | UR Info | Allows entry / edit of utilization review information. IB GROUP PLAN EDIT security key is required for editing. |
| ED | Effective Dates - | Allows the user to edit the effective date and expiration date of the insurance policy. |

| Acronym | Description | Action |
|---------|---|--|
| SU | Subscriber Update | Allows the user to edit the subscriber (person who holds the insurance coverage) information. |
| IP | Inactive Plan | Allows the user to inactivate an insurance plan or move subscribers from multiple insurance plans into one master plan. IB GROUP PLAN EDIT security key is required. |
| GC | Group Plan Comments | Allows the user to view, add, edit, or delete comments regarding the group plan. IB GROUP PLAN EDIT security key is required to edit comments. |
| EM | Employer Info | Allows the user to edit the subscriber's employer information. |
| PT | Pt Policy Comments | Allows the user to view, add, edit, or delete comments regarding the patient's policy.1 For more detailed information on Patient Policy Comments, refer to the eIV User Guide. |
| EA | Fast Edit All | A quick way to enter portions of the patient insurance information. IB GROUP PLAN EDIT security key is required for editing. |
| СР | Change Policy Plan | Allows the user to change the plan a veteran is subscribing. |
| VC | Verify Coverage | Allows the user to enter the system verification that the insurance coverage exists, and the information is correct. |
| AB | Annual Benefits (accesses Annual Benefits Editor screen) | Used to enter annual benefits data for the selected policy. |
| CV | Add/Edit Coverage | Allows the user to add, edit, or delete (unwanted) coverage limitations for a specific plan. IB GROUP PLAN EDIT security key is required for editing. |
| BU | Benefits Used (accesses the Benefits Used by Date Editor screen) | Used to enter policy benefits already used. |

-

¹ When the Patient Policy Information Screen is accessed by either the Third Party Joint Inquiry [IBJ Third Party Joint Inquiry] option or any of the Claims Tracking Editing options, the patient policy comments are in view only mode. User will not be able to edit, add, or deleted comments.

6.4. Annual Benefits Editor Screen

Once the benefit year is selected, this screen is displayed listing all the benefits for the selected insurance policy and benefit year. Benefit categories may include inpatient benefits, outpatient benefits, mental health, home health care, hospice, rehabilitation, and IV management.

Table 14: Common Actions

| Acronym | Description | Action |
|---------|--------------------|--|
| PI | Policy Information | Allows entry / edit of maximum out of pocket and ambulance coverage. |
| IP | Inpatient | Allows entry / edit of inpatient benefits data. |
| OP | Outpatient | Allows entry / edit of outpatient benefits data. |
| МН | Mental Health | Allows entry / edit of mental health inpatient and outpatient benefits data. |
| НН | Home Health | Allows entry / edit of home health care benefits data. |
| HS | Hospice | Allows entry / edit of hospice benefits data. |
| RH | Rehab | Allows entry / edit of rehabilitation benefits data. |
| IV | IV Mgmt. | Allows entry / edit of intravenous management benefits data. |
| EA | Edit All | Lists editable fields line by line for quick data entry. |
| CY | Change Year | Allows the user to change to another benefit year. |

6.4.1. Benefits Used by Date Editor Screen

Once the benefit year is selected, this screen is displayed listing all the benefits used for the selected insurance policy and benefit year. Benefit categories may include inpatient and outpatient deductibles.

Table 15: Common Actions

| Acronym | Description | Action |
|---------|-------------|---|
| PI | Policy Info | Allows entry / edit of policy information such as deductible met and pre-existing conditions. |
| OD | Opt Deduct | Allows entry / edit of the outpatient deductible insurance information. |
| ID | Inpt Deduct | Allows entry / edit of the inpatient deductible insurance information. |
| AC | Add Comment | Allows the user to add a comment regarding claims filed. |
| EA | Edit All | A quick way to enter portions of the patient insurance information. |
| CY | Change Year | Allows the user to change to another benefit year. |

6.5. View Patient Insurance

The View Patient Insurance option is used to look at a patient's insurance information. The system groups information that is specific to the insurance company, specific to the patient, specific to the group plan, specific to the annual benefits available, and the annual benefits already used. Editing of the data is not allowed through this option.

About the Screens

In the top left corner of each screen is the screen title. On some screens, the following line is a description of the information displayed. A plus sign (+) at the bottom of the screen indicates

there are additional screens. Left or right arrows (<<< >>>) may be displayed to indicate there is additional information to the left or right of the screen. Available actions are displayed below the screen. <??> entered at any "Select Action" prompt displays all available actions for that screen.

The user can QUIT from any screen; this will bring the user back one level or screen. EXIT is also available on most screens. When EXIT is entered, the user is prompted to "Exit option entirely?". A YES response returns the user to the menu. A NO response has the same result as the QUIT action. For more information on the use of the List Manager utility, please refer to the appendix at the end of this manual.

The following sections display screens found under this option, with a brief action description allow.

6.6. Patient Insurance Management Screen

Once a patient is selected, this screen is displayed listing all the patient's insurance policies. Information provided for each policy may include type of policy, group name or individual, holder, effective date, and expiration date.

Acronym **Description** Action VΡ View Policy Info Allows the user to view extensive insurance policy data. (accesses Patient **Policy Information** screen) AB Annual Benefits -Used to view annual benefits data for the selected policy. (accesses Annual Benefits Editor screen) Benefits Used -BU Used to view policy benefits already used. (accesses Benefits Used By Date Editor screen) CP **Change Patient** Allows the user to change to another patient without returning to the beginning of the option.

Table 16: Common Actions

6.7. Patient Policy Information Screen

This screen is displayed listing expanded policy information for the selected company. Categories include utilization review data, subscriber data, subscriber's employer information,

policy information, effective dates, plan coverage limitations, last contact, comments on the patient policy or insurance group plan, and personal riders. The only action allowed from this screen is EXIT.

6.8. Annual Benefits Editor Screen

Once the benefit year is selected, this screen is displayed listing all the benefits for the selected insurance policy and benefit year. Benefit categories may include inpatient benefits, outpatient benefits, mental health, home health care, hospice, rehabilitation, and IV management. The only actions allowed from this screen are CY to change the benefit year and EXIT.

6.9. Benefits Used By Date Editor Screen

Once the benefit year is selected, this screen is displayed listing all the benefits used for the selected insurance policy and benefit year. Benefit categories may include inpatient and outpatient deductibles. The only actions allowed from this screen are CY to change the benefit year and EXIT.

6.10. Insurance Company Entry / Edit

The Insurance Company Entry/Edit option is used to enter new insurance companies into the INSURANCE COMPANY file and edit data on existing companies. An insurance company must be in the INSURANCE COMPANY file before it can be entered into a patient's record.

When entering new insurance companies, the user will be prompted for the company street address, city, and whether the company will reimburse for treatment.

Following is a listing of the actions found on the screen in this option and a brief description of each. Once an action has been selected, <??> may be entered at most of the prompts that appear for lists of acceptable responses or instruction on how to respond.

6.11. Insurance Company Editor Screen

Once the insurance company is selected, this screen is displayed listing the following groups of information for that company: billing parameters, main mailing address, inpatient claims office data, outpatient claims office data, prescription claims office data, appeals office data, inquiry office data, remarks, and synonyms.

Description Acronym Action BP **Billing Parameters** Allows the user to add / edit the billing parameters for the selected MM Main Mailing Address - Allows the user to add/edit the company's main mailing address. The address entered here will automatically be entered for the other office addresses. IC Inpt Claims Office Allows the user to add / edit the company's inpatient claims office name, address, phone and fax numbers. OC **Opt Claims Office** Allows the user to add / edit the company's outpatient claims office name, address, phone and fax numbers. PC Prescr Claims Of -Allows the user to add / edit the company's prescription claims office name, address, phone and fax numbers.

Table 17: Common Actions

| Acronym | Description | Action |
|---------|---|---|
| АО | Appeals Office | Allows the user to add / edit the company's appeals office name, address, phone and fax numbers. |
| Ю | Inquiry Office - | Allows the user to add / edit the company's inquiry office name, address, phone and fax numbers. |
| RE | Remarks - | Allows the user to enter comments concerning the selected insurance company. |
| SY | Synonyms - | Allows the user to add / edit any synonyms for the selected company. |
| EA | Edit All | Lists editable fields line by line for quick data entry. |
| AI | (In)Activate Company | Allows the user to activate / inactivate the selected insurance company. This may be used to inactivate duplicate companies in the system. When an insurance company is no longer valid, it is important to inactivate the company rather than delete it from the system. The IB INSURANCE SUPERVISOR security key is required. Once a company has been inactivated, it may not be selected when entering billing information. The user may also obtain a report of patients insured by a given company through this action. |
| CC | Change Insurance Co. | Allows the user to change to another company without returning to the beginning of the option. |
| DC | Delete Company | Allows the user to delete an entry from the Insurance Company (#36) file. If claims have been submitted to the company, another company must be selected in which to point all claims and receivables information. |
| PL | Plans (accesses Insurance Plan List screen) | Allows the user to display and change plan attributes associated with the insurance company. |

6.12. Insurance Plan List Screen

This screen lists all plans (active and inactive, group and individual) for the selected insurance company.

Table 18: Common Actions

| Acronym | Description | Action | | | | | |
|---------|---|--|--|--|--|--|--|
| VP | View/Edit Plan (accesses View/Edit Plan screen) | Allows the user to display /change plan detailed information. | | | | | |
| IP | Inactive Plan | Allows the user to inactivate an insurance plan or move subscribers from multiple insurance plans into one master plan. IB GROUP PLAN EDIT security key is required. | | | | | |

| Acronym | Description | Action |
|---------|---|--|
| AB | Annual Benefits (accesses Annual Benefits Editor screen) | Used to enter annual benefits data for the selected policy. IB GROUP PLAN EDIT security key is required for editing. |
| NP | New Plan | Used to add a new group plan without assigning a subscriber. IB GROUP PLAN EDIT security key is required. |

6.13. Annual Benefits Editor Screen

Once the benefit year is selected, this screen is displayed listing all the benefits for the selected insurance policy and benefit year. Benefit categories may include inpatient benefits, outpatient benefits, mental health, home health care, hospice, rehabilitation, and IV management.

Common Actions

Table 19: Common Actions

| Acronym | Description | Action |
|---------|--------------------|--|
| PI | Policy Information | Allows entry / edit of maximum out of pocket and ambulance coverage. |
| IP | Inpatient | Allows entry / edit of inpatient benefits data. |
| ОР | Outpatient | Allows entry / edit of outpatient benefits data. |
| МН | Mental Health | Allows entry / edit of mental health inpatient and outpatient benefits data. |
| НН | Home Health | Allows entry / edit of home health care benefits data. |
| HS | Hospice | Allows entry / edit of hospice benefits data. |
| RH | Rehab | Allows entry / edit of rehabilitation benefits data. |
| IV | IV Mgmt. | Allows entry / edit of intravenous management benefits data. |
| EA | Edit All | Lists editable fields line by line for quick data entry. |
| CY | Change Year | Allows the user to change to another benefit year. |

6.14. View / Edit Plan Screen

This screen displays plan information for viewing / editing including utilization review info, plan coverage limitations, annual benefit dates, user information, and plan comments.

Table 20: Common Actions

| Acronym | Description | Action |
|---------|--------------------|---|
| PI | Policy Information | Allows entry / edit of maximum out of pocket and ambulance coverage. IB GROUP PLAN EDIT security key for editing. |

| Acronym | Description | Action |
|---------|---|--|
| UI | UR Info | Allows entry / edit of utilization review information. IB GROUP PLAN EDIT security key is required for editing. |
| CV | Add/Edit Coverage | Allows the user to add, edit, or delete (unwanted) coverage limitations for a specific plan. IB GROUP PLAN EDIT security key is required for editing. |
| PC | Plan Comments | Allows editing of comments for the plan. IB GROUP PLAN EDIT security key is required for editing. |
| IP | (In)Activate Plan | Allows the user to inactivate an insurance plan or move subscribers from multiple insurance plans into one master plan. IB GROUP PLAN EDIT security key is required. |
| AB | Annual Benefits - (accesses Annual Benefits Editor screen) | Used to enter annual benefits data for the selected policy. IB GROUP PLAN EDIT security key is required for editing. |
| СР | Change Plan | Allows the user to select another plan for this insurance company without having to exit back to the previous screen. |
| | | Although this option is not locked, the MCCR System Definition Menu is locked with the IB SUPERVISOR security key. |

6.15. View Insurance Company

The View Insurance Company option is used to look at data related to a selected insurance company. Editing of the data is not allowed through this option.

About the Screen

In the top left corner of each screen is the screen title. The following line is a description of the information displayed. A plus sign (+) at the bottom of the screen indicates there are additional screens. Left or right arrows (<<< >>>) may be displayed to indicate there is additional

information to the left or right of the screen. Available actions are displayed below the screen. <??> entered at any "Select Action" prompt displays all available actions for that screen.

The user can QUIT from any screen; this will bring the user back one level or screen. EXIT is also available on most screens. When EXIT is entered, the user is prompted to "Exit option entirely?". A YES response returns the user to the menu. A NO response has the same result as the QUIT action. For more information on the use of the List Manager utility, please refer to the appendix at the end of this manual.

6.16. Insurance Company Editor Screen

Once the insurance company is selected, this screen is displayed listing the following groups of information for that company: billing parameters, main mailing address, inpatient claims office data, outpatient claims office data, prescription claims office data, appeals office data, inquiry office data, remarks, and synonyms.

The two actions available through this option are CC Change Insurance Co. that allows the user to change to another company without returning to the beginning of the option, and EXIT.

6.17. Process Insurance Buffer

The IB INSURANCE SUPERVISOR security key is required to use the Reject Entry and Accept Entry actions. Adding new insurance companies requires the IB INSURANCE COMPANY ADD security key.

This option is used to process and manage the Insurance Buffer through the use of the following screens and actions.

6.18. Insurance Buffer List Screen

This screen contains the list of all Insurance Buffer file entries that have not yet been processed by authorized insurance personnel.

Process Entry Action
Opens the Insurance Buffer Process screen for a selected buffer entry. The buffer entry can then be compared against existing insurance records, viewed, edited, rejected, or accepted.

Reject Entry Action
Allows the user to reject a selected buffer entry without any changes to the existing permanent insurance records. This also results in the buffer entries insurance and patient data being deleted, leaving a stub record in the Buffer file for tracking and reporting purposes. The permanent Insurance files are not modified by this action. If the patient has no active insurance, then any bills on hold will be released.

Table 21: Common Actions

| Action | Description |
|---------------------|---|
| Expand Entry Action | Opens the Insurance Buffer Entry screen for a selected buffer entry. This screen displays the complete buffer entry and allows the data to be edited. |
| Add Action | Allows the user to create then edit a new Insurance Buffer entry. |
| Sort List | Re-sorts the list of unprocessed buffer entries on the Insurance Buffer List screen by a selected data element. |

6.19. Insurance Buffer Process Screen

This screen contains the information and actions needed to process a buffer entry. The screen display includes data to assist in matching the buffer entry with any existing insurance records. There are two versions of this screen,:

- 1. Patient (list is broken into 2 sections)
- 2. Insurance Company

Table 22: Common Actions

| Action | Description |
|--------------------------------|---|
| Accept Entry Action | Allows the user to accept the buffer data and transfer the insurance information from the buffer entry into the permanent insurance records. New insurance records can be created, or existing Insurance records can be updated with the buffer data. The new / updated Insurance record is flagged as verified. The insurance and patient data are deleted from the buffer entry leaving only a stub record for tracking and reporting purposes. If a new policy is added for the patient, the on hold date of any patient bills is updated to the current date. |
| Reject Entry Action | Allows the user to reject the buffer entry without any changes to the existing permanent insurance records. This also results in the buffer entries insurance and patient data being deleted, leaving a stub record in the Buffer file for tracking and reporting purposes. The permanent insurance files are not modified by this action. If the patient has no active insurance, any bills on hold are released. |
| Compare Entry Action | Displays the buffer entry and a user selected Insurance Policy side by side so to compare and determine if a match exists. It is also possible to edit the buffer entry data within this action. The display and editing are broken into three parts: Insurance Company data, Group / Plan data, and Patient Policy data. |
| Expand Entry Action | Opens the Insurance Buffer Entry screen for the buffer entry. It displays the complete buffer entry and allows the data to be edited. |
| Insurance Co/Patient Action | Toggles between the two versions of the Insurance Buffer Process screen: Patient or Insurance Company. If an Insurance Company is selected the Insurance Company version of the screen is displayed, if no company is selected the Patient version of the screen is displayed. |

6.20. Insurance Buffer Entry Screen

This screen displays all data defined for a buffer entry and allows that data to be edited.

Table 23: Common Actions

| Action | Description |
|-------------------------------|--|
| Insurance Co Edit Action | Edits the Insurance Company specific data in the buffer entry. |
| Group/Plan Edit Action | Edits the Insurance Group / Plan specific data in the buffer entry. |
| Patient Policy Edit Action | Edits the Patient Policy specific data in the buffer entry. |
| All Edit Action | Edits all three types of data in the buffer entry: Insurance Company, Group / Plan, and Patient Policy. |
| Verify Entry Action | Option to flag the buffer entry as verified before it is accepted. If the buffer entry is later accepted, the person that uses this action is added as the verifier in the permanent insurance policy. |

6.21. Manually Added HPIDs to Billing Claim Report

This report generates a list of Health Plan (HPID) numbers that have been added directly to claims. It allows billing staff to track the instances when an HPID number is added to a third-party claim and to generate an ad-hoc report of authorized claims with this entry information. Only HPIDs that have been manually added will appear on this report.

The user will be prompted for date range, report format, and device. The date range pertains to when the HPID was manually added to the claim.

This output displays patient name, last 4 of SSN, payer, HPID, claim number, username, date HPID added, Professional ID and Institutional ID.

6.22. Expire Group Plan (XPIR)

This Patient Insurance Menu (PI) option is used to specify an expiration date for all subscribers in a plan, effectively "terminating" the plan, without having to move the subscribers to a different plan. This option offers the user the option to inactivate the plan as part of the expiration or to allow the plan to remain active.

Sample Screens / Prompts

EXPIRE ALL SUBSCRIBERS WITHIN A GROUP PLAN
You can use this option to specify an expiration date for all subscriber policies in a
group plan without moving the subscribers to another group plan. If the group plan
status is currently "active," you can also choose to "inactivate" the group plan.
Select INSURANCE COMPANY:
You may select an existing Plan from a list or enter a specific Plan.
Do you wish to enter a specific plan? NO

• If the user response is NO, the Group Plan Lookup screen displays:

Figure 1: Group Plan Lookup - User Response of NO

• If the user response is **YES**, the following prompts display:

Figure 2: Group Plan Lookup - User Response of YES

```
Select a GROUP PLAN: CE

1 CENTRA Name: <NAME 1> Number: GRP NUM ####
2 CENTRA Name: <NAME 2> Number: GRP NUM ####
3 CENTRA Name: <NAME 3> Number: GRP NUM ####
CHOOSE 1-3:
```

• When the user selects a Group Plan, the following prompts display:

```
Collecting Subscribers . . .
This group plan has ## subscribers. All subscribers will be expired.
Do you want to expire all subscribers' policies for this plan? //YES
Enter expiration date (applies to all subscribers in this plan):
You selected to expire ## subscriber(s) with Expiration Date <MMM dd, yyyy> for:
      Insurance Company < INSURANCE COMPANY NAME>
     Plan Name <GROUP NAME>
                                   Number <GRP NUM #####>
Please note that the policy will be EXPIRED in the patient profile!!
Okay to continue? //YES
Expiring Policies . . .
Done. ## Subscribers' policies were expired as of <MMM dd, yyyy>.
A Bulletin was sent to you and members of 'IB NEW INSURANCE' Mail Group.
EXPIRE ALL SUBSCRIBERS WITHIN A GROUP PLAN
```

• One of the following messages may display if there are subscribers (policies) that were not / could not be expired:

```
These # entries could not be processed, they'll need to be adjusted manually.

Patient Name/ID Whose Employer Effective Expires

<patient name ####> <relation><employer> <date> <date>

Examine the entries that could not be processed.

Press RETURN to continue.
```

-or-

• If the group plan is active, the inactivate plan prompt, shown below, displays. The following warning displays with the inactivate plan prompt if there are subscribers (policies) that were not/could not be expired:

• If user response is YES, the following displays:

```
The <GROUP NAME> plan has been inactivated.
```

• If user response is NO, the following displays:

```
The <GROUP NAME> plan is still active.
```

• If the group plan is inactive, the following prompt displays:

6.23. Insurance Reports

The Insurance Reports menu provides the options to run the following reports:

Table 24: Report Descriptions

| Report | Description |
|--------|---|
| ABUF | Insurance Buffer Activity |
| AU | User Edit Report |
| EBUF | Insurance Buffer Employee |
| GP | List Group Plans without Annual Benefits |
| ID | Generate Insurance Company Listings |

| WNR | Patients Without MEDICARE (WNR) Insurance |
| WO | Patients with or without Insurance Report |

6.24. List Inactive Ins. Co. Covering Patients

The List Inactive Ins. Co. Covering Patients option is used to provide a listing of inactive insurance companies that are listed in the system as providing patient coverage.

Occasionally, an insurance company may be in the system twice under slightly different names (i.e., Blue Cross and Blue Cross of New York) when in fact it is the same company. Once the correct name is established, it would be necessary to inactivate the incorrect name and "repoint" those patients to the correct name. This option provides the number of patients that should be repointed to another company.

Information provided on the output includes insurance company name and address and the number of patients the system shows as having coverage by that company.

| INACTIVE INSURANCE COMP. | ANIES WITH PATIENTS | NOV 16,1993 | 08:46 | PAGE 1 NUMBER |

| ABC INS NATIONWIDE | 235 PENN AVE 77 PARKER BLVD | ANYTOWN ANYTOWN | NY MN | 19 1 |
| XYZ INS | 345 SECOND AVE | ANYTOWN | NY | 2 |

6.25. List Plans by Insurance Company

This report provides insurance information from both a plan and subscriber perspective. It is designed to generate lists of plans by insurance company and lists of subscribers (policies) by insurance plan. It can be used to generate plan and subscriber lists to be used for the database clean-up efforts. Once the database integrity has been restored, the report can be used to generate a list of subscribers to plans or companies.

This report is formatted to print at 132 columns.

6.29. Source of Information Report

The Source of Information Report (SOUR) option creates a report to help the user calculate accurate Return on Investment based on the source of information assigned to the patient policy. It includes only those specific policies associated with the parameters selected by the user during the report generation prompts.

Sample Screen

```
This report will print bills and payments within the user selected
date range that are associated to an insurance policy with a source
of information equal to the user selected criteria.
    Select one of the following:
                   Billed Date
                   Collected Date
Report by (B)ill Date or by (C)ollected Date?: // b Billed Date
Starting Billed Date: Mar 01, 2020// 1/1/15 (JAN 01, 2015)
 Ending Billed Date: Mar 23, 2020// 1/15/15 (JAN 15, 2015)
     *** Selected Billed Date range from Jan 01, 2015 to Jan 15, 2015 ***
Enter Sources of Information to include one at a time.

6.30. Release of Information Report

The VA Mission Act of 2018 modified the requirement for a signed Release of Information (ROI) when billing sensitive diagnoses. A signed ROI is not required for any bill for a sensitive diagnosis and a date of service on or after January 28, 2019. A date of service prior to January 28, 2019 will still require a signed ROI for a sensitive diagnosis.

This report provides a list of ROI for sensitive diagnosis medication and the associated expiration dates. The ROI report is designed to sort by expiration date, in reverse chronological order.

This report is formatted to print at 132 columns.

Sample Output

```
BEGINNING EXPIRATION DATE: T-180// (MAY 07, 2015)
ENDING EXPIRATION DATE: T+60// (JAN 02, 2016)
    Select one of the following:

7. Billing Supervisor Menu

*Documentation for the Unbilled Amounts Menu, which was released to the field as patch IB*2*19, has been included in this section of the manual as a matter of convenience. The Unbilled Amounts Menu [IBT UNBILLED MENU] need not be assigned to the Billing Supervisor Menu. It may be assigned to any menu in Integrated Billing, or to a user's secondary menu, as deemed appropriate by IRMS.

7.1. Insurance Buffer Activity

This report provides a summary of the activity within the Insurance Buffer for a specified date range. Counts, percentages, and average processing times are included for both processed and unprocessed entries. The report can be printed with totals only or by month within the selected date range.

Sample Output

| INSURANCE BUFF | ER ACTIVITY REP | ORT Apr 17 | , 1998 - Nov | 05, 1998 11/5/ | 98 11:06 PAGE 1 | | |

7.2. Management Reports (Billing) Menu

7.2.1. Statistical Report (IB)

This report lists the total number of Integrated Billing actions by action type along with the total charge by type for a date range. Integrated Billing actions include inpatient copayments by treating specialty, inpatient and NHCU per diems; and NHCU, outpatient, and pharmacy copayments.

Net statistics compute the current status for each new entry in the selected date range to calculate the net totals. Net totals are derived from the last update for a parent (even when the update is not within the date range) using the following formula: new entries (+) updates within the date range (-) cancellations.

The gross statistics count only the entries in the date range. It is possible that the net and gross statistics may not match. For example, if a charge was cancelled after the selected date range of the report but before the report ran, the net figures would reflect this, but the gross figures would not.

7.2.2. Most used Outpatient CPT Codes

This option will list the most common ambulatory procedures and ambulatory surgeries performed within a date range for selected clinic(s). This list may be used to help select which codes to include when building CPT check-off sheets through the Build CPT Check-off Sheet option under the Ambulatory Surgery Maintenance Menu.

The user can sort by clinic or procedure. When sorting by procedure, also include full procedure descriptions.

All reports provide the CPT code and procedure, a count of each procedure that has been entered for a clinic visit, number billed, the OPC status, and charge amount. The status and charge amount given are as of the current date. If no charge amount is shown, the procedure is not a billable procedure.

This output requires 132 column margin width.

Depending on the date range chosen, this report could be quite lengthy. Queue this to print during non-work hours.

7.2.3. Insurance Buffer Employee

This report provides a summary of entries and actions in the Insurance Buffer by employee for a specified date range. It can be printed for those employees who create buffer entries (primarily non-insurance personnel) or for those employees who verify and process (accept/reject) buffer entries (primarily insurance personnel). The report can also be printed for one specific employee or all employees. Counts, percentages, and average processing times are included and can be printed with totals only or by month.

7.2.4. Clerk Productivity

The Clerk Productivity option allows the user to print a report for bills entered, authorized, or printed within a selected date range. The report is sorted alphabetically by the clerk who first entered, authorized, or printed the bill.

The user can print either a full or summary report. If the user selects print a full report, select specific clerk(s) and rate type(s) to include.

A summary report will list the clerk, rate type, and the count and dollar amount of bills entered for each rate type for each clerk. A subtotal is provided for each clerk. The total amount for the report is also displayed.

The full report will list the clerk, rate type, date entered, current status, bill number, total charges, patient name, and patient ID for each bill included on the report. The full report should be printed at 132 column margin width.

Depending on the date range and other specifications opted for, this report could be quite lengthy. Queue the report to print during off hours.

7.2.5. Rank Insurance Carriers By Amount Billed

The Rank Insurance Carriers By Amount Billed option is used to generate a listing of insurance carriers ranked by the total amount billed. The user will be prompted for a date range from which bills should be selected and the number of carriers to be ranked.

NOTE: Insurance carriers that have been inactivated will be flagged as such on this report. If an inactivated company is associated with an active company to which all patients' policies have been recorded, the amount billed to the inactive company is credited to the active company.

This option no longer allows the user to transmit the report to the MCCR Program Office. Now, the IRM Service has the capability to transmit the report electronically to the Program Office. A patch will be issued with specific instructions should this report be required to be transmitted.

7.2.6. Billing Rates List

The Billing Rates List option will print a list of billing rates for a selected date range. It is an efficient way to verify that all billing rate entries have been entered correctly.

The output generated by this option displays the CHAMPVA, Health Care Finance Administration (HCFA) ambulatory surgery rates, Medicare deductible, and copayments. The effective date, amount (basic rate), and additional amount will be shown for each rate, if applicable. Certain ambulatory surgeries may be billed at the HCFA rate. The amount shown (if any) in the "Additional Amount" column is an extra amount that may be charged for all procedures within that rate group. The amount shown under "Inpatient Per Diem" and "NHCU Per Diem" is the daily charge for Category C patients.

Any billing rate that is effective for any date within the selected range is displayed. If more than one rate was effective within the date range, both rates are displayed.

7.2.7. Revenue Code Totals by Rate Type

The Revenue Code Totals by Rate Type option prints the total amount billed by revenue code for a selected rate type and date range.

Circular 10-91-012 requires that revenue code 100 be used for the \$10.00 hospital per diem and revenue code 550 be used for the \$5.00 nursing home per diem. The purpose of this report is to allow sites to calculate the total amount billed for \$5 (revenue code 550) and \$10 (revenue code 100) Means Test per diems for input to Automated Management Information System (AMIS) segments 295 and 296.

Print a list of all revenue codes (for the date range) with the associated patient name, patient ID, bill #, and individual amount or a summary list that provides the total amount and total number of bills for each code.

NOTE: Because more than one revenue code may appear on a bill, the total number of bills does not equal the sum of the number of bills containing a specific revenue code.

| Revenue Code Total | | | JUN 3, 1992@15: | :34:31 PAGE1 |

7.2.8. Bill Status Report

The Bill Status Report option is used to print a listing of bills and bill status for a specified date range. The user can opt to include all statuses or a single status. The report may be sorted by the event date (date beginning the bill's episode of care), bill date (date the bill was initially printed) or entered date (date the bill was first entered).

The following data items will be provided in the first portion of the report for each bill listed: bill number, patient name and patient ID#, event date, initials of the person who entered the bill, rate type, Means Test category, charges, and bill status with date of that status. If the user opts to sort by bill date or entered date, the bills are grouped for each date (billed or entered) of the selected range. The second portion of the report provides summary totals. The dollar amount and total number of bills for each bill type and for each status are included. Grand totals are also provided.

For bills that have been disapproved during the authorization process, the report will show *REVIEWED/DISAPP (will appear only for bills prior to this version of the IB software) or *AUTHORIZED/DISAPP after the status. The bill status will be followed by the initials of the user responsible for that status and his/her DUZ number. This is a number that uniquely identifies the user to the system. If a bill is pending (i.e., not printed or cancelled), the bill status will be preceded by an asterisk (*) on the report.

7.2.9. Rate Type Billing Totals Report

The Rate Type Billing Totals Report option is used to obtain a listing of all billing totals for each rate type for a specified date range. The date range is selected by event date (the date beginning the bill's episode of care) or bill date (the date the bill was initially printed).

The report is generated in two sections. The first section divides all the bills for each rate type (Category C, Workman's Compensation, Tort Feasor, etc.) into the following categories: initiated, pending, printed, and cancelled. The exact number of bills and dollar amount for each category is provided. The total amounts (sum of all rate types) are also given for each category.

The second section of the report is a breakdown of all the pending billing records (the "pending" category in the first section). All the pending bills for each rate type are divided into the following categories: no action, reviewed, and authorized. The exact number of bills and the dollar amount for each category is provided. The total amounts (sum of all rate types) are also given for each category.

The margin width of this output is 132.

7.2.10. Insurance Payment Trend Report

This option allows the user to analyze payment trends among insurance companies and track receivables that are due to the facility. Many different criteria may be specified to limit the selection of bills such as rate type, inpatient or outpatient bills, open or closed bills, treatment dates, bill printed dates, and insurance companies.

The report may be run for a single insurance company or a range of companies. In addition, the user may analyze any specialized subset of bills by selecting an additional field from the BILL/CLAIMS file (#399) and specifying a range of values for that field.

The Insurance Payment Trend Report displays the Payer's Name / TIN in the Header on the Summary and Main reports using the Payer TIN and Name stored in the (835).

The Insurance Payment Trend Report displays the 835 indicator (%) in front of the Patient Name if an 835 (ERA) is attached to the reported claim.

```

The user has the option to run a detailed report for all claims that meet the report criteria, or to print summary statistics only. The detailed report includes the bill number, patient name and age (as of the bill event date), bill from and to dates, date the bill was printed (authorized), date the bill closed, the number of days the bill has been open (the difference between the DATE PRINTED and the DATE BILL CLOSED fields), the amounts billed, collected, unpaid, remaining open, and percentage collected. The AMOUNT PENDING column has been added to differentiate the number of unpaid dollars and the number of dollars that are still pending collection. If the bill is not closed, the amount pending is the same as the amount unpaid. If the bill is closed (signified by an asterisk next to the bill number), the amount pending is zero.

The report is sorted alphabetically by insurance company name and a subtotal for number of bills, amount billed, amount collected, amount unpaid, amount pending, and percentage collected is given for each company. If the user opts only to print summary statistics, only these subtotals

are printed. Also included, for either the detailed or summary report, are the grand totals for these categories. A margin width of 132 cols. is required for this output.

The DATE BILL CLOSED field will always have an entry. If the bill is not actually closed, the Accounts Receivable status of the bill will appear on the report in the DATE BILL CLOSED column. If a bill is closed, an asterisk (*) will appear after the bill number. If a bill is rejected a "c" will display next to that bill number.

7.2.11. Unbilled BASC for Insured Patient Appointments

The Unbilled BASC for Insured Patient Appointments report lists all BASC (billable ambulatory surgical code) procedures for scheduled appointments of insured patients that could not be matched with BASC procedures entered on a bill for the patient for a selected date range. The match is based on the appointment date in Scheduling and the procedure date in Billing. The purpose of this report is to find all CPTs that were entered in Scheduling but never brought into Billing.

The list is printed in alphabetical order by patient name and provides the patient ID, appointment date, CPT code, and procedure.

| PATIENT NAME PROCEDURE | PATIENT ID | APPOINTMENT DATE | BILLABLE AMBULATORY |

7.3. Medication Copayment Income Exemption Menu

7.3.1. Print Charges Canceled Due to Income Exemption

This option enables the user to print a report that lists patients and medication copayment charges that are cancelled due to the income exemption (charges to patients determined to be exempt from the medication copayment requirement).

The user is prompted for a date range. The "start date" defaults to the effective date of the medication copayment legislation (Public Law 102-568), October 30, 1992, and the "to date" defaults to the date of the conversion completion.

This report should be reconciled periodically with the Accounts Receivable Medication Co-Pay Exemption Report (Medication Co-Pay Exemption Report option) to insure accuracy of patients' accounts.

Initially, this report will print a list of charges cancelled during the installation / conversion process. Later, this report may be used to list charges automatically cancelled. This occurs when a patient with a status of NON-EXEMPT due to no income data becomes EXEMPT due to income below the threshold level.

This report includes the patient name and ID, prescription date and number, cancel date and IB number, bill number and amount, a patient count, and dollar total. The user can also print a Conversion Quick Status Report with the listing that includes data such as the dates the conversion started and completed, total number of patients checked, number of patients exempt and non-exempt, the number of bills checked, dollar amount checked, total bills cancelled, and amount cancelled.

Queue this report to print during non-work hours as it may be very lengthy. The output for this option requires 132 columns.

7.3.2. Edit Copay Exemption Letter

This option allows the user to edit IB form letters. The user is prompted to edit the HEADER field. This text is automatically centered at the top of the letter (it is not necessary to center text) and must be edited to the facility's name and address. There is a limit of six lines of text.

The second field, the MAIN BODY, contains the text of the letter including the signer's title. Because the person signing this letter may be site specific, it might be necessary to edit the signer's title.

The default for the starting address line (patient address) is 15. This may be edited to any number between 10 and 25. This feature is provided to account for slight differences in printers and automated letter folders at each site.

When editing the IB Income Test Reminder letter, the user is prompted for a reprint date, whether to exclude domiciliary patients, and to schedule the days on that the letters are to print. The days selected to print the letters represent the mornings the user wants to pick up the letters from the printer. For example, if Monday is chosen, the letters print Sunday evening and are

ready to be picked up on Monday morning. The user can prevent the letters from being printed by answering YES to the "Do you wish to stop this job from running?" prompt.

After editing is completed, test print one letter. If the user opts to test print, a prompt to select a patient and device will appear. The letter is queueable to any printer.

    54 BROADWAY
    ANYTOWN, MA 04443
The VA is required by law to charge veterans who receive medications
on an outpatient basis for the treatment of nonservice-connected
conditions, a copayment of $2.00 for each 30-day (or less) supply
of medication provided. Based on the income information requested
each year, some veterans may be exempt from the copayment.
Our records indicate that your medication copayment exemption
status will expire on December 31, 1995.
To update your income information so we may review your
copayment exemption status, please call 555-3311 x9372
to set up an appointment to provide us with current
income information.
Chief, MAS
```

7.3.3. Inquire to Medication Copay Income Exemptions

This option allows the user to print a brief or full inquiry of exemptions for a patient. The brief inquiry is used to view past and / or present exemptions, and the full inquiry is used to view the entire audit history of all changes to a patient's exemption status.

Both inquiries provide the patient name and current status. The brief inquiry provides the following information on all active exemptions for the selected patient: effective date, type, status, reason, how the entry was added, and when. The full inquiry provides the following information for each exemption for the patient: effective date, status, whether active or inactive, how the entry was added, by whom and when, type, and reason for exemption.

NOTE: Programmers: For users whose FileMan Access = "@" (DUZ(0)= "@"), the full inquiry feature will display the patient internal entry number and the billing exemption internal entry number to aid in problem resolution.

All Medal of Honor recipients will be exempt from Medication Copayment (Public Law 114-315).

7.3.4. Manually Change Copay Exemption (Hardships)

This option is designed to grant and / or remove hardship waivers for patients who request the new copay income test. It may also be used to grant exemptions to Means Test patients; however, if MAS grants a hardship waiver to the Means Test by changing a patient's Means Test status from Category C to Category A, a hardship exemption is automatically generated.

A message or alert is generated anytime a hardship exemption is granted or removed. If the USE ALERTS site parameter is set to NO (or the field is left unanswered), a mail bulletin is generated; if set to YES, an alert is generated. A sample mail bulletin is provided in the example.

The system attempts to keep the effective date of the exemption the same as the effective date of the income test by defaulting to the effective date of the last exemption at the "Select Effective Date" prompt. Only the date of previous exemptions or the current date may be entered at this prompt.

Occasionally, the creation of a patient's exemption may be interrupted unexpectedly. In such cases, this option may be used to detect copay exemption discrepancies and correct/update the patient's exemption status.

Once a waiver is granted, the exemption is good for one year from the date it is granted. An electronic signature code is required to grant a hardship waiver.

Sample Output

7.3.5. Letters to Exempt Patients

This option is used to print the letters to be sent to patients who have been determined to be exempt from the medication copay. A range of patients and exemption effective dates may be specified. No letters will print for deceased patients, non-veterans, and patients who are SC>50%.

When this option is initially run, the user is prompted would like to store the results of the search in a template. If the answer YES, a search template, IB EXEMPTION LETTER, is created. This data may be accessed through the Print File Entries option in FileMan. For each subsequent search, the user is prompted to delete the results of the previous search. If YES, the previous search template is deleted, and an option of storing the results of the search. Only one IB EXEMPTION LETTER search template may exist at a time.

Medication copayment exemptions based on annual income must be re-evaluated yearly on the anniversary of a patient's copayment test. If a patient is exempt due to income below the threshold, a renewal date is shown below the "in reply" heading of the letter. The patient must complete a new copay income test by the renewal date, or he/she will no longer be considered exempt from the pharmacy copayment requirement.

This letter is designed to be one page and to print to a pin fed printer, on plain paper, in either 10 or 12 pitch. The default is set to start the address on line 15; however, this may be edited through the Edit Copay Exemption Letter option. If address line three contains data, that data prints at the end of address line two. If defined, temporary addresses are used.

IB*2.0*385 is part of VistA host file DG_53_P858.KID and provides Integrated Billing (IB) enhancements to support the Veterans Financial Assessment (VFA) Project. The VFA Project eliminates the annual means test renewal requirement for Veterans subject to means testing. Prior to the implementation of VFA, means test with a status of MT COPAY EXEMPT, GMT COPAY REQUIRED, or PENDING ADJUDICATION were considered "expired" 365 days from the effective date. Means tests with these statuses will no longer expire and will be considered "current" when the means test effective date is less than one year old from the VFA start date and forward. The VFA START DATE is a new field in the MAS PARAMETER File set to 1/1/2013 during installation of the VFA host file.

NOTE: The VFA Project did not include nor make any enhancements to copay exemption tests.

The following business rules pertain for exemptions letters where the billing exemption record was based on current means tests:

Exemptions letters based on a current means test will not include the renewal date. The letter should not state the means test needs to be re-evaluated yearly on the means test anniversary date.

7.3.6. List Income Thresholds

This option allows the user to print an output that lists the income thresholds used in the medication copayment income exemption process sorted by type of threshold and effective date.

If the default of FIRST is accepted at the start date prompt, first to last is assumed.

This output requires 132 columns.

Sample Output

7.3.7. Print Patient Exemptions or Summary

This option allows the user to print a list of copayment exemption statistics. Both exempt and non-exempt patients are included.

The user is given the option to print a detailed patient listing or a summary. The detailed report may be sorted by either exemption status or exemption reason. The information given includes the patient name, patient ID, primary eligibility code, status, reason for exemption/non-exemption, and status date. This data is followed by a summary showing subtotals for each exemption reason and totals for exempt and non-exempt patients. If the user opts to "Print Summary Only", the detailed portion of the output is omitted. Deceased patients are not included in the summary provided with the detailed listing; however, if print the summary only is selected, deceased patients are included. Exemptions will now include Medal of Honor (Public Law 114-315).

When printing only a summary, sorting by the EXEMPTION STATUS default reduces the time required to produce the report.

The detailed patient listing requires 132 columns. Queue this output to print during non-work hours as it may be very lengthy.

7.3.8. Reprint Single Income Test Reminder Letter

This option is used to generate an Income Test reminder letter for a patient whose effective copay exemption is based upon income.

If the patient is currently non-exempt due to no income data reported, a letter may be generated if the patient's previous exemption status is based on income.

IB*2.0*385 is part of VistA host file DG_53_P858.KID and provides Integrated Billing (IB) enhancements to support the Veterans Financial Assessment (VFA) Project. The VFA Project eliminates the annual means test renewal requirement for Veterans subject to means testing. Prior to the implementation of VFA, means test with a status of MT COPAY EXEMPT, GMT COPAY REQUIRED, or PENDING ADJUDICATION were considered "expired" 365 days from the effective date. Means tests with these statuses will no longer expire and will be considered "current" when the means test effective date is less than one year old from the VFA start date and forward. The VFA START DATE is a new field in the MAS PARAMETER File set to 1/1/2013 during installation of the VFA host file.

NOTE: The VFA Project did not include nor make any enhancements to copay exemption tests.

The following business rules pertain for reminder letters where the billing exemption record was based on current means tests:

Reminder Letters

The user will receive a warning when the Veterans current medication copayment exemption is based on a current means test. The user is returned to the (menu or select patient prompt) and the letter is not printed.

Sample Letter

```
Department of Veterans Affairs Medical Center
113 Holland Avenue
ANYTOWN, New York 12208
```

```
DEC 14, 1995
                                                    In Reply Refer To:
                                                    000-11-1111
     ONE IBPATIENT
     00 BROADWAY
    BOSTON, MA 04443
The VA is required by law to charge veterans who receive medications
on an outpatient basis for the treatment of nonservice-connected
conditions, a copayment of $2.00 for each 30-day (or less) supply
of medication provided. Based on the income information requested
each year, some veterans may be exempt from the copayment.
Our records indicate that your medication copayment exemption
status will expire on December 31, 1995.
To update your income information so we may review your
copayment exemption status, please call 462-3311 x9372
to set up an appointment to provide us with current
income information.
Chief, MAS
```

7.3.9. Add Income Thresholds

This option is used to enter / edit the income thresholds used in the medication copayment income exemption.

The thresholds are determined and released by VBA (Veterans Benefits Administration) December 1st of each year. These are the same thresholds used for A&A pensions.

Once the ADDITIONAL DEPENDENT AMOUNT is entered, the amount for each additional dependent can be automatically calculated when the copayment income exemptions are built. However, if the amount for each additional dependent does not have to be calculated, the exemption can be built much faster; therefore, it is advantageous to enter the amount for each dependent.

If the new income thresholds are released or entered after the normal effective date, this package was designed to note exemptions created with thresholds over one year old and to allow automatic recompilation of just those exemptions.

7.3.10. Print / Verify Patient Exemption Status

This option will search the BILLING EXEMPTIONS file (#354.1) and compare the currently stored active exemption for each patient against what the system calculates to be the correct exemption status for the patient based on current data from the MAS files.

Once a date range is selected, the user is asked whether to update each incorrect exemption status. If NO, a list of discrepancies is printed without updating the incorrect statuses. If YES, the same report will print, and the statuses are updated. Initially, the report should be run without updating the exemptions.

The Manually Change Copay Exemptions (Hardship) option may also be used to update exemptions to the correct status one patient at a time.

Print / Verify Patient Exemption Status option will identify existing patients with incorrect exemptions that should be Medal of Honor exemptions and update the status of Medal of Honor recipients (Public Law 114-315).

This output requires 132 columns. Queue to print during non-work hours as it can be quite lengthy.

7.4. MCCR System Definition Menu

The MCCR System Definition Menu is locked with the IB SUPERVISOR security key.

7.4.1. Enter / Edit Automated Billing Parameters

The Enter/Edit Automated Billing Parameters option is used to enter or edit the parameters that control automated third-party billing. Only entries in the Claims Tracking module will be billed automatically. Currently, only inpatient stays, outpatient encounters, and prescription refills are included in automated billing.

The following table lists a brief description of the parameters:

Table 25: Parameter Descriptions

| Parameter | Description |
|--------------------------|---|
| AUTO BILLER FREQUENCY | Number of days between each execution of the automated biller. For example, if the auto biller should run once a week, enter 7; if it should run every night, enter 1. If this field is left blank, the auto biller will never run. |
| INPATIENT STATUS (AB) | This is the status that a PTF record must be in before the automated biller will attempt to create an inpatient bill. The PTF record must be closed before an automated bill can be created. |
| AUTOMATE BILLING | This parameter controls the automated creation of bills. If this field is set to YES, the bills will be automatically created for possible billable events with no user interaction. If this field is left blank, the earliest auto bill date must be added to each event in Claims Tracking before a bill is automatically created by the auto biller. |

| Parameter | Description |
|---------------|---|
| BILLING CYCLE | This is the maximum number of days allowed to be billed on a single bill. If this field is left blank, the date range will default to the event date through the end of the month in which the event took place or for inpatient interim bills, the next month after the last interim bill. Claims Tracking events may be added to the list of events for which an auto bill should be created by adding a date to the earliest auto bill date in Claims Tracking. Events may be removed from the auto biller list by adding a reason not billable or deleting the earliest auto bill date. |
| DAYS DELAY | This field controls the number of days after the end of the BILLING CYCLE that a bill should be created. This parameter is used at two different points to determine if a bill should be created. The first is when the Claims Tracking entry is first created. At that time, the EARLIEST AUTO BILL DATE will be set to the current date plus the number of DAYS DELAY. The second time this parameter is used is when the auto biller is trying to set up a date range for the events bill. In that case, DAYS DELAY is added to the BILLING CYCLE to determine if the correct amount of time has elapsed for the bill to be created. |
| | For example, if DAYS DELAY is 3 and BILLING CYCLE is 10, a bill will not be created for at least 13 days after the initial entry was created in Claims Tracking. Inpatients are slightly different. If an inpatient is discharged, the auto biller will try to create a bill for that stay DAYS DELAY after the discharge date. The auto biller cannot, however, create a bill until the PTF record is closed. Therefore, the actual delay before bill creation for inpatient bills may be longer than DAYS DELAY. |

7.5. Charge Master Menu

7.5.1. Enter / Edit Charge Master

This option is used for the maintenance of Third-Party rates and charges. It contains the List Manager screens, which display all rate elements / fields. It also includes enter and edit actions so each element can be updated. All edit actions within these screens require the IB SUPERVISOR key.

Table 26: Screen Descriptions

| Screen | Description |
|---------------------|--|
| Introduction Screen | This screen displays a brief description of the elements of the Charge Master that may be viewed / edited through this option. The user can display / edit rate types, billing rates, charge sets, and rate schedules. |

| Screen | Description |
|------------------------|--|
| Rate Type Screen | This is a display / edit screen for Billing Rate Types. All Rate Types currently defined are displayed. |
| Billing Rates Screen | This is a display / edit screen for Billing Rates. All Billing Rates currently defined are displayed. Part of the definition of a Billing Rate includes what types of item the rate's charges are associated with (Billable Item) and how the charge should be calculated (Charge Method). |
| Charge Set Screen | This is a display / edit screen for Charge Sets. All Charge Sets currently defined will be displayed. These sets define a sub-set of charges for a Billing Rate. The editing of Charge Sets is restricted to non-critical elements if there are Charge Items defined for the set. Since Revenue Code and Bed section are required to add charges to a bill, the Default Revenue Code and Default Bed section are required unless these are defined for each individual Charge Item in the Set. |
| Charge Item Screen | This is a display / edit screen for Charge Items. These are the actual records of the item and its corresponding charge. This screen displays items that have active charges in a specified date range for the selected Charge Set. All active Charge Items are displayed for a Charge Set with a Billable Item of Bed section. However, this screen has been specifically limited to displaying either one CPT or one AWP item at a time. The Effective Date is required for all entries and controls when the charge is active. Each item entry overrides any previously effective charge for the item. A Revenue Code is only required if the Revenue Code of the Charge Set. |
| Billing Regions Screen | This is a display / edit screen for Billing Regions. All Billing Regions currently defined will be displayed. Billing Regions can be set-up that show the set of divisions that are billed the same charges for a Billing Rate. A Billing Region need only be defined if the charges for a rate vary by region/locality/division and more than one Region will be billed at the site. Currently only Billing Rates based on CPT charges may vary by region. |
| Rate Schedule Screen | This is a display / edit screen for Rate Schedules. These schedules link charges and types of bills to be added to. All Rate Schedules currently defined are displayed. Rate Schedules must be defined for both inpatient and outpatient charges for a Rate Type and all Charge Sets that may be charged to that type of bill should be added. A Charge Set can set-up to be automatically added to bills or to require user input before the charges are added. The effective dates should only be added if there is a specific date that billing to the payer can start or stop. |

7.5.2. Print Charge Master

This option provides reports for all elements of the Charge Master and maintenance of Third-Party rates. The full Charge Item report could be lengthy if many items have been added, such as CMAC (CHAMPUS Maximum Allowable Charges) charges.

7.5.3. Activate Revenue Codes

The Activate Revenue Codes option allows sites to activate revenue codes used for third-party billing.

The revenue codes are provided by the National Uniform Billing Committee. The full set of 999 codes is sent to each site. All codes have an INACTIVE status when received. The site chooses which codes to use for billing purposes by activating the codes through this option. Some of the codes are reserved for national assignment (no definition yet). These reserve codes cannot be activated. Only activated revenue codes may be selected during the billing process.

Adding or deleting codes from the REVENUE CODE file is NOT allowed.

7.5.4. Enter / Edit Billing Rates

The Enter/Edit Billing Rates option is used to edit billing rates for per diem rates; the Medicare deductible (this is the only place the Medicare deductible is entered); the HCFA ambulatory surgery rates, pharmacy copayment amounts, and CHAMPVA subsistence rates that are used in the automatic calculation of costs when preparing a third party bill.

Although the option allows entry of new rates, it should only be used for editing and for the entry of duplicate rates. Duplicate rates are those where two different rates are used for the same revenue code / bed section / effective date dependent on payor. All other new billing rates should be entered through the Fast Enter New Billing Rates option.

If YES is answered at the "NON-STANDARD RATE" prompt, that billing rate will only be used with insurance companies where the selected revenue code has been listed in the DIFFERENT REVENUE CODES TO USE field of the INSURANCE COMPANY file.

The user may enter an additional amount as well as the basic amount to be charged for all rates. This is a fixed additional dollar amount that will be added to the basic charge after it has been computed. An example would be the additional charge of \$200 added to HCFA Ambulatory Surgery rate groups for inter-ocular lens implants.

Accuracy in entering billing rates is critical. Incorrect entries will result in erroneous bills. After new rates are entered, it is suggested to print the Billing Rates List (Billing Rates List option on the Management Reports Menu) and verify that all entries are correctly recorded.

7.5.5. Flag Stop Codes / Dispositions / Clinics

Outpatient encounters recorded in the Scheduling package as either registrations or "stand-alone" stop codes will be billed automatically as those events are checked out. The Flag Stop Codes / Dispositions / Clinics option is used to flag / unflag those stop codes and dispositions that should not be billed. The option may also be used to flag clinics where Means Test billing is not appropriate.

If the user makes more than one selection, an opportunity to review the selections and deselect any, if necessary. All selections will be assigned the same effective date and billable status.

NOTE: Once a selection has been flagged as non-billable, it may later be flagged as billable if it is subsequently determined it would be appropriate to continue billing.

7.5.6. Flag Stop Codes / Clinics for Third Party

Non-billable stop codes or clinics are those that should not be billed to a Third-Party payer. By default, if a stop code or clinic is non-billable, it will not be billed by the auto biller; and therefore, is non-auto billable.

Non-auto billable stop codes or clinics are those that may be billable to a Third-Party payer, but the auto biller should not be used for billing. These are visits that need more research than can be performed by the auto biller to determine if billable.

These parameters are flagged by date and may be inactivated and reactivated.

7.5.7. Insurance Company Entry / Edit

The Insurance Company Entry/Edit option is used to enter new insurance companies into the INSURANCE COMPANY file and edit data on existing companies. An insurance company must be in the INSURANCE COMPANY file before it can be entered into a patient's record.

When entering new insurance companies, the user will be prompted for the company street address, city, and whether the company will reimburse for treatment.

The following sections are lists of the actions found on the screen in this option and a brief description of each. Once an action has been selected, <??> may be entered at most of the prompts that appear for lists of acceptable responses or instruction on how to respond.

7.5.7.1. Insurance Company Editor Screen

Once the insurance company is selected, this screen is displayed listing the following groups of information for that company: billing parameters, main mailing address, inpatient claims office data, outpatient claims office data, prescription claims office data, appeals office data, inquiry office data, remarks, and synonyms.

Acronym **Description** Action BP Allows the user to add / edit the billing parameters for the **Billing Parameters** selected insurance company. Allows the user to add / edit the company's main mailing MM Main Mailing address. The address entered here will automatically be Address entered for the other office addresses. IC Inpt Claims Office Allows the user to add / edit the company's inpatient claims office name, address, phone and fax numbers. OC **Opt Claims Office** Allows the user to add / edit the company's outpatient claims office name, address, phone and fax numbers. PC Prescr Claims Of Allows the user to add / edit the company's prescription claims office name, address, phone and fax numbers.

name, address, phone and fax numbers.

name, address, phone and fax numbers.

| Acronym | Description | Action | |
|---------|---|---|--|
| RE | Remarks | Allows the user to enter comments concerning the selected insurance company. | |
| SY | Synonyms | Allows the user to add / edit any synonyms for the selected company. | |
| EA | Edit All | Lists editable fields line by line for quick data entry. | |
| IA | (In)Activate Company | Allows the user to activate / inactivate the selected insurance company. This may be used to inactivate duplicate companies in the system. When an insurance company is no longer valid, it is important to inactivate the company rather than delete it from the system. The IB INSURANCE SUPERVISOR security key is required. Once a company has been inactivated, it may not be selected when entering billing information. The user may also obtain a report of patients insured by a given company through this action. | |
| CC | Change Insurance Co. | Allows the user to change to another company without returning to the beginning of the option. | |
| DC | Delete Company | Allows the user to delete an entry from the INSURANCE COMPANY (#36) file. If claims have been submitted to the company, another company must be selected in which to point all claims and receivables information. | |
| PL | Plans (accesses Insurance Plan List screen) | Allows the user to display and change plan attributes associated with the insurance company. | |

7.5.7.2. Insurance Plan List Screen

This screen lists all plans (active and inactive, group and individual) for the selected insurance company.

Table 28: Common Actions

| Acronym | Description | Action |
|---------|---|---|
| VP | View/Edit Plan (accesses the View/Edit Plan screen) | Allows the user to display / change plan detailed information. |
| IP | Inactive Plan | Allows the user to inactivate an insurance plan or move subscribers from multiple insurance plans into one master plan. |
| АВ | Annual Benefits - (accesses Annual Benefits Editor screen) | Used to enter annual benefits data for the selected policy. |

7.5.7.3. Annual Benefits Editor Screen

Once the benefit year is selected, this screen is displayed listing all the benefits for the selected insurance policy and benefit year. Benefit categories may include inpatient benefits, outpatient benefits, mental health, home health care, hospice, rehabilitation, and IV management.

Table 29: Common Actions

| Acronym | Description | Action |
|---------|--------------------|--|
| PI | Policy Information | Allows entry / edit of maximum out of pocket and ambulance coverage. |
| IP | Inpatient | Allows entry / edit of inpatient benefits data. |
| OP | Outpatient | Allows entry / edit of outpatient benefits data. |
| МН | Mental Health | Allows entry / edit of mental health inpatient and outpatient benefits data. |
| НН | Home Health | Allows entry / edit of home health care benefits data. |
| HS | Hospice | Allows entry / edit of hospice benefits data. |
| RH | Rehab | Allows entry / edit of rehabilitation benefits data. |
| IV | IV Mgmt. | Allows entry / edit of intravenous management benefits data. |
| EA | Edit All | Lists editable fields line by line for quick data entry. |
| CY | Change Year | Allows the user to change to another benefit year. |

7.5.7.4. View / Edit Plan Screen

This screen displays plan information for viewing / editing including utilization review info, plan coverage limitations, annual benefit dates, user information, and plan comments.

Table 30: Common Actions

| Acronym | Description | Action |
|---------|---|---|
| PI | Policy Information | Allows entry / edit of maximum out of pocket and ambulance coverage. |
| UI | UR Info | Allows entry / edit of utilization review information. |
| CV | Add/Edit Coverage | Allows the user to add, edit, or delete (unwanted) coverage limitations for a specific plan. |
| PC | Plan Comments | Allows editing of comments for the plan. |
| IP | Inpatient | Allows entry / edit of inpatient benefits data. |
| AB | Annual Benefits - (accesses Annual Benefits Editor screen) | Used to enter annual benefits data for the selected policy. |
| СР | Change Plan | Allows the user to select another plan for this insurance company without having to exit back to the previous screen. |

7.5.8. List Flagged Stop Codes / Dispositions / Clinics

The List Flagged Stop Codes / Dispositions / Clinics option is used to generate a list of all stop codes, dispositions, and clinics That have been flagged as not being billable for Means Test billing.

The user is prompted for the effective date of the list and a device. The output contains a separate page for non-billable dispositions, stop codes, and clinics.

Sample Output

```
LIST OF NON-BILLABLE DISPOSITIONS
                  As Of: 12/16/93
                                   Page: 1

```

7.5.8.1. List Flagged Stop Codes / Clinics for Third Party

This output is used to generate a list of all stop codes and clinics that are flagged through the Flag Stop Codes / Clinics for Third Party option as *non-billable* or *non-auto billable*. These flags can be deactivated and reactivated through the above-mentioned option.

Non-billable stop codes or clinics are those that should not be billed to a Third-Party payer. By default, if a stop code or clinic is non-billable, it will not be billed by the auto biller; and therefore, is non-auto billable.

Non-auto billable stop codes or clinics are those that may be billable to a Third-Party payer, but the auto biller should not be used for billing. These are visits that may need more research than can be performed by the auto biller to determine if billable.

Sample Output

```
LIST OF CLINIC STOP CODES FLAGGED FOR THIRD PARTY BILLING
                                      As Of: 10/01/96

7.5.9. Billing Rates List

The Billing Rates List option will print a list of billing rates for a selected date range. It is an efficient way to verify that all billing rate entries have been entered correctly.

The output generated by this option displays the CHAMPVA, Health Care Finance Administration (HCFA) ambulatory surgery rates, Medicare deductible, and copayments. The effective date, amount (basic rate), and additional amount will be shown for each rate, if applicable. Certain ambulatory surgeries may be billed at the HCFA rate. The amount shown (if any) in the "Additional Amount" column is an extra amount that may be charged for all procedures within that rate group. The amount shown under "Inpatient Per Diem" and "NHCU Per Diem" is the daily charge for Category C patients.

Any billing rate that is effective for any date within the selected range is displayed. If more than one rate was effective within the date range, both rates are displayed.

Sample Output

| JUN 11,1997 *** | *Billing | Rates Listing | * * * | | | | PAGE 1 | |

7.5.10. MCCR Site Parameter Enter / Edit

The MCCR Site Parameter Enter/Edit option allows the user to define and edit the MCCR site specific billing parameters. The parameters are displayed upon entering the option and are divided into groups for editing. Each group is labeled with a number to the left of the data items. Some values may be filled in by the system.

- **Group 1:** The medical center name is automatically filled in and is not editable. The federal tax number is the tax ID# assigned to the medical center and is a required field. There may be more than one Blue Cross / Blue Shield provider number assigned to a site for different categories of care. The main Blue Cross / Blue Shield provider number should be entered here. This is a required field. The Medicare provider number is furnished to the facility by Medicare. The MAS Service Pointer is Medical Administration Service the way it is entered in the HOSPITAL SERVICE file. The default division will appear as the default to the division question when entering Billable Ambulatory Surgical Codes on a bill.
- **Group 2:** The name and title of bill signer will appear on the third-party billing form. The billing supervisor name does not appear on the form. This is used in conjunction with the Bill Cancellation and Bill Disapproval Mail Groups. If these groups are not specified, the billing supervisor will be one of the few recipients of both messages.
- **Group 3:** The Multiple Form Types parameter should be set to YES if the facility uses more than one health insurance billing form. UB forms and HCFA-1500 are the forms currently available. If this field is left blank or answered NO, only UB forms will be allowed. Beginning with version 1.5 of Integrated Billing, the review step of creating a bill has been eliminated. If the CAN INITIATOR AUTHORIZE parameter is set to YES and the initiator holds the IB AUTHORIZE security key, the initiator of the bill will be allowed to authorize the bill. If this parameter is set to NO, another user who holds the IB AUTHORIZE key will have to authorize the bill.

The CAN CLERK ENTER NON-PTF CODES parameter affects editing of diagnosis and procedure codes on inpatient bills. If this parameter is set to YES, diagnosis and procedure codes not found in the PTF record may be entered into the billing record. The ASK HINQ IN MCCR parameter, if set to YES, will allow the billing clerk to enter a request in the HINQ Suspense file while entering a bill for a patient whose eligibility has not been verified. If set to YES, the USE OP CPT SCREEN parameter will allow the Current Procedural Terminology Codes Screen for outpatient bills to be displayed on Billing Screen 5. The date range of this listing will be determined by the OP VISIT DATE(S) on file in the bill. If there are none, the STATEMENT COVERS FROM and TO dates will be used to determine which CPT codes can be selected for inclusion in the bill.

234

When billing Billable Ambulatory Surgical Codes (BASC), the entry at the DEFAULT AMB SURG REV CODE parameter will be the default revenue code stored in the bill. If this is not appropriate for any insurance company, the AMBULATORY SURG. REV. CODE field in the Insurance Company file may be entered and used for that insurance company entry.

CPT procedures may be stored as ambulatory procedures in the SCHEDULING VISITS file (using the Add/Edit Stop Code option) and stored in the billing record as procedures to print on a bill. There is now a two-way sharing of information between these two files. If the TRANSFER PROCEDURES TO SCHED parameter is answered YES, as CPT procedures that are also ambulatory procedures are entered into a bill, the user will be prompted to indicate whether it should also be transferred to the SCHEDULING VISITS file. Conversely, the USE OP CPT SCREEN parameter allows importing of ambulatory procedures into a bill. Only CPT procedures that are either Billable Ambulatory Surgical Codes or nationally or locally active ambulatory procedures may be transferred.

The per diem start date is the date that the facility informed Category C patients of the new per diem charges and began per diem billing. This field represents the earliest date the hospital or nursing home per diem charge may be billed to a Category C patient. This billing is mandated by Public Law 101-508, which was implemented on November 5, 1990.

NOTE: Per diem billing will not occur if this field is blank.

A default revenue code, diagnosis code, and CPT procedure code can be set to be used on every bill that has prescription refills. The revenue code default will be overridden by the PRESCRIPTION REFILL REV. CODE for an insurance company, if one exists. Only activated revenue codes can be entered.

Set the SUPPRESS MT INS BULLETIN parameter to YES to suppress the bulletin sent when any Means Test charge covered by the patient's health insurance is billed.

• **Group 4:** This number is the revenue code for total charges. If the HOLD MT BILLS W/INS parameter is answered YES, automated Category C bills will automatically be placed on hold if the patient has active insurance. The bills may be released to Accounts Receivable after claim disposition from the insurance company. The next parameter allows the user to enter remarks to appear on every printed UB billing form type. The UB-92 Address Col and HCFA 1500 Addr Col parameters determine where the mailing address will begin printing on the billing form. The cancellation remark is the message that will be sent to Fiscal Service every time a bill is cancelled in MAS.

The next two parameters in this group allow mail groups to be set up so that whenever a bill is cancelled or disapproved, members of these groups are notified via electronic mail. If these groups are not specified, only the billing supervisor, user who cancelled / disapproved, and the initiator of the bill (for disapproval message only) will be notified. The Copay Background Error group is the mail group that will receive mail messages from the IBE filer when an unsuccessful attempt to file is detected. The Category C Billing mail group members will receive messages when Means Test t/ Category C billing processing errors have been encountered, and when movements and Means Tests

for Category C patients have been edited or deleted. The mail groups must have been established through MailMan in order to be entered at these prompts.

• **Group 5:** The agent cashier's mailing symbol, complete address, and telephone number are specified here. The street address will not appear on the screen. All billing payments made to the site should be received at the agent cashier's office.

The default form type is the form most used at the facility (UB-82 or UB-92). All new bills and all follow-up bills will be printed on this form unless the primary insurer has the other UB form defined as the form type. The DEFAULT FORM TYPE parameter helps to control the transition between the UB-82 and the UB-92.

The MCCR System Definition Menu and this option is locked with the IB SUPERVISOR security key.

If necessary, please refer to the Data Supplement at the end of this option documentation for an explanation of the required response for each parameter.

Sample Screen

DATA SUPPLEMENT

Table 31: Data Descriptions

| Data | Description | | | |
|---------------------------------|---|--|--|--|
| AGENT CASHIER MAIL SYMBOL | Mailing symbol of agent cashier at the facility. | | | |
| AGENT CASHIER STREET ADDRESS | Mailing address of agent cashier at the facility. | | | |
| AGENT CASHIER CITY | | | | |
| AGENT CASHIER STATE | | | | |

| Data | Description | | | | |
|------------------------------------|---|--|--|--|--|
| AGENT CASHIER ZIP CODE | | | | | |
| AGENT CASHIER PHONE NUMBER | Telephone number of agent cashier at the facility. | | | | |
| ASK HINQ IN MCCR | YES or NO: Allow billing clerk to enter a request in the HINQ Suspense file while entering a bill for a patient whose eligibility is not verified. | | | | |
| BILL CANCELLATION MAIL GROUP | Specify the mail group to notify whenever a third-party bill is cancelled. | | | | |
| BILL DISAPPROVED MAIL GROUP | Specify the mail group to notify whenever a third-party bill is disapproved. | | | | |
| BILLING SUPERVISOR NAME | Name of billing supervisor at the facility. | | | | |
| BLUE CROSS/SHIELD PROVIDER # | Main provider number (3 - 13 characters). | | | | |
| CAN CLERK ENTER NON-PTF CODES | YES or NO - Can diagnosis and procedure codes not found in the PTF record be entered into the billing record. | | | | |
| CAN INITIATOR AUTHORIZE | YES or NO - Beginning with Version 1.5 of Integrated Billing, the review step of creating a bill has been eliminated. If this parameter is answered YES and the initiator holds the IB AUTHORIZE key, the initiator of the bill will be allowed to authorize the bill. If this field is answered NO, another user who holds the IB AUTHORIZE key must authorize the bill. | | | | |
| CANCELLATION REMARK FOR FISCAL | Remark (reason for cancellation, 3-75 characters) that will be sent to Fiscal Svc. every time a bill is cancelled in MAS. | | | | |
| CATEGORY C BILLING MAIL GROUP | Members of this mail group will receive messages when Means Test / Category C billing processing errors have been encountered, and when movements and Means Tests for Category C patients have been edited or deleted. | | | | |
| COPAY BACKGROUND ERROR GROUP | This is the mail group that will receive mail messages from the IBE filer when an unsuccessful attempt to file is detected. | | | | |
| DEFAULT AMB SURG REV CODE | When billing BASCs (Billable Ambulatory Surgical Codes), this will be the default revenue code stored in the bill. If this is not appropriate for any insurance company, the AMBULATORY SURG. REV. CODE field in the INSURANCE COMPANY file may be used for that insurance company entry. | | | | |
| DEFAULT DIVISION | This field will appear as the default answer to the division question when entering Billable Ambulatory Surgeries on a bill. | | | | |
| DEFAULT FORM TYPE | Enter the form type most used at the facility. Choose from UB-82 or UB-92. | | | | |

| Data | Description | | | |
|--------------------------------------|---|--|--|--|
| DEFAULT RX REFILL CPT | Enter a CPT procedure code that should be printed on every bill that contains RX refills. If entered, this procedure will automatically be added to every bill that has a prescription refill. | | | |
| DEFAULT RX REFILL DX | Enter a diagnosis code that should be added to every RX refill bill. If entered, this diagnosis will automatically be added to every bill that has a prescription refill. | | | |
| DEFAULT RX REFILL REV CODE | Enter the revenue code that should be used for RX refills. This default will be over-ridden by the PRESCRIPTION REFILL REV. CODE for an insurance company, if one exists. Only activated revenue codes can be selected. | | | |
| FEDERAL TAX NUMBER | Enter the federal tax number for the facility in NN-NNNNNN format. | | | |
| HCFA 1500 ADDRESS COLUMN | This is the column the mailing address should begin printing on row 1 of the HCFA-1500 form. | | | |
| HOLD MT BILLS W/INS | If this parameter is answered YES, the automated Category C bills will automatically be placed on hold for patients with active insurance. The bills may be released to Accounts Receivable after claim disposition from the insurance company. | | | |
| MAS SERVICE POINTER | Medical Administration Service as it is entered in the HOSPITAL SERVICE file. | | | |
| MEDICARE PROVIDER NUMBER | Provided by Medicare to the facility (1-8 characters). This number will print in Form Locator 7 on the UB-82 form. | | | |
| MULTIPLE FORM TYPES | YES or NO - Set this field to YES if the facility uses more than one type of health insurance form. The UB forms and the HCFA-1500 are the form types currently available. If this parameter is set to NO or left blank, only UB forms will be allowed. | | | |
| NAME OF CLAIM FORM SIGNER | Name of person responsible for signing | | | |
| PER DIEM START DATE | This is the date that the facility informed Category C patients of the new per diem charges and began per diem billing. Per diem billing will not occur if this field is left blank. | | | |
| PRINT '001' FOR TOTAL CHARGES | YES or NO - Print '001' (revenue code for total charges) next to total charges on third party bill. | | | |
| REMARKS TO APPEAR ON EACH FORM | Facility specific remarks to print on every UB type bill. | | | |
| SUPPRESS MT INS BULLETIN | YES or NO - Set this parameter to YES to suppress the bulletin sent when any Means Test charge covered by the patient's health insurance is billed. | | | |
| TITLE OF CLAIM FORM SIGNER | Title of person responsible for signing | | | |

| Data | Description | | | |
|------------------------------------|--|--|--|--|
| TRANSFER PROCEDURES TO SCHED | YES or NO - If this parameter is answered | | | |
| UB-92 ADDRESS COLUMN | This is the column the mailing address should begin printing on the UB-92. | | | |
| USE OP CPT SCREEN | YES or NO - Allow Current Procedural Terminology Codes Screen to appear when editing procedure codes on Screen 5. The screen will list CPT codes for the dates associated with the bill. | | | |

7.5.11. Purge Insurance Buffer

When a Buffer entry is processed, most of the data is immediately deleted from that entry leaving only a stub entry for tracking and reporting purposes. This option deletes Insurance Buffer entries that were processed (accepted or rejected) before the selected date. A minimum of 1 year of buffer processed records is maintained on line; therefore, the latest selectable date is one year prior to the current date.

Sample Screen

INSURANCE BUFFER PURGE

This option will purge Buffer file records Processed before a given date.

When a Buffer record is Processed a stub entry remains in the Buffer file for tracking and reporting purposes. This option deletes all stub entries of Buffer records processed at least a year ago. Once a record is purged, it can not be retrieved and will no longer be included in Buffer reports. To maintain a record of the Buffer activity, consider printing the Buffer reports for the date range you are going to be purging.

Purge Buffer Records Processed Before: Nov 05, 1997// 6/1/97 (JUN 01, 1997)
Ok to Purge Buffer records Processed before Jun 01, 1997? y YES
Purge of Insurance Buffer queued for this evening at 8:00pm.

7.5.12. MCCR Site Parameter Display / Edit

Table 32: Parameter Group and Key

| Parameter Group | Security Key Required | | |
|-------------------------------------|--------------------------------------|--|--|
| IB Site Parameters | IB PARAMETER EDIT | | |
| Claims Tracking Parameters | IB PARAMETER EDIT; IB PARAMETER EDIT | | |
| Third Party Auto Billing Parameters | IB PARAMETER EDIT | | |
| Insurance Verification | IB SUPERVISOR | | |
| MCCR SITE PARAMETERS | IB PARAMETER EDIT | | |

This option consolidates parameters from the Enter / Edit IB Site Parameters, MCCR Site Parameter Enter / Edit, Claims Tracking Parameter Edit, and Enter / Edit Automated Billing Parameters options. The initial screen lists three parameter groups.

The following table lists the screens, the actions provided, and a brief description of each action. Actions shown in *italics* access other screens.

7.5.12.1. MCCR Site Parameters Screen

Table 33: Parameter Descriptions

| Parameter | Description | | | |
|-------------------------------------|--|--|--|--|
| IB Site Parameters | Accesses the IB Site Parameter screen that displays general Integrated Billing site parameters. | | | |
| Claims Tracking Parameters | Accesses the Claims Tracking Parameters screen that displays parameters specific to the set-up and control of Claims Tracking functions. | | | |
| Third Party Auto Billing Parameters | Accesses the Automated Billing Parameters screen that displays the control parameters for the Third-Party Automated Biller. | | | |
| Insurance Verification | Accesses the IV site parameters screen. More detail in the IV s parameters is provided in the eIV User Guide, Section 2. | | | |

7.5.12.2. IB Site Parameters Screen

Descriptions for most of the parameters included on this screen can be found in the Enter / Edit IB Site Parameters and MCCR Site Parameter Enter/Edit option documentation. The following table is a description of the six parameters (group 12) used to configure the Tricare Pharmacy billing interfaces that are user set. The other seven parameters in this group that appear on the right-hand side of the screen are set by the system.

Table 34: IB Site Parameters

| Parameter | Description | | | | | |
|-----------------|--|--|--|--|--|--|
| Rx Billing Port | This is the logical port that is opened to establish a Transmission Control Protocol / Internet Protocol (TCP / IP) connection with the RNA package to submit Pharmacy claims. This is normally a number between 2000 and 10000. The number that is selected is programmed into the RNA package, as this is the port that the RNA package constantly polls for input from VISTA. The Billing port must be entered to start the billing engine. | | | | | |
| AWP Update Port | This is the logical port that is opened to establish a TCP/IP connection with the RNA package to receive AWP updates. This is normally a number between 2000 and 10000. This number is also programmed into the RNA package, as it is the port through which the RNA package transmits the AWP updates. This port number must be different from the Billing port number, or the background job to receive AWP updates will not be queued to run. | | | | | |
| TCP/IP Address | This is the TCP / IP address used to reach the RNA package. This address is usually determined by the facility systems manager and supplied to RNA on the Plan Installation Worksheet. This address must be entered to start the billing engine. | | | | | |
| Task UCI,VOL | This is UCI and Volume set on which the queued background jobs should run. If this field has no value (i.e., for Alpha sites), the jobs will be queued to run on the current UCI and Volume. | | | | | |

| Parameter | Description | | | | |
|----------------|--|--|--|--|--|
| AWP Charge Set | This is the Charge Set within the Charge Master that was used to load the AWP. The interface must know which Charge Set should be used to extract a unit price for a specific NDC number (drug). A valid Charge Set must be entered to start the billing engine. | | | | |
| Prescriber ID | This is the DEA number assigned to the facility, which should determine prior to the installation of the RNA package. This number must be submitted with the Pharmacy Billing transaction. The number must be entered to start the billing engine. | | | | |
| Edit Set | This action allows the user to view/edit the fields included in the 12 sets displayed. | | | | |

7.5.12.3. Claims Tracking Parameters Screen

Descriptions of the parameters included on this screen can be found in the Claims Tracking Parameter Edit option documentation.

Table 35: Claims Tracking Parameters

| Parameter | Description | | | | |
|---------------|---|--|--|--|--|
| Tracking | Allows the user to edit the data displayed under the Tracking Parameters heading. These parameters control which episodes of care are added to Claims Tracking. | | | | |
| Random Sample | Allows the user to edit the data displayed under the Random Sample Parameters heading. These parameters control the selection of random samples. | | | | |
| General | Allows the user to edit the data displayed under the General Parameters heading. | | | | |
| Edit All | Allows the user to edit all data displayed on the Claims Tracking Parameters screen. | | | | |

7.5.12.4. Automated Billing Parameters Screen

Descriptions of the parameters included on this screen can be found in the Enter / Edit Automated Billing Parameters option documentation.

Table 36: Automated Billing Parameters

| Parameter | Description | | | |
|------------|---|--|--|--|
| General | Allows the user to edit the data displayed under the General Parameters heading. | | | |
| Inpatient | Allows the user to edit the data displayed under the Inpatient Admission heading. These parameters control when inpatient episodes of care are processed by the Third-Party automated biller. | | | |
| Outpatient | Allows the user to edit the data displayed under Outpatient Visit the heading. These parameters control when outpatient visits are processed by the Third-Party automated biller. | | | |

| Parameter | Description | | |
|--------------|---|--|--|
| Prescription | Allows the user to edit the data displayed under the Prescription Refill heading. These parameters control when prescription refills are processed by the Third-Party automated biller. | | |

7.5.12.5. Re-Generate Average Bill Amounts

This option is used to rebuild and store the monthly and yearly counts and dollar amounts of inpatient and outpatient bills for a single month. This data will overwrite any previously stored data.

If a past month is selected, the monthly totals for that month are recomputed and the subsequent yearly totals are updated. Previous months' data is also calculated, when required, in order to obtain yearly values. This information is used to compute the average bill amount for the Unbilled Amounts Report.

Once the average bill amounts are calculated, the Unbilled Amounts Report is automatically generated, via electronic mail, for the selected month. This mail message is sent to the mail group specified in the UNBILLED MAIL GROUP field of the IB SITE PARAMETERS file.

7.5.13. Re-Generate Unbilled Amounts Report

This option is used to regenerate the Unbilled Amounts Report for a single month. This recomputes the unbilled care for the month and updates the unbilled amounts. To simply view previously computed data, please use the View Unbilled Amounts option.

Sample Output

7.5.14. Send Test Unbilled Amounts Bulletin

This option allows the user to send a test mail message to the mail group receiving the unbilled amounts messages. This option should be used prior to reporting problems to assist sites in determining whether the mail groups are set up correctly. The mail group to receive the message should be specified in the UNBILLED MAIL GROUP (6.25) field in the IB SITE PARAMETERS file (350.9).

7.5.16. Third Party Joint Inquiry

This option provides information needed to answer questions from insurance carriers regarding specific bills or episodes of care. This information is presented in List Manager Screens.

Because the same actions are available on most screens, and most screens can be accessed from any other screen; these "Common Actions" are listed first and are not repeated under each screen description. Only actions specific to a screen are included with that screen description.

The user may QUIT from any screen; this will bring the user back one level or screen. EXIT is also available on most screens. EXIT returns the user to the menu. For more information on the use of the List Manager utility, please refer to the appendix at the end of this manual.

Actions shown in italics access other screens.

Table 37: Common Actions

| Acronym | Description | Action |
|---------|--------------------|---|
| ВС | Bill Charges | Accesses the Bill Charges screen. |
| DX | Bill Diagnoses | Accesses the Bill Diagnoses screen. |
| PR | Bill Procedures | Accesses the Bill Procedures screen. |
| CI | Go to Claim Screen | Returns the user to the Claim Information screen. Available on all screens that may be opened from the Claim Information screen. |
| AR | Account Profile | Accesses the AR Account Profile screen. |
| СМ | Comment History | Accesses the AR Comment History screen. |
| IR | Insurance Reviews | Accesses the Insurance Reviews / Contacts screen. |
| HS | Health Summary | Displays a Health Summary report. The information displayed on the Health Summary is site specified through the MCCR Site Parameter Display/Edit option. |
| AL | Go to Active List | Returns the user to the Third-Party Active Bills screen if that screen was accessed upon entering this option; otherwise, this action returns the user to the menu. |
| VI | Insurance Company | Accesses the Insurance Company screen. |
| VP | Policy | Accesses the Patient Policy Information screen. |
| AB | Annual Benefits | Accesses the Annual Benefits screen. |

| Acronym | Description | Action |
|---------|---------------------|--|
| EL | Patient Eligibility | Accesses the Patient Eligibility screen. |
| EX | Exit Action | Exits the option. |

7.5.16.1. Third Party Active Bills Screen

This is the first screen displayed if a patient's name is entered at the first prompt. It lists all active third-party bills for the specified patient in order of date created. All bills created in the Integrated Billing Third Party Billing module can be found on this screen or the Inactive Bills screen.

Table 38: Common Actions

| Acronym | Description | Action |
|---------|-------------------|---|
| IL | Inactive Bills | Accesses the Inactive Bills screen. |
| PI | Patient Insurance | Accesses the Patient Insurance screen. |
| СР | Change Patient | Allows the user to choose another patient and re-displays the Third-Party Active Bills screen for that patient. |

7.5.16.2. Inactive Bills Screen

This screen lists inactive bills for a specified patient. All bills created in the Integrated Billing Third Party Billing module are found on this screen or the Third-Party Active Bills screen. Bills are displayed beginning with most recent "statement from" date.

Table 39: Common Actions

| Acronym | Description | Action |
|---------|--------------|---|
| CD | Change Dates | Allows the user to change the bills listed by changing the most recent "statement from" date to be displayed. |

7.5.16.3. Patient Insurance Screen

This screen displays the list of insurance policies for a patient. It is based on the Patient Insurance Management screen of the Patient Insurance Info View/Edit option. It is only available from the Third-Party Active Bills screen.

7.5.16.4. Claim Information Screen

This screen contains bill data and status information to provide an overall status of the bill. This is the primary claim screen for the inquiry, and many actions are provided to expand on the details of the claim.

If a policy has been updated but the bill has not, those changes are not reflected on this screen. Updated or current insurance information may be viewed using the three insurance screens.

Table 40: Common Actions

| Acronym | Description | Action |
|---------|-------------|--|
| СВ | Change Bill | Allows the user to change the bill being displayed. If the user entered a patient name at the first prompt of this option, only bills for that patient may be selected. If the user entered a bill number at the first prompt, any bill may be selected. |

7.5.16.5. Bill Charges Screen

This screen displays a bill's charge information as it would print on the bill. For UB-92 bills, this closely corresponds to Form Locators 42-49; therefore, any prosthetic items, Rx refills, or additional diagnoses and procedures are included. For HCFA 1500 bills, this closely corresponds to Block 24.

7.5.16.6. Bill Diagnosis Screen

This screen displays all diagnoses assigned to the bill, in the order printed.

7.5.16.7. Bill Procedures Screen

This screen lists all procedures assigned to a bill, in the order printed.

7.5.16.8. AR Account Profile Screen

This screen provides the financial history of a claim's account. This includes the current status of the bill in both IB and AR, as well as the payment or transaction history of the bill from Accounts Receivable. This screen is loosely based on the Profile of Accounts Receivable option.

Table 41: Common Actions

| Acronym | Description | Action |
|---------|---------------------|--|
| VT | Transaction Profile | Accesses the AR Transaction Profile screen for a selected transaction. |

7.5.16.9. AR Transaction Profile Screen

This screen displays detailed account transaction information for individual claim transactions. It is loosely based on the Accounts Receivable Transaction Profile option.

7.5.16.10. AR Comment History Screen

This screen displays AR comments for the claim's account.

Table 42: Common Actions

| Acronym | Description | Action |
|---------|----------------|---|
| AD | Add AR Comment | Allows the user to add an AR Transaction Comment to the bill being displayed. Comment transactions may not be added to a bill that has not been authorized in IB. |

7.5.16.11. Insurance Reviews / Contacts Screen

This screen displays all insurance reviews and contacts for the episodes of care on a bill. It is based on the Insurance Reviews / Contacts screen of the Claims Tracking Insurance Review Edit option. The primary difference between the two screens is that this screen consolidates all contacts for each episode being billed on a claim, while the Claims Tracking screen displays the contacts for a single episode of care.

| Table 4 | 43: | Common | Actions |
|---------|-----|--------|---------|
|---------|-----|--------|---------|

| Acronym | Description | Action |
|---------|-----------------|--|
| VR | Reviews/Appeals | Displays expanded information on a selected insurance contact. The screen accessed by this action will depend on the type of contact selected. If the contact is an appeal or denial, the Expanded Appeals / Denials screen is opened; otherwise, the Expanded Insurance Reviews screen is opened. |

7.5.16.12. Expanded Appeals / Denials Screen

This screen displays expanded information on insurance appeals and denials listed on the Insurance Review / Contacts screen. This screen is based on the Expanded Appeals / Denials screen of the Claims Tracking Appeal/Denial Edit option.

7.5.16.13. Expanded Insurance Reviews Screen

This screen displays expanded information on insurance reviews listed on the Insurance Reviews / Contacts screen. This screen is based on the Expanded Insurance Reviews screen of the Claims Tracking Insurance Review Edit option.

7.5.16.14. Insurance Company Screen

This screen displays extended information on an Insurance Company. It is based on the Insurance Company Editor screen of the Insurance Company Entry/Edit option. This screen may be entered from the Patient Insurance screen or from any of the bill specific screens. Once a bill is selected, this screen displays only information related to the insurance carriers assigned to that bill.

7.5.16.15. Patient Policy Information Screen

This screen displays extended information on insurance policies. It is based on the Patient Policy Information screen of the Patient Insurance Info View/Edit option. This screen may be entered from either the Patient Insurance screen or from any of the bill specific screens. Once a bill is selected, this screen will only display information related to the insurance policies assigned to the bill.

7.5.16.16. Annual Benefits Screen

This screen displays extended information on the annual benefits of insurance policies. It is based on the Annual Benefits Editor screen of the Patient Insurance Info View/Edit option. This screen may be entered from the Patient Insurance screen or from any of the bill specific screens. Once a bill has been chosen, this screen displays information related to the insurance policies assigned to that bill.

7.5.16.17. Patient Eligibility Screen

This screen displays the current information on the patient's eligibility for care and service connection status. It is loosely based on the Eligibility Inquiry for Patient Billing option. This screen is available from the Third-Party Active Bills screen and the bill specific screens.

If this screen is accessed from one of the bill specific screens, such as the Claim Information screen, the standard list of bill screen actions will be available from this screen.

If this screen is accessed from the Patient Insurance screen, no other screens are, and the user must return to a previous screen to access other screens.

7.5.17. Fast Enter of New Billing Rates

The IB SUPERVISOR security key is required to edit.

This option is designed to allow quick entry of new rates into the Charge Master for Interagency and Tortiously Liable Billing Rates. This option should only be used for the annual updated Interagency and Tortiously Liable Rates. The charges will be asked for by charge type category: inpatient, outpatient, prescription, outpatient dental, Cat C copayment. Enter all charges for a category, then move to the next section for the next category. For example, when first prompted for Inpatient Charges. When the user has entered all inpatient bed sections and related charges, a <RET> entered at the "Select Inpatient Bed section" prompt that will bring the user to the next charge type, Outpatient, and so on until the user has entered the charges for all charge types.

Revenue codes may be edited through the Enter/Edit Charge Master option.

7.5.18. Delete Charges from the Charge Master

The IB SUPERVISOR security key is required to edit.

This option is used to delete charges from a Charge Set that are no longer needed. All charges that are inactive or that have been replaced before the specified date are deleted. A report of charges that *will be* deleted based on the date entered can be printed before the actual deletion to confirm the charges should be deleted.

Sample Output

| Charges (to be deleted) in TL-OPT Page 1 | DENTAL set | (ALL CHARGES | IN SET) May 28, 1997 | 09:49 |
|--|--------------|--------------|----------------------|-------|
| Charge Item | Effective | Inactive | Charge Rev Cd | |
| CHARGE SET: T | L-OPT DENTAL | | | |
| OUTPATIENT DENTAL | 10/01/92 | | 97.00 | |
| OUTPATIENT DENTAL | 10/01/93 | | 102.00 | |
| OUTPATIENT DENTAL | 10/01/94 | | 119.00 | |
| OUTPATIENT DENTAL | 10/01/95 | | 104.00 | |
| OUTPATIENT DENTAL | 10/01/96 | | 121.00 | |
| 5 Charges to be deleted | | | | |
| Enter RETURN to continue or '^' t | o exit: | | | |

7.5.19. Inactivate / List Inactive Codes in Charge Master

This option searches the charges in the Charge Master for inactive CPT codes. It then inactivates all charges associated with those inactive CPT codes. To confirm the charges should be inactivated, a report of charges for inactive CPT codes may be printed.

Sample Output

8. IRM System Manager's Integrated Billing Menu

8.1. Purge Functionality

The first option in the Purge Menu, Purge Update File, is used to delete all CPT entries from the temporary file, UPDATE BILLABLE AMBULATORY SURGICAL CODE (#350.41), after transferred to the permanent file, BILLABLE AMBULATORY SURGICAL CODES (#350.4). This is usually done yearly, after a HCFA update of the CPT codes.

The remainder of the options in this menu are used to archive and purge billing data. The files that may be archived and subsequently purged are the INTEGRATED BILLING ACTION file (#350) (pharmacy copayment transactions only), the CATEGORY C BILLING CLOCK file (#351), and the BILL/CLAIMS file (#399).

Billing data from the current and one previous fiscal year, at a minimum, must be maintained online; however, the user may opt to maintain data from additional fiscal years, if desired.

The following criteria must be met to purge billing data.

Table 44: Common Actions

| Action | Description |
|--------------------------------------|--|
| INTEGRATED BILLING ACTION File | The prescription that caused the action to be created must have been purged from the pharmacy database before the action may be archived. In addition, the bill must be closed in Accounts Receivable. |
| (pharmacy copayment actions) | The date the bill was closed is the date used to determine whether it will be included. |
| CATEGORY C | Only clocks with a status of CLOSED or |
| BILLING CLOCK file | CANCELLED and a clock end date prior to the selected time frame are included. |
| BILL/CLAIMS file | The bill must be closed in Accounts Receivable. The date the bill was closed is the date used to determine whether it will be included. |

There are three steps involved in the archiving and purging of these files.

- 1. A search is conducted to find all entries that may be archived through the Find Billing Data to Archive option. The user selects which of the three files to include in the search. The entries found are temporarily stored in a sort (search) template in the SORT TEMPLATE file (#.401). An entry is also made to the IB ARCHIVE/PURGE LOG file (#350.6). This log may be viewed through the Archive/Purge Log Inquiry and List Archive/Purge Log Entries options.
 - The List Search Template Entries option allows the user to view the contents of a search template. The user may delete entries from the search template using the Delete Entry from Search Template option.
- 2. The entries are archived using the Archive Billing Data option. It is highly recommended to archive the entries to paper (print to a non-slave printer) as there is currently no functionality to retrieve or restore data that has been archived.
- 3. The data is purged from the database using the Purge Billing Data option. The search template containing the purged entries is also deleted. An electronic signature code and the XUMGR security key are required to archive and purge data.

8.1.1. Select Default Device for Forms

This option is used to select the default devices on which third party claim forms will print. The devices entered through this option will appear as the default devices when using options that generate these forms. Separate devices may be entered for each type of form.

The user will be prompted for the form type. To avoid making duplicate entries of the same form type, it is suggested to type <??> at this prompt to first view the selections.

The user will then be prompted for a default printer (in Billing) and a follow-up printer (in Accounts Receivable). The user **must** enter an Accounts Receivable default device for follow-ups for every form except the UB-82.

In order to utilize the Print Authorized Bills option on the Third-Party Billing Menu, the user must set up billing default printers for each form type through this option. Any form type not set up with a billing default printer will not print when utilizing the Print Authorized Bills option.

The billing default printer must be added for the BILL ADDENDUM form type for the addendums to automatically print for every HCFA-1500 bill with prescription refills or prosthetic items.

8.1.2. Display Integrated Billing Status

The Display Integrated Billing Status option allows the user to view data from the IB SITE PARAMETER file and pertinent information about the status of the IB background filer. For further explanation of the IB site parameters, please refer to the Enter/Edit IB Site Parameters option documentation.

One or more of the following messages may appear:

- "The Integrated Billing filer has more than 10 transactions in the queue."
- "The Integrated Billing filer is not running and has transactions to file."
- "The Integrated Billing filer is late. It hasn't run since {date/time}."

If the second message appears, use the Start the Integrated Billing Background Filer option to start the filer. If the first or third message appear, recheck the status in a few minutes. If the message(s) persists or the "Number of Transactions in Queue" increases, use the Start the Integrated Billing Background Filer option to start the filer.

8.1.3. Enter / Edit IB Site Parameters

The Enter/Edit IB Site Parameters option allows the user to enter or edit the INTEGRATED BILLING SITE PARAMETER file.

The following is a list of the parameters that may be entered / edited through this option. It should be noted that modification of these parameters may affect the performance of the Integrated Billing background filer.

Table 45: IB Site Parameters

| Parameter | Description |
|--------------------|---|
| FACILITY NAME | The name of the facility from the INSTITUTION file (there must be a station number associated with this entry). This value will be used by IFCAP in determining the bill number. |
| FILE IN BACKGROUND | If set to YES, the background filer will run as a background job. If set to NO or left blank, filing will occur as applications pass data to Integrated Billing. |
| FILER UCI,VOL | The UCI and volume set where the user want the IBE filer to run. It is recommended that the filer run on the volume set that contains either the IB globals or the PRC globals. VAX sites should leave this field blank. |
| FILER HANG TIME | The number of seconds that the filer will remain idle after finishing all transactions and before checking for more transactions to file. The filer will shut itself down after 200 hangs with no activity detected. If this field is left blank, the default value is two. |

| Parameter | Description | |
|----------------------------------|---|--|
| COPAY BACKGROUND ERROR GROUP | The mail group to receive mail messages from the IBE filer when an unsuccessful attempt to file is detected. "IB ERROR" will be entered during installation and will appear as a default the first time this option is used; however, it may be edited to any mail group. | |
| COPAY EXEMPTION MAIL GROUP | The mail group to receive the copay exemption messages. The mail group specified as the Copay Background Error Group will be entered during installation and will appear as the default the first time this option is used. It may be edited to any mail group. | |
| USE ALERTS | If the facility has Version 7 or higher of Kernel installed, select whether to use alerts or bulletins for internal messages in Integrated Billing. The same mail group (Copay Background Error Group) will receive both alerts and bulletins. This functionality is only available for the Medication Copayment Exemption software; however, if this is a desirable feature it may be expanded in the future. If this field is left unanswered, it defaults to NO and IB will use bulletins. | |
| CATEGORY C BILLING MAIL GROUP | Members of this mail group will receive messages when Means Test / Category C billing processing errors have been encountered and when movements and Means Tests for Category C patients have been edited or deleted. "IB CAT C" will be entered during installation and will appear as a default the first time this option is used; however, it may be edited to any mail group. | |
| PER DIEM START DATE | The date that the facility informed Category C patients of the new per diem charges and began per diem billing. This field represents the earliest date for which the hospital (\$10.00) or nursing home (\$5.00) per diem charge may be billed to a Category C patient as mandated by Public Law 101-508 (implemented on November 5, 1990). Per diem billing will not occur if this field is left blank. | |
| MEANS TEST BILLING MAIL GROUP | Members of this mail group will receive bulletins when Means Test billing processing errors have been encountered, and when movements and Means Tests have been edited or deleted for veterans that require Means Test charges. | |
| IB MEANS TEST | Members of this mail group will receive messages to review the charge(s) for a patient with a National Category 1 High Risk for Suicide flag that were activated or inactivated on the previous day. | |

```
Subj: IB SHRPE 'HRfs' IB charges review for 6/20/2018 [#361849] 06/20/18@18:24
11 linesFrom: INTEGRATED BILLING PACKAGE In 'IN' basket. Page 1

The following patient had the HRfs (Cat I) flag activated/inactivated,
and the following charges created on 6/19/2018 should be reviewed by
IB revenue staff:
Patient: IBPATIENT, BEIGHT Pt. ID: I3251
User: POSTMASTER
2710761A-THROAT LO-1: 442-K8047LU
OPT COPAYMENT: 442-K8047LV
2769367-HALOPERIDO-1: Pending
2727837-MICONAZOLE-1 (r): 442-K8047LU
```

8.1.4. Inquire an IB Action

The Inquire an IB Action option provides a display of a captioned inquiry for a specified IB action. The purpose of this inquiry is to provide a quick reference of all the fields for all IB actions for a reference number.

8.1.5. Patient IB Action Inquiry

The Patient IB Action Inquiry option provides a brief display of IB actions for a selected patient and date range. The purpose of this inquiry is to provide a quick reference of all the fields for all IB actions for a patient.

8.1.6. Repost IB Action to Filer

The Repost IB Action to Filer option allows Integrated Billing action entries that did not successfully pass to Accounts Receivable to be reposted to the IB filer.

Though this option will seldom, if ever, be used, it allows transactions with a status of COMPLETE (which do not have an Accounts Receivable transaction number assigned) to be reposted.

If there is not enough data to repost the action or if the number selected already has an Accounts Receivable transaction number assigned to it, an appropriate message will be displayed, and the first prompt will be repeated. If the reposting is successful, the user will simply return to the first prompt.

8.1.7. Start the Integrated Billing Background Filer

When a filer job has terminated unexpectedly, this option may be used to force a filer to start running.

If a filer is currently running, the following message will be displayed:

```
"<<<<WARNING!!! Filer appears to have been started on (date/time)>>>>"
```

The user will then be given the option of starting a second filer.

8.1.8. Stop the Integrated Billing Background Filer

This option may be used to shut down the IB background filer. The filer will cease when it has finished processing all its known transactions. Processing with Accounts Receivable will then be accomplished in the foreground.

When the user shutdown the filer through this option, the FILE IN BACKGROUND site parameter is automatically edited to NO. The IB engine will file in the foreground until that parameter is edited to YES through the Enter/Edit IB Site Parameters option.

8.1.9. Verify RX Co-Pay Links

The Verify RX Co-Pay Links option compares the soft link stored in Integrated Billing with the pointer in the PRESCRIPTION file pointing back to Integrated Billing to provide a display/printout of all integrated billing actions that do not verify for a selected range of reference numbers.

Means Test charges may appear on this report if listed in the B cross-reference when there is no actual entry for the reference (this should rarely happen) or if the Means Test charge has no soft link.

This option should be used as a tool for resolving problems. False errors may be reported for several legitimate occurrences, such as the RX was deleted, or the copay cancelled.

Sample Output

| Verify Integrated Billing links to | | 10, 1991 Page:1 |
|---|----------------------|-----------------|
| Verify IB Reference Number 5001 to REF. NO. PATIENT | | IB LINK |
| CHARGE ID TRANS ERROR MESSAGE | | |

8.1.10. Forms Output Utility

This option displays a list of local forms defined for the site and the associated actions allow the user to add local forms and data elements and to override specific fields on a local form associated with the national one. It also allows the user to define a local SCREEN 9 for bill data entry.

List of Local Forms Screen

Add Local Form

This action allows the user to define local output billing forms and local input data screens that are not supported nationally but are needed for specific insurance companies or bill types. It provides the ability to create new forms/screens from scratch, as well as provides for two ways to easily create a new form "copy" based on an existing nationally released form.

The WANT TO ASSOCIATE THIS FORM WITH A NATIONAL FORM? field allows the user to associate a new local form with a nationally released form without copying any data. This association allows each site to create a local form, but only require modifications to the fields of the form that are different from the nationally released definitions. Any form field definition that is not changed on the local form will continue to use the standard national definition. Any changes from the national definition, however, will be stored as local entries that, when a bill is generated using this local form definition, will override the nationally released definition for these changed fields only. This way, data changes can be made without the site having to take responsibility for maintaining the entire form. Only forms that have the same BASE FILE NUMBER and FORM TYPE can be copied. Any local changes made must be tracked carefully as the site will be responsible for maintaining any locally modified fields should future changes become necessary. Since unmodified fields still rely on the national form for definition, any changes made via a nationally released update to unmodified fields on the form will be automatically incorporated into a local form definition associated with a national form definition.

The WANT TO COPY ALL FIELDS FROM AN EXISTING FORM? field allows a straight copy, where the field definitions for a selected form are all copied into new entries referencing the new local form. Any local form created via an "unassociated" copy will have NO link back to the national form once the copy is completed.

Since no changes to nationally released software will be made to these local entries, the user is free to modify the new form definition in whatever way needed and is responsible for any and all changes that are made or will need to be made in the future.

Form View / Edit

Allows the user to view and edit a selected form. This action brings the user to the Detailed View of Local Form Screen. See below.

• Add / Edit Local Data Elements

Allows the user to define local data elements that are not supported nationally but are needed to be included on one or more local billing form(s). Nationally released data element definitions CANNOT be modified via this action.

View Data Element

Allows the user to view the description, extract code, and other attributes of any data element defined at the site, both national and local.

Test Form

Allows the user to test the output of a selected form.

Detailed View of Local Form Screen

• Edit Local Form Demographics

Allows the user to edit the name, description, pre and post processing logic and the extract and output logic for local forms.

• Delete A Local Form

Allows the user to delete a locally defined form. When the form is deleted, all form fields and form field definitions (not data element definitions) associated with that form are also deleted.

Edit Form Fields

Allows the user to edit the field content defined for a local form associated with a national form that has local "override" field content definitions; or to edit any local, unassociated form field's form position data and field content definitions. This action brings the user to the Bill Form Fields Screen. See below.

• Switch Form

Allows the user to switch between forms without exiting the option.

• Bill Form Fields Screen

Add Local / Override Field

Allows the user to add fields to a local unassociated form and allows the addition of 'override' fields for local modifications to any form.

• Delete Local Form Field

Allows the user to delete the 'override' form field content definitions for a local form associated with a national form or to delete any fields defined for an unassociated local form that do not have override fields defined (the user must delete any override fields first).

Edit Local Form Field

Allows the user to edit the field content for a local form such as page or sequence, first line number, starting column or piece, maximum number of lines, short description, etc.

• Local Field Content Definition

Allows the user to edit the "override" form field content definitions for a local form associated with a national form, or to edit the form field content of any field on an unassociated local form.

Add / Edit Local Data Elements

Allows the user to define local data elements that are not supported nationally but are needed to be included on one or more local billing form(s). Nationally released data element definitions CANNOT be modified via this action.

View Data Element

Allows the user to view the description, extract code, and other attributes of any data element defined at the site, both national and local.

• View Form Fields

Allows the user to view the composition of a local 'override' or national form field for a local form. This includes both the form field's form position data as well as the associated form field content definition.

Example 1 - CUSTOM BILL PRINT

The site needs to print the total charge, not unit charge, in Block 24F on the HCFA 1500.

- 1. If there is not currently a local form defined for the HCFA 1500, use the ADD A LOCAL FORM option to add a form that will become the local HCFA 1500. Base file will be 399, print form type will be P (printed). Respond Yes to associate with national form question and choose the HCFA 1500 as the parent form. Give it a form length of 66 and enter a short description like Local 1500. Since this form is now "associated" with the national HCFA 1500 form, all the fields will default to the definition provided by the national HCFA 1500 form when the bills are printed. The only time to change the pre and post processing, edit or output routines, is if the user does not want the national defaults, but wants to write on the users own. Be very careful of any change to these executable fields.
- 2. Select View Form and, if prompted for selection, enter the local HCFA 1500 form sequence # from the list displayed. This will display the general characteristics of this form.
- 3. Choose the Edit Form Fields action (FF). This will display a list of the form fields that make up this form.
- 4. Press return for NEXT SCREEN until the field CHARGES (BX-24F) appears in the field list.
- 5. The charge field is a data element that is not able to be extracted on its own. Its value depends on the "line" within box 24 that it will print on because it depends on revenue, code, date, etc. This kind of data element is considered part of a "group" element and that group element must be extracted before any of its group member data element can be output. The group data element for charges is N-HCFA 1500 SERVICES (PRINT). If the user utilizes the View Data Element option and enter this group element name, it sets up the array, IBXSAVE ("BOX24", line #) for later use by its group member elements. The user will also see that the 9th "^" piece of this array is the # of units. This is a calculate only field (no output from it when it is processed).
- 6. Select the Add Local/Override Field option and enter the sequence number of the CHARGES field.

- 7. Respond Yes to OK? prompt and to the copy over from the original field question. This is almost always a good idea so the user can see what the original format of the field was.
- 8. Leave the data element field the same and do not enter an insurance company or bill type unless the user wants to restrict this change to a specific insurance company and / or bill type.
- 9. Now change the format field to multiply the value of charges (in variable IBXDATA (line #)) by the value of the units on the corresponding line # (in the 9th "^" piece of IBXSAVE ("BOX24", line #)).

```
Replace $J(IBXDATA(Z) With $J(IBXDATA(Z)*$P($G(IBXSAVE("BOX24",Z)),"^",9)
```

- 10. Now modify the format description to reflect the change just made, and the override of the field is complete.
- 11. To make the formatter print the local copy of the HCFA 1500, use the IRM menu option, Select Default Device for Forms, and enter the name of the local form as the value of the PRINT FORM field. The next time a HCFA 1500 bill prints, it will print the charges as total charges, not a unit charge.

Example 2 - LOCAL SCREEN 9

The site needs to print the provider's phone number in Form Locator 11 on the UB-92 for inpatient bills for insurance company Blue Cross of East Wherever and this data is not currently captured in VISTA.

There are several steps involved in this task. First, the user must set up a local field for this data in the bill / claims file and define a local data element in the forms data element file, then create or modify a local Screen 9 to enable the clerks to input this data for this insurance company's bills. The user then needs to edit the local UB-92 print form to include this data in Form Locator 11 for this insurance company and attach this local Screen 9 to the national UB-92 bill form. Only the steps for the creation of local Screen 9 are included here.

- 1. Use FileMan to add a local form field, numbered at least 10000 and stored on a numeric node of at least 10000 for this new data element. These are the only kind of fields that can be INPUT on a local Screen 9 (any field can be displayed).
- 2. Using the output formatter, select the Add/Edit Local Data Elements action. Enter a name for this new data element. Only national fields can start with N-, so any other name is valid. Set the base file to 399 and the type of element to "F" (FileMan). Type the name that the user gave the local field in step 1 as the FileMan field reference. Make sure the user types it correctly as no edit checks are made on the field at this point. For FileMan return format, use "I" if the user wants the "raw" data returned or "E" if the user wants FileMan to return it in display format. Then enter a description of the field to identify the list of local data elements.
- 3. Again, using the output formatter, if there is not currently a local form defined for local Screen 9 for the national UB-92 form, use the ADD A LOCAL FORM option to add this form. Base file will be 399, print form type will be S (screen). Respond No to associate with national form question and to the copy fields form another form question. Enter a short description. For now, do not put any code in the form pre and post processing

- fields. Code can be written to do edits for the data on the screen that will prevent it from being authorized unless the edits are passed (post-processing). The pre-processing is used to set up any variables that may be needed to process this screen. The pre-processing is executed before the screen is displayed; the post-processing takes place after the standard authorize edits are executed upon leaving the bill.
- 4. Select View Form (VF) and, if prompted for selection, enter the local UB-92 screen form sequence #. This will display the general characteristics of this form.
- 5. Choose the Edit Form Fields action (FF). This will display a list of the form fields that make up this form or, if a new form, will display "No fields currently defined for this form".
- 6. Choose Add Local/Override Field action (AF). If there are any fields already defined for this screen, there will be a prompt to allow the user to override an existing field. Respond No if this question is asked. Respond 1 for page / seq then enter the number of the line on the screen where the user wants to prompt for this field to appear and the column the prompt should start in. Skip max # of lines since this data element can have only one value per bill. Enter a length for the field and it should be long enough to hold the data and its prompt, if one is desired. Leave pad as none and edit status as editable. Give it an edit group number that is different from any other group that may already be on the screen. For this data element, assume the field will be output exactly as it is stored, so no format code is needed.
- 7. Now follow steps 1-3 in the first example but use the UB-92 national form wherever it says to use the HCFA 1500.
- 8. Press return for NEXT SCREEN until the field FORM LOCATOR 11 (FL-11/1) appears in the field display area.
- 9. Select the Add Local/Override Field action and enter the sequence number of the FORM LOCATOR 11 (FL-11/1) field.
- 10. Respond Yes to OK? prompt and No to the copy over from the original field question. This is OK in this case because the new data element is a single-valued field that has absolutely nothing to do with the field it is overriding.
- 11. Enter the name of the local data element for the provider phone number in the data element field. Enter the BLUE CROSS of EAST WHEREVER insurance company name at the insurance company prompt. Enter bill type as inpatient to restrict this change to a specific bill type for this one insurance company. There is no need to enter Format code or description as we're assuming the data is displayed the same way it is stored in the database. If the user wants it displayed with dashes, but store just the numeric, reformat it using M code here. Make sure there is a FileMan input transform on the data field to strip out the dashes before it stores it. This will now be the override field output for inpatient bills for the BL CR of EAST WHEREVER insurance company's form locator 11.
- 12. To make the formatter print the local copy of the UB-92 and to associate this local Screen 9 with the UB-92 form type, use the IRM menu option, Select Default Device For Forms, and enter the name of the local form as the value of the PRINT FORM field and the name of the local UB-92 Screen 9 as the local form just created/edited.

13. The next time a UB-92 bill is entered/edited whose insurance company is BL CROSS of EAST WHEREVER, there will be a Screen 9 available to allow entry of the provider phone #. This field will also print on the UB-92 as the first line in Form Locator 11 when the bill is printed.

8.2. Purge Menu

8.2.1. Purge Update File

The XUMGR security key is required to access this option.

The Purge Update File option is used to delete all CPT entries in the temporary file, UPDATE BILLABLE AMBULATORY SURGICAL CODE (#350.41) that have been successfully transferred to the permanent file, BILLABLE AMBULATORY SURGICAL CODE (#350.4). Upon completion, a total number of entries deleted is provided.

If the UPDATE BILLABLE AMBULATORY SURGICAL CODE file is not purged, the next file transfer through the Run Amb. Surg. Update option, all entries previously transferred successfully will show as errors under: "Codes already have entries for given effective date" and "Codes unable to transfer."

8.2.2. Archive Billing Data

The XUMGR security key and an electronic signature code are required to complete the archive process.

This option is used to archive data contained in search templates. Search templates are created from the INTEGRATED BILLING ACTION file (#350) (pharmacy copayment transactions only), the CATEGORY C BILLING CLOCK file (#351), and / or the BILL/CLAIMS file (#399) using the Find Billing Data to Archive option. Select which of the files to archive.

It is recommended the user archive the entries to paper (print to a device) as there is currently no functionality to retrieve or restore archived data.

The archive process is automatically queued. All data elements in the file for each entry in the search template are archived.

The user will be notified of the results via electronic mail. The ARCHIVE/PURGE LOG file (#350.6) is updated when the purge is completed. The log # provided in the mail message may be used for inquiries to this file.

Sample Message

8.2.3. Archive / Purge Log Inquiry

The XUMGR security key is required to access this option.

This option is used to provide a full inquiry of any entry in the IB ARCHIVE/PURGE LOG file (#350.6). Once the user enters the log #, all fields in the file for the selected entry will be displayed.

This output may be used to determine the status of a search template, whether archiving or purging has been completed, and who completed the search and / or archive / purge. The number of records, log status, initiator, and begin and end time for each of the three stages of the process (if applicable) are provided. The number of records found, archived, or purged will differ if records are deleted from the search template between processing steps.

Sample Output

```
LOG #: 121
            BILL/CLAIMS
                                               JUN 24, 1992@17:38:16

       Purge Initiator : EMPLOYEE
```

8.2.4. Delete Entry from Search Template

Once an entry meets the search criteria to be archived and subsequently purged and has been included in a search template, this option may be used to remove the entry from the template and prevent it from being purged. This option might be used for entries that meet the search criteria but because of unusual circumstances must be maintained on-line.

If more than one search template exists, it will be displayed for selection. Once selected, all records in that template will be displayed. The user will then be allowed to choose which records to delete from the template.

8.2.5. Find Billing Data to Archive

The Purge Menu and this option are locked with the XUMGR security key.

This option is used to identify records that meet the criteria to be archived and purged from the INTEGRATED BILLING ACTION file (#350), the CATEGORY C BILLING CLOCK file (#351), and the BILL/CLAIMS file (#399). Entries that are selected to be archived and subsequently purged are placed in a search (sort) template in the SORT TEMPLATE file (#.401). These entries may be viewed / printed through the List Search Template Entries option.

The user opts to which of the three files to include in the search and specify a different archive / purge time frame for each file; however, a minimum of the current plus one previous fiscal year must be maintained on-line. In cases where interim claims exist, the claim may only be archived / purged if the final claim can be archived / purged.

The following criteria must be met for the prescription, clock, or bill to be included.

Table 46: Common Actions

| File | Description |
|---|--|
| INTEGRATED BILLING ACTION File (pharmacy copay actions) | The prescription that caused the action to be created must have been purged from the pharmacy database before the action may be archived. In addition, the bill must be closed in Accounts Receivable. The date the bill was closed is the date used to determine whether it will be included. |
| BILLING CLOCK File | Only clocks with a status of CLOSED or CANCELLED and a clock end date prior to the selected time frame are included. |

| File | Description |
|------------------|--|
| BILL/CLAIMS File | The bill must be closed in Accounts Receivable. The date the bill was closed is used to determine whether it will be included. The search is automatically queued, and the user is notified of the results via electronic mail. An entry is made in the ARCHIVE/PURGE LOG file (#350.6) each time a search template is created. The log # provided in the mail message may be used for inquiries to this file. |

Sample Message

8.2.6. List Archive / Purge Log Entries

The XUMGR security key is required to access this option.

This option is used to list all log entries in the IB ARCHIVE/PURGE LOG file (#350.6). Entries are listed in the order added to the file. A new entry is filed each time a new search template is created through the Find Billing Data to Archive option. The log number, archive file, date created, initiator, and status is provided for each entry.

For a more detailed display on specific entries, please use the Archive/Purge Log Inquiry option.

Sample Output

| INTEG | RATED BILLING ARCHIVE/PURGE | LOG ENTRIE | S JUN 25,1992 07:57 | PAGE 1 |
|-------|-----------------------------|------------|---------------------|-----------|
| LOG# | ARCHIVE FILE | CREATED | INITIATOR | STATUS |

| 10 | BILL/CLAIMS | 07/02/92 | IBpatient, ten | CLOSED |

8.2.7. List Search Template Entries

A search template is created in the SORT TEMPLATE file (#.401) each time the Find Billing Data to Archive option is used. The List Search Template Entries option is used to list all entries in a search template that are scheduled to be archived and subsequently purged. This list may be used to review entries and ensure entries are included in the archive / purge of the file. If the user

has an entry that meets the purge criteria, but due to unusual circumstances must be maintained on-line, it may be deleted from the search template through the Delete Entry from Search Template option.

If more than one template exists, these templates will be listed for selection. The output may be sorted by patient as well as an additional specified field. <??> may be entered for a list of appropriate fields for selection and additional commands that may be used to customize the list. The selectable fields differ depending on the file. The user will be prompted to enter a range for patient name(s) and the additional field (if selected). If the user accepts the default of FIRST, the system will assume to include all entries.

The fields included in the display will depend on which of the three files the template is created from. The patient name and status are displayed for all three files. The INTEGRATED BILLING ACTION file (#350) also displays a brief description of the pharmacy prescription and the date it was added to the field. The CATEGORY C BILLING CLOCK file (#351) displays the clock begin and end dates. The BILL/CLAIMS file (#399) displays the rate type and status date.

Sample Output

| CATEGORY C BILLING CLOCK SEARCH | TEMPLATE CLOCK BEGIN | JUN 23,1 | 992 16:35 CLOCK END | PAGE 1 |
|---------------------------------|-------------------------|-----------|------------------------|--------|
| PATIENT | DATE | STATUS | DATE | |
| IBpatient, one | JUN 28,1988 | CLOSED | JUN 27,1989 | |
| IBpatient, two | MAY 30,1989 | CANCELLED | MAY 29,1990 | |
| IBpatient, three | MAR 15,1989 | CLOSED | MAR 14,1990 | |
| IBpatient, four | SEP 1,1988 | CLOSED | AUG 31,1989 | |
| IBpatient, five | JAN 2,1989 | CLOSED | JAN 1,1990 | |

8.2.8. Purge Billing Data

This option is used to purge data from the INTEGRATED BILLING ACTION file (#350) (pharmacy copayment transactions only), the CATEGORY C BILLING CLOCK file (#351), and / or the BILL/CLAIMS file (#399). For entries to be purged, they must first be stored in a search template created by the Find Billing Data to Archive option and archived through the Archive Billing Data option. If there is more than one search template created and archived, select which file(s) to purge.

The XUMGR security key and an electronic signature code are required to complete the purge process. The purge is automatically queued, all data elements in the file for each entry in the search template are purged, and the search template is deleted.

The user will be notified of the results via electronic mail. The ARCHIVE/PURGE LOG file (#350.6) is updated when the archive is completed. The log # provided in the mail message may be used for inquiries to this file.

8.3. Charge Master IRM Menu

8.3.1. Load Host File into Charge Master

This option allows new rates and charges to be added to the Charge Master form host files. This is only available for specific rates and charges. The Host file must be in a predefined format to be read correctly.

The following is a list of available choices.

- Load CMAC into XTMP Upload the CMAC from a host file.
- Load AWP into XTMP Upload Average Wholesale Price list from a host file.
- Assign Charge Set Assign charges loaded into XTMP to Charge Sets.
- Check Data Validity Check files waiting to be loaded into the Charge Master for data validity.
- Load into Charge Master Check files waiting to be loaded into the Charge Master for data validity and upload files.
- Delete XTMP files Delete files in XTMP.

8.3.2. Rate Schedule Adjustment Enter / Edit

This option allows the enter / edit of the Rate Schedule Adjustment field (#363.10). This field causes all charges for a schedule to be adjusted by a site defined amount. It requires M-code that is executed to provide the adjusted amounts and; therefore, requires programmer access (DUZ(0)="@").

This Adjustment will have an immediate effect on the charges of the Rate Schedule. The user can confirm the adjustment with a Yes response, deny the adjustment with a No response, or enter '^' to exit the option and not change the adjustment.

8.3.3. RC Change Facility Type

This option allows a site to change the Facility Designation of a division for which charges have been installed from Provider Based to Non-provider Based or vice versa. This entails multiple steps to inactivate the existing charges and then calculate and load the new charges.

8.3.4. Start the CHAMPUS Rx Billing Engine

This option is used by IRM personnel to queue the background filer. Several parameters must be set before this job can be queued to run; if not set, the job will not be queued. This job will cause four jobs to be queued. The first job is the background filer itself. After this job has been queued and has successfully opened a TCP / IP channel with the RNA system, this job will queue off a secondary filer job. If the first job aborts in any way, the secondary filer will assume the responsibilities of the primary filer and spawn another secondary filer. The option also directly

277

queues a second job to open a separate TCP / IP channel with the RNA system to receive updates of the Average Wholesale Pricelist (AWP). This update is normally received weekly. The AWP Update job will also spawn a secondary job, in a manner like the background filer, which will take over for the primary AWP update job if that job aborts.

NOTE: After the AWP Update is received, members of the IB CHAMP RX START mail group will receive an alert notifying the user that the update has completed.

8.3.5. Stop the CHAMPUS Rx Billing Engine

This option may be used to gracefully shut down the billing engine if a planned system shutdown is scheduled to occur, or if the RNA system is scheduled to be shutdown. The option sets a flag that calls for both the background filer and AWP update engine to stop running. The secondary jobs for both jobs will shut down as well.

8.3.6. Edit the CIDC Insurance Switch

The IB SUPERVISOR security key is required to access this option.

This option is used to edit the CIDC (Clinical Indicators Data Capture) insurance switch. The CIDC switch controls how CIDC will function in related VistA applications.

Depending on how the parameter is set, users who hold a PROVIDER KEY will, or will not be prompted with CIDC questions.

The following list are the parameters for the CIDC switch. The default is set to '0'. Changing this default parameter will affect how other CIDC related applications interact with both Providers and Back Door users.

- 0 = Do not prompt any patients (CIDC prompts do not appear).
- 1 = Prompt patients only with active billable insurance (CIDC prompts appear; conditional).

278

• 2 = Prompt for all patients (CIDC prompts appear).

9. APPENDIX B - Acronyms and Abbreviations

The following table provides definitions and explanations for terms and acronyms relevant to the content presented within this document. For additional terms and acronyms, you can include references to other VA acronym and glossary repositories (e.g., VA Acronym Lookup and OIT Master Glossary).

Table 47: Acronyms and Abbreviations

| Acronym or Term | Definition / Explanation |
|--------------------|---|
| AC | Add Charges |
| Admission Sheet | Worksheet commonly used in front of inpatient charts with a workspace available for concurrent reviews. |
| ALOS | Average Length of Stay. |
| AMIS | Automated Management Information System |
| AR | Accounts Receivable |
| Automated Biller | Utility that establishes third party bills with no user intervention. |
| AWP | Average Wholesale Pricelist |
| Background Filer | A background job that accumulates charges and causes adjustment transactions to a bill. |
| BASC | Billable Ambulatory Surgical Code. |
| Billing Clock | A 365-day period, usually beginning when a patient is Means Tested and is placed in Category C, through which a patient's Means Test charges are tracked. An inpatient's Medicare deductible copayment entitles the patient to 90 days of hospital/nursing home care. These 90 days must fall within the 365-day billing clock. |
| Category C Patient | Those patients responsible for making copayments as a result of Means Test legislation. |
| CC | Community Care |
| CHAMPUS | Civilian Health and Medical Program of the Uniformed Services; former TRICARE |
| CHAMPVA | Civilian Health and Medical Program of the Department of Veterans Affairs |
| Check-off Sheet | A site-configurable printed form containing CPT codes, descriptions, and dollar amounts (optional). Each check-off sheet may be assigned to an individual clinic or multiple clinics. |
| CIDC | Clinical Indicators Data Capture |
| Claims Tracking | Module that allows for the tracking of an episode of care, from scheduling through final disposition of the bill. |
| Collateral Visit | A visit by a non-veteran patient whose appointment is related to or associated with a patient's treatment. |

279

| Acronym or Term | Definition / Explanation |
|---------------------|---|
| Continuous Patients | Continuously hospitalized at the same level of care Patient since July 1, 1986. |
| Converted Charges | During the conversion, the BILLS/CLAIMS file (#399) is checked to ensure that each outpatient visit has been billed. For each visit without an established bill, one is established and given a status of CONVERTED. |
| Copayment | The charges, required by legislation, that a patient is billed for services or supplies. |
| CPT | Current Procedural Terminology - A coding method developed by the American Hospital Association to assign code numbers to procedures that are used for research, statistical, and reimbursement purposes. |
| CSA | Claim Status Awaiting Resolution |
| Diagnosis Code | A numeric or alpha-numeric classification of the terms describing medical conditions, causes, or diseases. |
| DOS | Date of Service |
| EDI | Electronic Data Interchange (EDI) |
| Encounter Form | A paper form used to display data pertaining to an out-patient visit and used to collect additional data pertaining to that visit. |
| FI | Fiscal Intermediary – the company with which a Tricare patient holds Tricare insurance coverage). |
| Form Locator | A block on the UB-82 or UB-92 bill form. |
| FR | Facility Revenue |
| HCFA | Health Care Finance Administration |
| HCFA-1500 | AMA approved health insurance claim form used for outpatient third party billings. |
| HINQ | Hospital Inquiry |
| HPID | Health Plan Identifier |
| IB | Integrated Billing |
| ICD | International Classification of Disease |
| ICD-9 | International Classification of Diseases, Ninth Modification: A coding system designed by the World Health Organization to assign code numbers to diagnoses and procedures for statistical, research, and reimbursement purposes. |
| ICD-10 | International Classification of Diseases, Tenth Modification A coding system designed by the World Health Organization to assign code numbers to diagnoses and procedures for statistical, research, and reimbursement purposes. |

| Acronym or Term | Definition / Explanation |
|---------------------------|---|
| Integrated Billing Action | The billing record of an event or an increase/decrease in the charges related to an event. An event is any billable goods or services provided by the VA. |
| Interqual Criteria | A method of evaluating appropriateness of care. |
| IVM | Income Verification Match |
| Locality Rate Modifier | The Geographic Wage Index that is used to account for wage differences in different localities when calculating the ambulatory surgery charge. It is multiplied by the wage component to get the final geographic wage component of the charge. |
| LTC | Long Term Care |
| MCCF | Medical Care Collections Fund |
| MCCR | Medical Care Cost Recovery - The collection of monies by the Department of Veterans Affairs (VA). |
| Means Test | A financial report used to determine if a patient may be required to make copayments for care. |
| MISSION | Maintaining Internal Systems and Strengthening Integrated Outside Networks Act |
| МОН | Medal of Honor |
| MRW | Medicare Remittance Advice Worklist |
| NDC | National Drug Code |
| NHCU | Nursing Home Care Unit |
| OEID | Other Entity Identifier. |
| OIT | Office of Information and Technology |
| PI | Patient Insurance |
| Principal Diagnosis | Condition, established after study, to be chiefly responsible for the patient's admission. |
| Provider | A person, facility, organization, or supplier that furnishes health care services. |
| PTF | Patient Treatment File |
| QM | Quality Management |
| Reimbursable Insurance | Health insurance that will reimburse VA for the cost of medical care provided to its subscribers. |
| Revenue Code | A code on a third-party bill identifying a specific accommodation, ancillary service, or billing calculation. |
| ROI | Release of Information |
| SSN | Social Security Number |

| Acronym or Term | Definition / Explanation |
|----------------------|--|
| Stop Code | A three-digit number corresponding to an additional stop / service a patient received in conjunction with a clinic visit. Stop code entries are used so that medical facilities may receive credit for the services rendered during a patient visit. |
| TAS | Transaction Applications Suite |
| TCP/IP | Transmission Control Protocol / Internet Protocol |
| Third Party Billings | Instances where a party other than the patient is charged. |
| TPJI | Third Party Joint Inquiry |
| UB-82 | AMA approved health insurance claim form previously used for third party billings. |
| UB-92 | AMA approved health insurance claim form used for third party billings. |
| UC | Urgent Care - A visit to a local health care facility approved by VA for non-emergent health situations authorized under the MISSION Act of 2018 legislation. |
| UR | Utilization Review - Review carried out by allied health personnel at predetermined times during the hospital stay to assess the appropriateness of care. |
| VA | Department of Veterans Affairs |
| VACO | VA Central Office |
| VBA | Veterans Benefits Administration |
| VFA | Veterans Financial Assessment Project |
| VHA | Veterans Health Administration |
| VistA | Veterans Health Information System and Technology Architecture |
| Wage Percentage | The percentage of the rate group unit charge that is the wage component to be used in calculating the HCFA charge for ambulatory surgical procedures. |
| XPIR | Expire Group Plan |

10. Military Time Conversion Table

Table 48: Military Time Conversion Table

| Standard | Military |
|----------------|------------|
| 12:00 MIDNIGHT | 2400 HOURS |
| 11:00 PM | 2300 HOURS |
| 10:00 PM | 2200 HOURS |
| 9:00 PM | 2100 HOURS |
| 8:00 PM | 2000 HOURS |

| 6:00 PM | 1800 HOURS |
| 5:00 PM | 1700 HOURS |
| 4:00 PM | 1600 HOURS |
| 3:00 PM | 1500 HOURS |
| 2:00 PM | 1400 HOURS |
| 1:00 PM | 1300 HOURS |
| 12:00 NOON | 1200 HOURS |
| 11:00 AM | 1100 HOURS |
| 10:00 AM | 1000 HOURS |
| 9:00 AM | 0900 HOURS |
| 8:00 AM | 0800 HOURS |
| 7:00 AM | 0700 HOURS |
| 6:00 AM | 0600 HOURS |
| 5:00 AM | 0500 HOURS |
| 4:00 AM | 0400 HOURS |
| 3:00 AM | 0300 HOURS |
| 2:00 AM | 0200 HOURS |
| 1:00 AM | 0100 HOURS |

11. List Manager Appendix

The List Manager is a tool that displays a list of items in a screen format and provides the following functionality:

- Browse through the list.
- Select items that need action.
- Act against those items.
- Select other List Manager actions without leaving the option.

Actions(s) are entered by typing the name(s) or mnemonics(s) at the "Select Action" prompt. Where applicable, multiple actions may be selected with one entry by separating actions with a semicolon (;). For example, the single entry "AL;CI" would cause the software to advance through two separate actions (Appointment Lists and Check In).

Select an action and entry number by using an equals sign (=).

- CI=1: will process entry 1 for check in.
- CI=3 4 5: will process entries 3, 4, 5 for check in.
- CI=1-3: will process entries 1, 2, 3 for check in.

In addition to the various actions that may be available specific to the option the user is working in, List Manager provides generic actions applicable to any List Manager screen. Enter double question marks (??) at the "Select Action" prompt for a list of all actions available. On the following page is a list of generic List Manager actions with a brief description. The mnemonic for each action is shown in brackets [] following the action name. Entering the mnemonic is the quickest way to select an action.

Table 49: List Manager Actions

| Action | Action |
|-------------------------|--|
| Next Screen [+] | Move to the next screen. |
| Previous Screen [-] | Move to the previous screen. |
| Up a Line [UP] | Move up one line. |
| Down a Line [DN] | Move down one line. |
| Shift View to Right [>] | Move the screen to the right if the screen width is more than 80 characters. |
| Shift View to Left [<] | Move the screen to the left if the screen width is more than 80 characters. |
| First Screen [FS] | Move to the first screen. |
| Last Screen [LS] | Move to the last screen. |
| Go to Page [GO] | Move to any selected page in the list. |
| Re Display Screen (RD) | Redisplay the current screen. |

284

| Action | Action |
|------------------------------|--|
| Print Screen [PS] | Prints the header and the portion of the list currently displayed. |
| Print List [PL] | Prints the list of entries currently displayed. |
| Search List [SL] | Finds selected text in list of entries. |
| Auto Display (On/Off) [ADPL] | Toggles the menu of actions to be displayed / not displayed automatically. |
| Quit [QU] | Exits the screen. |
