I. INTRODUCTION : GENERAL CONTEXT AND REVIEW OF THE 1987/8 ACADEMIC YEAR	3
II. REPORT ON ERASMUS ACTIVITIES, 15.6.87-31.12.87	7
III. CONCLUSIONS AND FUTURE PERSPECTIVES FOR 1988/9	29

Annexes

1. Composition of the ERASMUS Advisory Committee
2. Statistics
3. List of the Inter-University Cooperation Programmes supported
in 1987/8
4. List of the Study Visits supported in 1987/8
5. List of the ERASMUS National Grant-Awarding Authorities
6. List of the National Academic Recognition Information Centres
7. Documentation sent to universities containing a description of
the types of financial support available in 1987/8

I. INTRODUCTION : GENERAL CONTEXT AND REVIEW OF THE 1987/8 ACADEMIC YEAR

General context

1. In recent years, the conviction has grown that in order to maintain and enhance the competitiveness of the European Community on world markets and to make the Community an entity that is closer to its inhabitants in the framework of a People's Europe, urgent efforts must be undertaken to put the entire intellectual resources of the Community to better use and to produce, in particular, a much higher number of graduates with first-hand experience of living and working in other countries of the Community.

2. It is within this context that the Council decided to launch the ERASMUS Programme, or the European Community Action Scheme for the Mobility of University Students. The goals of the Programme as stated in the Council Decision (1) are the following :
 - to increase substantially the number of university students (2) carrying out an integrated period of study in another Member State, in order that the Community may draw on manpower with direct experience of the economic and social life of other Member States, while ensuring equal opportunities for the boys and girls benefitting from such mobility;

 - to promote wide-ranging and intensive cooperation efforts between the universities of all the Member States;

(1) 87/327/EEC Decision of 15 June 1987 (OJ N° L166 of 25 June 1987, pages 20 to 24).

(2) In the context of the ERASMUS Programme, the term "university" shall be used to cover all types of post-secondary education and training establishments which offer, where appropriate within the framework of advanced training, qualifications or diplomas of that level, whatever such establishments may be called in the Member States.

- to harness the full intellectual potential of the universities in the Community by means of increased mobility of teaching staff, thereby improving the quality of the education and training provided by the universities with a view to securing the competitiveness of the Community in the world market;
- to strengthen the interaction between citizens in different Member States with a view to consolidating the concept of a People's Europe;
- to ensure the development of a pool of graduates with direct experience of inter-Community cooperation, thereby creating the basis upon which intensified cooperation in the economic and social sectors can develop at Community level.

3. The ERASMUS Programme cannot be regarded as a separate entity, but needs to be considered within the context and in the line of a series of community initiatives which should be recalled, including notably :

- the community programme on cooperation between universities and enterprises regarding training in the field of technology (COMETT) adopted by a Council Decision (1) on 24 July 1986;
- the plan designed to stimulate cooperation and exchanges in the scientific field, especially as concerns the awarding of financial support and research grants;
- the various community programmes currently being implemented and developed in respect of the mobility of young people, the improvement of language courses as well as the strengthening of the Community dimension in curricula of different levels and European cooperation in the teacher training sector;

(1) 86/365/EEC Decision of 24 July 1986 (OJ N° L222 of 8 August 1986, pages 17 to 21).

- the other various actions currently being developed with a view to setting up a People's Europe.

4. Broadly speaking, owing to the transnational dimension underlying the Programme and the specific projects linked to it, ERASMUS constitutes together with COMETT a significant component in the development of the internal market. In fact, ERASMUS should contribute, on the one hand, to strengthening the competitive position of enterprises (by placing emphasis on the promotion of a larger number of students having had first-hand experience of other Member States in the course of their studies and who are better qualified thanks to their knowledge of languages and other cultures) and, on the other hand, to consolidating provisions in favour of staff mobility through measures designed to facilitate the academic recognition of diplomas.
5. For the purpose of carrying out the four actions indicated above, the Council Decision considered necessary a budget of 85 MECU for the first three-year period of the Programme, from 1 July 1987 to 30 June 1990. A joint declaration by the Council and the Commission provides for the distribution of this total three-year budget as follows : 1987/8 : 10 MECU; 1988/89 : 30 MECU; 1989/90 : 45 MECU. This declaration further provides that as of 1989/90, expenditure for Action 2 (student grants) will be double that for Action 1 (European University Network), but that in the initial launching period of the Programme, funding on the European University Network would predominate. The Annex to the Council Decision stipulates that after the first year, the cost of the measures adopted for Actions 3 and 4 will not exceed 10% of the annual appropriations to be allotted to the ERASMUS Programme.
6. In addition to the 10 MECU for 1987/8 provided for in the Council Decision, a further 1.2 MECU were available for this first academic year. This sum has been adopted in the framework of the Community budget for 1987 for the purpose of stimulating higher education cooperation (joint study programmes, study visits) and was accordingly assimilated to the ERASMUS budget.

Review of the 1987/8 academic year

7. Despite the - unavoidable - transitional nature of this first year of operation, the ERASMUS Programme is well and truly under way and the reactions of the universities have been very positive indeed, surpassing, in fact, the hopes of the Commission. As shown in table 6 in Annex 2, demand for ERASMUS has outstripped the amount of the funds available by a factor of more than 3:1. In the case of student grants, this factor was approximately 5:1. In the light of this first year of experience, the Commission's original proposal of a budget of 175 MECU for the first three years of the Programme's operation, which the Council reduced to 85 MECU, seems most realistic.

8. During the Programme's first year of operation, 398 inter-university cooperation programmes (ICP) received community support covering all the Community countries and involving altogether about 850 higher education institutions. These programmes constitute the starting point for the construction of the European University Network (Action 1 of ERASMUS). Around 3,000 students received grants which enabled them to spend a period of study in another Member State (Action 2). 1,138 study visit agreements afforded some 3,000 university teachers and administrators the opportunity of travelling to other Member States to lay the foundations of cooperation programmes and to become acquainted with the higher education system of the countries visited. 12 university associations are currently implementing European projects with the financial support of ERASMUS. The components of the programme which relate to academic recognition are well in hand and a large-scale and intensive information campaign has been launched in Member States whose universities have been found, so far, to participate less actively in the ERASMUS Programme. The Programme's infrastructure (ERASMUS Advisory Committee, National Agencies for the awarding of grants, ERASMUS Bureau) is now properly established.

9. Together, all these factors contributed to the success of this first year of activity. Naturally, some difficulties have arisen and are not to be underestimated. The universities in some of the Member States

(UK, F, D, IRE) have been quick to come forward with proposals for inter-university cooperation programmes (European University Network), but those in other Member States (I, GR, P, DK) have been much less in evidence. Several academic disciplines are clearly underrepresented in the ICPs supported this year, notably the Natural Sciences, Medical Sciences and Teacher Training. The limited resources available for Action 2 and the inflexibility of the system imposed by the Council Decision for allocating the Action 2 budget to Member States, have led to severe imbalances between the Member States in respect of student grants : with the budget made available to each of them, some Member States (DK, E, GR, I, P) were able to award grants to practically all students participating in an ERASMUS programme, while others (D, F, IRL, UK) could only offer grants to one out of four or five students. If these measures were to continue, they could have extremely damaging effects. Many organisational problems remain to be solved in order to arrange for the inclusion within ERASMUS of individual students wishing to move to other EC Member States outside the framework of ICPs. None of these problems is substantial enough, however, to call into question the fundamentally positive outcome of this first year of the programme's operation.

II. REPORT ON ERASMUS ACTIVITIES, 15.6.87-31.12.87

10. The strategy to implement ERASMUS in 1987/8 has centered around three sectors of activity :

- launch of the initial programme operations
- measures to inform the academic community, national authorities and the media about the Programme
- establishment of an organisational and consultative infrastructure for the Programme.

Due to the extremely tight schedule imposed by the Council Decision, these three activities have been conducted concurrently. The following paragraphs of this section summarize each of these sectors of activity in turn, starting with the measures that were adopted to carry out the four "Actions" of the Programme, i.e. :

- The European University Network (support to universities) (Action 1)
- student grants (Action 2)
- measures to improve academic recognition (Action 3)
- complementary measures (Action 4)

Action 1 : European University Network : Support for Inter-university Cooperation Programmes (ICP) and Study Visits

Inter-university Cooperation Programmes

11. The main objective of the ERASMUS Programme is to boost student mobility well above its present unsatisfactory level. In order to achieve this objective, it will not be sufficient merely to provide direct grants to individual students. The universities themselves must be encouraged to make arrangements with universities in other Member States whereby students may undertake a period of study elsewhere in the Community, which forms a coherent and recognised part of their overall course of study and therefore does not entail a prolongation of this course. It is also felt that inter-university arrangements of this kind (which in practice are often implemented at departmental and faculty levels) can minimize the organisational problems of study abroad and provide a solid framework for exchanging students on a regular basis.
12. Similar considerations apply with regard to staff mobility : while individual, short-term guest lectures may, in certain circumstances, fulfill a useful function, a truly significant pooling of the intellectual resources of the Community's universities for the purpose of providing a better quality education can only be achieved through longer ~~duration~~ integrated exchanges of university staff on a regular basis.

ERASMUS therefore provides financial support to encourage long-lasting cooperation between different Member State universities which, amongst themselves, have established inter-university cooperation programmes (ICP) regarding student and/or staff mobility. Such programmes receiving support in the framework of ERASMUS constitute the European University Network.

13. Student Mobility Programmes : ERASMUS support is intended for programmes which provide for the students of one university the chance to undertake, within a university of another Member State, a period of study which will be fully recognised by the home university when awarding these students their final diploma or qualification. All student mobility programmes which satisfy this criterion of recognition are eligible, regardless of the field of study, the level of study (up to and including the doctorate), or the type of participating institution. However, the Commission grants definite priority to reciprocal exchange programmes (regardless of whether this reciprocal element is organised in a single academic field or different fields).
14. The recognised period of study in another Member State must be of substantial duration (normally at least a three-month or six-month academic "term"); periods given over to no more than practical field-work, international conferences and seminars or very short visits are not eligible. The Commission accords preference to programmes which allow students to satisfy criteria enabling them to benefit from ERAS-
student MUS/*mobility* grants.
15. Financial support from the Commission may cover the following expenses entailed by a student mobility programme :

- the costs of travelling and staying abroad for university staff members who take part in meetings to plan, develop, implement, monitor and evaluate the programme (organisation and content of teaching and courses, accommodation and effective cost of living in another Member State, supervision of students, examination boards and panels, questions relating to academic recognition and qualifications, etc.);

- preparation and translation of written and other teaching material;
- preparation of students (information, linguistic preparation, academic and other facilities provided by the home and/or host institution);
- expenditure for making information about the programme more widely available;
- other expenditure directly related to carrying out the programme.

16. In no case may financial support be used to cover the normal salary costs of staff taking part in the programme.

17. For each student mobility programme, the maximum support which may be awarded is ECU 25,000 per year per participating university (the average amount in 1987/8 was well below this figure). Each group of students who are working for the same diploma or the same qualification and who go from one university to another one in another Member State, constitutes a distinctly separate mobility programme in applying this maximum. 7

18. Staff mobility programmes : this support is intended for inter-university programmes which provide an opportunity for the teaching staff of one university to teach in a partner university in another Member State.

19. Priority is accorded to programmes for reciprocal exchanges (within a single academic field or in different fields) in which the visiting staff member makes a substantial and integrated contribution to the teaching programme of the host university over a period of at least one month.

20. The financial support from the Commission may be used to cover the following expenses :

- the cost of the development and operation of the programme :
the costs of travelling and staying abroad for meetings concerning the organisation and content of teaching activity and examinations;
cost of translating teaching material; the specific linguistic preparation of the teaching staff, etc. The maximum financial support available for these expenses is ECU 5,000 per year per university for each programme;

- the travelling costs of the teaching staff : by this is meant the mobility costs (journey and stay abroad) of teaching staff who go to the partner university in order to teach and administer examinations; the maximum amount of financial support available varies according to the length of the period spent abroad; for a three-month period, for example, the maximum support that may be granted is ECU 3,500 per staff member;
- the costs of replacing teaching staff : when a staff member on mission abroad has to be replaced during his or her absence, the Commission may grant, under certain circumstances, maximum financial support of ECU 2,500 per month of replacement.

Programmes supported in the 1987/8 academic year

21. All universities which had applied for 1987/8 support of joint study programmes, a scheme which preceded ERASMUS, were immediately informed of the adoption of ERASMUS and given the opportunity of adapting their requests to the new terms of reference regarding inter-university cooperation programmes (ICP). The 608 requests concerned were referred to the Academic Advisory Group (1) in late June, and on the basis of the Group's recommendations, the Commission decided in October to provide support to a first batch of 240 inter-university cooperation programmes (ICP), in the framework of Action 1 of ERASMUS (European University Network). 230 of these projects also obtained financial support for participating students. Early in July, the Commission forwarded to all universities a document prepared in conformity with the provisions of the ERASMUS Decision, setting out the grants available in 1987/8 and giving universities until 30 September to submit their new applications.

(1) The role ^{of} this group, which consists of representatives from the academic world appointed by the Commission (Heads of universities, professors with extensive experience in the matter of organising teacher and student exchange programmes) is to give the Commission an informal opinion on the inter-university cooperation programmes to be supported.

260 further applications were received on the basis of this second round, which was an exceptional measure adopted only for 1987/8. These entered into competition with the 368 projects not supported in the first round in order to ensure equality of opportunity across the two selection rounds. After review by the Academic Advisory Group in late November, the Commission selected a further 158 ICPs for support (127 of which were also awarded support under Action 2 for the purpose of providing student grants).

22. In all, the Commission received 868 applications for financial support within the framework of Inter-university Cooperation Programmes (ICP) in the 1987/88 academic year. 398 applications (45.9%) were accepted by the Commission and received financial support totalling MECU 3.8, representing 32% of the total amount (MECU 12) requested.

23. Tables 1 and 2 show the distribution of applications and grants awarded per academic discipline per Member State. Table 1 reveals high concentrations of applications received and grants awarded in language and literature, business studies and engineering, which together accounted for exactly half of the total amount of financial support granted. On the other hand, the natural sciences, social sciences, general humanities, teacher training, agriculture and medicine appear to be less well represented (1). Medicine and teacher training were also the only fields of study to receive significantly fewer grants than might have been expected on the basis of their percentage of applications, suggesting that the quality of the applications received in these fields was somewhat disappointing. Plausible reasons may be adduced to account for this : in the case of medicine, restrictions on the admission of students and highly structured ,

(1) However, this impression is a relative one when one compares the number of programmes supported with that of the students or with the number of graduates in corresponding subjects (cf Table 1).

externally validated curricula tend to make integrated student exchanges difficult; in the case of teacher training, mobility is often impeded by the requirement that students must take a certain number of disciplines concurrently and carry out training periods in schools.

24. Viewed in terms of Member State participation, the high involvement rates of French and British universities in both applications and grants awarded immediately catches the eye. A number of factors may be responsible here, notably the language factor (English and French being by far the most widely taught foreign languages in the Community), existing structures for disseminating information on available community grants within the institutions of these countries and the background of experience developed in the framework of the Joint Study Programme Scheme. The highly encouraging performance of Spanish universities in attracting ERASMUS support is also worthy of note. On the other hand, Italian universities are not participating as fully in ERASMUS as would be merited by the country's population figures or overall student numbers. The apparent overall participation rate of Belgian universities camouflages the dearth of programmes involving universities located in the Flemish-speaking part of that country.
25. In general terms, however, it may be said that this first selection of ICPs represents a broad spectrum of cooperation programmes between universities in all Member States in a very wide range of academic disciplines. Furthermore, some extremely exciting examples of cooperation programmes are being developed and operated already now with the support of ERASMUS, in particular as regards student exchange programmes.
26. In some cases, it is even possible for students to obtain a dual qualification, i.e. a degree award from two different Member States :

. Business studies / Management science

- E Universidaad Pontificia Comillas, ICADE, Madrid
- F Groupe ESC Reims, CESEM
- D Fachhochschule für Technik und Wirtschaft, Reutlingen
- UK Middlesex Polytechnic, London

Four-year bilateral integrated exchange programmes whereby mixed groups of students spend two years (theoretical and practical study) in each of two countries and receive fully validated degree awards. Currently around 1,000 students are involved.

. Electrical engineering / Mechanical engineering

- UK Coventry (Lanchester) Polytechnic
- D Fachhochschule Osnabrück

Fully integrated course leading to a double qualification of Bachelor of Engineering and Diplom-Ingenieur. Language tuition (intensive courses) is part of the curriculum from the first year on.

. Energy studies, Materials science, Machine systems, Industrial robotics

- UK Cranfield Institute of Technology
- F Université de Technologie de Compiègne

Fully integrated course leading to the double qualification of Master of Science and Diplôme d'Ingénieur. The course also aims to acquaint engineering students with the economic, political and administrative structures of the two countries concerned.

. French and Italian studies / Language and literature

F Université de Savoie, Chambéry

I Università di Torino

Fully integrated two-year exchange programme at deuxième cycle level, the first year of which leads to a Franco-Italian Licence and the second year of which leads to a joint degree Maîtrise/Laurea awarded by a bi-national jury under the auspices of both universities and recognised in both countries.

27. In other instances, programmes follow the more "classical" pattern, whereby students spend the first part of their studies at their home university and then go to another EC Member State for an intercalated study year, before returning to complete their degree :

. Physics/Chemistry/Mathematics

UK University of Sussex

B Université Libre de Bruxelles

D Universität Bochum

D Universität Freiburg

D Universität Tübingen

F Université de Paris VII

F Université de Paris XI

F Université de Nantes

F Université de Grenoble I

F Ecole Supérieure de Télécommunications de Bretagne, Brest

F Institut National Polytechnique, Grenoble

F Université d'Aix-Marseille II

F Université de Caen

F ENSAC Toulouse

I Università di Firenze

Joint programme linking the University of Sussex with 15 other universities in 4 Member States. Students in science subjects /mathematics are exchanged for one academic year as an integrated part of their home university courses, with Sussex, the core institution, exchanging with each of the other universities depending on the subject area.

. Comparative national law / Law with languages

- D Universität Passau
- UK University College Cardiff
- I Università degli Studi di Pavia
- E Universidad de Santiago de Compostela
- F Université d'Angers
- F Université de Tours

Passau has introduced a first degree level course in law combined with the law of another country and exchanges students with the partner universities in Spain, France, Italy and the United Kingdom for one academic year. Credits taken abroad are fully recognised as counting towards the home degree. Students receive a supplementary certificate for their studies abroad. Language courses are provided to prepare the students for the course.

28. Mention should also be made of the programmes in which neighbouring universities in different Member States link together to form what may be termed as "transfrontier regional cooperation projects". One good example of this is located in the "Saar-Lor-Lux" region :

. Environmental sciences

- B Fondation Universitaire Luxembourgeoise, Arlon
- Lux Centre Universitaire de Luxembourg, Luxembourg
- D Universität des Saarlandes, Saarbrücken
- D Universität Trier
- D Universität Kaiserslautern
- F Université de Metz

Fully integrated two-year postgraduate programme involving 15 students of different nationalities who spend their first year working in French in Arlon and Metz and their second year working in German

at two out of the three German universities. The first six months consist of pluridisciplinary training. Afterwards, each student specialises in one individual research project. The overall course leads to a European Diploma in Environmental Science.

29. Not all programmes were as highly integrated as the models referred to above. Nevertheless, the overall quality of proposals received was high and this augurs well for the future development of the European University Network.

Study Visits

30. The development of the European University Network is further underscored by the awarding of grants to members of the teaching and administrative staff of the universities, to enable them to undertake "Study Visits". The purpose of these is to examine the possibility of establishing or broadening the scope of an inter-university cooperation agreement through contacts with one or several institutions in other Member States, or to add to their knowledge or experience of certain special aspects of the higher education system of one or several other Member States.
31. The schedule to implement ERASMUS made it necessary to organise two rounds for the selection of Study Visit projects, as was the case with inter-university cooperation programmes. In November, the Commission approved a first batch of 750 grants for members of the teaching and administrative staff who had submitted their application shortly before the adoption of ERASMUS according to the terms of the existing "Study Visit Scheme", to enable them to visit other Community countries for the purpose of preparing ICPs or studying specific aspects of the higher education system. The 850 unsuccessful applicants were placed on a reserve list which entered into competition with the study visit requests submitted in the second round, in accordance with the new ERASMUS documentation; in this second round, which attracted 866 new applications, 388 further grants were awarded in December 1987.

32. Tables 3 to 5 provide a statistical overview of the study visit projects supported under ERASMUS in the academic year 1987/8. In all, 1138 study visit grants were awarded out of the 2366 applications received (48.1%). As a large number of projects involve several people, the total number of projects accepted covered some 3,000 academic and administrative staff members. In certain instances, grants went to representatives of associations and organisations active in the field of higher education. Aside from the figures supplied in tables 3 to 5, the Commission also granted financial support to the representatives of the European Community Network of National Academic Recognition Information Centres (NARIC) (see further on) to provide them with an opportunity to visit the NARIC centres of other Member States.
33. Table 6 compares the figures for inter-university cooperation programmes and study visits. These figures show a considerable degree of similarity, for both applications received and grants awarded. This applies in particular to the high concentrations in Engineering, Languages and Business. There are also, however, a number of striking differences. These differences stem, on the one hand, from the "market" situation, i.e. the number of applications received, and on the other hand, (with regard to the grants awarded), the Commission's desire to use these visits partly as a means to redress the imbalances that were found to exist among the ICPs (cf. above). Thus, the figures for study visits show a considerably higher percentage than ICPs in respect of Agriculture, Education and Medical Sciences - a welcome sign in view of the fact that these fields are somewhat less fully represented in the ICPs. This also applies, though to a lesser extent, to the Social Sciences. Four subject areas show a much lower participation rate in Visits than in ICPs. In the case of Languages and Business Studies, this may be regarded as a self-regulating trend, given the high proportion of ICPs in these fields. In the case of Law (where the difference between ICP and Visit figures is especially clear) and Natural Sciences, the low percentage of Visits is obviously much less welcome.

Action 2 : ERASMUS student grants scheme

34. Action 2 of the ERASMUS Programme provides for the introduction of a scheme for the direct financial support of students to enable them to carry out an integrated period of study in another Member State. The grants, which are to be administered through the competent authorities in each Member State, may go up to a maximum of ECU 5,000 to each student, on the basis of a stay of one year abroad, subject to the following conditions :
- a) The grants will support mobility costs, that is travel costs, foreign language preparation as necessary and higher cost of living in the host country (including, where appropriate, the extra cost of living away from the student's home country);
 - b) priority will be given to students on courses which are part of the European University Network under Action 1, but grants may also be provided for students or groups of students on courses for which special arrangements are made outside the network in another Member State;
 - c) grants will only be awarded in cases where the period of study to be spent in another Member State will be granted full recognition by the student's home university;
 - d) no tuition fees shall be charged by the host university and, where appropriate, grant holders will continue to pay tuition fees at their home university;
 - e) grants will normally be awarded for periods of study in another Member State for a minimum of one term or semester and a maximum of one year. They will not normally be awarded for the first year of university study;

f) maintenance grants available to a student in his own country will continue to be paid to ERASMUS students during their period of study at the host university.

35. In the 1987/8 academic year, only the Federal Republic of Germany, Spain and the Netherlands decided to designate a central agency at national level ("National Grant-Awarding Authority" - NCAA) for the purpose of awarding ERASMUS student grants. For students from all other Member States, the grants for students were disbursed via the coordinating institution of the respective Inter-university Cooperation Programme (ICP) within which the students were moving to another Member State. Given the limited budget available and the fact that time was short, the decision was taken to award ERASMUS student grants exclusively to students participating in ICPs supported by the Network (Action 1) in 1987/8.

36. Of the 398 ICPs supported within the European University Network (Action 1 of ERASMUS), 357 (89.7%) were also provided with funds for students grants under Action 2 - a remarkably high percentage. Demand for student grants (approximately MECU 15) outstripped the available funds (MECU 3.1) by a factor of almost 5:1, thus confirming the Commission's view that a more substantial student grants scheme should have been adopted from the very beginning of the ERASMUS Programme on.

37. In this first year of ERASMUS, the number of students estimated to be receiving a student grant is in the order of 3,000. Many universities were obliged to cut down on the number of awards to be granted or to spread the available resources among a large number of students. This problem has already been dealt with in section I above.

38. In accordance with the Council Decision, the number of full-year grant equivalents available to each Member State under Action 2 was apportioned on the basis of the number of students and the number of 18 to 25 year-olds in each Member State, relative to the total for the European Community as a whole.

Exceptionally, the Commission increased the budget available to certain Member States on the basis of two additional factors, namely average distance from other Member States and relative price index. This process of calculation will not be applied in the second and third years of ERASMUS. However, the Commission will monitor the effect which its abolition is perceived to exert upon the participation rates of the various Member States.

39. In a few isolated instances, Member States were unable to utilize their Action 2 budget allocation to the full, due to the lack of eligible students within the ICFs selected for support. In these instances, the monies were redistributed for utilization by students from other Member States. The sums made available to each Member State are indicated in Table 7.

Action 3 : Academic recognition

European Community Course Credit Transfer System (ECTS)

40. Action 3.1. of the ERASMUS Programme provides that the Community will undertake, through cooperation with the competent authorities in the Member States, "measures to promote the European Community Course Credit Transfer System (ECTS) on an experimental and voluntary basis in order to provide a means by which students undergoing or having completed higher education and training may receive credit for such training carried out at universities in other Member States".
41. In view of the detailed preparation and in-depth consultations which are required in order to ensure the implementation of the ECTS pilot scheme, the Commission decided to defer the introduction of the pilot scheme until the 1988/9 academic year at the earliest. During 1987/8, the necessary consultations are being conducted and the Commission's detailed proposals prepared.

42. A first discussion concerning the introduction of ECTS was held at the second meeting of the ERASMUS Advisory Committee in November 1987. Subsequently, the Commission presented a working paper on the scheme to a meeting of experts convened in Brussels on 4 and 5 February 1988. The outcome of this meeting will be reflected in the first formal draft of the Commission's proposals for the ECTS pilot scheme, which will be discussed within the ERASMUS Advisory Committee in May 1988.
43. The document sent to all universities to inform them of ERASMUS grants available in the 1988/9 academic year contained an invitation to participate in the ECTS pilot system. Over 90 universities throughout the Community have already expressed their interest in participating in this system.

European Community Network of National Academic Recognition Information Centres (NARIC Network)

44. Action 2.3. of ERASMUS provides for the development of the European Community Network of National Academic Recognition Information Centres (NARIC network). This Network was already in operation before the ERASMUS Programme was adopted; however, its principal task today consists not only in ensuring optimum cooperation between the NARIC Centres, individual universities and the Member State governments, but also in integrating the NARIC network in the ERASMUS Programme. This was one of the main themes discussed in Brussels during the 8th meeting of the NARIC network in October 1987. Also to be noted is the fact that the Commission awards grants to NARIC representatives in each Member State to enable them to visit other Centres within the Community.

Support of joint curriculum development projects

45. Under Action 3.3. of ERASMUS, grants going up to ECU 20,000 may be awarded to universities in order to facilitate the development of joint curriculum projects between universities in different Member States. No projects based exclusively on this type of cooperation were awarded grants in 1987/8. However, a certain number of inter-university cooperation programmes for this year already contain an element of joint curriculum development work.

Action 4 : Complementary measures

46. Action 4 of ERASMUS groups together a number of complementary measures designed to promote student mobility within the Community, i.e. :

- grants to universities which organise intensive programmes of short duration involving students from several different Member States as well as grants to high-level experts to enable them to give a series of special lectures in different Member States

- actions aimed at supporting ERASMUS through provision of information and at promoting knowledge of the different higher education systems within the Community :

. support to university associations and consortia acting on a European basis, in particular with a view to making innovative initiatives in specific fields better known throughout the Community

. publications designed to enhance awareness of study and teaching opportunities in other Member States, to draw attention to important developments and innovative models for university cooperation throughout the Community

. ERASMUS prizes to be awarded to students and staff members who have made an outstanding contribution to the development of inter-university cooperation within the community.

47. Two components of Action 4 were introduced in the 1987/8 academic year, namely support to associations and publications (the latter only in the case of publications launched by the Commission).

University associations and consortia

48. 30 applications were received in respect of support for projects being carried out by university associations and consortia. The projects proposed varied very widely in nature and scope. The projects eventually selected will be sharing a total of ECU 134,000 between them, compared with the ECU 637,000 requested.

49. A number of examples of the projects supported may be cited here briefly in order to illustrate the type of cooperative activity which grants under this component of ERASMUS are designed to stimulate :

. European Foundation for Management Development (EFMD)

Development of an action to stimulate and prepare an action plan for the production and circulation of European Case Material for Management studies. The lack of Case Studies in the European business world is often considered to be one of the major deficiencies in European Business Management courses. Provision has been made to harmonise these courses through the national Case Clearing Houses.

. Association of European Schools of Planning (AESOP)

^a
AESOP is a new association linking together Schools of Planning in 7 European countries, 5 of which (D, E, F, NL, UK) are European Community Members, with a Secretariat in Liverpool. AESOP is working on a project to prepare and publish a Guide to Study Programmes and Courses in Town and Regional Planning available within the European Community, with a view to facilitating cooperative activities with educational institutions providing such courses and of promoting mobility in this field of study.

. NOOPOLIS (Centro Internazionale di Sviluppo e Cooperazione Culturale)

NOOPOLIS administers a data bank, to which students have on-line access, concerning various grants and forms of financial support available in Italy to study in other countries. Its project is to extend this service to include other countries and consists, in an initial stage, in conducting a feasibility study entailing the collection of information on other sources and on technical, legal and economic aspects.

Publications

50. Though no funds were made available to external applicants under this component of the ERASMUS Programme in 1987/8, work continued on a number of publications sponsored by the Commission itself, notably :
- European Community Student Handbook ;
 - Directory of Higher Education Institutions ;
 - Diploma Handbook ;
 - ERASMUS Newsletter ;
 - various publications by the NARIC Network (including reports on existing multilateral and bilateral agreements and on systems of recognition of qualifications awarded by each of the Member States) ;
 - preparation of the annual issue of the "ERASMUS Guide", which will contain a description of and provide technical information on all the Inter-university Cooperation Programmes selected for support within the framework of the European University Network (Action 1 of ERASMUS).
51. At the Commission's request, reports were drawn up concerning two vital aspects of ERASMUS. The first, prepared by the Liaison Committee of Rectors Conferences in EC Member States in collaboration with the "European University Public Relations and Information Officers Association" was concerned with optimising information flows between the Commission and the universities. The second, prepared by the Franco-German Institute (Ludwigsburg) and the Centre for Information and Research on Contemporary Germany (Paris), examined various questions relating to language and socio-cultural training aspects of ERASMUS. The Commission is currently considering the findings of these two reports.

Information and stimulation measures

52. A major effort was undertaken to inform the academic community, relevant agencies and the media of the adoption of the ERASMUS Programme and the opportunities which it offers. The measures adopted notably include the following :

- Immediate notification, following the Council Decision, to the 3,500 institutions providing higher education in the EC
 - Detailed documentation indicating available ERASMUS grants and describing the application procedures for 1987/8 was sent to all higher education institutions early in July
 - Three official press communiqués by the Commission on the ERASMUS Programme
 - First issue of the ERASMUS Newsletter in the nine languages of the Community
 - Information sessions with major national agencies operating in the sector of academic mobility
 - Participation in some 50 conferences, seminars and other meetings designed to inform the academic community about ERASMUS. Emphasis is placed in particular on information and stimulation measures aimed at Member States whose universities seem to be participating less fully in this first round of the Programme. In this connection, one will note the importance of the systematic information seminars in Belgium, Denmark, Greece, Italy and Portugal, which were organised in cooperation with the authorities of the Member States concerned.
53. The impact of the information and stimulation measures adopted will, of course, only make itself felt over a considerable period of time. Nonetheless, it should be noted that even in this very first year of the ERASMUS Programme, when time available for informing universities was extremely limited, about 83% more applications were submitted to the Commission in respect of ERASMUS Inter-university Cooperation Programmes than had ever been submitted under the Joint Study Programme Scheme which preceded ERASMUS, in 1986/7.

Programme infrastructure

54. In accordance with Article 3 of the Council Decision, the Commission is to be assisted in its task of implementing the Programme by a Committee composed of two representatives per Member State, at least one of whom shall be drawn from the academic community. The members of the Committee shall be appointed by the Commission on the basis of proposals from the Member State concerned. Immediately following the adoption of the Programme, the Commission invited the Member States to propose their members for the Committee, which is known as the ERASMUS Advisory Committee. The Member States complied with the Commission's request to propose high-level academic representatives (in most cases, Heads of universities with additional responsibilities in the framework of national academic organisations) and a senior government official. The list of members of the Committee is provided in the Annex to this report.
55. The ERASMUS Advisory Committee met on two occasions in 1987 (27-28 July and 24-25 November). The meetings of the Committee have been held in a cooperative and positive spirit which augurs well for the future cooperation between the Commission and Member States in ensuring the success of the ERASMUS Programme. The Committee's discussions so far have centered on the procedures for sharing out the student grants budget among the Member States, the procedure and financing of the national agencies responsible for administering the student grants, an analysis of the distribution of projects supported in 1987/8, the project selection procedures in the 1988/9 academic year, orientations on the measures to be adopted within ERASMUS for improving academic recognition of diplomas and periods of study abroad and the steps which must be taken in order to ensure appropriate evaluation and monitoring of the ERASMUS Programme.
56. A further important component of the infrastructure of the ERASMUS Programme are the competent authorities to be designated by the Member States as having responsibility for the administration of ERASMUS student grants (Action 2 of the ERASMUS Programme). For the 1987/8 academic year, only three Member States (~~German~~ German Federal Republic, Netherlands and Spain) have designated a central authority for this purpose.

[The

[Netherlands] of Germany
[the

In all other cases, the student grants were awarded via the universities coordinating the Inter-university Cooperation Programmes. However, by the end of 1987, eleven of the twelve Member States (Portugal being the exception) had designated a national authority for 1988/9. The representatives of the three agencies designated in 1987 and representatives of the other Member States met for the first time on 18-19 November to discuss various technical aspects of the implementation of ERASMUS student grants scheme. Lthe

57. In order to ensure that the ERASMUS Programme is properly implemented and that maximum efficiency and flexibility is achieved in operational terms, the Commission has taken the necessary measures to set up the ERASMUS Bureau, a non-profit organisation which assists the Commission in the task of administering ERASMUS. Appropriate contractual agreements were made in respect of this agency which, under its former title of Office for Cooperation in Education, had acquired many years' specialised experience in assisting the Commission with the management of the pilot programmes for ERASMUS (Joint Study Programmes and Study Visit Schemes).

III. CONCLUSIONS AND FUTURE PERSPECTIVES

58. Section II above presents a wide spectrum of the activities engaged in under ERASMUS in this first academic year of operation.
59. What changes will be witnessed in the 1988/9 academic year by comparison with 1987/8 ? Firstly, the overall volume of the Programme will change, with a three-fold increase in the budget. And since there will also be a redistribution of expenditure between the various Actions, approximately four times as much money will be available for student grants as in 1987/8.

60. All the various components of the four Actions will be implemented fully for the first time and each of the Actions will see a number of changes :

- As regards Action 1, the selection procedure will be modified by introducing a system based on Academic Advisory Groups (the natural and applied sciences, social sciences and humanities);
- Action 2 will be changed considerably in operational terms, since 11 of the 12 Member States will now have National Grant-Awarding Authorities. Furthermore, students moving to other EC countries on their own initiative (without participating in a ICP) will now also be able to obtain grants for this purpose in most Member States;
- In Action 3, the pilot scheme for the European Community Course Credit Transfer System (ECTS) is due to be launched;
- In Action 4, several Programme components not implemented in 1987/8 (intensive programmes, specialised courses, ERASMUS prizes, etc.) will be introduced for the first time.

And another challenge ahead is the design and implementation of appropriate arrangements for the ongoing monitoring and evaluation of the ERASMUS Programme as a whole.

61. The ERASMUS Programme was adopted by the Council without any restriction on time. This programme is a medium- and long-term investment in the future of the Community, which will have to show its ability to adapt to the new requirements now emerging. A first step has been taken in this direction with this year's launch of ERASMUS. A host of challenges lie ahead.

When announcing the agreement reached by the Council, the Commission described ERASMUS as "a programme of hope for the young people of Europe". There is every sign that this hope will be fulfilled.

- (1) Lacking a complete university infrastructure in their own country, Luxembourg students were eligible in 1987/88 for ERASMUS grants within the framework of the ICPs established between the universities of the other Member States, in which they were carrying out their studies. A different system will be established for Luxembourg from the 1988/89 academic year.
- (2) Student mobility programmes for which the geographical movements are not predetermined.

 ERASMUS 

FINANCIAL SUPPORT
FOR COOPERATION BETWEEN
HIGHER EDUCATION INSTITUTIONS
AND FOR STUDENT MOBILITY
IN THE EUROPEAN COMMUNITY

(July 1st 1988 - June 30th 1989)

- financial support to participating universities
- student mobility grants
- grants for visits
- other forms of financial support

IMPORTANT:

This document describes ERASMUS financial support for these activities which are to be carried out in the period from July 1st 1988 to June 30th 1989.

Deadline for the mailing of applications: January 31st 1988

Provisional address: Rue de la Loi 200 • B-1049 Brussels - Belgium

Telephone: Telephone exchange 235 11 11/236 11 11 - Direct line 23

Telex: COMEU B 21877 - *Telegraphic address:* COMEUR Brussels

The Council of the European Communities adopted the European Community Action Scheme for the Mobility of University Students (ERASMUS) on June 15th 1987.

Special transitional measures were adopted immediately by the Commission to ensure that both cooperation programmes organised by universities and students involved in them might benefit from ERASMUS financial support in the 1987/88 academic year.

For the second year of ERASMUS (July 1st 1988 to June 30th 1989), the budget will be substantially increased (to ECU 30 million from ECU 10 million for the first year).

In the official text of the ERASMUS Programme adopted by the Council, the financial support available is classified into four categories corresponding to the European University Network (Action 1), student mobility grants (Action 2), activities related to academic recognition of diplomas and periods of study (Action 3), and a series of complementary measures (Action 4).

These possibilities for support are set out in the present document in a different order more in tune with administrative requirements, so as to facilitate the task of prospective applicants.

I. FINANCIAL SUPPORT TO UNIVERSITIES

(In the context of ERASMUS, the term "university" is used to describe all types of higher education institutions - regardless of their designation in the individual Member States - which are either State sector institutions or, alternatively, recognized, officially certified or financed by the State.)

The aim of ERASMUS financial support is to encourage long-lasting cooperation between different Member State universities which, amongst themselves, have established inter-university cooperation agreements regarding student and/or staff mobility and/or the joint realisation of certain teaching activities. Such agreements are the cornerstone of the European University Network.

The inter-university cooperation agreements eligible for ERASMUS financial support may take several different forms, including the following:

- agreements linking university faculties or departments each specializing in the same academic field;
- 'framework' agreements between institutions relating to several academic fields.

A single university may thus be party to several inter-university cooperation agreements (in the sense of the foregoing definition).

Within the framework of a single inter-university cooperation agreement, the participating universities may receive ERASMUS financial support for one or several student and/or staff mobility programmes, as well as for the joint development of teaching activity, and for intensive programmes. Such support may be cumulative. Moreover, grants may be awarded to enable the preparation of new cooperation programmes for one or more of these activities (see Section III, "Grants for Visits").

Cooperation in the field of research is not eligible for ERASMUS financial support.

Irrespective of the number of participating universities in a single inter-university cooperation agreement, a single application must be submitted by one of the universities acting on behalf of all those participating. Where financial support is granted, it is paid, as a rule, to the coordinating institution which has to be responsible for administering the sum involved and distributing it among the participating institutions.

Commission support to institutions party to an inter-university cooperation agreement is granted for a period of one year. It may be renewed annually on the basis of information supplied in each new annual application. Where a programme involves periods in industry for students and/or teaching staff, the Commission reserves the right to examine the application under the terms of its COMETT programme (a European Community programme for cooperation between university and industry in training for technology).

1. Financial support for student mobility programmes

(Grants which may be awarded by the Commission to students taking part in these programmes are described in Section II.)

This support is intended for programmes which provide for the students of one university the chance to undertake, within a university of another Member State, a period of study which will be fully recognized by the home university when awarding these students their final diploma or qualification. All student mobility programmes which satisfy this criterion of recognition are eligible, regardless of the field of study, the level of study (up to and including the doctorate), or the type of participating institution. However, the Commission will grant definite priority to reciprocal exchange programmes (regardless of whether this reciprocal element is organised in a single academic field or different fields).

The recognized period of study in another Member State must be of substantial duration (normally at least a three-month or six-month academic 'term'). Periods given over to no more than practical fieldwork, international conferences and seminars and very short visits are not eligible.

The Commission will accord preference to programmes which allow students to satisfy criteria enabling them to benefit from ERASMUS mobility grants (see Section II).

Financial support from the Commission may cover the following expenses entailed by a student mobility programme:

- the costs of travelling and staying abroad for university staff members who take part in meetings to plan, develop, establish, monitor and evaluate the programme (organisation and content of teaching and courses, accommodation and effective cost of living in another Member State, supervision of students, examination boards and panels, questions relating to academic recognition and qualifications, etc.);
- preparation and translation of written and other teaching material;
- preparation of students (information, linguistic preparation, academic and other facilities provided for students by the home and/or host institution);
- expenditure for making information about the programme more widely available;
- other expenditure directly related to carrying out the programme.

In no case may financial support be used to cover the normal salary costs of staff taking part in the programme.

For each student mobility programme, the maximum support which may be awarded is ECU 25,000 per year per participating university (with the average amount of such support standing at some ECU 10,000). In applying this maximum, each group of students who are working for the same diploma or the same qualification and who go from one university to another one in another Member State, constitutes a distinctly separate mobility programme.

2. Financial support for staff mobility programmes

This support is intended for inter-university programmes which provide an opportunity for the teaching staff of one university to teach in a partner university in another Member State.

Priority will be accorded to programmes for reciprocal exchanges (within a single academic field or in different fields) in which the visiting staff member makes a substantial and integrated contribution to the teaching programme of the host university over a period of at least one month.

The financial support from the Commission may be used to cover the following expenses:

- the cost of the development and operation of the programme: the costs of travelling and staying abroad for meetings concerning the organisation and content of teaching activity and examinations; the cost of translating teaching material; the specific linguistic preparation of teaching staff, etc. The maximum financial support available with regard to these expenses is ECU 5000 per university per year for each programme;

- the travelling costs of teaching staff: by this is meant the 'mobility' costs (the return journey and stay abroad) of teaching staff who go to the partner university in order to teach and to administer examinations; the maximum amount of financial support available varies with the length of the period spent abroad; for a three-month period, for example, the maximum support available is ECU 3500 per staff member;
- the costs of replacing teaching staff: when a staff member on mission abroad has to be replaced during his or her absence, the Commission may grant maximum financial support of ECU 2500 per month per staff member replaced. Such support may only be paid where a replacement teacher has actually been employed at the expense of the home university of the staff member who has gone abroad. No such support may be granted when the absence of the staff member abroad occurs during a holiday period or a period of sabbatical leave normally provided for by his or her home institution; neither may the support be granted when the staff member is replaced free of charge, as part of an exchange arrangement with a staff member from the former's host institution. The Commission will only grant financial support for the replacement of teachers who are absent abroad for a period of several months (but for a maximum of one academic year).

3. Financial support for the joint development of courses or course units

Support of this kind is intended for universities in Member States which are seeking to create jointly or reciprocally adapt courses of teaching, the content of lectures and teaching material, with a view to their incorporation or implementation in all the universities taking part in such a project (regardless of whether or not there is any mobility on the part of the students involved between these universities).

The Commission will accord preference to projects involving entire university courses or substantial parts of them; special consideration will be given to projects adapted to the new techniques of multi-media or distance teaching, as well as those aimed at introducing a Community dimension into the content of courses.

The financial support of the Commission may be used to cover the expenses of the meetings involving teaching or administrative staff which are necessary in order to determine jointly the organisation and content of courses, as well as the costs of producing, translating and disseminating the content of courses or specially created or adapted teaching material. The maximum support available is ECU 20,000 per project.

4. Support for intensive programmes

Support is available for intensive (full-time) programmes of short duration (normally of up to one month) which have been organised on the basis of an agreement between universities of different Member States, and which in each case bring together students from several countries of the European Community.

In granting support, the Commission will accord preference to programmes which focus on a specific theme and involve a team of teaching staff from different Member States.

The financial support of the Commission may be used to cover:

- the expenses entailed by meetings necessary to plan seminars, courses or workshops;
- expenses incurred in producing, translating and circulating information literature and teaching material;
- the costs of travelling and staying abroad for staff and students who have to go from one Member State to another.

The maximum support which may be granted is ECU 20,000 per programme.

II. MOBILITY GRANTS FOR STUDENTS

As part of the ERASMUS Programme, grants of a maximum of ECU 5000 per person per year may be awarded to students. (It is estimated that the average grant will be of the order of ECU 2000 per student per full academic year.)

1. Conditions of eligibility

ERASMUS grants may only be awarded to students who:

- receive total academic recognition testified by an appropriate formal certificate from their home university for the studies they have undertaken in another Member State;
- are exempt from the payment of enrolment fees in the host university (although the home university may continue to require payment of these fees even during the student's absence);
- continue to receive during their stay abroad any grants or loans awarded by their government or national authority for study in their own university;
- spend at least a three-month term and at most a year in another Member State, but are not in their first year of higher studies. (Exceptions are, however, possible, particularly in the case of integrated programmes implying more than one year of university enrolment in another Member State.)

In the award of ERASMUS mobility grants, priority will be accorded to students within the European University Network, namely those involved in the mobility programmes which benefit from financial support from the Commission (see Section I,1).

2. Use of grants

The ERASMUS grants are intended to cover the 'mobility costs' of students or, in other words, the supplementary expenses entailed by a study period spent in another Member State, as follows:

- travelling expenses;
- expenses linked to linguistic preparation (specific enrolment fees due from the student, living expenses incurred where students spend a period abroad in another Member State);

- expenses arising from a higher general cost of living index in the host Member State;
- additional expenses related to the change in the individual material circumstances of students during their stay abroad (such as those which may be incurred, for example, as a result of their no longer benefiting from free or student rate board and lodging in a hall of residence).

3. Priority for students in the European University Network

The student mobility programmes within the European University Network (i.e. those in which participating universities receive financial support as described in Section I, 1) will be accorded priority for the award of ERASMUS student mobility grants. A list of these 'priority' programmes is to be drawn up annually, and will include all programmes supported by the Commission during the ongoing year concerned or the preceding year.

However, other students may also apply for ERASMUS grants provided they satisfy all the conditions for eligibility described in paragraph 1 above.

4. Administration of grants

The administration of grants may vary in accordance with the arrangements chosen by Member States. Grants may be awarded either directly by universities, or by a specially designated national agency. The system to be adopted by each Member State will be known by the end of 1987 at the latest. However, the following two basic principles are to apply throughout the Community:

- students wishing to benefit from an ERASMUS grant must in the first instance approach their home university which will have to certify formally that all the conditions of eligibility are satisfied. As a rule, this approach must be made before the end of 1987 for a grant to cover the 1988/89 academic year.
- in applications for financial support for their student mobility programmes (see Section I, 1 above), universities must submit precise details about the student movements envisaged together with an estimate of the financial needs of the students concerned. This information will be used both to process applications for financial support to participating universities, and to register the programme concerned on the list of programmes whose students are to be accorded priority in the award of ERASMUS grants (see paragraph 3 above).

III. GRANTS FOR VISITS

The aim of these grants is to enable higher education staff members to go on study visits or a teaching assignment in one or several other Member States of the European Community. In all cases, the total duration of the programme of the visit must not exceed the equivalent of four weeks.

These grants are not available to enable staff members in higher education to conduct research activities or to take part in symposia, seminars or conferences.

1. Grants for study visits

The grants for study visits may be awarded to candidates who wish:

- either to study the possibility of establishing or extending an inter-university cooperation agreement by entering into exploratory contact with one or several institutions in other Member States. Applications are evaluated by the Commission in the light of the prospects offered by the cooperation programme whose development the planned visit is intended to facilitate;
- or to improve the content of their lectures, in liaison with colleagues responsible for giving similar lectures in other institutions. Later, the visit must normally lead to the development of new specialized teaching material for use by the staff members involved;
- or to increase their knowledge and experience of certain particular aspects of the higher education system of one or several other Member States. The Commission will give special (but not exclusive) consideration to applications from persons concerned with at least one of the following questions:
 - validation, recognition or evaluation of diplomas and periods of study;
 - selection and admission of foreign students;
 - financial problems and living conditions of students studying in another Member State;
 - student guidance and advice on employment opportunities;
 - contacts between universities and firms;
 - organisation of studies and higher education institutions;
 - application of the new information technologies in higher education.

2. Grants for short teaching assignments

Unlike financial support for staff mobility within the framework of an inter-university cooperation agreement, these grants are intended for teaching staff who apply for them on an individual basis to cover periods abroad of no longer than four weeks in all.

The aim of the grants is to facilitate the following two kinds of period spent abroad by teaching staff in universities in other Member States:

- a visit by a staff member at the invitation of a university for the purpose of teaching its own students; here, preference will be given to those whose teaching is integrated within the courses normally offered by the host university;
- specialized lecture series given by one staff member or a team of university teachers in different universities within one or several other Member States; here, priority will be given to applicants who are eminent specialists in their field and who offer a series of lectures at high level.

3. Grant recipients

Grants for visits will be awarded as a priority to members of the teaching and administrative staff of higher education institutions in Member States of the European Community. However, they may also be awarded to staff members of non-profit-making organisations or associations concerned with questions regarding higher education in the Member States.

Visits may be undertaken by individuals or groups. In the second case, applicants must be able to indicate a clear sub-division of activity among the individual members of the group, and to demonstrate the need for or the advantages of a collective visit as opposed to one by a single individual. The Commission will give special consideration to applications submitted by groups which are composed of participants from different institutions and/or those which plan to visit several Member States. Reciprocal visits are also permitted.

In all cases, applicants must submit a detailed plan for the proposed visit, giving their reasons why they wish to undertake it. The plan for the visit should also mention a limited number of selected institutions at which the subjects for consideration may be examined in sufficient depth (in the case of visits of type III,1), or profitably taught to suitably qualified students (visits of type III, 2). The Commission will only support applicants whose visit corresponds to a specific and clearly defined objective.

4. Scale of grants

For all types of visits, the maximum grant which may be awarded is ECU 1500 per person. It includes no more than an allowance for travelling expenses and a per diem allowance to cover the cost of subsistence during the visit.

IV. OTHER FINANCIAL SUPPORT UNDER ERASMUS

1. ERASMUS prizes of the European Community

These prizes are to be awarded annually to draw attention to achievements which have made an outstanding contribution to the development of inter-university cooperation within the Community. The recipients may be students, teachers, administrators, or an inter-university cooperation programme.

Winners of these prizes will be named by the Commission on the basis of the information at its disposal. There is no planned formal application procedure for prizes.

2. Financial support for university associations

Financial support may be awarded to university associations or consortia working at European level, with the special aim of promoting awareness of initiatives in specific fields concerning higher education.

The financial support of the Commission is intended exclusively for associations which - via their networks of personal and institutional contacts, their working groups, their meetings and their publications - are particularly well placed to make a substantial contribution to achieving the aims of the Community as regards higher education.

Under no circumstances may such support from the Commission constitute a financial contribution to the everyday running of these associations. It is always granted solely for the carrying out of a specific project, and preference will be accorded to projects which aim:

- to introduce or reinforce the European (Community) dimension within the activities of an association;
- to coordinate the activity of different national associations at Community level;
- to initiate, at Community level, activity of special interest in the light of Community objectives as regards higher education;
- to create a new association at European level.

The financial support of the Commission may be of up to a maximum ECU 20,000 per project. It may be used to cover travelling expenses, as well as expenses entailed by meetings, the drafting and translation of written material, and the distribution of documents contributing to the realisation of the project being supported.

3. Publications

The Commission itself publishes a series of books and other material designed to encourage university cooperation within the Community (Student Handbook, Directory of Higher Education Institutions, the ERASMUS newsletter, etc.). It may also make a financial contribution to other publications dealing with cooperation and mobility in higher education in the European Community.

In each case, the amount of support is determined by the Commission in the light of the information it receives, on the basis that the costs concerned are to be shared.

4. Academic Recognition

Under its Action 3 (measures to encourage academic recognition), the ERASMUS programme offers annual support to the network of National Academic Recognition Information Centres (NARIC) which have been established in each of the Member States, as well as to universities which have been selected as participants in the experimental European Community Course Credit Transfer System (ECTS). The selection of universities for participation in the pilot programme for ECTS is likely to be made at the end of 1987 or early in 1988. Universities interested in participating should inform the ERASMUS Bureau as soon as possible. The Commission may also approach universities directly to invite their participation.

V. ADMINISTRATIVE PROCEDURES

The procedures referred to here relate to applications for support for the period from July 1st 1988 to June 30th 1989.

1. Presentation of applications

When presenting applications, the following documents should be used:

- in the case of financial support to universities (Section I above), please use the WHITE application forms, and complete in detail all the appropriate headings;
- as regards mobility grants for students involved in the student mobility programmes of the European University Network (Section II above), it is essential to complete very carefully in detail the corresponding sections of the WHITE application forms in order that these grants may, where appropriate, be awarded to student participants in the programme concerned. Students who wish to be awarded an ERASMUS grant must approach the university at which they are currently studying. This university will provide them with the necessary information about the procedures to be followed;
- in the case of grants for visits (Section III above), please use the GREEN application forms and complete in detail all the appropriate headings;
- as to financial support to university associations or for publications (Section IV above), the application should be submitted without using application forms, and should include a detailed description of the project (incorporating the proposed timetable and arrangements for carrying out the project), full details concerning the names, addresses and telephone numbers of the persons and/or institutions involved, and a detailed description of costs and proposed financing arrangements, including the financial support requested from the Commission. The application should be clear and detailed, and signed by the president of the association, or the person responsible for the publication.

All applications must be typewritten.

2. Mailing of applications

All applications should be addressed to:

ERASMUS Bureau,
15 rue d'Arlon,
B - 1040 BRUXELLES

Telephone: (32) (2) 233.01.11

The ERASMUS Bureau assists the Commission of the European Communities in the administration of the ERASMUS Programme, and will be pleased to reply to any enquiry from persons seeking more detailed information about the Programme.

The deadline for the mailing of applications is January 31st 1988 (as per postmark). Any student who wishes to apply for an ERASMUS grant but who is not a participant in a student mobility programme for which an application for financial support has been submitted in accordance with the provisions described in Section I, 1 (above), must notify his or her university of this intention by December 31st 1987 at the latest.

3. Allocation of financial support

The decisions of the Commission concerning applications for financial support will be communicated to applicants by the ERASMUS Bureau as soon as possible following completion of the selection procedures (from June 1988).

Use of the financial support allocated must be entirely within the period between the date on which the successful applicant signs the contract governing the grant award and June 30th 1989. It will not be possible to carry over such support into the subsequent period (beginning on July 1st 1989).

4. Publicity for ERASMUS

In any document providing information regarding a programme, a project, a visit, or a publication which has received financial support within the framework of ERASMUS, there must be explicit reference to the fact that the programme, project, visit, or publication concerned has been carried out or produced "with the support of the Commission of the European Communities within the framework of the ERASMUS Programme".
