Fixes

- The **Manage HP RDX** and **About HP RDX** menu options now work correctly when the software is first installed.
- The info tips now also work when no cartridge is loaded.

- The software no longer tries to copy files to a full cartridge.
- The software status messages no longer get stuck showing the wrong status.
- The **Cartridges** and **System Recovery** management screens are now populated when no cartridge is loaded.
- The **Data Protected** value now shows the correct amount of data protected.
- The Windows Software Licensing Service is now correctly protected by the system recovery points.
- Localization changes have been made to some of the screens and status messages.

Prerequisites

None

Installation instructions

See the 'Quick Start Guide' supplied with the software. Previous versions of HP RDX Continuous Data Protection Software on the system must be uninstalled and the system restarted before installation.

Making a physical CD from an ISO image file

Download the ISO image to a temporary directory.

In order to create a CD from this ISO image, you must use a software utility capable of writing an ISO file to a recordable media such as CD-R.

NOTE:

Simply copying the ISO file to a CD-R will NOT result in a usable CD. HP recommends that you turn the verify feature "ON".

Compatibility/Interoperability

None

Determining current version

Navigate to the **About HP RDX** option in the **HP RDX** menu.

Effective date

November 19, 2008
