GUIDE SPECIFICATION

CABINET

The cabinet is made of sturdy G-90 galvanized steel, Triple-coated, consisting of a Polyester top coat, a urethane primer coat preceded by an oxide pretreatment. Access panels for easy service. Base rails are 18 gauge steel with fork lift slots and holes provided for lifting shackles. Unit is designed for convertible airflow and is shipped ready for downflow application. Conversion to horizontal airflow is accomplished by relocating two panels.

Return air compartments are insulated with 1" (25.4mm) of water resistant coated glass fiber and 1" (25.4mm) of aluminum foil faced glass fiber in the furnace/supply compartments.

COOLING SECTION

Units are factory charged and operationally ready. Each refrigerant circuit has a compressor with internal overload protection, high and low pressure switches, filter drier, and copper tube/aluminum fin evaporator and condenser coils. The 6-1/3 ton units are two stage cooling.

Units are capable of cooling operation down to 40°F (17.4°C) as shipped from the factory.

COILS

The evaporator and condenser coils are fabricated with aluminum fins mechanically bonded to copper tubing. Both coils are pressure tested prior to assembly into the unit and electronically leak tested after assembly into the unit. The evaporator coil is protected from dust and debris on the return air side by factory installed 2" (50.8mm) air filters.

CONDENSER FAN

The unit has a single direct drive propeller fan/motor assembly mounted directly to a vertical-discharge grille panel that is easily removable. Motors are 1075 RPM with permanently lubricated sleeve bearings and inherent overload protection.

EVAPORATOR BLOWER

The PGB036-075 units have belt drive blowers for high static applications. The evaporator blower system has the capability to operate against the same rated external static pressure in downflow or horizontal duct designs.

HEATING SECTION

The units have aluminized steel tubular heat exchangers located on the discharge side of the evaporator blower with a single stage gas valve. The units have in-shot burners that are ignited by an electronic hot surface pilot with flame proving feature and protected by both a limit switch and flame roll-out switch. The induced draft blower motor is interlocked with a proven air pressure safety device.
