

# DC2552XS/L3

## High Performance, Stackable 10 and 40 Gigabit Layer 3 Switch

Designed for enterprise core and private cloud environments, the Allied Telesis DC2552XS/L3 switch provides high density 10GbE connectivity, 40GbE uplinks, and Virtual Chassis Stacking (VCStack™), to meet the demands of today's large data, cloud, and enterprise workloads.

AlliedWare Plus™  
OPERATING SYSTEM

### Overview

The DC2552XS/L3 is a 48 x 10GbE (SFP+) port high-bandwidth and high density switch designed for large data applications. It provides four QSFP+ 40Gb slots which can connect two units together in a VCStack—perfect for a high capacity resilient network core.

A smarter enterprise data center can be achieved by connecting servers and storage facilities with a high-speed, low latency network fabric that is faster, greener, and easy to manage. This switch delivers 1280Gbps of switching fabric with ultra low sub-µsec latency, and also provides 1+1 resilient power in a very compact 1RU chassis.

### High-bandwidth

As bandwidth-intensive applications such as Web 2.0, virtualization, High-Performance Computing (HPC) and Network Attached Storage (NAS) continue to proliferate within enterprise data centers, 10 and 40 Gigabit Ethernet provides a cost effective way to increase throughput and seamlessly deliver customer service level agreements.

### Future-proof

The performance of 40GbE uplinks and 48 x 10GbE ports empowers companies to expand application capabilities, and quickly respond to changing customer needs and market conditions. In combination with the AT-VNC10S Network Interface Cards for servers, clients can reduce costs and complexity.

The DC2552XS/L3 is Software Defined Networking (SDN) ready and able to support OpenFlow v1.3.

### High Availability

The DC2552XS/L3 has two slots for hot-swappable power supplies and fans. Also SFP+ and QSFP+ modules can be easily removed and replaced with no interruption to the network. These hot-swappable modules guarantee the continued delivery of essential services.

### Cut-through

Cut-through switching sends packets to their destination as soon as the first packet is ready. The delay is minimal and the packet reaches its destination in the shortest possible time. With cut-through mode, the DC2552XS/L3 forwards packets with a latency of 800 nanoseconds, and is ideal for inter-server communication.

### Air Flow

Cooling air flow has become a major design concern in modern data centers. The AT-DC2552XS/L3 utilizes back (PSU/and FAN side) to front (ports side) airflow which is suitable for rack mounting in data centers.

### Powerful Network Management

Meeting the increased management requirements of modern converged networks, Allied Telesis Management Framework™ (AMF) automates many everyday tasks including configuration management. The complete network can be managed as a single virtual device with powerful centralized management features. Growing the network can be accomplished with Plug-and-Play simplicity, and network node recovery is fully zero-touch.

AMF secure mode increases network security with management traffic encryption, authorization, and monitoring. AMF Guestnode allows third party devices, such as IP phones and security cameras, to be part of an AMF network.

### Eco-friendly

In keeping with our commitment to environmentally friendly products, this switch is designed to reduce power consumption and minimize hazardous waste.

## New Features

- ▶ Allied Telesis Management Framework (AMF) Master
- ▶ AMF secure mode
- ▶ AMF Guestnode
- ▶ Active Fiber Monitoring
- ▶ Long-Distance stacking over 40G
- ▶ OpenFlow for SDN
- ▶ VLAN ACLs

VCStack™

AMF™

EPSRing™

ACTIVE  
Fiber Monitoring™

## Key Features

### Allied Telesis Management Framework (AMF)

- ▶ Allied Telesis Management Framework (AMF) is a sophisticated suite of management tools that provide a simplified approach to network management. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- ▶ Any DC2552XS/L3 switch can operate as the AMF network master, storing firmware and configuration backups for other network nodes. The AMF master enables auto-provisioning and auto-upgrade by providing appropriate files to new network members. New network devices can be pre-provisioned making installation easy because no on-site configuration is required.
- ▶ AMF secure mode encrypts all AMF traffic, provides unit and user authorization, and monitors network access to greatly enhance network security.
- ▶ AMF Guestnode allows Allied Telesis wireless access points and further switching products, as well as third party devices such as IP phones and security cameras, to be part of an AMF network.

### VCStack (Virtual Chassis Stacking)

- ▶ Create a single virtual device out of two units with VCStack. VCStack provides a highly available system where network resources are spread out across stacked units, reducing the impact if one of the units fails. Aggregating switch ports on different units across the stack provides excellent network resiliency.

### Long-distance Stacking

- ▶ Long-distance stacking allows a VCStack to be created over longer distances, perfect for a distributed network environment.

### EPSRing (Ethernet Protection Switched Ring)

- ▶ EPSRing and 10 Gigabit Ethernet allow several DC2552XS/L3 switches to form high-speed protected rings capable of recovery within as little as 50ms. This feature is perfect for high performance and high availability in enterprise networks.
- ▶ Super-Loop Protection (SLP) enables a link between two EPSR nodes to be in separate EPSR domains, improving redundancy and network fault resiliency.

### High Reliability

- ▶ The DC2552XS/L3 switches feature front to back cooling and dual power supply units (PSUs). The DC2552XS/L3 features dual hot-swappable load sharing power supplies for maximum uptime, and the option of either front-to-back or back-to-front cooling. This makes it ideal for use as a top-of-rack data center switch.

### Virtual Routing and Forwarding (VRF Lite)

- ▶ VRF Lite provides Layer 3 network virtualization by dividing a single switch into multiple independent virtual routing domains. With independent routing domains, IP addresses can overlap without causing conflict, allowing multiple customers to have their own secure virtual network within the same physical infrastructure.

### sFlow

- ▶ sFlow is an industry-standard technology for monitoring high speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure it always has a real-time view of network traffic.

### Virtual Router Redundancy Protocol (VRRPv3)

- ▶ VRRPv3 is a protocol for providing device redundancy, by connecting redundant WAN gateway routers or server access switches in an IPv6 network. It allows a backup router or switch to automatically take over if the primary (master) router or switch fails.

### Open Shortest Path First (OSPFv3)

- ▶ OSPF is a scalable and adaptive routing protocol for IP networks. The addition of OSPFv3 adds support for IPv6 and further strengthens the Allied Telesis focus on next-generation networking.

### Dynamic Host Configuration Protocol (DHCPv6)

- ▶ DHCPv6 is used to dynamically assign IPv6 addresses to hosts from a central location. Acting as DHCPv6 client enables the switch to receive an IPv6 address, and acting as server enables the switch to dynamically allocate IPv6 addresses to hosts. The DHCPv6 server and client both support the Prefix Delegation feature, which allocates a whole IPv6 subnet to a DHCP client. The client, in turn, can allocate addresses from this subnet to the hosts that are connected to it.

### Hardware performance

- ▶ Layer-3 switching and routing is performed in specialized ASIC hardware for wire-speed packet forwarding and maximum throughput.

### Ease of management

- ▶ The AlliedWare Plus operating system incorporates an industry-standard CLI, facilitating intuitive manageability.
- ▶ Configuration tasks can be automated since commands may be used in scripts. Triggers can also be utilized. These provide a powerful mechanism for automatic and timed management, by automating command execution in response to specific events.

- ▶ With three distinct user modes, the CLI is highly secure, and the use of encrypted remote login sessions ensures CLI access is not compromised.

### Active Fiber Monitoring

- ▶ Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

### Premium Software License

- ▶ By default, the DC2552XS/L3 switch offers a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be elevated to full Layer 3 by applying the premium software license. This adds dynamic routing protocols and Layer 3 multicasting capabilities.

### Find Me

- ▶ In busy server rooms, comprised of a large number of equipment racks, it can be quite a job finding the correct switch quickly among many similar units. The "find me" feature is a simple visual way to quickly identify the desired physical switch for maintenance or other purposes, by causing its LEDs to flash in a specified pattern.

### UniDirectional link Detection

- ▶ UniDirectional Link Detection (UDLD) is useful for monitoring fiber-optic links between two switches that use two single-direction fibers to transmit and receive packets. UDLD prevents traffic from being sent across a bad link by blocking the ports at both ends of the link in the event that either the individual transmitter or receiver for that connection fails.

### Software Defined Networking (SDN)

- ▶ OpenFlow is a key technology that enables the use of SDN to build smart applications that unlock value and reduce cost.

### Microsoft Network Load Balancing (MS NLB) Support

- ▶ Support for MS NLB, which clusters identical servers together for increased performance through load-sharing.

### VLAN ACLs

- ▶ Simplify access and traffic control across entire segments of the network. Access Control Lists (ACLs) can be applied to a Virtual LAN (VLAN) as well as a specific port.

## Key Solutions

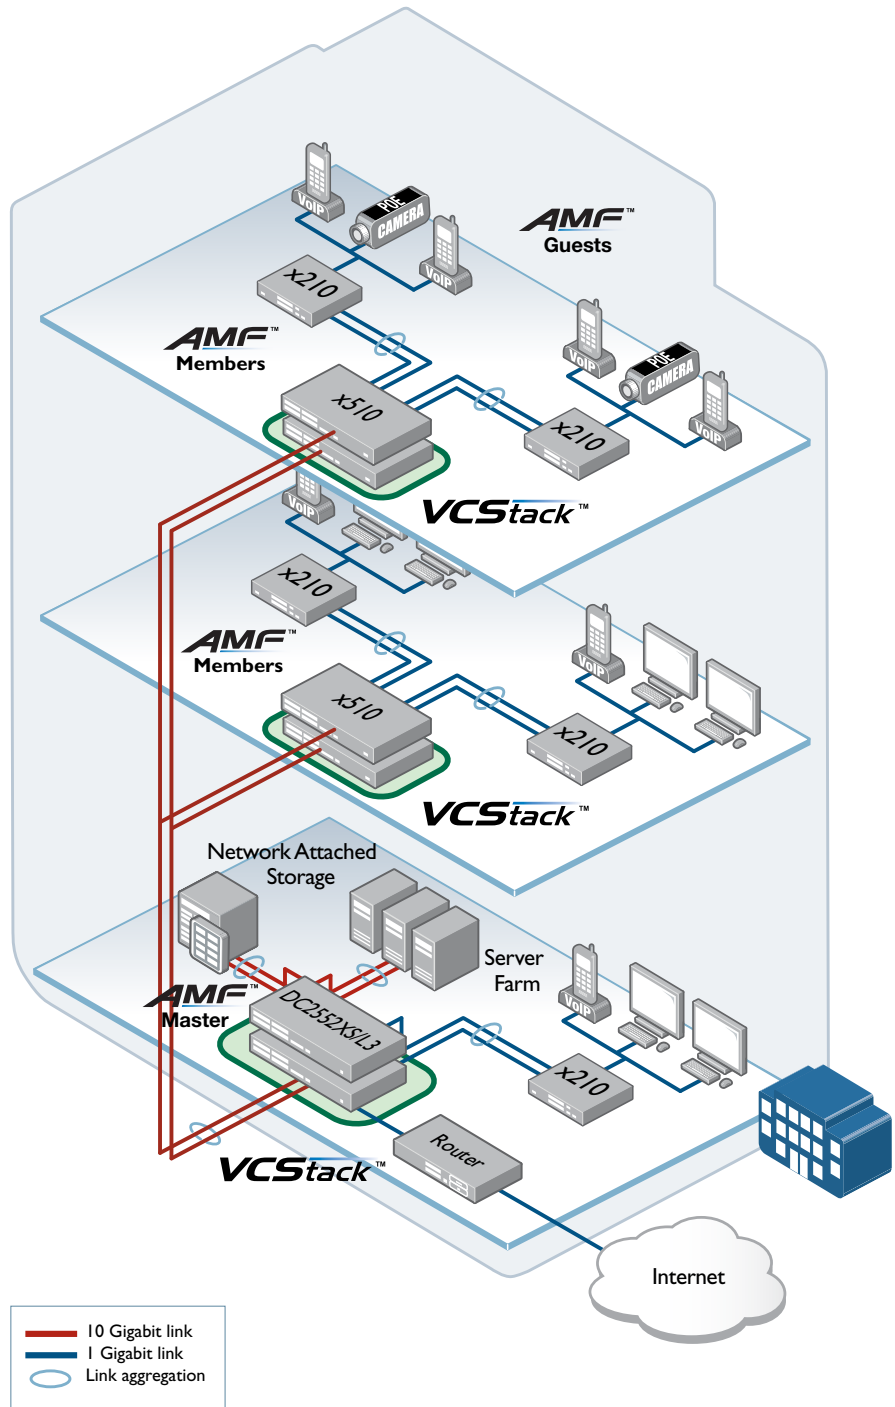

### Resilient Network Core

The convergence of network services in the enterprise has led to increasing demand for high performing networks with minimal downtime.

The Allied Telesis DC2552XS/L3 10GbE Layer 3 switch provides high density 10 Gigabit connectivity, and the ability to create a single virtual chassis out of 2 units with VCStack. With the benefits of high availability, increased capacity, and ease of management, VCStack makes networking reliable and simple.

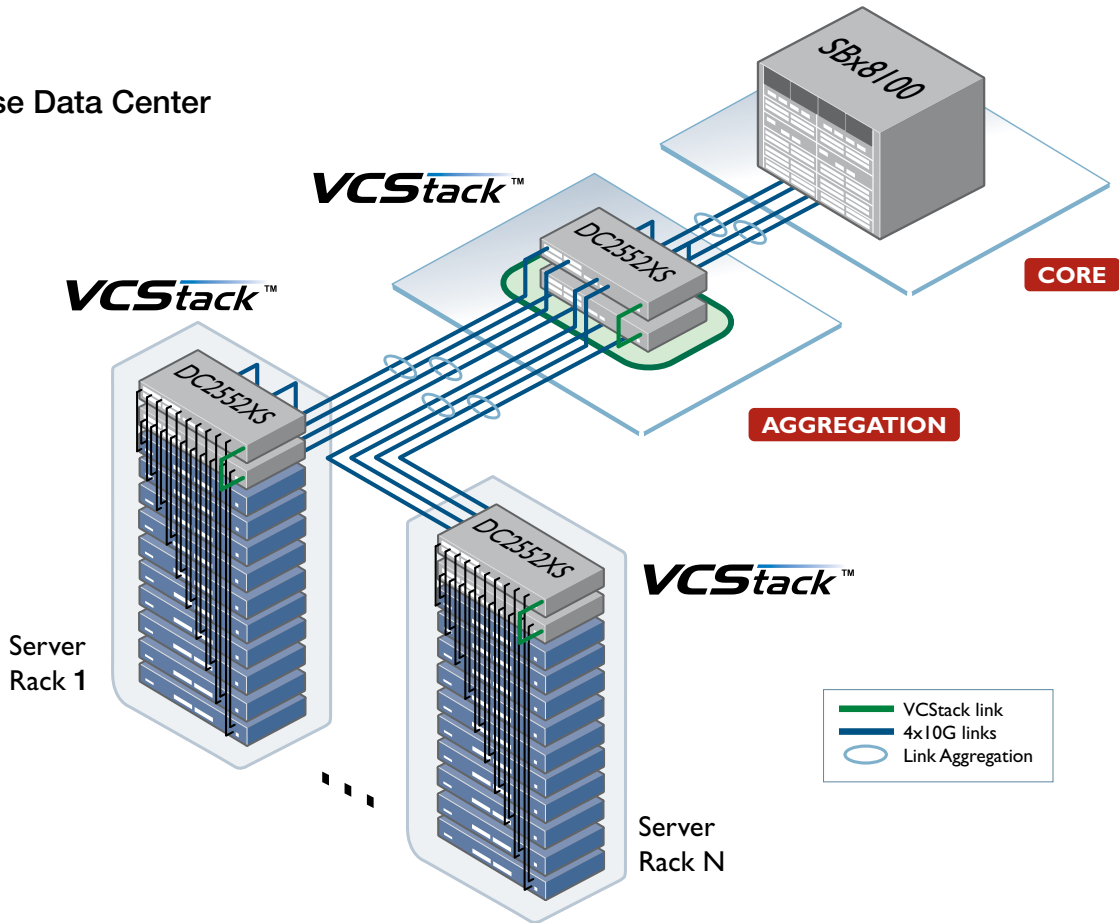

The diagram shows link aggregation between the core VCStack and distribution switches, as well as servers and storage. With link aggregation across ports on different virtual chassis members, there is no perceptible disruption in the case of a link failure, and the full bandwidth of the network remains available. Fast Failover ensures access to online resources is always available, and real-time applications like VoIP and streaming video are assured premium service on the network.

AMF allows the network to be managed as a single virtual entity, greatly reducing administration and automating many day-to-day tasks. AMF Guestnode allows third party devices, such as IP phones and security cameras, to be part of the AMF network.

## Key Solutions

### Enterprise Data Center

### Port Usage

This network configuration enables servers and storage to communicate with low-latency high-speed connectivity. VCStack creates a single virtual unit out of two devices with high-speed 40 Gigabit QSFP+ connections, ensuring no single point of failure.

#### Aggregation VCStack

- ▶ Two DC2552XS/L3 switches can be stacked with QSFP direct attach cables, or optics.
- ▶ Multiple 10Gb connections using link aggregation ensures high-speed resilient data transfer.

#### Top of Rack (ToR) VCStack

- ▶ Two DC2552XS/L3 switches can be stacked with QSFP direct attach cables, or optics.
- ▶ Servers and storage devices can be connected to both ToR switches using link aggregation for high availability and network resiliency.

## Specifications

- ▶ Switch ports  
48 SFP+ (1G/10G) slots  
4 QSFP+ (4x10G/40G) slots
- ▶ Supports any combination of 1000X, 1000SX, 1000LX, 1000ZX, 1000ZX CWDM, SFP or 10G-SR SFP+ modules
- ▶ Console port  
RS-232 (USB connector) x 1
- ▶ Management port (eth0)  
10/100/1000T (RJ-45 connector) x 1  
Auto negotiation, MDI-MDI-X
- ▶ Forwarding rate 952.32Mpps
- ▶ Switching capacity 1280Gbps
- ▶ 9MB packet buffer

## Performance

- ▶ IPv4 routes 16K
- ▶ IPv6 routes 8K
- ▶ 128K MAC addresses
- ▶ Maximum jumbo frames 12Kbytes
- ▶ Cut-through mode Latency 10GB:800ns (64byte)
- ▶ 1.2Ghz CPU, 2GB RAM, 128MB flash memory
- ▶ Wirespeed switching (unicast and multicast) on all ethernet ports

## Diagnostic Tools

- ▶ Built-In Self Test (BIST)
- ▶ Find-me device locator
- ▶ Automatic link flap detection and port shutdown
- ▶ Optical Digital Diagnostic Monitoring (DDM)
- ▶ UniDirectional Link Detection (UDLD)
- ▶ Ping polling for IPv4 and IPv6
- ▶ Port mirroring
- ▶ TraceRoute for IPv4 and IPv6

## IPv4 Standards

- ▶ Black hole routing
- ▶ Directed broadcast forwarding
- ▶ DNS relay
- ▶ Equal Cost Multi Path (ECMP) routing
- ▶ Policy-based routing
- ▶ Route maps
- ▶ Route redistribution (OSPF, BGP, RIP)
- ▶ Static unicast and multicast routes for IPv4
- ▶ UDP broadcast helper (IP helper)
- ▶ Up to 64 Virtual Routing and Forwarding (VRF lite) domains (with license)

## IPv6 Standards

- ▶ DHCPv6 client and relay
- ▶ DNSv6 client and relay
- ▶ IPv4 and IPv6 dual stack
- ▶ IPv6 aware storm protection and QoS
- ▶ IPv6 hardware ACLs
- ▶ Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
- ▶ NTPv6 client and server
- ▶ Static unicast and multicast routes for IPv6
- ▶ Log to IPv6 hosts with Syslog v6

## Management

- ▶ Allied Telesis Management Framework (AMF) enables powerful centralized management and zero-touch device installation and recovery

- ▶ Try AMF for free with the built-in AMF Starter license
- ▶ Console management port on the front panel for ease of access
- ▶ Eco-friendly mode allows ports and LEDs to be disabled to save power
- ▶ Industry-standard CLI with context-sensitive help
- ▶ Powerful CLI scripting engine
- ▶ Comprehensive SNMP MIB support for standards-based device management
- ▶ Built-in text editor
- ▶ Event-based triggers allow user-defined scripts to be executed upon selected system events

## Quality of Service (QoS)

- ▶ 8 priority queues with a hierarchy of high priority queues for real time traffic, and mixed scheduling, for each switch port
- ▶ Limit bandwidth per port or per traffic class down to 64kbps
- ▶ Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications
- ▶ Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- ▶ Policy-based storm protection
- ▶ Extensive remarking capabilities
- ▶ Taildrop for queue congestion control
- ▶ Strict priority, weighted round robin or mixed scheduling
- ▶ IP precedence and DiffServ marking based on Layer 2, 3 and 4 headers

## Resiliency

- ▶ Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ▶ Dynamic link failover (host attach)
- ▶ EPSRing (Ethernet Protection Switched Rings) with SuperLoop Protection (SLP) and enhanced recovery for extra resiliency
- ▶ Loop protection: loop detection and thrash limiting
- ▶ PVST+ compatibility mode
- ▶ STP root guard
- ▶ Long-Distance VCStack with 40G QSFP+ modules
- ▶ QSFP+ stacking ports can be configured as 40G Ethernet ports
- ▶ VCStack fast failover minimizes network disruption

## Security

- ▶ Access Control Lists (ACLs) based on Layer 3 and 4 headers, per VLAN or port
- ▶ Configurable ACLs for management traffic
- ▶ Configurable auth-fail and guest VLANs
- ▶ Authentication, Authorisation and Accounting (AAA)
- ▶ Bootloader can be password protected for device security
- ▶ BPDU protection
- ▶ DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- ▶ DoS attack blocking and virus throttling
- ▶ Dynamic VLAN assignment
- ▶ MAC address filtering and MAC address lock-down

- ▶ Network Access and Control (NAC) features manage endpoint security
- ▶ Port-based learn limits (intrusion detection)
- ▶ Private VLANs provide security and port isolation for multiple customers using the same VLAN
- ▶ Secure Copy (SCP)
- ▶ Strong password security and encryption
- ▶ Tri-authentication: MAC-based, web-based and IEEE 802.1x
- ▶ RADIUS group selection per VLAN or port

## Environmental Specifications

- ▶ Operating temperature 0°C to 40°C
- ▶ Storage temperature -20°C to 60°C
- ▶ Operating humidity 10% to 80% (non-condensing)
- ▶ Storage humidity 5% to 90% (non-condensing)

## Safety and Electromagnetic Emissions Certifications

- ▶ EMI: FCC class A, CISPR class A, EN55022 class A
- ▶ C-TICK, VCCI Class A, CE
- ▶ Immunity: EN50024, EN61000-3-3, EN61000-3-2
- ▶ Safety: UL 60950-1 (cUlus), EN60950-1 (TUV)

## Restrictions on Hazardous Substances (RoHS) Compliance

- ▶ Compliant with European RoHS standards

## Physical Specifications

- ▶ 19 inch rack mount
- ▶ Dimensions: 44.1 x 46 x 4.4 cm (W x D x H) 17.4 x 18.1 x 1.7 in
- ▶ Weight: 8.3 kg /18.3 lb (chassis only) 11.3 kg/24.9 lb (chassis with two fans and two PSUs)
- ▶ Packaged dimensions: 66.0 x 61.0 x 18.0 cm (W x D x H) 26.0 x 24.0 x 7.1 in
- ▶ Weight: 10 kg (22.0 lb)

## Power Characteristics

- ▶ Voltage: 100-240V AC (10% auto-ranging)
- ▶ Frequency: 50/60 Hz
- ▶ Maximum current: 14A @ 100V
- ▶ Heat dissipation: 900 BTU/hr

## Power Consumption

- ▶ 250W (max 280W)

## Noise Characteristics

- ▶ Tba - Tested to ISO7779; front bystander position

## Package Contents

- ▶ AT-DC2552XS/L3 switch with two PSU bay cover and two FAN unit bay covers
- ▶ Management cable (RS-232 to USB)
- ▶ Rubber feet and 19" rack-mountable hardware kit accessories

## Country of Origin

- ▶ China

## Standards and Protocols

### AlliedWare Plus Operating System

Version 5.4.7

### Border Gateway Protocol (BGP)

- BGP dynamic capability
- BGP outbound route filtering
- RFC 1772 Application of the Border Gateway Protocol (BGP) in the Internet
- RFC 1997 BGP communities attribute
- RFC 2385 Protection of BGP sessions via the TCP MD5 signature option
- RFC 2439 BGP route flap damping
- RFC 2545 Use of BGP-4 multiprotocol extensions for IPv6 inter-domain routing
- RFC 2858 Multiprotocol extensions for BGP-4
- RFC 2918 Route refresh capability for BGP-4
- RFC 3392 Capabilities advertisement with BGP-4
- RFC 3882 Configuring BGP to block Denial-of-Service (DoS) attacks
- RFC 4271 Border Gateway Protocol 4 (BGP-4)
- RFC 4360 BGP extended communities
- RFC 4456 BGP route reflection - an alternative to full mesh iBGP
- RFC 4724 BGP graceful restart
- RFC 4893 BGP support for four-octet AS number space
- RFC 5065 Autonomous system confederations for BGP

### Cryptographic Algorithms

#### FIPS Approved Algorithms

Encryption (Block Ciphers):

- ▶ AES (ECB, CBC, CFB and OFB Modes)
- ▶ 3DES (ECB, CBC, CFB and OFB Modes)

Block Cipher Modes:

- ▶ CCM
- ▶ CMAC
- ▶ GCM
- ▶ XTS

Digital Signatures & Asymmetric Key Generation:

- ▶ DSA
- ▶ ECDSA
- ▶ RSA

Secure Hashing:

- ▶ SHA-1
- ▶ SHA-2 (SHA-224, SHA-256, SHA-384, SHA-512)

Message Authentication:

- ▶ HMAC (SHA-1, SHA-2(224, 256, 384, 512))

Random Number Generation:

- ▶ DRBG (Hash, HMAC and Counter)

#### Non FIPS Approved Algorithms

RNG (AES128/192/256)

DES  
MD5

### Ethernet

- IEEE 802.1AX Link aggregation (static and LACP)
- IEEE 802.2 Logical Link Control (LLC)
- IEEE 802.3 Ethernet
- IEEE 802.3ab 100BASE-T
- IEEE 802.3ad Static and dynamic link aggregation
- IEEE 802.3ae 10 Gigabit Ethernet
- IEEE 802.3ba 40 Gigabit Ethernet
- IEEE 802.3x Flow control - full-duplex operation
- IEEE 802.3z 1000BASE-X

### IPv4 Standards

- RFC 768 User Datagram Protocol (UDP)
- RFC 791 Internet Protocol (IP)
- RFC 792 Internet Control Message Protocol (ICMP)
- RFC 793 Transmission Control Protocol (TCP)
- RFC 826 Address Resolution Protocol (ARP)
- RFC 894 Standard for the transmission of IP data grams over Ethernet networks

- RFC 919 Broadcasting Internet datagrams
- RFC 922 Broadcasting Internet datagrams in the presence of subnets
- RFC 932 Subnetwork addressing scheme
- RFC 950 Internet standard subnetting procedure
- RFC 951 Bootstrap Protocol (BootP)
- RFC 1027 Proxy ARP
- RFC 1035 DNS client
- RFC 1042 Standard for the transmission of IP data grams over IEEE 802 networks
- RFC 1071 Computing the Internet checksum
- RFC 1122 Internet host requirements
- RFC 1191 Path MTU discovery
- RFC 1256 ICMP router discovery messages
- RFC 1518 An architecture for IP address allocation with CIDR
- RFC 1519 Classless Inter-Domain Routing (CIDR)
- RFC 1542 Clarifications and extensions for BootP
- RFC 1591 Domain Name System (DNS)
- RFC 1812 Requirements for IPv4 routers
- RFC 1918 IP addressing
- RFC 2581 TCP congestion control

### IPv6 Standards

- RFC 1981 Path MTU discovery for IPv6
- RFC 2460 IPv6 specification
- RFC 2464 Transmission of IPv6 packets over Ethernet networks
- RFC 3056 Connection of IPv6 domains via IPv4 clouds
- RFC 3484 Default address selection for IPv6
- RFC 3596 DNS extensions to support IPv6
- RFC 4007 IPv6 scoped address architecture
- RFC 4193 Unique local IPv6 unicast addresses
- RFC 4291 IPv6 addressing architecture
- RFC 4443 Internet Control Message Protocol (ICMPv6)
- RFC 4861 Neighbor discovery for IPv6
- RFC 4862 IPv6 Stateless Address Auto-Configuration (SLAAC)
- RFC 5014 IPv6 socket API for source address selection
- RFC 5095 Deprecation of type 0 routing headers in IPv6
- RFC 5175 IPv6 Router Advertisement (RA) flags option
- RFC 6105 IPv6 Router Advertisement (RA) guard

### Management

- AMF MIB and SNMP traps
- AT Enterprise MIB
- SNMPv1, v2c and v3
- IEEE 802.1AB Link Layer Discovery Protocol (LLDP)
- RFC 1155 Structure and identification of management information for TCP/IP-based Internets
- RFC 1157 (SNMP) Simple Network Management Protocol
- RFC 1212 Concise MIB definitions
- RFC 1213 MIB for network management of TCP/IP-based Internets: MIB-II
- RFC 1215 Convention for defining traps for use with the SNMP
- RFC 1227 SNMP MUX protocol and MIB
- RFC 1239 Standard MIB
- RFC 1724 RIPv2 MIB extension
- RFC 2096 IP forwarding table MIB
- RFC 2578 Structure of Management Information v2 (SMIv2)
- RFC 2579 Textual conventions for SMIv2
- RFC 2580 Conformance statements for SMIv2
- RFC 2674 Definitions of managed objects for bridges with traffic classes, multicast filtering and VLAN extensions
- RFC 2741 Agent extensibility (AgentX) protocol
- RFC 2787 Definitions of managed objects for VRRP
- RFC 2819 RMON MIB (groups 1,2,3 and 9)
- RFC 2863 Interfaces group MIB
- RFC 3164 Syslog protocol
- RFC 3176 sFlow: a method for monitoring traffic in switched and routed networks
- RFC 3411 An architecture for describing SNMP management frameworks
- RFC 3412 Message processing and dispatching for the SNMP
- RFC 3413 SNMP applications

- RFC 3414 User-based Security Model (USM) for SNMPv3
- RFC 3415 View-based Access Control Model (VACM) for SNMP
- RFC 3416 Version 2 of the protocol operations for the SNMP
- RFC 3417 Transport mappings for the SNMP
- RFC 3418 MIB for SNMP
- RFC 3635 Definitions of managed objects for the Ethernet-like interface types
- IEEE 802.3 MAU MIB
- RFC 4022 SNMPv2 MIB for TCP using SMIv2
- RFC 4113 SNMPv2 MIB for UDP using SMIv2
- RFC 4293 SNMPv2 MIB for IP using SMIv2
- RFC 4188 Definitions of managed objects for bridges
- RFC 4318 Definitions of managed objects for bridges with RSTP
- RFC 4560 Definitions of managed objects for remote ping, traceroute and lookup operations
- RFC 6527 Definitions of managed objects for VRRPv3

### Multicast Support

- Bootstrap Router (BSR) mechanism for PIM-SM
- IGMP query solicitation
- IGMP snooping (IGMPv1, v2 and v3)
- IGMP snooping fast-leave
- IGMP/MLD multicast forwarding (IGMP/MLD proxy)
- MLD snooping (MLDv1 and v2)
- PIM-SM and SSM for IPv6
- RFC 1112 Host extensions for IP multicasting (IGMPv1)
- RFC 2236 Internet Group Management Protocol v2 (IGMPv2)
- RFC 2710 Multicast Listener Discovery (MLD) for IPv6
- RFC 2715 Interoperability rules for multicast routing protocols
- RFC 3376 IGMPv3
- RFC 3810 Multicast Listener Discovery v2 (MLDv2) for IPv6
- RFC 3973 PIM Dense Mode (DM)
- RFC 4541 IGMP and MLD snooping switches
- RFC 4601 Protocol Independent Multicast - Sparse Mode (PIM-SM): protocol specification (revised)
- RFC 4604 Using IGMPv3 and MLDv2 for source-specific multicast
- RFC 4607 Protocol Independent Multicast - Source-Specific Multicast (PIM-SSM)

### Open Shortest Path First (OSPF)

- OSPF link-local signaling
- OSPF MD5 authentication
- OSPF restart signaling
- Out-of-band LSDB resync
- RFC 1245 OSPF protocol analysis
- RFC 1246 Experience with the OSPF protocol
- RFC 1370 Applicability statement for OSPF
- RFC 1765 OSPF database overflow
- RFC 2328 OSPFv2
- RFC 2370 OSPF opaque LSA option
- RFC 2740 OSPFv3 for IPv6
- RFC 3101 OSPF Not-So-Stubby Area (NSSA) option
- RFC 3509 Alternative implementations of OSPF area border routers
- RFC 3623 Graceful OSPF restart
- RFC 3630 Traffic engineering extensions to OSPF
- RFC 4552 Authentication/confidentiality for OSPFv3
- RFC 5329 Traffic engineering extensions to OSPFv3

### Quality of Service (QoS)

- IEEE 802.1p Priority tagging
- RFC 2211 Specification of the controlled-load network element service
- RFC 2474 DiffServ precedence for eight queues/port
- RFC 2475 DiffServ architecture
- RFC 2597 DiffServ Assured Forwarding (AF)
- RFC 2697 A single-rate three-color marker
- RFC 2698 A two-rate three-color marker
- RFC 3246 DiffServ Expedited Forwarding (EF)

## Resiliency

- IEEE 802.1D MAC bridges (STP)
- IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)
- IEEE 802.1w Rapid Spanning Tree Protocol (RSTP)
- RFC 5798 Virtual Router Redundancy Protocol version 3 (VRRPv3) for IPv4 and IPv6

## Routing Information Protocol (RIP)

- RFC 1058 Routing Information Protocol (RIP)
- RFC 2080 RIPng for IPv6
- RFC 2081 RIPng protocol applicability statement
- RFC 2082 RIP-2 MD5 authentication
- RFC 2453 RIPv2

## Security

- SSH remote login
- SSLv2 and SSLv3
- TACACS+ accounting and authentication
- IEEE 802.1X authentication protocols (TLS, TTLS, PEAP and MD5)
- IEEE 802.1X multi-supplicant authentication
- IEEE 802.1X port-based network access control
- RFC 2818 HTTP over TLS ("HTTPS")
- RFC 2865 RADIUS
- RFC 2866 RADIUS accounting
- RFC 2868 RADIUS attributes for tunnel protocol support
- RFC 3280 Internet X.509 PKI Certificate and Certificate Revocation List (CRL) profile
- RFC 3546 Transport Layer Security (TLS) extensions
- RFC 3579 RADIUS support for Extensible Authentication Protocol (EAP)
- RFC 3580 IEEE 802.1x RADIUS usage guidelines
- RFC 3748 PPP Extensible Authentication Protocol (EAP)
- RFC 4251 Secure Shell (SSHv2) protocol architecture
- RFC 4252 Secure Shell (SSHv2) authentication protocol
- RFC 4253 Secure Shell (SSHv2) transport Layer protocol
- RFC 4254 Secure Shell (SSHv2) connection protocol
- RFC 5246 TLS v1.2

## Services

- RFC 854 Telnet protocol specification
- RFC 855 Telnet option specifications
- RFC 857 Telnet echo option
- RFC 858 Telnet suppress go ahead option
- RFC 1091 Telnet terminal-type option
- RFC 1350 Trivial File Transfer Protocol (TFTP)
- RFC 1985 SMTP service extension
- RFC 2049 MIME
- RFC 2131 DHCPv4 (server, relay and client)
- RFC 2132 DHCP options and BootP vendor extensions
- RFC 2616 Hypertext Transfer Protocol - HTTP/1.1
- RFC 2821 Simple Mail Transfer Protocol (SMTP)
- RFC 2822 Internet message format
- RFC 3046 DHCP relay agent information option (DHCP option 82)
- RFC 3315 DHCPv6 (server, relay and client)
- RFC 3633 IPv6 prefix options for DHCPv6
- RFC 3646 DNS configuration options for DHCPv6
- RFC 3993 Subscriber-ID suboption for DHCP relay agent option
- RFC 4330 Simple Network Time Protocol (SNTP) version 4
- RFC 5905 Network Time Protocol (NTP) version 4

## VLAN Support

- Generic VLAN Registration Protocol (GVRP)
- IEEE 802.1ad Provider bridges (VLAN stacking, Q-in-Q)
- IEEE 802.1Q Virtual LAN (VLAN) bridges
- IEEE 802.1v VLAN classification by protocol and port
- IEEE 802.3ac VLAN tagging

## Voice over IP (VoIP)

- LLDP-MED ANSI/TIA-1057
- Voice VLAN

## Ordering Information

### AT-DC2552XS/L3

- 48-port SFP+ slot
- 4-port QSFP+ slot
- 1-port console port
- 1-port management port
- 2 slots for PWR
- 2 slots for FAN

### AT-RKMT-SL01

- Sliding rack mount kit

### AT-PWR06-xx

- Hot-swappable AC power supply

### AT-FAN06

- Hot-swappable FAN
- (Two FANs are needed to operate.
- Reverse cooling airflow - port side to PSU/FAN side - is not supported)

Where xx =

- 10 for US power cord
- 30 for UK power cord
- 40 for Australian power cord
- 50 for European power cord

## 40G QSFP+ modules

### AT-QSFP1CU

- QSFP+ direct attach cable 1 m

### AT-QSFP3CU

- QSFP+ direct attach cable 3 m

### AT-QSFP4SR

- 40GSR 850 nm short-haul up to 150 m with MMF

### AT-QSFP4R4

- 40GLR4 1310 nm medium-haul up to 10 km with SMF

### AT-MTP12-1

- MTP optical cable for AT-QSFP4SR, 1 m

### AT-MTP12-5

- MTP optical cable for AT-QSFP4SR, 5 m

## Breakout Cables

### For 4 x 10G connections

### AT-QSFP-4SFP10G-3CU

- QSFP to 4 x SFP+ breakout direct attach cable (3 m)

### AT-QSFP-4SFP10G-5CU

- QSFP to 4 x SFP+ breakout direct attach cable (5 m)

## 10G SFP+ Modules

### AT-SP10SR

- 10GSR 850 nm short-haul, 300 m with MMF

### AT-SP10LRM

- 10GLRM 1310 nm short-haul, 220 m with MMF

### AT-SP10LR

- 10GLR 1310 nm medium-haul, 10 km with SMF

### AT-SP10LR/I

- 10GLR 1310 nm medium-haul, 10 km with SMF industrial temperature

### AT-SP10ER40/I

- 10GER 1310nm long-haul, 40 km with SMF industrial temperature

### AT-SP10T

- 10GBase-T 20 m copper

### AT-SP10TW1

- 10GBASE SFP+ direct attach cable (1 m)

### AT-SP10TW3

- 10GBASE SFP+ direct attach cable (3 m)

### AT-SP10TW7

- 10GBASE SFP+ direct attach cable (7 m)

## 1000Mbps SFP Modules

### AT-SPTX

- 1000T 100 m copper

### AT-SPSX

- 1000SX GbE multi-mode 850 nm fiber up to 550 m

### AT-SPEX

- 1000X GbE multi-mode 1310 nm fiber up to 2 km

### AT-SPLX10

- 1000LX GbE single-mode 1310 nm fiber up to 10 km
