Title: Source analysis of an extended Egyptian Hieroglyphs repertoire (Hieroglyphica based)

Source: Michel Suignard

Status: Individual Contribution

Distribution: UTC

Summary: This document contains a source analysis of the Hieroglyphica set, an extended Egyptian Hieroglyph repertoire covering all periods from the classical period to the Greco-Roman period. Combined with the existing Egyptian Hieroglyphs it currently lists 7346 characters. While it is an update to a previous document (L2/16-079), it takes a different approach by analyzing the content of Hieroglyphica in context of other sources and proposing a new taxonomy. Once the principles concerning that taxonomy can be agreed on, a newer proposal for encoding can be moved forward.

Introduction

Egyptian hieroglyphs have evolved from a set slightly above 700 characters during most of the classical period (from Old Kingdom, Middle Kingdom, to New Kingdom) to a much larger repertoire in the Greco-Roman period. In that era, the number of hieroglyphic characters have exploded to a number close to 8000. Typically, that larger set is known as Ptolemaic, but this is a simplifying assumption as many of these extensions have been found to be in use in the classical periods as well.

The explosion in glyph diversity was also accompanied by an increase in the number of phonetic values that could be assigned to a single glyph, up to twenty or even more readings. Overall, deciphering late usage of the script has proven to be challenging.

This document does not pretend to describe in details the various complexities of the extended Egyptian Hieroglyphs and its usage. There are many publications on that subject, a bibliographic references section may be extended in a future version of this document.

The intent of this proposal is to set the base for the encoding of the extended set, allowing Egyptologists to communicate data in a unified encoding platform. Then each element of the extended set can be indexed in a database where additional information can be conveyed, related to the sound, semantic, sources, description, etc. In many aspects this is similar to the work done for the Han ideographs where many ancillary data elements are associated with each Han characters (commonly known as the 'Unihan' database).

A new Taxonomy

The first order is to establish a taxonomy to make an inventory of these 7000+ characters. There is a common agreement to use the A-Z grouping created by Gardiner, going from 'A:Man and his Occupations' to 'Z: Strokes, signs' or at least something similar. However, it becomes difficult to create meaningful sub-groups within these large groups when some of them go from 50-60 elements to over 600 elements. Furthermore, many characters being composed of multiple simpler characters can be set in different groups (for example characters associating a human with an animal or an object). At the end there is a large dose of arbitrary choice to be made when creating such taxonomy and an important goal is to use an existing one.

The author considered two models:

- Hieroglyphica as available in the publication and the related font
- IFAO (Institut Français d'Archéologie Orientale du Caire)

Hieroglyphica simply augments the Gardiner grouping by adding either horizontal extensions (in the A group, A1 is extended to A1A, A1B, A1C) and new numbers (in the same A group, the regular Gardiner A1 to A58 values are extended beyond A500). Similar characters can be located in different part of this extended set, making difficult to correlate (such as the A13 subgroup and the A214-A223 subgroups).

The IFAO grouping is more detailed in its sub-grouping. But, because the hieroglyphs have many attributes, criteria, no ideal taxonomy can be created. Even the IFAO indexing, which further decomposes each major Gardiner section into many sub-sections (such as the A section into more than 20 sub-sections), has many limitations which result from the fact that many entities can arbitrarily belong to different sub-sections. To avoid multiple catalog entries, IFAO has rules determining in which of the possible groups, one character should be located.

The previous version of this document (L2/16-079) did not endorse that taxonomy for various reasons (mostly for lack of a good font using, but also the status of the IFAO documentation itself). However, based on additional research, mainly the partial cross-reference done by Sylvie Cauville in the [Dendara] project, the IFAO taxonomy appears to be a workable solution and this document now endorses it.

The proposed taxonomy uses a three level classification. The higher level is a combination of the Gardiner A-Z (and Aa) classification and the IFAO chapter classification (I to XXX in roman notation). While IFAO has a few more items, they can be easily mapped into existing Gardiner groups (for example the Gods (Chapter III) and Goddesses (Chapter IV) can be combined in the Gardiner group C (Anthropomorphic Deities). The following is the list of the first level groups and their relationship with the IFAO groups:

Gardiner groups	IFAO (translated from French)
A. Man and his occupations	I. Men and monarchs
B. Woman and her occupations	II. Woman and monarchs
C. Anthropomorphic deities	III. Gods IV. Goddesses
D. Parts of the human body	V. Parts of the human body
E. Mammals	VI. Mammals
F. Parts of mammals	VII. Parts of mammals' body
G. Birds	VIII. Birds
H. Parts of birds	IX. Part of birds
I. Amphibious animals, reptiles, etc.	X. Reptiles, Amphibians
K. Fishes and parts of fishes	XI. Fishes and parts of fish
L. Invertabrata and lesser animals	XII. Insects and arachnids
M. Trees and plants	XIII. Vegetal
N. Sky, earth, water	XIV. Sky, earth, water
O. Buildings, parts of buildings, etc.	XV. Edifices and parts of edifices
P. Ships and part of ships	XVI. Ships and part of ships
Q. Domestic and funerary furniture	XVII. Every day and funeral furniture
R. Temple furniture and sacred emblems	XVIII. Temple furniture
S. Crowns, dresses, staves, etc.	XIX. Crowns XX. Jewels, clothes, sticks
T. Warfare, hunting, butchery	XXII. Warfare, hunting, fishery, butchery
U. Agriculture, crafts, and professions	XXI. Agriculture and shop tools
V. Rope, fiber, baskets, bags, etc.	XXIII. Ropes, baskets, bags
W. Vessels of stone and earthenware	XXIV. Vases
X. Loaves and cakes	XXV. Bread loaves
Y. Writing, games, music	XXVI. Writing, games, and music

Gardiner groups	IFAO (translated from French)
Z. Strokes, signs derived from Hieratic, geometrical figures	XXVII. Geometric shapes
AA. Unclassified	XXVIII. Ill-defined signs

Note: IFAO Chapter XXIX (Uncertain identity signs) and Chapter XXX (Conventional signs) are not used because they have no known references in the Hieroglyphica set. The order of the A-Z and I to XXVIII lists is identical except for the inversion of the 2 groups T-U and XXI-XXII.

To facilitate the transition from the current Gardiner taxonomy, it seems preferable to keep the same naming convention A to Z for the higher level, to not use J either, and to put the uncertain code points in the group 'AA'.

The second level uses the IFAO classification into each chapter to further enumerate the content of each of these chapters. For example, the IFAO classification for A: Man and his Occupations has the following categories (translated from French):

Men and Rulers (homme et souverains)

1. Man seated or kneeling empty handed (homme assis ou agenouillé les mains vides)
2. Man standing empty handed (homme debout les mains vides)
3. Man, head down (homme, la tête en bas)
4. Man adoring or bent (homme adorant ou penché)
5. Man on the ground or in water (homme à terre ou dans l'eau)
6. Man standing, holding a stick (homme debout, tenant un bâton)
7. Man seated or kneeling, holding something (homme assis ou agenouillé, portant quelque chose)
8. Man standing, holding something (homme debout, portant quelque chose)
9. Man seated, pouring water (homme assis, versant de l'eau)
10. Man standing, pouring water (homme debout, versant de l'eau)
11. Man hiding (homme se cachant)
12. Man working (homme au travail)
13. Shepherd and porter (berger et portier)
14. Man carrying a balluchon (homme portant un baluchon)
15. Man standing, composed with a hieroglyphic sign (homme debout, en composition avec un signe hiéroglyphique)
16. Man holding a weapon (homme tenant une arme)
17. Soldier (soldat)
18. Prisoner and enemy (prisonnier et ennemi)
19. Dancer and acrobat (danseur et acrobates)
20. Musician (musicien)
21. Man and animal (homme et animal)
22. Man in a boat (homme dans un bateau)
23. Child (enfant)
24. Dwarf (nain)
25. Notable seated on a chair (notable assis sur un siège)
26. King or god seated without crown (Roi ou dieu assis sans couronne)
27. King or god standing without crown (Roi ou dieu debout sans couronne)
28. King wearing the white crown (Roi portant la couronne blanche)
29. King wearing the red crown (Roi portant la couronne rouge)
30. King wearing another crown (Roi portant une autre couronne)
31. Dead person kneeling (défunt agenouillé)
32. Mummy (momie)
33. Statue (statue)

This categorization is used in the new taxonomy, with just one additional value (34. Man, varia) added to cover glyphs described that are not attributable to any of the previous sub-groups. All approximately 500 members of this second level groups are listed in Annex A. Once these members are created, they are immutable, i.e. they cannot be removed or renumbered. However, new members can be created in each of the A-Z-AA first level group if such need arises.

Finally, the glyphs from Hieroglyphica have been mapped into each of these 2nd level sub-groups to create the 3rd level content, the following table shows an example for the sub-group S02 which currently contains 9 members (1st column shows an index, 2nd the catalog number used in L2/16-079, 3rd: glyph, 4th draft UCS code point from L2/16-079, 5th: Gardiner source, 6th: UniKemet index, 7th Hieroglyphica, 8th Hieroglyphica extension, 9th Douros extension, 10th Cauville reference, 11th: IFAO):

S02. Crown type 2 (S3)

5803	H-S003		132D4	S3	S003	S3	192,4	367,1
5909	H-S050		14B51			S50	199,7	367,3
5804	H-S004		132D5	S4	S004	S4		367,5
5911	H-S051		14B52			S51		367,7
5912	H-S051A		14B53			S51A		367,8
5913	H-S052		14B54			S52		367,9
5910	H-S050A		132D8		S006A	S50A S6A		
6078	H-S173		14BF4			S173		
6087	H-S183		14BFD			S183	204,8	

The IFAO classification for this sub-group S02 has 3 holes (367,2; 367,4; and 367,6) which correspond to mirror images and thus do not necessitate specific entries. Then, some issues arise like:

- Should the 7th entry be preserved or unified with the second one?
- Where to insert the additional entries? Interspersed or at the end (like having the currently 7th entry after the 2nd or as it is).
- Should we maintain entries for IFAO index values not yet part of the new taxonomy content and that are distinct?

An example of the naming scheme looks like S-02-003, which would be the third member of the sub-group 2: 'Crown type 2 (S3)' within the group S: 'Crowns, dresses, staves, etc.'. The possible confusion with the original Gardiner classification is diminished by using hyphen between each level notation (the 3-digit notation for the 3rd level is required because some sub-groups (such as G11: Falcon) have more than 99 members).

Therefore, proposed format for the names is as follows:

((A-IK-Z){1}|AA)-(0-9){2}-(0-9){3}

The definition could be simplified by using 'J' instead of AA, leading to (A-Z){1}-(0-9){2}-(0-9){3}, the only disadvantage being the insertion of the 'unclassified' in the middle of the range.

Taxonomy applied to the Hieroglyphica set

Having defined a taxonomy, the next step is to validate it by applying it to the target set which is the Hieroglyphica set, slightly augmented by extensions found in implemented fonts (the set is the base of document L2/16-079).

Annex B contains a preliminary result of that exercise which consists in mapping the Hieroglyphica set into the IFAO classification. It was found that among the 7346 characters of the extended Hieroglyphica set, 3955 have a tentative mapping into IFAO. In addition to the mapping into IFAO, the referencing done in [Dendara] is also reported in Annex B. This in itself would add justification for hundreds more of them.

The process led to several moves between A-Z groups within Hieroglyphica; it was found that there were many classification issues. Using the Cauville Hieroglyphica-IFAO referencing was a major help in getting this work done, even if sometimes the mapping decisions ended up being slightly different.

Another consideration was that while IFAO is a glyph repository and as such has some unnecessary duplicates from a character encoding point of view, the original Hieroglyphica creator did not create in the Hieroglyphica most of these duplicates. Therefore, there are few variants in the matched set where only the size or orientation are distinct.

Encoding Proposal

Unlike L2/6-079, this document does not propose to encode the full Hieroglyphica set at once. The new taxonomy makes much easier to insert new code points in a meaningful staged approach. While the encoding of similar characters may not be contiguous (that is already not possible because 1071 of them were encoded in the current Egyptian Hieroglyphs block), the taxonomy will make easy to identify later updates as part of the 'same' sub-group.

At this point, the subset of the 3955 characters that already have a mapping into IFAO and are not yet encoded in the existing Egyptian Hieroglyphs block is a prime candidate for encoding. In addition, all the additional characters not part of IFAO but referenced by an external source such as [Dendara] are also good candidates.

Also unlike L2/06-079, this document does not include code charts and name lists, instead it presents in its annex B a first approach of the Egyptian Hieroglyph database. Some of the elements presented in that annex are temporary and will disappear in future versions. For now, the following information for each entry is provided

- Index from 1 to 7345 corresponding to entry in the Hieroglyphica extended set (one is used twice)
- Catalog number, deprecated, was used in L2/16-079
- Glyph,
- UCS, code point temporarily assigned for code point above U+13430, code points below that value are already encoded.
- Gardiner 1957 references
- Unikemet references,
- Hieroglyphica reference,
- Hieroglyphica extension reference,
- Douros extension reference,
- Cauville (Dendara) reference (page number, index in page)
- IFAO reference (page number, index in page)
- Comment

As such it is an early prototype of the model that was proposed in L2/16-079, for reference:

- 1) Catalog Information with the following fields:
 - Primary catalog number – This is the reference used in the character names in the extended blocks in the HG-zzzzz
 - IFAO – in the form of page number, number in page
 - Cauville – in the form of page number, order in page
 - Gardiner – original Gardiner catalog identifier
 - Kurth – in the form of group number, page number, number in group,
 - Val Phon -

- Hieroglyphica – catalog identifier
 - Hieroglyphica extended – catalog identifier
 - Unikemet – catalog identifier
 - Douros – catalog identifier
- 2) Other Data
- Description – free form description of the glyph
 - Components – list of all glyph components
 - Determinative – typically indicates end of word and meaning
 - Logograph (or logogram) – indicates word
 - Phoneme (or phonogram) – indicates one or more sound
 - Variants – similar entries

At this point, it would be trivial to mechanically create a name list and code charts corresponding to the entries that have already IFAO sources and a Dendara (Cauville) reference. But before that, another pass needs to be made to improve the mapping between Hieroglyphica and IFAO.

Current issues

Some issues are still the same since L2/16-079 was generated:

1) Variants

Many characters look like variant of each other, some more than other. Because we have now a multi-stage approach for the encoding it is not as critical to encode variants. In fact, many quasi-duplicates have been detected during the mapping work and these should not be encoded multiple times.

2) Glyph variations with the original glyphs used in the existing Egyptian Hieroglyphs block

Part of the issue is to determine what is the preferred glyph for the original 760 glyphs that constitute the Egyptian Hieroglyphs core set. There are many differences between the Hieroglyphica version and original font used for the previous version of the code charts. The following tables shows these differences.

The first table shows the case where the original glyph from the Egyptian Hieroglyph block has not been preserved but considered close enough that a new reference was not necessary to encode them separately.

Original glyph and catalog number (currently in Unicode)	Updated glyph and its catalog number (from Hieroglyphica)
 A017A	 A17A
 F034	 F34
 G010	 G10
 M041	 M41
 N037A	 N37A
 O031	 O31

The second table shows a similar case (original glyph not preserved), but the reference number has been changed because Hieroglyphica used a catalog number not compatible with the original catalog number used in the Egyptian Hieroglyph block.

Original glyph and catalog number (currently in Unicode)	Updated glyph and its catalog number (from Hieroglyphica)
 A064	 A116
 D031A	 D374
 NL007	 T84E
 NL008	 T128B
 NU022	 T141
 S046	 S56

The third table shows cases where the glyph from the original Egyptian Hieroglyph block and the glyph from the Hieroglyphica font with the same catalog number differ and the glyph in the original block was preserved in principle. As a consequence, the original Hieroglyphica glyph should be encoded at a new code point position.

Original glyph and catalog number (currently in Unicode)	Equivalent Hieroglyphica glyph	Other glyph

Others are related to the new taxonomy:

- Should differences between the original Gardiner glyphs and nominal IFAO/Hieroglyphica be encoded as separate characters? It is quite common that the Gardiner glyphs differ from IFAO. It is not always clear which one is the preferred form, and if both should be preserved. For now, different entries are used.
- Should we maintain entries for IFAO index values not yet part of the new taxonomy and that are distinct? For example, the very first IFAO entry (1.1) does not have an equivalent in Hieroglyphica or in the original Gardiner set (In 1.1 the hand slightly looks different, and IFAO maintain a slight differentiation between 1.1 and 1.3 for the forearm angle). It does not mean that the distinct entries will be encoded, but they may have distinct spots in the taxonomy.
- Where to insert the additional entries? Interspersed or at the end? Again in the first group, it could make sense to keep the similar glyphs together (like keeping all glyphs similar to the IFAO glyphs from 1.1 to 1.8 close to those entries). The issue becomes more acute in large sub-groups (with 50 or more members). The first group is shown below:

- How to maintain IFAO taxonomy principle for extension? IFAO provides some principle for compound signs to determine which part of the compound sign should be used to classify the glyph:
 - o Container preempts sign contained inside,
 - o Signs are classed in order of reading order (difficult to maintain by this author),
 - o Vertical sign preempts horizontal sign

Typically, the process has been to look at existing cases to determine an underlying logic, not always explicitly described in IFAO. Even in few cases, the IFAO classification has not been followed because it was unexpected (for example IFAO 393,12 is classified along the Birds section, in the G08 sub-group (Owl), not the Tools section U.1 because most would expect to see that glyph in the bird section. This deviation could however be undone to adhere strictly to the IFAO model.

Correlation with the proposal to encode more Möller's sourced characters

Another document, [L2/16-250], authored by Michael Everson, is proposing an extension to the Egyptian Hieroglyphs by adding 146 characters to the Egyptian Hieroglyphs (one code point in the existing block, the other 145 in a new extended block). The extended set is made of 125 characters included in the usual Gardiner index (A-Z, AA) and 21 'uncertain' characters. A vast majority of the first 125 characters are already included in both the Hieroglyphica set and IFAO, and therefore part of what would be the first batch of an encoding proposal based on this new Taxonomy.

The same document is also advocating for the continuation of the same naming scheme used in the original Egyptian Hieroglyphs block. The IFAO catalog in its preamble shows the limitation of such a naming scheme when the set goes from 600-1000 to 7000 or 8000. Some of that rationale is repeated here in the introduction of the new taxonomy. The Appendix B of this document should demonstrate by example, how superior an IFAO based taxonomy can be to describe a large Egyptian Hieroglyphs set. In addition, the database scheme proposed here can be extended to add any new sources as appropriate, including Unikemet itself, or its internal references. The Database model proposed here is similar to what is done in CJK with Unihan, where new fields can be created when new information becomes available for an encoded character.

Conclusion

The work presented in this document is still very preliminary and some of the information is still presented in a very rough format. For example, the mapping between Hieroglyphica and IFAO is far from complete. But because that work is time-consuming, the author wants to validate the approach before engaging in a more refined version of this proposal. However, the base is now a spreadsheet containing all the pertinent information which can be used to extract correlation points and can be augmented easily with ancillary data to make encoding decision easier as well as facilitate search in this vast set.

The author wants to thank the following persons for their contribution to the effort: Debbie Anderson and Ken Whistler for their kind feedback to the previous drafts, Jochen Hallof and Barbara Richter for their contribution to the determination of the mapping to the existing encoded Egyptian hieroglyphs as well as the additional extensions beyond the original Hieroglyphica set. In addition, Barbara Richter and Debbie Anderson provided many documents helping the creation of this draft proposal. Important other resources were the original Egyptian Hieroglyphs proposal created by Michael Everson, as well as the Aegyptus font created by George Douros.

The proposal also benefited from discussions and ideas exchanged with many other Egyptologists during a meeting held in Cambridge, UK in July 2016.
