## Description

Side view

**DVM16E2S8/8G** is an unbuffered 1Gx72 memory module, which conforms to JEDEC's DDR3, PC3-12800 standard. The assembly is Dual Rank. Each rank is comprised of nine 512Mx8 DDR3 SDRAMs.

One EEPROM is used for Serial Presence Detect and a combination register/PLL, with Address and Command Parity, is also used.

Both output driver strength and input termination impedance are programmable to maintain signal integrity on the I/O signals in a Fly-by topology.

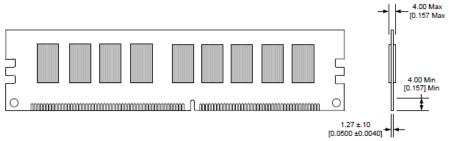

A thermal sensor accurately monitors the DIMM module and can prevent exceeding the maximum operating temperature of 95C.
