PUNCH CARDS AND SUMMARY OUTLINE OF TABULATIONS

CENSUS OF POPULATION: 1950

The basic tabulations for the Population Census using the "P" card consisted of 5 series of tabulations: B, C, D, W, and Z. In addition, data on the number and distribution of the population for small areas were transcribed from the first count of Series B to provide data for the series P-A bulletins. Each series of tabulations is outlined below, listing the cards used, the areas for which the data were tabulated, the sort groups, subject headings, number of tabulation machine counters used, and the items tabulated.

Series B tabulations consisted of 5 counts which provided data on the general characteristics of the population for small areas. Data were tabulated for such characteristics as age, race, sex, marital status, and employment status with limited information on income, migration, and occupation. All the counts were tabulated on a 100-percent basis except for count 4 which was tabulated only for the 20-percent sample.

Series C consisted of 9 tabulations which provided data on the detailed characteristics of the population for each city of 100,000 or more, each standard metropolitan area of 100,000 or more, and for each balance of State. This program consisted basically of three sets of counts: Counts A-l and A-2, which provided information on income in cross-classification with other characteristics; counts B-l through B-5, which provided data on age Cross-classified with other characteristics; and counts C-l and C-2, which provided information on occupation and on industry Cross-classified with other characteristics. In addition, data were provided on occupation and industry by sex for cities of 50,000 to 100,000 population. The A and B counts were based on a reproduced set of P-cards for persons in the 20-percent sample, whereas the C counts were based on a 100-percent tabulation of the P-cards.

Series D tabulations consisted of 17 counts based on a 3 1/3-percent sample of the F-cards. The cards for this series were selected and duplicated during the 20-percent age and income tabulations (Series C). These counts show detailed cross-classification of characteristics generally at the United States level, but with some data for regions.

Series W consisted of 13 tabulations which were made to provide special reports for various groups in the population: Institutional population; nativity and parentage of the foreign white stock; State of birth for the native population; Puerto Ricans in the Continental United States; white persons of Spanish surname; nonwhite population by race. The data for the 2 counts for the institutional population and the 4 counts for the nonwhite tabulations were tabulated on a 100-percent basis. All other counts in this series, however, were tabulated on a 20-percent basis.

Series Z consisted of 7 tabulations of all cards from the 20-percent sample except cards for those persons who either were under 1 year of age or had lived in the same house in both 1949 and 1950. Selected social, demographic, and economic characteristics of persons who had moved were tabulated for various types of mobility status.

Fertility Tabulations: Three tabulations were made, using funds from the Scripps Foundation for Research in Population Problems and from the Milbank Memorial Fund. These provided information on women by number of children ever born and by number of children under 5 years old, by selected social, demographic, and economic characteristics of the woman and her family. (Further tabulations may be made in the future, also on a reimbursable basis. These would provide data on the spacing of births or on cumulative birth rates.)

<u>Family Tabulations</u>: The first count of the series of "F" (Family) card tabulations, done on the Univac, is shown.

Summary Card Tabulation Program: Summary cards were obtained from Counts 2, 3A, 3B, 4, and 5 of Series B for 44 States and the District of Columbia. Since the Univac was used to obtain the Series B tables for Alabama, Iowa, Louisiana, and Virginia, no Series B summary cards were obtained for these 4 States. Summary cards were punched from all counts in Series C, but none were obtained from the Series D, W, and Z counts.

Summary cards are 80-column punch cards, having usually 15 four-column fields per card utilized for summary data entries with the remaining columns used for area and sort group identification. Area identifications included inside or outside standard metropolitan area, inside or outside urbanized area, size of place, and State economic area. Summary cards for each census tract included the following additional area identification - each untracted urban place, remainder of each urban fringe by county, rural-farm and rural-nonfarm remainder of each county.

In general, tabulations of the summary cards were made only for data required for publication. The tabulations were planned so as to yield the published material with a minimum number of summary card-passes.

Summary cards were obtained for each area and sort group in a given count. Thus, in Series B, Count 2, summary cards were punched for each sex and color sort group, for each tract, urban place, urban fringe area, rural-farm and rural-nonfarm balance of each county. The cards were tabulated only where data were required for the Series B or the Census Tract Bulletins, in the following "Stages":

Stage 1 - County.

Stage 2 - Counties containing areas whose urban-rural classification was changed due to the change in the definition of "urban" in the 1950 Census.

Stage 3 - State tabulation based on the change in the urbanrural definition.

Stage 4 - Urban places, rural-farm, and rural-nonfarm parts of counties.

Stage 5 - States, by 3-way residence (urban, rural nonfarm, rural farm).

Stage 6 - Census tracts.

Stage 7 - States by urbanized areas.

Stage 8 - States by standard metropolitan areas.

Series C summary card tabulations were made only for data required for publication in Series C, for the following areas:

1. States.

2. States by 3-way residence.

3. Standard metropolitan areas of 100,000 inhabitants or more.

4. Cities of 100,000 inhabitants or more. 5. Cities of 50,000 to 100,000 inhabitants.

However, occupation and industry summary cards were prepared for State totals only.

Publication Program: The Series A tabulations provided data for Volume I, Number of Inhabitants (Series P-A bulletin preprints), and Chapters A of Volume II, General Characteristics of the Population, in which the information given for the State in the first volume is repeated. The Series B tabulations yielded data for Volume II, Chapters B, General Characteristics, (series P-B bulletin preprints) and population statistics for Volume III, Census Tract Bulletins (series P-D bulletins). The Series C tabulations provided detailed characteristics of the population for the larger areas of the nation which were presented in Chapters C of Volume II, Detailed Characteristics (series P-C bulletin preprints). The series D, W, and Z tabulations provided data for Volume IV, Special Reports (series P-E bulletins), among which are Employment Characteristics, Institutional Population, Mobility of the Population, Education, and others.

The information concerning persons and families enumerated on the P-1 questionnaire was transferred to three types of punch cards. The basic population card, designated by the letter "P," was punched for each person enumerated in the 1950 Census of Population. The "P"cards were tabulated in several series yielding counts of number of inhabitants, general and detailed characteristics of the population, and special reports based on sample data. The two other basic card types were the "F"- Family Card and the "C"- Fertility Card. Family and fertility characteristics

of persons enumerated on the last sample line of the population schedule were consolidated with other needed information shown elsewhere on the schedule by transcribing the data on separate sheets. Part of the information punched on the "F" and "C" cards was derived from these transcription sheets and the remainder was obtained by matching and reproducing from the corresponding "P-H" cards (see Punch Cards - Census of Housing) for family data and from individual "P" cards for fertility data.

P-Persons Card: The basic population card, "P," served as the unit record of statistical information relating to the marital status, citizenship, employment, sex, race, age, education, military service, income, and farm residence of the population. This card included both the data collected on a 100-percent basis and also the data collected on a 20 percent sample basis. Approximately 151,000,000"P"cards were punched for the 1950 Census of Population.

F-Family Card: This card was designed to record information pertaining to the head of the household and his family. The data recorded included the characteristics of the person selected, the family composition, family income, characteristics of spouse of head of family, age at marriage, difference of age of spouse, and characteristics of dwelling unit. A 3 1/3-percent sample was established for the Family composition, family income, characteristics of dwelling unit. However, as an economy measure, the transcribed sample was reduced in selected areas. Approximately 1,216,000 F cards were punched.

C-Fertility Card: This card was designed to record information pertaining to females 14 years of age and over who were either married, widowed, divorced, or separated at the time of the enumeration. The data recorded on the card included general characteristics of the "ever married" female as well as the general characteristics of the husband, the age-relationship of the husband and wife, the age and number of children, and the spacing by years of the children. The "C" card file was selected to represent a 3 1/3-percent sample of the "ever married" families of 14 years of age and over. However, as an economy measure, the sample was reduced in selected areas so that transcriptions were prepared for only about 1,000,000 women. The punch cards for selected transcriptions were duplicated so that the set of cards represents a full 3 1/3-percent sample.

SERIES B: Count 1 Cards Used: All P cards Areas: Enumeration district within minor civil division

Sort: None Items Tabulated: Total persons (1) Sex, race, and nativity (8)
Male, female:
Native white, foreign-born white Negro Other races arm population by sex (2)
Male farm residents, female farm residents

dents
Sex by age of all persons (18); of nonfarm persons (16)
Male, female:
Under 5 years, 5-14, 15-20, 20-24
(15-24 for nonfarm), 25-34, 35-44,
45-54, 55-64, 65 years and over
Sample bias control totals (8)
Heads of household 14 years of age and

over: Total

Nonsample: White and nonfarm, non-white or farm Sample Nonheads 14 years and over, persons

under 14 years; Nonsample, sample Only for California, Arizona, Colorado, New Mexico, and Texas: Spanish white, birthplace, and citizen-

ship (7) Non-Spanish white Spanish white: Foreign-born: Naturalized, alien, citizenship not reported, born in Mexico, born in other foreign countries

Only for New York State: Citizenship of all persons (2)
Native or naturalized, alien or citizenship not reported
Puerto Ricans (5) Native: Born in Puerto Rico: White, non-Born in Fuerto white white Not born in Puerto Rico, sample persons whose parents were born in Puerto Rico: White, nonwhite

C CARD TABULATIONS: Count 3 (Fertility Report)

Cards Used:

o cards for women ever married, 15 to 49 years old, with 1 or more children under 5 years old in the household

Areas: United States: Urban, rural non-farm, rural farm

ort:
Color; 5-year age groups: 15-19 to 45-49; marital status: Married once, husband present, and other ever married; children under 5 years old: 1, 2, 3, 4, 5 or more

Items Tabulated: Same as in Count 2

F CARD TABULATIONS: Count 1 (General Families Report)

Cards Used: F cards for primary families and secondary families

reas:
Each city of 100,000 or more
Each balance of standard metropolitan area of 250,000 or more outside
cities of 100,000 or more: Urban, rural nonfarm, rural farm
Each balance of State inside standard metropolitan areas of less
than 250,000, and outside cities of 100,000 or more: Urban,
rural nonfarm, rural farm
Each balance of State outside standard metropolitan areas: Urban,
rural nonfarm, rural farm

Primary families, secondary families
Trype of family: Wale head, wife present; other family with male head;
family with female head

Items Tabulated:
For families with heads of all races, and for families with nonwhite heads:

ds:
Size of family (8)
2, 3, 4, 5, 6, 7, 8, 9 or more
Number of family members in labor force (5)
0, 1, 2, 3, 4 or more
Age of family head (4) by own children under 18 years of age (4)
Age under 35, 35-44, 45-64, 65 and over
0, 1; 2, 3 or more own children
Families with male head, married spouse present by age of wife (5),
by labor force status of wife (2), by own children under 6 years
of age (2)
Age under 25, 25-34, 35-44, 45-64, 65 and over

of age (2)

Age under 25, 25-34, 35-44, 45-64, 65 and over

Wife in labor force, wife not in labor force

Some or none own children under 6 years of sge

Families with other than male head, married spouse present, by

own children under 6 years of age (2)

For families with heads of all races other than families with male

heads, married spouse present:

Marited status of head (5) by own children under 18 years of age (4)

Married, spouse absent, widowed, divorced, separated, never married

O, 1, 2, 3 or more own children under 18 years of age

PUNCH CARDS AND SUMMARY OUTLINE OF TABULATIONS

CENSUS OF HOUSING: 1950

The basic housing tabulations included four series - Series A, Series B, Series C, and the Residential Financing tabulations. Series A provided data on housing characteristics for small geographic areas. Series B and C provided analytical data based on a 20-percent sample of the cards for occupied dwelling units in the United States - nonfarm and farm respectively. The Residential Financing tabulations provided statistics on the financial characteristics of all nonfarm mortgaged residential properties, based on a survey of a sample of the properties enumerated in the Census of Housing.

The Series A tabulations provided the data for Volume I, General Characteristics (Series H-A bulletins) and for Volume V, Block Statistics (Series H-E bulletins). The Series A tabulations also provided the data for the housing portions of Volume III of the Population Reports, Census Tracts (Series P-D bulletins). Series B tabulations provided the data for Volume II, Nonfarm Housing Characteristics (Series H-B bulletins). Series C tabulations were used for Volume III, Farm Housing Characteristics. The Residential Financing tabulations appear in Volume IV.

There were four basic card types used for tabulating the 1950 Census of Housing. One "H" card was manually punched for each dwelling unit enumerated on the housing side of the P-l question-naire. Another basic card type "P-H" was prepared by reproducing mechanically, selected data from matched pairs of P cards for household head and the corresponding H cards. The H card was used in obtaining series A tabulations of housing characteristics for specified areas. The P-H cards were used in compiling the series B, "Nonfarm Housing," tabulations and the series C, "Farm Housing," tabulations. The series B tabulations were made with the Univac (Universal Automatic Computer).

Two types of cards were used for the residential financing tabulations. The first type was the basic card punched manually from the schedules with two such cards being used-one for owner-occupied property and the other for rental property. The other card type was the work card reproduced mechanically from the basic card with three separate work cards being used. Most of the data from the basic card were transferred to the respective work card, some of them recoded to save space. The basic card punching volume was 108,000 and the number of reproduced work cards was also 108,000.

H-Housing Card: The housing card was designed to serve as the basic unit record of general statistical information relating to the status, quality, geographical distribution, and characteristics of dwelling units. A total of approximately 46,000,000 H cards was punched for the 1950 Housing Census.

P-H Household Card: This card was designed to serve as the source of both the population and housing data necessary for the Series B and C Housing tabulations. The required population information was transferred mechanically to the P-H cards from selected population head-of-household cards (P cards). These P-H cards were matched to the corresponding H - Housing cards for occupied dwelling units and the required housing characteristics were reproduced. The specimen P-H card shows the various fields derived from the respective P and H cards. Another phase of the P-H card matching operation was the transfer of certain population information from the P-H cards to columns 71-80 of the corresponding H cards. To facilitate the transfer of selected data from the P cards to the H cards, 18,000,000 P-H cards were reproduced, of which 9,000,000 were used in the 1950 Housing Census Series B and C tabulations.

SRF (basic) Card -- Owner-occupied Property: This basic card was the unit used for recording general statistical information relating to characteristics of owner-occupied mortgaged properties. A card was punched for each mortgage reported on each P-51 or P-52 schedule and another to record the total of all mortgages whenever there were 2 or 3 mortgages. A total of 54,000 cards of this type was punched.

SRF (basic) Card -- Rental Property: This card was designed to record data relating to characteristics of mortgaged rental properties. A card was punched to record each mortgage reported on each P-53 schedule and another to record the total of all mortgages whenever 2 or more were reported. A total of 54,000 cards of this type was punched.

SRF Work Card -- Owner Property: This card contained certain information relating to characteristics of owner property reproduced directly from the corresponding basic card. Other data on this card were derived from recoding and computation of information on the basic cards. Computations included weighted debt, taxes per \$1,000 market value, and monthly interest and principal payment. A total of approximately 54,000 cards of this type was reproduced.

SRF Work Card -- Large Rental Property: This card was derived from the basic SRF Rental Properties Cards. Other data were derived by recoding and computation of data on the corresponding basic card. For sampling purposes, properties of 50 or more dwelling units were designated as large properties. Fourteen thousand cards of this type were reproduced.

SRF Work Card -- Small Rental Property: This work card was the unit reproduced for information relating to all small rental property. For sampling purposes, those properties having 49 or fewer dwelling units were designated "small properties." Part of thesedata were reproduced directly from the corresponding basic cards and the remainder was derived through recoding and computation. Forty thousand cards of this type were reproduced. This work card was identical with the SRF Work Card -- Large Rental Property except for a difference in the color of the cards.

Stage 1. Stage 2. Stage 3. Stage 4.

The H cards were tabulated in series A tabulations comprising five counts to provide the data precented in Volume I of the reports of the 1950 Census of Housing. These same data are presented in the series H-A housing bulletins which are preprints of the various chapters of Volume I. All of the subjects tabulated on the second count were enumerated and tabulated on the basis of a 20-percent cumple of dvelling units. All other tabulations are based on the complete enumeration. Summary eards were prepared on 80-column punch cards for all of the data tabulated in the first, fourth, and fifth counts. They were also prepared from the second count machine cheets for all areas except separate census tracts. Thus, the second count summary cards relate to the same areas as those based on the fourth and fifth counts.

The summary cards from part I of the first count also contain average rent and average value for each city block but do not contain the count of dwelling units with "no hot running water, no private bath, no private toilet, or dilapidated." The summary cards from part I of the first count have been tabulated to obtain the statistics for city blocks within census tracts and wards, as presented in the H-E bulletins. The summary cards from part II of the first count have been tabulated to obtain totals for each minor civil division, and each incorporated and unincorporated place of 1,000 to 2,500.

```
FIRST COUNT: Part I
                                                                                                     Value of one-dwelling-unit structures,
                                                                                                         owner-occupied, and vacant non-
seasonal, not dilapidated, for sale

In addition to the summary cards for the areas observed in the tabulations, additional cards for the data from the second, fourth, and fifth counts have been prepared for the total of each county, each urbanized area, each standard metropolitan area which comprises other than one entire county, and each State. The summary cards have been tabulated in a series of tabulations designated as stage tabulations to yield the entire content of the basic tabulations for the following areas within each State:

Series B

In Series B housing tabulations, all nonfarm P-H cards for occupied dwelling units in the United States were tabulated on the Universal Automatic Computer (UNIVAC) to provide analytical data for all standard metropolitan areas, for all cities of 100,000 or more population, for each of the census divisions, and for the United States. For the divisions and for the United States, data were tabulated for dwelling units inside standard metropolitan areas, urban dwelling units outside standard metropolitan areas, and rural dwelling units outside standard metropolitan areas,

5 counts (2 owner, 3 renter). The tabulations for each of the 5 counts and the classifications used for each item are shown below. The P-H cards represent a sample of approximately 20 percent of the occupied dwelling units. However, the data covering year built, television, and heating equipment were based on a 4-percent sample since these items were originally enumerated on a 20-percent basis. Within a count an item may appear more than once depending on the cross-classification. The financial characteristics for owners relate to one-dwelling unit structures on one-dwelling unit properties.

¹Also tabulated separately for units which are either dilapidated or do not have all of the following plumbing facilities: Flush toilet and bath inside the structure for the unit's exclusive use, and hot running water.

Tabulated for each number up to 10 or more.

Series C

In Series C housing tabulations, all rural-farm P-H cards for occupied dwelling units in the United States were tabulated to provide analytical data for all races for each of the 119 economic subregions in the United States and for the United States total. Data for dwelling units occupied by nomwhite households were tabulated for 36 specified economic subregions and for the nonwhite balance for the United States which were combined

to give United States totals. The tabulations, run in 2 counts, are shown below. Each count was run in 2 parts; part 1 included all the cards, and part 2 included only the nonwhite cards. The P-H cards represent a sample of approximately 20-percent of the occupied dwelling units. However, items indicated by an atterisk (*) were based on a 4-percent sample since the items were originally enumerated on a 20-percent basis.

RESIDENTIAL FINANCING TABULATIONS

The tabulations for residential financing were of two types -- the basic, consisting of four sets of tabulations, and the analytical, comprising l4 sets of tabulations. The analytical series were designed to provide more crossclassifications of data but with less area coverage. The summary outlines are not shown for these tabulations because of space limitations. The data tabulated relate to: type of mortgage holder, outstanding debt, interest rate, term of the mortgage, annual mortgage payments, characteristics of the owner, purchase price, items included in mortgage payments, and the purpose of financing and refinancing.

1. Basic Tabulations

For each set of basic tabulations, the cards were run for each of the 25 selected standard metropolitan areas, for the remaining standard metropolitan areas combined in each region, and for the balance of each region outside standard metropolitan areas. Summary cards were automatically out during these runs and were used in making the tabulations for each of the four regions and the United States summaries.

Prior to the tabulations the detail cards for each geographic area were sorted into two basic groups (owner-occupied properties and fental properties). The owner-occupied properties were subdivided into two dwelling unit groups (1 dwelling unit and 2-4 dwelling units) and the rental group was subdivided into four dwelling unit groups (1 dwelling unit, 2-4 dwelling units, 5-49 dwelling units and 50 or more dwelling units). Both detail and summary tabulations were prepared separately for each of the above six tenure-size groups.

For each of the six groups, various mortgage characteristics were crossclassified by a number of subject items (e.g., type of mortgage holder, amount of mortgage, outstanding debt, origin and purpose of first mortgage). A total of 60 subject items were crossclassified for the 4 sets of tabulations with the number of subjects varying for each set. Within each of the six sort groups, the tabulations also varied as to subject item and as to detail within the subject item.

2. Analytical Tabulations

For the analytical tabulations, the detail cards were sorted for total territory inside and outside standard metropolitan areas, by government insurance status, by tenure-size group (a total of 36 nort groups). In this series no tabulations were made for specific metropolitan areas. Summany cards were prepared from the detail cards for each sort group, and were tabulated, in general, for United States totals, for territory inside and outside standard metropolitan areas, and for each government insurance status group (Fig. VM, and conventional mortgage), by tenure-size group (total owner, total renter; owner--1, 2-4 dwelling unit properties; rental--1, 2-4, 5-49, 50 or more dwelling unit properties). Some of the subject items and tabulations were restricted to specified types of properties or mortgages. The subjects for 3 of the sets of the analytical tabulations were further sorted for type of mortgage holder and tabulated separately for all lenders, for individual lenders, for combined major institutional lenders, for each of the six major institutional lenders. In addition, certain subjects were further sorted for year property acquired and for new structures.

0 F CENSUS AGRICULTURE: 1950

The tabulations for the Census of Agriculture consisted of two basic data series -- tabulations for counties, including in some cases, data for minor civil divisions and tabulations for economic areas or regions. Shown below for each tabulation are the detail tabulation number, the punch cards included, the geographic areas selected, sorts, the items tabulated, and the summary tabulation numbers with the data necessary to understand the variations from the detail runs. "Areas" and "Sort" indicate the arrangement into which the cards were grouped prior to tabulation. Examples of geographic areas are counties and economic regions; examples of sorts are color-tenure of operator, economic class of irrigation, size of farm, type of farm, large farms and farms in sample, and minor civil divisions. In section "Items Tabulated" are listed the items for which counts or totals were obtained within each of the sort groups established. The summary cards, which were automatically punched as the detail tabulations were run, were tabulated on summary tabulation sheets.

These summary tabulations were made in order to obtain sort group totals within specified geographic areas more simply. using the resulting smaller deck of summary cards, combinations of groups were obtainable more efficiently and economically. These summary tabulations, together with those basic tabulations for which summaries were not necessary, comprised the data which, with analysis and further consolidation, formed the basis for the published material.

More than 250 tabulations were required to tabulate the 1950 Census of Agriculture. These include 57 detail and 19 summary tabulations for the county series and 79 detail and 103 summary tabulations for the economic area series.

Shown below are the sort groups most frequently used, the punch cards used, and the summary outline of tabulations. following abbreviations are used in the outline: "Co". for County, "E.R" for Economic Region or Area, and "F.R" for Farms Reporting.

SORT GROUPS

Color-Tenure of Operator

Color White Full owner Part owner Negro ·Other Manager Cash tenant Share - cash tenant Crop - share tenant Livestock - share tenant Cropper Other tenant Unspecified tenant

Tenure

Economic Class of Farm (Used in full for large farms and farms in sample only. Non-sample, non-large farms were coded either "commercial" or "other.")

Commercial:

| | LOUL | | | | | |
|-------|------|-------|---------|--------------------|-----------|------------------------|

| General crop | Miscellaneous and unclassified |
| | |

Large Farms and Farms in Sample

Large farms (Total value of products sold or to be sold \$70,000 or more, acreage and livestock criteria vary with section of country)

Sample farms (Farms included in the sample)

Thirteen basic punch card types, containing information from the A-1, "Agriculture Questionnaire," were used for tabulating the 1950 Census of Agriculture. A total of 58,211,000 cards were punched for these 13 card types. There was no card type D used for this census.

A (East) - Land in Farms: This card was punched for every questionnaire from 29 "Eastern" States on which Section VI, "Irrigation in 1949," consisted of only 2 questions. Acres of land owned and rented, total land in farm and its uses, answers to the two irrigation questions, and miscellaneous information about the farm operator were also recorded. The A card was the only card punched for all questionnaires. Approximately 5,424,000 cards, A (East) and A (West) Section 1, were punched, of which 3,705,000 were A (East) cards.

A (West) - Land in Farms - Irrigation: This was a dual purpose card punched from questionnaires for 20 "Western" States which had Section VI, "Irrigation in 1949," consisting of questions 222 through 229. For this card, Florida, Arkansas, and Louisians fell in the category of "Western" States as questionnaires for these States contained the enlarged irrigation section. This card form was used for two purposes:

(a) To record acres of land owned and rented, total land in farm and its use, and miscellaneous information about the farm operator. When used for this purpose, it was referred to as Section 1 and the headings on the top of

- A (West) Land in Farms Irrigation -- Con.
 - the card were applicable. In this use, it was almost identical to the A (East) card except that it contained no irrigation information and had one additional land use field. One A (West)-Section 1 card was punched for every questionnaire from the 20 "Western" States. Approximately 1,719,000 A (West)-Section 1 cards were punched for these States.
 - (b) To record acres of irrigated land and its use, source of irrigation, acres irrigated by supplemental source and acres irrigated by sprinkler. When used for this purpose, it was referred to as A (West)-Section 2 card and the headings in the center of the card were applicable. An A (West)-Section 2 card was punched only if the irrigation code block in the center of the questionnaire was coded with a digit "1", "2", or "3", representing, respectively, cropland harvested wholly irrigated, cropland harvested partly irrigated, and farms with irrigation by no irrigated cropland harvested. Approximately 316,000 A (West)-Section 2 cards were punched.

E - All Crops Except Corn and Sorghums: An "E"card was punched for questionnaires on which entries appeared anywhere in Section III, "Crops," (except in the subsections for "Corn" and "Sorghums"), and in the subsection for "Tree Fruits, Nuts, and Grapes" (except for California questionnaires). It was designed to record information for three crops on one card. A number of "E"cards could be punched from one questionnaire, depending upon the number of crops for which entries were made. Thus, 29,459,000 "E" cards were punched.

G - Forest Products: This card was punched for all questionnaires having any entries for questions in Section VII, "Forest Products in 1949." It was used to record information about value of standing timber, firewood, fence posts, sawlogs, pulpwood, pilings and poles cut, and in some areas, information about maple trees tapped, quantities of maple sirup and sugar products, and value of sales of maple sirup and sugar. A total of 1,524,000 "G" cards was punched.

- J/N Sheep, Wool Production; Goats and Mohair for "Western" States: The "J/N" card served a dual purpose and was designed for punching two distinct types of information-
 (a) The <u>J card</u>, identified by the captions on the top of the card, was punched for all questionmaires on which entries appeared in Section IX, "Livestock," under the subsections for Sheep and Lambs, Goats, Rabbits and Fur Animals, and Wool Shorn. It was used to record an inventory of total sheep, lambs under six months, ewes, rams and wethers, number of sheep shorn, pounds of wool produced and value of wool sold; also "Yes" "No" questions on goats, rabbits and fur animals, and value of goats' milk, mohair, rabbits and fur animals sold. In certain areas, information on goats was enlarged to a separate subsection and was not recorded on the "J"card. The "Yes" "No" questions only were recorded on this card type. There were 601,000 "J" cards punched.
 - The N card, identified by the captions in the center of the card, was punched only for questionnaires for seven "Western" States on which entries appeared in Section IX, under the subsection for Goats. It was used to record an inventory of total, angora, and other goats, number of goats clipped, pounds of mohair clipped and value of goat milk and mohair sold. There were 34,000 "N" cards punched.

L - Farm Facilities and Equipment - Sample and Large Farms Only: This card was punched for every sample and large farm questionnaire from entries in Section X, "Facilities and Equipment," and from entries in Section XIII, subsections Trading Center and Kind of Road, and from information transcribed from other parts of the questionnaire. It was used to record such items as telephone, milking machine, source of electric power and monthly electric bill, certain electric facilities, trucks, tractors, autos, etc., distance to trading center, kind of road, date of enumeration, cropland harvested, residence of operator, work power and total value of products. A total of 1,170,000 "L" cards was punched.

M - Labor and Expenditures - Sample and Large Farms Only: This card was punched for every sample and large farm questionnaire with entries in Section XI, "Farm Labor Last Week," and Section XII, "Expenditures in 1949." It was used to record hours worked by farm operator, number of permanent and temporary hired workers, basis of pay, rate of pay, hours worked, and other perquisites for hired workers, and farm expenditures for machine hire, hired labor, feed and purchase of livestock and poultry, gasoline and other fuel, seeds, tractor repairs and other farm machinery repairs. About 1,152,000 "M" cards were punched.

PUNCH CARD AND SUMMARY OUTLINE OF TABULATIONS

One punch card, type IT, was prepared for each copy of the A3 questionnaire "Landlord-Tenant Operations" having one or more cropper sub-units enumerated in the field or 'office-constructed' in washington on the basis of information obtained in the Agriculture questionnaires. Two common groups of items tabulated covered the information on the punch card. The need for cross-classification

of the various items of information by geographic area and characteristic sort groups required a series of 14 tabulation runs, two for counties and 12 for economic regions. Shown below are the sort groups used in the tabulations, the punch card used (LT), and the 14 tabulations.

Color-Tenure of Operator

Color

Tenure

White Non-white

Full owners Part owners

Managers Tenants

Cropland Harvested Group

Under 20 acres

50 - 99 acres

20 - 29 acres 30 - 49 acres 100 - 199 acres 200 - 499 acres

500 acres and over

Kind of Sub-Unit

Croppers only

Croppers, share, and/or other tenants only

Groppers and tenants other than share tenants only

Number of Cropper Sub-Units

2 sub-units

5-9 sub-units

3 sub-units 4 aub-units

Tai

10-19 sub-units

20 sub-units and over

Office Constructed Code (for A-3 schedules prepared in Washington office)

With no home farm

With home farm

All land accounted for All land not accounted for

Size of Unit

Under 30 acres 30 - 49 acres

180 - 219 acres 220 - 259 acres

50 - 69 acres

260 - 499 acres

70 - 99 acres 100 - 139 acres 500 - 999 acres

LT - Landlord-Tenant Operations: This card contains information on total land owned or rented by the overall operator, total acres in the units, and total acres operated by tenants. It also contains a summation of all cropland harvested, all totton, tobacco or rice, peanuts, and corn harvested, horses and mules owned by landlord and those owned by tenants, and total number of units in the overall operation. Most of the data punched on this card were found at the bottom of the questionnaire where entries for individual units had been totaled. A total of 146,700 "LT" cards were punched.

PUNCH CARDS AND SUMMARY OUTLINE OF TABULATIONS -- CENSUS OF IRRIGATION: 1950

The tabulations for the Census of Irrigation, 1950, provided cross-classification of data for single-farm and multiple-farm irrigation works by States, counties, and drainage basins. The seventy-nine tabulations outlined below are grouped into 12 common groups of items tabulated. Shown for each tabulation are the number, card type included, the area controls, sorts, and items tab-

ulated. The section "Items Tabulated" lists the items for which counts or totals were obtained within each of the sort groups established. Since no summary cards or summary tabulations were prepared, these tabulations, with further analysis and consolidation, comprised the source of the published material. Shown below are the sort groups used, the punch cards used, and the tabulations.

SORT GROUPS

Acreage Groups (acres irrigated direct by the enterprise)

| None or not reported | 200 - 499 acres |
|----------------------|-----------------------|
| 1 - 9 acres | 500 - 999 acres |
| 10 - 29 acres | 1,000 - 2,999 acres |
| 30 - 59 acres | 3,000 - 9,999 acres |
| 60 - 99 acres | 10,000 - 29,999 acres |
| 100 - 199 acres | 30,000 acres and over |

Complete System Irrigation Enterprises

These enterprises delivered 90 percent or more of their irrigation water direct to farms, less than 10 percent to other irrigation enterprises, and obtained less than 10 percent of their water from other irrigation enterprises. Enterprises that delivered no water in 1949 are excluded.

Cost per Acre Group

Less than \$1.00 \$1.00 - \$1.99 \$2.00 - \$4.99 \$5.00 - \$9.99 \$10.00 or more

Number of Farms Group

| 1 - 3 farms | 100 - 299 farms |
|---------------|----------------------|
| 4 - 9 farms | 300 - 999 farms |
| 10 - 29 farms | 1,000 farms and over |
| 30 - 99 farms | |

Single and Multiple-Farm Enterprises

Single-farm enterprise - enumerated on I-1 schedule. Multiple- farm enterprise - enumerated on I-2 schedule.

Source of Water

| Natural | stream | Drainage v | vater |
|---------|--------|------------|--------|
| Natural | lake | Sewage | |
| Spring | | Any other | source |
| Flowing | well | • | |

Tabulation Area

This code was used to prevent duplication in the count of number of enterprises reporting an item where the irrigation works were located in two or more counties or drainage basins. Separate area questionnaires were prepared for each of the county and basin areas of each such intercounty and interbasin enterprise. By cumulating the totals of tabulation areas according to a special plan, the desired counts for specific county or basin areas were obtained. The original and separately prepared questionnaires contained one of the following codes according to the tabulation areas and the combined areas represented:

1 - County, basin, State and U. S.

2 - County, basin and State

3 - County and basin

4 - County

5 - Basin

6 - Part of a county and basin

Type of Enterprise

Single-farm U. S. Bureau of Reclamation
Mutual, unincorporated U. S. Bureau of Indian Affairs
Mutual, incorporated State
District City
Commercial

Type of Service

Primary irrigation and no supplemental. Supplemental irrigation and no primary Both primary and supplemental irrigation No primary or supplemental irrigation

Type of Water

Surface, all gravity Surface, all pumped Ground, pumped well Mixed Four cards (A, B, C, and D) were used to record data obtained on the irrigation questionnaires (I-1 and I-2). Cards A, B, and C were used to record comparable information from both forms.

Information for Card D was obtained from the I-2 questionnaire only. A total of 387,900 cards was punched for the Census.

A - Works and Equipment - Irrigation 1950: This card contained information on miles of irrigation supply ditches and pipe lines, number of feet of tunnels, number of reservoirs and their capacity, number of different types of dams, number of flowing wells, number of pumped wells and average lift, number of pumps, electric motors and other motors or engines. A total of 125,800 "A" cards was punched.

State; Multiple-farm enterprises only, 731-03: type of enterprise, type of

Areas and Sort -- Con.

731-04: State; Complete systems, acreage group, type of service

731-05: State: Complete systems, type of water (other than acreage group 1), type of service

State, county, tabulation area; Single and multiple-farm enterprises

731-07: State, drainage basin, tabula-tion area; Single and multiple-farm enter-

Items Tabulated:

Enterprises (total number) Primary:

Acres irrigated Cost of water Supplemental: Acres irrigated

Cost of water Cost other than for operation or

Enterprises reporting Acres irrigated Costs not for operation or maintenance Water to other farms

Enterprises reporting Acres in other farms Acres irrigated (total number)

TABULATIONS: 732-01 to 732-07

Cards Used: C cards for all irrigation

Areas and Sort:

732-01: State, county; Cost per scre group

732-02: State, drainage basin; Single and multiple-farm enterprises, cost per acre group

Multiple-farm enterprises only, type of enterprise, cost per acre group

State: 732-04: Complete system, acreage group, cost per acre group

732-05: State: Complete systems, type of water (other than acreage group 1) by cost per acre group

732-06: State, county, tabulation area;
No sort

732-07: State, drainage basin, tabulation area: Single and multiple-farm enterItems Tabulated:

Enterprises (total number) Acres irrigated (total number) Acres drained:

eres drained; Enterprises reporting Acres irrigated (primary) Acres drained

Drainage needed: Enterprises reporting Acres irrigated (primary) Acres needing drainage

Season of irrigation:

Early: Enterprises reporting Acres irrigated Enterprises reporting Acres irrigated Early and late:

Enterprises reporting Acres irrigated

TABULATIONS: 733-01 to 733-07

Cards Used: C cards for multiple-farm irrigation enterprises only

733-01: State county: No sort

733-02: State, drainage basin; No sort

State: 733-03:

Type of enterprise

State; Complete systems, acreage group 733-04:

733-05: State: Complete systems, type of water (other than acreage group 1)

733-06: State, county, tabulation area; No sort

733-07: State, drainage basin, tabulation area;

Items Tabulated:

Measurement of water:
"All" reported:
Number of enterprises Acres irrigated
"Part" reported:
Number of enterprises
Acres irrigated "None" reported: Number of enterprises Acres irrigated

Water to farms, supplemental: Enterprises reporting Acres irrigated Cost of water Acre feet of water

Items Tabulated -- Con.

Water to farms, primary: Enterprises reporting Acres irrigated Cost of water Acre feet of water Enterprises (total number)

TABULATIONS: 741-01 to 741-07

Cards Used: D cards for multiple-farm irrigation enterprises only

Areas and Sort.

741-01: State, county;

741-02: State, drainage basin; No sort

741-03: State; Type of enterprise

741-04: State: Complete systems, acreage group

741-05: State:

State; Complete systems, type of water (other than acreage group 1)

741-06: State, county, tabulation area;

741-07: State, drainage basin, tabula-tion area; No sort

Items Tabulated:

Water used: Delivered direct to farm: Enterprises reporting Acre feet of water

Delivered to other enterprises: Enterprises reporting Acre feet of water Delivered to other users: Enterprises reporting
Agre feet of water
Conveyance losses:
Enterprises reporting
Agre feet of water

Water obtained:

Surface: Enterprises reporting Acre feet of water Ground: Enterprises reporting Acre feet of water Other enterprises: Enterprises reporting Acre feet of water

Total all sources: Enterprises reporting Acre feet of water

The information for the 1950 Census of Drainage was manually tabulated since there were a relatively small number of questionnaires and relatively little cross-tabulation required. Data for the individual counties and States were posted by hand to about ten series of worksheets. The accompanying outline presents in summary form an arrangement of the items on the worksheets into seven equivalent tabulation runs. Of these, five were required to tabulate the data for the 30 Brainage District States in which the type D questionnaire was used and the remaining two tabulations covered the 10 County-Prain States enumerated on the D1 questionnaire. The three characteristic sort groups used in cross-classifying the data were:

Size of Enterprise (used for the 30 Drainage District States only)

Under 500 acres 500 to 999 acres 1,000 to 1,999 acres 2,000 to 4,999 acres 5,000 to 9,999 acres 10,000 to 19,999 acres

20,000 to 49,999 acres 50,000 to 99,999 acres 100,000 to 199,999 acres 200,000 to 499,999 acres 500,000 acres and over

Kind of Power (used for these Drainage District States only -- Florida, Illinois, Louisiana, and Missouri)

Internal combustion

Electric
Steam
Internal combustion and electric

Internal combustion and steam Internal combustion, electric, and steam Steam and electric

Kind of Pump (used for these Drainage District States only -- Florida, Illinois, Louisiana, and Missouri)

Centrifugal Axial flow Mixed flow

Centrifugal and mixed flow Centrifugal and axial flow
