1. Introduction

The system VPNRouter impresses with its quality and robustness. This makes it possible to use the VPNRouter in different areas. Of course, the VPNRouter also has the latest security features such as a firewall or VPN. In general there is a trade-off between ease-of-use and security, VPNRouter optimizes this. The system is easy to install and use, but at the same time offers security given by strong encryption standards.

1.1. Manual Strategy and Details

This manual covers the configuration of the VPNRouter in detail.

1.2. Typing Conventions

When describing the manual has to reference some components visible on the screen. For better identification the reference is supported by showing the text in certain styles.

Software text is written in a slanted style. Such item represents text output written on the screen.

- User Input Input forms require the user to type some data on the keyboard. Text written in style of a typewriter represents this input.
- **[A Button]** Controling the software will also require to click some **[buttons]**. These buttons are represented by the name on them. The name is written in typewriter style on silver background, and surrounded by brackets.
- [A Button] Further there are some [blue buttons] to control the web interface. These buttons are again represented by the name on them. This time the name is written in typewriter style white colour on blue background, still surrounded by brackets.
- **Component** The manual will reference some components on the Device, then the **name of it** is written in bold.

2. Hardware

2.1. Product Features

	VPNRouter iR 5221/VPNRouter iR 3220
CPU	TI Sitara AM3352 ARM Cortex-A8 RISC CPU,
	600MHz
RAM	256 MB DDR3 RAM
Flash	256 MB NAND Flash for boot Linux OS
SD-Slot	1 x Standard size
USB	2 x 2.0 High Speed as Host
	1 x USB/OTG (VPNRouter iR 5221 only)
LAN	$4 \ge 10/100$ Fast Ethernet with integrated switch
	$2\ge 10/100$ Fast Ethernet on VPNR outer iR 3220
WAN	$1 \ge 10/100/1000$ Gigabit Ethernet
WLAN	optional, IEEE 802.11b/g/n
CAN-Bus	$1 \ge CAN$ -Bus $20 \ge 10$ Mbps
	(VPNRouter iR 5221 only)
Serial Ports	$2 \ge \mathrm{RS}232/\mathrm{RS}422/\mathrm{RS}485$ up to $3.7\mathrm{Mbps}$
Digital I/O	4 x input signals
	4 x output signals (32 mA max.)
Console Port	RS232, up to 115200bps
I ² C	max. 400 kHz
RTC	yes
Watch Dog Timer	yes
MiniPCIe-Slot	yes, with SIM Card Slot
Reset Button	HW Reset
Power Input	12-50V DC
Power Consumption	0.3A @ 12V min.
Dimensions (W x L x H)	$154 \ge 104 \ge 50 \text{ mm}$
Antenna	The case is prepared for two antenna sockets, e.g.
	WLAN and GPS

Table 1: Product Hardware Specifications

	VPNRouter iR 2110
CPU	TI Sitara AM3352 ARM Cortex-A8 RISC CPU,
	600MHz
RAM	256 MB DDR3 RAM
Flash	256 MB NAND Flash for boot Linux OS
SD-Slot	1 x external, size microSD
USB	1 x 2.0 High Speed as Host
LAN	$1 \ge 10/100$ Fast Ethernet
WAN	$1 \ge 10/100/1000$ Gigabit Ethernet
WLAN	optional, IEEE 802.11b/g/n
Serial Ports	$1 \ge \frac{\text{RS}232}{\text{RS}422}$ RS 485 up to 3.7 Mbps
Console Port	TTL internal, up to 115200bps
	adapter to USB available
RTC	yes
Watch Dog Timer	yes
Reset Button	HW Reset
Power Input	9-54V DC
Power Consumption	0.2A @ 12V min.
Dimensions (W x L x H)	115 x 73 x 25 mm
Antenna	The case provides two positions for an antenna socket

 Table 2: Product Hardware Specifications

2.1.1. Ethernet

Two independent ports for Ethernet are available in VPNR outer, with separate MAC Addresses. One port is implemented as GigaLAN for $10/100/1000\,{\rm Mbit/s}$, the other provides an internal Ethernet switch for Fast Ethernet function $10/100\,{\rm Mbit/s}$. The VPNR outer iR 5221 provides four Fast Ethernet ports, on VPNR outer iR 3220 there are two of them and VPNR outer iR 2110 has only one missing the Ethernet switch.

2.1.2. USB

Two USB Host ports for USB 2.0 High Speed allow to connect any devices. The VPNR outer iR 2110 has only one port. Support for certain WLAN and 3G/4G adapters is available.

On VPNR outer iR 5221 only: there is one extra port type USB 2.0 OTG for Host and Device operation mode.

2.1.3. CAN-Bus

On VPNR outer iR 5221 only: one CAN port for CAN 2.0A and 2.0B is available. The port operates from 20 kbit/s up to 1 Mbit/s.

2.1.4. Serial Ports

Two serial ports are provided in RS232/422/485 modes that can be configured by software or by DIP switch where as the VPNRouter iR 2110 has only one serial port configurable by software. For the detailed information about the supported modes refer to the Table 3.

	RS 232	RS422	RS485
Modes	full duplex	full duplex	2-wire: half duplex, without echo
			4-wire: full duplex
Signals	TxD, RxD, RTS, CTS,	Tx+/-, Rx+/-,	2-wire: Data+/-, GND
	DTR, DSR, DCD, RI,	GND	4-wire: Tx+/-, Rx+/-, GND
	GND		
Data			by driver, via RTS
Direction			
Control			
Speed	up to $921.6 / 1000 \rm kbps$	up to 3.7 Mbps	up to 3.7 Mbps

2.1.5. Digital I/O

Four input and four output signals at TTL level are provided. For input signals the change of at least one input signal generates an interrupt. See Section 4.3 on page 17 for electrical characteristics. The VPNRouter iR 2110 does not have these.

2.1.6. I²C

One port for external I²C function is provided. The signals originate in a repeater, to protect the internal circuits from external misconfiguration or signal shorting. The VPNRouter iR 2110 does not have this port.

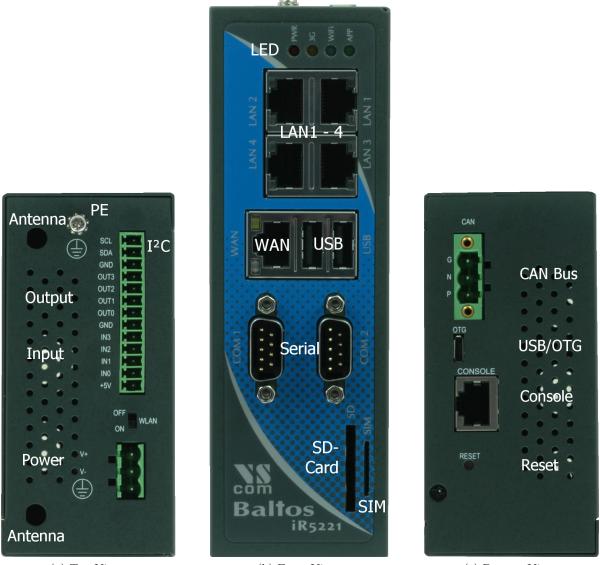

2.1.7. WLAN

The VPNR outer is available with an optional built-in WLAN function as of IEEE 802.11 b/g/n for wireless connection.

3. Appearance

This is how the VPNRouter systems look like on the top, front and bottom sides.

3.1. VPNRouter iR 5221

(a) Top View

(b) Front View

(c) Bottom View

Figure 1: Appearance VPNR outer iR 5221

3.2. VPNRouter iR 3220

Figure 2: Appearance VPNRouter iR 3220

The VPNR outer iR 3220 provides two ports for LAN, the CAN Bus connector and the $\rm USB/OTG$ port are not implemented.

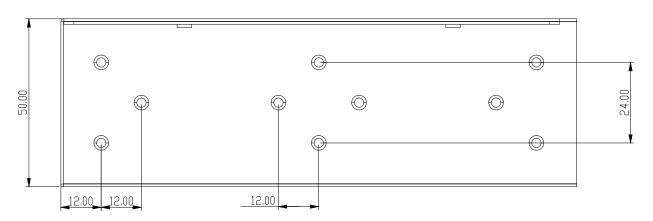

Figure 4: Mounting Positions VPNRouter iR 5221/VPNRouter iR 3220

3.3. VPNRouter iR 2110 Front and Rear

(b) Rear View

Figure 3: Appearance VPNRouter iR 2110

The front side has the Gigabit WAN port and USB. Then there is the serial port and the Fast Ethernet LAN port. Small on the lower right is the slot for a microSD card. The rear side provides the socket for the terminal block power connector. On this side also a DIN Rail clamp may be mounted. The DIP switches define the operation mode of the serial port. There is a possible location for a WLAN antenna. The Reset button is pushed by a small prick.

3.4. Mechanics for Mounting

This are the positions of screws for mounting. The groups of three on the left and right (actually top and bottom) hold the metal plates for wall mounting.

The group of four in the middle is for the DIN Rail mounting clamp. This may be mounted in standard orientation, or turned by 90° to provide for a (seldom used) horizontal fixture on the DIN Rail.

Figure 5a is a reference for the positions of front side connectors. It is for demonstration only.

Figure 5b shows the positions of screws for fixing. Note, this is upside down with respect to the front side. The two M3 screw positions in the middle allow to fix an DIN Rail clamp. There is also the position of a possible antenna socket near the Reset button.

4. Position of Connectors and Functions of VPNRouter iR 5221 and VPNRouter iR 3220

First the connectors and functions located on the top side of VPNR outer iR 5221 and VPN-Router iR 3220 are described. The next components are those on the front side, finally followed by those on the bottom side.

4.1. Power

The VPNR outer device is powered by a single power supply in a wide range from $12\,V$ to $50\,V$ DC. A suitable power supply adapter is available as add-on component, and part of the starter kit package. Connect the cable to the power jack at the top side of VPNR outer, and plug the adapter into the socket. The Power LED (red) on VPNR outer will light. You can connect a power supply of your choice, providing the technical requirements are met.

Warning: disconnect the VPNRouter from power supply before performing installation or wiring. The wire size must follow the maximum current specifications. The maximum possible current in the power wires as well as in the common wires must be taken under consideration. If the current rises above the maximum ratings, the wiring can overheat, causing serious damage to your equipment. When powered, the VPNRouter's internal components generate heat, and consequently the outer case may feel warm to the touch.

4.1.1. Connection and Polarity

Power is connected via three clamps on a terminal block, located on the top side of VPNRouter iR 5221/VPNRou

Warning: do not confuse the CAN connector at the bottom side for power input. Such may damage the CAN bus port.

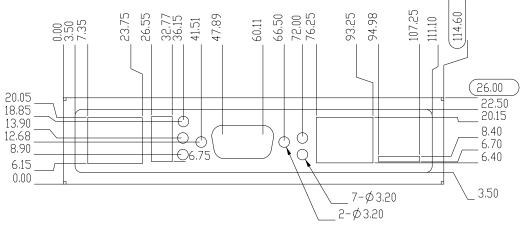

Clamp	3	2	1
Function	PE	V-	V+

 Table 4: Power Connector

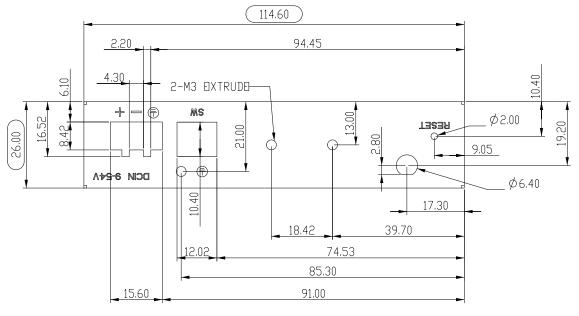

V+ and V- are clamps for DC voltage supply. PE is the clamp to connect the case and shields of connection cables to Protective Earth. PE is internally connected to logic ground, which is on the level of Vsupply line.

Figure 6: Power Connector

(b) Rear Side

Figure 5: Mounting Positions VPNRouter iR 2110

Attention: Never connect the Terminal block for power supply in reversed direction, i.e. turned by 180°. This would connect the power between V- (logic ground) and case/protective ground. High current is the result, causing damage inside the system.

4.1.2. Grounding

Grounding and wire routing help limit the effects of noise due to electromagnetic interference (EMI). Run the ground connection from the ground screw to the grounding surface prior to connecting devices.

In noisy environments the case of VPNRouter shall be directly connected to Protective Earth. This is the purpose of the dedicated PE Screw on the case top/rear side.

Figure 7: PE Screw

4.2. WLAN Switch

The WLAN switch on the top side is used to disable the WLAN function. Provided the VPNRouter is equipped with a WLAN module. Otherwise software may just read this switch for other purposes.

4.3. Digital I/O

The functions of Digital Input and Output are located on the 13 clamp terminal block on the top side of VPNR outer. Also available on this terminal block is the function of I²C and an auxiliary power output.

1 2				3		4		5		6

GND SDA SCL											
(c) I ² C connects											

 SCL
 Image: Constraint of the second sec

Figure 9: Digital Input / Output Connector

Table 5: Digital Input/Output: Connector

4.3.1. Digital Input

The VPNR outer provides four digital input channels. The signals IN 0 to IN 3 are located on clamps 2 to 5 of the terminal block, the reference GND is on clamp 6. A signal change on an input channel will generate an interrupt.

Input High	TTL level $(2.0 \text{ to } 5.0\text{V})$
Input Low	TTL level $(0.0 \text{ to } 0.8\text{V})$

Table 6:	Digital	Input:	Electrical	Characteristics
----------	---------	--------	------------	-----------------

4.3.2. Digital Output

The VPNRouter provides four digital output channels. The signals OUT 0 to OUT 3 are located on clamps 7 to 10 of the terminal block, the reference GND is on clamp 6 and 11. The output ports can source some milliAmpere output in High status, with decreasing voltage when the current rises. In Low status they can sink significant current, enough to drive small relays.

Output High	Source $32mA@TTL$ (2.0 to 5.0V)
Output Low	Sink $64mA@TTL (0.0 \text{ to } 0.6V)$

 Table 7: Digital Output:
 Electrical Characteristics

4.3.3. I²C Interface

The I²C interface operates with a maximum frequency of 400 kHz (Fast Mode). The connector for I²C is located on the terminal digital I/O block and has three contacts: SCL, SDA and GND (clamps 11 to 13). When required the I²C device can be powered with the VCC auxiliary output of the digital I/O terminal block.

4.3.4. Auxiliary Power

+5V is an auxiliary power output of 5V DC, for max. 500 milliAmpere. This may be used to drive special driver circuits connected at Digital-I/O. For example +5V may drive a relay controlled by the output signals, or power a small I²C-controlled display. The GND for auxiliary power is on clamps 6 and 11.

4.4. Antenna Locations

The VPNRouter is prepared for adding two antenna sockets of the usual SMA type. These may be used for functions like WLAN, UMTS/LTE wireless or GPS receivers. The positions are covered by plastic caps. Both antenna positions are on the top side of VPN-Router iR 5221/VPNRouter iR 3220.

Figure 10: Antenna location

4.5. LED

The front side starts with a group of four LEDs.

- **PWR** (Red) lights when power is applied to the VPNRouter. System software may generate short blinks for certain events.
- $\mathbf{3G}$ (Yellow) is controlled by a UMTS/LTE modem card in the mini PCIe expansion slot.
- WIFI (Blue) signals operation status of WLAN function.
- **APP** (Green) is free to use by customers application, e.g. as some ready light. Figure 11: Front LED

4.6. LAN

The first Ethernet port in VPNRouter is for 10/100 Mbps Fast Ethernet. This connects to an internal Ethernet switch, with 2 (VPNRouter iR 3220) or 4 (VPNRouter iR 5221) external connectors. Devices or systems connected to these ports can communicate with each other, without involving the CPU of VPNRouter.

Each of the LAN ports are the usual RJ45. When the connect is done the Link LED on RJ45 (right) will light. When data traffic occurs on the network, this LED will blink. It depends on your network or devices whether a 100 Mbit or a 10 Mbit connect will be established. The Speed LED (left) lights for 100Mbps connections.

Figure 12: LAN ports

4.7. WAN

The second Ethernet port in VPNR outer is for 10/100/1000 Mbps Gigabit Ethernet. The connector is the usual RJ45, integrated with USB ports.

When the connect is done the Link LED on RJ45 (green, left) will light. When data traffic occurs on the network, this LED will blink. It depends on your network or devices whether a 1000 Mbit, a 100 Mbit or a 10 Mbit connect will be established. The Speed LED (yellow, right) lights for 10 and 100 Mbps connections. This Ethernet interfaces supports Auto-MDI(X) feature.

Figure 13: WAN port and USB connectors

4.8. USB

The VPNRouter provides two USB 2.0 Host interfaces. They can be used for Mass Storage Devices, like Flash- or Hard Drive, Bluetooth and WLAN adapters etc.

The ports are integrated with the Gigabit Ethernet WAN port, see figure 13.

4.9. Serial

VPNRouter iR 5221 and VPNRouter iR 3220 provide two DSub-9 male connectors. All three modes of operating RS232, RS422 or RS485 are entirely configurable by software. For the pinout refer to the Table 8. If the configuration by software is not used, the default operation mode of each port is configured by a DIP switch. The DIP switch may be overridden by software, if the user chooses to do so. Check section ?? on page ?? for details.

Pin	$\mathbf{RS}232$	RS422	RS485 2-wire
1	DCD	Tx- (A)	Data- (A)
2	RxD	Tx+(B)	Data+(B)
3	TxD	Rx+(B)	
4	DTR	Rx- (A)	
5	GND	GND	GND
6	DSR		
7	RTS		
8	CTS		
9	RI		

Figure 14: COM Ports

Table 8: Serial DSub-9 Pinout

Please note the function of the GND signal in RS422 and RS485 modes: this signal must also be connected between the serial devices. So in reality a 2-wire and a 4-wire connection need 3 wire and 5 wire respectively. With the exception of very special configurations, a serial connection in RS422/RS485 mode without GND connection violates the specifications for RS422 and RS485 standards.

4.9.1. DIP Configuration for Serial Ports

The right side of the case has a small opening slit. This is provided to access the DIP switches for serial configuration. With a small pen or screw driver the configuration can be changed without opening the case.

The current setting of the switches is readable by software. If the user or software decides to do this, the software can override the active configuration, i.e. change the operation mode. Please check section **??** on page **??** for details about this function.

Figure 15: DIP Switches

4.10. SD-Slot

The VPNR outer provides an SD-Slot on the front side of the case, for cards in standard size. The slot supports cards as SD 2.0 or SDHC type, to allow up to 32 GB of capacity. Class 10 cards are supported as well.

If an operating system is installed on the SD Card, the VPNR outer will boot this software.

Figure 16: SD and SIM Slot

4.11. SIM-Slot

A SIM-Slot is located right next to the SD-Slot, see figure 16 on the preceding page. A Mini SIM card in this slot is accessed by a UMTS/LTE modem card in the mini PCIe expansion slot.

4.12. Reset

The Reset button is the front most component on the bottom side of VPNRouter.

With Reset button you can restart the VPNRouter without removing the power. The Reset button should be used only in situations, where reboot command is not available, to avoid file system integrity errors.

RESET

Figure 17: Reset Button

4.13. Console Port

The console port (RS232) has an RJ45 connector on the bottom side. An adapter cable to DSub-9 female is available as part of the Starter Kit (??).

Pin	Signal		Pin	Signal]
3	GND		2	TxD]
4	TxD		3	RxD	
5	RxD		5	GND	
(a) Co	onsole RJ45	(b) Cons fema		-9

Table 9: Serial Console Port

4.14. USB/OTG

Only available on VPNRouter iR 5221: A connector of micro-AB type provides one extra USB channel. This port can operate in Host or Device Mode, the hardware detects if the connected device is a Host (PC) or some device (printer, external HDD etc.). Hence the designation as USB/OTG.

Figure 19: OTG

4.15. CAN Bus

CAN bus is only available on VPNR outer iR 5221. The connector for CAN bus is a terminal block with three clamps. Available signals are CAN High, CAN Low and CAN GND. Termination of CAN bus (120 Ω) shall be implemented on the cable.

Figure 18: Console Port

Clamp	G	Ν	Р	
Function	CAN_GND	CAN_L	CAN_H	

Table 10: CAN bus Connector

Figure 20: CAN Bus

5. Position of Connectors and Functions of VPNRouter iR 2110

5.1. Power

The VPNRouter device is powered by a single power supply in a wide range from 9 V to 54 V DC. The socket for a terminal block clamp is on the rear side. A suitable power supply adapter is available as an add-on component, and part of the Starter Kit package. Connect the cable to the power jack, and plug the adapter into the socket. The Power LED (red) on VPNRouter will light. You can connect a power supply of your choice, providing the technical requirements are met.

Warning: disconnect the VPNRouter from power supply before performing installation or wiring. The wire size must follow the maximum current specifications. The maximum possible current in the power wires as well as in the common wires must be taken under consideration. If the current rises above the maximum ratings, the wiring can overheat, causing serious damage to your equipment. When powered, the VPNRouter internal components generate heat, and consequently the outer case may feel warm to the touch.

5.1.1. Connection and Polarity

Power is connected via three clamps on a terminal block, located on the rear side of VPNRouter.

Clamp	3	2	1
Function	PE	V-	V+

Table 11: Power Connector

V+ and V- are clamps for DC voltage supply. PE is the clamp to connect the case and shields of connection cables to Protective Earth. PE is internally connected to logic ground, which is on the level of Vsupply line.

Figure 21: Power Connector

Attention: Never connect the Terminal block for power supply in reversed direction, i.e. turned by 180°. This would connect the power between V- (logic ground) and case/protective ground. High current is the result, causing damage inside the system.

5.1.2. Grounding

Grounding and wire routing help limit the effects of noise due to electromagnetic interference (EMI). Run the ground connection from the ground screw to the grounding surface prior to connecting devices.

In noisy environments the case of VPNRouter shall be directly connected to Protective Earth. This is the purpose of the dedicated PE Screw on the case rear side.

Figure 22: PE Screw

Figure 23: DIP

۲

ON DIP

Switches

5.2. DIP Switches

The rear side of the case holds a group of four DIP switches. There is no special purpose coupled to the switches. Customers softwar can read the configuration, and evaluate for own intentions.

5.3. Antenna Locations

The VPNRouter is prepared for adding one antenna socket of the usual SMA type. Possible locations are on the rear and on the left side (top wide when mounted on a DIN Rail). Both are covered by plastic caps.

Figure 24: Antenna location

5.4. Reset

The Reset button is on the rear side of VPNRouter. Push it by using a small prick.

With Reset button you can restart the VPNRouter without removing the power. The Reset button should be used only in situations, where reboot command is not available, to avoid file system integrity errors.

Figure 25: Reset Button

DECET

5.5. WAN

The WAN Ethernet port in VPNR outer is for 10/100/1000 Mbps Gigabit Ethernet. When the connect is done the Link LED on RJ45 (green, left) will light. When data traffic occurs on the network, this LED will blink. It depends on your network or devices whether a 1000 Mbit, a 100 Mbit or a 10 Mbit connect will be established. The Speed LED (yellow, right) lights for 10 and 100 Mbps connections.

This Ethernet interface supports Auto-MDI(X) feature.

5.6. USB

The OnRISC VPNRouter iR 2110 provides a USB 2.0 Host interface. This can be used for Mass Storage Devices, like Flash- or Hard Drive, Bluetooth and WLAN adapters etc. Figure 26: WAN Port

Figure 27: USB Connector

Ē

5.7. LED

The front side holds a group of three LEDs.

- **PWR** (Red) lights when power is applied to the VPNRouter. System software may generate short blinks for certain events.
- **WIFI** (Blue) signals operation status of WLAN function.
- **APP** (Green) is free to use by customers application, e.g. as some ready light. Figure 28: Front LED

5.8. Serial

The VPNRouter provides one DSub-9 male connector. All three modes of operating RS232, RS 422 or RS485 are entirely configured by software. For the pinout refer to the Table 12.

Pin	RS 232	$\mathbf{RS422}$	RS485 2-wire
1	DCD	Tx- (A)	Data- (A)
2	RxD	Tx+(B)	Data+(B)
3	TxD	Rx+(B)	
4	DTR	Rx- (A)	
5	GND	GND	GND
6	DSR		
7	RTS		
8	CTS		
9	RI		

Figure 29: COM Port

Table 12: Serial DSub-9 Pinout

Please note the function of the GND signal in RS422 and RS485 modes: this signal must also be connected between the serial devices. So in reality a 2-wire and a 4-wire connection need 3 wire and 5 wire respectively. With the exception of very special configurations, a serial connection in RS422/RS485 mode without GND connection violates the specifications for RS422 and RS485 standards.

In RS232 and RS422 Mode data may be received while transmitting. This also applies to RS485 Full Duplex Mode, which is also referred to as 4-wire connection (same signal assignment as the RS422).

The RS485 Standard Mode is alternatively referred to as Half Duplex Mode, 2-wire connection or Bus Mode. It uses the same two wires for transmit and receive. So it would be possible to simultaneously receive the same data the port just transmitted, this is often named an Echo. The serial port in VPNRouter intentionally suppresses this Echo. In the rare situations where this Echo is required, the port should be set as this:

- Configure the port for RS485 Full Duplex Mode
- Connect Tx+ with Rx+ in the cable
- Connect Tx- with Rx- in the cable

5.9. LAN

The LAN Ethernet port in VPNRouter is for 10/100 Mbps Fast Ethernet. When the connect is done the Link LED on RJ45 (right) will light. When data traffic occurs on the network, this LED will blink. It depends on your network or devices whether a 100 Mbit or a 10 Mbit connect will be established. The Speed LED (left) lights for 100 Mbps connections.

5.10. SD-Slot

The VPNRouter provides an SD-Slot on the front side of the case, for cards in microSD size. The slot supports cards as SD 2.0 or SDHC type, to allow up to 32 GB of capacity. Class 10 cards are supported as well.

If an operating system is installed on the SD Card, the VPNR outer will boot Figure 31: SD Slot this software.

6. Logon to the Device

The Device is configured via an internal web interface. In part this is similar to many SOHO-Routers on the market. Consequently you need a network connection to the Device, where you then open your browser to access the web interface. Basically there is one way to get the required access. In the description here it is assumed the Device is in factory configuration.

6.1. Connect to the Device

6.1.1. Ethernet Cable to LAN Port

That is the option for on-site access, i.e. you are in front of the Device. Plug the Ethernet cable from your PC into a LAN port (not the WAN port). Your PC uses DHCP to get an IP Address from the Device. Then open your browser and type the IP Address 192.168.178.1 into the address bar.

6.2. Logon to Device Web Interface

By default there is no password set. The Username is fixed as "user".

VS InRouter	
No password set!	
There is no password set on this router. Please configure a root password to protect the web interface and enable SSH. Go to password configuration	
Authorization Required	
Please enter your username and password.	
Username	
Password	
Login Reset	

Figure 32: Logon Mask

Click on "Login" to get access to the configuration. On top of the screen is a classic Pull-Down Menu, but you may also click on the buttons itself. For function of *Logout* this is mandatory.

Figure 33: Pull Down Menu

Note the down-arrow on the buttons *Network*, *System*, *Services* and *Logout*. When the mouse hovers over one of these buttons, the list of menu items opens. Use the mouse to click on one of the items. There are two views ("Administation" and "Essentials") of the web interface, we only describe the "Essentials" view. Use the Administration view if you are experienced and need special features.

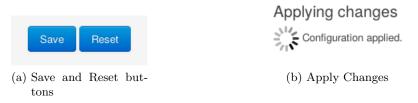

Figure 34: Save Configuration Changes

The pages use two buttons on the bottom right to apply the parameters, or discard the changes. Button [Save] will save the new parameters, and apply them automatically. For a short time a display like figure 34b will appear. The Button [Reset] will discard any modifications in the configuration forms, back to the last operation of saving or entry to the page.

7. Network

Network 👻
General
Wifi
3G/4G
DHCP

The Menu Network lists the items of General, Wifi, 3G/4G and DHCP. Wifi is for WLAN function and 3G/4G configures an interface for 3G/UMTS or 4G/LTE communication via mobile communication networks. These two items only appear if the required interface hardware is available, otherwise they are hidden. A click on the top button [Network] opens the item General.

Figure 35: Menu Network

7.1. General

Network

There are many sections on the web page, explained block by block.

Network	MAC-Addres	s	IPv4-Address	IPv4-Netmask	Traffic	Errors
	Hardware Ad	dress			transmitted / received	TX / RX
lan	74:6A:8F:FF:	8E:CA	192.168.178.1	255.255.255.0	46.90 KB / 18.98 KB	0 / 0
wan	74:6A:8F:FF:	67:A8	192.168.1.88	255.255.255.0	23.23 KB / 76.59 KB	0 / 0
vpn					-/-	- / -
IPv4-G	IPv4-Netmask ateway (optional) Server (optional)	255.255.255.0	•			
DNS						
nternet C	onnection	WAN	•			

Figure 36: Network General Overview

Save configuration changes using the buttons on the bottom line, see figure 34a on page 27.

7.1.1. Status

Status					
Network	MAC-Address	IPv4-Address	IPv4-Netmask	Traffic	Errors
	Hardware Address			transmitted / received	TX / RX
lan	74:6A:8F:FF:8E:CA	192.168.178.1	255.255.255.0	46.90 KB / 18.98 KB	0 / 0
wan	74:6A:8F:FF:67:A8	192.168.1.88	255.255.255.0	23.23 KB / 76.59 KB	0 / 0
vpn				- / -	- / -

Figure 37: Status of Network Interfaces

All available network interfaces are listet here, with status information. Wifi and 3G/4G only appear if the required interface hardware is available. Each interface is listed with the common values of MAC Address, IP Address and Netmask. Further the data Traffic on the interface is listed, separated for transmitted and received. Appended are Errors, all these values counted from the last reboot or power-on of the Device.

7.1.2. Local Network

The Local Network references the Ethernet ports labelled LAN on the front side.

Local Network

IPv4-Address	192.168.178.1	
IPv4-Netmask	255.255.255.0	•
IPv4-Gateway (optional)		
DNS-Server (optional)		

Figure 38: Local Network Configuration

This address should be from the IPv4 address ranges assigned to private networks. The following IP blocks are reserved for private IP addresses.

Class	Starting IP Address	Ending IP Address	# of Hosts
Class A	10.0.0.0	10.255.255.255	16,777,216
Class B	172.16.0.0	172.31.255.255	1,048,576
Class C	192.168.0.0	192.168.255.255	$65{,}536$

Table 13: Private IPv4 addresses

7.1.3. Internet Connection

Usually the Ethernet Port labelled **WAN** is used for Internet access. This is configured by selecting WAN port in the drop-down list of Internet Access via (see figure 39). The other options are Wifi and 3G/4G, provided the referenced hardware is available.

7.1.3.1. by WAN Connection By default the *IP-Address Assignment* on WAN interface is done by *DHCP (automatic)*. With this configuration on startup the Device will send a special request to get a valid configuration.

Internet Connection	
Internet Access via	WAN -
Protocol	static
IPv4-Address	
IPv4-Netmask	
IPv4-Gateway	
DNS-Server	

Figure 39: WAN connection

If that automatic is disabled by selecting *static* in the drop-down, the next four input fields appear. A static IP Address configuration is necessary, and the network administrator has to provide this information to you. Enter correct values in the fields of *IP-Address*, *Netmask*, *ISP* or *Gateway* and *DNS-Server*.

7.1.3.2. by 3G/4G Connection When the Internet access is configured for 3G/4G communication (figure 39), the configuration of the IP Address is done entirely by the provider.

Internet Connection

Internet Access via	3G/4G
---------------------	-------

Settings for 3G/4G under Network -> 3G/4G

Figure 40: 3G/4G Configuration

So there is nothing to configure specifically, the access parameters are defined in section 7.3 on page 37.

7.1.3.3. by Wifi Connection The access to Internet may be done by the WLAN function. Then this is configured for the Operation Mode as Client (see section 7.2.3 on page 35).

Internet Connection	
Internet Access via	WLAN -
Protocol	static 💌
IPv4-Address	
IPv4-Netmask	
IPv4-Gateway	
DNS-Server	

Figure 41: Wifi Configuration

By default the configuration of the WLAN Client connection is automatic like for the WAN port (see 7.1.3.1 on the previous page). Then the other parameters are hidden from view. If the field *Protocol* has a the value *static*, a static IP Address configuration is necessary. Again the network administrator has to provide this information to you. Enter correct values in the fields of *IP*-Address, *Netmask*, *Gateway* and *DNS-Server*.

7.2. Wifi

The Wifi adapter in the Device may be deactivated (switched-off) by the **WLAN** switch on the case. This has precedence to any internal configurations. If the external switch is **On**, for operation it needs a check mark in the box *Enable*; otherwise it is still inactive.

An active adapter has two operation modes, as Client or as Access Point (AP). The second is the default configuration, and it allows access to the LAN side of the Device. Configured as Client the adapter connects to on-site network for Internet access. In Client Mode there is no access to the web interface via WLAN.

The parameters are explained in the following sections, to save configuration changes using the buttons on the bottom line (figure 34a on page 27). A suggested sequence of configuration steps is at the end of this section (7.2.4).

Configuration Transfer: If the Wifi Adapter in target and source is configured for operation as Access Point, there is no risk in transfering the configuration. However if either is configured in Client Mode, often it is used for Internet Access then. A transfer of parameters will likely disrupt the Internet connection.

Even if both source and target shall share the same SSID and similar parameters, they must use different IP Addresses. The only save configuration then is DHCP for WLAN.

7.2.1. Networks

Networks

Link	ESSID	BSSID	Channel	Protocol	Mode	Encr.	Power	Scan
0	VS_InRouter_220100013	74:6A:8F:00:22:D0	11	802.11 bgn	Master	None	20 dBm	🖸 Scan

In Client operation mode the Wifi Adapter shall connect to an existing WLAN network. The network and the connection parameters are shown when this is successful. The button [Scan] searches for WLAN networks in the vicinity.

7.2.1.1. WLAN scanned Scanning for WLAN networks may help in select the parameters for a connection to the target network.

Figure 43: Wifi Scan Results

7.2.2. Adapter

When the Wifi Adapter is Enabled, some parameters need selection.

Devices

enable		
Mode	802.11g	•
Channel	11 (2.4 GHz)	•

Figure 44: Wifi Radio Parameters

The Mode has five values to select from: *auto*, 802.11b, 802.11g, 802.11a and 802.11b+g. In Client Mode choose the value which best matches the configuration provided by the network administrator.

In Client mode you do not need to select the *Channel*, the Adapter follows the configuration of the Access Point it connects to (figure 43). In AP mode you have to select the channel to operate on, please check with the network administrator which parameter to use. The selectable values range from 1 (2.4GHz) to 14 (2.4GHz) plus *auto*. Please also check with local regulations if there are forbidden channels, for example in Europe you often are not allowed to use channel 14. The configuration of *auto* lets the Adapter search for the best free range.

7.2.3. Local Network

Local Network	
Network Name (ESSID)	VS_InRouter_220100013
Mode	Provide (Access Point)
Encryption	WPA2-PSK
Key	

Figure 45: Wifi Network

These are the final parameters for WLAN configuration. *Network Name (ESSID)* defines which WLAN network to connect to. The *Operation* mode is either *Join (Client)* or *Provide (Access Point)*. The *Encryption* mode supports:

- No Encryption: Only use that in Client Mode, when the WLAN net does not support security.
- *WEP*: This is an old and weak way of security. Only use that in Client Mode, when the WLAN net does not support better security.
- WPA-PSK, WPA2-PSK and WPA-PSK, WPA2-PSK Mixed Mode: This is state of the art encryption. Use this in Access Point Mode, and select a secure Pre-Shared-Key (PSK). WPA2 is the best choice, but WPA is still secure.
- WPA-Radius and WPA2-Radius: These are usable in Client Mode only, since in AP Mode the Device does not have access to a Radius Server for Authentication.

In the field Key enter the so-called Passphrase for the Wireless LAN. In combination with the ESSID this defines the PSK for encryption.

7.2.4. Configuration Procedures

These are suggested sequences to configure the WLAN function

7.2.4.1. as Access Point

- 1. Under Adapter check Enable.
- 2. Under Adapter select the Mode.
- 3. Under Adapter select a Channel for communication.
- 4. Under Local Network provide a unique name (ESSID) for your WLAN communication. The default value of VS_InRouter_<SNo.> is fine for start, other values are OK.
- 5. Under Local Network select Operation as Provide (Access Point).
- 6. Under Local Network select Encryption as WPA2-PSK.
- 7. Under *Local Network* define a secure *Key* for encryption. About 16 random letters or digits are a good start.
- 8. Click on the [Save] button and wait for the changes to be applied.

7.2.4.2. as Client

- 1. Under Adapter check Enable.
- 2. Under Local Network select Operation as Join (Client).
- 3. Click on the [Save] button and wait for the changes to be applied.
- 4. Under *Networks* click the button for [Scan], and wait for the results. Check if the target WLAN network is visible.
- 5. Under Adapter select the Mode according to the result of the Scan.
- 6. Under Local Network enter the ESSID for the target WLAN network.
- 7. Under *Local Network* select the appropriate mode for *Encryption*. In case of doubt ask the network administrator.
- 8. Under *Local Network* enter the *Key* for encryption. You get that from the network administrator as well.
- 9. Again click on the button [Save] and wait for the changes to be applied.

7.3. 3G/4G

3G/4G Interface	
	🖉 Connect 🔯 Stop
Status	MAC-Address: C2:84:10:0B:2E:F0
	RX: 0.00 B (0 Pkts.)
	TX: 0.00 B (0 Pkts.)
Mode	GSM/GPRS -
4.511	Internet a club de
APN	internet.e-plus.de
PIN	
DAD/OLIAD	
PAP/CHAP username	
PAP/CHAP password	A
	· · · · · · · · · · · · · · · · · · ·

Figure 46: 3G/4G Interface

A 3G/4G Interface is available when the Device is equipped with a supported 3G/4G communication card. For proper operation it needs to have a card inserted in the **SIM** slot on the case. Such an interface may be used as an alternative for Ethernet (on the **WAN** port), for example when the location does not have wired Internet access. The parameters to use the interface are provided by the mobile communication provider, together with the SIM Card.

In the field *Mode* may select from a set of options like *All*, *LTE UMTS*, *GSM/UMTS* or *CDMA*. The actual values available depend on the model of communication card, and what is provided by use of the given SIM Card.

Enter APN for Internet access and PIN to authenticate for the SIM Card. The PAP/CHAP username and PAP/CHAP password are rarely used.

On the bottom line are the usual buttons, click on [Save] to save your new configuration. To use the 3G/4G Interface click on the button Connect.

7.4. DHCP

DHCP is the "Dynamic Host Configuration Protocol", the Device has a server component for this built-in. The protocol is designed to provide correct configuration of IP Address and related parameters to clients. Clients in this context are any computers/machines/adapters connected to the **LAN** ports of the Device. The purpose of using DHCP is to have non-conflicting configurations without manually placing parameters into each client.

When the client is started it sends a special request on the network, and it receives an offer from the server. The server has a range of IP Addresses to choose from. It will attempt to offer the same IP Address to the client as it did before. If that is not possible for some reason it will offer a different IP Address. An IP Address assigned to a client is named as a Lease in context of DHCP.

The server has a list of known clients, it will identify them by their MAC Address. If the client is on this list, it gets the pre-defined IP Address reserved for this client as an offer. No other client will ever get this IP Address. For clients not on this list on their first contact to the server they receive an offer with an IP Address from the range, which does not conflict with the IP Addresses of known clients.

There are some issues to consider with DHCP, see 7.4.4 on page 41.

7.4.1. DHCP-Server

DHCP	
DHCP-Server	
enable	enable
First leased address	100
Number of leased addresses	151

Figure 47: DHCP Address Range

The Start address and End address define the available address range for the DHCP-Server, both addresses are included in the range. The values like 100 represent the fourth/last number of an IP Address, the preceeding three numbers are identical to the Device's IP Address (see section 7.1.2 on page 30).

7.4.2. Active Leases

Active Leases			
Hostname	IPv4-Address	MAC-Address	Leasetime remaining
DRVDEV	192.168.178.207	00:16:d3:27:53:a1	11h 59min 46s

Attention!

Figure 48: Active Leases

When a client received an IP Address from the DHCP server, it has a "Lease" on this address. This is active for a given time, and the client may request to renew this lease. Clients with a lease are listed for informational purposes.

To have a *Hostname* appear in the list the client transmits its name, or the client is from the list of known clients. Otherwise that field is just empty. Also listed are *IPAddress* and *MAC-Address*, followed by the *Leasetime remaining*.

7.4.2.1. Automatic Detection of local Devices happens under a few restrictions. If a device uses static IP Address configuration, it will not send a request to the DHCP server. So at first the server has no knowledge about that device. But the server monitors certain local network traffic, and will detect static devices when they become active on the network. These are added to the list of *Active Leases* for information. Since This page displays many information for reference.there can't be a name there is a question mark, and the Lease information is *not DHCP*.

7.4.3. Static Leases

Static Leases

Hostname	MAC-Address	IPv4-Address
TR3500	00:10:f3:4e:26:9a (192.168.178.3)	192.168.178.3 • Delete
NetComMini	00:16:d3:27:53:a1 (192.168.178.207) 💌	192.168.178.207 - Delete
	•	▼ Delete
Add		

Figure 49: Static Leases

The Static Leases are the methode to configure the list of known clients. The button [Add] creates a new entry in the list, with empty values.

- 1. You should enter the *Hostname* like MyMachine. The name follows the rules for computer names: It shall start with a letter, and consist of letters and digits only; special characters and spaces are not allowed.
- 2. Provide the *MAC-Address*. Either there is already an entry in the drop down list, this happens when the client previously was active on the local network. Or select *custom* from the list, and manually type the value (e.g. 03:10:17:76:0D:0A).
- 3. Select the *IP Address*. If the client was active on the local network, you may just select the entry from the drop-down list. Or again select *custom* and type the complete IP Address.

You may later change the entry by modifying the values in the same way. The button for [Delete] removes an entry from the list.

7.4.4. Issues

- Startup times: When Device and clients are switched on at the same time, the client may issue the DHCP request before the DHCP-server in the Device is operating. Then the request will fail. The client may repeat the request until it gets a sufficient offer. Otherwise the client has to use static IP Address configuration. Either the IP Address is not in the Start-to-End range of the server, or better there shall be an entry in the Static Leases to reserve this address.
- Wifi: When the Wifi adapter is operating in AP mode, connected clients receive their IP Address configuration from the Device's DHCP-server. In general this is a positive effect.

8. System

Figure 50: Menu System

The Menu System lists the items of General, Language, Admin Password, Backup/Restore, Flash Firmware and Reboot. A click on the top button [System] opens the item General.

8.1. General

A lot of information is displayed here, but only the *Timezone* is available for configuration.

System		
See identification and parameters of your device, and configure the timezone.		
Router Model	VS InRouter Pro	
Hardware Revision	3.1	
Firmware Version	0.1.0/1.2.4	
Serial Number	220100013	
LAN-MAC	74:6A:8F:FF:8E:CA	
WAN-MAC	74:6A:8F:FF:67:A8	
WLAN-MAC	74:6A:8F:00:22:D0	
System	ARMv7 Processor rev 2 (v7l)	
Load	0.00, 0.01, 0.05	
Memory	243.27 MB (0% buffered, 87% free)	
Local Time	Tue May 10 10:20:46 2016	
Uptime	03h 31min 41s	
Timezone	UTC •	

Figure 51: System General Information

This page displays information for reference. There is the VPNRouter *Router Model* with its *Hardware Revision*, these are fixed. The firmware in the Device consists of two components, so the *Firmware Version* actually displays two values. With firmware upgrades these values will change of course.

The Serial Number is printed on the case of the Device. Some statistical parameters like Uptime, System Load and usable Memory are shown.

8.2. Language

Web UI		
Select the language for the devi	ces web interface (her	e).
General		
Language	auto	•

Figure 52: Select Language

The Web UI (User Interface) supports different languages. In the drop-down you may select *auto*, *Deutsch* and *English*. With *auto* the Web UI tries to follow your system configuration, i.e. the language your browser uses. In certain configurations this may fail. The other entries do not need explanation. Save the configuration using the button [Save] as usual.

8.3. Admin Password

Admin Password		
Change the password of the system administrator		
Password		
Confirmation		

Figure 53: Set Admin Password

By default there is no password set. On this page you can set a password. Click on the button [Submit] and wait for the changes to be applied. A password protects the Web UI (User Interface) against unauthorized access.

8.4. Backup/Restore

The purpose of this functions are given on the web interface. There are some functions on the web page, explained block by block.

Backup / Restore

Click "Generate archive" to download a tar archive of the current configuration files. To reset the firmware to its initial state, click "Perform reset" (only possible with squashfs images).

Download backup:	Generate archive	
Reset to defaults:	Perform reset	
To restore configuration files, you	an upload a previously generated backup archive here.	
Restore backup:	Browse No file selected. Upload archive	

8.4.1. Download backup

Click Generate archive to download a tar archive of the current configuration files.

8.4.2. Reset to defaults

Reset this device to factory settings. *Attention*: This is not a start configuration your company may have provided. Also it is possible this operation disconnects the device from the Internet. So it is recommended to only perform this in person at the device. To discard the configuration in the Device click on the *Perform reset* link.

8.4.3. Restore backup

To restore configuration files, you can upload a previously generated backup archive.

8.5. Flash Firmware

Flash new firmware ima	age		
Upload a sysupgrade-compatible in firmware image).	mage here to replace the running firm	nware. Check "Keep settings" to retain the current confi	guration (requires an compatible
Keep settings:	V		
Image:	Browse No file selected.	Flash image	

To flash the firmware upload the new firmware image. The current firmware image of the VPN-Router can be downloaded from Attention: By default the checkmark is set. Please make sure that the checkmark in the box is set to keep the current configuration. Otherwise the settings will be reset to the default configuration when the flash process is done.

8.6. Reboot

System
Reboot
Reboots the operating system of your device
Perform reboot

Figure 56: Reboot the Device

In normal circumstances it is not necessary to reboot the Device. If you feel you need to do this, click on the *Perform reboot* link.

9. Services

Figure 57: Menu Services

The menu of Services provides the four entries named as GPIO, NetCom, NET-CAN and SimpleVPN. These reference certain interfaces in the Device, which may be used to connect to special hardware. GPIO is for digital input and output signals, controlled via the web interface. NetCom refers to the two serial ports, and allows to use them in the same way as the VScom NetCom Mini devices. And NET-CAN refers to a CAN bus interface, available for remote control via the VPNRouter tunnel in the same way as the VScom NET-CAN 110. The function of NET-CAN is only available if a CAN bus interface exists on the model. SimpleVPN serves for configuration of an virtual private network (VPN) with viscos on the CPIO configuration

two devices. The click on [Services] opens the GPIO configuration.

9.1. GPIO

The changes in this function are automatically applied, there is no [Save] buttom at the bottom.

General Purpose Digital Input/Output

This page monitors the input and controls the output GPIO pins of this Device.

Port	Mode	State
INO	Input	0
IN1	Input	0
IN2	Input	0
IN3	Input	0
OUT0	Output	
OUT1	Output	
OUT2	Output	
OUT3	Output	

Figure 58: GPIO Control

In column *Port* the name represents special contacts on the Device, like **OUT3** or **IN1**. In this example figure 58 the *Mode* is fixed as *Input* and *Output*. For *Input* direction you can read the *State* of the external signal. "0" is for low voltage or an inactive signal, while "1" represents high voltage on an active signal. For *Output* direction you may check a signal to make it active, then the output is high voltage. Without checkmark the *State* is inactive, i.e. low voltage.

9.2. NetCom

The Device offers serial ports named as **COM1** and **COM2**. For remote control of the serial ports the protocol known as RFC 2217 is used.

NetCom TCP/IP to Serial Gateway configuration.		
Interfaces		
COM1		
DIP-Mode	loopback mode (active)	
SW-Mode	RS-232 •	
TCP Port	5100	
Telnet Protocol	RFC2217 •	
Telnet Timeout	0	
COM2		
DIP-Mode	loopback mode (active)	
SW-Mode	RS-232	
TCP Port	5101	
Telnet Protocol	RFC2217 •	
Telnet Timeout	0	

Figure 59: NetCom Configuration

The upper section COM1 configures operation of serial port COM1, while section COM2 configures the COM2 port. By default the positions of the DIP switches decisive of the active mode. The DIP switches are on the underside or back of the device. If the position of the DIP switches is select by software (OFF OFF ON ON) the configuration of the SW-Mode is valid. The SW-Mode supports the modes: RS-232, RS-422, RS-422 with termination, RS-485 full duplex, RS-485 full duplex with termination, DIP switches configured mode and loopback mode.

The connection for remote control is via TCP/IP, so a *TCP Port* is required. By default the first serial port uses 5100, the next ports use 5101 and following (if there are more than two ports). The serial ports then operate in the same way as the VScom NetCom Mini Serial Device Servers.

There is a driver for Windows operating system, which allows to use the remote serial port like a virtual local Com Port on your computer. Other drivers or libraries using RFC 2217 are supported in the same way, and on different operating systems.

COM1

DIP-Mode	loopback mode (active)
SW-Mode	RS-232
TCP Port	5100
Telnet Protocol	RFC2217
Telnet Timeout	0

Figure 60: Configuration RFC2217

The remote control functions are not limited to transmit and receive serial data to a connected machine. It is also possible to control the status and operation mode of the serial port. The *Telnet Protocol* extension known as RFC2217 is used for that purpose, the other choice is TCP raw. With that second choice indeed only transmit and receive with a fixed configuration is possible. Let the *Telnet Timeout* stay at the value of 0.

The following parameters only have an effect when TCP raw is selected for communication. They are fairly common and do not need much explanation.

COM1

DIP-Mode	loopback mode (active)
SW-Mode	RS-232
TCP Port	5100
Telnet Protocol	TCP raw
Telnet Timeout	0
Baudrate	115200
DataBit	8
Parity	None
StopBit	1
FlowType	None

Figure 61: Configuration TCP raw

- The *Baudrate* is selectable from a drop-down list of common values. At the bottom the entry of *custom* let you type the desired rate into the box (e.g. 31250).
- The DataBits are possible as 8 or 7.
- The Parity is available with the choice of None, Even and Odd.
- The *StopBit* may have a duration of 1 or 2 data bits.
- Finally the *FlowType* is usable as *None* (no control), *XON/XOFF* (software flow control) and *RTS/CTS* (hardware handshake).

Activate the new configuration using the [Save] button.

9.3. NET-CAN

Some models also support an interface to **CAN** Bus. This interface is usable via network by TCP/IP, from remote locations and the LAN ports. It supports the same VSCAN library as the VScom NET-CAN CAN Gateways.

NET-CAN

TCP/IP to CAN Bus Gateway settings.

Interfaces

TCP Port 5030

Figure 62: NET-CAN Configuration

The configuration for remote control just requires to define the network parameters. Here only the TCP Port is necessary, the default value is 5030.

9.4. SimpleVPN

The service SimpleVPN allows easy configuration of an virtual private network (VPN) connecting two or more locations with an encrypted tunnel. This service can configure a pair or more industrial routers; so that all routers have a functional configuration after this dialog. Note: The service SimpleVPN is only important if you have a set of industrial routers. There are several options on this web page that will be explained block by block. You can make all relevant settings which are needed for a virtual private network (VPN) on this page.

SimpleVPN Get Partner configuration	
	via Cable
Apply pre-configured settings	
	• via USB Browse No file selected.
Send/Save Partner configuration	
	via Cable via USB Download
Configuration

9.4.1. Configuration transfer

SimpleVPN Get Partner configuration			
-	🔹 via Cable	🕈 via USB	
Apply pre-configured settings			
	via USB	Browse No file selected	-
Send/Save Partner configuration			
	🕈 via Cable	✤ via USB	ad

Figure 64: Area configuration transfer

This area is for transfering the configurations files. There are two options:

- 1. Transfer the new configuration to VPNRouter Clients see section 9.4.1.1 on the next page. Note: This point is only important if you are configuring the industrial routers for the first time.
- 2. Modify existing configurations and transfer the new configuration to VPNRouter Clients see section 9.4.1.2 on page 55.

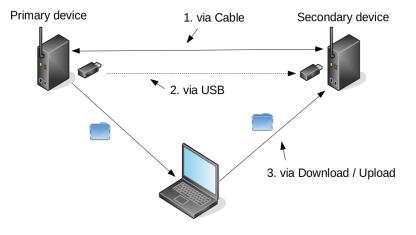

Figure 65: Overview transfer SimpleVPN

The figure 65 shows the different ways to transfer configurations.

9.4.1.1. New configuration

There are three different options to send the new configuration to a other device.

1. via Cable :

corresponds to point 1 of figure 65 on the preceding page.

- a) Make sure that the devices are connected together via the *LAN port*. A switch may be needed to connect all Clients.
- b) Check that the configuration is correct and certificates and keys are present.
- c) To send the configuration to the partner device use the button [via Cable] in the area "Send/Save Partner configuration".
- d) A list of all connected VPNR outers is presented.
- e) Choose a VPNR outer by clicking on it. The SimpleVPN page is shown (after authentication if a password was already set). The APP LED will also light to show which Router you are configuring.
- f) Please choose a Client. Use the button [Selected] to apply the Client configurations. The button [Selected] will be displayed in green.
- g) Continue with the remaining Routers at e).
- 2. via USB:

corresponds to point 2 of figure 65 on the previous page.

- a) Make sure that the USB stick is connected to the USB port on the device.
- b) Check that the configuration is correct and certificates and keys are present.
- c) When you use the button [via USB] in the area "Send/Save Partner configuration" a new folder will be created on the USB Stick with configurations, certificates and keys in it.
- d) Disconnect the USB stick from the USB port.
- e) Disconnect the device from the LAN port.
- f) Connect a VPNRouter Client to your PC via the LAN port with an Ethernet cable.
- g) Connect the USB stick to the Router.
- h) Then open your browser and type the IP Address 192.168.178.1 into the address bar.
- i) Logon the Web UI (Webinterface) see section 6.2 on page 26.
- j) Open the SimpleVPN site.
- k) To apply the configuration for the Client use the button [via USB] in the area "Apply pre-configured settings".
- Please choose the corresponding Client. Use the button [Selected] to apply the Client configurations. The button [Selected] will be displayed in green.
- m) Disconnect the USB stick from the USB port.

n) Continue with the remaining Routers at e).

3. via Download / Upload:

corresponds to point 1 of figure 65 on page 53.

- a) Use the button [Download] to generate a tgz file.
- b) Now you can save the tgz file on your own computer.
- c) Disconnect the Server from the LAN port.
- d) Connect a Client to your PC via the LAN port with an Ethernet cable.
- e) Then open your browser and type the IP Address 192.168.178.1 into the address bar.
- f) Logon the Web UI (Webinterface) see section 6.2 on page 26.
- g) Open the SimpleVPN site.
- h) You can upload the generated tgz file in the area "Apply pre-configured settings" to apply the configuration to the secondary device. Click on [Browse] and select the tgz file from your computer.
- i) Please choose the corresponding Client. Use the button [Selected] to apply the Client configurations. The button [Selected] will be displayed in green.
- j) Continue with the remaining Routers at e).

9.4.1.2. Existing configurations

Attention: Changes in the exsiting VPN network should only be made if it is necessary. There are two options to modify existing configurations.

1. via Cable:

- a) Make sure that the devices are connected together via the LAN port.
- b) Using the button [via Cable] in the area "Get Partner configuration" to get the configuration from the secondary device .
- c) Now you can modify the configuration.
- d) When the necessary settings have been made, click on the button [Save & Apply] and wait for the changes to be applied.
- e) Transfer the configuration see in section 1 on the previous page.
- 2. via USB:
 - a) Check that the configuration is available on your USB stick. It is the folder "VS-Router" with configurations, certificates and keys files.
 - b) Connect the USB stick with the USB port on the device.
 - c) Using the button **[via USB]** in the area "Get Partner configuration" to get the configuration from the secondary device.
 - d) Now you can modify the configuration.

- e) When the necessary settings hnd cannot be used. The following table shows the generalave been made, click on the button [Save & Apply] and wait for the changes to be applied.
- f) Transfer the configuration see section 2 on page 54.

9.4.2. Configuration

In this section you can make all relevant settings which are needed for a virtual private network (VPN). If all settings are correct and complete click on the button [Save & Apply] and wait for the changes to be applied. The goal of this service is to build a virtual private network (VPN) to connect two or more locations with an encrypted tunnel. The advantage of a VPN is that it expands an existing network over the Internet while ensuring to transmit sensitive data in a way that protects it from tampering and interception. This service helps to make the necessary settings step by step. The current device is automatically the Server. It allows to configure multiple devices. The figure 66 shows an exemplary topology.

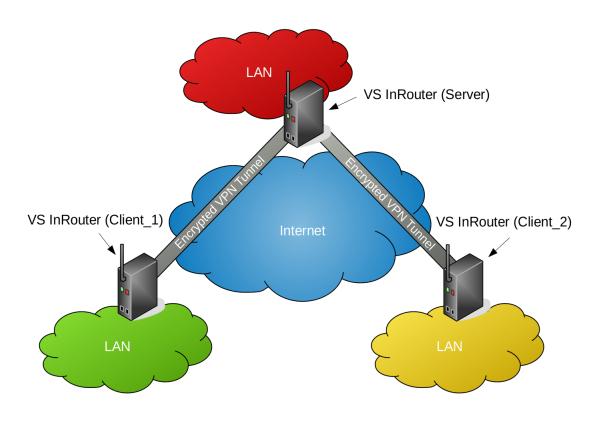

Figure 66: Topology

9.4.2.1. Server Settings In this section you can make the necessary settings for the *Server*.

9.4.2.1.1. Public Server IPv4 Adress or Domain Name Please fill in this field the *Public Server IPv4 Adress* or the *Domain Name*.

Public Server IPv4 Adress or	
Domain Name	

Figure 67: SimpleVPN- Public Server IPv4 Address

The must be the public IP address under which the Server VPNRouter is or will be accessible over the Internet. You may use services like https://www.whatismyip.com/. The Internet Service Provider may (preferibly) assign a static IP address to your Internet access. If only a dynamic IP address is available, a DynDNS service is necessary. The resulting DNS name belongs in this field in that case. To make the Router accessible you may need to do a few more steps explained in the following section.

9.4.2.1.2. Server Mode and Client Mode It is possible to use the devices in two different variation. You can use the device as *Internet Router* or *VPN Gateway*.

Server Mode	Internet Router	Client Mode	O Internet Router
	O VPN Gateway		O VPN Gateway
(a) Se	erver Mode	(b) C	lient Mode

Figure 68: Server and Client Mode

Difference between Internet Router and VPN Gateway.

Internet Router:

- Provides its own network on LAN-Ports with DHCP Server
- Provides the firewall to protect the local network
- Provides access to the other site over an encrypted VPN tunnel
- All device on the LAN side have access to the VPN.
- The WAN-Port is directly (or possibly indirectly behind a modem) attached to the Internet.

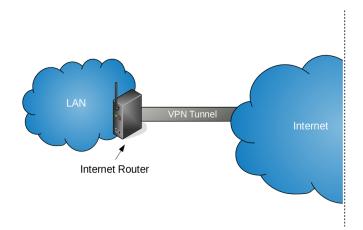

Figure 69: Internet Router

VPN Gateway:

- Is a device in a already existing local network
- Can be used as a switch
- Provides access to the other site over an encrypted VPN tunnel
- If the VPNR outer acts as VPN Server, the router of the existing local network has to assign the VPN port to this VPN router (port forwarding).
- Every device that may use the VPN has to have a route to the VPNRouter for every subnet it may access. This may be done in the router or in every device.

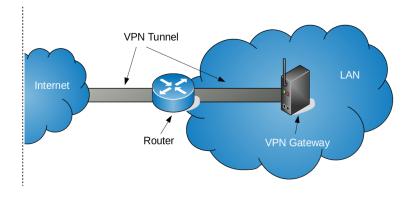

Figure 70: VPN Gateway

9.4.2.1.3. Server LAN IPv4-Address It is the local IP address of the *Server*. This IP address should be from the IPv4 address ranges assigned to private networks. The table 13 in section 7.1.2 shows the reserved private IPv4 addresses.

Server LAN IPv4-Address	

Figure 71: SimpleVPN - Server IPv4-Address

By default it is the best option to use private addresses from the class C block. If you need more than 65,536 Hosts you can use one of the other classes. In an IP network, two addresses are always automatically assigned. For example, in 192.168.1.0/24, "0" is the assigned network address. In 192.168.1.255/24, "255" is the assigned broadcast address. The 0 and 255 are always assigned and should not be used for hosts. Please do not use the two IPv4 addresses which are used to connect the encrypted VPN tunnel, also do not use addresses of the 10.8.0.0/24 range.

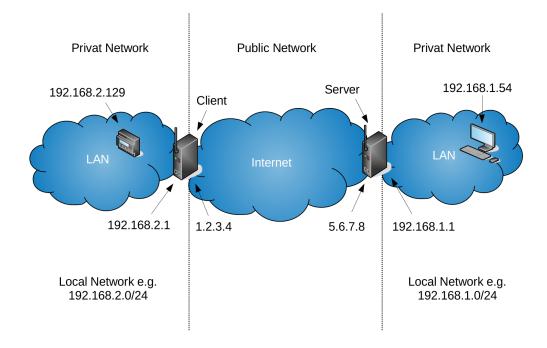

Figure 72: Difference between public and private addresses

The figure 72 shows the difference between public and private IP addresses.

9.4.2.1.4. Server LAN Netmask Please choose the corresponding netmask for the private IPv4 address. A netmask is a 32-bit mask used to divide an IP address into subnets and specify the networks available hosts.

Server LAN Netmask	-
Corror Entrioundent	

Figure 73: SimpleVPN - Server LAN Netmask

The following table shows common netmasks

Class	Netmask length	# of networks	# of hosts	Netmask
Class A	8	126	16,777,214	255.0.0.0
Class B	16	16,382	65,534	255.255.0.0
Class C	24	2,097,150	254	255.255.255.0

Table 14: Common netmasks

9.4.2.1.5. Transport Protocol It is possible to change the transport protocol. By default the transport protocol UDP is selected.

Transport Protocol	UDP	•	
--------------------	-----	---	--

Figure 74: SimpleVPN - Transport Protocol

TCP is a connection oriented stream over an IP network. It guarantees that all sent packets will reach the destination in the correct order. This imply the use of acknowledgement packets sent back to the sender, and automatic retransmission, causing additional delays and a general less efficient transmission than UDP. UDP is a connection-less protocol. Communication is datagram oriented. The integrity is guaranteed only on the single datagram. Datagrams reach destination and can arrive out of order or don't arrive at all. It is more efficient than TCP because it does not use ACKs. It's generally used for real time communication, where a little percentage of packet loss rate is preferable to the overhead of a TCP connection.

9.4.2.1.6. Port The VPN Server will listen for client connections on a UDP or TCP port. By default it is port 1194 (OpenVPN's official port number).

Port	1194
	TCP/UDP port # for both local and remote

Figure 75: OpenVPN Port

You can change the port if it is necessary. It is recommended to use the port 1194.

9.4.2.1.7. Allow Client-to-Client traffic Enable client-to-client communication by placing a checkmark in the box if you would like connecting clients to be able to reach each other over the VPN. By default, clients will only be able to reach the server.

Client-to-Client 🛛 😰 Allow client-to-client traffic

Figure 76: OpenVPN client-to-client

9.4.2.1.8. Upload Server Certificates and Keys You will need the following certificates and keys for the server:

- Certificate authority
- Diffie Hellman parameters
- Server certificate
- Server private key

Click on the button **[Browse]** and select the file to upload a certificate or a key. One can also generate these keys and certificates on the device itself at bottom of the page.

9.4.2.2. Add a Client Please enter the name of the client in the appropriate field. For example *Client_1*. To add the client please click on the button [Add].

Configuration Clients	
This section contains no values yet	
	🎦 Add

Figure 77: Add a Client

It appears an area where you can configure the *Client*. See section 9.4.2.3.

Client private key	Browse No file selected.	
	1 Add	

Figure 78: Client overview

9.4.2.3. Client Settings In this section you can make the necessary settings for each *Client*.

9.4.2.3.1. Client LAN IPv4-Address It is the local network IP address of the *Client*. This adress should be from the IPv4 address ranges assigned to private networks. The table 13 on section 7.1.2 shows the reserved private IPv4 addresses.

Client LAN IPv4-Address	
-------------------------	--

Figure 79: SimpleVPN - Client LAN IPv4-Address

By default it is the best option to use private adresses from the class C block. If you need more than 65,536 Hosts you can use one of the other classes. Please use not the two IPv4 addresses which are used to connect the encrypted VPN tunnel, also do not use addresses of the 10.8.0.0/24 range. The figure 72 shows the difference between public and private IP addresses.

9.4.2.3.2. Client LAN IPv4-Netmask Please choose the corresponding netmask for the private IPv4 address. A netmask is a 32-bit mask used to divide an IP address into subnets and specify the networks available hosts.

Client LAN Netmask

Figure 80: SimpleVPN - Client LAN Netmask

The table 14 in section 9.4.2.1.4 shows common netmasks.

9.4.2.3.3. Upload Client Certificates and Keys You will need the following certificates and keys for each client:

- Client certificate
- Client private key

Click on the button **[Browse]** and select the file to upload a certificate or a key. One can also generate these keys and certificates on the device itself at bottom of the page.

9.4.2.4. Delete a Client It is possible to delete a created client. The client will be removed from the virtual private network (VPN). Use the button **[Delete]** on the right side to remove a created client.

Configuration Clients		
		Delete

Figure 82: Generate Certificates and Keys

Please fill in all necessary fields. Click the button [Save]. After the store process the button [Generate] and [Generate DH Parameters] will be displayed.

Generate Certs Generate DH Parameters

Figure 83: Buttons Generate and Generate DH Parameters

If you click on the button [Generate] the certificates and keys will automatically be generated in the background. A set of Diffie-Hellman parameters are already on the Router because the generation process on the device may take a considerable time. They will become visible after the generation the other keys and certificates. Use the button [Generate DH Parameters] to calculate and get new Diffie-Hellman parameters. After the generation process the certificates and keys will be displayed as if they were uploaded. You may need to reload the page.

B. Licenses

VPNRouter Router use Open Source Software to fulfill part of their functions. The main licenses involved are the GNU General Public Licence version 2 (GPLv2), the GNU Lesser General Public Licence version 2.1 (LGPLv2.1) and the Apache License Version 2.0 (Apache-2.0). You'll find the relevant text of those licenses below. In part there are similar public licenses involved.

Please see our Open Source related page for more information¹. You'll also find all related license texts and source code archives there.

B.1. GNU GENERAL PUBLIC LICENSE

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.

51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

¹http://www.visionsystems.de/opensource

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these

conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WAR-RANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EX-CEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PRO-GRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRIT-ING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUEN-TIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INAC-CURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and an idea of what it does.>

Copyright (C) < yyyy> < name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author Gnomovision comes with ABSO-LUTELY NO WARRANTY; for details type 'show w'. This is free software, and you are welcome to redistribute it under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items-whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program 'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989 Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

B.2. GNU LESSER GENERAL PUBLIC LICENSE

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.

51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software–to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages-typically libraries-of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library

in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely welldefined independent of the application. Therefore, Subsection 2d requires that any applicationsupplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to

distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may

not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WAR-RANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EX-CEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION. 16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRIT-ING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUEN-TIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (IN-CLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INAC-CURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and an idea of what it does.>

Copyright (C) < year > < name of author >

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in

the library 'Frob' (a library for tweaking knobs) written

by James Random Hacker.

<signature of Ty Coon>, 1 April 1990

Ty Coon, President of Vice

That's all there is to it!

B.3. Apache License

Apache License

Version 2.0, January 2004

http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their

Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABIL-ITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.
