Section 3: Data Communications Provider Mandatory Minimum Requirements

1.29 E-Rate Requirement

D-Link is an approved E-Rate Priority 2 service provider and has an active E-Rate program to help schools and libraries navigate the process of getting funding and discounts.

1.30 Section 508 Compliant

D-Link will ensure all applicable websites and products are 508 compliant.

3.1 General Information

3.1.1 Equipment Offering

D-Link systems offers the following products requested for this contract:

5.2.2 - Networking Software

5.2.6 – Security

5.2.7 – Storage Networking

5.2.8 – Switches

5.2.9 – Wireless

5.3.1 - Services

3.1.2 Service Offering

D-Link's customizable professional services and flexible advanced support options play a significant role in driving the low TCO and high business productivity our total networking solutions deliver. Combine the professional services you need to supplement and extend your capabilities with the support levels required to meet your IT requirements.

Professional Services Include:

- Network Assessment
- Network Installation
- Network Security Audit
- Wireless Site Survey, Design, and Implementation
- SAN Storage Implementation
- IP Surveillance Site Survey, Design, and Implementation

D-Link Systems, Inc.

WSCA-NASPO: Data Communications

Bid JP14001

- Remote Consulting Service for Configuration and Installation
- D-Link 5-year Enhanced Warranty. Adds 5 years of next business day advance hardware delivery with 9-to-5 phone support.
- Standalone Priority Phone Support. Per Incident 24x7 or Contract Period 9-to-5 or 24x7.

3.1.3 Insurance Requirement

D-Link maintains insurance coverage that meets all the requirements set forth in the WSCA-NASPO RFP. Upon award of the contract D-Link will add the State of Utah and any other Participating States as an additional insured on the policy. D-Link will provide proof of certificate of insurance to WSCA-NASPO and any other Participating States.

3.1.4 Delivery

(M) The prices offered by D-Link are the delivered price to any WSCA-NASPO purchasing entity. All deliveries shall be F.O.B. destination with all transportation and handling charges paid by the contractor. Responsibility and liability for loss or damage shall remain the Contractor until final inspection and acceptance (*within 30 days after delivery for external damage and 30 days for any concealed damage*) when responsibility shall pass to the Buyer except as to latent defects, fraud and Contractor's warranty obligations. The minimum shipment amount will be found in the special terms and conditions. Any order for less than the specified amount is to be shipped with the freight prepaid and added as a separate item on the invoice. Any portion of an order to be shipped without transportation charges that is back ordered shall be shipped without charge.

3.1.5 Service Offering Documentation

(M) Upon request, user and/or technical documentation should be supplied for all procured products and services. Manuals may be available via the Contracted Supplier's website. The manual shall contain user and technical instructions appropriate to the service.

All user and technical documentation is available for download on all product pages at www.dlink.com. The documents available are the product datasheet, reference guide, hardware installation guide, CLI reference guide, warranty information, manual, and latest firmware.

3.1.6 Data Communications Provider Contract Administrator and Usage Report Administrator

(M) The Contract Administrator to manage compliance with the scope and terms and conditions for this contract will be D-Link's Government/Education Sales Manager, Andy Lee.

- a. Andy Lee has seven years of experience in the Data Communications Services business.
- b. Andy Lee has authority to enforce the scope of work and terms and conditions of the resulting contract.

The Government/Education Sales Admin, Kathy Villasenor will be the Usage Report Administrator responsible for the quarterly sales reporting described in Section 1.15 Usage Reporting Requirement

3.1.7 eMarket Center Cooperation

(M) D-Link agrees to cooperate with WSCA-NASPO and SciQuest (and any authorized agent or successor entity to SciQuest) with uploading a hosted catalog or integrating a punchout site.

Section 4: Data Communications Provider Qualifications

4.1 General Information:

Company Overview

Founded in 1986, D-Link is a global leader in the design, manufacture and marketing of advanced networking, broadband, digital, voice and data communications solutions. Following our company motto, "Building Networks for People", D-Link continually meets the global networking and connectivity needs of digital home consumers, small office professionals, small- to medium-sized businesses, and enterprise environments.

D-Link's core competency is in Ethernet connectivity. In fact, we are the global leader in providing network connectivity solutions to small and medium-sized business. From the beginning, D-Link engineers have researched, designed and manufactured innovative, standards-based networking solutions. We sell our state-of-the-art hardware at the best prices. Price may be the deciding factor for many new customers, but D-Link innovation, reliability and service keeps them loyal year after year.

A major contributor to our success is our established and expanding network of global distribution and delivery channels that brings products to more than 100 countries every day. We do more than meet the growing demand for computer networking and communications solutions - we fuel it. Our development of global distribution channels in more than 100 countries has resulted in double-digit growth every year for 20 years. D-Link surpassed the \$1 billion revenue milestone in 2005, driven by record sales in every geographic region of the world.

Global Presence

D-Link's international headquarters are located in Taipei, Taiwan. More than 90 global offices serve North America, Asia and Europe, including the North American headquarters in Fountain Valley, California. D-Link maintains strategic operations in Canada, the United Kingdom, Germany, France, Spain, Italy, Greece, Turkey, Sweden, Norway, the Netherlands, Denmark, Finland, Russia, Israel, the Middle East, South Africa, Chile, Australia, Japan, Vietnam, Singapore, China, India and other countries on five continents.

Innovation Leader

Our engineers have been key contributors to the development of the rapidly expanding home and business networking environment we take for granted today. D-Link has been awarded patents and copyrights on a variety of technology platforms - including Application Specific Integrated Circuit (ASIC) computer chips, hardware technology designs, software applications and other intellectual properties. D-Link product solutions are high-performance and feature-rich by design.

As a key contributor to the Digital Home Working Group (DHWG), D-Link embraces industry standards as criterion for the development of new and innovative connectivity and communications solutions for home and business. D-Link products are certified by the FCC, the Wi-Fi Alliance and CableLabs.

4.2 Warranty

D-Link offers a true lifetime hardware warranty that is transferable with product ownership and covers power supplies and fans. A three-year standard warranty covers most of D-Link's xStack Storage iSCSI SAN Arrays with optional five-year extended warranty options for a total of up to eight full years of coverage.

Additional extended options include warranty extensions and priority phone and delivery support. On-site or on the phone, D-Link business class networking solutions are among the best supported network products on the market today.

The information in the following chart provides warranty details across all D-Link business-class products available in the USA.

Managed Switches	
DES-3528, 3528P, 3552	Lifetime (for product purchased on or after July 1, 2013)
DGS-3200-10, DGS-3000-10TC	
DGS-3120 Series	
DGS-3420 Series	Lifetime (for product purchased before July 1, 2013)
DGS-3620 Series	
DXS-3600 Series (including expansion modules)	
DXS-3600 Power Supplies and Fans	5 Year Limited
DES-3200 Series Switches	Limited Lifetime
Chassis Switches	
DGS-6600 Chassis and I/O Cards	Limited Lifetime
DGS-6600 Power Supplies and Fans	5 Year Limited
Smart Switches	

DES-1210 Series WebSmart Switches	Limited Lifetime
DGS-1100 Series EasySmart Switches	
DGS-1210 Series WebSmart Switches	
DGS-1500 Series Smart Pro Switches	
Unmanaged Switches	
DES/DSS Unmanaged Switches	Limited Lifetime
DGS Unmanaged Switches	
SFP/SFP+/XFP	
DEM Series Optical Transceivers	2 Year Limited
RPS Power Supplies	
DPS Series Redundant Power Supplies	1 Year Limited
Unified Wireless	
DWS-3160 Series Unified Switches	Limited Lifetime
DWS-4026 Unified Switch	
DWC-1000 Wireless Controller	
Unified Access Points	
DWL-2600AP, 3600AP, 6600AP, 8600AP	Limited Lifetime
Standalone Access Points	
DAP-2310, 2360, 2553, 2590, 2690, 3520, 3690, 3525	Limited Lifetime
Media Converters	

DMC-300SC, 700SC	2 Year Limited
Services Routers	
DSR-150, 150N, 250, 250N, 500, 500N	Limited Lifetime
Firewalls	
DFL-260E-NB, 860E-NB, 1660-NB, 2560-NB, 2560G-NB	Limited Lifetime
VPN Routers	
DIR-140L, 640L	Limited Lifetime
IP Cameras	
DCS-2136L, 2210, 2230, 2310L, 6010L, 5605, 5635, 6616, 6818, 6915, 7010L	1 Year Limited
DCS-3010, 3112, 3710, 3716, 6111, 6112, 6113, 6210, 6314, 6510, 6511, 6513, 7110, 7413, 7513	5 Year Limited
KVM Switches	
KVM-402, 440, 450	1 Year Limited
NAS/Unified Storage	
DNS-1200-05, 1250-04, 1250-06, 1550-04	5 Year Limited
IP SAN Storage	
DSN-4000 Series, DSN-6000 Series	3 Year Limited

4.3 Website

D-Link maintains a corporate website applicable to the WSCA/NASPO contract which will allow Participating States to see applicable contract price list, discounts on said price list, approved

resellers or partners for their state and any additional information that may be required to assist the participating states in obtaining information concerning the contract award. If awarded a contract, D-Link has a dedicated page in which the contract, price list, and approved resellers in each state are listed.

<http://www.dlink.com/us/en/business-solutions/industries/government/state-contracts>

4.4 Customer Service

Specify the Offeror's standard customer service policies and detail the escalation process used to handle customer-generated issues.

D-Link offers 24/7 telephone service to all of our customers. We have three tiers of technical support available. Tier 1 support goes to our support partner, Concentrix. If the technical issue is unable to be resolved, they are transferred to our Tier 2 support which is in house. We have dedicated technical support staff that is available Monday through Friday from 8:00am to 5:00pm PST. If our Tier 2 staff cannot resolve the problem, the customer is then transferred to our Tier 3 in house technical support staff. In addition to phone support, we also have 24/7 email support with a 24 hour turnaround time.

Support Level	Hours Available
Tier 1	24/7
Tier2 (In House)	8:00am-5:00pm PST
Tier 3 (In House)	24/7
Email	24/7 (24 hour turnaround)

D-Link also offers two add-on packages of warranty and service. The first is our Securelink program that allows the customer to bypass the whole technical support process and request a replacement unit. A replacement unit is then shipped out within 24 hours. The Securelink program also extends the customers warranty for 5 years. The other service is our on-site replacement. The customer can either choose a 4 hour response package that allows them to contact D-Link and request a replacement unit. An agent will respond to their location within 4 hours with a replacement unit and install it. D-Link also offers a 24 hour on-site replacement where an agent will respond to the location within 24 hours of the replacement request. D-Link currently has 47 depots nationwide with units stocked for replacements. D-Link is also willing to expand into new territories if needed.

	Extends Warranty	Replacement Shipped	Replacement Delivered
Securelink	5 years	Yes (24 hours)	No
Techforce	No	No	Yes (4 or 24 hours)

D-Link has a team of inside and outside sales engineers that are assigned to six territories across the United States. The sales engineers are available for pre-sales and at times are also utilized for post-sales support. Sales engineers work very closely with our end-users on developing solutions, troubleshooting issues, and training our partners.

4.5 Firm

a. Provide a brief history of your firm including the following:

1. Number of years providing Data Communications Services being offered in response to this RRP.

D-Link has been providing Data Communications Services for 27 years, since 1986.

2. Number of separate services provided in each of the area categories described in this RFP.

- Professional Services Include:

- Network Assessment
- Network Installation
- Network Security Audit
- Wireless Site Survey, Design, and Implementation
- SAN Storage Implementation
- IP Surveillance Site Survey, Design, and Implementation
- Remote Consulting Service for Configuration and Installation

b. Describe specifically what makes your firm a stable long term partner for WSCA-NASPO.

- D-Link has been providing data communications solutions for over 27 years to over 100 countries globally. D-Link owns the whole manufacturing supply chain and not only produces networking products for D-Link but for most of the major networking hardware companies worldwide. Last year, D-Link was number one in WLAN stand-alone access point shipments worldwide and has been number three in Ethernet switch shipments worldwide since 2001.

D-Link is committed to providing solutions to all levels of government and has been supporting state and local entities since the beginning.

c. Describe specifically what information the Data Communications Provider Contract Administrator would provide at annual meetings with an entity that has executed a participating addendum.

- The Data Communications Provider Contract Administrator would provide information regarding the usage of the contract as it pertains to the participating entity, any new products, end of life products, pricing changes, and future product/technology roadmaps.

d. Describe how you plan to implement the contract including having a single point of contact to perform and manage all aspects of this contract.

- D-Link will assign the Government/Education Sales Manager, Andy Lee, to manage all aspects of this contract. He will be the main point of contact between D-Link and WSCA-NASPO as well as any participating entity. If awarded the contract, D-Link will upload and maintain a catalog on WSCA-NASPO's eMarket Center website. D-Link will provide the WSCA-NASPO pricing to our authorized resellers/distributor in the territories of all participating entities and have them sign contracts agreeing to honor all negotiated pricing to eligible organizations and provide usage reports to D-Link.

e. Describe in detail your firm's escalation management plan including contact information.

Any issues that arise as a result of this contract will initially be handled by the Government/Education Sales Manager, Andy Lee. If the issue is unable to be solved, Mike Hardy the VP of Enterprise and Channel Sales will be brought in to aid in resolving any issue. If he is unable to provide a solution, Albert Ling, the Executive VP of Sales and Marketing will be called upon.

- Andy Lee – Government Education Sales Manager, 714-885-6012, andy.lee@dlink.com

- Mike Hardy – VP Enterprise & Channel Sales, 800-326-1688 x6011, michael.hardy@dlink.com

- Albert Ling – Executive VP – Sales & Marketing, 80-326-1688 x6019, albert.ling@dlink.com

4.6 Authorized Sub Contractor Relationships

a. Briefly describe what your firms required from potential contractors to become "Authorized Data Communications Reseller." Provide an Authorized Contractor List.

D-Link has a Value in Partnership+ Program to register and identify our "Authorized Data Communications Resellers." The program allows partners to differentiate themselves and earn benefits based on training in specific product categories. All partners enter the program at the Registered Level. From there, they attain various designations within the program that will position their capabilities to end-users and add layers of benefits. Currently we have over 3000 registered, silver, and gold partners.

Partners may earn one of the program levels of Registered, Silver, or Gold which represent their overall status in the program. Silver and Gold levels are based on training and certification in D-Link's core product technologies of Switching and Wireless. With Technology Specializations in Storage, IP Surveillance, and Security categories, partners that demonstrate proficiency within a specific technology will earn a Preferred status and benefits that apply to Business Solutions products within the technology category.

D-Link offers the following certifications: D-Link Sales Specialist, D-Link Certified Specialist, D-Link Certified Professional.

D-Link Sales Specialist course is designed for sales professionals. DSS courses focus on D-Link's market strategy, value proposition, product positioning, identifying opportunities, and understanding customer needs.

D-Link Certified Specialist (DCS) course is designed for pre-sales technical professionals, to ensure that they are knowledgeable about networking concepts and can explain the features, functionality and positioning of D-Link products. This course will ensure that the sales professional fully understands the customers' business needs.

D-Link Certified Professional (DCP) program is the highest level of achievement in D-Link's certification program. It is designed for networking technology professionals and those who have already earned their DCS certification. After earning their DCP certification, participants will have advanced knowledge and skills in the installation, configuration, maintenance, and troubleshooting of networks and D-Link supported core solutions.

VIP+ Level	Pre-Sales Tech Certifications	Post-Sales Tech Certifications
Silver	2x DCS Switching 2 x DCS Wireless	N/A
Gold	2 x DCS Switching 2 x DCS Wireless	2 x DCP Switching 2 x DCP Wireless

b. Describe in detail how your firm currently measures an authorized contractors' performance.

- D-Link has a Distribution Model where all Authorized VAR's buy from one of several Authorized Distributors. For the purpose of this contract, D-Link will create a Special Pricing Authorization (SPA) and load it at our preferred distributors. All Authorized VAR's on D-Link's WSCA-NASPO contract will purchase from only the approved distributors and will have to reference the SPA number to get the WSCA-NASPO discounted price.

All approved resellers will be required to sign a D-Link contract that specifies that they will follow all the reporting requirements and terms and conditions as specified in this RFP. They (VAR) will supply monthly sales reports directly to D-Link. D-Link's distributors will be able to report all sales by the SPA number, and that data will be updated daily in our Salesforce tool. At the end of each

month, D-Link will compare the two reports and reconcile any discrepancies and pay the administration fee as required by the contract.

c. Describe in detail the process for revoking a designation as a sub-contractor from an authorized contractor for issues related to customer service, or other authorized contractor performance related issues.

Per section 8.6 of our Value in Partnership + Program terms and conditions, in the event an audit reveals any fraud or misrepresentations with respect to VIP+ Partner's intended customers and/or end-users and/or any other misrepresentations on the part of VIP+ Partner regarding information provided to D-Link specific to any SPA then the VIP+ Partner shall reimburse D-Link the cost of such audit. D-Link reserves the right to deduct the refunded discount amount owing from any monetary incentive owed from D-Link to VIP+ Partner. The penalty for any violation shall include, but is not limited to, D-Link reclaiming the total discounts provided on the SPA, exclusion from SPA and/or Deal Registration programs, forfeiture of any and all rebates owed for any D-Link program or promotion, or termination from the VIP+ Program and loss of all status and benefits. Additionally, D-Link reserves the right to terminate any existing SPAs and/or deny any future SPA being granted.

d. Describe in detail how your firm will support and assist an authorized contractor in improving their performance and the corrective action process.

Periodically, D-Link will review the performance of our authorized contractors in the areas of sales, service, and support. If the contractor is not performing to the standards of D-Link, the contractor will be given the option to receive additional training. The training can include sales and product training and/or technical training. In addition, D-Link's Inside Channel Sales Representative will periodically provide them leads on RFPs that are located in the contractor's territory. D-Link will provide pre-sales assistance from our Field Account Engineers and Sales Engineers to assist in winning the opportunity with the end-user.

e. Describe in detail the process that your firm uses to track and respond to issues and concerns from both your authorized contractors and from participating entities.

Typically D-Link's Channel Account Managers in the field as well as the Inside Channel Account Manager for a particular territory will work together to respond to any issues that may arise with our authorized contractors. D-Link's Field Account Engineers as well as the Sales Engineers will work with the end-users to resolve any technical issues that may arise. The Government/Education Sales Manager will work with the participating entities along with the territory sales teams to resolve any issues that may arise.

f. Describe in detail how your firm will track, report and verify sales from your designated Data Communication partners and authorized contractors.

All authorized contractors will be provided a Special Pricing Authorization (SPA) number in reference to the WSCA-NASPO contract. Anytime they request pricing, they will have to provide the SPA number to D-Link or their designated distributor. All resellers/distributors will be contractually obligated to report WSA-NASPO usage reports to D-Link. D-Link's Government/Education Sales Admin will aggregate all of the information and provide a usage report to WSCA-NASPO and any participating entity.

Section 5: Service Offering Qualifications

5.1.1 General Business Requirements

Each provider must meet the following mandatory general business requirements:

5.1.2 Terms and Conditions

(M) D-Link Systems accepts the State of Utah's Standard Terms and Conditions in addition to the WSCA-NASPO Terms and Conditions attached to this RFP as Attachment A and Attachment B without exception.

5.1.3 Experience

(M) Respondents *must* be able to provide reference service contracts from a minimum of five government or commercial customers for their Data Communications Product and Services offerings. Government references are preferred. References must include environments and complexity that is similar in scope to those described within this RFP. Any proposals from Respondents that cannot meet these requirements will not be considered. The Respondent must provide specific contact information describing their reference service contracts, which may be verified.

The contacts for current state contracts that D-Link holds (Texas DIR, State of New York, PEPPM) would not provide a reference due to their policies. They will however confirm the existence of the contract with D-Link System. Additional business references have been included and will be sent to WSCA-NASPO.

5.1.4 Financial Stability

(M) The Data Communications Product and Services vendor ***must*** provide audited financial statements to the State and should meet a minimum Dun and Bradstreet (D&B) credit rating of 4A2 or better, or a recognized equivalent rating. Please provide the Respondent's D&B Number and the composite credit rating. The State reserves the right to verify this information. If a branch or wholly owned subsidiary is bidding on this RFP, please provide the D&B Number and score for the parent company that will be financially responsible for performance of the agreement. Prime contractors working on behalf of Respondents must submit financial statements that demonstrate financial stability, and adequate working capital, but do not need to meet 4A2 credit rating requirements.

D-Link is a private company in the United States and does not disclose any financial information. However, we are a publically traded company in Taiwan and all of our financial information globally is available on our Headquarter's website:

<http://www.corpasia.net/taiwan/2332/irwebsite/index.php?mod=financial>

D-Link's Dun & Bradstreet number is 15-395-0274. However, being a private company, we do not have a rating. We have a TCRI credit rating of Grade 4 from TEJ in Taiwan.

5.1.5 Other General Responsibilities

(M) The Respondent MUST provide the personnel, equipment, tools, and expertise to meet the requirements in this RFP.

(M) Computer applications and web sites MUST be accessible to people with disabilities, and MUST comply with Participating entity accessibility policies and the Americans with Disability Act.

(M) Applications and content delivered through Web browsers must be accessible using current released versions of multiple browser platforms (such as Internet Explorer, Firefox, Chrome, and Safari) at minimum.

D-Link will comply with all of the above general responsibilities.

TECHNICAL

5.2 Data Communications Services – Requirements

Please refer to attachment A to see a full list of supported protocols.

5.2.1 Data Center Application Services

D-Link does not offer any products in this category.

5.2.2 NETWORKING SOFTWARE

5.2.2.1 Network Management and Automation

- DV-600S – D-View 6.0 Network Management Software, Standard Version
- DV-600P – D-View 6.0 Network Management Software, Professional Version

Overview

D-View 6.0 SNMP Network Management System is a comprehensive standards-based management tool designed to centrally manage critical network characteristics such as availability, reliability, resilience and security in a consistent way. Flexible and versatile, this software accommodates a wide range of D-Link devices. D-View provides useful tools to allow network administrators to effectively manage device configurations, fault tolerance, performance and security.

Modular Architecture

D-View 6.0 is organized into a vendor-independent platform and user plug-in modules. The platform consists of several main components, namely the Domain Manager, NetMap Manager, Topology Generator, Batch Configuration, MIB utilities, Net Toolbox and Performance Monitor. The components can be loaded or unloaded according to the users' need. Plug-in modules are for the D-Link devices that the administrators want to manage. When a device is selected for management, D-View 6.0 will look for that device's plug-in module and display its image on the screen.

Topology Map & Network Devices Discovery

Users can create a topology map to graphically represent planned or existing networks to aid network design, and also D-View 6.0 will periodically poll network devices to monitor the status. Users can further customize their diagrams with selected icons and bitmap files used for the background. When a topology map is opened, D-View 6.0 will discover the devices connected on the network and display their icons on the map. D-View 6.0 can recognize SNMP enabled devices and also distinguish the device's type. The protocols used in polling for device discovery are SNMP and ICMP. For remote network devices, D-View 6.0 acts as a trap receiver, collects traps sent by the devices and notifies network administrators immediately.

Third-Party Device Management

Users can also manage non-D-Link devices that do not have plug-in modules. D-View 6.0 provides a MIB compiler for users to compile MIB files supplied by the vendors of these devices into a system recognizable format. After compilation, D-View 6.0 loads them into the database. The compiler can communicate with these devices, enabling the administrator to get the values currently stored in the devices or to set new values for specific MIB objects. All MIBs are converted into a graphic tree view, with

which the administrator can use the MIB Browser to manage the devices. As non-D-Link devices do not have plug-in modules for installation in D-View 6.0, this software can simulate the device panels to create user interface graphics.

Integration with D-Link's End-to-End Security (E2ES) Solutions*

D-Link has innovated comprehensive security solutions aimed to provide end-to-end threat containment and security protection solutions. It consists of three major components, namely the Gateway Security, the End-point Security and Joint Security. D-View 6.0 seamlessly integrates these security components scattered among different solutions into a single platform to provide users with a unified interface to manage D-Link network devices.

Traps & Configurations

D-View 6.0's Trap Editor provides user with the capability to edit trap descriptions, import third parties' trap definitions and configure trap notifications via mail and sound. D-View 6.0 also provides simultaneous backup configurations, batch configurations and the capability to enable specific functions for LAN switches.

- Auto-generates network topology maps and periodically polls network devices
- Creates detailed network schematics
- Graphically represents real-time status of devices
- Supports client-server architecture (Professional Version only)
- Supports Batch Configuration and is capable of configuring multiple devices at a time
- Central management center for D-Link's E2ES (End-to-End Security) solutions*
- Manages Wireless Switches, Access Points and NetDefend products such as IPS and UTM firewalls*
- Supports multiple, concurrent administrators
- Customizable trap messages for user readability and additional information
- Trap/Alarm notification by e-mail and sound
- MIB Complier and Browser for easy management of third-party devices under the same platform
- SNMPv3 support for major MIBs
- Database supporting familiar Microsoft SQL Server and Microsoft Access formats

5.2.2.2 Data Center Management and Automation

5.2.2.3 Cloud Portal and Automation

5.2.2.4 Branch Office Management and Automation

5.2.3 NETWORK OPTIMIZATION AND ACCELERATION

D-Link does not offer any products in this category.

5.2.4 OPTICAL NETWORKING

D-Link does not offer any products in this category.

5.2.5 ROUTERS

D-Link does not offer any products in this category.

5.2.6 SECURITY

D.2.6.2 Intrusion Detection/Protection and Firewall Appliances

D-Link offers the following NetDefend Network UTM Firewall products that meet the criteria:

- DFL-260E - NetDefend Anti-Virus (AV) 1-Year Subscription for DFL-260/260E
- DFL-860E - NetDefend Network UTM Firewall, 2 WAN, 1 DMZ, 8 LAN, Gigabit, IPS/AV/WCF
- DFL-1660 - NetDefend Network UTM Firewall, 1U, 6xGbE, IPS/AV/WCF
- DFL-2560 - NetDefend Network UTM Firewall, 1U, 10xGbE, IPS/AV/WCF

Overview

The D-Link NetDefend Unified Threat Management (UTM) firewalls provide a powerful security solution to protect business networks from a wide variety of threats. UTM Firewalls offer a comprehensive defense against virus attacks, unauthorized intrusions, and harmful content, successfully enhancing fundamental capabilities for managing, monitoring, and maintaining a healthy network.

Enterprise-Class Firewall Security

NetDefend UTM Firewalls provide complete advanced security features to manage, monitor, and maintain a healthy and secure network. Network management features include: Remote Management, Bandwidth Control Policies, URL Black/White Lists, Access Policies and SNMP. For network monitoring, these firewalls support e-mail alerts, system logs, consistency checks and real-time statistics.

Unified Threat Management

NetDefend UTM Firewalls integrate an intrusion detection and prevention system, gateway antivirus, and content filtering for superior Layer 7 content inspection protection. An acceleration engine increases throughput, while the real-time update service keeps the IPS information, antivirus signatures, and URL databases current. Combined, these enhancements help to protect

the office network from application exploits, network worms, malicious code attacks, and provide everything a business needs to safely manage employee Internet access.

Powerful VPN Performance

NetDefend UTM Firewalls offer an integrated VPN Client and Server. This allows remote offices to securely connect to a head office or a trusted partner network. Mobile users working from home or remote locations can also safely connect to the office network to access company data and e-mail. NetDefend UTM Firewalls have hardware-based VPN engines to support and manage a large number of VPN configurations. They support IPSec, PPTP, and L2TP protocols in Client/Server mode and can handle pass-through traffic as well. Advanced VPN configuration options include: DES/3DES/AES/Twofish/Blowfish/CAST- 128 encryption, Manual or IKE/ISAKMP key management, Quick/Main/Aggressive Negotiation modes, and VPN authentication support using either an external RADIUS server or a large user database.

UTM Services

Maintaining an effective defense against the various threats originating from the Internet requires that all three databases used by the NetDefend UTM Firewalls are kept up-to-date. In order to provide a robust defense, D-Link offers optional NetDefend Firewall UTM Service subscriptions which include updates for each aspect of defense: Intrusion Prevention Systems (IPS), Antivirus and Web Content Filtering (WCF). NetDefend UTM Subscriptions ensure that each of the firewall's service databases are complete and effective.

Robust Intrusion Prevention

The NetDefend UTM Firewalls employ component-based signatures, a unique IPS technology which recognizes and protects against all varieties of known and unknown attacks. This system can address all critical aspects of an attack or potential attack including payload, NOP sled, infection, and exploits. In terms of signature coverage, the IPS database includes attack information and data from a global attack sensor-grid and exploits collected from public sites such as the National Vulnerability Database and Bugtrax. The NetDefend UTM Firewalls constantly create and optimize NetDefend signatures via the D-Link Auto-Signature Sensor System without overloading existing security appliances. These signatures ensure a high ratio of detection accuracy and a low ratio of false positives.

Stream-Based Virus Scanning

The NetDefend UTM Firewalls examine files of any size, using a stream-based virus scanning technology which eliminates the need to cache incoming files. This zero-cache scanning method not only increases inspection performance but also reduces network bottlenecks. NetDefend UTM firewalls use virus signatures from Kaspersky Labs to provide systems with reliable and accurate antivirus protection, as well as prompt signature updates. Consequentially, viruses and malware can be effectively blocked before they reach the network's desktops or mobile devices.

Web Content Filtering

Web Content Filtering helps administrators monitor, manage, and control employee usage of and access to the Internet. The NetDefend UTM Firewalls implement multiple global index servers with millions of URLs and real-time website data to enhance performance capacity and maximize service availability. These firewalls use highly granular policies and explicit black/white lists to

control access to certain types of websites for any combination of users, interfaces and IP networks. The firewall can actively handle Internet content by stripping potential malicious objects, such as Java Applets, JavaScripts/ VBScripts, ActiveX objects, and cookies.

NetDefend UTM Subscription

The standard NetDefend UTM Subscription provides your firewall with UTM service updates for 12 months* starting from the day you activate or extend your service. The NetDefend UTM Subscription can be renewed regularly to provide your firewalls with the most up-to-date security service available from D-Link.

5.2.6.4 Secure Edge and Branch Integrated Security Products

D-Link offers the following products that meet the criteria:

- DSR-150N – Services Router, 8 10/100M LAN Ports, 1 WAN, VPN, SSL
- DSR-250 – Services Router, 8 Gigabit Ports, 1 WAN, VPN, SSL
- DSR-250N – Wireless Services Router, 8 Gigabit Ports, 1 WAN, VPN, SSL
- DSR-500 – Services Router, 4 Gigabit Ports, 2 WAN, VPN, SSL
- DSR-500N – Wireless Services Router, 4 Gigabit Ports, 2 WAN, VPN, SSL

Overview

D-Link Unified Services Routers are secure, high performance networking solutions that address the growing needs of small and medium businesses. The integrated high-speed IEEE 802.11n wireless technology in the DSR-150N, DSR-250N and DSR-500N routers offers comparable performance to traditional wired networks, but with fewer limitations. Each router provides optimal network security via features such as Virtual Private Network (VPN) tunnels, IP Security (IPSec), Point-to-Point Tunneling Protocol (PPTP), Layer 2 Tunneling Protocol (L2TP), and Secure Sockets Layer (SSL). These routers also allow you to empower your road warriors with clientless remote access anywhere and anytime using SSL VPN tunnels.

Reliable Internet Connectivity

The DSR-500/500N include dual-WAN Gigabit Ethernet ports that provide policy-based service management to ensure maximum productivity for your business operations. The failover feature maintains data traffic without disconnecting when a landline connection is lost. The Outbound Load Balancing feature adjusts outgoing traffic across two WAN interfaces and optimizes system performance, resulting in high availability. The second WAN port can be configured as a DMZ port, allowing you to isolate servers from your LAN.

Superior Wireless Performance

Designed to deliver superior wireless performance, the DSR-150N, DSR-250N and DSR-500N include 802.11b/g/n support allowing for operation on the 2.4 GHz wireless LAN radio band. Multiple In Multiple Out (MIMO) technology allows the DSR-150N, DSR-250N and DSR-500N to provide high data rates and a wide wireless coverage area with minimized “dead spots.”

Robust VPN Features

A full featured virtual private network (VPN) provides your mobile workers and branch offices with a secure link to your internal network. The DSR-150/150N, DSR-250/250N and DSR-500/500N are capable of simultaneously managing 1, 5 or 10 Secure Sockets Layer (SSL) VPN tunnels respectively, empowering your mobile users by providing remote access to a central corporate network. Site-to-site VPN tunnels use IP Security (IPSec) Protocol, Point-to-Point Tunneling Protocol (PPTP), or Layer 2 Tunneling Protocol (L2TP) to facilitate branch office connectivity through encrypted virtual links. The DSR-150/150N supports up to 10 simultaneous VPN tunnels, the DSR-250/250N supports up to 25 simultaneous VPN tunnels, and the DSR-500/500N supports up to 35 VPN tunnels.

Efficient Green Technology

As a responsible member of the global community, D-Link is devoted to providing ecofriendly products. D-Link Green Wi-Fi and D-Link Green Ethernet features save power and help cut energy costs. The D-Link Green WLAN Scheduler shuts down your wireless network automatically according to a schedule you define, allowing you to turn off your wireless network during off-peak hours, saving energy and keeping your network secure. The D-Link Green Ethernet feature can detect the length of the cables connected to the router and can adjust power usage accordingly to save energy automatically without sacrificing performance. It can also detect if a link is down on a port and automatically puts that port into a sleep mode, reducing the amount of power used. In addition, compliance with RoHS (Restriction of Hazardous Substances) and WEEE (Waste Electrical and Electronic Equipment) directives make D-Link Green certified devices an environmentally responsible choice.

5.2.7 STORAGE NETWORKING

D-Link offers the following products that meet the criteria:

5.2.8 SWITCHES

5.2.8.1 Campus LAN - Access Switches

D-Link offers the following products that meet the criteria:

- DGS-1210-28P – Web Smart 24-Port Gigabit PoE Switch w/ 4 SFP Slots
- DGS-1210-28P - Web Smart 48-Port Gigabit PoE Switch w/ 4 SFP Slots

Overview

The DGS-1210 Series is the latest generation of D-Link Gigabit Web Smart Switches featuring D-Link Green 3.0 technology. The switches comply with the IEEE 802.3az Energy Efficient Ethernet standard. Support for IPv6 management and configuration features ensures your network remains protected after an upgrade from IPv4 to IPv6. By offering multiple management options, these switches allow quick deployment, infrastructure expansion, and seamless upgrades. Targeting small and medium sized businesses, the DGS-1210 Web Smart switches provide functionality, security, and manageability for a fraction of the standard cost of ownership.

The DGS-1210 Series switches support 16, 24, or 48 10/100/1000BASE-T ports. In addition, each switch supports 4 Gigabit SFP ports for optical connections using multimode or singlemode SFP transceivers.

PoE Support

One model in the DGS-1210 series family, the DGS-1210-28P, delivers Power-over-Ethernet capabilities, simplifying deployments with IP cameras, VoIP phones, wireless access points, and other powered devices. It supports 802.3at on its first four ports (30W max per port) and supports 802.3af on ports 5 through 24 (15.4W max. per port.) Its total power budget is 185W. Using the product's management interface, an administrator can control various PoE functions, such as remotely rebooting cameras or access points, from anywhere on the network, including over the Internet. The switches also support time-based PoE – an option that allows administrators to set a time window that determines when each port's PoE power is turned on and off.

Energy Saving

The DGS-1210 Series switches are capable of conserving power without sacrificing operational performance or functionality by using D-Link Green 3.0 technology. Using the Energy Efficient Ethernet standard, the network will automatically decrease the power usage when traffic is low with no setup required. For environments not fully supporting the standard, these switches offer advanced power-saving settings including port shutoff and standby, LED shutoff, and system hibernation based on custom time profiles. The time profiles can also be applied to the PoE switches so that unnecessary power consumption can be saved during off hours. The switches can also detect the length of connected cables to automatically reduce power usage on shorter cable connections.

Easy Management

The D-Link Web Smart Switch series is designed for easy management. All configurations can be made through a Web interface regardless of the host PC's operating system. Furthermore, the web UI contains ten language options to make operations more straightforward. In the initial installation, the Smart Console Utility will automatically discover all D-Link Smart switches in the network, allowing administrators to assign IP addresses and subnet masks quickly. It also allows simultaneous firmware upgrades to multiple switches, saving a great deal of time. Important management commands, such as download firmware or configuration file, can be completed using batch operations for multiple switches.

Auto Surveillance VLAN and Voice VLAN

The D-link Web Smart series automates the process of setting up IP surveillance and VoIP devices on a network. Auto Surveillance VLAN consolidates data and surveillance video transmission through the network, sparing businesses the expense of maintaining dedicated facilities. ASV also protects the quality of real-time video by grouping IP surveillance devices on a single high priority VLAN. This ensures that surveillance video streams will not be affected when ordinary data traffic is at a high level. Similarly, the Auto Voice VLAN guarantees clear quality and efficient transmission for all voice communication.

Extensive Layer 2 Features

Equipped with a complete lineup of L2 features, these switches include IGMP Snooping, Port Mirroring, Spanning Tree, and Link Aggregation Control Protocol (LACP). The IEEE 802.3x Flow Control function allows servers to directly connect to the switch for fast, reliable data transfer. At 2000 Mbps Full Duplex, the Gigabit ports provide high-speed data pipes to servers with minimum data transfer loss. Network maintenance features include Loopback Detection and Cable Diagnostics. Loopback Detection is used to detect loops created by a specific port and automatically shut down the affected port. The Cable Diagnostic feature designed primarily for administrators and customer service representatives, can rapidly discover the type of error and determine the cable quality.

Secure your Network

D-Link's innovative Safeguard Engine protects the switches against traffic flooding caused by virus attacks. The switches also support 802.1X port-based authentication, allowing the network clients to be authenticated through external RADIUS servers. In addition, the Access Control List (ACL) feature enhances network security and protects the network by screening traffic from illegal MAC or IP addresses. ARP Spoofing Prevention prevents malicious intruders from sending massive fake ARP messages through a manipulated source. This protects important data from being stolen by Man-in-the-Middle attacks, and prevents wasting CPU cycles on these packets. For added security, the DHCP Server Screening feature blocks rogue DHCP server packets from user ports to prevent unauthorized IP assignment.

Limited Lifetime Warranty

D-Link offers a Limited Lifetime Warranty on the DGS-1210 Series Web Smart switches to further its commitment to product quality and long-term customer confidence. The Limited Lifetime Warranty applies for as long as the original customer owns the product or five (5) years after product discontinuance, whichever occurs first.

- DES- 3200-28P – Web Smart 24-Port 10/100 PoE Switch, 2 1000BASE-T Ports, 2 1000BASE-T/Combo SFP Ports
- DES-3200-52 - Web Smart 48-Port 10/100 Switch, 2 1000BASE-T Ports, 2 1000BASE-T/Combo SFP Ports

Overview

The DES-3200 Series are members of D-Link's Layer 2 xStack Managed Switch family designed for the Metro ETTX, FTTX, and Enterprise market. The DES-3200 series offers 24 or 48 10/100Mbps Fast Ethernet Ports with available PoE, plus 2 combo Gigabit/SFP ports and 2 dedicated SFP ports. It also offers the beneficial design of 2 Gigabit/SFP Combo ports and 2 dedicated SFP ports which provide up to 4 Gbps uplink bandwidth or dual Ethernet ring topology support.

Security & Availability

The DES-3200 Series supports 802.1X Port-based/Host-based Access Control, Guest VLAN, and RADIUS and TACAS+ Authentication for strict access control over the network. The IP-MAC-Port Binding feature allows administrators to bind a source IP address with an associated MAC for a defined port number to enhance user access control. Furthermore with the DHCP Snooping feature, the switch automatically understands the IP/MAC pairs by snooping DHCP packets and

saving them to the IMPB white list. These features play a significant role in keeping the network secure and auditable. The built-in D-Link Safeguard Engine identifies and prioritizes "CPU interested" packets to prevent malicious traffic from interrupting normal network flows and protects switch operation. In addition, the Access Control List (ACL) feature enhances the network security and switch performance.

Resilience & Quality of Service

For mission critical environments the DES-3200 Series supports 802.1D-2004 edition, 802.1w and 802.1s Spanning Tree Protocols (STP). STP allows you to configure the switch with a redundant backup bridge path, so transmission and reception of packets can be guaranteed in the event of any failed switch on the network. The switch also supports 802.1AX (formerly 802.3ad) Link Aggregation, enabling you to group multiple ports in parallel to form a single port, increasing bandwidth and redundancy for higher availability. For Quality of Service

(QoS), the switches support 802.1p. This standard is a mechanism that allows real-time traffic classification into 8 priority levels mapped to 4 queues. Packet classification is based on TOS, DSCP, MAC Addresses, IP Addresses, VLAN ID, TCP/UDP port number, protocol type and user defined packet content, which enables flexible configuration especially for realtime streaming multimedia applications such as voice over IP.

Traffic & Bandwidth Control

The bandwidth control feature allows network administrators to define the throughput levels for each port in order to manage bandwidth. It also provides fine granularity to define the ingress/egress traffic limits down to 8kbps segments. The switches also support the Broadcast Storm Control feature which minimizes the chance of a virus attack within the network. Port Mirroring helps administrators facilitate traffic diagnostics or track switch performance and make changes if necessary. Q-in-Q, also known as VLAN stacking, is a powerful yet simple and cost-effective solution which can be used to provide multiple virtual connections and access to multiple services available over the Metro Ethernet.

Multicast Applications

The DES-3200 Series provides IGMP Snooping to prune multicast traffic and to optimize network performance. The MLD snooping feature minimizes multicast IPv6 packets at the port level to conserve network bandwidth.

Management Capabilities

The DES-3200 Series supports standard management protocols such as SNMP, RMON, Telnet, SSH/SSL security authentication and DHCP Relay Option 82. A web-based GUI is also supported for user-friendly interface and easy management. DHCP Auto- Configuration is an enhanced management feature that allows administrators to pre-set configuration and save them to a TFTP server. Individual switches can then get IP addresses from the server for booting up and loading the pre-set configuration. The Link Layer Discovery Protocol (LLDP) allows a network device to advertise its identity and capabilities on the local network, which helps businesses better manage their network topology. Each port on the switch supports the Cable Diagnostics feature that helps to detect cable-related information such as cable length status or cable functionality. D-Link Single IP Management (SIM) simplifies and speeds up management tasks, allowing multiple switches to be configured, monitored and maintained from any workstation

running a web browser through one unique IP address. The DES-3200 Series also works with D-Link's D-View 6.0 software. D-View 6.0 is a Network Management System that allows for the central management of critical network characteristics such as availability, reliability, resilience, and security. D-View 6.0 provides a useful set of tools for network administrators who want to effectively manage device configurations, fault tolerance, performance, and security.

- DGS-3120-24TC - XStack Managed 24-Port Gigabit Stackable L2+ Switch, 4 Combo SFP, 40-Gigabit Stacking, Enhanced Image
- DGS-3120-48TC - XStack Managed 48-Port Gigabit Stackable L2+ Switch, 4 Combo SFP, 40-Gigabit Stacking, Enhanced Image
- DGS-3120-24PC - xStack Managed 24-Port Gigabit Stackable L2 PoE+ Switch, 4 Combo SFP, 40-Gigabit Stacking, Standard Image
- DGS-3120-48PC - xStack Managed 48-Port Gigabit Stackable L2 PoE+ Switch, 4 Combo SFP, 40-Gigabit Stacking, Standard Image

Description

The DGS-3120 xStack Series are enhanced L2 access stackable switches designed to connect end-users in a secure SMB or enterprise network. These switches support physical stacking, multicast and enhanced security, making them an ideal Gigabit access layer solution. The DGS-3120-24TC/48TC provides 20 or 44 10/100/1000 Mbps Gigabit Ethernet ports and 4 combo 1000BASE-T/SFP Gigabit Ethernet ports. The DGS-3120-24PC/48PC provides 24 or 48 10/100/1000 Mbps PoE Gigabit Ethernet ports and 4 combo 1000BASE-T/SFP Gigabit Ethernet ports. Each 10/100/1000 Mbps port of DGS-3120-24PC/48PC supports 802.3af and 802.3at Power over Ethernet standard. The default power budget is 370 Watts and can be expanded to 740 Watts with the DPS-700 RPS. The switches are also equipped with an SD Card slot, allowing the user to boot images and upload configuration files directly from an SD Card. Furthermore, syslog files can also be conveniently saved to a card.

Standard and Enhanced Images

The DGS-3120 Series is available with two different software images - Standard Image (SI) and Enhanced Image (EI). The Standard Image provides sophisticated features for campus, or enterprise. It includes advanced Quality of Service (QoS), traffic shaping, L2 multicasting, and robust security features. The Enhanced Image supports ERPS, Double VLAN (Q-in-Q), Ethernet OAM, Static Route, IMPB, sFlow, IPv6 features which are suitable for the next generation IPv6 networks or triple play applications in Metro Ethernet.

Enhanced Network Reliability

The DGS-3120 Series targets enterprise/campus and customers who require a high level of network security and maximum uptime. All the models in DGS-3120 Series support an external redundant power supply so that continued operation can be assured. They also include other features, such as 802.1D Spanning Tree (STP), 802.1w Rapid Spanning Tree (RSTP) and 802.1s Multiple Spanning Tree (MSTP), Loopback Detection (LBD), and Broadcast Storm Control, that enhance network resilience. The G.8032 Ethernet Ring Protection Switching (ERPS) function minimizes the recovery time to 50 ms. For load sharing and redundancy backup in switch

cascading/server attachment configuration, the DGS-3120 Series provides dynamic 802.3ad Link Aggregation Port Trunking.

Comprehensive Security

The DGS-3120 Series provides users with the latest security features such as Multi-layer and Packet Content Access Control Lists (ACL), Storm Control, and IP-MAC-Port Binding (IMPB) with DHCP Snooping. The IP-MAC-Port Binding feature allows administrators to bind a source IP address with an associated MAC and also define the port number to enhance user access control. With the DHCP Snooping feature, the switch automatically learns IP/MAC pairs by snooping DHCP packets and saving them to the IMPB white list. In addition, the D-Link Safeguard Engine identifies and prioritizes "CPU interested" packets to prevent malicious traffic from interrupting normal network flows, and to protect switch operation.

Identity Driven Network Policies

The DGS-3120 Series supports authentication mechanisms such as 802.1X, Web-based Access Control (WAC), and MAC-based Access Control (MAC) for strict access control and easy deployment. After authentication, individual policies such as VLAN membership, QoS policies, and ACL rules can be assigned to each host. In addition, the switch also supports Microsoft® NAP (Network Access Protection). NAP is a policy enforcement technology that allows customers to protect network assets from unhealthy computers by enforcing compliance with network health policies.

Traffic Management for Triple Play

The DGS-3120 Series implements a rich set of multilayer QoS/CoS features to ensure that critical network services like VoIP, video conference, IPTV and IP surveillance are served with high priority. The Traffic Shaping features guarantee bandwidth of these services when the network is busy. With L2 Multicast support, the DGS-3120 shows its ability to handle growing IPTV applications. Host-based IGMP/MLD Snooping allows multiple multicast subscribers per physical interface and ISM VLAN sends multicast streams in a multicast VLAN to save bandwidth and to provide better security to the backbone network. The ISM VLAN profiles allow users to bind/replace the pre-defined multicast registration information to subscriber ports quickly and easily.

Proactive, Effective Network Management

To uphold enterprise customers' Service Level Agreements (SLA), service providers must reduce the Mean Time to Repair (MTTR) and increase service availability. Ethernet OAM features address these challenges and enable service providers to offer carrier-grade services. The DGS-3120 Series supports industry-standard OAM tools, including IEEE 802.3ah, IEEE802.1ag, and ITU-T Y.1731. Connectivity Fault Management (CFM) provides tools to monitor and troubleshoot end-to-end Ethernet networks, allowing service providers to check connectivity, isolate network issues, and identify customers affected by network issues.

IPv6 Technology

The DGS-3120 Series is fully compliant with the future IPv6 networks. It supports remote IPv6 manageability from telnet, HTTP, or SNMP. To create secure IPv6 networks, the DGS-3120 Series uses IPv6 ACL, DHCPv6 Snooping and Neighbor Discovery (ND) Snooping functions to

protect the network from illegal IPv6 clients. The DGS-3120 Series has been certified with IPv6 Ready Logo Phase 2 from the IPv6 forum, a worldwide IPv6 advocacy consortium. The IPv6 Ready Logo Program provides conformance and interoperability of IPv6 products

D-Link Green Technology

D-Link is striving to take the lead in developing innovative and power-saving technology that does not sacrifice operational performance or functionality. The DGS-3120 Series implements the D-Link Green Technology, which includes a power saving mode, smart fan, reduced heat dissipation, and cable length detection. The power saving feature automatically powers down ports that have no link or link partner. The Smart Fan feature allows for the built-in fans to automatically adjust their speed at a certain temperature, providing continuous, reliable and eco-friendly operation of the switch.

Manageability

D-Link's Single IP Management (SIM) simplifies and speeds up management tasks, allowing multiple switches to be configured, monitored and maintained from any workstation running a web browser through one unique IP address. This virtual stack is managed as a single object, having all units maintained by one IP address. The DGS-3120 Series also supports standard-based management protocols such as SNMP, RMON, Telnet, Console, Web-based GUI and SSH/SSL security authentication.

- DGS-3420-28TC - xStack 28 Port Gigabit L2+ Managed Switch, 20 GE Ports, 4 Combo GE/SFP Ports & 4 SFP+ Ports
- DGS-3420-28SC - xStack 28 SFP Port L2+ Managed Switch, 20 SFP Ports, 4 Combo GE/SPF Ports, and 4 SFP+ Port
- DGS-3420-28PC - xStack 28 Port Gigabit L2+ Managed PoE Switch, 20 GE PoE Ports, 4 Combo PoE GE/SFP Ports & 4 SFP+ Ports
- DGS-3420-52T - xStack 52 Port Gigabit L2+ Managed Switch, 48 Gigabit Ports and 4 SFP+ Ports
- DGS-3420-52P - xStack 52 Port Gigabit L2+ Managed PoE Switch, 48 Gigabit PoE Ports and 4 SFP+ Ports

Overview

The xStack DGS-3420 series of next generation Layer 2+ Gigabit switches delivers performance, flexibility, security, multi-layer QoS, and accessibility, along with redundant power options for SMBs and enterprises. With high Gigabit port densities, Gigabit SFP, 10-Gigabit SFP+ support, and advanced software solutions, these switches can act as either a departmental access layer or aggregation switches to form a multilevel network. Service providers can take advantage of the high SFP density (DGS-3420-28SC) to structure the aggregation of Fiber to the Building (FTTB) networks that can be extended to subscribers' sites.

Unparalleled Flexibility

Easily deployed and simple to manage, the DGS-3420 can be stacked with any switch that supports D-Link's Single IP Management to form a multi-level network with centralized

management. The virtual stack can include units located anywhere on the same network domain and uses optional 10-Gigabit uplinks to move intra-stack traffic at 20 Gbps full duplex speeds.

Redundant Ring Stacking

Alternatively, depending on whether linear or ring stacking is implemented, users can use one or two 10-Gigabit SFP+ ports to create a physical stack. 12 units or 576 Gigabit ports can be configured for a stack using direct attach cables to provide high-bandwidth and return on investment.

Security, Performance & Availability

The DGS-3420 Series provides a complete set of security features including L2/L3/L4 multi-layer Access Control Lists and 802.1X user authentication via TACACS+ and RADIUS servers. The DGS-3420 Series offers extensive VLAN support including GVRP and 802.1Q VLAN to enhance security and performance. A robust set of L2/L3/L4 QoS/CoS solutions help ensure that critical network services such as VoIP, ERP, Intranet, and video conferencing are served with proper priority. The series also provides D-Link's Safeguard Engine to increase the switch's reliability, serviceability and availability to prevent malicious traffic flooding caused by worms or virus infections. Bandwidth Control can be flexibly set for each port using pre-defined thresholds to assure a committed level of service for end users. For advanced applications, flow-based bandwidth control allows easy fine-tuning of service types based on specific IP addresses or protocols.

IPv6 Technology

The DGS-3420 Series also features comprehensive IPv6 support, including IPv6 Tunneling, ICMPv6, DHCPv6, RIPng, etc. With 10-Gigabit connectivity and IPv6 support, the DGS-3420 Series enables you to future-proof your network for cost efficiency and longevity while meeting the requirements for IPv6 capable network devices in the coming years.

D-Link Green Technology

D-Link is striving to take the lead in developing innovative and power-saving technology that does not sacrifice operational performance or functionality. The DGS-3420 Series implements D-Link Green technology, which includes power saving through link status, smart fan design, increased heat dissipation, and cable length detection. The power saving feature automatically powers down ports that have no link or link partner. The Smart Fan design allows the built-in fans to automatically turn on only at a certain temperature, providing continuous, reliable, and eco-friendly operation of the switch.

These products support most of the listed protocols. See attachment A for a list of supported protocols.

5.2.8.2 Campus LAN – Core Switches

D-Link offers the following products that meet the criteria:

- DGS-3620-28TC - xStack Managed 24-Port Layer 3 Switch with 4-Combo SFP, (4) 10Gigabit SFP+, Standard Image

- DGS-3620-28SC - xStack Managed 24-Port Layer 3 SFP Switch with 4-Combo 1Gigabit Ports, (4) 10Gigabit SFP+, Standard Image
- DGS-3620-28PC - xStack Managed 24-Port Layer 3 Gigabit Stackable PoE+ Switch with 4-Combo SFP Ports, (4) 10Gigabit SFP+, Standard Image
- DGS-3620-52T - xStack Managed 48-Port Layer 3 Switch with (4) 10Gigabit SFP+, Standard Image
- DGS-3620-52P - xStack Managed 48-Port Layer 3 PoE+ Switch with (4) 10Gigabit SFP+, Standard Image

Overview

The latest generation of D-Link® xStack® Switches supports IPv6 routing and has more advanced features than ever to address today's security, QoS, and management concerns. The xStack DGS-3620 Series includes five Gigabit managed switches with a choice of 24 or 48 port 10/100/1000Base-T models, 24 SFP port model, and PoE+ model options. The DGS-3620-28TC comes with four combo SFP slots and four 10-Gigabit SFP+ slots. The DGS-3620-28SC is the fiber version equipped with four combo 10/100/1000 Base-T ports and four 10-Gigabit SFP+ slots. The DGS-3620-52T has four 10-Gigabit SFP+ slots. The DGS-3620-28PC and DGS-3620-52P also include PoE (802.3af) and PoE+ (802.3at) that provides up to 30W to power devices such as IP phones, Access Points, or security cameras.

The xStack DGS-3620 Series is equipped with robust features that fulfill the most demanding network's needs for voice and video streaming. Stackable up to 12 units under a single IP, the switches are able to provide a total of up to 576 Gbps aggregated bandwidth. To help secure your network, the D-Link Safeguard Engine™ helps prevent Denial-of-Service (DoS) attacks while the Access Control List (ACL) enhances network security. The DGS-3620 Series is equipped with industry standard management features including easy-to-use CLI and web-based administrator interfaces. D-Link provides these features on a scalable platform, increasing your company's productivity while protecting your investment.

IPv6 and IPv4 Routing

The xStack DGS-3620 Series provides current IPv4 networks with a simple migration path to IPv6 and protects your investment for future network upgrades when greater security and larger addressing are required. Basic static routing such as RIP and RIPv2 are supported for small network routing applications. Advanced routing protocols such as OSPF and equal cost routing are supported for load balancing and building a scalable network.

Stackable up to 12 Units

Each switch in the xStack DGS-3620 Series has four SFP+ Ports to install compatible modules for stacking provide up to 40Gbps data stacking backplane while in full-duplex mode. This enhances your overall network performance for switches transmitting large files such as graphics or pictures. Under stacking mode, the switches are hot-swappable. This means that in a stack configuration, any of the switches can be replaced or removed without affecting the network. There is no need to reconfigure a replacement switch; just give the new switch the same stack number ID as the old switch and the network will carry the same configuration as before. This

minimizes network downtime and maximizes the productivity of your business. Also, to facilitate network administration, cross stack port mirroring and port trunking are supported.

The D-Link Safeguard Engine and Security

The DGS-3620 Series incorporates advanced mechanisms to detect an attack against the central processing unit of the switch and to take corrective action on the attacking interface. When a DoS attack is waged against any of the DGS-3620 switches, the D-Link Safeguard Engine detects the threat and prevents overload of the CPU, thus ensuring network integrity and helping to maintain open network bandwidth channels.

In addition, the xStack DGS-3620 Series offers a variety of authentication methods, including those without the requirement of a RADIUS server. It supports MAC-based Access Control, which authenticates the user based on the MAC address of the client so that authentication is transparent to the client. It also supports Web-based Access Control, which prompts for username and password before allowing access to TCP traffic. Lastly, the xStack Series supports Network Access Protection (NAP). This feature works in conjunction with Microsoft® software platforms to reinforce network health and security policies including policy validation, network restriction, remediation, and ongoing compliance.

Voice and Video Applications

For today's businesses, having voice, data, and video on the same network is common practice. This challenge is met by the xStack DGS-3620 Series, which support 802.1p with eight queues. The administrator can designate traffic priority based on a variety of means including IP and MAC address, so that voice data is clear and jitter-free. Video traffic can also be assigned with the same priority. In addition, the xStack DGS-3620 Series provides IGMP Snooping, which allows the forwarding of multicast packets such as streaming audio and video without increasing network broadcast congestion. By snooping IGMP registration information within a frame, a list of workstations that have joined the multicast group is created. This list then allows the switch to intelligently forward packets to only the appropriate member workstations. For IPv6 traffic, the xStack DGS-3620 Series supports MLD snooping. Multicast routing is supported under independent multicast protocol, including PIM-SM, PIM-DM, and PIM-SDM (Sparse Dense Mode). DVMRP is also supported to interconnect two multicast-enabled networks across non-multicast networks. In conjunction with support for 802.1Q VLANs, Quality of Service (QoS) and security can be achieved on a network infused with data traffic.

Ease of Management

The xStack DGS-3620 Series supports SNMP v1/2c/3 so traps can be set on abnormal events and information can be polled to maximize network productivity. Other standard management features also supported include RMON and IEEE 802.1D Spanning Tree. User interfaces include an intuitive Web-based GUI or standard CLI, either of which can be protected through SSL or SSH encryption.

- DXS-3600-16S - 8-Port 10GbE SFP+ L2/L3 Managed Switch with Expansion Slot
- DXS-3600-32S - 24-Port 10GbE SFP+ L2/L3 Managed Switch with Expansion Slot

Overview

The DXS-3600-16S is a 8-port SFP+ 10-Gigabit Ethernet (GbE) switch featuring wired-speed 10 Gigabit Ethernet switching, routing, and very low latency. This switch delivers high-performance 10 GbE capacity of up to 480 Gbps and forwarding rates of up to 357.14 Mbps. The switch features hot swappable power supplies and fan trays to provide a redundant, high availability architecture. With 1U height and front-to-back air flow, the DXS-3600-16S is suitable for enterprise/campus network aggregation switching, as well as top-of-rack (ToR) deployment in data centers.

Security, Performance & Availability

The DXS-3600-16S switch provides a complete set of security features including Access Control Lists and 802.1x user authentication via TACACS+ and RADIUS servers. This ensures the network is protected from unauthorized access. It also offers extensive VLAN support including GVRP and 802.1Q VLAN to enhance security and performance. A robust set of QoS/CoS solutions help ensure that critical network services such as VoIP and video conferencing are served with priority. Bandwidth Control can be flexibly set for each port using pre-defined thresholds to assure a committed level of service for end users. For advanced applications, flow-based bandwidth control allows easy fine-tuning of service types based on specific IP addresses or protocols.

Energy Efficient

The DXS-3600-16S provides front-to-back airflow, a more effective cooling method throughout rack systems in data centers, compared to side-to-side airflow. The switch also features built-in smart fans; internal heat sensor monitor and detects temperature change, reacting accordingly by utilizing different fan speeds for different temperatures. At lower temperatures, the fans will run slower and reduce the switch's power consumption and noise.

- DGS-6600 – 6600-Series Chassis Switch

Overview

D-Link's DGS-6600 series chassis-based switches are intelligent and high-performance multi-layer LAN devices designed for the small and mid-size enterprise. They are ideal for deployment in environments that require uninterrupted running of network applications and a high level of performance, security and control.

Featuring a flexible modular architecture and industry standard compliance, these switches provide scalable expansion and a high level of investment protection for businesses to deploy Gigabit and 10-Gigabit packet switching and routing.

The DGS-6600 series is equipped with high-speed switch fabric, and advanced software functions, including complete IPv6 support. These switches provide the performance, high availability and future-proof architecture suitable for applications of not just today, but those of the future.

Flexible Modular Design

The DGS-6600 series is now available in a 4-slot chassis model, the DGS-6604. One open slot is reserved for a control module, and the other three slots can be fitted with user-selectable port modules. In addition to these open slots, there are four slots for redundant backup power

supplies, and one slot for a replaceable fan module. This modular architecture allows modules to be gradually added to meet network growth, and modules can be easily swapped anytime to fit network requirement changes.

High Performance

The DGS-6604 4-slot switch provides a switch capacity of up to 576 Gbps and system performance of up to 428.57 Mpps. To make use of this high-performance hardware, these switches utilize a distribution switching method where each line card intelligently determines the switch path for each data packet. The switches synchronize the switching and routing information between the control cards and the line cards to map out the fastest data transfer path. With each line card capable of performing L2/3/4 on-board packet switching without relying on the control cards, the DGS-6600 series switches can deliver very fast packet forwarding at almost zero-wait speed.

High Port Densities

Port densities can reach 144 Gigabit or 24 10-Gigabit ports per 4-slot chassis. All port modules are hot swappable without the need to change any hardware or software settings. By providing up to 24 10GE ports with each port running at non-blocking rates, it can help enterprises migrate to a 10G backbone.

High Availability

The DGS-6604 provides 3+1 redundant backup power supplies (up to 3 active and 1 backup) and a hot swappable fan module to create a very highly available chassis-based device suitable for mission-critical network applications.

Application Convergence

The DGS-6600 series combines high-speed hardware with software functions like prioritised traffic QoS and multicast routing to deliver the performance needed for real-time applications such as Internet telephony, streaming multimedia, and IPTV. In addition, these switches offer Power over Ethernet (PoE) solutions to provide both electrical power and network connectivity to PoE-capable devices, such as IP phones and wireless APs, and are ideal for large-scale enterprise edge deployment. An example of this application convergence would be VoIP for mobile users via wireless access points connected through the DGS-6600 series switches.

Complete IPv6 Support

The DGS-6600 series provides complete support for IPv6 to accommodate the potential huge increase in number of users and geographical needs of Internet expansion. It addresses the requirements of emerging applications such as Internet-enabled wireless devices, home and industrial appliances, Internet-connected transportation, integrated telephony services, sensor networks, and distributed computing or gaming. The use of globally unique IPv6 addresses simplifies the mechanisms used for reach-ability and end-to-end security for network devices - functionality that is crucial to the applications and services that are driving the demand for IP addresses.

Enterprise-Wide Security

The DGS-6600 series provides not only network access security but also protection against internal and external attacks. Access security is provided through comprehensive policy-based ACL, port security, IP-MAC-Port binding features, and Defeat IP Scan. Attacks hidden behind control protocols are thwarted, preventing the switch's CPU from being overwhelmed with unnecessary tasks which can cause degradation to a network's performance. The DGS-6600 series extends security to network management via such functions as SSH v2 and SNMP v3 with authentication and encryption of management traffic.

These products support most of the listed protocols. See attachment A for a list of supported protocols.

5.2.8.3 Campus Distribution Switches

D-Link offers the following products that meet the criteria:

- DGS-3420-28TC, DGS-3420-28SC, DGS-3420-28PC, DGS-3420-52T, DGS-3420-52P
- DGS-3620-28TC, DGS-3620-28SC, DGS-3620-28PC, DGS-3620-52T, DGS-3620-52P
- DGS-6600

These products support most of the listed protocols. See attachment A for a list of supported protocols.

5.2.9 WIRELESS

5.2.9.1 Access Points

D-Link offers the following products that meet the criteria:

- DWL-6600 - Unified 802.11n Dual Band Access Point

Overview

The DWL-6600AP Unified N Dual-band PoE Access Point is a best-in-class indoor access point designed specifically for business-class environments. With high data transmission speeds and access point load balancing, the DWL-6600AP offers high-quality and reliable wireless service. Versatile and powerful, the DWL-6600AP can be flexibly deployed as a standalone wireless access point or as a managed access point controlled by a D-Link® Unified Wireless Switch or Wireless Controller. Businesses can start with standalone mode deployment, then migrate to a centrally managed system anytime later.

Enhanced Performance

The DWL-6600AP delivers reliable wireless performance with maximum wireless signal rates of up to 300 Mbps in either the 2.4 GHz or 5 GHz mode. Support for Wi-Fi Multimedia™ (WMM) Quality of Service features makes the DWL-6600AP an ideal access point for audio, video, and voice application. In addition, the load balancing feature ensures maximum performance and best service quality in the wireless environment¹.

Self-Configuring Cluster

For small businesses that need to deploy multiple access points (APs) but lack the resources to tackle the complicated task of network management, the DWL-6600AP's self-configuring cluster feature offers the ideal solution. When several DWL-6600APs are deployed on the network, they can be organized to form a self-configuring cluster. The administrator can configure one access point and apply the same arrangement to all remaining APs. Up to 16 APs may be used to form a cluster.

Unified Management

The DWL-6600AP can operate in conjunction with a D-Link Wireless Switch and Wireless Controller. In this mode, multiple DWL-6600APs can connect directly or indirectly to one of these switches/ controllers to provide unparalleled security and wireless mobility for wireless clients. Each DWL-6600AP will be continually tuned by these switches to provide the optimal RF channels and transmission power for all mobile clients, giving them the best wireless signals in both 2.4GHz and 5.0GHz bands and uninterrupted wireless connectivity.

Security

The DWL-6600AP supports the latest standards in wireless security, including WEP, WPA, WPA2, and 802.1X. In addition, the DWL-6600AP supports up to 16 virtual access points (VAP) per radio, for a total of 32 VAPs, allowing the administrator to assign different access privileges to different groups of users. When Station Isolation is enabled, the AP blocks communication between wireless clients on the same radio and VAP. When used with D-Link's line of Unified Wireless Switches, security is strengthened. Administrators will be immediately notified of any security threats arise and when rogue APs in the network are detected.

Automatic RF Management

When a number of access points are deployed close to each other, interference may result if proper RF management is not implemented. When a DWL-6600AP senses any neighbor AP at startup, it will automatically select a non-interfering channel, the DWL-6600AP will automatically lower its transmission power to minimize interference. When that managed AP is no longer present, the DWL-6600AP will increase its transmit power to expand coverage.

Quality of Service

The DWL-6600AP is WMM-certified, so in the event of network congestion, time-sensitive traffic can be given priority ahead of other traffic. Furthermore, when a number of DWL-6600APs are in close proximity with each other, an access point can refuse new association request once its resources are fully utilized. Instead, the association request will be picked up by a neighboring AP. This feature ensures that no single AP is over burdened while other APs nearby sit idle.

Convenient Installation

With an embedded antenna and simple styled exterior, the DWL-6600AP can be installed on a wall or ceiling and blends in with most interior decorations in an office. Enclosed in a plenum-rated chassis, the DWL-6600AP adheres to strict fire codes for placement in air passageways. For easy installation, the DWL-6600AP has integrated 802.3af Power over Ethernet (PoE) support, allowing installation of this device in areas where power outlets are not readily available.

- DWL-8600 - Unified Wireless PoE Access Point, Simultaneous Dual Band 802.11n

Overview

The DWL-8600AP is D-Link's next generation Unified Access Point supporting the IEEE 802.11n standard. Versatile and powerful, this device can be flexibly deployed as a stand-alone "fit" wireless Access Point or as a "thin" managed Access Point (AP) manageable from a wireless switch such as D-Link's DWS-4026.

Blazing Wireless Speeds

802.11n offers up to six times increased throughput when compared with existing 802.11a/g networks. By employing the DWL-8600AP today, you can prepare your business for the future generation of wireless devices and mobile applications. The DWL-8600AP is also fully backwards compatible with 802.1a/b/g clients.

Green Technology for Advanced Power Saving

The DWL-8600AP features scheduled and unscheduled Automatic Power Save Delivery (APSD). Unscheduled APSD (U-APSD) is a power management method that is more efficient than older 802.11 Power Save Polling. The primary benefit of U-APSD is that it allows for the voice client to synchronize the transmission and reception of voice frames with the AP, thereby allowing the client to go into power saving mode when not sending or receiving packets.

Intelligent "Fit" Access Point

The DWL-8600AP has everything on-board that enables network administrators to set up a secure wireless network and to connect to any Ethernet switch or router. Advanced wireless functions that the DWL-8600AP supports include: WEP data encryption, WPA/WPA2 security, client MAC address filtering, AP load balancing, QoS/WMM (Wireless Multimedia), and Rogue AP Detection.

"Thin" AP Centrally Managed

Alternatively, the DWL-8600AP can operate in conjunction with a D-Link DWS-4026 unified wired/wireless switch. In this mode, multiple DWL-8600APs can connect directly or indirectly to the switch to provide unparalleled security and wireless mobility for wireless clients. Each DWL-8600AP will be continually tuned by the switch to provide optimal RF channels and transmission power for all mobile clients, giving them the best wireless signals in both 2.4GHz and 5.0GHz bands and uninterrupted wireless connectivity.

In this mode, the switch automatically configures every connected "thin" DWL-8600AP, so no configuration is necessary during installation. If a DWL-8600AP needs to be replaced, the replacement DWL-8600AP automatically inherits the same configuration, making the replacement process simple.

Flexible Quadband Wireless LAN Connectivity

The DWL-8600AP delivers concurrent wireless performance in both frequency bands simultaneously. With Quadband connectivity, two wireless networks are effectively created, both running at full bandwidth, offering a significant increase in total network capacity. At the same

time, the DWL-8600AP remains fully backward compatible with the 802.11b standard in the 2.4GHz frequency.

Optimal Wireless Performance

The architecture of most current wireless LAN controllers requires wireless traffic to return to the controller for centralized processing, providing unnecessary traffic delay. The DWL-8600AP – when operating with a DWS-4026 switch – offers administrators extra options.

Total Security & Quality of Service (QoS)

The DWL-8600AP continuously scans both frequency bands and their associated channels to detect rogues while simultaneously providing wireless connectivity to mobile clients. If a rogue is detected, it reports the result to the DWS-4026 wireless switch that manages it. From a management console, administrators can identify the rogue AP and take appropriate action.

The DWL-8600AP supports 64/128/152-bit WEP data encryption, WPA/WPA2 security and multiple SSID per RF frequency band. These functions along with wireless user MAC Address Filtering and SSID Broadcast Disable can be used to set up security and limit outsiders' access to the internal network. The DWL-8600AP supports 802.1Q VLAN Tagging and WMM (Wi-Fi Multimedia) for important wireless transmissions such as VoIP and streaming media applications, delivering critical user-based services, such as prioritized delivery of voice traffic.

These products support most of the listed protocols. See attachment A for a list of supported protocols.

5.2.9.2 Outdoor Wireless Access Points

D-Link offers the following products that meet the criteria:

- DAP-3690 - AirPremier® N Dual Band Outdoor PoE Access Point

Overview

The D-Link® DAP-3690 AirPremier® N Outdoor Dual Band PoE Access Point is a versatile, high power outdoor access point designed with harsh weather resistant features making it an ideal solution for creating outdoor wireless hot spot networks. In addition to outdoor, it can be installed in environments where flexible wireless access and harsh conditions exists including; manufacturing plants, industrial automation, convention halls, stadium facilities, airports, school campuses, golf courses, marinas or virtually any venue requiring a robust wireless solution.

Versatile Access Point

Detachable antennas provide flexibility and optimal wireless coverage in both 2.4GHz (802.11 b/g/n) and 5GHz (802.11 a/b/g/n) bands. Designed for outdoor deployments, the DAP-3690 includes a broad range of harsh environment features such as IP67 water/ dust proof housing, wide operating temperature range, built in heater and power surge arrestor to withstand all elements. Easy installation is realized with integrated 802.3at Power over Ethernet (PoE) support, eliminating the need for power outlets and the included wall and pole mounting kits minimize installation time making the DAP-3690 quick to deploy.

Multiple Operation Modes

The DAP-3690 can be configured to optimize network performance based on any one of its multiple operation modes: Access Point, Wireless Distribution System (WDS) with Access Point, WDS, and Wireless Client.

Also included are advanced features such as Load Balancing, which optimizes high network traffic volume, and redundancy for fail-safe wireless connectivity. Additionally, the DAP-3690 offers Spanning Tree Protocol support for greater efficiency and to avoid broadcast storms when used in WDS mode.

Enhanced Performance

The DAP-3690 delivers reliable wireless performance with with maximum wireless signal rate of up to 300 Mbps in both the 2.4 GHz and 5 GHz wireless band.¹ Additionally, support for Wi-Fi Multimedia™ (WMM) Quality of Service (QoS) features, make this device an ideal access point for audio, video, and voice applications.

When enabled, QoS allows the DAP-3690 to automatically prioritize traffic according to the level of interactive streaming, such as Voice over IP(VoIP). The QoS feature also provides a drop-down menu option to customize priority settings. The load balance feature in this device also ensures maximum performance by setting a limit for the total number of users per access point.

Security

To help maintain a secure wireless network, the DAP-3690 provides the latest in wireless security technologies by supporting both Personal and Enterprise versions of WPA™ and WPA2™ (802.11i) with support for a RADIUS server backend. To further protect your wireless network, MAC Address Filtering, Wireless LAN Segmentation, Disable SSID Broadcast, Rogue AP Detection, and Wireless Broadcast Scheduling are also included. The DAP-3690 includes support for up to 16 VLANs per band to implement multiple SSIDs to further help segment users on the network. It also includes a wireless client isolation mechanism, which limits direct client-to-client communication.

Network Management

Network administrators have multiple options for securely managing the DAP-3690 including Web (HTTP/HTTPS), Secure Sockets Layer (SSL), Secure Shell (SSH), and Telnet and a RJ-45 console port. For advanced network management, administrators can use the D-Link AP Manager II, AP Array, or D-View SNMPv3 management module to configure and manage multiple access points from a single location. In addition to a streamlined management process, both AP Manager II and D-View provide network administrators with the means to verify and conduct regular maintenance checks remotely, eliminating the need to send out personnel to physically verify proper operation.

With simultaneous dual band functionality, PoE support, extensive manageability, versatile operation modes, and solid security enhancements, the D-Link AirPremier N Dual Band Outdoor PoE Access Point (DAP-3690) provides SMB and enterprise environments with a business class solution for deploying a wireless network in outdoor environments.

These products support most of the listed protocols. See attachment A for a list of supported protocols.

5.2.9.3 Wireless LAN Controllers

D-Link offers the following products that meet the criteria:

- DWS-3160-24PC - Unified Wireless L2+ Gigabit PoE Switch

Overview

The DWS-3160 is D-Link's latest Unified L2+ Gigabit Wireless Switch. Designed to be the ideal mobility solution for medium-sized and large enterprises and service providers, the DWS-3160 empowers administrators to exercise total control over their wireless networks by centralizing all aspects of provisioning and management. Able to manage up to 48 D-Link Unified Access Points by itself and up to 192 in a Peer Group, the DWS-3160 can be configured to act either as a Wireless Controller in the core network, and as an L2+ Gigabit Switch at the edge, enabling it to be seamlessly integrated into any existing network infrastructure. The DWS-3160 comes in two models with or without PoE support.

Simplified Management

The DWS-3160 is able to centralize all critical WLAN management, thereby eliminating the need to manage access points individually. The administrator simply assigns a profile to an individual D-Link Unified Access Point, and the configuration corresponding to that profile would be applied onto that access point automatically. In addition, the DWS-3160 can apply new firmware to all D-Link Unified Access Points on the network, thus greatly simplifying the upgrade process.

The DWS-3160 also excels as an advanced L2+ switch. Complete with RIPv1/v2 dynamic routing, ACL security, multi-layer QoS, comprehensive VLAN support, as well as Multicast Snooping capabilities, the DWS-3160 enables easy and flexible deployment. Furthermore, multiple DWS-3160s can form a Peer Group, which enables the administrator to configure all switches from one Peer Group Master. As the size of the Peer Group grows, so can the number of D-Link Unified Access Points being managed. Up to 192 D-Link Unified Access Points may be managed by a Peer Group. This helps to significantly simplify management and reduce maintenance efforts when a network is scaled up.

Trusted Security

The DWS-3160 offers a state-of-the-art Wireless Intrusion Detection System (WIDS), which empowers administrators to detect Rogue Access Points and Rogue Clients, effectively preventing them from causing damage to the network. The administrator can also activate various threat detections and use Radio Frequency Scan to sweep the entire wireless network to identify any possible security breach in advance.

When working in conjunction with D-Link Unified Access Points, Virtual Access Points may be easily configured and managed, allowing the administrator to assign different access privileges to different classes of users. In addition to WPA and WPA2, an added measure of protection is added with an advanced captive portal, thus enabling only authorized users to utilize the wireless network. On the wired side, the DWS-3160 utilizes Access Control Lists to tightly control what goes in and out of the network by setting up a number of simple rules. Along with other advanced security features, such as 802.1X Network Access Control and advanced Denial-of-Service Protection, the DWS-3160 provides robust and centralized security, ensuring maximum network reliability.

Network Resiliency

When a number of access points are deployed close to each other, interference may result if proper RF management is not implemented. The DWS-3160 is aware of how the radio spectrum is being utilized in the network and will automatically assign the most optimized channel to each access point under its management. This greatly reduces RF interference and will allow the administrator to deploy APs more densely.

To further minimize interference, the DWS-3160 also can adjust the transmit power of each radio independently. When, for whatever reason, there is no longer so many access points present, transmission power will be increased to expand network coverage. To ensure that no access point is overburdened while others sit idle, the DWS-3160 will prevent certain D-Link Unified Access Points from accepting new association requests if its resources are fully utilized. A neighboring D-Link Unified Access Point will instead pick up the load. This ensures that proper load balancing is in place, and the network will function in the most optimal state.

Seamless Mobility

Wireless clients can enjoy seamless and uninterrupted roaming from AP to AP if they are managed by the same DWS-3160, even if they are not in the same subnet. Because the DWS-3160 employs various mechanisms such as pre-authentication and keycaching, wireless users can freely roam the entire network without needing to re-authenticate. This allows tablet and smart phone and netbook computer users to travel freely within any premise covered by the DWS-3160's managed APs without having to worry about network connectivity, thus enabling for a truly mobile workplace.

- DWS-4026

Overview

The DWS-4026 is D-Link's next generation Unified Wired/Wireless Gigabit Switch with an array of advanced features and 802.11n support. With the ability to manage up to 64 Unified Wireless Access Points by itself and up to 256 in a Peer Group, the DWS-4026 is a full-featured and cost-effective mobility solution for mid-to large enterprises and service providers. Extremely versatile and flexible, the DWS-4026 can be deployed as a Wireless Controller in the core network or as a L2+ PoE Gigabit Switch at the edge depending on the requirement. By centralizing WLAN configuration and management functions, DWS-4026 enables network administrators to have control, security, redundancy, and reliability needed to scale and manage their wireless networks easily and efficiently.

Adaptable Wireless

Most of the current Wireless LAN controllers' architecture requires wireless traffic to return to the controller for centralized processing, causing unnecessary traffic delay. The DWS-4026 offers network administrators additional options: depending on the wireless application, wireless traffic can either be tunneled back to the switch for better security control, or locally forwarded at the Access Point for optimal performance.

Comprehensive Wired/Wireless Security

The DWS-4026 offers a state-of-the-art Wireless Intrusion Detection System (WIDS), which empowers network administrators to detect rogue Access Points and rogue clients as well as anticipate wireless threats, preventing them from causing damage to the network. With WIDS, administrators can activate various threat detections and use RF scans to sweep the entire wireless network for any possible security breach in advance. Other wireless security features include WPA/WPA2 Enterprise, 802.11i, Captive Portal and MAC Authentication.

Seamless Mobility

Wireless clients can enjoy seamless and uninterrupted roaming from AP to AP managed by a DWS-4026 even if they are not in the same subnet. Because the DWS-4026 employs various mechanisms such as pre-authentication and key-caching, wireless users can freely “roam” the entire network without needing to re-authenticate. The additional Fast Roaming feature results in disruption-free, reliable wireless connectivity crucial for mobile applications such as Wi-Fi IP Phones and wireless PDAs. Furthermore, the DWS-4026 supports advanced “AP-AP Tunneling”, which is used to support L3 roaming for wireless clients without forwarding any data traffic to the Unified Switch. This can help to significantly reduce network traffic and save bandwidth.

Voice-Optimised Quality of Service (QoS)

The DWS-4026 is specifically designed and optimized for Voice over Wireless traffic with features such as Auto-VoIP and Voice VLAN. The Auto-VoIP feature explicitly matches VoIP streams and provides them with a better class-of-service than ordinary traffic.

Network Resiliency

The DWS-4026 offers a “self-healing” network capability to increase the resiliency of the entire wireless network. To make up for a sudden RF signal vacuum created by any “dead” AP (AP with DC power failure, for example), the DWS-4026 automatically increases the transmit output power of the neighboring APs to expand the RF coverage, thereby “healing” the network. Also, to ensure continuous connection for current clients, the DWS-4026 performs load balancing across access points when network traffic reaches a certain threshold by forcing additional clients to associate with other access points.

Maximized Flexibility

In addition to all its wireless capabilities, the DWS-4026 also excels as an advanced L2+ PoE Switch. Complete with dynamic routing using RIPv1/v2, ACL security, multi-layer QoS, comprehensive VLAN support, IGMP/MLD Snooping as well as dual 10-Gigabit uplink support, the DWS-4026 truly enables network administrators to integrate their enterprise class wireless network with their wired infrastructure. Businesses contemplating upgrading their current wired or wireless network can deploy the DWS-4026 to take advantage of its dual-role flexibility.

Simplified Management

Multiple DWS-4026s can form a Switch Cluster, which enables network administrators to manage and configure all switches from one single “Cluster Master.” In addition, the Switch Cluster also manages information of all the Access Points as well as their associated clients. This helps to significantly simplify management and reduce maintenance efforts as the network scales up.

These products support most of the listed protocols. See attachment A for a list of supported protocols.

5.3.0 UNIFIED COMMUNICATIONS (UC)

D-Link does not offer any products in this category.

5.3.1 SERVICES

D-Link's customizable professional services and flexible advanced support options play a significant role in driving the low TCO and high business productivity our total networking solutions deliver. Combine the professional services you need to supplement and extend your capabilities with the support levels required to meet your IT and business requirements.

D-Link Professional Services options include network assessments, network installation, virtual and on-site wireless site surveys, planning design and implementation assistance, IP surveillance site surveys, design, implementation and configuration.

Professional Services Include:

- Network Assessment
- Network Installation
- Network Security Audit
- Wireless Site Survey, Design, and Implementation
- SAN Storage Implementation
- IP Surveillance Site Survey, Design, and Implementation
- Remote Consulting Service for Configuration and Installation
- D-Link 5-year Enhanced Warranty. Adds 5 years of next business day advance hardware delivery with 9-to-5 phone support.
- Standalone Priority Phone Support. Per Incident 24x7 or Contract Period 9-to-5 or 24x7.

Note: In addition to the listed items, D-Link offers a range of IP surveillance cameras, storage devices, software, and consumer networking products. Please see the attached price/product list for details on products, pricing, and discounts.

5.2.8 SWITCHES

5.2.8.1 Campus LAN – Access Switches

- Security
 - i. SSHv2 (Secure Shell Version 2)
 - ii. 802.1X (Port Based Network Access Control)
 - iii. Port Security
 - iv. DHCP (Dynamic Host Configuration Protocol) Snooping
- VLANs
- Fast Ethernet/Gigabit Ethernet
- PoE (Power over Ethernet)
- link aggregation
- 10 Gb support
- Port mirroring
- Span Taps
- Support of IPv6 and IPv4
- Standards-based rapid spanning tree
- Netflow Support (Optional).

5.2.8.2 Campus LAN – Core Switches

- High bandwidth
- Low latency
- Hot swappable power supplies and fans
- Security
 - i. SSHv2
 - ii. MacSec encryption
 - iii. Role-Based Access Control Lists (ACL)
- Support of IPv6 and IPv4
- 1/10/40/100 Gbps support
- IGP (Interior Gateway Protocol) routing
- EGP (Exterior Gateway Protocol) routing
- VPLS (Virtual Private LAN Service) Support
- VRRP (Virtual Router Redundancy Protocol) Support
- Netflow Support.

5.2.8.3 Campus Distribution Switches

- High bandwidth
- Low latency
- Hot swappable power supplies and fans
- Security (SSHv2 and/or 802.1X)
- Support of IPv6 and IPv4
- Jumbo Frames Support
- Dynamic Trunking Protocol (DTP)
- Per-VLAN Rapid Spanning Tree (PVRST+)
- Switch-port auto recovery
- NetFlow Support or equivalent

5.2.9 WIRELESS

- Redundancy and automatic failover
- IPv6 compatibility
- NTP Support

Y for all below Y for all below
 Y for all below Y for all below
 Y for all below Y for all below

5.2.9.1 Access Points

- 802.11a/b/g/n
- 802.11n
- 802.11ac
- Capable of controller discovery method via DHCP (onsite controller or offsite through Cloud Architecture)
- UL2043 plenum rated for safe mounting in a variety of indoor environments
- Support AES-CCMP (128-bit)
- Provides real-time wireless intrusion monitoring and detection

5.2.9.2 Outdoor Wireless Access Points

- Flexible Deployment Options
- Provides real-time wireless intrusion monitoring and detection
- Capable of controller discovery method via DHCP (onsite controller or offsite through Cloud Architecture)

DAP-3690
 Y
 Y
 N

5.2.9.3 Wireless LAN Controllers

- Ability to monitor and mitigate RF interference/self-heal
- Support seamless roaming from AP to AP without requiring re-authentication
- Support configurable access control lists to filter traffic and denying wireless peer to peer traffic
- System encrypts all management layer traffic and passes it through a secure tunnel
- Policy management of users and devices provides ability to de-authorize or deny devices without denying the creden
- Support configurable access control lists to filter traffic and denying wireless peer to peer traffic

NOTICE

When submitting a response (proposal, quote or bid) electronically through BidSync, it is the sole responsibility of the supplier to ensure that the response is received by BidSync prior to the closing date and time. Each of the following steps in BidSync MUST be completed in order to place an offer:

- A. Login to www.bidsync.com;
- B. Locate the bid (solicitation) to which you are responding;
 - a. Click the "Search" tab on the top left of the page;
 - b. Enter keyword or bid (solicitation) number and click "Search";
- C. Click on the "Bid title/description" to open the Bid (solicitation) Information Page;
- D. "View and Accept" all documents in the document section;
- E. Select "Place Offer" found at the bottom of the page;
- F. Enter your pricing, notes, other required information and upload attachments to this page;
- G. Click "Submit" at the bottom of the page;
- H. Review Offer(s); and
- I. Enter your password and click "Confirm".

Note that the final step in submitting a response involves the supplier's acknowledgement that the information and documents entered into the BidSync system are accurate and represent the supplier's actual proposal, quote or bid. This acknowledgement is registered in BidSync when the supplier clicks "Confirm". BidSync will post a notice that the offer has been received. This notice from BidSync MUST be recorded prior to the closing date and time or the response will be considered late and will not be accepted.

Be aware that entering information and uploading documents into BidSync may take considerable time. Please allow sufficient time to complete the online forms and upload documents. Suppliers should not wait until the last minute to submit a response. It is recommended that suppliers submit responses a minimum of 24 hours prior to the closing deadline. The deadline for submitting information and documents will end at the closing time indicated in the solicitation. All information and documents must be fully entered, uploaded, acknowledged (Confirm) and recorded into BidSync before the closing time or the system will stop the process and the response will be considered late and will not be accepted.

Responses submitted in BidSync are completely secure. No one (including state purchasing staff) can see responses until after the deadline. Suppliers may modify or change their response at any time prior to the closing deadline. However, all modifications or changes must be completed and acknowledged (Confirm) in the BidSync system prior to the deadline. BidSync will post a notice that the modification/change (new offer) has been received. This notice from BidSync MUST be recorded prior to the closing date and time or the response will be considered late and will not be accepted.

Utah Code 46-4-402(2) Unless otherwise agreed between a sender (supplier) and the recipient (State Purchasing), an electronic record is received when: (a) it enters an information processing system that the recipient has designated or uses for the purpose of receiving electronic records or information of the type sent and from which the recipient is able to retrieve the electronic record; and (b) it is in a form capable of being processed by that system.

REQUEST FOR PROPOSAL - INSTRUCTIONS AND GENERAL PROVISIONS

1. SUBMITTING THE PROPOSAL: (a) The Utah Division of Purchasing and General Services (DIVISION) prefers that proposals be submitted electronically. Electronic proposals may be submitted through a secure mailbox at BidSync (formerly RFP Depot, LLC) (www.bidsync.com) until the date and time as indicated in this document. It is the sole responsibility of the supplier to ensure their proposal reaches BidSync before the closing date and time. There is no cost to the supplier to submit Utah's electronic proposals via BidSync. (b) Electronic proposals may require the uploading of electronic attachments. The submission of attachments containing embedded documents is prohibited. All documents should be attached as separate files. (c) If the supplier chooses to submit the proposal directly to the DIVISION in writing: The proposal must be signed in ink, sealed, and delivered to the Division of Purchasing, 3150 State Office Building, Capitol Hill, Salt Lake City, UT 84114-1061 by the "Due Date and Time." The "Solicitation Number" and "Due Date" must appear on the outside of the envelope. All prices and notations must be in ink or typewritten. Each item must be priced separately. Unit price shall be shown and a total price shall be entered for each item offered. Errors may be crossed out and corrections printed in ink or typewritten adjacent and must be initialed in ink by person signing offer. Unit price will govern, if there is an error in the extension. Written offers will be considered only if it is submitted on the forms provided by the DIVISION. (d) Proposals, modifications, or corrections received after the closing time on the "Due Date" will be considered late and handled in accordance with the Utah Procurement Rules, section R33-3-209. (e) Facsimile transmission of proposals to DIVISION will not be considered.

2. PROPOSAL PREPARATION: (a) Delivery time of products and services is critical and must be adhered to as specified. (b) Wherever in this document an item is defined by using a trade name of a manufacturer and/or model number, it is intended that the words, "or equivalent" apply. "Or equivalent" means any other brand that is equal in use, quality, economy and performance to the brand listed as determined by the DIVISION. If the supplier lists a trade name and/or catalog number in the offer, the DIVISION will assume the item meets the specifications unless the offer clearly states it is an alternate, and describes specifically how it differs from the item specified. All offers must include complete manufacturer's descriptive literature if quoting an equivalent product. All products are to be of new, unused condition, unless otherwise requested in this solicitation. (c) Incomplete proposals may be rejected. (d) Where applicable, all proposals must include complete manufacturer's descriptive literature. (e) By submitting the proposal the offeror certifies that all of the information provided is accurate, that they are willing and able to furnish the item(s) specified, and that prices offered are correct. (f) This proposal may not be withdrawn for a period of 60 days from the due date.

3. FREIGHT COST: Suppliers are to provide line item pricing FOB Destination Freight Prepaid. Unless otherwise indicated on the contract/purchase order, shipping terms will be FOB Destination Freight Prepaid.

4. SOLICITATION AMENDMENTS: All changes to this solicitation will be made through written addendum only. Answers to questions submitted through BidSync shall be considered addenda to the solicitation documents. Bidders are cautioned not to consider verbal modifications.

5. PROTECTED INFORMATION: Suppliers are required to mark any specific information contained in their offer which they are claiming as protected and not to be disclosed to the public or used for purposes other than the evaluation of the offer. Each request for non-disclosure must be made by completing the "Confidentiality Claim Form" located at: <http://www.purchasing.utah.gov/contract/documents/confidentialityclaimform.doc> with a specific justification explaining why the information is to be protected. Pricing and service elements of any proposal will not be considered proprietary. All material becomes the property of the DIVISION and may be returned only at the DIVISION's option.

6. BEST AND FINAL OFFERS: Discussions may be conducted with offerors who submit proposals determined to be reasonably susceptible of being selected for award for the purpose of assuring full understanding of, and responsiveness to, solicitation requirements. Prior to award, these offerors may be asked to submit best and final offers. In conducting discussions, there shall be no disclosure of any information derived from proposals submitted by a competing offeror.

7. SAMPLES: Samples of item(s) specified in this offer, brochures, etc., when required by the DIVISION, must be furnished free of expense to the DIVISION. Any item not destroyed by tests may, upon request made at the time the sample is furnished, be returned at the offeror's expense.

8. AWARD OF CONTRACT: (a) The contract will be awarded with reasonable promptness, by written notice, to the responsible offeror whose proposal is determined to be the most advantageous to the DIVISION, taking into consideration price and evaluation factors set forth in the RFP. No other factors or criteria will be used in the evaluation. The contract file shall contain the basis on which the award is made. Refer to Utah Code Annotated 65-

56-408. (b) The DIVISION may accept any item or group of items, or overall best offer. The DIVISION can reject any or all proposals, and it can waive any informality, or technicality in any proposal received, if the DIVISION believes it would serve the best interests of the DIVISION. (c) Before, or after, the award of a contract the DIVISION has the right to inspect the offeror's premises and all business records to determine the offeror's ability to meet contract requirements. (d) The DIVISION will open proposals publicly, identifying only the names of the offerors. During the evaluation process, proposals will be seen only by authorized DIVISION staff and those selected by DIVISION to evaluate the proposals. Following the award decision, all proposals become public information except for protected information (see number 5 above). A register of proposals and contract awards are posted at <http://purchasing.utah.gov/vendor/bidtab.html>. (e) Estimated quantities are for bidding purposes only, and not to be interpreted as a guarantee to purchase any amount. (f) Utah has a reciprocal preference law which will be applied against offerors offering products or services produced in states which discriminate against Utah products. For details see Section 63G-6-404 and 63G-6-405, Utah Code Annotated. (g) Multiple contracts may be awarded if the DIVISION determines it would be in its best interest.

9. DEBRIEFING OF UNSUCCESSFUL OFFERORS:

State Purchasing does not conduct face to face or teleconference debriefings. All debriefings are to be conducted in writing. A debrief request must be submitted in writing to the Purchasing Agent within seven (7) calendar days of the award notification or rejection notification made through written correspondence or posted on BidSync. The debrief response will be limited to critiquing the strength/weakness of an offeror's proposal based on the evaluation criteria. The debriefing is intended as a courtesy to offerors, providing feedback to be used for future opportunities. Comparisons between proposals or evaluations of other proposals will not be allowed.

10. DIVISION APPROVAL: Contracts written with the State of Utah, as a result of this proposal, will not be legally binding without the written approval of the Director of the DIVISION.

11. DEBARMENT: The CONTRACTOR certifies that neither it nor its principals are presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction (contract) by any governmental department or agency. If the CONTRACTOR cannot certify this statement, attach a written explanation for review by the DIVISION.

12. ENERGY CONSERVATION AND RECYCLED PRODUCTS: The contractor is encouraged to offer Energy Star certified products or products that meet FEMP (Federal Energy Management Program) standards for energy consumption. The State of Utah also encourages contractors to offer products that are produced with recycled materials, where appropriate, unless otherwise requested in this solicitation.

13. GOVERNING LAWS AND REGULATIONS: All State purchases are subject to the Utah Procurement Code, Title 63 Chapter 56 U.C.A. 1953, as amended, and the Procurement Rules as adopted by the Utah State Procurement Policy Board. These are available on the Internet at www.purchasing.utah.gov. By submitting a bid or offer, the bidder/offeror warrants that the bidder/offeror and any and all supplies, services equipment, and construction purchased by the State shall comply fully with all applicable Federal and State laws and regulations, including applicable licensure and certification requirements.

14. SALES TAX ID NUMBER: Utah Code Annotated (UCA) 59-12-106 requires anyone filing a bid with the state for the sale of tangible personal property or any other taxable transaction under UCA 59-12-103(1) to include their Utah sales tax license number with their bid. For information regarding a Utah sales tax license see the Utah State Tax Commission's website at www.tax.utah.gov/sales. The Tax Commission is located at 210 North 1950 West, Salt Lake City, UT 84134, and can be reached by phone at (801) 297-2200.

(Revision Date: 05 Nov 2012 - RFP Instructions)
