## FUEL PUMP

مضخه وقود

Bomba de combustible

Electric / Injection  
Mechanical / Assembly

e-catalog

TAIWAN  
Since 1978

**DRY TEST IS PROHIBIT !!!**  
( Don't test without fuel testing oil )

Axial rotation will generate frictional heat and the bearing will be burned out.

Electricity rotation will generate heat on inner coil and will cause plastic part of armature melted.

Axial rotation will generate frictional heat and the impeller will be burned out.

**Dry test will cause**

1. Fuel pump jammed.
2. Fuel pump noises and vibration.
3. Bearing burned out.
4. Armature burned out.
5. Impeller burned out.
6. Consume fuel pump performance.

FUEL PUMP TEST OIL

**All product is 100% tested before shipment**

## ELECTRIC INJECTION FUEL PUMP INSTALLATION PRECAUTION

1. During installation fuel pump or filter do not kiss the in-tank metal surface, adjust it for avoid any abnormal noises.
2. Installation must according the OE specification, check the fuel tube, rubber seal and other parts before install. When replacement must beware do not over tightened, it will cause the failure and noises.
3. Fuel pump must handle with care, do not fall down , it will caused the armature loss balance and in high rotation will appear abnormal noises.
4. Avoiding any damages on the pump, do not paste label, sticker or any other material on the housing. If need to do any engraving, write on the top of plastic material. Failure will not cover in warranty.
5. When replacement removes the battery and must change with new fuel filter and strainer. Clean the fuel tank for avoiding any other residue will causes the failure. After replacement confirm all the fuel line is working properly and start the engine 5 minutes for stabilizing the pressure. Last steps check all the parts for any leaking possibilities.
6. Fuel pump flow rate specification produced according OE standard, do not indicate the sound volume standard. For any sound volume claim failure do not cover in warranty.
7. Every fuel pump caused by burn failure, the connection wire must be replaced. When inspection for the connection wire is aged, must replace with OE specification standard. If replace wire not according the OE standard wire it may caused current, flow, pressure unstable and possibility of severe burning car. For installment of the connection wire restricted to use solder, when the temperature 100°C it will melt the solder material.
8. Adding gasoline containing methanol will cause the fuel pump inner material corrosion and will resulting the current, flow, pressure unstable and noises.
9. When installation must check the rubber seal. If the sealed is failure will cause the in-tank pressure unstable and effect performance. Strongly recommend to replace the seal.
10. Avoiding any other problem or failure , recommend to replace with new parts and do not using old parts.
11. Fuel pump Assembly specification including pressure valve, if only replace for the fuel pump and can't working properly, it may caused by the failure of pressure valve. Change it with assembly will fix the problem.
