THE
IDLER.

Nº 85. SATURDAY, DECEMBER 1, 1759.

ONE of the peculiarities which distinguish the present age is the multiplication of books. Every day brings new advertisements of literary undertakings, and we are flattered with repeated promises of growing wise on easier terms than our progenitors.

How much either happiness or knowledge is advanced by this multitude of authors, it is not very easy to decide.

He that teaches us any thing which we knew not before, is undoubtedly to be revered as a master.

He that conveys knowledge by more pleasing ways, may very properly be loved as a benefactor; and he that supplies life with innocent amusement, will be certainly caressed as a pleasing companion.

But few of those who fill the world with books have any pretensions to the hope either of pleasing or instructing. They have often no other task than to lay two books before them, out of which

they compile a third, without any new materials of their own, and with very little application of judgment to those which former authors have supplied.

That all compilations are useless I do not assert. Particles of science are often very widely scattered. Writers of extensive comprehension have incidental remarks upon topicks very remote from the principal subject, which are often more valuable than formal treatises, and which yet are not known because they are not promised in the title. He that collects those under proper heads is very laudably employed, for though he exerts no great abilities in the work, he facilitates the progress of others, and by making that easy of attainment which is already written, may give some mind, more vigorous or more adventurous than his own, leisure for new thoughts and original designs.

But the collections poured lately from the press have been seldom made at any great expence of time or inquiry, and therefore only serve to distract choice without supplying any real want.

It is observed that *a corrupt society has many laws*; I know not whether it is not equally true, that *an ignorant age has many books*. When the treasures of ancient knowledge lie unexamined, and original authors are neglected and forgotten, compilers and plagiaries are encouraged, who give us again what we had before, and grow great by setting before us what our own sloth had hidden from our view.

Yet are not even these writers to be indiscriminately censured and rejected. Truth, like beauty, varies its fashions, and is best recommended by different dresses to different minds; and he that recalls the attention of mankind to any part of learning which time has left behind it, may be truly said

to advance the literature of his own age. As the manners of nations vary, new topics of persuasion become necessary, and new combinations of imagery are produced; and he that can accommodate himself to the reigning taste, may always have readers who perhaps would not have looked upon better performances.

To exact of every man who writes that he should say something new, would be to reduce authors to a small number; to oblige the most fertile genius to say only what is new would be to contract his volumes to a few pages. Yet, surely, there ought to be some bounds to repetition; libraries ought no more to be heaped for ever with the same thoughts differently expressed, than with the same books differently decorated.

The good or evil which these secondary writers produce is seldom of any long duration. As they owe their existence to change of fashion, they commonly disappear when a new fashion becomes prevalent. The authors that in any nation last from age to age are very few, because there are very few that have any other claim to notice than that they catch hold on present curiosity, and gratify some accidental desire, or produce some temporary convenience.

But however the writers of the day may despair of future fame, they ought at least to forbear any present mischief. Though they cannot arrive at eminent heights of excellence, they might keep themselves harmless. They might take care to inform themselves before they attempt to inform others, and exert the little influence which they have for honest purposes.

But such is the present state of our literature, that the ancient sage, who thought *a great book a great evil*, would now think the multitude of books a multitude of evils. He would consider a bulky writer who engrossed a year, and a swarm of pamphleteers who stole each an hour, as equal wasters of human life, and would make no other difference between them, than between a beast of prey and a flight of locusts.

N^o 86. SATURDAY, DECEMBER 8, 1759.

TO THE IDLER.

SIR,

I AM a young lady newly married to a young gentleman. Our fortune is large, our minds are vacant, our dispositions gay, our acquaintances numerous, and our relations splendid. We considered that marriage, like life, has its youth; that the first year is the year of gaiety and revel, and resolved to see the shows and feel the joys of London before the increase of our family should confine us to domestick cares and domestick pleasures.

Little time was spent in preparation; the coach was harnessed, and a few days brought us to London, and we alighted at a lodging provided for us by Miss *Biddy Trifle*, a maiden niece of my husband's father, where we found apartments on a

second floor, which my cousin told us would serve us till we could please ourselves with a more commodious and elegant habitation, and which she had taken at a very high price, because it was not worth the while to make a hard bargain for so short a time.

Here I intended to lie concealed till my new clothes were made, and my new lodging hired; but Miss *Trifle* had so industriously given notice of our arrival to all her acquaintance, that I had the mortification next day of seeing the door thronged with painted coaches and chairs with coronets, and was obliged to receive all my husband's relations on a second floor.

Inconveniences are often balanced by some advantage: the elevation of my apartments furnished a subject for conversation, which, without some such help, we should have been in danger of wanting. Lady *Stately* told us how many years had passed since she climbed so many steps. Miss *Airy* ran to the window, and thought it charming to see the walkers so little in the street; and Miss *Gentle* went to try the same experiment, and screamed to find herself so far above the ground.

They all knew that we intended to remove, and therefore all gave me advice about a proper choice. One street was recommended for the purity of its air, another for its freedom from noise, another for its nearness to the park, another because there was but a step from it to all places of diversion, and another, because its inhabitants enjoyed at once the town and country.

I had civility enough to hear every recommendation with a look of curiosity while it was made;

and of acquiescence when it was concluded, but in my heart felt no other desire than to be free from the disgrace of a second floor, and cared little where I should fix, if the apartments were spacious and splendid.

Next day a chariot was hired, and *Miss Trifle* was dispatched to find a lodging. She returned in the afternoon, with an account of a charming place, to which my husband went in the morning to make the contract. Being young and unexperienced, he took with him his friend *Ned Quick*, a gentleman of great skill in rooms and furniture, who sees, at a single glance, whatever there is to be ecommended or censured. Mr *Quick*, at the first view of the house, declared that it could not be inhabited, for the sun in the afternoon shone with full glare on the windows of the dining-room.

Miss Trifle went out again and soon discovered another lodging, which Mr *Quick* went to survey, and found, that, whenever the wind should blow from the east, all the smoke of the city would be driven upon it.

A magnificent set of rooms was then found in one of the streets near Westminster-Bridge, which *Miss Trifle* preferred to any which she had yet seen; but Mr *Quick*, having mused upon it for a time, concluded that it would be too much exposed in the morning to the fogs that rise from the river.

Thus Mr *Quick* proceeded to give us every day new testimonies of his taste and circumspection; sometimes the street was too narrow for a double range of coaches; sometimes it was an obscure place, not inhabited by persons of quality. Some places were dirty, and some crowded; in some houses

the furniture was ill-suited, and in others the stairs were too narrow. He had such fertility of objections that Miss *Trifle* was at last tired, and desisted from all attempts for our accommodation.

In the mean time I have still continued to see my company on a second floor, and am asked twenty times a day when I am to leave those odious lodgings, in which I live tumultuously without pleasure, and expensively without honour. My husband thinks so highly of Mr *Quick*, that he cannot be persuaded to remove without his approbation; and Mr *Quick* thinks his reputation raised by the multiplication of difficulties.

In this distress to whom can I have recourse? I find my temper vitiated by daily disappointment, by the sight of pleasures which I cannot partake, and the possession of riches which I cannot enjoy. Dear Mr *Idler*, inform my husband that he is trifling away, in superfluous vexation, the few months which custom has appropriated to delight; that matrimonial quarrels are not easily reconciled between those that have no children; that wherever we settle he must always find some inconvenience; but nothing is so much to be avoided as a perpetual state of inquiry and suspense.

I am, SIR,

Your humble servant,

PEGGY HEARTLESS.

N° 87. SATURDAY, DECEMBER 15, 1759.

OF what we know not, we can only judge by what we know. Every novelty appears more wonderful as it is more remote from any thing with which experience or testimony have hitherto acquainted us; and if it passes further beyond the notions that we have been accustomed to form, it becomes at last incredible.

We seldom consider that human knowledge is very narrow, that national manners are formed by chance, that uncommon conjectures of causes produce rare effects, or that what is impossible at one time or place may yet happen in another. It is always easier to deny than to inquire. To refuse credit confers for a moment an appearance of superiority, which every little mind is tempted to assume when it may be gained so cheaply as by withdrawing attention from evidence, and declining the fatigue of comparing probabilities. The most pertinacious and vehement demonstrator may be wearied in time by continual negation; and incredulity, which an old poet, in his address to Raleigh, calls *the wit of fools*, obtunds the argument which it cannot answer, as woolsacks deaden arrows though they cannot repel them.

Many relations of travellers have been slighted as fabulous, till more frequent voyages have confirmed their veracity; and it may reasonably be ima-

gined, that many ancient historians are unjustly suspected of falsehood, because our own times afford nothing that resembles what they tell.

Had only the writers of antiquity informed us that there was once a nation in which the wife lay down upon the burning pile only to mix her ashes with those of her husband, we should have thought it a tale to be told with that of Endymion's commerce with the Moon. Had only a single traveller related that many nations of the earth were black, we should have thought the account of the *Negroes* and of the *Phenix* equally credible. But of black men the numbers are too great who are now repining under English cruelty, and the custom of voluntary cremation is not yet lost among the ladies of India.

Few narratives will either to men or women appear more incredible than the histories of the *Amazons*; of female nations of whose constitution it was the essential and fundamental law, to exclude men from all participation either of publick affairs or domestick business; where Female armies marched under female captains, female farmers gathered the harvest, female partners danced together, and female wits diverted one another.

Yet several ages of antiquity have transmitted accounts of the *Amazons* of Caucasus; and of the *Amazons* of America, who have given their name to the greatest river in the world, Condamine lately found such memorials, as can be expected among erratick and unlettered nations, where events are recorded only by tradition, and new swarms settling in the country from time to time, confuse and efface all traces of former times.

To die with husbands, or to live without them, are the two extremes which the prudence and moderation of European ladies have, in all ages, equally declined; they have never been allured to death by the kindness or civility of the politest nations, nor has the roughness and brutality of more savage countries ever provoked them to doom their male associates to irrevocable banishment. The Bohemian matrons are said to have made one short struggle for superiority, but instead of banishing the men, they contented themselves with condemning them to servile offices; and their constitution thus left imperfect, was quickly overthrown.

There is, I think, no class of English women from whom we are in any danger of *Amazonian* usurpation. The old maids seem nearest to independence, and most likely to be animated by revenge against masculine authority; they often speak of men with acrimonious vehemence, but it is seldom found that they have any settled hatred against them, and it is yet more rarely observed that they have any kindness for each other. They will not easily combine in any plot; and if they should ever agree to retire and fortify themselves in castles or in mountains, the sentinel will betray the passes in spite, and the garrison will capitulate upon easy terms, if the besiegers have handsome sword-knots, and are well supplied with fringe and lace.

The gamesters, if they were united, would make a formidable body; and since they consider men only as beings that are to lose their money, they might live together without any wish for the officiousness of gllantary or the delights of diversified

conversation. But as nothing would hold them together but the hope of plundering one another, their government would fail from the defect of its principles, the men would need only to neglect them, and they would perish in a few weeks by a civil war

I do not mean to censure the ladies of England as defective in knowledge or in spirit, when I suppose them unlikely to revive the military honours of their sex. The character of the ancient *Amazons* was rather terrible than lovely; the hand could not be very delicate that was only employed in drawing the bow and brandishing the battle-axe; their power was maintained by cruelty, their courage was deformed by ferocity, and their example only shews that men and women live best together.

N^o 88. SATURDAY, DECEMBER 22, 1759.

WHEN the philosophers of the last age were first congregated into the Royal-Society, great expectations were raised of the sudden progress of useful arts; the time was supposed to be near, when engines should turn by a perpetual motion, and health be secured by the universal medicine; when learning should be facilitated by a real character,

and commerce extended by ships which could reach their ports in defiance of the tempest.

But improvement is naturally slow. The Society met and parted without any visible diminution of the miseries of life. The gout and stone were still painful, the ground that was not ploughed brought no harvest, and neither oranges nor grapes would grow upon the hawthorn. At last, those who were disappointed began to be angry; those likewise who hated innovation were glad to gain an opportunity of ridiculing men who had depreciated, perhaps with too much arrogance, the knowledge of antiquity. And it appears from some of their earliest apologies, that the philosophers felt with great sensibility the unwelcome importunities of those who were daily asking, "What have ye done?"

The truth is, that little had been done compared with what fame had been suffered to promise; and the question could only be answered by general apologies and by new hopes, which, when they were frustrated, gave a new occasion to the same vexatious inquiry.

This fatal question has disturbed the quiet of many other minds. He that in the latter part of his life too strictly inquires what he has done, can very seldom receive from his own heart such an account as will give him satisfaction.

We do not indeed so often disappoint others as ourselves. We not only think more highly than others of our own abilities, but allow ourselves to form hopes which we never communicate, and please our thoughts with employments which none ever will allot us, and with elevations to which we are

never expected to rise; and when our days and years have passed away in common business, or common amusements, and we find at last that we have suffered our purposes to sleep till the time of action is past, we are reproached only by our own reflections; neither our friends nor our enemies wonder that we live and die like the rest of mankind; that we live without notice, and die without memorial; they know not what task we had proposed, and therefore cannot discern whether it is finished.

He that compares what he has done with what he has left undone, will feel the effect which must always follow the comparison of imagination with reality; he will look with contempt on his own unimportance, and wonder to what purpose he came into the world; he will repine that he shall leave behind him no evidence of his having been, that he has added nothing to the system of life, but has glided from youth to age among the crowd, without any effort for distinction.

Man is seldom willing to let fall the opinion of his own dignity, or to believe that he does little only because every individual is a very little being. He is better content to want diligence than power, and sooner confesses the depravity of his will than the imbecility of his nature.

From this mistaken notion of human greatness it proceeds, that many who pretend to have made great advances in wisdom so loudly declare that they despise themselves. If I had ever found any of the self-contemners much irritated or pained by the consciousness of their meanness, I should have given them consolation by observing, that a little more than nothing is as much as can be expected

from a being, who, with respect to the multitudes about him, is himself little more than nothing. Every man is obliged, by the Supreme Master of the universe, to improve all the opportunities of good which are afforded him, and to keep in continual activity such abilities as are bestowed upon him. But he has no reason to repine, though his abilities are small and his opportunities few. He that has improved the virtue, or advanced the happiness of one fellow-creature, he that has ascertained a single moral proposition, or added one useful experiment to natural knowledge, may be contented with his own performance, and, with respect to mortals like himself, may demand, like *Augustus*, to be dismissed, at his departure, with applause.

N° 89. SATURDAY, DECEMBER 29, 1759.

Ἄνιχος καὶ ἀπέχου.

ΕΠΙCT.

HOW evil came into the world; for what reason it is that life is overspread with such boundless varieties of misery; why the only thinking being of this globe is doomed to think merely to be wretched, and to pass his time from youth to age in fearing or in suffering calamities, is a question which philosophers have long asked, and which philosophy could never answer.

Religion informs us that misery and sin were produced together. The depravation of human will was followed by a disorder of the harmony of nature; and by that providence which often places antitodes in the neighbourhood of poisons, vice was checked by misery, lest it should swell to universal and unlimited dominion.

A state of innocence and happiness is so remote from all that we have ever seen, that though we can easily conceive it possible, and may therefore hope to attain it, yet our speculations upon it must be general and confused. We can discover that where there is universal innocence, there will probably be universal happiness; for why should afflictions be permitted to infest beings who are not in danger of corruption from blessings, and where there is no use of terror nor cause of punishment? But in a world like ours, where our senses assault us, and our hearts betray us, we should pass on from crime to crime, heedless and remorseless, if misery did not stand in our way, and our own pains admonish us of our folly.

Almost all the moral good which is left among us, is the apparent effect of physical evil.

Goodness is divided by divines into soberness, righteousness, and godliness. Let it be examined how each of these duties would be practised if there were no physical evil to enforce it.

Sobriety, or temperance, is nothing but the forbearance of pleasure; and if pleasure was not followed by pain, who would forbear it? We see every hour those in whom the desire of present indulgence overpowers all sense of past and all foresight of future misery. In a remission of the gout, the drunk-

ard returns to his wine, and the glutton to his feast ; and if neither disease nor poverty were felt or dreaded, every one would sink down in idle sensuality, without any care of others, or of himself. To eat and drink, and lie down to sleep, would be the whole business of mankind.

Righteousness, or the system of social duty, may be subdivided into justice and charity. Of justice one of the Heathen sages has shewn, with great acuteness, that it was impressed upon mankind only by the inconveniences which injustice had produced. “ In the first ages,” says he, “ men “ acted without any rule but the impulse of desire ; they practised injustice upon others, and “ suffered it from others in their turn ; but in time “ it was discovered, that the pain of suffering “ wrong was greater than the pleasure of doing it ; “ and mankind, by a general compact, submitted “ to the restraint of laws, and resigned the pleasure to escape the pain.”

Of charity it is superfluous to observe, that it could have no place if there were no want ; for of a virtue which could not be practised, the omission could not be culpable. Evil is not only the occasional but the efficient cause of charity ; we are incited to the relief of misery by the consciousness that we have the same nature with the sufferer, that we are in danger of the same distresses, and may sometimes implore the same assistance.

Godliness, or piety, is elevation of the mind towards the Supreme Being, and extension of the thoughts of another life. The other life is future, and the Supreme Being is invisible. None would have recourse to an invisible power, but that all

other subjects have eluded their hopes. None would fix their attention upon the future, but that they are discontented with the present. If the senses were feasted with perpetual pleasure, they would always keep the mind in subjection. Reason has no authority over us, but by its power to warn us against evil.

In childhood, while our minds are yet unoccupied, religion is impressed upon them, and the first years of almost all who have been well educated are passed in a regular discharge of the duties of piety. But as we advance forward into the crowds of life, innumerable delights solicit our inclinations, and innumerable cares distract our attention; the time of youth is passed in noisy frolicks; manhood is led on from hope to hope, and from project to project; the dissoluteness of pleasure, the inebriation of success, the ardour of expectation, and the vehemence of competition, chain down the mind alike to the present scene, nor is it remembered how soon this mist of trifles must be scattered, and the bubbles that float upon the rivulet of life be lost for ever in the gulph of eternity. To this consideration scarcely any man is awakened but by some pressing and resistless evil. The death of those from whom he derived his pleasures, or to whom he destined his possessions, some disease which shews him the vanity of all external acquisitions, or the gloom of age, which intercepts his prospects of long enjoyment, forces him to fix his hopes upon another state, and when he has contended with the tempests of life till his strength fails him, he flies at last to the shelter of religion.

That misery does not make all virtuous, expe-

rience too certainly informs us ; but it is no less certain that of what virtue there is, misery produces far the greater part. Physical evil may be therefore endured with patience, since it is the cause of moral good ; and patience itself is one virtue by which we are prepared for that state in which evil shall be no more.

N^o 90. SATURDAY, JANUARY 5, 1760.

IT is a complaint which has been made from time to time, and which seems to have lately become more frequent, that English oratory, however forcible in argument, or elegant in expression, is deficient and inefficacious, because our speakers want the grace and energy of action.

Among the numerous projectors who are desirous to refine our manners, and improve our faculties, some are willing to supply the deficiency of our speakers. We have had more than one exhortation to study the neglected art of moving the passions, and have been encouraged to believe that our tongues, however feeble in themselves, may, by the help of our hands and legs, obtain an uncontrollable dominion over the most stubborn audience, animate the insensible, engage the careless, force tears from the obdurate, and money from the avaricious.

If by sleight of hand, or nimbleness of foot, all

these wonders can be performed, he that shall neglect to attain the free use of his limbs may be justly censured as criminally lazy. But I am afraid that no specimen of such effects will easily be shewn. If I could once find a speaker in Change-Alley raising the price of stocks by the power of persuasive gestures, I should very zealously recommend the study of his art; but having never seen any action by which language was much assisted, I have been hitherto inclined to doubt whether my countrymen are not blamed too hastily for their calm and motionless utterance.

Foreigners of many nations accompany their speech with action; but why should their example have more influence upon us than ours upon them? Customs are not to be changed but for better. Let those who desire to reform us shew the benefits of the change proposed. When the Frenchman waves his hands and writhes his body in recounting the revolutions of a game at cards, or the Neapolitan, who tells the hour of the day, shews upon his fingers the number which he mentions; I do not perceive that their manual exercise is of much use, or that they leave any image more deeply impressed by their bustle and vehemence of communication.

Upon the English stage there is no want of action; but the difficulty of making it at once various and proper, and its perpetual tendency to become ridiculous, notwithstanding all the advantages which art and show, and custom and prejudice, can give it, may prove how little it can be admitted into any other place, where it can have no recommendation but from truth and nature.

The use of English oratory is only at the bar,

in the parliament, and in the church. Neither the judges of our laws nor the representatives of our people would be much affected by laboured gesticulation, or believe any man the more because he rolled his eyes, or puffed his cheeks, or spread abroad his arms, or stamped the ground, or thumped his breast, or turned his eyes sometimes to the cieling and sometimes to the floor. Upon men intent only upon truth, the arm of an orator has little power; a credible testimony, or a cogent argument, will overcome all the art of modulation, and all the violence of contortion.

It is well known that, in the city which may be called the parent of oratory, all the arts of mechanical persuasion were banished from the court of supreme judicature. The judges of the *Areopagus* considered action and vociferation as a foolish appeal to the external senses, and unworthy to be practised before those who had no desire of idle amusement, and whose only pleasure was to discover right.

Whether action may not be yet of use in churches, where the preacher addresses a mingled audience, may deserve inquiry. It is certain that the senses are more powerful as the reason is weaker; and that he whose ears convey little to his mind, may sometimes listen with his eyes till truth may gradually take possession of his heart. If there be any use of gesticulation, it must be applied to the ignorant and rude, who will be more affected by vehemence than delighted by propriety. In the pulpit little action can be proper, for action can illustrate nothing but that to which it may be referred by nature or by custom. He that imitates by

his hand a motion which he describes, explains it by natural similitude; he that lays his hand on his breast, when he expresses pity, enforces his words by a customary allusion. But theology has few topicks to which action can be appropriated; that action which is vague and indeterminate will at last settle into habit, and habitual peculiarities are quickly ridiculous.

It is perhaps the character of the English to despise trifles; and that art may surely be accounted a trifle which is at once useless and ostentatious, which can seldom be practised with propriety, and which, as the mind is more cultivated, is less powerful. Yet as all innocent means are to be used for the propagation of truth, I would not deter those who are employed in preaching to common congregations from any practice which they may find persuasive; for, compared with the conversion of sinners, propriety and elegance are less than nothing.

N° 91. SATURDAY, JANUARY 12, 1760.

IT is common to overlook what is near, by keeping the eye fixed upon something remote. In the same manner present opportunities are neglected, and attainable good is slighted, by minds busied in extensive ranges, and intent upon future advantages. Life, however short, is made still shorter by waste

of time, and its progress towards happiness, though naturally slow, is yet retarded by unnecessary labour.

The difficulty of obtaining knowledge is universally confessed. To fix deeply in the mind the principles of science, to settle their limitations, and deduce the long succession of their consequences; to comprehend the whole compass of complicated systems, with all the arguments, objections, and solutions, and to reposit in the intellectual treasury the numberless facts, experiments, apophthegms, and positions, which must stand single in the memory, and of which none has any perceptible connexion with the rest, is a task which, though undertaken with ardour and pursued with diligence, must at last be left unfinished by the frailty of our nature.

To make the way to learning either less short or less smooth, is certainly absurd; yet this is the apparent effect of the prejudice which seems to prevail among us in favour of foreign authors, and of the contempt of our native literature, which this excursive curiosity must necessarily produce. Every man is more speedily instructed by his own language, than by any other; before we search the rest of the world for teachers, let us try whether we may not spare our trouble by finding them at home.

The riches of the English language are much greater than they are commonly supposed. Many useful and valuable books lie buried in shops and libraries, unknown and unexamined, unless some lucky compiler opens them by chance, and finds an easy spoil of wit and learning. I am far from in-

tending to insinuate, that other languages are not necessary to him who aspires to eminence, and whose whole life is devoted to study ; but to him who reads only for amusement, or whose purpose is not to deck himself with the honours of literature, but to be qualified for domestick usefulness, and sit down content with subordinate reputation, we have authors sufficient to fill up all the vacancies of his time, and gratify most of his wishes for information.

Of our poets I need say little, because they are perhaps the only authors to whom their country has done justice. We consider the whole succession from Spenser to Pope, as superior to any names which the continent can boast ; and therefore the poets of other nations, however familiarly they may be sometimes mentioned, are very little read, except by those who design to borrow their beauties.

There is, I think, not one of the liberal arts which may not be competently learned in the English language. He that searches after mathematical knowledge may busy himself among his own countrymen, and will find one or other able to instruct him in every part of those abstruse sciences. He that is delighted with experiments, and wishes to know the nature of bodies from certain and visible effects, is happily placed where the mechanical philosophy was first established by a public institution, and from which it was spread to all other countries.

The more airy and elegant studies of philology and criticism have little need of any foreign help. Though our language, not being very analogical, gives few opportunities for grammatical researches,

yet we have not wanted authors who have considered the principles of speech ; and with critical writings we abound sufficiently to enable pedantry to impose rules which can seldom be observed, and vanity to talk of books which are seldom read.

But our own language has, from the Reformation to the present time, been chiefly dignified and adorned by the works of our divines, who, considered as commentators, controvertists, or preachers, have undoubtedly left all other nations far behind them. No vulgar language can boast such treasures of theological knowledge, or such multitudes of authors at once learned, elegant, and pious. Other countries and other communions have authors perhaps equal in abilities and diligence to ours ; but if we unite number with excellence, there is certainly no nation which must not allow us to be superior. Of morality little is necessary to be said, because it is comprehended in practical divinity, and is perhaps better taught in English sermons than in any other books ancient and modern. Nor shall I dwell on our excellence in metaphysical speculations, because he that reads the works of our divines will easily discover how far human subtilty has been able to penetrate,

Political knowledge is forced upon us by the form of our constitution ; and all the mysteries of government are discovered in the attack or defence of every minister. The original law of society, the rights of subjects, and the prerogatives of kings, have been considered with the utmost nicety, sometimes profoundly investigated, and sometimes familiarly explained.

Thus copiously instructive is the English lan-

guage ; and thus needless is all recourse to foreign writers. Let us not therefore make our neighbours proud by soliciting help which we do not want, nor discourage our own industry by difficulties which we need not suffer.

N^o 92. SATURDAY, JANUARY 19, 1760.

WHATEVER is useful or honourable will be desired by many who never can obtain it ; and that which cannot be obtained when it is desired, artifice or folly will be diligent to counterfeit. Those to whom fortune has denied gold and diamonds decorate themselves with stones and metals, which have something of the show, but little of the value ; and every moral excellence or intellectual faculty has some vice or folly which imitates its appearance.

Every man wishes to be wise, and they who cannot be wise are almost always cunning. The less is the real discernment of those whom business or conversation brings together, the more illusions are practised, nor is caution ever so necessary as with associates or opponents of feeble minds.

Cunning differs from wisdom as twilight from open day. He that walks in the sunshine goes boldly forward by the nearest way ; he sees that

where the path is straight and even he may proceed in security, and where it is rough and crooked he easily complies with the turns, and avoids the obstructions. But the traveller in the dusk fears more as he sees less; he knows there may be danger, and therefore suspects that he is never safe, tries every step before he fixes his foot, and shrinks at every noise lest violence should approach him. Wisdom comprehends at once the end and the means, estimates easiness or difficulty, and is cautious or confident in due proportion. Cunning discovers little at a time, and has no other means of certainty than multiplication of stratagems and superfluity of suspicion. The man of cunning always considers that he can never be too safe, and therefore always keeps himself enveloped in a mist, impenetrable, as he hopes, to the eye of rivalry or curiosity.

Upon this principle *Tom Double* has formed a habit of eluding the most harmless question. What he has no inclination to answer, he pretends sometimes not to hear, and endeavours to divert the inquirer's attention by some other subject; but if he be pressed hard by repeated interrogation, he always evades a direct reply. Ask him whom he likes best on the stage; he is ready to tell that there are several excellent performers. Inquire when he was last at the coffee-house; he replies, that the weather has been bad lately. Desire him to tell the age of any of his acquaintance; he immediately mentions another who is older or younger.

Will Puzzle values himself upon a long reach. He foresees every thing before it will happen,

though he never relates his prognostications till the event is past. Nothing has come to pass for these twenty years of which Mr *Puzzle* had not given broad hints, and told at least that it was not proper to tell. Of those predictions, which every conclusion will equally verify, he always claims the credit, and wonders that his friends did not understand them. He supposes very truly that much may be known which he knows not, and therefore pretends to know much of which he and all mankind are equally ignorant. I desired his opinion yesterday of the German war, and was told, that if the Prussians were well supported, something great may be expected; but that they have very powerful enemies to encounter; that the Austrian general has long experience, and the Russians are hardy and resolute; but that no human power is invincible. I then drew the conversation to our own affairs, and invited him to balance the probabilities of war and peace. He told me that war requires courage, and negotiation judgment, and that the time will come when it will be seen whether our skill in treaty is equal to our bravery in battle. To this general prattle he will appeal hereafter, and will demand to have his foresight applauded, whoever shall at last be conquered or victorious.

With *Ned Smuggle* all is a secret. He believes himself watched by observation and malignity on every side, and rejoices in the dexterity by which he has escaped snares that never were laid. *Ned* holds that a man is never deceived if he never trusts, and therefore will not tell the name of his taylor or his hatter. He rides out every morning for the air, and pleases himself with thinking that

nobody knows where he has been. When he dines with a friend, he never goes to his house the nearest way, but walks up a bye-street to perplex the scent. When he has a coach called, he never tells him at the door the true place to which he is going, but stops him in the way that he may give him directions where nobody can hear him. The price of what he buys or sells is always concealed. He often takes lodgings in the country by a wrong name, and thinks that the world is wondering where he can be hid. All these transactions he registers in a book, which, he says, will some time or other amaze posterity.

It is remarked by Bacon, that many men try to procure reputation only by objections, of which, if they are once admitted, the nullity never appears, because the design is laid aside. *This false feint of wisdom*, says he, *is the ruin of business*. The whole power of cunning is privative; to say nothing, and to do nothing, is the utmost of its reach. Yet men thus narrow by nature, and mean by art, are sometimes able to rise by the miscarriages of bravery and the openness of integrity; and by watching failures and snatching opportunities, obtain advantages which belong properly to higher characters.

N° 93. SATURDAY, JANUARY 26, 1760.

SAM SOFTLY was bred a sugar-baker; but succeeding to a considerable estate on the death of his elder brother, he retired early from business, married a fortune, and settled in a country-house near Kentish-town. *Sam*, who formerly was a sportsman, and in his apprenticeship used to frequent Barnet races, keeps a high chaise, with a brace of seasoned geldings. During the summer months, the principal passion and employment of *Sam's* life is to visit, in this vehicle, the most eminent seats of the nobility and gentry in different parts of the kingdom, with his wife and some select friends. By these periodical excursions *Sam* gratifies many important purposes. He assists the several pregnancies of his wife; he shews his chaise to the best advantage; he indulges his insatiable curiosity for finery, which, since he has turned gentleman, has grown upon him to an extraordinary degree; he discovers taste and spirit; and, what is above all, he finds frequent opportunities of displaying to the party, at every house he sees, his knowledge of family connection. At first, *Sam* was contented with driving a friend between London and his villa. Here he prided himself in pointing out the boxes of the citizens on each side of the road, with an accurate detail of their respective failures or successes in trade; and harangued on the several equipages that were accidentally pass-

ing. Here, too, the seats interspersed on the surrounding hills, afforded ample matter for *Sam's* curious discoveries. For one, he told his companion, a rich Jew had offered money; and that a retired widow was courted at another, by an eminent dry-salter. At the same time he discussed the utility, and enumerated the expences, of the Islington turnpike. But *Sam's* ambition is at present raised to nobler undertakings.

When the happy hour of the annual expedition arrives, the seat of the chaise is furnished with *Ogilvy's Book of Roads*, and a choice quantity of cold tongues. The most alarming disaster which can happen to our hero, who thinks he *throws a whip* admirably well, is to be overtaken in a road which affords no *quarter* for wheels. Indeed, few men possess more skill or discernment for concerting and conducting a *party of pleasure*. When a seat is to be surveyed, he has a peculiar talent in selecting some shady bench in the park, where the company may most commodiously refresh themselves with cold tongue, chicken, and *French* rolls; and is very sagacious in discovering what cool temple in the garden will be best adapted for drinking tea, brought for this purpose, in the afternoon, and from which the chaise may be resumed with the greatest convenience. In viewing the house itself, he is principally attracted by the chairs and beds, concerning the cost of which his minute inquiries generally gain the clearest information. An agate table easily diverts his eyes from the most capital strokes of *Rubens*, and a *Turkey* carpet has more charms than a *Titian*. *Sam*, however, dwells with some attention on the family portraits, parti-

cularly the most modern ones ; and as this is a topic on which the housekeeper usually harangues in a more copious manner, he takes this opportunity of improving his knowledge of intermarriages. Yet, notwithstanding this appearance of satisfaction, *Sam* has some objection to all he sees. One house has too much gilding ; at another, the chimney-pieces are all monuments ; at a third, he conjectures that the beautiful canal must certainly be dried up in a hot summer. He despises the statues at Wilton, because he thinks he can see much better carving at Westminster Abbey. But there is one general objection which he is sure to make at almost every house, particularly at those which are most distinguished. He allows that all the apartments are extremely fine, but adds, with a sneer, that they are too fine to be inhabited.

Misapplied genius most commonly proves ridiculous. Had *Sam*, as Nature intended, contentedly continued in the calmer and less conspicuous pursuits of sugar-baking, he might have been a respectable and useful character. At present he dissipates his life in a specious idleness, which neither improves himself nor his friends. Those talents which might have benefited society, he exposes to contempt by false pretensions. He affects pleasures which he cannot enjoy, and is acquainted only with those subjects on which he has no right to talk, and which it is no merit to understand.

N^o 94. SATURDAY, FEBRUARY 2, 1760.

IT is common to find young men ardent and diligent in the pursuit of knowledge; but the progress of life very often produces laxity and indifference; and not only those who are at liberty to chuse their business and amusements, but those likewise whose professions engage them in literary inquiries, pass the latter part of their time without improvement, and spend the day rather in any other entertainment than that which they might find among their books.

This abatement of the vigour of curiosity is sometimes imputed to the insufficiency of learning. Men are supposed to remit their labours, because they find their labours to have been vain; and to search no longer after truth and wisdom, because they at last despair of finding them.

But this reason is for the most part very falsely assigned. Of learning, as of virtue, it may be affirmed, that it is at once honoured and neglected. Whoever forsakes it will for ever look after it with longing, lament the loss which he does not endeavour to repair, and desire the good which he wants resolution to seize and keep. The idler never applauds his own idleness, nor does any man repent of the diligence of his youth.

So many hindrances may obstruct the acquisition of knowledge, that there is little reason for wou-

dering that it is in a few hands. To the greater part of mankind the duties of life are inconsistent with much study ; and the hours which they would spend upon letters must be stolen from their occupations and their families. Many suffer themselves to be lured by more sprightly and luxurious pleasures from the shades of contemplation, where they find seldom more than a calm delight, such as, though greater than all others, its certainty and its duration being reckoned with its power of gratification, is yet easily quitted for some extemporary joy, which the present moment offers, and another, perhaps, will put out of reach.

It is the great excellence of learning, that it borrows very little from time or place ; it is not confined to season or to climate, to cities or to the country, but may be cultivated and enjoyed where no other pleasure can be obtained. But this quality, which constitutes much of its value, is one occasion of neglect ; what may be done at all times with equal propriety, is deferred from day to day, till the mind is gradually reconciled to the omission, and the attention is turned to other objects. Thus habitual idleness gains too much power to be conquered, and the soul shrinks from the idea of intellectual labour and intenseness of meditation.

That those who profess to advance learning sometimes obstruct it, cannot be denied ; the continual multiplication of books not only distracts choice, but disappoints inquiry. To him that has moderately stored his mind with images, few writers afford any novelty ; or what little they have to add to the common stock of learning, is so buried in the mass of general notions, that, like silver

mingled with the ore of lead, it is too little to pay for the labour of separation; and he that has often been deceived by the promise of a title, at last grows weary of examining, and is tempted to consider all as equally fallacious.

There are indeed some repetitions always lawful, because they never deceive. He that writes the history of past times, undertakes only to decorate known facts by new beauties of method or of style, or at most to illustrate them by his own reflections. The author of a system, whether moral or physical, is obliged to nothing beyond care of selection and regularity of disposition. But there are others who claim the name of authors merely to disgrace it, and fill the world with volumes only to bury letters in their own rubbish. The traveller, who tells, in a pompous folio, that he saw the *Pantheon* at Rome, and the *Medicean Venus* at Florence; the natural historian, who, describing the productions of a narrow island, recounts all that it has in common with every other part of the world; the collector of antiquities, that accounts every thing a curiosity which the ruins of *Herculaneum* happen to emit, though an instrument already shewn in a thousand repositories, or a cup common to the ancients, the moderns, and all mankind; may be justly censured as the persecutors of students, and the thieves of that time which never can be restored.

N^o 95. SATURDAY, FEBRUARY 9, 1760.

TO THE IDLER.

MR IDLER,

[T is, I think, universally agreed, that seldom any good is gotten by complaint ; yet we find that few forbear to complain, but those who are afraid of being reproached as the authors of their own miseries. I hope therefore for the common permission, to lay my case before you and your readers, by which I shall disburden my heart, though I cannot hope to receive either assistance or consolation.

I am a trader, and owe my fortune to frugality and industry. I began with little ; but by the easy and obvious method of spending less than I gain, I have every year added something to my stock, and expect to have a seat in the common-council at the next election.

My wife, who was as prudent as myself, died six years ago, and left me one son and one daughter, for whose sake I resolved never to marry again, and rejected the overtures of Mrs *Squeeze*, the broker's widow, who had ten thousand pounds at her own disposal.

I bred my son at a school near Islington ; and when he had learned arithmetick, and wrote a good hand, I took him into the shop, designing, in

about ten years, to retire to Stratford or Hackney, and leave him established in the business.

For four years he was diligent and sedate, entered the shop before it was opened, and when it was shut always examined the pins of the window. In any intermission of business it was his constant practice to peruse the ledger. I had always great hopes of him, when I observed how sorrowfully he would shake his head over a bad debt, and how eagerly he would listen to me when I told him that he might at one time or other become an alderman.

We lived together with mutual confidence, till unluckily a visit was paid him by two of his school-fellows who were placed, I suppose, in the army, because they were fit for nothing better: they came glittering in their military dress, accosted their old acquaintance, and invited him to a tavern, where, as I have been since informed, they ridiculed the meanness of commerce, and wondered how a youth of spirit could spend the prime of life behind a counter.

I did not suspect any mischief. I knew my son was never without money in his pocket, and was better able to pay his reckoning than his companions; and expected to see him triumphing in his own advantages, and congratulating himself that he was not one of those who expose their heads to a musquet bullet for three shillings a day.

He returned sullen and thoughtful; I supposed him sorry for the hard fortune of his friends; and tried to comfort him, by saying that the war would soon be at an end, and that, if they had any honest occupation, half-pay would be a pretty help,

He looked at me with indignation; and snatching up his candle, told me, as he went up stairs, that *he hoped to see a battle yet.*

Why he hoped to see a battle, I could not conceive, but let him go quietly to sleep away his folly. Next day he made two mistakes in the first bill, disoblged a customer by surly answers, and dated all his entries in the journal in a wrong month. At night he met his military companions again, came home late, and quarelled with the maid.

From this fatal interview he has gradually lost all his laudable passions and desires. He soon grew useless in the shop, where, indeed, I did not willingly trust him any longer: for he often mistook the price of goods to his own loss, and once gave a promissory note instead of a receipt.

I did not know to what degree he was corrupted, till an honest taylor gave me notice that he had bespoke a laced suit, which was to be left for him at a house kept by the sister of one of my journey-men. I went to this clandestine lodging, and found, to my amazement, all the ornaments of a fine gentleman, which he has taken upon credit, or purchased with money subducted from the shop.

This detection has made him desperate. He now openly declares his resolution to be a gentleman; says that his soul is too great for a counting-house; ridicules the conversation of city taverns; talks of new plays, and boxes, and ladies; gives duchesses for his toasts; carries silver, for readiness, in his waistcoat-pocket; and comes home at night in a chair, with such thunders at the door, as have more than once brought the watchmen from their stands.

Little expences will not hurt us; and I could forgive a few juvenile frolics, if he would be careful of the main; but his favourite topick is contempt of money, which, he says, is of no use but to be spent. Riches, without honour, he holds empty things; and once told me to my face, that wealthy plodders were only purveyors to men of spirit.

He is always impatient in the company of his old friends, and seldom speaks till he is warmed with wine; he then entertains us with accounts that we do not desire to hear, of intrigues among lords and ladies, and quarrels between officers of the guards; shews a miniature on his snuff-box, and wonders that any man can look upon the new dancer without rapture.

All this is very provoking; and yet all this might be borne, if the boy could support his pretensions. But whatever he may think, he is yet far from the accomplishments which he has endeavoured to purchase at so dear a rate. I have watched him in publick places. He sneaks in like a man that knows he is where he should not be; he is proud to catch the slightest salutation, and often claims it when it is not intended. Other men receive dignity from dress, but my booby looks always more meanly for his finery. Dear Mr *Idler*, tell him what must at last become of a fop, whom pride will not suffer to be a trader, and whom long habits in a shop forbid to be a gentleman.

I am, SIR, &c.

TIM WAINSCOT.

N^o 96. SATURDAY, FEBRUARY 16, 1760.

HACHO, a king of Lapland, was in his youth the most renowned of the northern warriors. His martial achievements remain engraved on a pillar of flint in the rocks of Hanga, and are to this day solemnly carolled to the harp by the Laplanders, at the fires with which they celebrate their nightly festivities. Such was his intrepid spirit, that he ventured to pass the lake *Vether* to the isle of *Wizards*, where he descended alone into the dreary vault in which a magician had been kept bound for six ages, and read the Gothick characters inscribed on his brazen mace. His eye was so piercing, that, as ancient chronicles report, he could blunt the weapons of his enemies only by looking at them. At twelve years of age he carried an iron vessel of a prodigious weight, for the length of five furlongs, in the presence of all the chiefs of his father's castle.

Nor was he less celebrated for his prudence and wisdom. Two of his proverbs are yet remembered and repeated among Laplanders. To express the vigilance of the Supreme Being, he was wont to say, *Odin's belt is always buckled*. To shew that the most prosperous condition of life is often hazardous, his lesson was, *When you slide on the smoothest ice, beware of pits beneath*. He consoled his countrymen, when they were once preparing to

leave the frozen deserts of Lapland, and resolved to seek some warmer climate, by telling them, that the Eastern nations, notwithstanding their boasted fertility, passed every night amidst the horrors of anxious apprehension, and were inexpressibly affrighted, and almost stunned, every morning, with the noise of the sun while he was rising.

His temperance and severity of manners were his chief praise. In his early years he never tasted wine; nor would he drink out of a painted cup. He constantly slept in his armour, with his spear in his hand; nor would he use a battle-ax whose handle was inlaid with brass. He did not, however, persevere in this contempt of luxury; nor did he close his days with honour.

One evening, after hunting the *Gulos*, or wild-dog, being bewildered in a solitary forest, and having passed the fatigues of the day without any interval of refreshment, he discovered a large store of honey in the hollow of a pine. This was a dainty which he had never tasted before; and being at once faint and hungry, he fed greedily upon it. From this unusual and delicious repast he received so much satisfaction, that, at his return home, he commanded honey to be served up at his table every day. His palate, by degrees, became refined and vitiated; he began to lose his native relish for simple fare, and contracted a habit of indulging himself in delicacies; he ordered the delightful gardens of his castle to be thrown open, in which the most luscious fruits had been suffered to ripen and decay, unobserved and untouched, for many revolving autumns, and gratified his appetite with

luxurious desserts. At length he found it expedient to introduce wine, as an agreeable improvement, or a necessary ingredient, to his new way of living; and having once tasted it, he was tempted, by little and little, to give a loose to the excesses of intoxication. His general simplicity of life was changed; he perfumed his apartments by burning the wood of the most aromattick fir, and commanded his helmet to be ornamented with beautiful rows of the teeth of the rein-deer. Indolence and effeminacy stole upon him by pleasing and imperceptible gradations, relaxed the sinews of his resolution, and extinguished his thirst of military glory.

While Hacho was thus immersed in pleasure and in repose, it was reported to him, one morning, that the preceding night, a disastrous omen had been discovered, and that bats and hideous birds had drunk up the oil which nourished the perpetual lamp in the temple of Odin. About the same time, a messenger arrived to tell him, that the king of Norway had invaded his kingdom with a formidable army. Hacho, terrified as he was with the omen of the night, and enervated with indulgence, roused himself from his voluptuous lethargy, and recollecting some faint and few sparks of veteran valour, marched forward to meet him. Both armies joined battle in the forest where Hacho had been lost after hunting; and it so happened, that the king of Norway challenged him to single combat, near the place where he had tasted the honey. The Lapland chief, languid and long disused to arms, was soon overpowered; he fell to the ground; and before his insulting adversary struck his head

from his body, uttered this exclamation, which the Laplanders still use as an early lesson to their children: "The vicious man should date his destruction from the first temptation. How justly do I fall a sacrifice to sloth and luxury, in the place where I first yielded to those allurements which seduced me to deviate from temperance and innocence! The honey which I tasted in this forest, and not the hand of the king of Norway, conquers Hacho."

N° 97. SATURDAY, FEBRUARY 23, 1760.

IT may, I think, be justly observed, that few books disappoint their readers more than the narrations of travellers. One part of mankind is naturally curious to learn the sentiments, manners, and condition of the rest; and every mind that has leisure or power to extend its views, must be desirous of knowing in what proportion Providence has distributed the blessings of nature, or the advantages of art, among the several nations of the earth.

This general desire easily procures readers to every book from which it can expect gratification. The adventurer upon unknown coasts, and the describer of distant regions, is always welcomed as a man who has laboured for the pleasure of others,

and who is able to enlarge our knowledge and rectify our opinions ; but when the volume is opened, nothing is found but such general accounts as leave no distinct idea behind them, or such minute enumerations as few can read with either profit or delight.

Every writer of travels should consider, that, like all other authors, he undertakes either to instruct or please, or to mingle pleasure with instruction. He that instructs must offer to the mind something to be imitated, or something to be avoided ; he that pleases must offer new images to his reader, and enable him to form a tacit comparison of his own state with that of others.

The greater part of travellers tell nothing, because their method of travelling supplies them with nothing to be told. He that enters a town at night and surveys it in the morning, and then hastens away to another place, and guesses at the manners of the inhabitants by the entertainment which his inn afforded him, may please himself for a time with a hasty change of scenes, and a confused remembrance of palaces and churches ; he may gratify his eye with a variety of landscapes, and regale his palate with a succession of vintages ; but let him be contented to please himself without endeavouring to disturb others. Why should he record excursions by which nothing could be learned, or wish to make a shew of knowledge, which, without some power of intuition unknown to other mortals, he never could attain ?

Of those who crowd the world with their itineraries, some have no other purpose than to describe the face of the country ; those who sit idle at home,

and are curious to know what is done or suffered in distant countries, may be informed by one of these wanderers, that on a certain day he set out early with the caravan, and in the first hour's march saw, towards the south, a hill covered with trees, then passed over a stream, which ran northward with a swift course, but which is probably dry in the summer months; that an hour after he saw something to the right which looked at a distance like a castle with towers, but which he discovered afterwards to be a craggy rock; that he then entered a valley, in which he saw several trees tall and flourishing, watered by a rivulet not marked in the maps, of which he was not able to learn the name; that the road afterward grew stony, and the country uneven, where he observed among the hills many hollows worn by torrents, and was told that the road was passable only part of the year; that going on they found the remains of a building, once, perhaps, a fortress, to secure the pass, or to restrain the robbers, of which the present inhabitants can give no other account than that it is haunted by fairies; that they went to dine at the foot of a rock, and travelled the rest of the day along the banks of a river, from which the road turned aside towards evening, and brought them within sight of a village, which was once a considerable town, but which afforded them neither good victuals nor commodious lodging.

Thus he conducts his reader through wet and dry, over rough and smooth, without incidents, without reflection; and, if he obtains his company for another day, will dismiss him again at night,

equally fatigued with a like succession of rocks and streams, mountains and ruins.

This is the common style of those sons of enterprise, who visit savage countries, and range through solitude and desolation; who pass a desert, and tell that it is sandy; who cross a valley, and find that it is green. There are others of more delicate sensibility, that visit only the realms of elegance and softness; that wander through Italian palaces, and amuse the gentle reader with catalogues of pictures; that hear masses in magnificent churches, and recount the number of the pillars or variegations of the pavement. And there are yet others, who, in disdain of trifles, copy inscriptions elegant and rude, ancient and modern; and transcribe into their book the walls of every edifice, sacred or civil. He that reads these books must consider his labour as its own reward; for he will find nothing on which attention can fix, or which memory can retain.

He that would travel for the entertainment of others, should remember that the great object of remark is human life. Every nation has something particular in its manufactures, its works of genius, its medicines, its agriculture, its customs, and its policy. He only is a useful traveller, who brings home something by which his country may be benefited; who procures some supply of want, or some mitigation of evil, which may enable his readers to compare their condition with that of others, to improve it whenever it is worse, and whenever it is better to enjoy it.

N° 98. SATURDAY, MARCH 1, 1760.

TO THE IDLER.

SIR,

I AM the daughter of a gentleman, who during his life-time enjoyed a small income which arose from a pension from the court, by which he was enabled to live in a genteel and comfortable manner.

By the situation of life in which he was placed, he was frequently introduced into the company of those of much greater fortunes than his own, among whom he was always received with complaisance, and treated with civility.

At six years of age I was sent to a boarding-school in the country, at which I continued till my father's death. This melancholy event happened at a time when I was by no means of sufficient age to manage for myself, while the passions of youth continued unsubdued, and before experience could guide my sentiments or my actions.

I was then taken from school by an uncle, to the care of whom my father had committed me on his dying-bed. With him I lived several years; and as he was unmarried, the management of his family was committed to me. In this character I always endeavoured to acquit myself, if not with applause, at least without censure.

At the age of twenty-one, a young gentleman of some fortune paid his addresses to me, and of-

ferred me terms of marriage. This proposal I should readily have accepted, because from vicinity of residence, and from many opportunities of observing his behaviour, I had in some sort contracted an affection for him. My uncle, for what reason I do not know, refused his consent to this alliance, though it would have been complied with by the father of the young gentleman; and as the future condition of my life was wholly dependent on him, I was not willing to disoblige him, and therefore, though unwillingly, declined the offer.

My uncle, who possessed a plentiful fortune, frequently hinted to me in conversation, that at his death I should be provided for in such a manner that I should be able to make my future life comfortable and happy. As this promise was often repeated, I was the less anxious about any provision for myself. In a short time my uncle was taken ill, and though all possible means were made use of for his recovery, in a few days he died.

The sorrow arising from the loss of a relation, by whom I had been always treated with the greatest kindness, however grievous, was not the worst of my misfortunes. As he enjoyed an almost uninterrupted state of health, he was the less mindful of his dissolution, and died intestate, by which means his whole fortune devolved to a nearer relation, the heir at law.

Thus excluded from all hopes of living in the manner with which I have so long flattered myself, I am doubtful what method I shall take to procure a decent maintenance. I have been educated in a manner that has set me above a state of servitude, and my situation renders me unfit for the company

of those with whom I have hitherto conversed. But, though disappointed in my expectations, I do not despair. I will hope that assistance may still be obtained for innocent distress, and that friendship, though rare, is yet not impossible to be found.

I am, SIR,

Your humble servant,

SOPHIA HEEDFULL.

N° 99. SATURDAY, MARCH 8, 1760.

AS *Ortogrul* of *Basra* was one day wandering along the streets of Bagdat, musing on the varieties of merchandise which the shops offered to his view, and observing the different occupations which busied the multitudes on every side, he was awakened from the tranquillity of meditation by a crowd that obstructed his passage. He raised his eyes, and saw the chief visier, who, having returned from the divan, was entering his palace.

Ortogrul mingled with the attendants, and being supposed to have some petition for the visier, was permitted to enter. He surveyed the spaciousness of the apartments, admired the walls hung with golden tapestry, and the floors covered with silken

carpets, and despised the simple neatness of his own little habitation.

Surely, said he to himself, this palace is the seat of happiness, where pleasure succeeds to pleasure, and discontent and sorrow can have no admission. Whatever nature has provided for the delight of sense, is here spread forth to be enjoyed. What can mortals hope or imagine, which the master of this palace has not obtained? The dishes of luxury cover his table, the voice of harmony lulls him in his bowers; he breathes the fragrance of the groves of Java, and sleeps upon the down of the cygnets of Ganges. He speaks, and his mandate is obeyed; he wishes, and his wish is gratified; all whom he sees obey him, and all whom he hears flatter him. How different, *Ortogrul*, is thy condition, who art doomed to the perpetual torments of unsatisfied desire, and who hast no amusement in thy power that can withhold thee from thy own reflections! They tell thee that thou art wise; but what does wisdom avail with poverty? None will flatter the poor, and the wise have very little power of flattering themselves. That man is surely the most wretched of the sons of wretchedness, who lives with his own faults and follies always before him, and who has none to reconcile him to himself by praise and veneration. I have long sought content, and have not found it; I will from this moment endeavour to be rich.

Full of his new resolution, he shut himself in his chamber for six months, to deliberate how he should grow rich; he sometimes proposed to offer himself as a counsellor to one of the kings of India, and sometimes resolved to dig for diamonds in

the mines of Golconda. One day, after some hours passed in violent fluctuation of opinion, sleep insensibly seized him in his chair; he dreamed that he was ranging a desert country in search of some one that might teach him to grow rich; and as he stood on the top of a hill shaded with cypress, in doubt whither to direct his steps, his father appeared on a sudden standing before him. *Ortogrul*, said the old man, I know thy perplexity; listen to thy father; turn thine eye on the opposite mountain. *Ortogrul* looked, and saw a torrent tumbling down the rocks, roaring with the noise of thunder, and scattering its foam on the impending woods. Now, said his father, behold the valley that lies between the hills. *Ortogrul* looked, and espied a little well, out of which issued a small rivulet. Tell me now, said his father, dost thou wish for sudden affluence, that may pour upon thee like the mountain torrent, or for a slow and gradual increase, resembling the rill gliding from the well? Let me be quickly rich, said *Ortogrul*; let the golden stream be quick and violent. Look round thee, said his father, once again. *Ortogrul* looked, and perceived the channel of the torrent dry and dusty; but following the rivulet from the well, he traced it to a wide lake, which the supply, slow and constant, kept always full. He waked, and determined to grow rich by silent profit and persevering industry.

Having sold his patrimony, he engaged in merchandise, and in twenty years purchased lands, on which he raised a house, equal in sumptuousness to that of the visier, to which he invited all the ministers of pleasure, expecting to enjoy all the felicity

city which he had imagined riches able to afford. Leisure soon made him weary of himself, and he longed to be persuaded that he was great and happy. He was courteous and liberal; he gave all that approached him hopes of pleasing him, and all who should please him hopes of being rewarded. Every art of praise was tried, and every source of adulatory fiction was exhausted. *Ortogrul* heard his flatterers without delight, because he found himself unable to believe them. His own heart told him its frailties, his own understanding reproached him with his faults. How long, said he, with a deep sigh, have I been labouring in vain to amass wealth which at last is useless! Let no man hereafter wish to be rich, who is already too wise to be flattered.

N° 100. SATURDAY, MARCH 15, 1760.

TO THE IDLER.

SIR,

THE uncertainty and defects of language have produced very frequent complaints among the learned; yet there still remain many words among us undefined, which are very necessary to be rightly understood, and which produce very mischievous mistakes when they are erroneously interpreted.

I lived in a state of celibacy beyond the usual time. In the hurry, first of pleasure, and afterwards of business, I felt no want of a domestic companion; but becoming weary of labour, I soon grew more weary of idleness, and thought it reasonable to follow the custom of life, and to seek some solace of my cares in female tenderness, and some amusement of my leisure in female cheerfulness.

The choice which has been long delayed is commonly made at last with great caution. My resolution was, to keep my passions neutral, and to marry only in compliance with my reason. I drew upon a page of my pocket-book a scheme of all female virtues and vices, with the vices which border upon every virtue, and the virtues which are allied to every vice. I considered that wit was sarcastick, and magnanimity imperious; that avarice was oeconomic, and ignorance obsequious; and having estimated the good and evil of every quality, employed my own diligence, and that of my friends, to find the lady in whom nature and reason had reached that happy mediocrity which is equally remote from exuberance and deficiency.

Every woman had her admirers and her censurers; and the expectations which one raised were by another quickly depressed; yet there was one in whose favour almost all suffrages concurred. Miss *Gentle* was universally allowed to be a good sort of woman. Her fortune was not large, but so prudently managed, that she wore finer clothes, and saw more company, than many who were known to be twice as rich. Miss *Gentle's* visits were every where welcome; and whatever family she favoured

with her company, she always left behind her such a degree of kindness as recommended her to others. Every day extended her acquaintance; and all who knew her declared that they never met with a better sort of woman.

To Miss *Gentle* I made my addresses, and was received with great equality of temper. She did not in the days of courtship assume the privilege of imposing rigorous commands, or resenting slight offences. If I forgot any of her injunctions, I was gently reminded; if I missed the minute of appointment, I was easily forgiven. I foresaw nothing in marriage but a halcyon calm, and longed for the happiness which was to be found in the inseparable society of a good sort of woman.

The jointure was soon settled by the intervention of friends, and the day came in which Miss *Gentle* was made mine for ever. The first month was passed easily enough in receiving and repaying the civilities of our friends. The bride practised with great exactness all the niceties of ceremony, and distributed her notice in the most punctilious proportions to the friends who surrounded us with their happy auguries.

But the time soon came when we were left to ourselves, and were to receive our pleasures from each other, and I then began to perceive that I was not formed to be much delighted by a good sort of woman. Her great principle is, that the orders of a family must not be broken. Every hour of the day has its employment inviolably appropriated; nor will any importunity persuade her to walk in the garden at the time which she has devoted to her needle-work, or to sit up stairs in

that part of the forenoon which she has accustomed herself to spend in the back parlour. She allows herself to sit half an hour after breakfast, and an hour after dinner; while I am talking or reading to her, she keeps her eye upon her watch, and when the minute of departure comes, will leave an argument unfinished, or the intrigue of a play unravelled. She once called me to supper when I was watching an eclipse, and summoned me at another time to bed when I was going to give directions at a fire.

Her conversation is so habitually cautious, that she never talks to me but in general terms, as to one whom it is dangerous to trust. For discriminations of character she has no names: all whom she mentions are honest men and agreeable women. She smiles not by sensation, but by practice. Her laughter is never excited but by a joke, and her notion of a joke is not very delicate. The repetition of a joke does not weaken its effect; if she has laughed once, she will laugh again.

She is an enemy to nothing but ill-nature and pride; but she has frequent reason to lament that they are so frequent in the world. All who are not equally pleased with the good and the bad, with the elegant and gross, with the witty and the dull, all who distinguish excellence from defect, she considers as ill-natured; and she condemns as proud all who repress impertinence or quell presumption, or expect respect from any other eminence than that of fortune, to which she is always willing to pay homage.

There are none whom she openly hates, for if once she suffers, or believes herself to suffer, any

contempt or insult, she never dismisses it from her mind, but takes all opportunities to tell how easily she can forgive. There are none whom she loves much better than others; for when any of her acquaintance decline in the opinion of the world, she always finds it inconvenient to visit them; her affection continues unaltered, but it is impossible to be intimate with the whole town.

She daily exercises her benevolence by pitying every misfortune that happens to every family within her circle of notice; she is in hourly terrors lest one should catch cold in the rain, and another be frightened by the high wind. Her charity she shews by lamenting that so many poor wretches should languish in the streets, and by wondering what the great can think on that they do so little good with such large estates.

Her house is elegant, and her table dainty, though she has little taste of elegance, and is wholly free from vicious luxury; but she comforts herself that nobody can say that her house is dirty, or that her dishes are not well drest.

This, Mr *Idler*, I have found by long experience to be the character of a good sort of woman, which I have sent you for the information of those by whom a *good sort of woman*, and a *good woman*, may happen to be used as equivalent terms, and who may suffer by the mistake, like

Your humble servant,

TIM WARNER.

N^o 101. SATURDAY, MARCH 22, 1760.

OMAR, the son of Hussan, had passed seventy-five years in honour and prosperity. The favour of three successive califs had filled his house with gold and silver; and whenever he appeared, the benedictions of the people proclaimed his passage.

Terrestrial happiness is of short continuance. The brightness of the flame is wasting its fuel; the fragrant flower is passing away in its own odours. The vigour of Omar began to fail, the curls of beauty fell from his head, strength departed from his hands and agility from his feet. He gave back to the calif the keys of trust and the seals of secrecy; and sought no other pleasure for the remains of life than the converse of the wise, and the gratitude of the good.

The powers of his mind were yet unimpaired. His chamber was filled by visitants, eager to catch the dictates of experience, and officious to pay the tribute of admiration. Caled, the son of the viceroy of Egypt, entered every day early, and retired late. He was beautiful and eloquent; Omar admired his wit, and loved his docility. Tell me, said Caled, thou to whose voice nations have listened, and whose wisdom is known to the extremities of Asia, tell me how I may resemble Omar the prudent. The arts by which you have gained power and preserved it, are to you no longer necessary or useful; impart to me the secret of your

conduct, and teach me the plan upon which your wisdom has built your fortune.

Young man, said Omar, it is of little use to form plans of life. When I took my first survey of the world, in my twentieth year, having considered the various conditions of mankind, in the hour of solitude I said thus to myself, leaning against a cedar which spread its branches over my head: Seventy years are allowed to man; I have yet fifty remaining: ten years I will allot to the attainment of knowledge, and ten I will pass in foreign countries; I shall be learned, and therefore shall be honoured; every city will shout at my arrival, and every student will solicit my friendship. Twenty years thus passed will store my mind with images which I shall be busy through the rest of my life in combining and comparing. I shall revel in inexhaustible accumulations of intellectual riches; I shall find new pleasures for every moment, and shall never more be weary of myself. I will, however, not deviate too far from the beaten track of life, but will try what can be found in female delicacy. I will marry a wife beautiful as the *Houries* and wise as *Zobeide*; with her I will live twenty years within the suburbs of Bagdat, in every pleasure that wealth can purchase, and fancy can invent. I will then retire to a rural dwelling, pass my last days in obscurity and contemplation, and lie silently down on the bed of death. Through my life it shall be my settled resolution, that I will never depend upon the smile of princes; that I will never stand exposed to the artifices of courts; I will never pant for publick honours, nor disturb my quiet

with affairs of state. Such was my scheme of life, which I impressed indelibly upon my memory.

The first part of my ensuing time was to be spent in search of knowledge; and know not how I was diverted from my design. I had no visible impediments without, nor any ungovernable passions within. I regarded knowledge as the highest honour and the most engaging pleasure; yet day stole upon day, and month glided after month, till I found that seven years of the first ten had vanished, and left nothing behind them. I now postponed my purpose of travelling; for why should I go abroad while so much remained to be learned at home? I immured myself for four years, and studied the laws of the empire. The fame of my skill reached the judges; I was found able to speak upon doubtful questions, and was commanded to stand at the footstool of the calif. I was heard with attention, I was consulted with confidence, and the love of praise fastened on my heart.

I still wished to see distant countries, listened with rapture to the relations of travellers, and resolved some time to ask my dismissal, that I might feast my soul with novelty; but my presence was always necessary, and the stream of business hurried me along. Sometimes I was afraid lest I should be charged with ingratitude; but I still proposed to travel, and therefore would not confine myself by marriage.

In my fiftieth year, I began to suspect that the time of travelling was past, and thought it best to lay hold on the felicity yet in my power, and indulge myself in domestic pleasures. But at fifty no man easily finds a woman beautiful as the *Hou-*

ries, and wise as *Zobeide*. I inquired and rejected, consulted and deliberated, till the sixty-second year made me ashamed of gazing upon girls. I had now nothing left but retirement, and for retirement I never found a time, till disease forced me from publick employment.

Such was my scheme, and such has been its consequence. With an insatiable thirst for knowledge, I trifled away the years of improvement; with a restless desire of seeing different countries, I have always resided in the same city; with the highest expectation of connubial felicity, I have lived unmarried; and with unalterable resolutions of contemplative retirement, I am going to die within the walls of *Bagdat*.

N^o 102. SATURDAY, MARCH 29, 1760.

IT very seldom happens to man that his business is his pleasure. What is done from necessity is so often to be done when against the present inclination, and so often fills the mind with anxiety, that an habitual dislike steals upon us, and we shrink involuntarily from the remembrance of our task. This is the reason why almost every one wishes to quit his employment; he does not like another state, but is disgusted with his own.

From this unwillingness to perform more than

is required of that which is commonly performed with reluctance, it proceeds that few authors write their own lives. Statesmen, courtiers, ladies, generals, and seamen, have given to the world their own stories, and the events with which their different stations have made them acquainted. They retired to the closet as to a place of quiet and amusement, and pleased themselves with writing, because they could lay down the pen whenever they were weary. But the author, however conspicuous, or however important, either in the publick eye or in his own, leaves his life to be related by his successors, for he cannot gratify his vanity but by sacrificing his ease.

It is commonly supposed that the uniformity of a studious life affords no matter for narration: but the truth is, that of the most studious life a great part passes without study. An author partakes of the common condition of humanity; he is born and married like another man; he has hopes and fears, expectations and disappointments, griefs and joys, and friends and enemies, like a courtier or a statesman; nor can I conceive why his affairs should not excite curiosity as much as the whisper of a drawing-room, or the factions of a camp.

Nothing detains the reader's attention more powerfully than deep involutions of distress, or sudden vicissitudes of fortune; and these might be abundantly afforded by memoirs of the sons of literature. They are intangled by contracts which they know not how to fulfil, and obliged to write on subjects which they do not understand. Every publication is a new period of time, from which some increase or declension of fame is to be reckoned.

The gradations of a hero's life are from battle to battle, and of an author's from book to book.

Success and miscarriage have the same effects in all conditions. The prosperous are feared, hated, and flattered; and the unfortunate avoided, pitied, and despised. No sooner is a book published than the writer may judge of the opinion of the world. If his acquaintance press round him in publick places, or salute him from the other side of the street; if invitations to dinner come thick upon him, and those with whom he dines keep him to supper; if the ladies turn to him when his coat is plain, and the footmen serve him with attention and alacrity; he may be sure that his work has been praised by some leader of literary fashions.

Of declining reputation the symptoms are not less easily observed. If the author enters a coffee-house, he has a box to himself; if he calls at a bookseller's, the boy turns his back; and, what is the most fatal of all prognosticks, authors will visit him in a morning, and talk to him hour after hour of the malevolence of criticks, the neglect of merit, the bad taste of the age, and the candour of posterity.

All this, modified and varied by accident and custom, would form very amusing scenes of biography, and might recreate many a mind which is very little delighted with conspiracies or battles, intrigues of a court, or debates of a parliament; to this might be added all the changes of the countenance of a patron, traced from the first glow which flattery raises in his cheek, through ardour of fondness, vehemence of promise, magnificence of praise, excuse of delay, and lamentation

of inability, to the last chill look of final dismissal, when the one grows weary of soliciting, and the other of hearing solicitation.

Thus copious are the materials which have been hitherto suffered to lie neglected, while the repositories of every family that has produced a soldier or a minister are ransacked, and libraries are crowded with useless folios of state papers which will never be read, and which contribute nothing to valuable knowledge.

I hope the learned will be taught to know their own strength and their value, and, instead of devoting their lives to the honour of those who seldom thank them for their labours, resolve at last to do justice to themselves.

N^o 103. SATURDAY, APRIL 5, 1760.

Respicere ad longa jussit spatia ultima vite.

Juv.

MUCH of the pain and pleasure of mankind arises from the conjectures which every one makes of the thoughts of others; we all enjoy praise which we do not hear, and resent contempt which we do not see. The *Idler* may therefore be forgiven, if he suffers his imagination to represent to him what his readers will say or think when they

are informed that they have now his last paper in their hands.

Value is more frequently raised by scarcity than by use. That which lay neglected when it was common, rises in estimation as its quantity becomes less. We seldom learn the true want of what we have till it is discovered that we can have no more.

This essay will, perhaps, be read with care even by those who have not yet attended to any other; and he that finds this late attention recompensed, will not forbear to wish that he had bestowed it sooner.

Though the *Idler* and his readers have contracted no close friendship, they are perhaps both unwilling to part. There are few things not purely evil, of which we can say, without some emotion of uneasiness, *this is the last*. Those who never could agree together, shed tears when mutual discontent has determined them to final separation; of a place which has been frequently visited, though without pleasure, the last look is taken with heaviness of heart; and the *Idler*, with all his chillness of tranquillity, is not wholly unaffected by the thought that his last essay is now before him.

This secret horror of the last is inseparable from a thinking being, whose life is limited, and to whom death is dreadful. We always make a secret comparison between a part and the whole; the termination of any period of life reminds us that life itself has likewise its termination; when we have done any thing for the last time, we involuntarily reflect that a part of the days allotted us is past, and that as more is past there is less remaining.

It is very happily and kindly provided, that in

every life there are certain pauses and interruptions, which force consideration upon the careless, and seriousness upon the light; points of time where one course of action ends, and another begins; and by vicissitudes of fortune, or alteration of employment, by change of place or loss of friendship, we are forced to say of something, *this is the last*.

An even and unvaried tenour of life always hides from our apprehension the approach of its end. Succession is not perceived but by variation; he that lives to-day as he lived yesterday, and expects that as the present day is such will be the morrow, easily conceives time as running in a circle and returning to itself. The uncertainty of our duration is impressed commonly by dissimilitude of condition; it is only by finding life changeable that we are reminded of its shortness.

This conviction, however forcible at every new impression, is every moment fading from the mind; and partly by the inevitable incursion of new images, and partly by voluntary exclusion of unwelcome thoughts, we are again exposed to the universal fallacy; and we must do another thing for the last time, before we consider that the time is nigh when we shall do no more.

As the last Idler is published in that solemn week which the Christian world has always set apart for the examination of the conscience, the review of life, the extinction of earthly desires, and the renovation of holy purposes; I hope that my readers are already disposed to view every incident with seriousness, and improve it by meditation; and that, when they see this series of trifles brought to a conclusion, they will consider that,

by outliving the *Idler*, they have passed weeks, months, and years, which are now no longer in their power; that an end must in time be put to every thing great as to every thing little; that to life must come its last hour, and to this system of being its last day, the hour at which probation ceases, and repentance will be vain; the day in which every work of the hand, and imagination of the heart, shall be brought to judgment, and an everlasting futurity shall be determined by the past.

N° XXII*.

MANY naturalists are of opinion, that the animals which we commonly consider as mute, have the power of imparting their thoughts to one another. That they can express general sensation is very certain; every being that can utter sounds, has a different voice for pleasure and for pain. The hound informs his fellows when he scents his game; the hen calls her chickens to their food by her cluck, and drives them from danger by her scream.

Birds have the greatest variety of notes; they have indeed a variety, which seems almost sufficient to make a speech adequate to the purposes of a life

* This was the original No. 22, but on the republication of the work in volumes, Dr Johnson substituted what now stands under that head.

which is regulated by instinct, and can admit little change or improvement. To the cries of birds curiosity or superstition has been always attentive; many have studied the language of the feathered tribes, and some have boasted that they understood it.

The most skilful or most confident interpreters of the sylvan dialogues, have been commonly found among the philosophers of the east, in a country where the calmness of the air, and the mildness of the seasons, allow the student to pass a great part of the year in groves and bowers. But what may be done in one place by peculiar opportunities, may be performed in another by peculiar diligence. A shepherd of Bohemia has, by long abode in the forests, enabled himself to understand the voice of birds; at least he relates with great confidence a story, of which the credibility is left to be considered by the learned.

As I was sitting (said he) within a hollow rock, and watching my sheep that fed in the valley, I heard two vultures interchangeably crying on the summit of a cliff. Both voices were earnest and deliberate. My curiosity prevailed over the care of the flock; I climbed slowly and silently from crag to crag, concealed among the shrubs, till I found a cavity where I might sit and listen without suffering, or giving disturbance.

I soon perceived that my labour would be well repaid, for an old vulture was sitting on a naked prominence, with her young about her, whom she was instructing in the arts of a vulture's life, and preparing, by the last lecture, for their final dismissal to the mountains and the skies.

My children, said the old vulture, you will the less want my instructions, because you have had my practice before your eyes; you have seen me snatch from the farm the household fowl, you have seen me seize the leveret in the bush, and the kid in the pasture; you know how to fix your talons, and how to balance your flight when you are laden with your prey. But you remember the taste of more delicious food. I have often regaled you with the flesh of man. Tell us, said the young vultures, where man may be found, and how he may be known; his flesh is surely the natural food of a vulture. Why have you never brought a man in your talons to the nest? He is too bulky, said the mother; when we find a man we can only tear away his flesh, and leave his bones upon the ground. Since man is so big, said the young ones, how do you kill him? You are afraid of the wolf and of the bear, by what power are vultures superior to man? Is man more defenceless than a sheep? We have not the strength of man, returned the mother, and I am sometimes in doubt whether we have the subtilty; and the vultures would seldom feast upon his flesh, had not nature, that devoted him to our uses, infused into him a strange ferocity, which I have never observed in any other being that feeds upon the earth. Two herds of men will often meet and shake the earth with noise, and fill the air with fire. When you hear noise, and see fire, with flashes along the ground, hasten to the place with your swiftest wing for men are surely destroying one another; you will then find the ground smoking with blood, and covered with carcasses, of which many are dismembered and mangled for the

convenience of the vulture. But when men have killed their prey, said the pupil, why do they not eat it? When the wolf has killed a sheep, he suffers not the vulture to touch it till he has satisfied himself. Is not man another kind of wolf? Man, said the mother, is the only beast who kills that which he does not devour, and this quality makes him so much a benefactor to our species. If men kill our prey, and lay it in our way, said the young one, what need shall we have of labouring for ourselves? Because man will, sometimes, replied the mother, remain for a long time quiet in his den. The old vultures will tell you when you are to watch his motions. When you see men in great numbers moving close together, like a flight of storks, you may conclude that they are hunting, and that you will soon revel in human blood. But still, said the young one, I would gladly know the reason of this mutual slaughter. I could never kill what I could not eat. My child, said the mother, this is a question which I cannot answer, though I am reckoned the most subtle bird of the mountain. When I was young, I used frequently to visit the ayry of an old vulture, who dwelt upon the *Carpathian* rocks; he had made many observations; he knew the places that afforded prey round his habitation, as far in every direction as the strongest wing can fly between the rising and the setting of the summer sun; he had fed year after year on the entrails of men. His opinion was, that men had only the appearance of animal life, being really vegetables with a power of motion; and that as the boughs of an oak are dashed together by the storm, that swine may fatten upon the fallen

acorns, so men are by some unaccountable power driven one against another, till they lose their motion, that vultures may be fed. Others think they have observed something of contrivance and policy among these mischievous beings; and those that hover more closely round them, pretend, that there is, in every herd, one that gives directions to the rest, and seems to be more eminently delighted with a wide carnage. What it is that entitles him to such pre-eminence we know not; he is seldom the biggest or the swiftest, but he shews by his eagerness and diligence that he is, more than any of the others, a friend to the vultures.

P R E F A C E *

TO
AN ESSAY
ON

Milton's Use and Imitation of the Moderns,

IN HIS PARADISE LOST.

[First published in the Year MDCCL.]

IT is now more than half a century since the PARADISE LOST, having broke through the clouds with which the unpopularity of the author, for a time, obscured it, has attracted the general admi-

" * It is to be hoped, nay, it is *expected*, that the elegant and nervous writer, whose judicious sentiments, and imitable style, points out the author of *Lauder's Preface and Postscript*, will no longer allow one to *plume himself with his feathers*, who appears so little to have deserved his assistance; an assistance which I am persuaded would never have been communicated, had there been the least suspicion of those facts which I have been the instrument of conveying to the world in these sheets."—*Milton vindicated from the charge of plagiarism brought against him by Mr Lauder, and Lauder himself convicted of several forgeries and gross impositions on the publick.* By John Douglas, M. A. Rector of Eaton Constantine, Salop, 8vo. 1751, p. 77.

ration of mankind ; who have endeavoured to compensate the error of their first neglect, by lavish praises and boundless veneration. There seems to have arisen a contest, among men of genius and literature, who should most advance its honour, or best distinguish its beauties. Some have revised editions, others have published commentaries, and all have endeavoured to make their particular studies, in some degree, subservient to this general emulation.

Among the inquiries to which this ardour of criticism has naturally given occasion, none is more obscure in itself, or more worthy of rational curiosity, than a retrospection of the progress of this mighty genius, in the construction of his work ; a view of the fabrick gradually rising, perhaps from small beginnings, till its foundation rests in the centre, and its turrets sparkle in the skies ; to trace back the structure, through all its varieties, to the simplicity of its first plan ; to find what was first projected, whence the scheme was taken, how it was improved, by what assistance it was executed, and from what stores the materials were collected, whether its founder dug them from the quarries of nature, or demolished other buildings to embellish his own.

This inquiry has been, indeed, not wholly neglected, nor, perhaps, prosecuted with the care and diligence that it deserves. Several criticks have offered their conjectures ; but none have much endeavoured to enforce or ascertain them. * Mr VOLTAIRE tells us, without proof, that the first

* Essay upon the Civil Wars of France, and also upon the Epick Poetry of the European Nations, from Homer down to Milton, 8vo, 1727, p. 103. E.

hint of PARADISE LOST was taken from a farce called ADAMO, written by a player; * Dr PEARCE, that it was derived from an Italian tragedy, called IL PARADISO PERSO; and † Mr PECK, that it was borrowed from a wild romance. Any of these conjectures may possibly be true, but, as they stand without sufficient proof, it must be granted, likewise, that they may all possibly be false; at least they cannot preclude any other opinion, which without argument has the same claim to credit, and may perhaps be shewn, by resistless evidence, to be better founded.

It is related, by steady and uncontroverted tradition, that the PARADISE LOST was at first a TRAGEDY, and therefore, amongst tragedies, the first hint is properly to be sought. In a manuscript, published from MILTON'S own hand, among a great number of subjects for tragedy, is ADAM UNPARADISED, or ADAM IN EXILE; and this, therefore, may be justly supposed the embryo of this great poem. As it is observable, that all these subjects had been treated by others, the manuscript can be supposed nothing more than a memorial or catalogue of plays, which, for some reason, the writer thought worthy of his attention. When, therefore, I had observed, that ADAM IN EXILE was named amongst them, I doubted not but, in finding the original of that tragedy, I should disclose the genuine source of PARADISE LOST.

* Preface to a Review of the Text of the Twelve Books of Milton's Paradise Lost, in which the chief of Dr Bentley's Emendations are considered, 8vo, 1733. E.

† New Memoirs of Mr John Milton. By Francis Peck, 4to. 1740. p. 52. E.

Nor was my expectation disappointed ; for, having procured the *ADAMUS EXUL* of Grotius, I found, or imagined myself to find, the first draught, the *prima stamina* of this wonderful poem.

Having thus traced the *original* of this work, I was naturally induced to continue my search to the *collateral relations*, which it might be supposed to have contracted in its progress to *maturity* : and having, at least, persuaded my own judgment that the search has not been entirely ineffectual, I now lay the result of my labours before the publick ; with full conviction, that in questions of this kind, the world cannot be *mistaken*, at least cannot long continue in error.

I cannot avoid acknowledging the *candour* of the author of that excellent monthly book, the *Gentleman's Magazine*, in giving admission to the specimens in favour of this argument ; and his *impartiality* in as freely inserting the several answers. I shall here subjoin some *extracts* from the xviiith volume of this work, which I think suitable to my purpose. To which I have added, in order to obviate every pretence for cavil, a *list* of the authors quoted in the following *ESSAY*, with their respective *dates*, in comparison with the *date* of *PARADISE LOST*.

POSTSCRIPT.

WHEN this Essay was almost finished, the splendid Edition of *PARADISE LOST*, so long promised by the Rev. Dr Newton, fell into my hands ; of which I had, however, so little use, that as it would be unjust to censure, it would be *flattery* to commend it : and I should have totally *forborn* the mention of a book that I have not read, had

not one passage, at the conclusion of the life of Milton, excited in me too much pity and indignation to be suppressed in silence.

“Deborah, Milton’s youngest daughter,” says the Editor, “was married to Mr Abraham Clarke, a weaver, in Spitalfields, and died in August 1727, in the 76th year of her age. She had ten children. Elizabeth, the youngest, was married to Mr Thomas Foster, a weaver, in Spitalfields, and had seven children, who are all dead; and she herself is aged about *sixty*, and *weak and infirm*. She seemeth to be a *good plain sensible woman*, and has confirmed several particulars related above, and informed me of some others, which she had often heard from her mother.”—These the Doctor enumerates, and then adds, “In all probability Milton’s whole family will be extinct with her, and he can live only in his writings. And such is the caprice of fortune, this grand-daughter of a man, who will be an everlasting glory to the nation, has now for some years, with her husband, kept a little chandler’s or grocer’s shop, for their subsistence, lately at the lower Holloway, in the road between Highgate and London, and at present in Cock-lane, not far from Shoreditch Church.”

That this relation is true cannot be questioned: but, surely, the honour of letters, the dignity of sacred poetry, the spirit of the English nation, and the glory of human nature, require—that it should be true no longer.—In an age, in which statues are erected to the honour of this great writer, in which his effigy has been diffused on medals, and his work propagated by translations, and illustrated by

commentaries; in an age, which, amidst all its vices, and all its follies, has not become infamous for want of charity: it may be, surely, allowed to hope, that the living remains of Milton will be no longer suffered to languish in distress. It is yet in the power of a great people to reward the poet whose name they boast, and from their alliance to whose genius they claim some kind of superiority to every other nation of the earth; that poet, whose works may possibly be read when every other monument of British greatness shall be obliterated; to reward him—not with pictures or with medals, which, if he sees, he sees with contempt, but—with tokens of gratitude, which he, perhaps, may even now consider as not unworthy the regard of an immortal spirit. And surely, to those, who refuse their names to no other scheme of expence, it will not be unwelcome, that a *subscription* is proposed, for relieving, in the languor of age, the pains of disease, and the contempt of poverty, the grand-daughter of the author of *Paradise Lost*. Nor can it be questioned, that if I, who have been marked out as the *Zoilus* of *Milton*, think this regard due to his posterity, the design will be warmly seconded by those, whose lives have been employed in discovering his excellencies, and extending his reputation.

A
LETTER
TO THE
REVEREND MR DOUGLAS,
OCCASIONED BY HIS
VINDICATION OF MILTON,
TO WHICH ARE SUBJOINED,
SEVERAL CURIOUS ORIGINAL LETTERS,
FROM THE
AUTHORS OF THE UNIVERSAL HISTORY, MR AINS-
WORTH, MR MACLAURIN, &c.

BY WILLIAM LAUDER, A. M.

Quem penitet peccasse pœne est innocens.

SENECA.

Corpora magnanimo satis est prostrasse Leoni.

Pugna suum finem, quum jacet hostis, habet.

OVID.

*Præstuli Clementiam
Juris Rigori.*

GROTII ADAMUS EXUL.

First printed in the Year M DCC LI.

Of this pamphlet Mr Lauder gives the following account :
" An ingenious gentleman (for whose amazing abilities I had
" conceived the highest veneration, and in whose candour and
" friendship I reposed the most implicit and unlimited confi-
" dence) advised me to make an unreserved disclosure of all
" the lines I had interpolated against Milton, with this view,
" chiefly, that no future cricks might ever have an opportu-
" nity of valuing themselves upon small discoveries of a few
" lines, which would serve to revive my error, and keep the
" controversy eternally alive.

" With this expedient I then cheerfully complied, when
" that gentleman wrote for me the letter that was published in
" my name to Mr Douglas, in which he committed one error
" that proved fatal to me, and at the same time injurious to the
" publick. For, in place of acknowledging that such and such
" particular passages only were interpolated, he gave up the
" whole Essay against Milton as delusion and misrepresenta-
" tion, and thereby imposed more grievously on the publick
" than I had done, and that too in terms much more submissive
" and abject than the nature of the offence required.

" Though this letter, in many respects, contained not my
" sentiments, as plainly appears from the contradictory Post-
" script subjoined to it: yet such was my infatuation at that
" time, and implicit confidence in my friend, that I suffered it
" to be printed in my name, though I was previously informed
" by one of the greatest men of the age of its hurtful tendency,
" which I have since fully experienced to my cost.

" That the gentleman meant to serve me, and was really of
" opinion that the method he proposed might probably prove
" effectual for rescuing me from the odium of the publick, and
" in some measure restoring my character to the honour it had
" lost, I was then disposed to believe. His repeated acts of
" friendship to me on former occasions in conjunction with a
" reputation universally established for candour and integrity,
" left me little room to doubt it : though it is certainly a most
" preposterous method for a criminal, in order to obtain par-
" don for one act of felony, to confess himself guilty of a thou-
" sand. However, I cannot but condemn myself for placing so
" implicit a confidence in the judgment of any man, how great
" or good soever, as to suffer his mistakes to be given to the
" publick as my opinion."—*King Charles vindicated from the
" charge of plagiarism, brought against him by Milton, and Milton
" himself convicted of forgery and a gross imposition on the publick,*
8vo. 1754. p. 3. E.

TO THE

REVEREND MR DOUGLAS.

SIR,

CANDOUR and tenderness are in any relation, and on all occasions, eminently amiable; but when they are found in an adversary, and found so prevalent as to overpower that zeal which his cause excites, and that heat which naturally increases in the prosecution of argument, and which may be in a great measure justified by the love of truth, they certainly appear with particular advantages; and it is impossible not to envy those who possess the friendship of him, whom it is even some degree of good fortune to have known as an enemy.

I will not so far dissemble my weakness, or my fault, as not to confess that my wish was to have passed undetected; but since it has been my fortune to fail in my original design, to have the suppositious passages which I have inserted in my quotations made known to the world, and the shade which began to gather on the splendour of *Milton* totally dispersed, I cannot but count it an alleviation of my pain, that I have been defeated by a man who knows how to use advantages with so much moderation, and can enjoy the honour of conquest without the insolence of triumph.

It was one of the maxims of the *Spartans*, not to press upon a flying army, and therefore their enemies were always ready to quit the field, because they knew the danger was only in opposing. The civility with which you have thought proper to treat me, when you had incontestable superiority, has inclined me to make your victory complete, without any further struggle, and not only publickly to acknowledge the truth of the charge which you have hitherto advanced, but to confess, without the least dissimulation, subterfuge, or concealment, every other interpolation I have made in those authors, which you have not yet had opportunity to examine.

On the sincerity and punctuality of this confession, I am willing to depend for all the future regard of mankind, and cannot but indulge some hopes, that they whom my offence has alienated from me, may, by this instance of ingenuity and repentance, be propitiated and reconciled. Whatever be the event, I shall at least have done all that can be done in reparation of my former injuries to *Milton*, to truth, and to mankind, and entreat that those who shall continue implacable, will examine their own hearts, whether they have not committed equal crimes without equal proofs of sorrow, or equal acts of atonement*.

PASSAGES interpolated in MASENIUS.

The word *pandemonium* in the marginal notes of Book I. Essay, page 10.

* The interpolations are distinguished by *italic* characters

CITATION VI. Essay, page 38.

Adnuit ipsa dolo, malumque (heu ; longa dolendi
 Materies ! & triste nefas !) vesana momordit !
 Tanti ignara mali. Mora nulla, solutus Avernus
 Exspuit infandas acies ; fractumque remugit
 Divulsa compage solum. Nabathæa receptum
 Regna dedere sonum, Pharioque in littore Nereus
 Territus erubuit : simul adgemuere dolentes
 Hesperix valles, Libyæque calentis arenæ
 Exarsere procul. Stupefacta Lycaonis ursa
 Constitit, & pavido riguit glacialis in axe :
 Omnis cardinibus submotus inhorruit orbis ;
Angeli hoc efficiunt, caelestia jussa secuti.

CITATION VII. Essay, page 41.

Illa quidem fugiens, sparsis per terga capillis,
 Ora rigat lacrimis, & cælum questibus implet :
 Talia voce rogans. Magni Deus arbiter orbis !
 Qui rerum momenta tenes, solusque futuri
 Præscius, elapsique memor : quem terra potentem
 Imperio, cœlique tremunt ; quem dite superbus
 Horrescit Phlegethon, pavidoque furore veretur :
 En ! Styge crudeli premimur. Laxantur hiatus
 Tartarei, dirusque solo dominatur Avernus,
Infernique canes populantur cuncta creata,
 Et manes violant superos : discrimina rerum
 Sustulit Antitheus, divumque oppressit honorem.
 Respice Sarcotheam : nimis, heu ! decepta momordit
 Infaustas epulas, nosque omnes prodidit hosti.

CITATION VIII. Essay, p. 42. the whole passage.

*Quadrupedi pugnat quadrupes, volucrique volucris ;
 Et piscis cum pisce ferox hostilibus armis
 Prælia sæva gerit : jam pristina pabula spernunt,*

*Jam tondere piget viridantes gramine campos:
 Alterum & alterius vivunt animalia letho:
 Prisca nec in gentem humanam reverentia durat;
 Sed fugiunt, vel si steterant fera bella minantur
 Fronte truci, torvosque oculos jaculantur in illam.*

CITATION IX. Essay, page 43.

*Vatibus antiquis numerantur lumine cassis,
 Tiresias, Phineus, Thamyrisque, & magnus Ho-
 merus.*

The above passage stands thus in Masenius, in one line :

Tiresias cœcus, Thamyrisque, & Daphnis, Ho-
 merus.

N. B. The verse now cited is in *Masenius's Poems*, but not in the *Sarcotis*.

CITATION X. Essay, page 46.

*In medio, turmas inter provectus ovantes
 Cernitur Antitheus, reliquis hic altior unus
 Eminent, & circum vulgus despectat inane:
 Frons nebulis obscura latet, torvamque furorẽ
 Dissimulat, fidæ tectus velamine noctis:
 Persimilis turri præcelsæ, aut montibus altis
 Antiqua cedro, nudate frondis honore.*

PASSAGES interpolated in GROTIUS.

CITATION I. Essay, page 55.

*Sacri tonantis hostis, exsul patriæ
 Cœlestis adsum; tartari tristem specum
 Fugiens, & atram noctis æternæ plagam.
 Hac spe, quod unum maximum fugio malum,*

Superos videbo. Fallor? an certè meo
 Concussa tellus tota trepidat pondere?
 Quid dico? Tellus? Orcus & pedibus tremit.

CITATION II. Essay, page 58, the whole passage.

Nam, me iudice,

*Regnare dignum est ambitu, etsi in Tartaro :
 Alto præesse Tartaro siquidem juvat,
 Calis quam in ipsis servi obire munia.*

CITATION IV. Essay, page 61, the whole passage.

*Innominata queque nominibus suis,
 Libet vocare propriis vocabulis.*

CITATION V. Essay, page 63.

Terrestris orbis rector! & princeps freti!
 Cali solique soboles; ætherium genus!
 Adame! dextram liceat amplecti tuam!

CITATION VI. Essay, *ibid.*

Quod illud animal, tramite obliquo means,
 Ad me volutum flexili serpit viâ?
 Sibila retorquet ora setosum caput
 Trifidamque linguam vibrat: oculi ardent duo,
Carbunculorum luce certantes rubrâ.

CITATION VII. Essay, page 65, the whole passage.

————— *Nata deo! atque homine sata!*
Regina mundi! eademque interitus inscia!
Cunctis colenda! —————

CITATION VIII. Essay, page 66, the whole passage.

*Rationis etenim omnino paritas exigit,
 Ego bruta quando bestia evasi loquens;
 Ex homine, qualis ante, te fieri Deam.*

CITATION IX. Essay, *ibid.*

Per sancta thalami sacra, per jus nominis
 Quodcumque nostri : sive me natam vocas,
 Ex te creatam ; sive communi patre
 Ortam, sororem ; sive potius conjugem :
Cassam, oro, dulci, luminis jubare tui
 Ne me relinquant : nunc tuo auxilio est opus.
 Cum versa sors est. Unicum lapsæ mihi
 Firmamen, unam spem gravi afflictæ malo,
 Te mihi reserva, dum licet : mortalium
 Ne tota soboles pereat unius nece :
Tibi nam relicta, quò petam ? aut ævum exigam ?

CITATION X. Essay, page 67, the whole passage.

*Tu namque soli numini contrarius,
 Minus es noscivus ; ast ego nocentior,
 (Adeoque misera magis, quippe miseriæ comes
 Origoque scelus est, lurida mater male !)
 Deumque læsi scelere, teque, vir ! s.mul.*

CITATION XI. Essay, page 68, the whole passage.

Quod comedo, poto, gigno, diris subjacet.

Interpolation in *Ramsay*.

CITATION VI. Essay, page 88.

O judex ! nova me facies inopinæ terret ;
 Me maculæ turpes, nudæque in corpore sordes,
 Et cruciant duris exercita pectora pœnis :
 Me ferus horror agit. Mihi non vernantia prata,
 Non vitrei fontes, cœli non aurea templa,
 Nec sunt grata mihi sub utroque jacentia sole :
 Judicis ora Dei sic terrent, lancinat ægrum .
 Sic pectus mihi noxa. O si mî abrumpere vitam,

Et detur pœnam quovis evadere letho !
 Ipsa parens utinam mihi tellus ima dehiscat !
 Ad piceas trudarque umbras, atque infera regna !
Pallentes umbras Erebi, noctemque profundam !
 Montibus aut premar injectis, cœlique ruinâ !
 Ante tuos vultus, tua quam flammantiaque ora
 Suspiciam, caput objectem & cœlestibus armis !

Interpolations in *Staphorstius*.

CITATION III. Essay, page 104.

Fœdus in humanis fragili quod sanctius ævo !
 Firmius & melius, quod magnificentius, ac quam
 Conjugii, sponsi sponsæque jugalia sacra !
Auspice te, fugiens alieni subcuba lecti,
Dira libido hominum tota de gente repulsa est :
Ac tantum gregibus pecudum ratione carentum
Imperat, & sine lege tori furibunda vagatur.
Auspice te, quam jura probant, rectumque, piumque,
Filias atque pater, fraterque innotuit ; & quot
Vincula vicini sociarunt sanguinis, a te
Nominibus didicere suam distinguere gentem.

CITATION VI. Essay, page 109.

Cœlestes animæ ! sublimia templa tenentes,
 Laudibus adcumulate deum super omnia magnum !—
 Tu quoque nunc animi vis tota ac maxuma nostri !
 Tota tui in Domini gratas dissolvere laudes !
Aurorâ redeunte novâ, redeuntibus umbris.
 Immensum ! augustum ! verum ! inscrutabile nu-
 men !
 Summe Deus ! sobolesque Dei ! consorsque duorum,
 Spiritus ! æternas retines, bone rector ! habenas,
 Per mare, per terras, cœlosque, atque unus Jehova
 VOL. IX. I

Existens, celebrabo tuas, memorique sonabo
 Organico plectro laudes. Te pectore amabo,
Te primum, & medium, & summum, sed sine carentem,
 O miris mirande modis! ter maxime rerum!
 Collustrat terras dum lumine Titan Eoo!

Interpolation in *Fox*. Essay, page 116.

Tu Psychephone
 Hypocrisis esto, hoc sub Francisci pallio.
 Tu Thanate, Martyromastix re & nomine sies.

Altered thus,

Tu Psychephone!
 Hypocrisis esto; hoc sub Francisci pallio,
Quo tutò tecte sese credunt emori.

Interpolation in *Quintianus*. Essay, page 117.

Mic. Cur huc procaci veneris cursu refer?
 Manere si quis in sua potest domo,
 Habitare numquam curet alienas domos.
Luc. Quis non, relictâ Tartari nigri domo,
 Veniret? Illic summa tenebrarum lues,
 Ubi pedor ingens redolet extremum situm.
 Hic autem amœna regna, & dulcis quies;
 Ubi serenus ridet æternum dies.
 Mutare facile * est pondus immensum levi,
Summos dolores maximisque gaudiis.

Interpolation in *Beza*. Essay, page 119.

Stygemque testor, & profunda Tartari,
 Nisi impediret livor, & queius prosequor
 Odi: supremum numen, atque hominum genus,

* For *facile*, the word *volupte* was substituted in the Essay.

Pietate motus hinc patris, & hinc filii,
 Possem parenti condolere & filio,
Quasi exuissem omnem malitiam ex pectore.

Interpolation in *Fletcher*. Essay, page 124.

Nec tamen æternos obliti (absiste timere)
 Umquam animos, fessique ingentes ponimus iras.
 Nec fas; non sic deficimus, nec talia tecum
 Gessimus, in cœlos olim tua signa secuti.
 Est hic, est vitæ & magni contemptor Olympi,
 Quique oblatam animus lucis nunc respuat aulam,
 Et domiti tantum placeat cui regia cœli.
 Ne dubita, numquam fractis hæc pectora, numquam
 Deficient animis: prius ille ingentia cœli
 Atria, desertosque æternæ lucis alumnos
 Destituens, Erebum admigret noctemque profun-
 dam,
 Et Stygiis mutet radiantia lumina flammis.
*In promptu caussa est: superest invicta voluntas,
 Immortale odium, vindictæ & seva cupido.*

Interpolations in *Taubman*. Essay, page 132.

Tunc, ait, imperio regere omnia solus; et una
 Filius iste tuus, qui se tibi subjicit ultro,
 Ac genibus minor ad terram prosternit, & offert
 Nescio quos toties animi servilis honores?
 Et tamen æterni proles æterna Jehovah
 Audit ab ætherea luteaque propagine mundi.
*(Scilicet hunc natum dixisti cuncta regentem;
 Calitibus regem cunctis, dominumque supremum)*
 Huic ego sim supplex? ego? quo præstantior alter
 Non agit in superis. Mihi jus dabit ille, suum qui
 Dat caput alterius sub jus & vincula legum?

Semideus reget iste polos? reget avia terræ?

Me pressum levioꝛe manu fortuna tenebit?

Et cogar æternum duplici servire tyranno?

Haud ita. Tu solus non polles fortibus ausis.

Non ego sic cecidi, nec sic mea fata premuntur,

Ut nequeam relevare caput, colloque superbum

Excutere imperiũ. Mihi si mea dextra favebit,

Audeo totius mihi jus promittere mundi.

Essay, page 152.

Throni dominationes, principatus, virtutes, potestates, is said to be a line borrowed by MILTON from the title-page of HEYWOOD'S *Hierarchy of Angels*. But there are more words in *Heywood's* title; and, according to his own arrangement of his subjects, they should be read thus.—*Seraphim, cherubim, throni, potestates, angeli, archangeli, principatus, dominationes*.

These are my interpolations, minutely traced without any arts of evasion. Whether from the passages that yet remain, any reader will be convinced of my general assertion, and allow, that *Milton* had recourse for assistance to any of the authors whose names I have mentioned, I shall not now be very diligent to inquire, for I had no particular pleasure in subverting the reputation of *Milton*, which I had myself once endeavoured to exalt*; and of which, the foundation had always re-

* *Virorum maximus—JOANNES MILTONUS—Poeta celeberrimus—non Angliæ modo, soli natalis, verum generis humani ornamentum—cujus eximius liber, Anglicanis versibus conscriptus, vulgo PARADISUS AMISSUS, immortalis illud ingenii monumentum, cum ipsa ferè æternitate perennaturum est opus!—Hujus memoriam Anglorum primus, post tantum, proh dolor! ab tanti excessu poetæ intervalum statua eleganti in loco celeberrimo, cœnobio Westmonasteriensi,*

mained untouched by me, had not my credit and my interest been blasted, or thought to be blasted, by the shade which it cast from its boundless elevation.

About ten years ago, I published an edition of Dr Johnston's translation of the Psalms, and having procured from the general assembly of the Church of Scotland, a recommendation of its use to the lower classes of grammar-schools, into which I had begun to introduce it, though not without much controversy and opposition; I thought it likely that I should, by annual publications, improve my little fortune, and be enabled to support myself in freedom from the miseries of indigence. But Mr Pope, in his malevolence to Mr Benson, who had distinguished himself by his fondness for the same version, destroyed all my hopes by a distich, in which he places Johnston in a contemptuous comparison with the author of *Paradise Lost* †.

posita, regum, principum, antistitum, illustriumque Angliæ virorum cæmeterio, vir ornatissimus, Gulielmus Benson persecutus est.

Poetorum Scotorum Muse Sacre in præfatione, Edinb. 1739.

A character, as high and honourable as ever was bestowed upon him by the most sanguine of his admirers! and as this was my cool and sincere opinion of that wonderful man formerly, so I declare it to be the same still, and ever will be, notwithstanding all appearances to the contrary, occasioned merely by passion and resentment; which appear, however, by the Postscript to the Essay, to be so far from extending to the posterity of Milton, that I recommend his only remaining descendant, in the warmest terms, to the publick.

† On two unequal crutches prop'd he * came,
MILTON's on this, on that *one* JOHNSTON's name,
Dunciad. Book IV.

* *Benson*] This man endeavoured to raise himself to fame,

From this time, all my praises of Johnston became ridiculous, and I was censured with great freedom, for forcing upon the schools, an author whom Mr Pope had mentioned only as a foil to a better poet. On this occasion, it was natural not to be pleased, and my resentment seeking to discharge itself some where, was unhappily directed against Milton. I resolved to attack his fame, and found some passages in cursory reading, which gave me hopes of stigmatising him as a plagiarist. The farther I carried my search, the more eager I grew for the discovery, and the more my hypothesis was opposed, the more I was heated with rage. The consequence of my blind passion, I need not relate; it has, by your detection, become apparent to mankind. Nor do I mention this provocation as adequate to the fury which I have shown, but as a cause of

by erecting monuments, striking coins, and procuring translations of Milton; and afterwards by a great passion for Arthur Johnston, a Scots physician's version of the psalms, of which he printed many fine editions. *Notes on the Dunciad.*

No fewer than six different editions of that useful and valuable book, two in quarto, two in octavo, and two in a lesser form, now lie like lumber in the hand of Mr Vaillant, bookseller, the effects of Mr Pope's ill-natured criticism.

One of these editions in quarto, illustrated with an interpretation and notes, after the manner of the classic authors *in usum Delphini*, was by the worthy editor *anno 1741*, inscribed to his Royal Highness Prince George, as a proper book for his instruction in principles of piety, as well as knowledge of the Latin tongue, when he should arrive at due maturity of age. To restore this book to credit was the cause that induced me to engage in this disagreeable controversy, rather than any design to depreciate the just reputation of Milton.

anger, less shameful and reproachful than fractious malice, personal envy, or national jealousy.

But for the violation of truth, I offer no excuse, because I well know, that nothing can excuse it. Nor will I aggravate my crime, by disingenuous palliations. I confess it, I repent it, and resolve, that my first offence shall be my last. More I cannot perform, and more therefore cannot be required. I intreat the pardon of all men, whom I have by any means induced to support, to countenance, or patronise my frauds, of which I think myself obliged to declare, that not one of my friends was conscious. I hope to deserve, by better conduct and more useful undertakings, that patronage, which I have obtained from the most illustrious and venerable names by misrepresentation and delusion, and to appear hereafter in such a character, as shall give you no reason to regret that your name is frequently mentioned with that of,

Reverend SIR,

Your most humble servant,

WILLIAM LAUDER.

Dec. 20, 1750.

REVIEW
OF A
FREE ENQUIRY
INTO THE
NATURE AND ORIGIN OF EVIL.

THIS is a treatise consisting of Six Letters upon a very difficult and important question, which I am afraid this author's endeavours will not free from the perplexity which has intangled the speculatists of all ages, and which must always continue while *we see but in part*. He calls it a *Free Enquiry*, and indeed his *freedom* is, I think, greater than his modesty. Though he is far from the contemptible arrogance, or the impious licentiousness of Bolingbroke, yet he decides too easily upon questions out of the reach of human determination, with too little consideration of mortal weakness, and with too much vivacity for the necessary caution.

In the first letter *on Evil in general*, he observes, that, "it is the solution of this important question, "*whence came Evil*, alone, that can ascertain the "moral characteristick of God, without which "there is an end of all distinction between Good "and Evil." Yet he begins this Enquiry by this declaration: "That there is a Supreme Being,

“infinitely powerful, wise, and benevolent, the great Creator and Preserver of all things, is a truth so clearly demonstrated, that it shall be here taken for granted.” What is this but to say, that we have already reason to grant the existence of those attributes of God, which the present Enquiry is designed to prove? The present Enquiry is then surely made to no purpose. The attributes, to the demonstration of which the solution of this great question is necessary, have been demonstrated without any solution, or by means of the solution of some former writer.

He rejects the *Manichean* system, but imputes to it an absurdity, from which, amidst all its absurdities, it seems to be free, and adopts the system of Mr Pope, “That pain is no evil, if asserted with regard to the individuals who suffer it, is downright nonsense; but if considered as it affects the universal system, is an undoubted truth, and means only that there is no more pain in it than what is necessary to the production of happiness. How many soever of these evils then force themselves into the creation, so long as the good preponderates, it is a work well worthy of infinite wisdom and benevolence; and, notwithstanding the imperfections of its parts, the whole is most undoubtedly perfect.” And in the former part of the Letter he gives the principle of his system in these words: “Omnipotence cannot work contradictions, it can only effect all possible things. But so little are we acquainted with the whole system of nature, that we know not what are possible, and what are not: but if we may judge from that constant mixture of

“ pain with pleasure, and inconveniency with advantage, which we must observe in every thing round us, we have reason to conclude, that to endue created beings with perfection, that is, to produce Good exclusive of Evil, is one of those impossibilities which even infinite power cannot accomplish.”

This is elegant and acute, but will by no means calm discontent, or silence curiosity; for whether Evil can be wholly separated from Good or not, it is plain that they may be mixed in various degrees, and as far as human eyes can judge, the degree of Evil might have been less without any impediment to Good.

The second Letter *on the evils of imperfection*, is little more than a paraphrase of Pope's Epistles, or yet less than a paraphrase, a mere translation of poetry into prose. This is surely to attack difficulty with very disproportionate abilities, to cut the *Gordian* knot with very blunt instruments. When we are told of the insufficiency of former solutions, why is one of the latest, which no man can have forgotten, given us again? I am told, that this pamphlet is not the effort of hunger: what can it be then but the product of vanity? and yet how can vanity be gratified by plagiarism or transcription? When this speculist finds himself prompted to another performance, let him consider whether he is about to disburthen his mind, or employ his fingers; and if I might venture to offer him a subject, I should wish that he would solve this question, Why he that has nothing to write, should desire to be a writer?

Yet is not this Letter without some sentiments,

which, though not new, are of great importance, and may be read with pleasure in the thousandth repetition.

“ Whatever we enjoy is purely a free gift from
“ our Creator; but that we enjoy no more, can
“ never sure be deemed an injury, or a just reason
“ to question his infinite benevolence. All our
“ happiness is owing to his goodness; but that it
“ is no greater, is owing only to ourselves; that is,
“ to our not having any inherent right to any hap-
“ piness, or even to any existence at all. This is
“ no more to be imputed to God, than the wants
“ of a beggar to the person who has relieved him:
“ that he had something, was owing to his bene-
“ factor; but that he had no more, only to his own
“ original poverty.

Thus far he speaks what every man must approve, and what every wise man has said before him. He then gives us the system of subordination, not invented, for it was known I think to the Arabian metaphysicians, but adopted by Pope; and from him borrowed by the diligent researches of this great investigator.

“ No system can possibly be formed, even in
“ imagination, without a subordination of parts.
“ Every animal body must have different members
“ subservient to each other; every picture must
“ be composed of various colours, and of light
“ and shade; all harmony must be formed of
“ trebles, tenors, and basses; every beautiful and
“ useful edifice must consist of higher and lower,
“ more and less magnificent apartments. This is
“ in the very essence of all created things, and

“ therefore cannot be prevented by any means
 “ whatever, unless by not creating them at all.”

These instances are used instead of Pope's *Oak* and *Weeds*, or *Jupiter* and his *Satellites*; but neither Pope, nor this writer, have much contributed to solve the difficulty. Perfection or imperfection of unconscious beings has no meaning as referred to themselves; the *bass* and the *treble* are equally perfect; the mean and magnificent apartments feel no pleasure or pain from the comparison. *Pope* might ask the weed why it was less than the oak, but the weed would never ask the question for itself. The *bass* and *treble* differ only to the hearer, meanness and magnificence only to the inhabitant. There is no evil but must inhere in a conscious being, or be referred to it; that is, Evil must be felt before it is evil. Yet even on this subject many questions might be offered which human understanding has not yet answered, and which the present haste of this extract will not suffer me to dilate.

He proceeds to a humble detail of Pope's opinion: “ The universe is a system whose very essence consists in subordination; a scale of beings descending by insensible degrees from infinite perfection to absolute nothing; in which, though we may justly expect to find perfection in the whole, could we possibly comprehend it; yet would it be the highest absurdity to hope for it in all its parts, because the beauty and happiness of the whole depend altogether on the just inferiority of its parts, that is, on the comparative imperfections of the several beings of which it is composed.”

“ It would have been no more an instance of

“ God’s wisdom to have created no beings but of
“ the highest and most perfect order, than it
“ would be of a painter’s art to cover his whole
“ piece with one single colour, the most beautiful
“ he could compose. Had he confined himself to
“ such, nothing could have existed but demi-gods,
“ or arch-angels, and then all inferior orders must
“ have been void and uninhabited; but as it is
“ surely more agreeable to infinite Benevolence,
“ that all these should be filled up with beings
“ capable of enjoying happiness themselves, and
“ contributing to that of others, they must neces-
“ sarily be filled with inferior beings, that is, with
“ such as are less perfect, but from whose exist-
“ ence, notwithstanding that less perfection, more
“ felicity upon the whole accrues to the universe,
“ than if no such had been created. It is more-
“ over highly probable, that there is such a con-
“ nection between all ranks and orders by subor-
“ dinate degrees, that they mutually support each
“ other’s existence, and every one in its place is
“ absolutely necessary towards sustaining the
“ whole vast and magnificent fabrick.

“ Our pretences for complaint could be of this
“ only, that we are not so high in the scale of ex-
“ istence as our ignorant ambition may desire; a
“ pretence which must eternally subsist; because,
“ were we ever so much higher, there would be
“ still room for infinite power to exalt us; and
“ since no link in the chain can be broke, the
“ same reason for disquiet must remain to those
“ who succeed to that chasm, which must be oc-
“ casioned by our preferment. A man can have
“ no reason to repine that he is not an angel; nor

“ a horse that he is not a man ; much less, that
 “ in their several stations they possess not the fa-
 “ culties of another ; for this would be an insuf-
 “ ferable misfortune.”

This doctrine of the regular subordination of beings, the scale of existence, and the chain of nature, I have often considered, but always left the inquiry in doubt and uncertainty.

That every being not infinite, compared with infinity, must be imperfect, is evident to intuition ; that whatever is imperfect must have a certain line which it cannot pass, is equally certain. But the reason which determined this limit, and for which such being was suffered to advance thus far and no farther, we shall never be able to discern. Our discoverers tell us, the Creator has made beings of all orders, and that therefore one of them must be such as man. But this system seems to be established on a concession, which, if it be refused, cannot be extorted.

Every reason which can be brought to prove, that there are beings of every possible sort, will prove that there is the greatest number possible of every sort of beings ; but this with respect to man we know, if we know any thing, not to be true.

It does not appear even to the imagination, that of three orders of being, the first and the third receive any advantage from the imperfection of the second, or that indeed they may not equally exist, though the second had never been, or should cease to be, and why should that be concluded necessary, which cannot be proved even to be useful ?

The scale of existence from infinity to nothing, cannot possibly have being. The highest being

not infinite must be, as has been often observed, at an infinite distance below infinity. Cheyne, who, with the desire inherent in mathematicians to reduce every thing to mathematical images, considers all existence as a *cone*, allows that the basis is at an infinite distance from the body. And in this distance between finite and infinite, there will be room for ever for an infinite series of indefinable existence.

Between the lowest positive existence and nothing, wherever we suppose positive existence to cease, is another chasm infinitely deep; where there is room again for endless orders of subordinate nature, continued for ever and for ever, and yet infinitely superior to non-existence.

To these meditations humanity is unequal. But yet we may ask, not of our Maker, but of each other, since on the one side creation, wherever it stops, must stop infinitely below infinity, and on the other infinitely above nothing, what necessity there is that it should proceed so far either way that beings so high or so low should ever have existed? We may ask; but I believe no created wisdom can give an adequate answer.

Nor is this all. In the scale wherever it begins or ends, are infinite vacuities. At whatever distance we suppose the next order of beings to be above man, there is room for an intermediate order of beings between them; and if for one order, then for infinite orders; since every thing that admits of more or less, and consequently all the parts of that which admits them, may be infinitely divided. So that, as far as we can judge, there may be room in the vacuity between any two steps of the scale, or

between any two points of the cone of being, for infinite exertion of infinite power.

Thus it appears how little reason those who repose their reason upon the scale of being have to triumph over them who recur to any other expedient of solution, and what difficulties arise on every side to repress the rebellions of presumptuous decision. *Qui pauca considerat, facile pronunciat.* In our passage through the boundless ocean of disquisition we often take fogs for land, and after having long toiled to approach them, find, instead of repose and harbours, new storms of objection, and fluctuations of uncertainty.

We are next entertained with Pope's alleviations of those evils which we are doomed to suffer.

“ Poverty or the want of riches, is generally
 “ compensated by having more hopes, and fewer
 “ fears, by a greater share of health, and a more
 “ exquisite relish of the smallest enjoyments, than
 “ those who possess them are usually blessed with.
 “ The want of taste and genius, with all the pleasures
 “ that arise from them, are commonly recom-
 “ pensed by a more useful kind of common sense,
 “ together with a wonderful delight, as well as success,
 “ in the busy pursuits of a scrambling world.
 “ The sufferings of the sick are greatly relieved
 “ by many trifling gratifications imperceptible to
 “ others, and sometimes almost repaid by the inconceivable
 “ transports occasioned by the return
 “ of health and vigour. Folly cannot be very
 “ grievous, because imperceptible; and I doubt
 “ not but that there is some truth in that rant of
 “ a mad poet, that there is a pleasure in being mad,
 “ which none but madmen know. Ignorance, or

“ the want of knowledge and literature, the ap-
 “ pointed lot of all born to poverty, and the
 “ drudgeries of life, is the only opiate capable of
 “ infusing that insensibility which can enable them
 “ to endure the miseries of the one and the fatigues
 “ of the other. It is a cordial administered by the
 “ gracious hand of Providence ; of which they
 “ ought never to be deprived by an ill-judged and
 “ improper education. It is the basis of all sub-
 “ ordination, the support of society, and the pri-
 “ vilege of individuals : and I have ever thought it
 “ a most remarkable instance of the divine wisdom,
 “ that whereas in all animals, whose individuals
 “ rise little above the rest of their species, know-
 “ ledge is instinctive ; in man, whose individuals
 “ are so widely different, it is acquired by educa-
 “ tion ; by which means the prince and the labour-
 “ er, the philosopher and the peasant, are in some
 “ measure fitted for their respective situations.”

Much of these positions is perhaps true, and the whole paragraph might well pass without censure, were not objections necessary to the establishment of knowledge. *Poverty* is very gently paraphrased by *want of riches*. In that sense almost every man may in his own opinion be poor. But there is another poverty, which is *want of competence*, of all that can soften the miseries of life, of all that can diversify attention, or delight imagination. There is yet another poverty, which is *want of necessaries*, a species of poverty which no care of the publick, no charity of particulars, can preserve many from feeling openly, and many secretly.

That hope and fear are inseparably or very frequently connected with poverty and riches, my

surveys of life have not informed me. The milder degrees of poverty are sometimes supported by hope, but the more severe often sink down in motionless despondence. Life must be seen before it can be known. This author and Pope perhaps never saw the miseries which they imagine thus easy to be borne. The poor indeed are insensible of many little vexations which sometimes embitter the possessions and pollute the enjoyments of the rich. They are not pained by casual incivility, or mortified by the mutilation of a compliment; but this happiness is like that of a malefactor, who ceases to feel the cords that bind him when the pincers are tearing his flesh.

That want of taste for one enjoyment is supplied by the pleasures of some other, may be fairly allowed. But the compensations of sickness I have never found near to equivalence, and the transports of recovery only prove the intenseness of the pain.

With folly no man is willing to confess himself very intimately acquainted, and therefore its pains and pleasures are kept secret. But what the author says of its happiness seems applicable only to fatuity, or gross dulness; for that inferiority of understanding which makes one man without any other reason the slave, or tool, or property of another, which makes him sometimes useless, and sometimes ridiculous, is often felt with very quick sensibility. On the happiness of madmen, as the case is not very frequent, it is not necessary to raise a disquisition, but I cannot forbear to observe, that I never yet knew disorders of mind increase felicity: every madman is either arrogant and irascible, or

gloomy and suspicious, or possessed by some passion or notion destructive to his quiet. He has always discontent in his look, and malignity in his bosom. And, if he had the power of choice, he would soon repent who should resign his reason to secure his peace.

Concerning the portion of ignorance necessary to make the condition of the lower classes of mankind safe to the publick and tolerable to themselves, both morals and policy exact a nicer inquiry than will be very soon or very easily made. There is undoubtedly a degree of knowledge which will direct a man to refer all to Providence, and to acquiesce in the condition with which Omniscient Goodness has determined to allot him ; to consider this world as a phantom that must soon glide from before his eyes, and the distresses and vexations that encompass him, as dust scattered in his path, as a blast that chills him for a moment, and passes off for ever.

Such wisdom, arising from the comparison of a part with the whole of our existence, those that want it most cannot possibly obtain from philosophy ; nor unless the method of education, and the general tenor of life are changed, will very easily receive it from religion. The bulk of mankind is not likely to be very wise or very good : and I know not whether there are not many states of life, in which all knowledge, less than the highest wisdom, will produce discontent and danger. I believe it may be sometimes found, that a *little learning* is to a poor man a *dangerous thing*. But such is the condition of humanity, that we easily see, or quickly feel the wrong, but cannot always distin-

guish the right. Whatever knowledge is superfluous, in irremediable poverty, is hurtful, but the difficulty is to determine when poverty is irremediable, and at what point superfluity begins. Gross ignorance every man has found equally dangerous with perverted knowledge. Men left wholly to their appetites and their instincts, with little sense of moral or religious obligation, and with very faint distinctions of right and wrong, can never be safely employed, or confidently trusted: they can be honest only by obstinacy, and diligent only by compulsion or caprice. Some instruction, therefore, is necessary, and much perhaps may be dangerous.

Though it should be granted that those who are *born to poverty and drudgery* should not be *deprived* by an *improper education* of the *opiate* of *ignorance*; even this concession will not be of much use to direct our practice, unless it be determined who are those that are *born to poverty*. To entail irreversible poverty upon generation after generation, only because the ancestor happened to be poor, is in itself cruel, if not unjust, and is wholly contrary to the maxims of a commercial nation, which always suppose and promote a rotation of property, and offer every individual a chance of mending his condition by his diligence. Those who communicate literature to the son of a poor man, consider him as one not born to poverty, but to the necessity of deriving a better fortune from himself. In this attempt, as in others, many fail, and many succeed. Those that fail will feel their misery more acutely; but since poverty is now confessed to be such a calamity as cannot be borne without the opiate of

insensibility, I hope the happiness of those whom education enables to escape from it, may turn the balance against that exacerbation which the others suffer.

I am always afraid of determining on the side of envy or cruelty. The privileges of education may sometimes be improperly bestowed, but I shall always fear to withhold them, lest I should be yielding to the suggestions of pride, while I persuade myself that I am following the maxims of policy; and under the appearance of salutary restraints, should be indulging the lust of dominion, and that malevolence which delights in seeing others depressed.

Pope's doctrine is at last exhibited in a comparison, which, like other proofs of the same kind, is better adapted to delight the fancy than convince the reason.

“ Thus the universe resembles a large and well
 “ regulated family, in which all the officers and
 “ servants, and even the domestic animals, are sub-
 “ servient to each other in a proper subordination :
 “ each enjoys the privileges and perquisites peculiar
 “ to his place, and at the same time contributes by
 “ that just subordination to the magnificence and
 “ happiness of the whole.”

The magnificence of a house is of use or pleasure always to the master, and sometimes to the domesticks. But the magnificence of the universe adds nothing to the Supreme Being; for any part of its inhabitants with which human knowledge is acquainted, an universe much less spacious or splendid would have been sufficient; and of happiness it does not appear that any is communicated

from the beings of a lower world to those of a higher.

The Enquiry after the cause of *natural Evil* is continued in the third Letter, in which, as in the former, there is mixture of borrowed truth, and native folly, of some notions just and trite, with others uncommon and ridiculous.

His opinion of the value and importance of happiness is certainly just, and I shall insert it, not that it will give any information to any reader, but it may serve to shew how the most common notion may be swelled in sound, and diffused in bulk, till it shall perhaps astonish the author himself.

“ Happiness is the only thing of real value in
 “ existence ; neither riches, nor power, nor wis-
 “ dom, nor learning, nor strength, nor beauty,
 “ nor virtue, nor religion, nor even life itself, be-
 “ ing of any importance, but as they contribute
 “ to its production. All these are in themselves
 “ neither good nor evil : happiness alone is their
 “ great end, and they are desirable only as they
 “ tend to promote it.”

Success produces confidence. After this discovery of the value of happiness, he proceeds, without any distrust of himself, to tell us what has been hid from all former enquirers.

“ The true solution of this important question,
 “ so long and so vainly searched for by the philo-
 “ sophers of all ages and all countries, I take to
 “ be at last no more than this, that these real evils
 “ proceed from the same source as those imaginary
 “ ones of imperfection, before treated of, namely,
 “ from that subordination, without which no cre-
 “ ated system can subsist ; all subordination im-

“ plying imperfection, all imperfection evil, and
 “ and all evil some kind of inconveniency or suf-
 “ fering : so that there must be particular incon-
 “ veniencies and sufferings annexed to every parti-
 “ cular rank of created beings by the circum-
 “ stances of things, and their modes of existence.
 “ God indeed might have made us quite other
 “ creatures, and placed us in a world quite differ-
 “ ently constituted ; but then we had been no
 “ longer men, and whatever beings had occupied
 “ our stations in the universal system, they must
 “ have been liable to the same inconveniences.”

In all this there is nothing that can silence the
 inquiries of curiosity, or calm the perturbations of
 doubt. Whether subordination implies imperfec-
 tion may be disputed. The means respecting
 themselves may be as perfect as the end. The
 weed as a weed is no less perfect than the oak as
 an oak. That imperfection implies evil, and evil
 suffering, is by no means evident. Imperfection
 may imply privative evil, or the absence of some
 good, but this privation produces no suffering, but
 by the help of knowledge. An infant at the breast
 is yet an imperfect man, but there is no reason for
 belief that he is unhappy by his immaturity, un-
 less some positive pain be superadded.

When this author presumes to speak of the uni-
 verse, I would advise him a little to distrust his own
 faculties, however large and comprehensive. Many
 words easily understood on common occasion, be-
 come uncertain and figurative when applied to the
 works of Omnipotence. Subordination in human
 affairs is well understood; but when it is attributed
 to the universal system, its meaning grows less cer-

tain, like the petty distinctions of locality, which are of good use upon our own globe, but have no meaning with regard to infinite space, in which nothing is *high* or *low*.

That if man, by exaltation to a higher nature, were exempted from the evils which he now suffers, some other being must suffer them; that if man were not man, some other being must be man, is a position arising from his established notion of the scale of being. A notion to which Pope has given some importance by adopting it, and of which I have therefore endeavoured to shew the uncertainty and inconsistency. This scale of being I have demonstrated to be raised by presumptuous imagination, to rest on nothing at the bottom, to lean on nothing at the top, and to have vacuities from step to step, through which any order of being may sink into nihility without any inconvenience, so far as we can judge, to the next rank above or below it. We are therefore little enlightened by a writer who tells us, that any being in the state of man must suffer what man suffers, when the only question that requires to be resolved is, Why any being is in this state?

Of poverty and labour he gives just and elegant representations, which yet do not remove the difficulty of the first and fundamental question, though supposing the present state of man necessary, they may supply some motives to content.

“Poverty is what all could not possibly have
 “been exempted from, not only by reason of the
 “fluctuating nature of human possessions, but be-
 “cause the world could not subsist without it;

“ for had all been rich, none could have submitted
 “ to the commands of another, or the necessary
 “ drudgeries of life ; thence all governments must
 “ have been dissolved, arts neglected, and lands
 “ uncultivated, and so an universal penury have
 “ overwhelmed all, instead of now and then pinch-
 “ ing a few. Hence, by the by, appears the
 “ great excellence of charity, by which men are
 “ enabled by a particular distribution of the bless-
 “ ings and enjoyments of life, on proper occasions,
 “ to prevent that poverty which by a general one
 “ Omnipotence itself could never have prevented :
 “ so that, by enforcing this duty, God as it were
 “ demands our assistance to promote universal hap-
 “ piness, and to shut out misery at every door
 “ where it strives to intrude itself.

“ Labour, indeed, God might easily have ex-
 “ cused us from, since at his command the earth
 “ would readily have poured forth all her treasures
 “ without our inconsiderable assistance : but if the
 “ severest labour cannot sufficiently subdue the
 “ malignity of human nature, what plots and ma-
 “ chinations, what wars, rapine, and devastation,
 “ what profligacy and licentiousness, must have
 “ been the consequences of universal idleness ! so
 “ that labour ought only to be looked upon as
 “ a task kindly imposed upon us by our indulgent
 “ Creator, necessary to preserve our health, our
 “ safety, and our innocence.”

I am afraid that *the latter end of his commonwealth*
forgets the beginning. If God could easily have
excused us from labour, I do not comprehend why
he could not possibly have exempted all from poverty.

For poverty, in its easier and more tolerable degree, is little more than necessity of labour; and in its more severe and deplorable state, little more than inability for labour. To be poor is to work for others, or to want the succour of others without work. And the same exuberant fertility which would make work unnecessary, might make poverty impossible.

Surely a man who seems not completely master of his own opinion, should have spoken more cautiously of Omnipotence, nor have presumed to say what it could perform, or what it could prevent. I am in doubt whether those who stand highest in *the scale of being* speak thus confidently of the dispensations of their Maker:

For fools rush in, where angels fear to tread.

Of our inquietudes of mind his account is still less reasonable. "Whilst men are injured, they must be inflamed with anger; and whilst they see cruelties, they must be melted with pity; whilst they perceive danger, they must be sensible of fear." This is to give a reason for all evil, by shewing that one evil produces another. If there is danger there ought to be fear; but if fear is an evil, why should there be danger? His vindication of pain is of the same kind: pain is useful to alarm us that we may shun greater evils, but those greater evils must be presupposed, that the fitness of pain may appear.

Treating on death, he has expressed the known and true doctrine with sprightliness of fancy, and neatness of diction. I shall therefore insert it.

There are truths which, as they are always necessary, do not grow stale by repetition.

“ Death, the last and most dreadful of all evils,
 “ is so far from being one, that it is the infallible
 “ cure for all others.

‘ To die, is landing on some silent shore,
 ‘ Where billows never beat, nor tempests roar.
 ‘ Ere well we feel the friendly stroke, ’tis o’er.’

GARTH.

“ For, abstracted from the sickness and sufferings
 “ usually attending it, it is no more than the ex-
 “ piration of that term of life God was pleased
 “ to bestow on us, without any claim or merit on
 “ our part. But was it an evil ever so great, it
 “ could not be remedied but by one much greater,
 “ which is by living for ever ; by which means our
 “ wickedness, unrestrained by the prospect of a
 “ future state, would grow so insupportable, our
 “ sufferings so intolerable by perseverance, and
 “ our pleasures so tiresome by repetition, that no
 “ being in the universe could be so completely mi-
 “ serable as a species of immortal men. We have
 “ no reason, therefore, to look upon death as an
 “ evil, or to fear it as a punishment, even without
 “ any supposition of a future life : but if we con-
 “ sider it as a passage to a more perfect state, or
 “ a remove only in an eternal succession of still-
 “ improving states, (for which we have the strongest
 “ reasons) it will then appear a new favour from
 “ the divine munificence ; and a man must be as
 “ absurd to repine at dying, as a traveller would
 “ be, who proposed to himself a delightful tour.

“ through various unknown countries, to lament
“ that he cannot take up his residence at the first
“ dirty inn which he baits at on the road.

“ The instability of human life, or of the changes
“ of its successive periods, of which we so fre-
“ quently complain, are no more than the neces-
“ sary progress of it to this necessary conclusion ;
“ and are so far from being evils deserving these
“ complaints, that they are the source of our
“ greatest pleasures, as they are the source of all
“ novelty, from which our greatest pleasures are
“ ever derived. The continual succession of sea-
“ sons in the human life, by daily presenting to
“ us new scenes, render it agreeable, and like those
“ of the year, afford us delights by their change,
“ which the choicest of them could not give us by
“ their continuance. In the spring of life, the
“ gilding of the sun-shine, the verdure of the fields,
“ and the variegated paintings of the sky, are so
“ exquisite in the eyes of infants at their first
“ looking abroad into a new world, as nothing
“ perhaps afterwards can equal. The heat and
“ vigour of the succeeding summer of youth ripens
“ for us new pleasures, the blooming maid, the
“ nightly revel, and the jovial chace: the serene au-
“ tumn of complete manhood feasts us with the
“ golden harvests of our worldly pursuits: nor is
“ the hoary winter of old age destitute of its pe-
“ culiar comforts and enjoyments, of which the re-
“ collection and relation of those past are perhaps
“ none of the least ; and at last death opens to us
“ a new prospect, from whence we shall probably
“ look back upon the diversions and occupations

“ of this world with the same contempt we do now
“ on our tops and hobby-horses, and with the
“ same surprise that they could ever so much en-
“ tertain or engage us.”

I would not willingly detract from the beauty of this paragraph; and in gratitude to him who has so well inculcated such important truths, I will venture to admonish him, since the chief comfort of the old is the recollection of the past, so to employ his time and his thoughts, that when the imbecility of age shall come upon him, he may be able to recreate its languors by the remembrance of hours spent, not in presumptuous derisions, but modest enquiries, not in dogmatical limitations of Omnipotence, but in humble acquiescence and fervent adoration. Old age will shew him that much of the book now before us has no other use than to perplex the scrupulous, and to shake the weak, to encourage impious presumption, or stimulate idle curiosity.

Having thus dispatched the consideration of particular evils, he comes at last to a general reason for which *evil* may be said to be *our good*. He is of opinion that there is some inconceivable benefit in pain abstractedly considered; that pain however inflicted, or wherever felt, communicates some good to the general system of being, and that every animal is some way or other the better for the pain of every other animal. This opinion he carries so far as to suppose that there passes some principle of union through all animal life, as attraction is communicated to all corporeal nature; and that the evils suffered on this globe may, by

some inconceivable means, contribute to the felicity of the inhabitants of the remotest planet.

How the origin of evil is brought nearer to human conception by any *inconceivable* means, I am not able to discover. We believed that the present system of creation was right, though we could not explain the adaptation of one part to the other, or for the whole succession of causes and consequences. Where has this enquirer added to the little knowledge that we had before? He has told us of the benefits of evil, which no man feels, and relations between distant parts of the universe, which he cannot himself conceive. There was enough in this question inconceivable before, and we have little advantage from a new inconceivable solution.

I do not mean to reproach this author for not knowing what is equally hidden from learning and from ignorance. The shame is to impose words for ideas upon ourselves or others; to imagine that we are going forward when we are only turning round; to think that there is any difference between him that gives no reason, and him that gives a reason, which by his own confession cannot be conceived.

But that he may not be thought to conceive nothing but things inconceivable, he has at last thought on a way by which human sufferings may produce good effects. He imagines, that as we have not only animals for food, but choose some for our diversion, the same privilege may be allowed to some beings above us, *who may deceive, torment, or destroy us, for the ends only of their own*

pleasure or utility. This he again finds impossible to be conceived, *but that impossibility lessens not the probability of the conjecture, which by analogy is so strongly confirmed.*

I cannot resist the temptation of contemplating this analogy, which I think he might have carried further, very much to the advantage of his argument. He might have shewn that these *hunters whose game is men* have many sports analogous to our own. As we drown whelps and kittens, they amuse themselves now and then with sinking a ship, and stand round the fields of Blenheim, or the walls of Prague, as we encircle a cock-pit. As we shoot a bird flying, they take a man in the midst of his business or pleasure, and knock him down with an apoplexy. Some of them, perhaps, are virtuosi, and delight in the operations of an asthma, as a human philosopher in the effects of the air-pump. To swell a man with a tympany is as good sport as to blow a frog. Many a merry bout have these frolick beings at the vicissitudes of an ague, and good sport it is to see a man tumble with an epilepsy, and revive and tumble again, and all this he knows not why. As they are wiser and more powerful than we, they have more exquisite diversions, for we have no way of procuring any sport so brisk and so lasting, as the paroxysms of the gout and stone, which undoubtedly must make high mirth, especially if the play be a little diversified with the blunders and puzzles of the blind and deaf. We know not how far their sphere of observation may extend. Perhaps now and then a merry being may place himself in such a situation

as to enjoy at once all the varieties of an epidemical disease, or amuse his leisure with the tossings and contortions of every possible pain exhibited together.

One sport the merry malice of these beings has found means of enjoying to which we have nothing equal or similar. They now and then catch a mortal proud of his parts, and flattered either by the submission of those who court his kindness, or the notice of those who suffer him to court theirs. A head thus prepared for the reception of false opinions, and the projection of vain designs, they easily fill with idle notions, till in time they make their plaything an author: their first diversion commonly begins with an ode or an epistle, then rises perhaps to a political irony, and is at last brought to its height, by a treatise of philosophy. Then begins the poor animal to entangle himself in sophisms, and flounder in absurdity, to talk confidently of the scale of being, and to give solutions which himself confesses impossible to be understood. Sometimes, however, it happens that their pleasure is without much mischief. The author feels no pain, but while they are wondering at the extravagance of his opinion, and pointing him out to one another as a new example of human folly, he is enjoying his own applause, and that of his companions, and perhaps is elevated with the hope of standing at the head of a new sect.

Many of the books which now crowd the world, may be justly suspected to be written for the sake of some invisible order of beings, for surely they are of no use to any of the corporeal inhabitants

of the world. Of the productions of the last bounteous year, how many can be said to serve any purpose of use or pleasure? The only end of writing is to enable the readers better to enjoy life, or better to endure it: and how will either of those be put more in our power by him who tells us that we are puppets, of which some creature not much wiser than ourselves manages the wires. That a set of beings unseen and unheard, are hovering about us, trying experiments upon our sensibility, putting us in agonies to see our limbs quiver, torturing us to madness, that they may laugh at our vagaries, sometimes obstructing the bile, that they may see how a man looks when he is yellow; sometimes breaking a traveller's bones to try how he will get home; sometimes wasting a man to a skeleton, and sometimes killing him fat for the greater elegance of his hide.

This is an account of natural evil, which though, like the rest, not quite new, is very entertaining, though I know not how much it may contribute to patience. The only reason why we should contemplate evil is, that we may bear it better; and I am afraid nothing is much more placidly endured, for the sake of making others sport.

The first pages of the fourth Letter are such as incline me both to hope and wish that I shall find nothing to blame in the succeeding part. He offers a criterion of action, on account of virtue and vice, for which I have often contended, and which must be embraced by all who are willing to know why they act, or why they forbear to give any reason of their conduct to themselves or others.

“ In order to find out the true origin of moral
“ evil, it will be necessary, in the *first* place, to
“ enquire into its nature and essence ; or what it
“ is that constitutes one action evil, and another
“ good. Various have been the opinions of vari-
“ ous authors on this criterion of virtue; and this
“ variety has rendered that doubtful, which must
“ otherwise have been clear and manifest to the
“ meanest capacity. Some indeed have denied
“ that there is any such thing, because different
“ ages and nations have entertained different sen-
“ timents concerning it : but this is just as reason-
“ able as to assert, that there are neither sun, moon,
“ nor stars, because astronomers have supported
“ different systems of the motions and magnitudes
“ of these celestial bodies. Some have placed it
“ in conformity to truth, some to the fitness of
“ things, and others to the will of God. But all
“ this is merely superficial : they resolve us not
“ why truth, or the fitness of things, are either
“ eligible or obligatory, or why God should re-
“ quire us to act in one manner rather than ano-
“ ther ; the true reason of which can possibly be
“ no other than this, because some actions pro-
“ duce happiness and others misery : so that all
“ moral good and evil are nothing more than the
“ production of nature. This alone it is that
“ makes truth preferable to falsehood, this that
“ determines the fitness of things, and this that
“ induces God to command some actions, and for-
“ bid others. They who extol the truth, beauty,
“ and harmony of virtue, exclusive of its conse-
“ quences, deal but in pompous non-sense, and

“ they who would persuade us, that good and evil
“ are things indifferent, depending wholly on the
“ will of God, do but confound the nature of
“ things, as well as all our notions of God himself,
“ by representing him capable of willing contra-
“ dictions ; that is, that we should be, and be
“ happy, and at the same time that we should tor-
“ ment and destroy each other ; for injuries can-
“ not be made benefits, pain cannot be made plea-
“ sure, and consequently vice cannot be made virtue
“ by any power whatever. It is the consequences,
“ therefore, of all human actions that must stamp
“ their value. So far as the general practice of any
“ action tends to produce good, and introduce hap-
“ piness into the world, so far we may pronounce
“ it virtuous ; so much evil as it occasions, such is
“ the degree of vice it contains. I say the general
“ practice, because we must always remember, in
“ judging by this rule, to apply it only to the ge-
“ neral species of actions, and not to particular
“ actions ; for the infinite wisdom of God, desirous
“ to set bounds to the destructive consequences
“ which must otherwise have followed from the
“ universal depravity of mankind, has so wonder-
“ fully contrived the nature of things, that our most
“ vicious actions may sometimes accidentally and
“ collaterally produce good. Thus, for instance,
“ robbery may disperse useless hoards to the bene-
“ fit of the publick ; adultery may bring heirs and
“ good humour too into many families, where they
“ would otherwise have been wanting ; and murder
“ free the world from tyrants and oppressors. Lux-

ury maintains its thousands, and vanity its ten
thousands. Superstition and arbitrary power
contribute to the grandeur of many nations, and
the liberties of others are preserved by the per-
petual contentions of avarice, knavery, selfishness,
and ambition; and thus the worst of vices, and
the worst of men, are often compelled by Pro-
vidence to serve the most beneficial purposes,
contrary to their own malevolent tendencies and
inclinations; and thus private vices become pub-
lick benefits, by the force only of accidental cir-
cumstances. But this impeaches not the truth
of the criterion of virtue before mentioned, the
only solid foundation on which any true system
of ethicks can be built, the only plain, simple,
and uniform rule by which we can pass any
judgment on our actions; but by this we may be
enabled, not only to determine which are Good,
and which are Evil, but almost mathematically
to demonstrate the proportion of virtue or vice
which belongs to each, by comparing them with
the degrees of happiness or misery which they
occasion. But though the production of hap-
piness is the essence of virtue, it is by no means
the end; the great end is the probation of man-
kind, or the giving them an opportunity of exalt-
ing or degrading themselves in another state by
their behaviour in the present. And thus indeed
it answers two most important purposes; those
are the conservation of our happiness, and
the test of our obedience; or had not such a test
seemed necessary to God's infinite wisdom, and
productive of universal good, he would never have

“ permitted the happiness of men, even in this life,
“ to have depended on so precarious a tenure, as
“ their mutual good behaviour to each other. For
“ it is observable, that he who best knows our for-
“ mation, has trusted no one thing of importance
“ to our reason or virtue: he trusts only to our
“ appetites for the support of the individual, and
“ the continuance of our species; to our vanity or
“ compassion, for our bounty to others; and to our
“ fears, for the preservation of ourselves; often to
“ our vices for the support of government, and
“ sometimes to our follies for the preservation of
“ our religion. But since some test of our obedi-
“ ence was necessary, nothing sure could have been
“ commanded for that end so fit and proper, and
“ at the same time so useful, as the practice of
“ virtue: nothing could have been so justly reward-
“ ed with happiness, as the production of happi-
“ ness in conformity to the will of God. It is this
“ conformity alone which adds merit to virtue, and
“ constitutes the essential difference between mo-
“ rality and religion. Morality obliges men to live
“ honestly and soberly, because such behaviour is
“ most conducive to publick happiness, and conse-
“ quently to their own; religion to pursue the same
“ course, because conformable to the will of their
“ Creator. Morality induces them to embrace vir-
“ tue from prudential considerations; religion from
“ those of gratitude and obedience. Morality
“ therefore, entirely abstracted from religion, can
“ have nothing meritorious in it; it being but wis-
“ dom, prudence, or good œconomy, which like
“ health, beauty, or riches, are rather obligations

“ conferred upon us by God, than merits in us to-
“ wards him; for though we may be justly punish-
“ ed for injuring ourselves, we can claim no reward
“ for self-preservation; as suicide deserves punish-
“ ment and infamy, but a man deserves no reward
“ or honours for not being guilty of it. This I
“ take to be the meaning of all those passages in
“ our Scriptures, in which works are represented to
“ have no merit without faith; that is, not with-
“ out believing in historical facts, in creeds, and
“ articles; but without being done in pursuance of
“ our belief in God, and in obedience to his com-
“ mands. And now, having mentioned Scripture,
“ I cannot omit observing, that the Christian is the
“ only religious or moral institution in the world,
“ that ever set in a right light these two material
“ points, the essence and the end of virtue, that ever
“ founded the one in the production of happiness,
“ that is, in universal benevolence, or, in their lan-
“ guage, charity to all men; the other, in the pro-
“ bation of man, and his obedience to his Creator.
“ Sublime and magnificent as was the philosophy
“ of the ancients, all their moral systems were defi-
“ cient in these two important articles. They were
“ all built on the sandy foundations of the innate
“ beauty of virtue, or enthusiastick patriotism; and
“ their great point in view was the contemptible
“ reward of human glory; foundations which were
“ by no means able to support the magnificent
“ structures which they erected upon them; for the
“ beauty of virtue, independent of its effects, is un-
“ meaning nonsense; patriotism, which injures man-
“ kind in general for the sake of a particular coun-

“ try, is but a more extended selfishness, and really
“ criminal: and all human glory but a mean and
“ ridiculous delusion. The whole affair then of
“ religion and morality, the subject of so many
“ thousand volumes, is, in short, no more than this:
“ the Supreme Being, infinitely good, as well as
“ powerful, desirous to diffuse happiness by all
“ possible means, has created innumerable ranks
“ and orders of beings, all subservient to each other
“ by proper subordination. One of these is occu-
“ pied by man, a creature endued with such a cer-
“ tain degree of knowledge, reason, and free-will,
“ as is suitable to his situation, and placed for a
“ time on this globe as in a school of probation and
“ education. Here he has an opportunity given
“ him of improving or debasing his nature, in such
“ a manner as to render himself fit for a rank of
“ higher perfection and happiness, or to degrade
“ himself to a state of greater imperfection and
“ misery; necessary indeed towards carrying on
“ the business of the universe, but very grievous
“ and burthensome to those individuals, who, by
“ their own misconduct, are obliged to submit to it.
“ The test of this his behaviour, is doing good, that
“ is, co-operating with his Creator, as far as his
“ narrow sphere of action will permit, in the pro-
“ duction of happiness. And thus the happiness
“ and misery of a future state will be the just re-
“ ward or punishment of promoting or prevent-
“ ing happiness in this. So artificially by this means
“ is the nature of all human virtue and vice con-
“ trived, that their rewards and punishments are
“ woven as it were in their very essence; their im-

“ mediate effects give us a foretaste of their future,
 “ and their fruits in the present life are the proper
 “ samples of what they must unavoidably produce
 “ in another. We have reason given us to distin-
 “ guish these consequences, and regulate our con-
 “ duct? and, lest that should neglect its post, con-
 “ science also is appointed as an instinctive kind of
 “ monitor, perpetually to remind us both of our in-
 “ terest and our duty.”

Si sic omnia dixisset! To this account of the es-
 sence of vice and virtue, it is only necessary to add,
 that the consequences of human actions being some-
 times uncertain, and sometimes remote, it is not
 possible in many cases for most men, nor in all cases
 for any man, to determine what actions will ulti-
 mately produce happiness, and therefore it was
 proper that *revelation* should lay down a rule to be
 followed invariably in opposition to appearances,
 and in every change of circumstances, by which
 we may be certain to promote the general felicity,
 and be set free from the dangerous temptation of
doing Evil that Good may come.

Because it may easily happen, and in effect will
 happen very frequently, that our own private hap-
 piness may be promoted by an act injurious to
 others, when yet no man can be obliged by nature
 to prefer ultimately the happiness of others to his
 own; therefore, to the instructions of infinite wis-
 dom it was necessary that infinite power should add
 penal sanctions. That every man to whom those
 instructions shall be imparted may know that he can
 never ultimately injure himself by benefiting others,
 or ultimately by injuring others benefit himself;

but that however the lot of the good and bad may be huddled together in the seeming confusion of our present state, the time shall undoubtedly come, when the most virtuous will be most happy.

I am sorry that the remaining part of this Letter is not equal to the first. The author has indeed engaged in a disquisition in which we need not wonder if he fails, in the solution of questions on which philosophers have employed their abilities from the earliest times,

And found no end, in wand'ring mazes lost.

He denies that man was created *perfect*, because the system requires subordination, and because the power of losing his perfection, of *rendering himself wicked and miserable, is the highest imperfection imaginable*. Besides, the regular gradations of the scale of being required somewhere *such a creature as man with all his infirmities about him, and the total removal of those would be altering his nature, and when he became perfect he must cease to be a man*.

I have already spent some considerations on the *scale of being*, of which yet I am obliged to renew the mention whenever a new argument is made to rest upon it; and I must therefore again remark, that consequences cannot have greater certainty than the postulate from which they are drawn, and that no system can be more hypothetical than this, and perhaps no hypothesis more absurd.

He again deceives himself with respect to the perfection with which *man* is held to be originally vested. *That man came perfect, that is, endued with*

all possible perfection, out of the hands of his Creator, is a false notion, derived from the philosophers.—The universal system required subordination, and consequently comparative imperfection. That man was ever endowed with all possible perfection, that is with all perfection of which the idea is not contradictory or destructive of itself, is undoubtedly false. But it can hardly be called a false notion, because no man ever thought it, nor can it be derived from the philosophers; for without pretending to guess what philosophers he may mean, it is very safe to affirm, that no philosopher ever said it. Of those who now maintain that man was once perfect, who may very easily be found, let the author enquire whether man was ever omniscient, whether he was ever omnipotent, whether he ever had even the lower power of archangels or angels. Their answers will soon inform him, that the supposed perfection of man was not absolute, but respective, that he was perfect in a sense consistent enough with subordination, perfect, not as compared with different beings, but with himself in his present degeneracy; not perfect, as an angel, but perfect as man.

From this perfection, whatever it was, he thinks it necessary that man should be debarred, because pain is necessary to the good of the universe; and the pain of one order of beings extending its salutary influence to innumerable orders above and below, it was necessary that man should suffer; but because it is not suitable to justice that pain should be inflicted on innocence, it was necessary that man should be criminal.

This is given as a satisfactory account of the

Original of moral Evil, which amounts only to this, that God created beings whose guilt he foreknew, in order that he might have proper objects of pain, because the pain of part is, no man knows how or why, necessary to the felicity of the whole

The perfection which man once had, may be so easily conceived, that without any unusual strain of imagination we can figure its revival. All the duties to God or man that are neglected we may fancy performed, all the crimes that are committed we may conceive forborn. Man will then be restored to his moral perfections, and into what head can it enter that by this change the universal system would be shaken, or the condition of any order of beings altered for the worse?

He comes in the fifth Letter to political, and in the sixth to religious Evils. Of political Evil, if we suppose the Origin of moral Evil discovered, the account is by no means difficult: polity being only the conduct of immoral men in publick affairs. The Evils of each particular kind of government are very clearly and elegantly displayed, and from their secondary causes very rationally deduced; but the first cause lies still in its ancient obscurity. There is in this Letter nothing new, nor anything eminently instructive; one of his practical deductions, that *from government Evils cannot be eradicated, and their excess only can be prevented*, has been always allowed; the question upon which all dissension arises is, when that excess begins, at what point men shall cease to bear, and attempt to remedy.

Another of his precepts, though not new, well deserves to be transcribed, because it cannot be too frequently impressed.

“ What has here been said of their imperfections and abuses, is by no means intended as a defence of them: every wise man ought to redress them to the utmost of his power; which can be effected by one method only; that is, by a reformation of manners: for as all political Evils derive their original from moral, these can never be removed, until those are first amended. He, therefore, who strictly adheres to virtue and sobriety in his conduct, and enforces them by his example, does more real service to a state, than he who displaces a minister, or dethrones a tyrant; this gives but a temporary relief, but that exterminates the cause of the disease. No immoral man then can possibly be a true patriot; and all those who profess outrageous zeal for the liberty and prosperity of their country, and at the same time infringe her laws, affront her religion, and debauch her people, are but despicable quacks, by fraud or ignorance increasing the disorders they pretend to remedy.”

Of religion he has said nothing but what he has learned, or might have learned from the divines; that it is not universal, because it must be received upon conviction, and successively received by those whom conviction reached; that its evidences and sanctions are not irresistible, because it was intended to induce, not to compel; and that it is obscure, because we want faculties to comprehend it. What he means by his assertion, that it wants policy, I do

not well understand; he does not mean to deny that a good Christian will be a good governor, or a good subject; and he has before justly observed, that the good man only is a patriot.

Religion has been, he says, corrupted by the wickedness of those to whom it was communicated, and has lost part of its efficacy by its connection with temporal interest and human passion.

He justly observes, that from all this, no conclusion can be drawn against the divine original of Christianity, since the objections arise not from the nature of the revelation, but of him to whom it is communicated.

All this is known, and all this is true; but why, we have not yet discovered. Our author, if I understand him right, pursues the argument thus: the religion of man produces evils, because the morality of man is imperfect; his morality is imperfect, that he may be justly a subject of punishment: he is made subject to punishment because the pain of part is necessary to the happiness of the whole; pain is necessary to happiness no mortal can tell why or how.

Thus, after having clambered with great labour from one step of argumentation to another, instead of rising into the light of knowledge, we are devolved back into dark ignorance; and all our efforts end in belief, that for the Evils of life there is some good reason, and in confession, that the reason cannot be found. This is all that has been produced by the revival of Chrysippus's untractableness of matter, and the Arabians scale of existence. A system has been raised, which is so ready to fall to

pieces of itself, that no great praise can be derived from its destruction. To object is always easy, and it has been well observed by a late writer, that *the hand which cannot build a bovel, may demolish a temple**.

JOURNEY
TO
THE WESTERN ISLANDS
OF
SCOTLAND.

I HAD desired to visit the Hebridés, or Western Islands of Scotland, so long, that I scarcely remember how the wish was originally excited; and was in the Autumn of the year 1773 induced to undertake the journey, by finding in Mr Boswell a companion, whose acuteness would help my enquiry, and whose gaiety of conversation and civility of manners are sufficient to counteract the inconveniencies of travel, in countries less hospitable than we have passed.

On the eighteenth of August we left Edinburgh, a city too well known to admit description, and directed our course northward, along the eastern coast of Scotland, accompanied the first day by another gentleman, who could stay with us only long enough to shew us how much we lost at separation.

As we crossed the Frith of Forth, our curiosity was attracted by *Inch Keith*, a small island, which neither of my companions had ever visited, though, lying within their view, it had all their lives solicited their notice. Here, by climbing with some difficulty over shattered crags, we made the first experiment of unfrequented coasts. *Inch Keith* is nothing more than a rock covered with a thin layer of earth, not wholly bare of grass, and very fertile of thistles. A small herd of cows grazes annually upon it in the summer. It seems never to have afforded to man or beast a permanent habitation.

We found only the ruins of a small fort, not so injured by time but that it might be easily restored to its former state. It seems never to have been intended as a place of strength, nor was built to endure a siege, but merely to afford cover to a few soldiers, who perhaps had the charge of a battery, or were stationed to give signals of approaching danger. There is therefore no provision of water within the walls, though the spring is so near that it might have been easily inclosed. One of the stones had this inscription: "*Maria Reg.* 1564." It has probably been neglected from the time that the whole island had the same king.

We left this little island with our thoughts employed a while on the different appearance that it would have made, if it had been placed at the same distance from London, with the same facility of approach; with what emulation of price a few rocky acres would have been purchased, and with what expensive industry they would have been cultivated and adorned.

When we landed, we found our chaise ready,

and passed through Kinghorn, Kirkcaldy, and Cupar, places not unlike the small or straggling market-towns in those parts of England where commerce and manufactures have not yet produced opulence.

Though we were yet in the most populous part of Scotland, and at so small a distance from the capital, we met few passengers.

The roads are neither rough nor dirty; and it affords a southern stranger a new kind of pleasure to travel so commodiously without the interruption of toll-gates. Where the bottom is rocky, as it seems commonly to be in Scotland, a smooth way is made indeed with great labour, but it never wants repairs; and in those parts where adventitious materials are necessary, the ground once consolidated is rarely broken; for the inland commerce is not great, nor are heavy commodities often transported otherwise than by water. The carriages in common use are small carts, drawn each by one little horse; and a man seems to derive some degree of dignity and importance from the reputation of possessing a two-horse cart.

ST ANDREW'S.

At an hour somewhat late we came to St Andrew's, a city once archiepiscopal; where that university still subsists in which philosophy was formerly taught by Buchanan, whose name has as fair a claim to immortality as can be conferred by modern latinity, and perhaps a fairer than the instability of vernacular languages admits.

We found, that by the interposition of some in-

visible friend, lodgings had been provided for us at the house of one of the professors, whose easy civility quickly made us forget that we were strangers; and in the whole time of our stay we were gratified by every mode of kindness, and entertained with all the elegance of lettered hospitality.

In the morning we rose to perambulate a city, which only history shews to have once flourished, and surveyed the ruins of ancient magnificence, of which even the ruins cannot long be visible, unless some care be taken to preserve them; and where is the pleasure of preserving such mournful memorials? They have been till very lately so much neglected, that every man carried away the stones who fancied that he wanted them.

The cathedral, of which the foundations may be till traced, and a small part of the wall is standing, appears to have been a spacious and majestick building, not unsuitable to the primacy of the kingdom. Of the architecture, the poor remains can hardly exhibit, even to an artist, a sufficient specimen. It was demolished, as is well known, in the tumult and violence of Knox's reformation.

Not far from the cathedral, on the margin of the water, stands a fragment of the castle, in which the archbishop anciently resided. It was never very large, and was built with more attention to security than pleasure. Cardinal Beatoun is said to have had workmen employed in improving its fortifications, at the time when he was murdered by the ruffians of reformation, in the manner in which Knox has given what he himself calls a merry narrative.

The change of religion in Scotland, eager and vehement as it was, raised an epidemical enthusi-

asm, compounded of sullen scrupulousness and warlike ferocity, which, in a people whom idleness resigned to their own thoughts, and who, conversing only with each other, suffered no dilution of their zeal from the gradual influx of new opinions, was long transmitted in its full strength from the old to the young, but by trade and intercourse with England, is now visibly abating, and giving way too fast to that laxity of practice, and indifference of opinion, in which men, not sufficiently instructed to find the middle point, too easily shelter themselves from rigour and constraint.

The city of St Andrew's, when it had lost its archiepiscopal pre-eminence, gradually decayed: one of its streets is now lost; and in those that remain, there is the silence and solitude of inactive indigence and gloomy depopulation.

The university, within a few years, consisted of three colleges, but is now reduced to two; the college of St Leonard being lately dissolved by the sale of its buildings, and the appropriation of its revenues to the professors of the two others. The chapel of the alienated college is yet standing, a fabrick not inelegant of external structure: but I was always, by some civil excuse, hindered from entering it. A decent attempt, as I was since told, has been made to convert it into a kind of greenhouse, by planting its area with shrubs. This new method of gardening is unsuccessful; the plants do not hitherto prosper. To what use it will next be put, I have no pleasure in conjecturing. It is something, that its present state is at least not ostentatiously displayed. Where there is yet shame, there may in time be virtue.

The dissolution of St Leonard's College was doubtless necessary; but of that necessity there is reason to complain. It is surely not without just reproach, that a nation, of which the commerce is hourly extending, and the wealth increasing, denies any participation of its prosperity to its literary societies; and while its merchants or its nobles are raising palaces, suffers its universities to moulder into dust.

Of the two colleges yet standing, one is by the institution of its founder appropriated to divinity. It is said to be capable of containing fifty students; but more than one must occupy a chamber. The library, which is of late erection, is not very spacious, but elegant and luminous.

The doctor, by whom it was shown, hoped to irritate or subdue my English vanity, by telling me, that we had no such repository of books in England.

St Andrew's seems to be a place eminently adapted to study and education, being situated in a populous, yet a cheap country, and exposing the minds and manners of young men neither to the levity and dissoluteness of a capital city, nor to the gross luxury of a town of commerce, places naturally unpropitious to learning; in one the desire of knowledge easily gives way to the love of pleasure, and in the other, is in danger of yielding to the love of money.

The students, however, are represented as at this time not exceeding a hundred. Perhaps it maybe some obstruction to their increase that there is no episcopal chapel in the place. I saw no reason for imputing their paucity, to the present pro-

fessors; nor can the expence of an academical education be very reasonably objected. A student of the highest class may keep his annual session, or as the English call it, his term, which lasts seven months, for about fifteen pounds, and one of lower rank for less than ten; in which, board, lodging, and instruction are all included.

The chief magistrate resident in the university, answering to our vice-chancellor, and to the *rector magnificus* on the continent, had commonly the title of Lord Rector; but being addressed only as *Mr Rector* in an inaugural speech by the present chancellor, he has fallen from his former dignity of style. Lordship was very liberally annexed by our ancestors to any station or character of dignity: they said, the *Lord General*, and *Lord Ambassador*; so we still say, *my Lord* to the judge upon the circuit, and yet retain in our Liturgy, *the Lords of the Council*.

In walking among the ruins of religious buildings, we came to two vaults over which had formerly stood the house of the sub-prior. One of the vaults was inhabited by an old woman, who claimed the right of abode there, as the widow of a man whose ancestors had possessed the same gloomy mansion for no less than four generations. The right, however it began, was considered as established by legal prescription, and the old woman lives undisturbed. She thinks however that she has a claim to something more than sufferance; for as her husband's name was Bruce, she is allied to royalty, and told Mr Boswell, that when there were persons of quality in the place, she was distinguished by some notice; that indeed she is now

neglected, but she spins a thread of a cat, and is troublesome to

Having now seen whatever offered to our curiosity, we left having reason to be highly pleased that was paid us. But the world must see many things. The kindness of the professor to abate the uneasy remembrance declining, a college alienated, faded and hastening to the ground.

St Andrew's indeed has for atrocious ravages and more excellent but recent evils affect with grief were reconciled to the sight of ruins. The distance of a calamitous time seems to preclude the possibility of sympathy. Events long past they are not considered. We are emotion the violence of Knox and the irruptions of Alaric and the university been destroyed two should not have regretted it; but in decay, and struggling for life with mournful images and ineffable

ABERBROTH

As we knew sorrow and wisdom was now our business to mind the roads of Scotland afford little comfort to the traveller, who seldom sees himself or overtaken, and who has nothing but grounds that have no vision

among the grass and weeds, and its
 by some parts yet standing. The
 the gates is entire, and of another
 vidated as to diversify the appear-
 apartment of great loftiness is yet
 I could not conjecture, as its ele-
 disproportionate to its area. Two
 particularly attracted our attention.
 ose inquisitiveness is seconded by
 rambled in at a high window, but
 within broken, and could not reach
 the other tower we were told that
 sometimes climbed it, but we did
 discern the entrance, and as the
 ring upon us, thought proper to
 ed in architecture might do what
 pt: they might probably form an
 of this venerable edifice. They
 parts yet standing conjecture its
 perhaps by comparing it with other
 same kind and the same age attain
 truth. I should scarcely have re-
 ey, had it afforded nothing more
 Aberbrothick.

MONTROSE.

fragments of magnificence, we tra-
 velt to Montrose, which we surveyed in the
 and it well built, airy, and clean.
 a handsome fabrick with a por-
 sent to view the English chapel,
 church, clean to a degree un-
 der part of Scotland, with com-

land possession has long been secure, and inheritance regular, yet it may be doubted whether before the Union any man between Edinburgh and England had ever set a tree.

Of this improvidence no other account can be given than that it probably began in times of tumult, and continued because it had begun. Established custom is not easily broken, till some great event shakes the whole system of things, and life seems to recommence upon new principles. That before the Union the Scots had little trade and little money, is no valid apology; for plantation is the least expensive of all methods of improvement. To drop a seed into the ground can cost nothing, and the trouble is not great of protecting the young plant, till it is out of danger; though it must be allowed to have some difficulty in places like these where they have neither wood for palisades, nor thorns for hedges.

Our way was over the Frith of Tay, where, though the water was not wide, we paid four shillings for ferrying the chaise. In Scotland the necessaries of life are easily procured, but superfluities and elegancies are of the same price at least as in England, and therefore may be considered as much dearer.

We stopped a while at Dundee, where I remember nothing remarkable, and mounting our chaise again, came about the close of the day to Aberbrothick.

The monastery of Aberbrothick is of great renown in the history of Scotland. Its ruins afford ample testimony of its ancient magnificence: its extent might, I suppose, easily be found by follo-

wing the walls among the grass and weeds, and its height is known by some parts yet standing. The arch of one of the gates is entire, and of another only so far dilapidated as to diversify the appearance. A square apartment of great loftiness is yet standing; its use I could not conjecture, as its elevation was very disproportionate to its area. Two corner towers particularly attracted our attention. Mr Boswell, whose inquisitiveness is seconded by great activity, scrambled in at a high window, but found the stairs within broken, and could not reach the top. Of the other tower we were told that the inhabitants sometimes climbed it, but we did not immediately discern the entrance, and as the night was gathering upon us, thought proper to desist. Men skilled in architecture might do what we did not attempt: they might probably form an exact ground-plot of this venerable edifice. They may from some parts yet standing conjecture its general form, and perhaps by comparing it with other buildings of the same kind and the same age attain an idea very near to truth. I should scarcely have regretted my journey, had it afforded nothing more than the sight of Aberbrothick.

MONTROSE.

Leaving these fragments of magnificence, we travelled on to Montrose, which we surveyed in the morning, and found it well built, airy, and clean. The town-house is a handsome fabrick with a portico. We then went to view the English chapel, and found a small church, clean to a degree unknown in any other part of Scotland, with com-

modious galleries, and, what was yet less expected, with an organ.

At our inn we did not find a reception such as we thought proportionate to the commercial opulence of the place; but Mr Boswell desired me to observe that the innkeeper was an Englishman, and I then defended him as well as I could.

When I had proceeded thus far, I had opportunities of observing what I had never heard, that there were many beggars in Scotland. In Edinburgh the proportion is, I think, not less than in London, and in the smaller places it is far greater than in English towns of the same extent. It must, however, be allowed, that they are not importunate, nor clamorous. They solicit silently, or very modestly, and therefore, though their behaviour may strike with more force the heart of a stranger, they are certainly in danger of missing the attention of their countrymen. Novelty has always some power; an unaccustomed mode of begging excites an unaccustomed degree of pity. But the force of novelty is by its own nature soon at an end; the efficacy of outcry and perseverance is permanent and certain.

The road from Montrose exhibited a continuation of the same appearances. The country is still naked, the hedges are of stone, and the fields so generally plowed, that it is hard to imagine where grass is found for the horses that till them. The harvest, which was almost ripe, appeared very plentiful.

Early in the afternoon Mr Boswell observed, that we were at no great distance from the house of Lord Monboddo. The magnetism of his con-

versation easily drew us out of our way, and the entertainment which we received would have been a sufficient recompence for a much greater deviation.

The roads beyond Edinburgh, as they are less frequented, must be expected to grow gradually rougher; but they were hitherto by no means incommodious. We travelled on with the gentle pace of a Scotch driver, who having no rivals in expedition, neither gives himself nor his horses unnecessary trouble. We did not affect the impatience we did not feel, but were satisfied with the company of each other, as well riding in the chaise, as sitting at an inn. The night and the day are equally solitary and equally safe; for where there are so few travellers, why should there be robbers?

ABERDEEN.

We came somewhat late to Aberdeen, and found the inn so full, that we had some difficulty in obtaining admission, till Mr Boswell made himself known: his name overpowered all objection, and we found a very good house and civil treatment.

I received the next day a very kind letter from Sir Alexander Gordon, whom I had formerly known in London, and, after a cessation of all intercourse for near twenty years, met here professor of physick in the King's College. Such unexpected renewals of acquaintance may be numbered among the most pleasing incidents of life.

The knowledge of one professor soon procured me the notice of the rest, and I did not want any token of regard, being conducted wherever there

was any thing which I desired to see, and entertained at once with the novelty of the place, and the kindness of communication.

To write of the cities of our own island with the solemnity of geographical description, as if we had been cast upon a newly discovered coast, has the appearance of a very frivolous ostentation; yet as Scotland is little known to the greater part of those who may read these observations, it is not superfluous to relate, that under the name of Aberdeen are comprised two towns, standing about a mile distant from each other, but governed, I think, by the same magistrates.

Old Aberdeen is the ancient episcopal city, in which are still to be seen the remains of the cathedral. It has the appearance of a town in decay, having been situated, in times when commerce was yet unstudied, with very little attention to the commodities of the harbour.

New Aberdeen has all the bustle of prosperous trade, and all the show of increasing opulence. It is built by the water-side. The houses are large and lofty, and the streets spacious and clean. They build almost wholly with the granite used in the new pavement of the streets of London, which is well known not to want hardness, yet they shape it easily. It is beautiful, and must be very lasting.

What particular parts of commerce are chiefly exercised by the merchants of Aberdeen, I have not inquired. The manufacture which forces itself upon a stranger's eye is that of knit-stockings, on which the women of the lower class are visibly employed.

In each of these towns there is a college, or in stricter language an university; for in both there are professors of the same parts of learning, and the colleges hold their sessions and confer degrees separately, with total independence of one on the other.

In Old Aberdeen stands the King's College, of which the first president was Hector Boece, or Boethius, who may be justly revered as one of the revivers of elegant learning. When he studied at Paris, he was acquainted with Erasmus, who afterwards gave him a publick testimony of his esteem, by inscribing to him a catalogue of his works. The style of Boethius, though, perhaps, not always rigorously pure, is formed with great diligence upon ancient models, and wholly uninfected with monastick barbarity. His history is written with elegance and vigour, but his fabulousness and credulity are justly blamed. His fabulousness, if he was the author of the fictions, is a fault for which no apology can be made; but his credulity may be excused in an age when all men were credulous. Learning was then rising on the world; but ages so long accustomed to darkness, were too much dazzled with its light to see any thing distinctly. The first race of scholars in the fifteenth century, and some time after, were, for the most part, learning to speak, rather than to think, and were therefore more studious of elegance than of truth. The contemporaries of Boethius thought it sufficient to know what the ancients had delivered. The examination of tenets and of facts was reserved for another generation.

Boethius, as president of the university, enjoyed

a revenue of forty Scottish marks, about two pounds four shillings and sixpence of sterling money. In the present age of trade and taxes, it is difficult even for the imagination so to raise the value of money, or so to diminish the demands of life, as to suppose four-and-forty shillings a year an honourable stipend; yet it was probably equal, not only to the needs, but to the rank of Boethius. The wealth of England was undoubtedly to that of Scotland more than five to one, and it is known that Henry the Eighth, among whose faults avarice was never reckoned, granted to Roger Ascham, as a reward of his learning, a pension of ten pounds a year.

The other, called the *Mariscbal College*, is in the new town. The hall is large and well lighted. One of its ornaments is the picture of Arthur Johnston, who was principal of the college, and who holds among the Latin poets of Scotland the next place to the elegant Buchanan.

In the library I was shewn some curiosities; a Hebrew manuscript of exquisite penmanship, and a Latin translation of Aristotle's *Politicks* by Leonardus Aretinus, written in the Roman character with nicety and beauty, which, as the art of printing has made them no longer necessary, are not now to be found. This was one of the latest performances of the transcribers, for Aretinus died but about twenty years before typography was invented. This version has been printed, and may be found in libraries, but is little read; for the same books have been since translated both by Victorius and Lambinus, who lived in an age more cultivated, but perhaps owed in part to Aretinus that they

were able to excel him. Much is due to those who first broke the way to knowledge, and left only to their successors the task of smoothing it.

In both these colleges the methods of instruction are nearly the same; the lectures differing only by the accidental difference of diligence, or ability in the professors. The students wear scarlet gowns, and the professors black, which is, I believe, the academical dress in all the Scottish universities, except that of Edinburgh, where the scholars are not distinguished by any particular habit. In the King's College there is kept a publick table, but the scholars of the Marischal College are boarded in the town. The expence of living is here, according to the information that I could obtain, somewhat more than at St Andrew's.

The course of education is extended to four years, at the end of which those who take a degree, who are not many, become masters of arts; and whoever is a master may, if he pleases, immediately commence doctor. The title of doctor, however, was for a considerable time bestowed only on physicians. The advocates are examined and approved by their own body; the ministers were not ambitious of titles, or were afraid of being censured for ambition; and the doctorate in every faculty was commonly given or sold into other countries. The ministers are now reconciled to distinction, and as it must always happen that some will excel others, have thought graduation a proper testimony of uncommon abilities or acquisitions.

The indiscriminate collation of degrees has justly taken away that respect which they originally

claimed, as stamps by which the literary value of men so distinguished was authoritatively denoted. That academical honours, or any others, should be conferred with exact proportion to merit, is more than human judgment or human integrity have given reason to expect. Perhaps degrees in universities cannot be better adjusted by any general rule than by the length of time passed in the publick profession of learning. An English or Irish doctorate cannot be obtained by a very young man, and it is reasonable to suppose, what is likewise by experience commonly found true, that he who is by age qualified to be a doctor, has in so much time gained learning sufficient not to disgrace the title, or wit sufficient not to desire it.

The Scotch universities hold but one term or session in the year. That of St Andrew's continues eight months, that of Aberdeen only five, from the first of November to the first of April.

In Aberdeen there is an English chapel, in which the congregation was numerous and splendid. The form of publick worship used by the church of England, is in Scotland legally practised in licensed chapels, served by clergymen of English or Irish ordination, and by tacit connivance quietly permitted in separate congregations, supplied with ministers by the successors of the bishops who were deprived at the Revolution.

We came to Aberdeen on Saturday, August 21. On Monday we were invited into the town-hall, where I had the freedom of the city given me by the Lord Provost. The honour conferred had all the decorations that politeness could add, and, what I am afraid I should not have had to say of

any city south of the Tweed, I found no petty officer bowing for a fee.

The parchment containing the record of admission is, with the seal appending, fastened to a ribbon, and worn for one day by the new citizen in his hat.

By a lady who saw us at the chapel, the earl of Errol was informed of our arrival, and we had the honour of an invitation to his seat, called Slanes Castle, as I am told, improperly, from the castle of that name, which once stood at a place not far distant.

The road beyond Aberdeen grew more stony, and continued equally naked of all vegetable decoration. We travelled over a tract of ground near the sea, which, not long ago, suffered a very uncommon and unexpected calamity. The sand of the shore was raised by a tempest in such quantities, and carried to such a distance, that an estate was overwhelmed and lost. Such and so hopeless was the barrenness superinduced, that the owner, when he was required to pay the usual tax, desired rather to resign the ground.

SLANES CASTLE.—THE BULLER OF BUCHAN.

We came in the afternoon to Slanes Castle, built upon the margin of the sea, so that the walls of one of the towers seem only a continuation of a perpendicular rock, the foot of which is beaten by the waves. To walk round the house seemed impracticable. From the windows the eye wanders over the sea that separates Scotland from Norway,

and when the winds beat with violence, must enjoy all the terrifick grandeur of the tempestuous ocean. I would not for my amusement wish for a storm; but as storms, whether wished or not, will sometimes happen, I may say, without violation of humanity, that I should willingly look out upon them from *Slanes Castle*.

When we were about to take our leave, our departure was prohibited by the Countess till we should have seen two places upon the coast, which she rightly considered as worthy of curiosity, *Dun Buy*, and the *Buller of Buchan*, to which Mr Boyd very kindly conducted us.

Dun Buy, which in *Erse* is said to signify the *Yellow Rock*, is a double protuberance of stone, open to the main sea on one side, and parted from the land by a very narrow channel on the other. It has its name and its colour from the dung of innumerable sea-fowls, which in the spring choose this place as convenient for incubation, and have their eggs and their young taken in great abundance. One of the birds that frequent this rock has, as we were told, its body not larger then a duck's, and yet lays eggs as large as those of a goose. This bird is by the inhabitants named a *Coot*. That which is called *Coot* in England, is here a *Cooter*.

Upon these rocks there was nothing that could long detain attention, and we soon turned our eyes to the *Buller* or *Bouilloir of Buchan*, which no man can see with indifference, who has either sense of danger, or delight in rarity. It is a rock perpendicularly tubulated, united on one side with a high shore, and on the other rising steep to a great height, above the main sea. The top is open, from

which may be seen a dark gulf of water which flows into the cavity, through a breach made in the lower part of the inclosing rock. It has the appearance of a vast well bordered with a wall. The edge of the *Buller* is not wide, and to those that walk round, appears very narrow. He that ventures to look downward, sees that if his foot should slip, he must fall from his dreadful elevation upon stones on one side, or into the water on the other. We however went round, and were glad when the circuit was completed.

When we came down to the sea, we saw some boats, and rowers, and resolved to explore the *Buller*, at the bottom. We entered the arch, which the water had made, and found ourselves in a place, which, though we could not think ourselves in danger, we could scarcely survey without some recoil of the mind. The bason in which we floated was nearly circular, perhaps thirty yards in diameter. We were inclosed by a natural wall, rising steep on every side to a height which produced the idea of insurmountable confinement. The interception of all lateral light caused a dismal gloom. Round us was a perpendicular rock, above us the distant sky, and below an unknown profundity of water. If I had any malice against a walking spirit, instead of laying him in the *Red-sea*, I would condemn him to reside in the *Buller of Buchan*.

But terror without danger is only one of the sports of fancy, a voluntary agitation of the mind that is permitted no longer than it pleases. We were soon at leisure to examine the place with minute inspection, and found many cavities which, as the watermen told us, went backward to a depth

which they had never explored. Their extent we had not time to try; they are said to serve different purposes. Ladies come hither sometimes in the summer with collations, and smugglers make them store-houses for clandestine merchandise. It is hardly to be doubted but the pirates of ancient times often used them as magazines of arms, or repositories of plunder.

To the little vessels used by the northern rowers, the *Buller* may have served as a shelter from storms, and perhaps as a retreat from enemies; the entrance might have been stopped, or guarded with little difficulty, and though the vessels that were stationed within would have been battered with stones showered on them from above, yet the crews would have lain safe in the caverns.

Next morning we continued our journey, pleased with our reception at *Slanes Castle*, of which we had now leisure to recount the grandeur and the elegance; for our way afforded us few topics of conversation. The ground was neither uncultivated nor unfruitful; but it was still all arable. Of flocks or herds there was no appearance. I had now travelled two hundred miles in Scotland, and seen only one tree not younger than myself.

BANFF.

We dined this day at the house of Mr Frazer of Streichon, who showed us in his grounds some stones yet standing of a Druidical circle, and what I began to think more worthy of notice, some forest trees of full growth.

At night we came to Banff, where I remember nothing that particularly claimed my attention. The ancient towns of Scotland have generally an appearance unusual to Englishmen. The houses, whether great or small, are for the most part built of stones. Their ends are now and then next the streets, and the entrance into them is very often by a flight of steps, which reaches up to the second story; the floor which is level with the ground being entered only by stairs descending within the house.

The art of joining squares of glass with lead is little used in Scotland, and in some places is totally forgotten. The frames of their windows are all of wood. They are more frugal of their glass than the English, and will often, in houses not otherwise mean, compose a square of two pieces, not joining like cracked glass, but with one edge laid perhaps half an inch over the other. Their windows do not move upon hinges, but are pushed up and drawn down in grooves, yet they are seldom accommodated with weights and pulleys. He that would have his window open must hold it with his hand, unless, what may be sometimes found among good contrivers, there be a nail which he may stick into a hole, to keep it from falling.

What cannot be done without some uncommon trouble or particular expedient, will not often be done at all. The incommodiousness of the Scotch windows keeps them very closely shut. The necessity of ventilating human habitations has not yet been found by our northern neighbours; and even in houses well built and elegantly furnished, a

stranger may sometimes be forgiven, if he allows himself to wish for fresher air.

These diminutive observations seem to take away something from the dignity of writing, and therefore are never communicated but with hesitation, and a little fear of abasement and contempt. But it must be remembered, that life consists not of a series of illustrious actions, or elegant enjoyments; the greater part of our time passes in compliance with necessities, in the performance of daily duties, in the removal of small inconveniencies, in the procurement of petty pleasures; and we are well or ill at ease, as the main stream of life glides on smoothly, or is ruffled by small obstacles and frequent interruption. The true state of every nation is the state of common life. The manners of a people are not to be found in the schools of learning, or the palaces of greatness, where the national character is obscured or obliterated by travel or instruction, by philosophy or vanity; nor is publick happiness to be estimated by the assemblies of the gay, or the banquets of the rich. The great mass of nations is neither rich nor gay: they whose aggregate constitutes the people, are found in the streets and the villages, in the shops and farms; and from them, collectively considered, must the measure of general prosperity be taken. As they approach to delicacy, a nation is refined; as their conveniencies are multiplied, a nation, at least a commercial nation, must be denominated wealthy.

ELGIN.

Finding nothing to detain us at Banff, we set out in the morning, and having breakfasted at Cul-len, about noon came to Eglin, where, in the inn that we supposed the best, a dinner was set before us, which we could not eat. This was the first time, and except one, the last, that I found any reason to complain of a Scottish table; and such disappointments, I suppose, must be expected in every country, where there is no great frequency of travellers.

The ruins of the cathedral of Elgin afforded us another proof of the waste of reformation. There is enough yet remaining to shew, that it was once magnificent. Its whole plot is easily traced. On the north side of the choir, the chapter-house, which is roofed with an arch of stone, remains entire; and on the south side, another mass of building, which we could not enter, is preserved by the care of the family of Gordon; but the body of the church is a mass of fragments.

A paper was here put into our hands, which deduced from sufficient authorities the history of this venerable ruin. The church of Elgin had, in the intestine tumults of the barbarous ages, been laid waste by the irruption of a Highland chief, whom the bishop had offended; but it was gradually restored to the state of which the traces may be now discerned, and was at last not destroyed by the tumultuous violence of Knox, but more shamefully suffered to dilapidate by deliberate robbery and frigid indifference. There is still extant, in the

books of the council, an order, of which I cannot remember the date, but which was doubtless issued after the reformation, directing that the lead, which covers the two cathedrals of Elgin and Aberdeen, shall be taken away, and converted into money for the support of the army. A Scotch army was in those times very cheaply kept; yet the lead of two churches must have borne so small a proportion to any military expence, that it is hard not to believe the reason alledged to be merely popular, and the money intended for some private purse. The order however was obeyed; the two churches were stripped, and the lead was shipped to be sold in Holland. I hope every reader will rejoice that this cargo of sacrilege was lost at sea.

Let us not however make too much haste to despise our neighbours. Our own cathedrals are mouldering by unregarded dilapidation. It seems to be part of the despicable philosophy of the time to despise monuments of sacred magnificence, and we are in danger of doing that deliberately, which the Scots did not do but in the unsettled state of an imperfect constitution.

Those who had once uncovered the cathedrals never wished to cover them again; and being thus made useless, they were first neglected, and perhaps, as the stone was wanted, afterwards demolished.

Elgin seems a place of little trade, and thinly inhabited. The episcopal cities of Scotland, I believe, generally fell with their churches, though some of them have since recovered by a situation convenient for commerce. Thus Glasgow, though it has no longer an archbishop, has risen beyond its

original state by the opulence of its traders; and Aberdeen, though its ancient stock had decayed, flourishes by a new shoot in another place.

In the chief street of Elgin, the houses jut over the lowest story, like the old buildings of timber in London, but with greater prominence; so that there is some times a walk for a considerable length under a cloister, or portico, which is now indeed frequently broken, because the new houses have another form, but seems to have been uniformly continued in the old city.

FORES.—CALDER.—FORT GEORGE.

We went forwards the same day to Fores, the town to which Macbeth was travelling when he met the weird sisters in his way. This to an Englishman is classick ground. Our imaginations were heated, and our thoughts recalled to their old amusements.

We had now a prelude to the Highlands. We began to leave fertility and culture behind us, and saw for a great length of road nothing but heath; yet at Fochabars, a seat belonging to the duke of Gordon, there is an orchard, which in Scotland I had never seen before, with some timber-trees, and a plantation of oaks.

At Fores we found good accommodation, but nothing worthy of particular remark, and next morning entered upon the road on which Macbeth heard the fatal prediction; but we travelled on, not interrupted by promises of kingdoms, and came to Nairn, a royal burgh, which, if once it flourished, is now in a state of miserable decay; but I know

not whether its chief annual magistrate has not still the title of Lord Provost.

At Nairn we may fix the verge of the Highlands; for here I first saw peat fires, and first heard the Erse language. We had no motive to stay longer than to breakfast, and went forward to the house of Mr Macaulay, the minister who published an account of St Kilda, and by his direction visited Calder Castle, from which Macbeth drew his second title. It has been formerly a place of strength. The draw-bridge is still to be seen, but the moat is now dry. The tower is very ancient. Its walls are of great thickness, arched on the top with stone, and surrounded with battlements. The rest of the house is later, though far from modern.

We were favoured by a gentleman, who lives in the castle, with a letter to one of the officers at Fort George, which being the most regular fortification in the island, well deserves the notice of a traveller, who has never travelled before. We went thither next day, found a very kind reception, were led round the works by a gentleman, who explained the use of every part, and entertained by Sir Eyre Coote, the governor, with such elegance of conversation, as left us no attention to the delicacies of his table.

Of Fort George I shall not attempt to give any account. I cannot delineate it scientifically, and a loose and popular description is of use only when the imagination is to be amused. There was every where an appearance of the utmost neatness and regularity. But my suffrage is of little value, because this and Fort Augustus are the only garrisons that I ever saw.

We did not regret the time spent at the fort, though in consequence of our delay we came somewhat late to Inverness, the town which may properly be called the capital of the Highlands. Hither the inhabitants of the inland parts come to be supplied with what they cannot make for themselves; hither the young nymphs of the mountains and vallies are sent for education, and as far as my observation has reached, are not sent in vain.

INVERNESS.

Inverness was the last place which had a regular communication by high roads with the southern counties. All the ways beyond it have, I believe, been made by the soldiers in this century. At Inverness therefore Cromwell, when he subdued Scotland, stationed a garrison, as at the boundary of the Highlands. The soldiers seem to have incorporated afterwards with the inhabitants, and to have peopled the place with an English race; for the language of this town has been long considered as peculiarly elegant.

Here is a castle, called the castle of *Macbeth*, the walls of which are yet standing. It was no very capacious edifice, but stands upon a rock so high and steep, that I think it was once not accessible, but by the help of ladders, or a bridge. Over against it, on another hill, was a fort built by Cromwell, now totally demolished; for no faction of Scotland loved the name of Cromwell, or had any desire to continue his memory.

Yet what the Romans did to other nations, was in a great degree done by Cromwell to the Scots;

he civilized them by conquest, and introduced by useful violence the arts of peace. I was told at Aberdeen, that the people learned from Cromwell's soldiers to make shoes and to plant kail.

How they lived without kail, it is not easy to guess; they cultivate hardly any other plant for common tables, and when they had not kail they probably had nothing. The numbers that go bare-foot are still sufficient to show that shoes may be spared; they are not yet considered as necessaries of life; for tall boys, not otherwise meanly dressed, run without them in the streets; and in the islands the sons of gentlemen pass several of their first years with naked feet.

I know not whether it be not peculiar to the Scots to have attained the liberal, without the manual arts, to have excelled in ornamental knowledge, and to have wanted not only the elegancies, but the conveniencies of common life. Literature soon after its revival, found its way to Scotland, and from the middle of the sixteenth century, almost to the middle of the seventeenth, the politer studies were very diligently pursued. The Latin poetry of *Delicia Poëtarum Scotorum* would have done honour to any nation; at least till the publication of *May's Supplement*, the English had very little to oppose.

Yet men thus ingenious and inquisitive were content to live in total ignorance of the trades by which human wants are supplied, and to supply them by the grossest means. Till the Union made them acquainted with English manners, the culture of their lands was unskilful, and their domestick life unformed; their tables were coarse as the feasts

of *Eskimeaux*, and their houses filthy as the cottages of *Hottentots*.

Since they have known that their condition was capable of improvement, their progress in useful knowledge has been rapid and uniform. What remains to be done they will quickly do, and then wonder, like me, why that which was so necessary, and so easy was so long delayed. But they must be for ever content to owe to the English that elegance and culture, which, if they had been vigilant and active, perhaps the English might have owed to them.

Here the appearance of life began to alter. I had seen a few women with plaids at Aberdeen; but at Inverness the Highland manners are common. There is, I think, a kirk, in which only the Erse language is used. There is likewise an English chapel, but meanly built, where on Sunday we saw a very decent congregation.

We were now to bid farewell to the luxury of travelling, and to enter a country, upon which perhaps no wheel has ever rolled. We could indeed have used our post-chaise one day longer, along the military road to Fort Augustus, but we could have hired no horses beyond Inverness, and we were not so sparing of ourselves, as to lead them, merely that we might have one day longer the indulgence of a carriage.

At Inverness, therefore, we procured three horses for ourselves and a servant, and one more for our baggage, which was no very heavy load. We found in the course of our journey the convenience of having disencumbered ourselves, by laying aside whatever we could spare; for it is not to

be imagined without experience, how in climbing crags, and treading bogs, and winding through narrow and obstructed passages, a little bulk will hinder, and a little weight will burden, or how often a man that has pleased himself at home with his own resolution, will, in the hour of darkness and fatigue, be content to leave behind him every thing but himself.

LOUGH NESS.

We took two Highlanders to run beside us, partly to show us the way, and partly to take back from the sea-side the horses, of which they were the owners. One of them was a man of great liveliness and activity, of whom his companion said, that he would tire any horse in Inverness. Both of them were civil and ready-handed. Civility seems part of the national character of Highlanders. Every chieftain is a monarch, and politeness, the natural product of royal government, is diffused from the laird through the whole clan. But they are not commonly dextrous; their narrowness of life confines them to a few operations, and they are accustomed to endure little wants more than to remove them.

We mounted our steeds on the 28th of August, and directed our guides to conduct us to Fort Augustus. It is built at the head of Lough Ness, of which Inverness stands at the outlet. The way between them has been cut by the soldiers, and the greater part of it runs along a rock, levelled with great labour and exactness, near the water side.

Most of this day's journey was very pleasant.

The day, though bright, was not hot; and the appearance of the country, if I had not seen the *Peak*, would have been wholly new. We went upon a surface so hard and level, that we had little care to hold the bridle, and were therefore at full leisure for contemplation. On the left were high and steepy rocks shaded with birch, the hardy native of the north, and covered with fern or heath. On the right the limpid waters of Lough Ness were beating their bank, and waving their surface by a gentle agitation. Beyond them were rocks sometimes covered with verdure, and sometimes towering in horrid nakedness. Now and then we espied a little corn-field, which served to impress more strongly the general barrenness.

Lough Ness is about twenty-four miles long, and from one mile to two miles broad. It is remarkable that Boethius, in his description of Scotland, gives it twelve miles of breadth. When historians or geographers exhibit false accounts of places far distant, they may be forgiven, because they can tell but what they are told; and that their accounts exceed the truth may be justly supposed, because most men exaggerate to others, if not to themselves: but Boethius lived at no great distance; if he never saw the lake, he must have been very incurious, and if he had seen it, his veracity yielded to very slight temptations.

Lough Ness, though not twelve miles broad, is a very remarkable diffusion of water without islands. It fills a large hollow between two ridges of high rocks, being supplied partly by the torrents which fall into it on either side, and partly, as is supposed, by springs at the bottom. Its water is remarkably

clear and pleasant, and is imagined by the natives to be medicinal. We were told, that it is in some places a hundred and forty fathom deep, a profundity scarcely credible, and which probably those that relate it have never sounded. Its fish are salmon, trout, and pike.

It was said at Fort Augustus, that Lough Ness is open in the hardest winters, though a lake not far from it is covered with ice. In discussing these exceptions from the course of nature, the first question is, whether the fact be justly stated. That which is strange is delightful, and a pleasing error is not willingly detected. Accuracy of narration is not very common, and there are few so rigidly philosophical, as not to represent as perpetual what is only frequent, or as constant, what is really casual. If it be true that Lough Ness never freezes, it is either sheltered by its high banks from the cold blasts, and exposed only to those winds which have more power to agitate than congeal; or it is kept in perpetual motion by the rush of streams from the rocks that enclose it. Its profundity, though it should be such as is represented, can have little part in this exemption; for though deep wells are not frozen, because their water is secluded from the external air, yet where a wide surface is exposed to the full influence of a freezing atmosphere, I know not why the depth should keep it open. Natural philosophy is now one of the favourite studies of the Scottish nation, and Lough Ness well deserves to be diligently examined.

The road on which we travelled, and which was itself a source of entertainment, is made along the

rock, in the direction of the lough, sometimes by breaking off protuberances, and sometimes by cutting the great mass of stone to a considerable depth. The fragments are piled in a loose wall on either side, with apertures left at very short spaces, to give a passage to the wintry currents. Part of it is bordered with low trees, from which our guides gathered nuts, and would have had the appearance of an English lane, except that an English lane is almost always dirty. It has been made with great labour, but has this advantage, that it cannot, without equal labour, be broken up.

Within our sight there were goats feeding or playing. The mountains have red deer, but they came not within view; and if what is said of their vigilance and subtlety be true, they have some claim to that palm of wisdom, which the eastern philosopher, whom *Alexander* interrogated, gave to those beasts which live furthest from men.

Near the way, by the water side, we espied a cottage. This was the first Highland hut that I had seen; and as our business was with life and manners, we were willing to visit it. To enter a habitation without leave, seems to be not considered here as rudeness or intrusion. The old laws of hospitality still give this licence to a stranger.

A hut is constructed with loose stones, ranged for the most part with some tendency to circularity. It must be placed where the wind cannot act upon it with violence, because it has no cement; and where the water will run easily away, because it has no floor but the naked ground. The wall, which is commonly about six feet high, declines from the perpendicular a little inward. Such raft-

ers as can be procured are then raised for a roof, and covered with heath, which makes a strong and warm thatch, kept from flying off by ropes of twisted heath, of which the ends, reaching from the centre of the thatch to the top of the wall, are held firm by the weight of a large stone. No light is admitted but at the entrance, and through a hole in the thatch, which gives vent to the smoke. This hole is not directly over the fire, lest the rain should extinguish it, and the smoke therefore naturally fills the place before it escapes. Such is the general structure of the houses in which one of the nations of this opulent and powerful island has been hitherto content to live. Huts, however, are not more uniform than palaces; and this which we were inspecting was very far from one of the meanest, for it was divided into several apartments; and its inhabitants possessed such property as a pastoral poet might exalt into riches.

When we entered, we found an old woman boiling goat's flesh in a kettle. She spoke little English, but we had interpreters at hand, and she was willing enough to display her whole system of œconomy. She has five children, of which none are yet gone from her. The eldest, a boy of thirteen, and her husband, who is eighty years old, were at work in the wood. Her two next sons were gone to Inverness to buy meal, by which oatmeal is always meant. Meal she considered as expensive food, and told us, that in spring when the goats gave milk, the children could live without it. She is mistress of sixty goats, and I saw many kids in an enclosure at the end of her house. She had also some poultry. By the lake we saw a potatoe

garden, and a small spot of ground on which stood four shucks, containing each twelve sheaves of barley. She has all this from the labour of their own hands, and for what is necessary to be bought, her kids and her chickens are sent to market.

With the true pastoral hospitality, she asked us to sit down and drink whisky. She is religious, and though the kirk is four miles off, probably eight English miles, she goes thither every Sunday. We gave her a shilling, and she begged snuff; for snuff is the luxury of a Highland cottage.

Soon after we came to the *General's Hut*, so called because it was the temporary abode of Wade, while he superintended the works upon the road. It is now a house of entertainment for passengers, and we found it not ill stocked with provisions.

FALL OF FIERS.

Towards evening we crossed, by a bridge, the river which makes the celebrated *Fall of Fiers*. The country at the bridge strikes the imagination with all the gloom and grandeur of Siberian solitude. The way makes a flexure, and the mountains, covered with trees, rise at once on the left hand and in the front. We desired our guides to shew us the *Falls*, and, dismounting, clambered over very rugged crags, till I began to wish that our curiosity might have been gratified with less trouble and danger. We came at last to a place where we could overlook the river, and saw a channel torn, as it seems, through black piles of stone, by which the stream is obstructed and broken, till

it comes to a very sharp descent, of such dreadful depth, that we were naturally inclined to turn aside our eyes.

But we visited the place at an unseasonable time, and found it divested of its dignity and terror. Nature never gives every thing at once. A long continuance of dry weather, which made the rest of the way easy and delightful, deprived us of the pleasure expected from the *Fall of Fiers*. The river having now no water but what the springs supply, showed us only a swift current, clear and shallow, fretting over the asperities of the rocky bottom; and we were left to exercise our thoughts, by endeavouring to conceive the effect of a thousand streams poured from the mountains into one channel, struggling for expansion in a narrow passage, exasperated by rocks rising in their way, and at last discharging all their violence of waters by a sudden fall through the horrid chasm.

The way now grew less easy, descending by an uneven declivity, but without either dirt or danger. We did not arrive at Fort Augustus till it was late. Mr Boswell, who, between his father's merit and his own, is sure of reception wherever he comes, sent a servant before to beg admission and entertainment for that night. Mr Trapaud, the governor, treated us with that courtesy which is so closely connected with the military character. He came out to meet us beyond the gates, and apologized that, at so late an hour, the rules of a garrison suffered him to give us entrance only at the postern.

FORT AUGUSTUS.

In the morning we viewed the fort, which is much less than that of St George, and is said to be commanded by the neighbouring hills. It was not long ago taken by the Highlanders. But its situation seems well chosen for pleasure, if not for strength; it stands at the head of the lake, and, by a sloop of sixty tons, is supplied from Inverness with great convenience.

We were now to cross the Highlands towards the western coast, and to content ourselves with such accommodations, as a way so little frequented could afford. The journey was not formidable, for it was but of two days, very unequally divided, because the only house where we could be entertained was not further off than a third of the way. We soon came to a high hill, which we mounted by a military road, cut in traverses, so that as we went upon a higher stage, we saw the baggage following us below in a contrary direction. To make this way, the rock has been hewn to a level, with labour that might have broken the perseverance of a Roman legion.

The country is totally denuded of its wood, but the stumps both of oaks and firs, which are still found, shew that it has been once a forest of large timber. I do not remember that we saw any animals, but we were told that, in the mountains, there are stags, roebucks, goats, and rabbits.

We did not perceive that this tract was possessed by human beings, except that once we saw a corn-field, in which a lady was walking with some

gentlemen. Their house was certainly at no great distance, but so situated that we could not descry it.

Passing on through the dreariness of solitude, we found a party of soldiers from the fort, working on the road, under the superintendence of a serjeant. We told them how kindly we had been treated at the garrison, and as we were enjoying the benefit of their labours, begged leave to shew our gratitude by a small present.

ANOCH.

Early in the afternoon, we came to Anoch, a village in Glenmollison of three huts, one of which is distinguished by a chimney. Here we were to dine and lodge, and were conducted through the first room, that had the chimney, into another lighted by a small glass window. The landlord attended us with great civility, and told us what he could give us to eat and drink. I found some books on a shelf, among which were a volume or more of *Prideaux's Connection*.

This I mentioned as something unexpected, and perceived that I did not please him. I praised the propriety of his language, and was answered that I need not wonder, for he had learned it by grammar.

By subsequent opportunities of observation, I found that my host's diction had nothing peculiar. Those Highlanders that can speak English, commonly speak it well, with few of the words, and little of the tone by which a Scotchman is distinguished. Their language seems to have been learn-

ed in the army or the navy, or by some communication with those who could give them good examples of accent and pronunciation. By their Lowland neighbours they would not willingly be taught; for they have long considered them as a mean and degenerate race. These prejudices are wearing fast away; but so much of them still remains, that when I asked a very learned minister in the islands, which they considered as their most savage clans: "*Those (said he) that live next the Lowlands.*"

As we came hither early in the day, we had time sufficient to survey the place. The house was built like other huts, of loose stones; but the part in which we dined and slept was lined with turf and wattled with twigs, which kept the earth from falling. Near it was a garden of turnips and a field of potatoes. It stands in a glen, or valley, pleasantly watered by a winding river. But this country, however it may delight the gazer or amuse the naturalist, is of no great advantage to its owners. Our landlord told us of a gentleman who possesses lands, eighteen Scotch miles in length, and three in breadth; a space containing at least a hundred square English miles. He has raised his rents, to the danger of depopulating his farms, and he sells his timber, and by exerting every art of augmentation, has obtained a yearly revenue of four hundred pounds, which for a hundred square miles is three halfpence an acre.

Some time after dinner we were surprized by the entrance of a young woman, not inelegant either in mien or dress, who asked us whether we would have tea. We found that she was the daugh-

ter of our host, and desired her to make it. Her conversation, like her appearance, was gentle and pleasing. We knew that the girls of the Highlands are all gentlewomen, and treated her with great respect, which she received as customary and due, and was neither elated by it, nor confused, but repaid my civilities without embarrassment, and told me how much I honoured her country by coming to survey it.

She had been at Inverness to gain the common female qualifications, and had, like her father, the English pronunciation. I presented her with a book, which I happened to have about me, and should not be pleased to think that she forgets me.

In the evening the soldiers, whom we had passed on the road, came to spend at our inn the little money that we had given them. They had the true military impatience of coin in their pockets, and had marched at least six miles to find the first place where liquor could be bought. Having never been before in a place so wild and unfrequented, I was glad of their arrival, because I knew that we had made them friends, and to gain still more of their good-will, we went to them where they were carousing in the barn, and added something to our former gift. All that we gave was not much, but it detained them in the barn, either merry or quarrelling, the whole night, and in the morning they went back to their work, with great indignation at the bad qualities of whisky.

We had gained so much the favour of our host, that, when we left his house in the morning, he walked by us a great way, and entertained us with

conversation both on his own condition, and that of the country. His life seemed to be merely pastoral, except that he differed from some of the ancient *Nomades* in having a settled dwelling. His wealth consists of one hundred sheep, as many goats, twelve milk-cows, and twenty-eight beeves ready for the drover.

From him we first heard of the general dissatisfaction which is now driving the Highlanders into the other hemisphere; and when I asked him whether they would stay at home, if they were well treated, he answered with indignation, that no man willingly left his native country. Of the farm, which he himself occupied, the rent had, in twenty-five years, been advanced from five to twenty pounds, which he found himself so little able to pay that he would be glad to try his fortune in some other place. Yet he owned the reasonableness of raising the Highland rents in a certain degree, and declared himself willing to pay ten pounds for the ground which he had formerly had for five.

Our host having amused us for a time, resigned us to our guides. The journey of this day was long, not that the distance was great, but that the way was difficult. We were now in the bosom of the Highlands, with full leisure to contemplate the appearance and properties of mountainous regions, such as have been, in many countries, the last shelters of national distress, and are every where the scenes of adventures, stratagems, surprises, and escapes.

Mountainous countries are not passed but with difficulty, not merely from the labour of climbing;

for to climb is not always necessary : but because that which is not mountain is commonly bog, through which the way must be picked with caution. Where there are hills, there is much rain, and the torrents pouring down into the intermediate spaces, seldom find so ready an outlet, as not to stagnate, till they have broken the texture of the ground.

Of the hills, which our journey offered to the view on either side, we did not take the height, nor did we see any that astonished us with their loftiness. Towards the summit of one, there was a white spot, which I should have called a naked rock, but the guides, who had better eyes, and were acquainted with the phenomena of the country, declared it to be snow. It had already lasted to the end of August, and was likely to maintain its contest with the sun, till it should be reinforced by winter.

The height of mountains philosophically considered, is properly computed from the surface of the next sea ; but as it affects the eye or imagination of the passenger, as it makes either a spectacle or an obstruction, it must be reckoned from the place where the rise begins to make a considerable angle with the plain. In extensive continents the land may, by gradual elevation, attain great height, without any other appearance than that of a plane gently inclined, and if a hill placed upon such raised ground be described, as having its altitude equal to the whole space above the sea, the representation will be fallacious.

These mountains may be properly enough measured from the inland base ; for it is not much

above the sea. As we advanced at evening towards the western coast, I did not observe the declivity to be greater than is necessary for the discharge of the inland waters.

We passed many rivers and rivulets, which commonly ran with a clear shallow stream over a hard pebbly bottom. These channels, which seem so much wider than the water that they convey would naturally require, are formed by the violence of wintry floods, produced by the accumulation of innumerable streams that fall in rainy weather from the hills, and bursting away with resistless impetuosity, make themselves a passage proportionate to their mass.

Such capricious and temporary waters cannot be expected to produce many fish. The rapidity of the wintry deluge sweeps them away, and the scantiness of the summer stream would hardly sustain them above the ground. This is the reason why in fording the northern rivers, no fishes are seen, as in England, wandering in the water.

Of the hills many may be called with Homer's *Ida*, abundant in springs, but few can deserve the epithet which he bestows upon *Pelion*, by *waving their leaves*. They exhibit very little variety; being almost wholly covered with dark heath, and even that seems to be checked in its growth. What is not heath is nakedness, a little diversified by now and then a stream rushing down the steep. An eye accustomed to flowery pastures and waving harvests is astonished and repelled by this wide extent of hopeless sterility. The appearance is that of matter incapable of form or usefulness, dismissed by nature from her care, and disin-

herited of her favours, left in its original elemental state, or quickened only with one sullen power of useless vegetation.

It will very readily occur, that this uniformity of barrenness can afford very little amusement to the traveller; that it is easy to sit at home and conceive rocks, and heath, and waterfalls; and that these journies are useless labours, which neither impregnate the imagination, nor enlarge the understanding. It is true, that of far the greater part of things, we must content ourselves with such knowledge as description may exhibit, or analogy supply; but it is true likewise, that these ideas are always incomplete, and that, at least, till we have compared them with realities, we do not know them to be just. As we see more, we become possessed of more certainties, and consequently gain more principles of reasoning, and found a wider basis of analogy.

Regions mountainous and wild, thinly inhabited, and little cultivated, make a great part of the earth, and he that has never seen them must live unacquainted with much of the face of nature, and with one of the great scenes of human existence.

As the day advanced towards noon, we entered a narrow valley not very flowery, but sufficiently verdant. Our guides told us, that the horses could not travel all day without rest or meat, and entreated us to stop here, because no grass would be found in any other place. The request was reasonable, and the argument cogent. We therefore willingly dismounted, and diverted ourselves as the place gave us opportunity.

I sat down on a bank, such as a writer of romance might have delighted to feign. I had indeed no trees to whisper over my head, but a clear rivulet streamed at my feet. The day was calm, the air was soft, and all was rudeness, silence, and solitude. Before me, and on either side, were high hills, which, by hindering the eye from ranging, forced the mind to find entertainment for itself. Whether I spent the hour well I know not; for here I first conceived the thought of this narration.

We were in this place at ease and by choice, and had no evils to suffer or to fear; yet the imaginations excited by the view of an unknown and untravelled wilderness are not such as arise in the artificial solitude of parks and gardens, a flattering notion of self-sufficiency, a placid indulgence of voluntary delusions, a secure expansion of the fancy, or a cool concentration of the mental powers. The phantoms which haunt a desert are want, and misery, and danger; the evils of dereliction rush upon the thoughts; man is made unwillingly acquainted with his own weakness, and meditation shews him only how little he can sustain, and how little he can perform. There were no traces of inhabitants, except perhaps a rude pile of clods, called a summer hut, in which a herdsman had rested in the favourable seasons. Whoever had been in the place where I then sat, unprovided with provisions, and ignorant of the country, might, at least before the roads were made, have wandered among the rocks till he had perished with hardship, before he could have found either food or shelter. Yet what are these hillocks to the ridges of *Taurus*,

or these spots of wilderness to the deserts of America?

It was not long before we were invited to mount, and continued our journey along the side of a lough, kept full by many streams, which with more or less rapidity and noise crossed the road from the hills on the other hand. These currents, in their diminished state, after several dry months, afford, to one who has always lived in level countries, an unusual and delightful spectacle; but in the rainy season, such as every winter may be expected to bring, must precipitate an impetuous and tremendous flood. I suppose the way by which we went is, at this time, impassable.

GLENSHEALS.

The lough at last ended in a river broad and shallow like the rest, but that it may be passed when it is deeper, there is a bridge over it. Beyond it is a valley called *Glensheals*, inhabited by the clan of *Macrae*. Here we found a village called *Auknasheals*, consisting of many huts, perhaps twenty, built all of *dry-stone*, that is, stones piled up without mortar.

We had, by the direction of the officers at Fort Augustus, taken bread for ourselves, and tobacco for those Highlanders who might shew us any kindness. We were now at a place where we could obtain milk, but must have wanted bread if we had not brought it. The people of this valley did not appear to know any English, and our guides now became doubly necessary as interpreters. A woman, whose hut was distinguished by greater

spaciousness and better architecture, brought out some pails of milk. The villagers gathered about us in considerable numbers, I believe without any evil intention, but with a very savage wildness of aspect and manner. When our meal was over, Mr Boswell sliced the bread, and divided it amongst them, as he supposed them never to have tasted a wheaten loaf before. He then gave them little pieces of twisted tobacco, and among the children we distributed a small handful of halfpence, which they received with great eagerness. Yet I have been since told, that the people of that valley are not indigent; and when we mentioned them afterwards as needy and pitiable, a Highland lady let us know, that we might spare our commiseration; for the dame whose milk we drank had probably more than a dozen milk-cows. She seemed unwilling to take any price, but being pressed to make a demand, at last named a shilling. Honesty is not greater where elegance is less. One of the by-standers, as we were told afterwards, advised her to ask more, but she said a shilling was enough. We gave her half-a-crown, and I hope got some credit by our behaviour; for the company said, if our interpreters did not flatter us, that they had not seen such a day since the old laird of Macleod passed through their country.

The *Macraes*, as we heard afterwards in the Hebrides, were originally an indigent and subordinate clan, and having no farms nor stock, were in great numbers servants to the *Maclellans*, who, in the war of Charles the First, took arms at the call of the-heroick Montrose, and were, in one of his battles, almost all destroyed. The women that

were left at home, being thus deprived of their husbands, like the Scythian ladies of old, married their servants, and the Macraes became a considerable race.

THE HIGHLANDS.

As we continued our journey, we were at leisure to extend our speculations, and to investigate the reason of those peculiarities by which such rugged regions as these before us are generally distinguished.

Mountainous countries commonly contain the original, at least the oldest race of inhabitants, for they are not easily conquered, because they must be entered by narrow ways, exposed to every power of mischief from those that occupy the heights; and every new ridge is a new fortress, where the defendants have again the same advantages. If the assailants either force the strait, or storm the summit, they gain only so much ground; their enemies are fled to take possession of the next rock, and the pursuers stand at gaze, knowing neither where the ways of escape wind among the steeps, nor where the bog has firmness to sustain them; besides that, mountaineers have an agility in climbing and descending, distinct from strength or courage, and attainable only by use.

If the war be not soon concluded, the invaders are dislodged by hunger; for in those anxious and toilsome marches, provisions cannot easily be carried, and are never to be found. The wealth of mountains is cattle, which, while the men stand in the passes, the women drive away. Such lands at

last cannot repay the expence of conquest, and therefore perhaps have not been so often invaded by the mere ambition of dominion, as by resentment of robberies and insults, or the desire of enjoying in security the more fruitful provinces.

As mountaineers are long before they are conquered, they are likewise long before they are civilized. Men are softened by intercourse mutually profitable, and instructed by comparing their own notions with those of others. Thus Cæsar found the maritime parts of Britain made less barbarous by their commerce with the Gauls. Into a barren and rough tract no stranger is brought either by the hope of gain or of pleasure. The inhabitants having neither commodities for sale, nor money for purchase, seldom visit more polished places, or if they do visit them seldom return.

It sometimes happens that by conquest, intermixture, or gradual refinement, the cultivated parts of a country change their language. The mountaineers then become a distinct nation, cut off by dissimilitude of speech from conversation with their neighbours. Thus in Biscay, the original Cantabrian, and in Dalecarlia, the old Swedish still subsists. Thus Wales and the Highlands speak the tongue of the first inhabitants of Britain, while the other parts have received first the Saxon, and in some degree afterwards the French, and then formed a third language between them.

That the primitive manners are continued where the primitive language is spoken, no nation will desire me to suppose, for the manners of mountaineers are commonly savage, but they are rather

produced by their situation than derived from their ancestors.

Such seems to be the disposition of man, that whatever makes a distinction produces rivalry. England, before other causes of enmity were found, was disturbed for some centuries by the contests of the northern and southern counties; so that at Oxford, the peace of study could for a long time be preserved only by choosing annually one of the proctors from each side of the Trent. A tract intersected by many ridges of mountains, naturally divides its inhabitants into petty nations, which are made by a thousand causes enemies to each other. Each will exalt its own chiefs, each will boast the valour of its men, or the beauty of its women, and every claim of superiority irritates competition; injuries will sometimes be done, and be more injuriously defended; retaliation will sometimes be attempted, and the debt exacted with too much interest.

In the Highlands it was a law, that if a robber was sheltered from justice, any man of the same clan might be taken in his place. This was a kind of irregular justice, which, though necessary in savage times, could hardly fail to end in a feud; and a feud once kindled among an idle people, with no variety of pursuits to divert their thoughts, burnt on for ages, either sullenly glowing in secret mischief, or openly blazing into publick violence. Of the effects of this violent judicature, there are not wanting memorials. The cave is now to be seen to which one of the *Campbells*, who had injured the *Macdonalds*, retired with a body of his own clan. The *Macdonalds* required the offender, and being

refused, made a fire at the mouth of the cave, by which he and his adherents were suffocated together.

Mountaineers are warlike, because by their feuds and competitions they consider themselves as surrounded with enemies, and are always prepared to repel incursions, or to make them. Like the Greeks in their unpolished state, described by Thucydides, the Highlanders, till lately, went always armed, and carried their weapons to visits, and to church.

Mountaineers are thievish, because they are poor, and having neither manufactures nor commerce, can grow rich only by robbery. They regularly plunder their neighbours, for their neighbours are commonly their enemies; and having lost that reverence for property, by which the order of civil life is preserved, soon consider all as enemies, whom they do not reckon as friends, and think themselves licensed to invade whatever they are not obliged to protect.

By a strict administration of the laws, since the laws have been introduced into the Highlands, this disposition to thievery is very much repressed. Thirty years ago no herd had ever been conducted through the mountains, without paying tribute in the night to some of the clans; but cattle are now driven, and passengers travel, without danger, fear, or molestation.

Among a warlike people, the qualities of highest esteem is personal courage, and with a magnificent display of courage are characterised by promptitude of offence, and quick retreat. The Highlanders, before the

ed, were so addicted to quarrels, that the boys used to follow any publick procession or ceremony, however festive or however solemn, in expectation of the battle, which was sure to happen before the company dispersed.

Mountainous regions are sometimes so remote from the seat of government, and so difficult of access, that they are very little under the influence of the sovereign, or within the reach of national justice. Law is nothing without power; and the sentence of a distant court could not be easily executed, nor perhaps very safely promulgated, among men ignorantly proud and habitually violent, unconnected with the general system, and accustomed to reverence only their own lords. It has therefore been necessary to erect many particuar jurisdictions, and commit the punishment of crimes, and the decision of right, to the proprietors of the country who could enforce their own decrees. It immediately appears that such judges will be often ignorant, and often partial; but in the immaturity of political establishments no better expedient could be found. As government advances towards perfection, provincial judicature is perhaps in every empire gradually abolished.

Those who had thus the dispensation of law, were by consequence themselves lawless. Their vassals had no shelter from outrages and oppressions; but were condemned to endure, without resistance, the caprices of wantonness, and the rage of cruelty.

In the Highlands, some great lords had an hereditary jurisdiction over counties; and some chieftains over their own lands; till the final conquest of

the Highlands afforded an opportunity of crushing all the local courts, and of extending the general benefits of equal law to the low and the high, in the deepest recesses and obscurest corners.

While the chiefs had this resemblance of royalty, they had little inclination to appeal, on any question, to superior judicatures. A claim of lands between too powerful lairds was decided like a contest for dominion between sovereign powers. They drew their forces into the field, and right attended on the strongest. This was, in ruder times, the common practice, which the kings of Scotland could seldom controul.

Even so lately as in the last years of king William, a battle was fought at Mulroy, on a plain a few miles to the south of Inverness, between the clans of *Mackintosh* and *Macdonald of Keppoch*. Colonel Macdonald the head of a small clan, refused to pay the dues demanded from him by *Mackintosh*, as his superior lord. They disdained the interposition of judges and laws, and calling each his followers to maintain the dignity of the clan, fought a formal battle, in which several considerable men fell on the side of *Mackintosh*, without a complete victory to either. This is said to have been the last open war made between the clans by their own authority.

The Highland lords made treaties, and formed alliances, of which some traces may still be found, and some consequences still remain as lasting evidences of petty regality. The terms of one of these confederacies were, that each should support the other in the right, or in the wrong, except against the king.

The inhabitants of mountains form distinct races, and are careful to preserve their genealogies. Men in a small district necessarily mingle blood by intermarriages, and combine at last into one family, with a common interest in the honour and disgrace of every individual. Then begins that union of affections, and co-operation of endeavours, that constitute a clan. They who consider themselves as ennobled by their family, will think highly of their progenitors, and they who through successive generations live always together in the same place, will preserve local stories and hereditary prejudices. Thus every Highlander can talk of his ancestors, and recount the outrages which they suffered from the wicked inhabitants of the next valley.

Such are the effects of habitation among mountains, and such were the qualities of the Highlanders, while their rocks secluded them from the rest of mankind, and kept them an unaltered and discriminated race. They are now losing their distinction, and hastening to mingle with the general community.

GLENELG.

We left Auknasheals and the Macraes in the afternoon, and in the evening came to Ratikin, a high hill on which a road is cut, but so steep and narrow that it is very difficult. There is now a design of making another way round the bottom. Upon one of the precipices, my horse, weary with the steepness of the rise, staggered a little, and I called in haste to the Highlander to hold him.

This was the only moment of my journey, in which I thought myself endangered.

Having surmounted the hill at last, we were told, that at *Glenelg*, on the sea-side, we should come to a house of lime, and slate, and glass. This image of magnificence raised our expectation. At last we came to our inn, weary and peevish, and began to inquire for meat and beds.

Of the provisions the negative catalogue was very copious. Here was no meat, no milk, no bread, no eggs, no wine. We did not express much satisfaction. Here however we were to stay. Whisky we might have, and I believe at last they caught a fowl and killed it. We had some bread, and with that we prepared ourselves to be contented, when we had a very eminent proof of Highland hospitality. Along some miles of the way, in the evening, a gentleman's servant had kept us company on foot with very little notice on our part. He left us near *Glenelg*, and we thought on him no more till he came to us again, in about two hours, with a present from his master of rum and sugar. The man had mentioned his company, and the gentleman, whose name, I think, is Gordon, well knowing the penury of the place, had this attention to two men, whose names perhaps he had not heard, by whom his kindness was not likely to be ever repaid, and who could be recommended to him only by their necessities.

We were now to examine our lodging. Out of one of the beds, on which we were to repose, started up, at our entrance, a man black as a *Cyclops* from the forge. Other circumstances of no elegant recital concurred to disgust us. We had been

frighted by a lady at Edinburgh, with discouraging representations of Highland lodgings. Sleep, however, was necessary. Our Highlanders had at last found some hay, with which the inn could not supply them, I directed them to bring a bundle into the room, and slept upon it in my riding coat. Mr Boswell being more delicate, laid himself sheets, with hay over and under him, and lay in linen like a gentleman.

SKY.—ARMIDEL.

In the morning, September the twentieth, we found ourselves on the edge of the sea. Having procured a boat, we dismissed our Highlanders, whom I would recommend to the service of any future travellers, and were ferried over to the isle of Sky. We landed at Armidel, where we were met on the sands by Sir Alexander Macdonald, who was at that time there with his lady, preparing to leave the island, and reside at Edinburgh.

Armidel is a neat house, built where the *Macdonalds* had once a seat, which was burnt in the commotions that followed the Revolution. The walled orchard, which belonged to the former house, still remains. It is well shaded by tall ash-trees, of a species, as Mr Janes the fossilist informed me, uncommonly valuable. This plantation is very properly mentioned by Dr Campbell, in his new account of the state of Britain, and deserves attention; because it proves that the present nakedness of the Hebrides is not wholly the fault of nature.

As we sat at Sir Alexander's table, we were entertained, according to the ancient usage of the north, with the melody of the bagpipe. Every thing in those countries has its history. As the bagpiper was playing, an elderly gentleman informed us, that in some remote time, the *Macdonalds* of Glengary having been injured, or offended by the inhabitants of Culloden, and resolving to have justice or vengeance, came to Culloden on a Sunday, where, finding their enemies at worship, they shut them up in the church, which they set on fire; and this, said he, is the tune that the piper played while they were burning.

Narrations like this, however uncertain, deserve the notice of a traveller, because they are the only records of a nation that has no historians, and afford the most genuine representation of the life and character of the ancient Highlanders.

Under the denomination of *Highlanders* are comprehended in Scotland all that now speak the Erse language, or retain the primitive manners, whether they live among the mountains or in the islands; and in that sense I use the name, when there is not some apparent reason for making a distinction.

In Sky I first observed the use of brogues, a kind of artless shoes, stitched with thongs so loosely, that though they defend the foot from stones, they do not exclude water. Brogues were formerly made of raw hides, with the hair inwards, and such are perhaps still used in rude and remote parts; but they are said not to last above two days. Where life is somewhat improved, they are now made of leather tanned with oak-bark, as in other places, or with the bark of birch, or roots of tor-

mentil, a substance recommended in defect of bark, about forty years ago, to the Irish tanners, by one to whom the parliament of that kingdom voted a reward. The leather of Sky is not completely penetrated by vegetable matter, and therefore cannot be very durable.

My inquiries about brogues, gave me an early specimen of Highland information. One day I was told, that to make brogues was a domestick art, which every man practised for himself, and that a pair of brogues was the work of an hour. I supposed that the husband made brogues as the wife made an apron, till next day it was told me, that a brogue-maker was a trade, and that a pair would cost half-a-crown. It will easily occur that these representations may both be true, and that, in some places, men may buy them, and in others make them for themselves; but I had both the accounts in the same house within two days.

Many of my subsequent inquiries upon more interesting topicks ended in the like uncertainty. He that travels in the Highlands may easily saturate his soul with intelligence, if he will acquiesce in the first account. The Highlander gives to every question an answer so prompt and peremptory, that scepticism itself is dared into silence, and the mind sinks before the bold reporter in unresisting credulity; but if a second question be ventured, it breaks the enchantment; for it is immediately discovered, that what was told so confidently was told at hazard, and that such fearlessness of assertion was either the sport of negligence, or the refuge of ignorance.

If individuals are thus at variance with themselves, it can be no wonder that the accounts of different men are contradictory. The traditions of an ignorant and savage people have been for ages negligently heard, and unskilfully related. Distant events must have been mingled together, and the actions of one man given to another. These, however, are deficiencies in story, for which no man is now to be censured. It were enough, if what there is yet opportunity of examining were accurately inspected, and justly represented; but such is the laxity of Highland conversation, that the inquirer is kept in continual suspense, and by a kind of intellectual retrogradation, knows less as he hears more.

In the islands the plaid is rarely worn. The law by which the Highlanders have been obliged to change the form of their dress, has, in all the places that we have visited, been universally obeyed. I have seen only one gentleman completely clothed in the ancient habit, and by him it was worn only occasionally and wantonly. The common people do not think themselves under any legal necessity of having coats; for they say that the law against plaids was made by lord Hardwicke, and was in force only for his life: but the same poverty that made it then difficult for them to change their clothing, hinders them now from changing it again.

The fillibeg, or lower garment, is still very common, and the bonnet almost universal; but their attire is such as produces, in a sufficient degree, the effect intended by the law, of abolishing the dissimilitude of appearance between the Highlanders

and the other inhabitants of Britain; and if dress be supposed to have much influence, facilitates their coalition with their fellow-subjects.

What we have long used we naturally like; and therefore the Highlanders were unwilling to lay aside their plaid, which yet to an unprejudiced spectator must appear an incommodious and cumbersome dress; for hanging loose upon the body, it must flutter in a quick motion, or require one of the hands to keep it close. The Romans always laid aside the gown when they had any thing to do. It was a dress so unsuitable to war, that the same word which signified a gown signified peace. The chief use of a plaid seems to be this, that they could commodiously wrap themselves in it, when they were obliged to sleep without a better cover.

In our passage from Scotland to Sky, we were wet for the first time with a shower. This was the beginning of the Highland winter, after which we were told that a succession of three dry days was not to be expected for many months. The winter of the Hebrides consists of little more than rain and wind. As they are surrounded by an ocean never frozen, the blasts that come to them over the water are too much softened to have the power of congelation. The salt loughs, or inlets of the sea, which shoot very far into the island, never have any ice upon them, and the pools of fresh water will never bear the walker. The snow that sometimes falls, is soon dissolved by the air, or the rain.

This is not the description of a cruel climate, yet the dark months are here a time of great distress; because the summer can do little more than

feed itself, and winter comes with its cold and its scarcity upon families very slenderly provided.

CORIATACHAN IN SKY.

The third or fourth day after our arrival at Armidel, brought us an invitation to the isle of Raasay, which lies east of Sky. It is incredible how soon the account of an event is propagated in these narrow countries by the love of talk, which much leisure produces, and the relief given to the mind in the penury of insular conversation by a new topick. The arrival of strangers at a place so rarely visited, excites rumour, and quickens curiosity. I know not whether we touched at any corner, where fame had not already prepared us a reception.

To gain a commodious passage to Raasay, it was necessary to pass over a large part of Sky. We were furnished therefore with horses and a guide. In the islands there are no roads, nor any marks by which a stranger may find his way. The horseman has always at his side a native of the place, who, by pursuing game, or tending cattle, or being often employed in messages or conduct, has learned where the ridge of the hill has breadth sufficient to allow a horse and his rider a passage, and where the moss or bog is hard enough to bear them. The bogs are avoided as toilsome at least, if not unsafe, and therefore the journey is made generally from precipice to precipice; from which if the eye ventures to look down, it sees below a gloomy cavity, whence the rush of water is sometimes heard.

But there seems to be in all this more alarm than danger. The Highlander walks carefully before, and the horse, accustomed to the ground, follows him with little deviation. Sometimes the hill is too steep for the horseman to keep his seat, and sometimes the moss is too tremulous to bear the double weight of horse and man. The rider then dismounts, and all shift as they can.

Journies made in this manner are rather tedious than long. A very few miles require several hours. From Armidel we came at night to Coriatachan, a house very pleasantly situated between two brooks, with one of the highest hills of the island behind it. It is the residence of Mr Mackinnon, by whom we were treated with very liberal hospitality, among a more numerous and elegant company than it could have been supposed easy to collect.

The hill behind the house we did not climb. The weather was rough, and the height and steepness discouraged us. We were told that there is a cairne upon it. A cairne is a heap of stones thrown upon the grave of one eminent for dignity of birth, or splendour of achievements. It is said, that by digging, an urn is always found under these cairnes: they must therefore have been thus piled by a people whose custom it was to burn the dead. To pile stones is, I believe, a northern custom, and to burn the body was the Roman practice; nor do I know when it was that these two acts of sepulture were united,

The weather was next day too violent for the continuation of our journey; but we had no reason to complain of the interruption. We saw in every place, what we chiefly desired to know, the man-

ners of the people. We had company, and if we had chosen retirement, we might have had books.

I never was in any house of the islands, where I did not find books in more languages than one, if I had staid long enough to want them, except one from which the family was removed. Literature is not neglected by the higher rank of the Hebridians.

It need not, I suppose, be mentioned, that in countries so little frequented as the islands, there are no houses where travellers are entertained for money. He that wanders about these wilds, either procures recommendations to those whose habitations lie near his way, or, when night and weariness come upon him, takes the chance of general hospitality. If he finds only a cottage, he can expect little more than shelter; for the cottagers have little more for themselves: but if his good fortune brings him to the residence of a gentleman, he will be glad of a storm to prolong his stay. There is, however, one inn by the sea side at Sconsor, in Sky, where the post-office is kept.

At the table where a stranger is received, neither plenty nor delicacy is wanting. A tract of land so thinly inhabited, must have much wild-fowl; and I scarcely remember to have seen a dinner without them. The moorgame is every where to be had. That the sea abounds with fish, needs not be told, for it supplies a great part of Europe. The isle of Sky has stags and roebucks, but no hares. They send very numerous droves of oxen yearly to England, and therefore cannot be supposed to want beef at home. Sheep and goats are

in great numbers, and they have the common domestick fowls.

But as here is nothing to be bought, every family must kill its own meat, and roast part of it somewhat sooner than *Apicius* would prescribe. Every kind of flesh is undoubtedly excelled by the variety and emulation of English markets; but that which is not best may be yet very far from bad, and he that shall complain of his fare in the Hebrides, has improved his delicacy more than his manhood.

Their fowls are not like those plumped for sale by the poulterers of London, but they are as good as other places commonly afford, except that the geese, by feeding in the sea, have universally a fishy rankness.

These geese seem to be of a middle race, between the wild and domestick kinds. They are so tame as to own a home, and so wild as sometimes to fly quite away.

Their native bread is made of oats, or barley. Of oatmeal they spread very thin cakes, coarse and hard, to which unaccustomed palates are not easily reconciled. The barley cakes are thicker and softer; I began to eat them without unwillingness; the blackness of their colour raises some dislike, but the taste is not disagreeable. In most houses there is wheat-flour, with which we were sure to be treated, if we staid long enough to have it kneaded and baked. As neither yeast nor leaven are used among them, their bread of every kind is unfermented. They make only cakes, and never mould a loaf.

A man of the Hebrides, for of the women's diet I can give no account, as soon as he appears in the morning, swallows a glass of whisky; yet they are not a drunken race, at least I never was present at much intemperance; but no man is so abstemious as to refuse the morning dram, which they call a *skalk*. The word *whisky* signifies water, and is applied by way of eminence to strong water, or distilled liquor. The spirit drunk in the north is drawn from barley. I never tasted it, except once for experiment at the inn in Inverary, when I thought it preferable to any English malt brandy. It was strong, but not pungent, and was free from the empyreumatick taste or smell. What was the process I had no opportunity of inquiring, nor do I wish to improve the art of making poison pleasant.

Not long after the dram, may be expected the breakfast, a meal in which the Scots, whether of the lowlands or mountains, must be confessed to excel us. The tea and coffee are accompanied not only with butter, but with honey, conserves, and marmalades. If an epicure could remove by a wish, in quest of sensual gratifications, wherever he had supped, he would breakfast in Scotland.

In the islands, however, they do what I found it not very easy to endure. They pollute the tea-table by plates piled with large slices of Cheshire cheese, which mingles its less grateful odours with the fragrance of the tea.

Where many questions are to be asked, some will be omitted. I forgot to inquire how they were supplied with so much exotick luxury. Perhaps the French may bring them wine for wool,

and the Dutch give them tea and coffee at the fishing season, in exchange for fresh provision. Their trade is unconstrained; they pay no customs, for there is no officer to demand them; whatever, therefore, is made dear only by impost, is obtained here at an easy rate.

A dinner in the Western Islands differs very little from a dinner in England, except that in the place of tarts there are always set different preparations of milk. This part of their diet will admit some improvement. Though they have milk, and eggs, and sugar, few of them know how to compound them in a custard. Their gardens afford them no great variety, but they have always some vegetables on the table. Potatoes at least are never wanting, which, though they have not known them long, are now one of the principal parts of their food. They are not of the mealy, but the viscous kind.

Their more elaborate cookery, or made dishes, an Englishman, at the first taste, is not likely to approve, but the culinary compositions of every country are often such as become grateful to other nations only by degrees; though I have read a French author, who, in the elation of his heart, says, that French cookery pleases all foreigners, but foreign cookery never satisfies a Frenchman.

Their suppers are like their dinners, various, and plentiful. The table is always covered with elegant linen. Their plates for common use are often of that kind of manufacture which is called cream coloured, or queen's ware. They use silver on all occasions where it is common in England,

nor did I ever find a spoon of horn but in one house.

The knives are not often either very bright, or very sharp. They are indeed instruments of which the Highlanders have not been long acquainted with the general use. They were not regularly laid on the table, before the prohibition of arms, and the change of dress. Thirty years ago the Highlander wore his knife as a companion to his dirk or dagger, and when the company sat down to meat, the men who had knives, cut the flesh into small pieces for the women, who with their fingers conveyed it to their mouths.

There was, perhaps, never any change of national manners so quick, so great, and so general, as that which has operated in the Highlands, by the last conquest, and the subsequent laws. We came thither too late to see what we expected, a people of peculiar appearance, and a system of antiquated life. The clans retain little now of their original character; their ferocity of temper is softened, their military ardour is extinguished, their dignity of independence is depressed, their contempt of government subdued, and their reverence for their chiefs abated. Of what they had before the late conquest of their country, there remain only their language and their poverty. Their language is attacked on every side. Schools are erected, in which English only is taught, and there were lately some who thought it reasonable to refuse them a version of the holy scriptures, that they might have no monument of their mother-tongue.

That their poverty is gradually abated, cannot be mentioned among the unpleasing consequences

of a form of life inured to hardships, and therefore not studious of nice accommodations. But I know not whether, for many ages, it was not considered as a part of military policy, to keep the country not easily accessible. The rocks are natural fortifications, and an enemy climbing with difficulty was easily destroyed by those who stood high above him.

Our reception exceeded our expectations. We found nothing but civility, elegance, and plenty. After the usual refreshments, and the usual conversation, the evening came upon us. The carpet was then rolled off the floor; the musician was called, and the whole company was invited to dance, nor did ever fairies trip with greater alacrity. The general air of festivity, which predominated in this place, so far remote from all those regions which the mind has been used to contemplate as the mansions of pleasure, struck the imagination with a delightful surprise, analogous to that which is felt at an unexpected emersion from darkness into light.

When it was time to sup, the dance ceased, and six and thirty persons sat down to two tables in the same room. After supper the ladies sung Erse songs, to which I listened as an English audience to an Italian opera, delighted with the sound of words which I did not understand.

I inquired the subjects of the songs, and was told of one, that it was a love song, and of another, that it was a farewell composed by one of the islanders that was going, in this epidemical fury of emigration, to seek his fortune in America. What sentiments would rise, on such an occasion, in the

heart of one who had not been taught to lament by precedent, I should gladly have known; but the lady, by whom I sat, thought herself not equal to the work of translating.

Mr Macleod is the proprietor of the islands of Raasay, Rona, and Fladda, and possesses an extensive distrct in Sky. The estate has not, during four hundred years, gained or lost a single acre.

One of the old Highland alliances has continued for two hundred years, and is still subsisting between Macleod of Raasay, and Macdonald of Sky, in consequence of which, the survivor always inherits the arms of the deceased; a natural memorial of military friendship. At the death of the late Sir James Macdonald, his sword was delivered to the present laird of Raasay.

The family of Raasay consists of the laird, the lady, three sons, and ten daughters. For the sons there is a tutor in the house, and the lady is said to be very skilful and diligent in the education of her girls. More gentleness of manners, or a more pleasing appearance of domestick society, is not found in the most polished countries.

Raasay is the only inhabited island in Mr Macleod's possession. Rona and Fladda afford only pasture for cattle, of which one hundred and sixty winter in Rona, under the superintendance of a solitary herdsman.

The length of Raasay is, by computation, fifteen miles, and the breadth two. These countries have never been measured, and the computation by miles is negligent and arbitrary. We observed in travelling, that the nominal and real distance of places had very little relation to each other. Raas-

say probably contains near a hundred square miles. It affords not much ground, notwithstanding its extent, either for tillage or pasture; for it is rough, rocky, and barren. The cattle often perish by falling from the precipices. It is like the other islands, I think, generally naked of shade, but it is naked by neglect; for the laird has an orchard, and very large forest trees grow about his house. Like other hilly countries, it has many rivulets. One of the brooks turns a corn-mill, and at least one produces trouts.

In the streams or fresh lakes of the islands, I have never heard of any other fish than trouts and eels. The trouts which I have seen are not large; the colour of their flesh is tinged as in England. Of their eels I can give no account, having never tasted them; for I believe they are not considered as wholesome food.

It is not very easy to fix the principles upon which mankind have agreed to eat some animals, and reject others; and as the principle is not evident, it is not uniform. That which is selected as delicate in one country, is by its neighbours abhorred as loathsome. The Neapolitans lately refused to eat potatoes in a famine. An Englishman is not easily persuaded to dine on snails with an Italian, on frogs with a Frenchman, or on horse-flesh with a Tartar. The vulgar inhabitants of Sky, I know not whether of the other islands, have not only eels, but pork and bacon in abhorrence, and accordingly I never saw a hog in the Hebrides, except one at Dunvegan.

Raasay has wild-fowl in abundance, but neither deer, hares, nor rabbits. Why it has them not,

might be asked, but that of such questions there is no end. Why does any nation want what it might have? Why are not spices transplanted to America? Why does tea continue to be brought from China? Life improves but by slow degrees, and much in every place is yet to do. Attempts have been made to raise roebucks in Raasay, but without effect. The young ones it is extremely difficult to rear, and the old can very seldom be taken alive.

Hares and rabbits might be more easily obtained. That they have few or none of either in Sky, they impute to the ravage of the foxes, and have therefore set, for some years past, a price upon their heads, which, as the number was diminished, has been gradually raised, from three shillings and sixpence to a guinea, a sum so great in this part of the world, that in a short time Sky may be as free from foxes, as England from wolves. The fund for these rewards is a tax of sixpence in the pound, imposed by the farmers on themselves, and said to be paid with great willingness.

The beasts of prey in the islands are foxes, otters, and weasels. The foxes are bigger than those of England; but the otters exceed ours in a far greater proportion. I saw one at Armidel, of a size much beyond that which I supposed them ever to attain; and Mr Maclean, the heir of Col, a man of middle stature, informed me that he once shot an otter, of which the tail reached the ground, when he held up the head to a level with his own. I expected the otter to have a foot particularly formed for the art of swimming; but upon examination, I did not find it differing much from

that of a spaniel. As he preys in the sea, he does little visible mischief, and is killed only for his fur. White otters are sometimes seen.

In Raasay they might have hares and rabbits, for they have no foxes. Some depredations, such as were never made before, have caused a suspicion that a fox has been lately landed in the island by spite or wantonness. This imaginary stranger has never yet been seen, and therefore, perhaps, the mischief was done by some other animal. It is not likely that a creature so ungentle, whose head could have been sold in Sky for a guinea, should be kept alive only to gratify the malice of sending him to prey upon a neighbour: and the passage from Sky is wider than a fox would venture to swim, unless he were chased by dogs into the sea, and, perhaps, than his strength would enable him to cross. How beasts of prey came into any islands is not easy to guess. In cold countries they take advantage of hard winters, and travel over the ice; but this is a very scanty solution; for they are found where they have no discoverable means of coming.

The corn of this island is but little. I saw the harvest of a small field. The women reaped the corn, and the men bound up the sheaves. The strokes of the sickle were timed by the modulation of the harvest song, in which all their voices were united. They accompany, in the Highlands, every action, which can be done in equal time, with an appropriated strain, which has, they say, not much meaning; but its effects are regularity and cheerfulness. The ancient proceusmatick song, by which the rowers of gallies were animated, may be

supposed to have been of this kind. There is now an oar-song used by the Hebridians.

The ground of Raasay seems fitter for cattle than for corn; and of black cattle, I suppose, the number is very great. The laird himself keeps a herd of four hundred, one hundred of which are annually sold. Of an extensive domain, which he holds in his own hands, he considers the sale of cattle as repaying him the rent, and supports the plenty of a very liberal table with the remaining product.

Raasay is supposed to have been very long inhabited. On one side of it they show caves into which the rude nations of the first ages retreated from the weather. These dreary vaults might have had other uses. There is still a cavity near the house called the oar-cave, in which the seamen, after one of those piratical expeditions, which in rougher times was very frequent, used, as tradition tells, to hide their oars. This hollow was near the sea, that nothing so necessary might be far to be fetched; and it was secret, that enemies, if they landed, could find nothing. Yet it is not very evident of what use it was to hide their oars from those, who, if they were masters of the coast, could take away their boats.

A proof much stronger of the distance at which the first possessors of this island lived from the present time, is afforded by the stone heads of arrows, which are very frequently picked up. The people call them *elf-bolts*, and believe that the fairies shoot them at the cattle. They nearly resemble those which Mr Banks has lately brought from the savage countries in the Pacific Ocean, and must

have been made by a nation to which the use of metals was unknown.

The number of this little community has never been counted by its ruler, nor have I obtained any positive account, consistent with the result of political computation. Not many years ago, the late laird led out one hundred men upon a military expedition. The sixth part of a people is supposed capable of bearing arms; Raasay had therefore six hundred inhabitants. But because it is not likely, that every man able to serve in the field would follow the summons, or that the chief would leave his lands totally defenceless, or take away all the hands qualified for labour, let it be supposed, that half as many might be permitted to stay at home. The whole number will then be nine hundred, or nine to a square mile; a degree of populousness greater than those tracts of desolation can often show. They are content with their country, and faithful to their chiefs, and yet uninfected with the fever of migration.

Near the house at Raasay is a chapel, unroofed and ruinous, which has long been used only as a place of burial. About the churches in the islands are small squares enclosed with stone, which belong to particular families, as repositories for the dead. At Raasay there is one, I think, for the proprietor, and one for some collateral house.

It is told by Martin, that at the death of the lady of the island, it has been here the custom to erect a cross. This we found not to be true. The stones that stand about the chapel at a small distance, some of which perhaps have crosses cut upon them, are believed to have been, not funeral

monuments, but the ancient boundaries of the sanctuary, or consecrated ground.

Martin was a man not illiterate: he was an inhabitant of Sky, and therefore was within reach of intelligence, and with no great difficulty might have visited the places which he undertakes to describe; yet with all his opportunities, he has often suffered himself to be deceived. He lived in the last century, when the chiefs of the clans had lost little of their original influence. The mountains were yet unpenetrated, no inlet was opened to foreign novelties, and the feudal institutions operated upon life with their full force. He might therefore have displayed a series of subordination and a form of government, which in more luminous and improved regions, have been long forgotten, and have delighted his readers with many uncouth customs that are now disused, and wild opinions that prevail no longer. But he probably had not knowledge of the world sufficient to qualify him for judging what would deserve or gain the attention of mankind. The mode of life which was familiar to himself, he did not suppose unknown to others, nor imagined that he could give pleasure by telling that of which it was, in his little country, impossible to be ignorant.

What he has neglected cannot now be performed. In nations, where there is hardly the use of letters, what is once out of sight is lost for ever. They think but little, and of their few thoughts, none are wasted on the past, in which they are neither interested by fear nor hope. Their only registers are stated observances and practical representations. For this reason an age of igno-

rance is an age of ceremony. Pageants, and processions, and commemorations, gradually shrink away, as better methods come into use of recording events, and preserving rights.

It is not only in Raasay that the chapel is unroofed and useless: through the few islands which we visited we neither saw nor heard of any house of prayer, except in Sky, that was not in ruins. The malignant influence of Calvinism has blasted ceremony and decency together; and if the remembrance of Papal superstition is obliterated, the monuments of Papal piety are likewise effaced.

It has been, for many years, popular to talk of the lazy devotion of the Romish clergy; over the sleepy laziness of men that erected churches, we may indulge our superiority with a new triumph, by comparing it with the fervid activity of those who suffer them to fall.

Of the destruction of churches, the decay of religion must in time be the consequence; for while the publick acts of the ministry are now performed in houses, a very small number can be present; and as the greater part of the islanders make no use of books, all must necessarily live in total ignorance who want the opportunity of vocal instruction.

From these remains of ancient sanctity, which are every where to be found, it has been conjectured, that, for the last two centuries, the inhabitants of the islands have decreased in number. This argument, which supposes that the churches have been suffered to fall, only because they were no longer necessary, would have some force, if the

houses of worship still remaining were sufficient for the people. But since they have now no churches at all, these venerable fragments do not prove the people of former times to have been more numerous, but to have been more devout. If the inhabitants were doubled, with their present principles; it appears not that any provision for public worship would be made. Where the religion of a country enforces consecrated buildings, the number of those buildings may be supposed to afford some indication, however uncertain, of the populousness of the place; but where, by a change of manners, a nation is contented to live without them, their decay implies no diminution of inhabitants.

Some of these dilapidations are said to be found in islands now uninhabited; but I doubt whether we can thence infer that they were ever peopled. The religion of the middle age is well known to have placed too much hope in lonely austerities. Voluntary solitude was the great art of propitiation, by which crimes were effaced, and conscience was appeased; it is therefore not unlikely, that oratories were often built in places where retirement was sure to have no disturbance.

Raasay has little that can detain a traveller, except the laird and his family; but their power wants no auxiliaries. Such a seat of hospitality, amidst the winds and waters, fills the imagination with a delightful contrariety of images. Without is the rough ocean and the rocky land, the beating billows and the howling storm: within is plenty and elegance, beauty and gaiety, the song and the

dance. In Raasay, if I could have found an *Ulysses*, I had fancied a *Phaacia*.

DUNVEGAN.

At Raasay, by good fortune, *Macleod*, so the chief of the clan is called, was paying a visit, and by him we were invited to his seat at Dunvegan. Raasay has a stout boat, built in Norway, in which, with six oars, he conveyed us back to Sky. We landed at *Port Re*, so called, because James the Fifth of Scotland, who had curiosity to visit the islands, came into it. The port is made by an inlet of the sea, deep and narrow, where a ship lay waiting to dispeople Sky, by carrying the natives away to America.

In coasting Sky, we passed by the cavern in which it was the custom, as Martin relates, to catch birds in the night, by making a fire at the entrance. This practice is disused; for the birds, as is known often to happen, have changed their haunts.

Here we dined at a publick house, I believe the only inn of the island, and having mounted our horses, travelled in the manner already described, till we came to *Kingsborough*, a place distinguished by that name, because the king lodged here when he landed at *Port Re*. We were entertained with the usual hospitality by Mr Macdonald and his lady Flora Macdonald, a name that will be mentioned in history, and if courage and fidelity be virtues, mentioned with honour. She is a woman of middle stature, soft features, gentle manners, and elegant presence.

In the morning we sent our horses round a promontory to meet us, and spared ourselves part of the day's fatigue, by crossing an arm of the sea. We had at last some difficulty in coming to Dunvegan; for our way led over an extensive moor, where every step was to be taken with caution, and we were often obliged to alight, because the ground could not be trusted. In travelling this watery flat, I perceived that it had a visible declivity, and might without much expence or difficulty be drained. But difficulty and expence are relative terms, which have different meanings in different places.

To Dunvegan we came, very willing to be at rest, and found our fatigue amply recompensed by our reception. Lady Macleod, who had lived many years in England, was newly come hither with her son and four daughters, who knew all the arts of southern elegance, and all the modes of English œconomy. Here therefore we settled, and did not spoil the present hour with thoughts of departure.

Dunvegan is a rocky prominence, that juts out into a bay, on the west side of Sky. The house, which is the principal seat of Macleod, is partly old and partly modern; it is built upon the rock, and looks upon the water. It forms two sides of a small square: on the third side is the skeleton of a castle of unknown antiquity, supposed to have been a Norwegian fortress, when the Danes were masters of the islands. It is so nearly entire, that it might easily have been made habitable, were there not an ominous tradition in the family, that the owner shall not long outlive the repara-

tion. The grand-father of the present laird, in defiance of prediction, began the work, but desisted in a little time, and applied his money to worse uses.

As the inhabitants of the Hebrides lived, for many ages, in continual expectation of hostilities; the chief of every clan resided in a fortress. This house was accessible only from the water, till the last possessor opened an entrance by stairs upon the land.

They had formerly reason to be afraid, not only of declared wars and authorized invaders, or of roving pirates, which, in the northern seas, must have been very common; but of inroads and insults from rival clans, who in the plenitude of feudal independence, asked no leave of their sovereign to make war on one another. Sky has been ravaged by a feud between the two mighty powers of *Macdonald* and *Macleod*. *Macdonald* having married a *Macleod*, upon some discontent dismissed her, perhaps because she had brought him no children. Before the reign of James the Fifth, a Highland laird made a trial of his wife for a certain time, and if she did not please him, he was then at liberty to send her away. This however must always have offended, and *Macleod* resenting the injury, whatever were its circumstances, declared that the wedding had been solemnized without a bonfire, but that the separation should be better illuminated; and raising a little army, set fire to the territories of *Macdonald*, who returned the visit, and prevailed.

Another story may show the disorderly state of insular neighbourhood. The inhabitants of the isle

of Egg, meeting a boat manned by Macleods, tied the crew hand and foot, and set them a-drift. Macleod landed upon Egg, and demanded the offenders; but the inhabitants refusing to surrender them, retreated to a cavern, into which they thought their enemies unlikely to follow them. Macleod choked them with smoke, and left them lying dead by families as they stood.

Here the violence of the weather confined us for sometime, not at all to our discontent or inconvenience. We would indeed very willingly have visited the islands, which might be seen from the house scattered in the sea, and I was particularly desirous to have viewed Isay; but the storms did not permit us to launch a boat, and we were condemned to listen in idleness to the wind, except when we were better engaged by listening to the ladies.

We had here more wind than waves, and suffered the severity of a tempest, without enjoying its magnificence. The sea being broken by the multitude of islands, does not roar with so much noise, nor beat the storm with such foamy violence, as I have remarked on the coast of Sussex. Though, while I was in the Hebrides, the wind was extremely turbulent, I never saw very high billows.

The country about Dunvegan is rough and barren. There are no trees, except in the orchard, which is a low sheltered spot, surrounded with a wall.

When this house was intended to sustain a siege, a well was made in the court, by boring the rock downwards, till water was found, which, though

so near to the sea, I have not heard mentioned as brackish, though it has some hardness, or other qualities, which make it less fit for use; and the family is now better supplied from a stream, which runs by the rock, from two pleasing water-falls.

Here we saw some traces of former manners, and heard some standing traditions. In the house is kept an ox's horn, hollowed so as to hold perhaps two quarts, which the heir of Macleod was expected to swallow at one draught, as a test of his manhood, before he was permitted to bear arms, or could claim a seat among the men. It is held that the return of the laird to Dunvegan, after any considerable absence, produces a plentiful capture of herrings; and that, if any woman crosses the water to the opposite island, the herrings will desert the coast. Boetius tells the same of some other place. This tradition is not uniform. Some hold that no woman may pass, and others that none may pass but a Macleod.

Among other guests, which the hospitality of Dunvegan brought to the table, a visit was paid by the laird and lady of a small island south of Sky, of which the proper name is Muack, which signifies swine. It is commonly called Muck, which the proprietor not liking, has endeavoured, without effect, to change to Monk. It is usual to call gentlemen in Scotland by the name of their possessions, as Raasay, Bernera, Loch Buy, a practice necessary in countries inhabited by clans, where all that live in the same territory have one name, and must be therefore discriminated by some addition. This gentleman, whose name, I think, is Maclean, should be regularly called Muck; but the appella-

tion, which he thinks too coarse for his island, he would like still less for himself, and he is therefore addressed by the title of *Isle of Muck*.

This little island, however it be named, is of considerable value. It is two English miles long, and three quarters of a mile broad, and consequently contains only nine hundred and sixty English acres. It is chiefly arable. Half of this little dominion the laird retains in his own hand, and on the other half, live one hundred and sixty persons, who pay their rent by exported corn. What rent they pay, we were not told, and could not decently inquire. The proportion of the people to the land is such, as the most fertile countries do not commonly maintain.

The laird having all his people under his immediate view, seems to be very attentive to their happiness. The devastation of the small-pox, when it visits places where it comes seldom, is well known. He has disarmed it of its terror at Muack, by inoculating eighty of his people. The expence was two shillings and sixpence a head. Many trades they cannot have among them, but upon occasion, he fetches a smith from the isle of Egg, and has a taylor from the main land, six times a year. This island well deserved to be seen, but the laird's absence left us no opportunity.

Every inhabited island has its appendant and subordinate islets. Muck, however small, has yet others smaller about it, one of which has only ground sufficient to afford pasture for three wethers.

At Dunvegan I had tasted lotus, and was in danger of forgetting that I was ever to depart, till

Mr Boswell sagely reproached me with my sluggishness and softness. I had no very forcible defence to make; and we agreed to pursue our journey. Macleod accompanied us to Ulinish where we were entertained by the sheriff of the island.

ULINISH.

Mr Macqueen travelled with us, and directed our attention to all that was worthy of observation. With him we went to see an ancient building, called a *dun* or borough. It was a circular inclosure, about forty-two feet in diameter, walled round with loose stones, perhaps to the height of nine feet. The walls are very thick, diminishing a little towards the top, and though in these countries stone is not brought far, must have been raised with much labour. Within the great circle were several smaller rounds of wall, which formed distinct apartments. Its date and its use are unknown. Some suppose it the original seat of the chiefs of the Macleods. Mr Macqueen thought it a Danish fort.

The entrance is covered with flat stones, and is narrow, because it was necessary that the stones which lie over it, should reach from one wall to the other; yet, strait as the passage is, they seem heavier than could have been placed where they now lie, by the naked strength of as many men as might stand about them. They were probably raised by putting long pieces of wood under them, to which the action of a long line of lifters might be applied. Savages, in all countries, have patience proportionate to their unskilfulness, and

are content to attain their end by very tedious methods.

If it was ever roofed, it might once have been a dwelling, but as there is no provision for water, it could not have been a fortress. In Sky, as in every other place, there is an ambition of exalting whatever has survived memory, to some important use, and referring it to very remote ages. I am inclined to suspect, that in lawless times, when the inhabitants of every mountain stole the cattle of their neighbour, these enclosures were used to secure the herds and flocks in the night. When they were driven within the wall, they might be easily watched, and defended as long as could be needful; for the robbers durst not wait till the injured clan should find them in the morning

The interior enclosures, if the whole building were once a house, were the chambers of the chief inhabitants. If it was a place of security for cattle, they were probably the shelters of the keepers.

From the Dun we were conducted to another place of security, a cave carried a great way underground, which had been discovered by digging after a fox. These caves, of which many have been found, and many probably remain concealed, are formed, I believe, commonly by taking advantage of a hollow, where banks or rocks rise on either side. If no such place can be found, the ground must be cut away. The walls are made by piling stones against the earth, on either side. It is then roofed by large stones laid across the cavern, which therefore cannot be wide. Over the roof, turfs were placed, and grass was suffered to grow;

and the mouth was concealed by bushes, or some other cover.

These caves were represented to us as the cabins of the first rude inhabitants, of which, however, I am by no means persuaded. This was so low, that no man could stand upright in it. By their construction they are all so narrow, that two can never pass along them together, and being subterraneous, they must be always damp. They are not the work of an age much ruder than the present; for they are formed with as much art as the construction of a common hut requires. I imagine them to have been places only of occasional use, in which the islander, upon a sudden alarm, hid his utensils, or his clothes, and perhaps sometimes his wife and children.

This cave we entered, but could not proceed the whole length, and went away without knowing how far it was carried. For this omission we shall be blamed, as we perhaps have blamed other travellers; but the day was rainy, and the ground was damp. We had with us neither spades nor pick-axes, and if love of ease surmounted our desire of knowledge, the offence has not the invidiousness of singularity.

Edifices, either standing or ruined, are the chief records of an illiterate nation. In some part of this journey, at no great distance from our way, stood a shattered fortress, of which the learned minister, to whose communication we are much indebted, gave us an account.

Those, said he, are the walls of a place of refuge, built in the time of James the Sixth, by Hugh Macdonald, who was next heir to the dignity and for-

tune of his chief. Hugh, being so near his wish, was impatient of delay; and had art and influence sufficient to engage several gentlemen in a plot against the laird's life. Something must be stipulated on both sides; for they would not dip their hands in blood merely for Hugh's advancement. The compact was formally written, signed by the conspirators, and placed in the hands of one Macleod.

It happened that Macleod had sold some cattle to a drover, who, not having ready money, gave him a bond for payment. The debt was discharged, and the bond re-demanded; which Macleod, who could not read, intending to put into his hands, gave him the conspiracy. The drover, when he had read the paper, delivered it privately to Macdonald, who, being thus informed of his danger, called his friends together, and provided for his safety. He made a publick feast, and inviting Hugh Macdonald and his confederates, placed each of them at the table between two men of known fidelity. The compact of conspiracy was then shown, and every man confronted with his own name. Macdonald acted with great moderation. He upbraided Hugh both with disloyalty and ingratitude; but told the rest, that he considered them as men deluded and misinformed. Hugh was sworn to fidelity, and dismissed with his companions; but he was not generous enough to be reclaimed by lenity; and finding no longer any countenance among the gentlemen, endeavoured to execute the same design by meaner hands. In this practice he was detected, taken to Macdonald's castle, and imprisoned in

the dungeon. When he was hungry, they let down a plentiful meal of salted meat; and when, after his repast, he called for drink, conveyed to him a covered cup, which, when he lifted the lid, he found empty. From that time they visited him no more, but left him to perish in solitude and darkness.

We were then told of a cavern by the sea-side, remarkable for the powerful reverberation of sounds. After dinner we took a boat, to explore this curious cavity. The boatmen, who seemed to be of a rank above that of common drudges, inquired who the strangers were, and being told we came one from Scotland, and the other from England, asked if the Englishman could recount a long genealogy. What answer was given them, the conversation being in Erse, I was not much inclined to examine.

They expected no good event of the voyage; for one of them declared that he heard the cry of an English ghost. This omen I was not told till after our return, and therefore cannot claim the dignity of despising it.

The sea was smooth. We never left the shore, and came without any disaster to the cavern, which we found rugged and misshapen, about one hundred and eighty feet long, thirty wide in the broadest part, and in the loftiest, as we guessed, about thirty high. It was now dry, but at high water the sea rises in it near six feet. Here I saw what I had never seen before, limpets and muscles in their natural state. But, as a new testimony to the veracity of common fame, here was no echo to be heard.

We then walked through a natural arch in the rock, which might have pleased us by its novelty, had the stones, which encumbered our feet, given

us leisure to consider it. We were shown the gummy seed of the kelp, that fastens itself to a stone, from which it grows into a strong stalk.

In our return, we found a little boy upon the point of a rock, catching with his angle a supper for the family. We rowed up to him, and borrowed his rod, with which Mr Boswell caught a cuddy.

The cuddy is a fish of which I know not the philosophical name. It is not much bigger than a gudgeon, but is of great use in these islands, as it affords the lower people both food and oil for their lamps. Cuddies are so abundant, at some times of the year, that they are caught like white bait in the Thames, only by dipping a basket and drawing it back.

If it were always practicable to fish, these islands could never be in much danger from famine; but unhappily, in the winter, when other provision fails, the seas are commonly too rough for nets, or boats.

TALISKER IN SKY.

From Ulinish our next stage was to Talisker, the house of colonel Macleod, an officer in the Dutch service, who in this time of universal peace, has for several years been permitted to be absent from his regiment. Having been bred to physick, he is consequently a scholar, and his lady, by accompanying him in his different places of residence, is become skilful in several languages. Talisker is the place beyond all that I have seen, from which the gay and the jovial seem utterly excluded; and

where the hermit might expect to grow old in meditation, without possibility of disturbance or interruption. It is situated very near the sea, but upon a coast where no vessel lands but when it is driven by a tempest on the rocks. Towards the land are lofty hills streaming with water-falls. The garden is sheltered by firs, or pines, which grow there so prosperously, that some, which the present inhabitant planted, are very high and thick.

At this place we very happily met with Mr Donald Maclean, a young gentleman, the eldest son of the laird of Col, heir to a very great extent of land, and so desirous of improving his inheritance, that he spent a considerable time among the farmers of Hertfordshire and Hampshire, to learn their practice. He worked with his own hands at the principal operations of agriculture, that he might not deceive himself by a false opinion of skill, which if he should find it deficient at home, he had no means of completing. If the world has agreed to praise the travels and manual labours of the czar of Muscovy, let Col have his share of the like applause, in the proportion of his dominions to the empire of Russia.

This young gentleman was sporting in the mountains of Sky, and when he was weary with following his game, repaired for lodging to Talisker. At night he missed one of his dogs, and when he went to seek him in the morning, found two eagles feeding on his carcase.

Col, for he must be named by his possessions, hearing that our intention was to visit Jona, offered to conduct us to his chief, Sir Allan Maclean, who lived in the isle of Inch Kenneth, and would readi-

ly find us a convenient passage. From this time was formed an acquaintance, which being begun by kindness, was accidentally continued by constraint we derived much pleasure from it, and I hope have given him no reason to repent it.

The weather was now almost one continued storm, and we were to snatch some happy intermission to be conveyed to Mull, the third island of the Hebrides, lying about a degree south of Sky, whence we might easily find our way to Inch Kenneth, where Sir Allan Mackean resided, and afterward to Jona.

For this purpose, the most commodious station that we could take was Armidel, which Sir Alexander Macdonald had now left to a gentleman who lived there as his factor or steward.

In our way to Armidel was Coriatachan, where we had already been, and to which therefore we were very willing to return. We staid however so long at Talisker, that a great part of our journey was performed in the gloom of the evening. In travelling even thus almost without light through naked solitude, when there is a guide whose conduct may be trusted, a mind not naturally too much disposed to fear, may preserve some degree of cheerfulness; but what must be the solicitude of him who should be wandering, among the crags and hollows, benighted, ignorant, and alone?

The fictions of the Gothick romances were not so remote from credibility as they are now thought. In the full prevalence of the feudal institution, when violence desolated the world, and every baron lived in a fortress, forests and castles were regularly succeeded by each other, and the adventurer

might very suddenly pass from the gloom of woods, or the ruggedness of moors, to seats of plenty, gaiety, and magnificence. Whatever is imagined in the wildest tale, if giants, dragons, and enchantment be excepted, would be felt by him, who, wandering in the mountains without a guide, or upon the sea without a pilot, should be carried amidst his terror and uncertainty, to the hospitality and elegance of Raasay or Dunvegan.

To Coriatachan at last we came, and found ourselves welcomed as before. Here we staid two days, and made such inquiries as curiosity suggested. The house was filled with company, among whom Mr Macpherson and his sister distinguished themselves by their politeness and accomplishments. By him we were invited to Ostig, a house not far from Armidel, where we might easily hear of a boat, when the weather would suffer us to leave the island.

OSTIG IN SKY.

At Ostig, of which Mr Macpherson is Minister, we were entertained for some days, then removed to Armidel, where we finished our observations on the island of Sky.

As this island lies in the fifty-seventh degree, the air cannot be supposed to have much warmth. The long continuance of the sun above the horizon, does indeed sometimes produce great heat in northern latitudes; but this can only happen in sheltered places, where the atmosphere is to a certain degree stagnant, and the same mass of air continues to receive for many hours the rays of the sun,

and the vapours of the earth. Sky lies open on the west and north to a vast extent of ocean, and is cooled in the summer by a perpetual ventilation, but by the same blasts is kept warm in winter. Their weather is not pleasing. Half the year is deluged with rain. From the autumnal to the vernal equinox, a dry day is hardly known, except when the showers are suspended by a tempest. Under such skies can be expected no great exuberance of vegetation. Their winter overtakes their summer, and their harvest lies upon the ground drenched with rain. The autumn struggles hard to produce some of our early fruits. I gathered gooseberries in September; but they were small, and the husk was thick.

The winter is seldom such as puts a full stop to the growth of plants, or reduces the cattle to live wholly on the surplusage of the summer. In the year seventy-one they had a severe season, remembered by the name of the Black Spring, from which the island has not yet recovered. The snow lay long upon the ground, a calamity hardly known before. Part of their cattle died for want, part were unseasonably sold to buy sustenance for the owners; and, what I have not read or heard of before, the kine that survived were so emaciated and dispirited, that they did not require the male at the usual time. Many of the roebucks perished.

The soil, as in other countries, has its diversities. In some parts there is only a thin layer of earth spread upon a rock, which bears nothing but short brown heath, and perhaps is not generally capable of any better product. There are many bogs or mosses of greater or less extent, where the soil can-

not be supposed to want depth, though it is too wet for the plough. But we did not observe in these any aquatick plants. The vallies and the mountains are alike darkened with heath. Some grass, however, grows here and there, and some happier spots of earth are capable of tillage.

Their agriculture is laborious, and perhaps rather feeble than unskilful. Their chief manure is sea-weed, which, when they lay it to rot upon the field, gives them a better crop than those of the Highlands. They heap sea-shells upon the dunghill, which in time moulder into a fertilizing substance. When they find a vein of earth where they cannot use it, they dig it up, and add it to the mould of a more commodious place.

Their corn grounds often lie in such intricacies among the crags, that there is no room for the action of a team and plough. The soil is then turned up by manual labour, with an instrument called a crooked spade, of a form and weight which to me appeared very incommodious, and would perhaps be soon improved in a country where workmen could be easily found and easily paid. It has a narrow blade of iron fixed to a long and heavy piece of wood, which must have, about a foot and a half above the iron, a knee or flexure with the angle downwards. When the farmer encounters a stone, which is the great impediment of his operations, he drives the blade under it, and bringing the knee or angle to the ground, has in the long handle a very forcible lever.

According to the different mode of tillage, farms are distinguished into *long land* and *short land*.

Long land is that which affords room for a plough, and short land is turned up by the spade.

The grain which they commit to the furrows thus tediously formed, is either oats or barley. They do not sow barley without very copious manures, and then they expect from it ten for one, an increase equal to that of better countries; but the culture is so operose, that they content themselves commonly with oats; and who can relate without compassion, that after all their diligence they are to expect only a triple increase? It is in vain to hope for plenty, when a third part of the harvest must be reserved for seed.

When their grain is arrived at the state which they must consider as ripeness, they do not cut, but pull the barley: to the oats they apply the sickle. Wheel carriages they have none, but make a frame of timber which is drawn by one horse, with the two points behind pressing on the ground. On this they sometimes drag home their sheaves, but often convey them home in a kind of open panier, or frame of sticks, upon the horse's back.

Of that which is obtained with so much difficulty, nothing surely ought to be wasted; yet their method of clearing their oats from the husk is by parching them in the straw. Thus with the genuine improvidence of savages, they destroy that fodder for want of which their cattle may perish. From this practice they have two petty conveniences: they dry the grain so that it is easily reduced to meal, and they escape the theft of the thresher. The taste contracted from the fire by the oats, as by every other scorched substance, use must long

ago have made grateful. The oats that are not parched must be dried in a kiln.

The barns of Sky I never saw. That which Macleod of Raasay had erected near his house was so contrived, because the harvest is seldom brought home dry, as by perpetual perfusion to prevent the mow from heating.

Of their gardens I can judge only from their tables. I did not observe that the common greens were wanting, and suppose, that by choosing an advantageous exposition, they can raise all the more hardy esculent plants. Of vegetable fragrance or beauty they are not yet studious. Few vows are made to Flora in the Hebrides.

They gather a little hay, but the grass is mown late; and is so often almost dry and again very wet, before it is housed, that it becomes a collection of withered stalks without taste or fragrance; it must be eaten by cattle that have nothing else, but by most English farmers would be thrown away.

In the islands I have not heard that any subterraneous treasures have been discovered, though where there are mountains, there are commonly minerals. One of the rocks in Col has a black vein, imagined to consist of the ore of lead; but it was never yet opened or essayed. In Sky a black mass was accidentally picked up, and brought into the house of the owner of the land, who found himself strongly inclined to think it a coal, but unhappily it did not burn in the chimney. Common ores would be here of no great value; for what requires to be separated by fire, must, if it were found, be carried away in its mineral state, here being no fuel for the smelting-house or forge. Per-

haps by diligent search in this world of stone, some valuable species of marble might be discovered. But neither philosophical curiosity, nor commercial industry, have yet fixed their abode here, where the importunity of immediate want, supplied but for the day, and craving on the morrow, has left little room for excursive knowledge, or the pleasing fancies of distant profit.

They have lately found a manufacture considerably lucrative. Their rocks abound with kelp, a sea-plant, of which the ashes are melted into glass. They burn kelp in great quantities, and then send it away in ships, which come regularly to purchase them. This new source of riches has raised the rents of many maritime farms; but the tenants pay, like all other tenants, the additional rent with great unwillingness; because they consider the profits of the kelp as the mere product of personal labour, to which the landlord contributes nothing. However, as any man may be said to give what he gives the power of gaining, he has certainly as much right to profit from the price of kelp as of any thing else found or raised upon his ground.

This new trade has excited a long and eager litigation between Macdonald and Macleod, for a ledge of rocks, which, till the value of kelp was known, neither of them desired the reputation of possessing.

The cattle of Sky are not so small as is commonly believed. Since they have sent their beeves in great numbers to southern marts, they have probably taken more care of their breed. At stated times the annual growth of cattle is driven to a fair

by a general drover, and with the money, which he returns to the farmer, the rents are paid.

The price regularly expected, is from two to three pounds a-head : there was once one sold for five pounds. They go from the islands very lean, and are not offered to the butcher till they have been long fattened in English pastures.

Of their black cattle some are without horns, called by the Scots *humble cows*, as we call a bee an humble bee, that wants a sting. Whether this difference be specifick, or accidental, though we inquired with great diligence, we could not be informed. We are not very sure that the bull is ever without horns, though we have been told, that such bulls there are. What is produced by putting a horned and unhorned male and female together, no man has ever tried that thought the result worthy of observation.

Their horses are, like their cows, of a moderate size. I had no difficulty to mount myself commodiously by the favour of the gentlemen. I heard of very little cows in Barra, and very little horses in Rum, where perhaps no care is taken to prevent that diminution of size, which must always happen, where the greater and the less copulate promiscuously, and the young animal is restrained from growth by penury of sustenance.

The goat is the general inhabitant of the earth, complying with every difference of climate and of soil. The goats of the Hebrides are like others : nor did I hear any thing of their sheep to be particularly remarked.

In the penury of these malignant regions, nothing is left that can be converted to food. The

goats and the sheep are milked like the cows. A single meal of a goat is a quart, and of a sheep a pint. Such at least was the account, which I could extract from those of whom I am not sure that they ever had inquired.

The milk of goats is much thinner than that of cows, and that of sheep is much thicker. Sheep's milk is never eaten before it is boiled; as it is thick, it must be very liberal of curd, and the people of St Kilda form it into small cheeses.

The stags of the mountains are less than those of our parks or forests, perhaps not bigger than our fallow deer. Their flesh has no rankness, nor is inferior in flavour to our common venison. The roebuck I neither saw nor tasted. These are not countries for a regular chase. The deer are not driven with horns and hounds. A sportsman, with his gun in his hand, watches the animal, and when he has wounded him, traces him by the blood.

They have a race of brindled greyhounds larger and stronger than those with which we course hares, and those are the only dogs used by them for the chase.

Man is by the use of fire-arms made so much an overmatch for other animals, that in all countries, where they are in use, the wild part of the creation sensibly diminishes. There will probably not be long either stags or roebucks in the islands. All the beasts of chase would have been lost long ago in countries well inhabited, had they not been preserved by laws for the pleasure of the rich.

There are in Sky neither rats nor mice, but the weasel is so frequent, that he is heard in houses rattling behind chests or beds, as rats in England.

They probably owe to his predominance that they have no other vermin ; for since the great rat took possession of this part of the world, scarce a ship can touch at any port, but some of his race are left behind. They have within these few years began to infest the isle of Col, where, being left by some trading vessel, they have increased for want of weasels to oppose them.

The inhabitants of Sky, and of the other islands, which I have seen, are commonly of the middle stature, with fewer among them very tall or very short, than are seen in England ; or perhaps, as their numbers are small, the chances of any deviation from the common measure are necessarily few. The tallest men that I saw are among those of higher rank. In regions of barrenness and scarcity, the human race is hindered in its growth by the same causes as other animals.

The ladies have as much beauty here as in other places, but bloom and softness are not to be expected among the lower classes, whose faces are exposed to the rudeness of the climate, and whose features are sometimes contracted by want, and sometimes hardened by the blasts. Supreme beauty is seldom found in cottages or workshops, even where no real hardships are suffered. To expand the human face to its full perfection, it seems necessary that the mind should co-operate by placidness of content, or consciousness of superiority.

Their strength is proportionate to their size, but they are accustomed to run upon rough ground, and therefore can with great agility skip over the bog, or clamber the mountain. For a campaign in the wastes of America, soldiers better qualified

could not have been found. Having little work to do, they are not willing, nor perhaps able, to endure a long continuance of manual labour, and are therefore considered as habitually idle.

Having never been supplied with those accommodations, which life extensively diversified with trades affords, they supply their wants by very insufficient shifts, and endure many inconveniencies, which a little attention would easily relieve. I have seen a horse carrying home the harvest on a crate. Under his tail was a stick for a crupper, held at the two ends by twists of straw. Hemp will grow in their islands, and therefore ropes may be had. If they wanted hemp, they might make better cordage of rushes, or perhaps of nettles, than of straw.

Their method of life neither secures them perpetual health, nor exposes them to any particular diseases. There are physicians in the islands, who, I believe, all practise chirurgery, and all compound their own medicines.

It is generally supposed, that life is longer in places where there are few opportunities of luxury; but I found no instance here of extraordinary longevity. A cottager grows old over his oat-cakes, like a citizen at a turtle feast. He is indeed seldom incommoded by corpulence. Poverty preserves him from sinking under the burden of himself, but he escapes no other injury of time. Instances of long life are often related, which those who hear them are more willing to credit than examine. To be told that any man has attained a hundred years, gives hope and comfort to him who

stands trembling on the brink of his own climacterick.

Length of life is distributed impartially to very different modes of life in very different climates; and the mountains have no greater examples of age and health than the low lands, where I was introduced to two ladies of high quality; one of whom, in her ninety-fourth year, presided at her table with the full exercise of all her powers; and the other has attained her eighty-fourth, without any diminution of her vivacity, and with little reason to accuse time of depredations on her beauty.

In the islands, as in most other places, the inhabitants are of different rank, and one does not encroach here upon another. Where there is no commerce nor manufacture, he that is born poor can scarcely become rich; and if none are able to buy estates, he that is born to land cannot annihilate his family by selling it. This was once the state of these countries. Perhaps there is no example, till within a century and half, of any family whose estate was alienated otherwise than by violence or forfeiture. Since money has been brought amongst them, they have found, like others, the art of spending more than they receive; and I saw with grief the chief of a very ancient clan, whose island was condemned by law to be sold for the satisfaction of his creditors.

The name of highest in dignity is *laird*, of which there are in the extensive isle of Sky only three, Macdonald, Macleod, and Mackinnon. The laird is the original owner of the land, whose natural power must be very great where no man lives but by agriculture; and where the produce of the land

is not conveyed through the labyrinths of traffick, but passes directly from the hand that gathers it to the mouth that eats it. The laird has all those in his power that live upon his farms. Kings can, for the most part, only exalt or degrade. The laird at pleasure can feed or starve, can give bread, or withhold it. This inherent power was yet strengthened by the kindness of consanguinity, and the reverence of patriarchal authority. The laird was the father of the clan, and his tenants commonly bore his name. And to these principles of original command was added, for many ages, an exclusive right of legal jurisdiction.

This multifarious and extensive obligation operated with force scarcely credible. Every duty, moral or political, was absorbed in affection and adherence to the chief. Not many years have passed since the clans knew no law but the laird's will. He told them to whom they should be friends or enemies, what king they should obey, and what religion they should profess.

When the Scots first rose in arms against the succession of the house of Hanover, Lovat, the chief of the Frasers, was in exile for a rape. The Frasers were very numerous, and very zealous against the government. A pardon was sent to Lovat. He came to the English camp, and the clan immediately deserted to him.

Next in dignity to the laird is the *tacksman*, a large taker or lease-holder of land, of which he keeps part as a domain in his own hand, and lets part to under-tenants. The tacksman is necessarily a man capable of securing to the laird the whole rent, and is commonly a collateral relation,

These tacks, or subordinate possessions, were long considered as hereditary, and the occupant was distinguished by the name of the place at which he resided. He held a middle station, by which the highest and the lowest orders were connected. He paid rent and reverence to the laird, and received them from the tenants. This tenure still subsists, with its original operation, but not with the primitive stability. Since the islanders, no longer content to live, have learned the desire of growing rich, an ancient dependent is in danger of giving way to a higher bidder, at the expence of domestick dignity and hereditary power. The stranger, whose money buys him preference, considers himself as paying for all that he has, and is indifferent about the laird's honour or safety. The commodiousness of money is indeed great; but there are some advantages which money cannot buy, and which therefore no wise man will by the love of money be tempted to forego.

I have found in the hither parts of Scotland, men not defective in judgment or general experience, who consider the tacksman as a useless burden of the ground, as a drone who lives upon the product of an estate, without the right of property, or the merit of labour, and who impoverishes at once the landlord and the tenant. The land, say they, is let to the tacksman at sixpence an acre, and by him to the tenant at tenpence. Let the owner be the immediate landlord to all the tenants; if he sets the ground at eightpence, he will increase his revenue by a fourth part, and the tenant's burden will be diminished by a fifth.

Those who pursue this train of reasoning, seem not sufficiently to inquire whither it will lead them, nor to know that it will equally shew the propriety of suppressing all wholesale trade, of shutting up the shops of every man who sells what he does not make, and of extruding all whose agency and profit intervene between the manufacturer and the consumer. They may, by stretching their understandings a little wider, comprehend, that all those who, by undertaking large quantities of manufacture, and affording employment to many labourers, make themselves considered as benefactors to the publick, have only been robbing their workmen with one hand, and their customers with the other. If Crowley had sold only what he could make, and all his smiths had wrought their own iron with their own hammers, he would have lived on less, and they would have sold their work for more. The salaries of superintendents and clerks would have been partly saved, and partly shared, and nails been sometimes cheaper by a farthing in a hundred. But then if the smith could not have found an immediate purchaser, he must have deserted his anvil ; if there had by accident at any time been more sellers than buyers, the workmen must have reduced their profit to nothing, by underselling one another ; and as no great stock could have been in any hand, no sudden demand of large quantities could have been answered, and the builder must have stood still till the nailer could supply him.

According to these schemes, universal plenty is to begin and end in universal misery. Hope and emulation will be utterly extinguished ; and as all

must obey the call of immediate necessity, nothing that requires extensive views, or provides for distant consequences, will ever be performed.

To the southern inhabitants of Scotland, the state of the mountains and the islands is equally unknown with that of Borneo or Sumatra: of both they have only heard a little, and guess the rest. They are strangers to the language and the manners, to the advantages and wants of the people, whose life they would model, and whose evils they would remedy.

Nothing is less difficult than to procure one convenience by the forfeiture of another. A soldier may expedite his march by throwing away his arms. To banish the tacksman is easy, to make a country plentiful by diminishing the people, is an expeditious mode of husbandry; but that abundance, which there is nobody to enjoy, contributes little to human happiness.

As the mind must govern the hands, so in every society the man of intelligence must direct the man of labour. If the tacksmen be taken away, the Hebrides must in their present state be given up to grossness and ignorance; the tenant, for want of instruction, will be unskilful, and for want of admonition, will be negligent. The laird, in these wide estates, which often consist of islands remote from one another, cannot extend his personal influence to all his tenants; and the steward having no dignity annexed to his character, can have little authority among men taught to pay reverence only to birth, and who regard the tacksmen as their hereditary superior; nor can the steward have equal zeal for the prosperity of an

estate profitable only to the laird, with the tacksmen, who has the laird's income involved in his own.

The only gentlemen in the islands are the lairds, the tacksmen, and the ministers, who frequently improve their livings by becoming farmers. If the tacksmen be banished, who will be left to impart knowledge, or impress civility? The laird must always be at a distance from the greater part of his lands; and if he resides at all upon them, must drag his days in solitude, having no longer either a friend or a companion; he will therefore depart to some more comfortable residence, and leave the tenants to the wisdom and mercy of a factor.

Of tenants there are different orders, as they have greater or less stock. Land is sometimes leased to a small fellowship, who live in a cluster of huts, called a *Tenant's Town*, and are bound jointly and separately for the payment of their rent. These, I believe, employ in the care of their cattle and the labour of tillage, a kind of tenants yet lower; who having a hut, with grass for a certain number of cows and sheep, pay their rent by a stipulated quantity of labour.

The condition of domestick servants, or the price of occasional labour, I do not know with certainty. I was told that the maids have sheep, and are allowed to spin for their own clothing; perhaps they have no pecuniary wages, or none but in very wealthy families. The state of life, which has hitherto been purely pastoral, begins now to be a little variegated with commerce; but novelties enter by degrees, and till one mode has fully prevailed over the other, no settled notion can be formed.

Such is the system of insular subordination, which having little variety, cannot afford much delight in the view, nor long detain the mind in contemplation. The inhabitants were for a long time, perhaps, not unhappy; but their content was a muddy mixture of pride and ignorance, an indifference for pleasures which they did not know, a blind veneration for their chiefs, and a strong conviction of their own importance.

Their pride has been crushed by the heavy hand of a vindictive conqueror, whose severities have been followed by laws, which, though they cannot be called cruel, have produced much discontent, because they operate upon the surface of life, and make every eye bear witness to subjection. To be compelled to a new dress has always been found painful.

Their chiefs being now deprived of their jurisdiction, have already lost much of their influence; and as they gradually degenerate from patriarchal rulers to rapacious landlords, they will divest themselves of the little that remains.

That dignity which they derived from an opinion of their military importance, the law, which disarmed them, has abated. An old gentleman, delighting himself with the recollection of better days, related, that forty years ago, a chieftain walked out attended by ten or twelve followers, with their arms rattling. That animating rabble has now ceased. The chief has lost his formidable retinue; and the Highlander walks his heath unarmed and defenceless, with the peaceable submission of a French peasant, or English cottager.

Their ignorance grows every day less, but their knowledge is yet of little other use than to shew them their wants. They are now in the period of education, and feel the uneasiness of discipline, without yet perceiving the benefit of instruction.

The last law, by which the Highlanders are deprived of their arms, has operated with efficacy beyond expectation. Of former statutes made with the same design, the execution had been feeble, and the effect inconsiderable. Concealment was undoubtedly practised, and perhaps often with connivance. There was tenderness or partiality on one side, and obstinacy on the other. But the law, which followed the victory of Culloden, found the whole nation dejected and intimidated; informations were given without danger and without fear, and the arms were collected with such rigour, that every house was despoiled of its defence.

To disarm part of the Highlands, could give no reasonable occasion of complaint. Every government must be allowed the power of taking away the weapon that is lifted against it. But the loyal clans murmured, with some appearance of justice, that, after having defended the king, they were forbidden for the future to defend themselves; and that the sword should be forfeited, which had been legally employed. Their case is undoubtedly hard, but in political regulations, good cannot be complete, it can only be predominant.

Whether by disarming a people thus broken into several tribes, and thus remote from the seat of power, more good than evil has been produced, may deserve inquiry. The supreme power in every community has the right of debarring every indi-

vidual, and every subordinate society, from self-defence, only because the supreme power is able to defend them; and therefore where the governor cannot act, he must trust the subject to act for himself. These islands might be wasted with fire and sword before their sovereign would know their distress. A gang of robbers, such as has been lately found confederating themselves in the Highlands, might lay a wide region under contribution. The crew of a petty privateer might land on the largest and most wealthy of the islands, and riot without controul in cruelty and waste. It was observed by one of the chiefs of Sky, that fifty armed men might, without resistance, ravage the country. Laws that place the subjects in such a state, contravene the first principles of the compact of authority: they exact obedience, and yield no protection.

It affords a generous and manly pleasure to conceive a little nation gathering its fruits and tending its herds with fearless confidence, though it lies open on every side to invasion, where, in contempt of walls and trenches, every man sleeps securely with his sword beside him; where all on the first approach of hostility come together at the call to battle, as at a summons to a festal show; and committing their cattle to the care of those whom age or nature has disabled, engage the enemy with that competition for hazard and for glory, which operate in men that fight under the eye of those whose dislike or kindness they have always considered as the greatest evil or the greatest good.

This was, in the beginning of the present century, the state of the Highlands. Every man was

a soldier, who partook of national confidence, and interested himself in national honour. To lose this spirit, is to lose what no small advantage will compensate.

It may likewise deserve to be inquired, whether a great nation ought to be totally commercial? whether amidst the uncertainty of human affairs, too much attention to one mode of happiness may not endanger others? whether the pride of riches must not sometimes have recourse to the protection of courage; and whether, if it be necessary to preserve in some part of the empire the military spirit, it can subsist more commodiously in any place, than in remote and unprofitable provinces, where it can commonly do little harm, and whence it may be called forth at any sudden exigence?

It must however be confessed, that a man who places honour only in successful violence, is a very troublesome and pernicious animal in time of peace; and that the martial character cannot prevail in a whole people, but by the diminution of all other virtues. He that is accustomed to resolve all right into conquest, will have very little tenderness of equity. All the friendship in such a life can be only a confederacy of invasion, or alliance of defence. The strong must flourish by force, and the weak subsist by stratagem.

Till the Highlanders lost their ferocity with their arms, they suffered from each other all that malignity could dictate, or precipitance could act. Every provocation was revenged with blood, and no man that ventured into a numerous company, by whatever occasion brought together, was sure of returning without a wound. If they are now

exposed to foreign hostilities, they may talk of the danger, but can seldom feel it. If they are no longer martial, they are no longer quarrelsome. Misery is caused, for the most part, not by a heavy crush of disaster, but by the corrosion of less visible evils, which canker enjoyment, and undermine security. The visit of an invader is necessarily rare, but domestick animosities allow no cessation.

The abolition of the local jurisdictions, which had for so many ages been exercised by the chiefs, has likewise its evil and its good. The feudal constitution naturally diffused itself into long ramifications of subordinate authority. To this general temper of the government was added the peculiar form of the country, broken by mountains into many subdivisions scarcely accessible but to the natives, and guarded by passes, or perplexed with intricacies, through which national justice could not find its way.

The power of deciding controversies, and of punishing offences, as some such power there must always be, was entrusted to the lairds of the country, to those whom the people considered as their natural judges. It cannot be supposed that a rugged proprietor of the rocks, unprincipled and unenlightened, was a nice resolver of entangled claims, or very exact in proportioning punishment to offences. But the more he indulged his own will, the more he held his vassals in dependence. Prudence and innocence, without the favour of the chief, conferred no security; and crimes involved no danger, when the judge was resolute to acquit.

When the chiefs were men of knowledge and

virtue, the convenience of a domestick judicature was great. No long journies were necessary, nor artificial delays could be practised; the character, the alliances, and interests of the litigants, were known to the court, and all false pretences were easily detected. The sentence, when it was past, could not be evaded; the power of the laird superseded formalities, and justice could not be defeated by interest or stratagem.

I doubt not but that since the regular judges have made their circuits through the whole country, right has been every where more wisely and more equally distributed; the complaint is, that litigation is grown troublesome, and that the magistrates are too few, and therefore often too remote for general convenience.

Many of the smaller islands have no legal officer within them. I once asked, if a crime should be committed, by what authority the offender could be seized? and was told, that the laird would exert his right; a right which he must now usurp, but which surely necessity must vindicate, and which is therefore yet exercised in lower degrees, by some of the proprietors, when legal processes cannot be obtained.

In all greater questions, however, there is now happily an end to all fear or hope from malice or from favour. The roads are secure in those places through which, forty years ago, no traveller could pass without a convoy. All trials of right by the sword are forgotten, and the mean are in as little danger from the powerful as in other places. No scheme of policy has, in any country, yet brought the rich and poor on equal terms into courts of ju-

dicature. Perhaps experience, improving on experience, may in time effect it.

Those who have long enjoyed dignity and power, ought not to lose it without some equivalent. There was paid to the chiefs by the publick, in exchange for their privileges, perhaps a sum greater than most of them had ever possessed, which excited a thirst for riches, of which it shewed them the use. When the power of birth and station ceases, no hope remains but from the prevalence of money. Power and wealth supply the place of each other. Power confers the ability of gratifying our desire without the consent of others. Wealth enables us to obtain the consent of others to our gratification. Power, simply considered, whatever it confers on one, must take from another. Wealth enables its owner to give to others, by taking only from himself. Power pleases the violent and proud: wealth delights the placid and the timorous. Youth therefore flies at power, and age grovels after riches.

The chiefs, divested of their prerogatives, necessarily turned their thoughts to the improvement of their revenues, and expect more rent, as they have less homage. The tenant, who is far from perceiving that his condition is made better in the same proportion as that of his landlord is made worse, does not immediately see why his industry is to be taxed more heavily than before. He refuses to pay the demand, and is ejected; the ground is then let to a stranger, who perhaps brings a larger stock, but who, taking the land at its full price, treats with the laird upon equal terms, and considers him not as a chief but as a trafficker in

land. Thus the estate perhaps is improved, but the clan is broken.

It seems to be the general opinion, that the rents have been raised with too much eagerness. Some regard must be paid to prejudice. Those who have hitherto paid but little, will not suddenly be persuaded to pay much, though they can afford it. As ground is gradually improved, and the value of money decreases, the rent may be raised without any diminution of the farmer's profits; yet it is necessary in these countries, where the ejection of a tenant is a greater evil than in more populous places, to consider not merely what the land will produce, but with what ability the inhabitant can cultivate it. A certain stock can allow but a certain payment; for if the land be doubled, and the stock remains the same, the tenant becomes no richer. The proprietors of the Highlands might perhaps often increase their income, by subdividing the farms, and allotting to every occupier only so many acres as he can profitably employ, but that they want people.

There seems now, whatever be the cause, to be through a great part of the Highlands a general discontent. That adherence which was lately professed by every man to the chief of his name, has now little prevalence; and he that cannot live as he desires at home, listens to the tale of fortunate islands, and happy regions, where every man may have land of his own, and eat the product of his labour without a superior.

Those who have obtained grants of American lands, have, as is well known, invited settlers from all quarters of the globe; and among other places,

where oppression might produce a wish for new habitations, their emissaries would not fail to try their persuasions in the isles of Scotland, where, at the time when the clans were newly disunited from their chiefs, and exasperated by unprecedented exactions, it is no wonder that they prevailed.

Whether the mischiefs of emigration were immediately perceived, may be justly questioned. They who went first, were probably such as could best be spared; but the accounts sent by the earliest adventurers, whether true or false, inclined many to follow them; and whole neighbourhoods formed parties for removal; so that departure from their native country is no longer exile. He that goes thus accompanied, carries with him all that makes life pleasant. He sits down in a better climate, surrounded by his kindred and his friends: they carry with them their language, their opinions, their popular songs, and hereditary merriment: they change nothing but the place of their abode; and of that change they perceive the benefit.

This is the real effect of emigration, if those that go away together settle on the same spot, and preserve their ancient union. But some relate that these adventurous visitants of unknown regions, after a voyage passed in dreams of plenty and felicity, are dispersed at last upon a sylvan wilderness, where their first years must be spent in toil to clear the ground which is afterwards to be tilled, and that the whole effect of their undertaking is only more fatigue and equal scarcity.

Both accounts may be suspected. Those who are gone will endeavour by every art to draw others after them; for as their numbers are greater, they

will provide better for themselves. When Nova Scotia was first peopled, I remember a letter, published under the character of a New Planter, who related how much the climate put him in mind of Italy. Such intelligence the Hebridians probably receive from their transmarine correspondents. But with equal temptations of interest, and perhaps with no greater niceness of veracity, the owners of the islands spread stories of American hardships to keep their people content at home.

Some method to stop this epidemick desire of wandering, which spreads its contagion from valley to valley, deserves to be sought with great diligence. In more fruitful countries, the removal of one, only makes room for the succession of another: but in the Hebrides, the loss of an inhabitant leaves a lasting vacuity; for nobody born in any other parts of the world will choose this country for his residence; and an island once depopulated will remain a desert, as long as the present facility of travel gives every one, who is discontented and unsettled, the choice of his abode.

Let it be inquired, whether the first intention of those who are fluttering on the wing, and collecting a flock that they may take their flight, be to attain good, or to avoid evil? If they are dissatisfied with that part of the globe which their birth has allotted them, and resolve not to live without the pleasures of happier climates; if they long for bright suns, and calm skies, and flowery fields, and fragrant gardens, I know not by what eloquence they can be persuaded, or by what offers they can be hired to stay.

But if they are driven from their native country by positive evils, and disgusted by ill-treatment, real or imaginary, it were fit to remove their grievances, and quiet their resentment; since, if they have been hitherto undutiful subjects, they will not much mend their principles by American conversation.

To allure them into the army, it was thought proper to indulge them in the continuance of their national dress. If this concession could have any effect, it might easily be made. That dissimilitude of appearance, which was supposed to keep them distinct from the rest of the nation, might disincline them from coalescing with the Pennsylvanians or people of Connecticut. If the restitution of their arms will reconcile them to their country, let them have again those weapons, which will not be more mischievous at home than in the Colonies. That they may not fly from the increase of rent, I know not whether the general good does not require that the landlords be, for a time, restrained in their demands, and kept quiet by pensions proportionate to their loss.

To hinder insurrection by driving away the people, and to govern peaceably, by having no subjects, is an expedient that argues no great profundity of politicks. To soften the obdurate, to convince the mistaken, to mollify the resentful, are worthy of a statesman; but it affords a legislator little self-applause to consider, that where there was formerly an insurrection, there is now a wilderness.

It has been a question often agitated, without solution, why those northern regions are now so

thinly peopled, which formerly overwhelmed with their armies the Roman empire? The question supposes what I believe is not true, that they had once more inhabitants than they could maintain, and overflowed only because they were full.

This is to estimate the manners of all countries and ages by our own. Migration, while the state of life was unsettled, and there was little communication of intelligence between distant places, was among the wilder nations of Europe capricious and casual. An adventurous projector heard of a fertile coast unoccupied, and led out a colony; a chief of renown for bravery, called the young men together, and led them out to try what fortune would present. When Cæsar was in Gaul, he found the Helvetians preparing to go they knew not whither, and put a stop to their motions. They settled again in their own country, where they were so far from wanting room, that they had accumulated three years provision for their march.

The religion of the north was military; if they could not find enemies, it was their duty to make them: they travelled in quest of danger, and willingly took the chance of empire or death. If their troops were numerous, the countries from which they were collected are of vast extent, and without much exuberance of people great armies may be raised where every man is a soldier. But their true numbers were never known. Those who were conquered by them are their historians, and shame may have excited them to say, that they were overwhelmed with multitudes. To count is a modern practice, the ancient method was to guess;

and when numbers are guessed, they are always magnified.

Thus England has for several years been filled with the achievements of seventy thousand Highlanders employed in America. I have heard from an English officer, not much inclined to favour them, that their behaviour deserved a very high degree of military praise; but their number has been much exaggerated. One of the ministers told me, that seventy thousand men could not have been found in all the Highlands, and that more than twelve thousand never took the field. Those that went to the American war, went to destruction. Of the old Highland regiment, consisting of twelve hundred, only seventy-six survived to see their country again.

The Gothick swarms have at least been multiplied with equal liberality. That they bore no great proportion to the inhabitants in whose countries they settled, is plain from the paucity of northern words now found in the provincial languages. Their country was not deserted for want of room, because it was covered with forests of vast extent; and the first effect of plentitude of inhabitants is the destruction of wood. As the Europeans spread over America, the lands are gradually laid naked.

I would not be understood to say, that necessity had never any part in their expeditions. A nation, whose agriculture is scanty or unskilful, may be driven out by famine. A nation of hunters may have exhausted their game. I only affirm that the northern regions were not, when their irruptions subdued the Romans, overpeopled with regard to

their real extent of territory, and power of fertility. In a country fully inhabited, however afterward laid waste, evident marks will remain of its former populousness. But of Scandinavia and Germany, nothing is known but that as we trace their state upwards into antiquity, their woods were greater, and their cultivated ground was less.

That causes very different from want of room may produce a general disposition to seek another country, is apparent from the present conduct of the Highlanders, who are in some places ready to threaten a total secession. The numbers which have already gone, though like other numbers they may be magnified, are very great, and such as if they had gone together, and agreed upon any certain settlement, might have founded an independent government in the depths of the western continent. Nor are they only the lowest and most indigent; many men of considerable wealth have taken with them their train of labourers and dependents; and if they continue the feudal scheme of polity, may establish new clans in the other hemisphere.

That the immediate motives of their desertion must be imputed to their landlords, may be reasonably concluded, because some lairds of more prudence and less rapacity have kept their vassals undiminished. From Raasay only one man had been seduced, and at Col there was no wish to go away.

The traveller who comes hither from more opulent countries, to speculate upon the remains of pastoral life, will not much wonder that a common Highlander has no strong adherence to his native soil; for of animal enjoyments, or of physical good

he leaves nothing that he may not find again where-soever he may be thrown.

The habitations of men in the Hebrides may be distinguished into huts and houses. By a *house*, I mean a building with one story over another; by a *hut*, a dwelling with only one floor. The laird, who formerly lived in a castle, now lives in a house; sometimes sufficiently neat, but seldom very spacious or splendid. The tacksmen and the ministers have commonly houses. Wherever there is a house, the stranger finds a welcome, and to the other evils of exterminating tacksmen may be added the unavoidable cessation of hospitality, or the devolution of too heavy a burden on the ministers.

Of the houses little can be said. They are small, and by the necessity of accumulating stores, where there are so few opportunities of purchase, the rooms are very heterogeneously filled. With want of cleanliness it were ingratitude to reproach them. The servants having been bred upon the naked earth, think every floor clean, and the quick succession of guests, perhaps not always over-elegant, does not allow much time for adjusting their apartments.

Huts are of many gradations; from murky dens to commodious dwellings.

The wall of a common hut is always built without mortar, by a skilful adaptation of loose stones. Sometimes perhaps a double wall of stones is raised, and the intermediate space filled with earth. The air is thus completely excluded. Some walls are, I think, formed of turfs, held together by a wattle, or texture of twigs. Of the meanest huts the first

room is lighted by the entrance, and the second by the smoke-hole. The fire is usually made in the middle. But there are huts, or dwellings of only one story, inhabited by gentlemen, which have walls cemented with mortar, glass windows, and boarded floors. Of these all have chimneys, and some chimneys have grates.

The house and the furniture are not always nicely suited. We were driven once, by missing a passage, to the hut of a gentleman, where, after a very liberal supper, when I was conducted to my chamber I found an elegant bed of Indian cotton, spread with fine sheets. The accommodation was flattering; I undressed myself, and felt my feet in the mire. The bed stood upon the bare earth, which a long course of rain had softened to a puddle.

In pastoral countries the condition of the lowest rank of people is sufficiently wretched. Among manufacturers, men that have no property may have art and industry, which make them necessary, and therefore valuable. But where flocks and corn are the only wealth, there are always more hands than work, and of that work there is little in which skill and dexterity can be much distinguished. He therefore who is born poor never can be rich. The son merely occupies the place of the father, and life knows nothing of progression or advancement.

The petty tenants, and labouring peasants, live in miserable cabins, which afford them little more than shelter from the storms. The boor of Norway is said to make all his own utensils. In the Hebrides, whatever might be their ingenuity, the

want of wood leaves them no materials. They are probably content with such accommodations as stones of different forms and sizes can afford them.

Their food is not better than their lodging. They seldom taste the flesh of land animals; for here are no markets. What each man eats is from his own stock. The great effect of money is to break property into small parts. In towns, he that has a shilling may have a piece of meat; but where there is no commerce, no man can eat mutton but by killing a sheep.

Fish in fair weather they need not want; but, I believe, man never lives long on fish, but by constraint; he will rather feed upon roots and berries.

The only fuel of the islands is peat. Their wood is all consumed, and coal they have not yet found. Peat is dug out of the marshes, from the depth of one foot to that of six. That is accounted the best which is nearest the surface. It appears to be a mass of black earth held together by vegetable fibres. I know not whether the earth be bituminous, or whether the fibres be not the only combustible part; which, by heating the interposed earth red-hot, make a burning mass. The heat is not very strong nor lasting. The ashes are yellowish, and in a large quantity. When they dig peat, they cut it into square pieces, and pile it up to dry beside the house. In some places it has an offensive smell. It is like wood charred for the smith. The common method of making peat fires is by heaping it on the hearth; but it burns well in grates, and in the best houses is so used.

The common opinion is, that peat grows again where it has been cut; which, as it seems to be chiefly a vegetable substance, is not unlikely to be true, whether known or not to those who relate it.

There are water-mills in Sky and Raasay; but where they are too far distant, the housewives grind their oats with a quern, or hand-mill, which consists of two stones, about a foot and a half in diameter; the lower is a little convex, to which the concavity of the upper must be fitted. In the middle of the upper stone is a round hole, and on one side is a long handle. The grinder sheds the corn gradually into the hole with one hand, and works the handle round with the other. The corn slides down the convexity of the lower stone, and by the motion of the upper is ground in its passage. These stones are found in Lochaber.

The islands afford few pleasures, except to the hardy sportsman, who can tread the moor and climb the mountain. The distance of one family from another, in a country where travelling has so much difficulty, makes frequent intercourse impracticable. Visits last several days, and are commonly paid by water; yet I never saw a boat furnished with benches, or made commodious by any addition to the first fabrick. Conveniences are not missed where they never were enjoyed.

The solace which the bagpipe can give, they have long enjoyed; but among other changes, which the last revolution introduced, the use of the bagpipe begins to be forgotten. Some of the chief families still entertain a piper, whose office was an

ciently hereditary. Macrimmon was piper to Macleod, and Rankin to Maclean of Col.

The tunes of the bagpipe are traditional. There has been in Sky, beyond all time of memory, a college of pipers, under the direction of Macrimmon, which is not quite extinct. There was another in Mull, superintended by Rankin, which expired about sixteen years ago. To these colleges, while the pipe retained its honour, the students of musick repaired for education. I have had my dinner exhilarated by the bagpipe, at Armidel, at Dunvegan, and in Col.

The general conversation of the islanders has nothing particular. I did not meet with the inquisitiveness of which I have read, and suspect the judgment to have been rashly made. A stranger of curiosity comes into a place where a stranger is seldom seen: he importunes the people with questions, of which they cannot guess the motive, and gazes with surprise on things which they, having had them always before their eyes, do not suspect of any thing wonderful. He appears to them like some being of another world, and then thinks it peculiar that they take their turn to inquire whence he comes, and whither he is going.

The islands were long unfurnished with instruction for youth, and none but the sons of gentlemen could have any literature. There are now parochial schools, to which the lord of every manor pays a certain stipend. Here the children are taught to read; but by the rule of their institution they teach only English, so that the natives read a language which they may never use or understand. If a parish, which often happens, contains several

islands, the school being but in one, cannot assist the rest. This is the state of Col, which, however, is more enlightened than some other places; for the deficiency is supplied by a young gentleman, who, for his own improvement, travels every year on foot over the Highlands to the session at Aberdeen; and at his return, during the vacation, teaches to read and write in his native island.

In Sky there are two grammar-schools, where boarders are taken to be regularly educated. The price of board is from three pounds to four pounds ten shillings a year, and that of instruction is half a crown a quarter. But the scholars are birds of passage, who live at school only in the summer; for in winter provisions cannot be made for any considerable number in one place. This periodical dispersion impresses strongly the scarcity of these countries.

Having heard of no boarding-school for ladies nearer than Inverness, I suppose their education is generally domestick. The elder daughters of the higher families are sent into the world, and may contribute by their acquisitions to the improvement of the rest.

Women must here study to be either pleasing or useful. Their deficiencies are seldom supplied by very liberal fortunes. A hundred pounds is a portion beyond the hope of any but the laird's daughter. They do not indeed often give money with their daughters; the question is, How many cows a young lady will bring her husband? A rich maiden has from ten to forty; but two cows are a decent fortune for one who pretends to no distinction.

The religion of the islands is that of the kirk of Scotland. The gentlemen with whom I conversed are all inclined to the English liturgy; but they are obliged to maintain the established minister, and the country is too poor to afford payment to another, who must live wholly on the contribution of his audience.

They therefore all attend the worship of the kirk, as often as a visit from their minister, or the practicability of travelling, gives them opportunity; nor have they any reason to complain of insufficient pastors; for I saw not one in the islands, whom I had reason to think either deficient in learning, or irregular in life; but found several with whom I could not converse without wishing, as my respect increased, that they had not been presbyterians.

The ancient rigour of puritanism is now very much relaxed, though all are not yet equally enlightened. I sometimes met with prejudices sufficiently malignant, but they were prejudices of ignorance. The ministers in the islands had attained such knowledge as may justly be admired in men, who have no motive to study, but generous curiosity, or what is still better, desire of usefulness; with such politeness as so narrow a circle of converse could not have supplied, but to minds naturally disposed to elegance.

Reason and truth will prevail at last. The most learned of the Scottish doctors would now gladly admit a form of prayer, if the people would endure it. The zeal or rage of congregations has its different degrees. In some parishes the Lord's Prayer is suffered: in others it is still rejected as a form

and he that should make it part of his supplication would be suspected of heretical pravity.

The principle upon which extemporary prayer was originally introduced, is no longer admitted. The minister formerly, in the effusion of his prayer, expected immediate, and perhaps perceptible inspiration, and therefore thought it his duty not to think before what he should say. It is now universally confessed, that men pray as they speak on other occasions, according to the general measure of their abilities and attainments. Whatever each may think of a form prescribed by another, he cannot but believe that he can himself compose by study and meditation a better prayer than will rise in his mind at a sudden call; and if he has any hope of supernatural help, why may he not as well receive it when he writes as when he speaks?

In the variety of mental powers, some must perform extemporary prayer with much imperfection; and in the eagerness and rashness of contradictory opinions, if publick liturgy be left to the private judgment of every minister, the congregation may often be offended or misled.

There is in Scotland, as among ourselves, a restless suspicion of popish machinations, and a clamour of numerous converts to the Romish religion. The report is, I believe, in both parts of the island equally false. The Romish religion is professed only in Egg and Canna, two small islands, into which the Reformation never made its way. If any missionaries are busy in the Highlands, their zeal entitles them to respect, even from those who cannot think favourably of their doctrine.

The political tenets of the islanders I was not curious to investigate, and they were not eager to obtrude. Their conversation is decent and inoffensive. They disdain to drink for their principles, and there is no disaffection at their tables. I never heard a health offered by a Highlander that might not have circulated with propriety within the precincts of the king's palace.

Legal government has yet something of novelty to which they cannot perfectly conform. The ancient spirit that appealed only to the sword, is yet among them. The tenant of Scalpa, an island belonging to Macdonald, took no care to bring his rent; when the landlord talked of exacting payment, he declared his resolution to keep his ground and drive all intruders from the island, and continued to feed his cattle as on his own land, till it became necessary for the sheriff to dislodge him by violence.

The various kinds of superstition which prevailed here, as in all other regions of ignorance, are by the diligence of the ministers almost extirpated.

Of *Brownny*, mentioned by Martin, nothing has been heard for many years. *Brownny* was a sturdy fairy; who, if he was fed, and kindly treated, would, as they said, do a great deal of work. They now pay him no wages, and are content to labour for themselves.

In Troda, within these three-and-thirty years, milk was put every Saturday for *Greogach*, or *the Old Man with the Long Beard*. Whether *Greogach* was courted as kind, or dreaded as terrible, whether they meant, by giving him the milk, to obtain good or avert evil, I was not informed. The

minister is now living by whom the practice was abolished.

They have still among them a great number of charms for the cure of different diseases; they are all invocations, perhaps transmitted to them from the times of popery, which increasing knowledge will bring into disuse.

They have opinions, which cannot be ranked with superstition, because they regard only natural effects. They expect better crops of grain, by sowing their seed in the moon's increase. The moon has great influence in vulgar philosophy. In my memory it was a precept annually given in one of the English almanacks, *to kill hogs when the moon was increasing, and the bacon would prove the better in boiling.*

We should have had little claim to the praise of curiosity, if we had not endeavoured with particular attention to examine the question of the *Second Sight*. Of an opinion received for centuries by a whole nation, and supposed to be confirmed through its whole descent by a series of successive facts, it is desirable that the truth should be established, or the fallacy detected.

The *Second Sight* is an impression made either by the mind upon the eye, or by the eye upon the mind, by which things distant or future are perceived, and seen as if they were present. A man on a journey far from home falls from his horse; another, who is perhaps at work about the house, sees him bleeding on the ground, commonly with a landscape of the place where the accident befalls him. Another seer, driving home his cattle, or wandering in idleness, or musing in the sunshine,

is suddenly surprised by the appearance of a bridal ceremony, or funeral procession, and counts the mourners, or attendants, of whom, if he knows them, he relates the names, if he knows them not, he can describe the dresses. Things distant are seen at the instant when they happen. Of things future I know not that there is any rule for determining the time between the sight and the event.

This receptive faculty, for power it cannot be called, is neither voluntary nor constant. The appearances have no dependence upon choice: they cannot be summoned, detained, or recalled. The impression is sudden, and the effect often painful.

By the term *Second Sight*, seems to be meant a mode of seeing, superadded to that which nature generally bestows. In the Earse it is called *Taisch*; which signifies likewise a spectre, or a vision. I know not, nor is it likely that the Highlanders ever examined, whether by *Taisch*, used for *Second Sight*, they mean the power of seeing, or the thing seen.

I do not find it to be true, as it is reported, that to the *Second Sight* nothing is presented but phantoms of evil. Good seems to have the same proportion in those visionary scenes, as it obtains in real life: almost all remarkable events have evil for their basis, and are either miseries incurred, or miseries escaped. Our sense is so much stronger of what we suffer, than of what we enjoy, that the ideas of pain predominate in almost every mind. What is recollection but a revival of vexations, or history, but a record of wars, treasons, and calamities? Death, which is considered as the greatest evil,

happens to all. The greatest good, be it what it will, is the lot but of a part.

That they should often see death is to be expected ; because death is an event frequent and important. But they see likewise more pleasing incidents. A gentleman told me, that when he had once gone far from his own island, one of his labouring servants predicted his return, and described the livery of his attendant, which he had never worn at home ; and which had been, without any previous design, occasionally given him. .

Our desire of information was keen, and our inquiry frequent. Mr Boswell's frankness and gaiety made every body communicative ; and we heard many tales of these airy shows, with more or less evidence and distinctness.

It is the common talk of the Lowland Scots, that the notion of the *Second Sight* is wearing away with other superstitions ; and that its reality is no longer supposed, but by the grossest people. How far its prevalence ever extended, or what ground it has lost, I know not. The islanders of all degrees, whether of rank or understanding, universally admit it, except the ministers, who universally deny it, and are suspected to deny it, in consequence of a system, against conviction. One of them honestly told me, that he came to Sky with a resolution not to believe it.

Strong reasons for incredulity will readily occur. This faculty of seeing things out of sight is local, and commonly useless. It is a breach of the common order of things, without any visible reason or perceptible benefit. It is ascribed only to a peo-

ple very little enlightened; and among them, for the most part, to the mean and ignorant.

To the confidence of these objections it may be replied, that by presuming to determine what is fit, and what is beneficial, they presuppose more knowledge of the universal system than man has attained; and therefore depend upon principles too complicated and extensive for our comprehension; and that there can be no security in the consequence, when the premises are not understood; that the second sight is only wonderful because it is rare, for, considered in itself, it involves no more difficulty than dreams, or perhaps than the regular exercise of the cogitative faculty; that a general opinion of communicative impulses, or visionary representations, has prevailed in all ages and all nations; that particular instances have been given, with such evidence as neither Bacon nor Boyle has been able to resist; that sudden impressions, which the event has verified, have been felt by more than own or publish them; that the second sight of the Hebrides implies only the local frequency of a power which is no where totally unknown; and that where we are unable to decide by antecedent reason, we must be content to yield to the force of testimony.

By pretension to *Second Sight*, no profit was ever sought or gained. It is an involuntary affection, in which neither hope nor fear are known to have any part. Those who profess to feel it do not boast of it as a privilege, nor are considered by others as advantageously distinguished. They have no temptation to feign; and their hearers have no motive to encourage the imposture.

To talk with any of these seers is not easy. There is one living in Sky, with whom we would have gladly conversed ; but he was very gross and ignorant, and knew no English. The proportion in these countries of the poor to the rich is such, that if we suppose the quality to be accidental, it can very rarely happen to a man of education ; and yet on such men it has sometimes fallen. There is now a second-sighted gentleman in the Highlands, who complains of the terrors to which he is exposed.

The foresight of the seers is not always prescience : they are impressed with images, of which the event only shews them the meaning. They tell what they have seen to others, who are at that time not more knowing than themselves, but may become at last very adequate witnesses, by comparing the narrative with its verification.

To collect sufficient testimonies for the satisfaction of the publick, or of ourselves, would have required more time than we could bestow. There is against it, the seeming analogy of things confusedly seen, and little understood ; and for it, the indistinct cry of national persuasion, which may be perhaps resolved at last into prejudice and tradition. I never could advance my curiosity to conviction ; but came away at last only willing to believe.

As there subsists no longer in the islands much of that peculiar and discriminative form of life, of which the idea had delighted our imagination, we were willing to listen to such accounts of past times as would be given us. But we soon found what memorials were to be expected from an illiterate people, whose whole time is a series of distress ;

where every morning is labouring with expedients for the evening ; and where all mental pains or pleasure arose from the dread of winter, the expectation of spring, the caprices of their chiefs, and the motions of the neighbouring clans ; where there was neither shame from ignorance, nor pride in knowledge ; neither curiosity to inquire, nor vanity to communicate.

The chiefs, indeed, were exempt from urgent penury and daily difficulties ; and in their houses were preserved what accounts remained of past ages. But the chiefs were sometimes ignorant and careless, and sometimes kept busy by turbulence and contention ; and one generation of ignorance effaces the whole series of unwritten history. Books are faithful repositories, which may be a while neglected or forgotten ; but when they are opened again, will again impart their instruction : memory, once interrupted, is not to be recalled. Written learning is a fixed luminary, which, after the cloud that had hidden it has past away, is again bright in its proper station. Tradition is but a meteor, which, if once it falls, cannot be rekindled.

It seems to be universally supposed, that much of the local history was preserved by the bards, of whom one is said to have been retained by every great family. After these bards were some of my first inquiries ; and I received such answers as, for a while, made me please myself with my increase of knowledge, for I had not then learned how to estimate the narration of a Highlander.

They said that a great family had a *bard* and a *senachi*, who were the poet and historian of the house ; and an old gentleman told me that he re-

membered one of each. Here was a dawn of intelligence. Of men that had lived within memory some certain knowledge might be attained. Though the office had ceased, its effects might continue; the poems might be found, though there was no poet.

Another conversation, indeed, informed me, that the same man was both bard and senachi. This variation discouraged me; but as the practice might be different in different times, or at the same time in different families, there was yet no reason for supposing that I must necessarily sit down in total ignorance.

Soon after I was told by a gentleman, who is generally acknowledged the greatest master of Hebridian antiquities, that there had indeed once been both bards and senachies; and that senachi signified *the man of talk*, or of conversation; but that neither bard nor senachi had existed for some centuries. I have no reason to suppose it exactly known at what time the custom ceased, nor did it probably cease in all houses at once. But whenever the practice of recitation was disused, the works, whether poetical or historical, perished with the authors; for in those times nothing had been written in the Earse language.

Whether the *man of talk* was an historian, whose office was to tell truth, or a story-teller, like those which were in the last century, and perhaps are now among the Irish, whose trade was only to amuse, it now would be vain to inquire.

Most of the domestick offices were, I believe, hereditary; and probably the laureat of a clan was always the son of the last laureat. The history of

the race could no otherwise be communicated or retained ; but what genius could be expected in a poet by inheritance ?

The nation was wholly illiterate. Neither bards nor senachies could write or read ; but if they were ignorant, there was no danger of detection ; they were believed by those whose vanity they flattered.

The recital of genealogies, which has been considered as very efficacious to the preservation of a true series of ancestry, was anciently made when the heir of the family came to manly age. This practice has never subsisted within time of memory, nor was much credit due to such rehearsers, who might obtrude fictitious pedigrees, either to please their masters, or to hide the deficiency of their own memories.

Where the chiefs of the Highlands have found the histories of their descent is difficult to tell ; for no Earse genealogy was ever written. In general this only is evident, that the principal house of a clan must be very ancient, and that those must have lived long in a place, of whom it is not known when they came thither.

Thus hopeless are all attempts to find any traces of Highland learning. Nor are their primitive customs and ancient manner of life otherwise than very faintly and uncertainly remembered by the present race.

The peculiarities which strike the native of a commercial country, proceeded in a great measure from the want of money. To the servants and dependents that were not domesticks, and, if an estimate be made from the capacity of any of their old houses which I have seen, their domesticks could have

been but few, were appropriated certain portions of land for their support. Macdonald has a piece of ground yet, called the bards or senachies' field. When a beef was killed for the house, particular parts were claimed as fees by the several officers, or workmen. What was the right of each I have not learned. The head belonged to the smith, and the udder of a cow to the piper; the weaver had likewise his particular part; and so many pieces followed these prescriptive claims, that the laird's was at last but little.

The payment of rent in kind has been so long disused in England, that it is totally forgotten. It was practised very lately in the Hebrides, and probably still continues, not only at St Kilda, where money is not yet known, but in others of the smaller and remoter islands. It were perhaps to be desired, that no change in this particular should have been made. When the laird could only eat the produce of his lands, he was under the necessity of residing upon them; and when the tenant could not convert his stock into more portable riches, he could never be tempted away from his farm, from the only place where he could be wealthy. Money confounds subordination, by overpowering the distinctions of rank and birth, and weakens authority, by supplying power of resistance, or expedients for escape. The feudal system is formed for a nation employed in agriculture, and has never long kept its hold where gold and silver have become common.

Their arms were anciently the *claymore*, or great two-handed sword, and afterwards the two-edged sword and target, or buckler, which was sustain-

ed on the left arm. In the midst of the target, which was made of wood, covered with leather, and studded with nails, a slender lance, about two feet long, was sometimes fixed ; it was heavy and cumbersome, and accordingly has for sometime past been gradually laid aside. Very few targets were at Culloden. The dirk, or broad dagger, I am afraid, was of more use in private quarrels than in battles. The Lochaber ax is only a slight alteration of the old English bill.

After all that has been said of the force and terror of the Highland sword, I could not find that the art of defence was any part of common education. The gentlemen were perhaps sometimes skilful gladiators, but the common men had no other powers than those of violence and courage. Yet it is well known, that the onset of the Highlanders was very formidable. As an army cannot consist of philosophers, a panick is easily excited by any unwonted mode of annoyance. New dangers are naturally magnified ; and men accustomed only to exchange bullets at a distance, and rather to hear their enemies than see them, are discouraged and amazed when they find themselves encountered hand to hand, and catch the gleam of steel flashing in their faces.

The Highland weapons gave opportunity for many exertions of personal courage, and sometimes for single combats in the field ; like those which occur so frequently in fabulous wars. At Falkirk, a gentleman now living was, I suppose, after the retreat of the king's troops, engaged at a distance from the rest with an Irish dragoon. They were both skilful swordsmen, and the contest was not

easily decided: the dragoon at last had the advantage, and the Highlander called for quarter; but quarter was refused him, and the fight continued till he was reduced to defend himself upon his knee. At that instant one of the Macleods came to his rescue; who, as it is said, offered quarter to the dragoon, but he thought himself obliged to reject what he had before refused, and, as battle gives little time to deliberate, was immediately killed.

Funerals were formerly solemnized by calling multitudes together, and entertaining them at a great expence. This emulation of useless cost has been for some time discouraged, and at last, in the isle of Sky, is almost suppressed.

Of the Earse language, as I understand nothing, I cannot say more than I have been told. It is the rude speech of a barbarous people, who had few thoughts to express, and were content, as they conceived grossly, to be grossly understood. After what has been lately talked of Highland bards, and Highland genius, many will startle when they are told, that the Earse never was a written language; that there is not in the world an Earse manuscript a hundred years old; and that the sounds of the Highlanders were never expressed by letters, till some little books of piety were translated, and a metrical version of the Psalms was made by the synod of Argyle. Whoever, therefore, now writes in this language, spells according to his own perception of the sound, and his own idea of the power of the letters. The Welsh and the Irish are cultivated tongues. The Welsh, two hundred years ago, insulted their English neighbours for the instability of their orthography; while

the Earse merely floated in the breath of the people, and could therefore receive little improvement.

When a language begins to teem with books, it is tending to refinement; as those who undertake to teach others must have undergone some labour in improving themselves, they set a proportionate value on their own thoughts, and wish to enforce them by efficacious expressions; speech becomes embodied and permanent; different modes and phrases are compared, and the best obtains an establishment. By degrees, one age improves upon another. Exactness is first obtained, and afterwards elegance. But diction, merely vocal, is always in its childhood. As no man leaves his eloquence behind him, the new generations have all to learn. There may possibly be books without a polished language, but there can be no polished language without books.

That the bards could not read more than the rest of their countrymen; it is reasonable to suppose; because, if they had read, they could probably have written; and how high their compositions may reasonably be rated, an inquirer may best judge by considering what stores of imagery, what principles of ratiocination, what comprehension of knowledge, and what delicacy of elocution he has known any man attain who cannot read. The state of the bards was yet more hopeless. He that cannot read, may now converse with those that can; but the bard was a barbarian among barbarians, who, knowing nothing himself, lived with others that knew no more.

There has lately been in the islands one of these illiterate poets, who hearing the Bible read at

church, is said to have turned the sacred history into verse. I heard part of a dialogue, composed by him, translated by a young lady in Mull, and thought it had more meaning than I expected from a man totally uneducated; but he had some opportunities of knowledge; he lived among a learned people. After all that has been done for the instruction of the Highlanders, the antipathy between their language and literature still continues; and no man that has learned only Earse, is at this time able to read.

The Earse has many dialects, and the words used in some islands are not always known in others. In literate nations, though the pronunciation, and sometimes the words of common speech, may differ, as now in England, compared with the south of Scotland, yet there is a written diction, which pervades all dialects, and is understood in every province. But where the whole language is colloquial, he that has only one part never gets the rest, as he cannot get it but by change of residence.

In an unwritten speech, nothing that is not very short is transmitted from one generation to another. Few have opportunities of hearing a long composition often enough to learn it, or have inclination to repeat it so often as is necessary to retain it; and what is once forgotten is lost for ever. I believe there cannot be recovered in the whole Earse language, five hundred lines of which there is any evidence to prove them a hundred years old. Yet I hear that the father of *Ossian* boasts of two chests more of ancient poetry, which he suppresses, because they are too good for the English.

He that goes into the Highlands with a mind naturally acquiescent, and a credulity eager for wonders, may come back with an opinion very different from mine; for the inhabitants, knowing the ignorance of all strangers in their language and antiquities, perhaps are not very scrupulous adherents to truth; yet I do not say that they deliberately speak studied falsehood, or have a settled purpose to deceive. They have inquired and considered little, and do not always feel their own ignorance. They are not much accustomed to be interrogated by others: and seem never to have thought upon interrogating themselves; so that if they do not know what they tell to be true, they likewise do not distinctly perceive it to be false.

Mr Boswell was very diligent in his inquiries; and the result of his investigation was, that the answer to the second question was commonly such as nullified the answer to the first.

We were a while told, that they had an old translation of the scriptures; and told it till it would appear obstinacy to inquire again. Yet by continued accumulation of questions we found, that the translation meant, if any meaning there were, was nothing else than the Irish Bible.

We heard of manuscripts that were, or that had been, in the hands of somebody's father, or grandfather; but at last we had no reason to believe they were other than Irish. Martin mentions Irish, but never any Earse manuscripts, to be found in the islands in his time.

I suppose my opinion of the poems of Ossian is already discovered. I believe they never existed

in any other form than that which we have seen. The editor, or author, never could shew the original; nor can it be shewn by any other; to revenge reasonable incredulity, by refusing evidence, is a degree of insolence, with which the world is not yet acquainted; and stubborn audacity is the last refuge of guilt. It would be easy to shew it if he had it; but whence could it be had? It is too long to be remembered, and the language formerly had nothing written. He has doubtless inserted names that circulated in popular stories, and may have translated some wandering ballads, if any can be found; and the names, and some of the images, being recollected, make an inaccurate auditor imagine, by the help of Caldonian bigotry, that he has formerly heard the whole.

I asked a very learned minister in Sky, who had used all arts to make me believe the genuineness of the book, whether at last he belived it himself? but he would not answer. He wished me to be deceived, for the honour of his country; but would not directly and formally deceive me. Yet has this man's testimony been publickly produced, as of one that held *Fingal* to be the work of Ossian.

It is said, that some men of integrity profess to have heard parts of it, but they all heard them when they were boys; and it was never said that any of them could recite six lines. They remember names, and perhaps some proverbial sentiments; and having no distinct ideas, coin a resemblance without an original. The persuasion of the Scots, however, is far from universal; and in a question so capable of proof, why should doubt be suffered to continue? The editor has been

heard to say, that part of the poem was received by him in the Saxon character. He has then found, by some peculiar fortune, an unwritten language, written in a character which the natives probably never beheld.

I have yet supposed no imposture but in the publisher ; yet I am far from certainty, that some translations have not been lately made, that may now be obtruded as parts of the original work. Credulity on one part is a strong temptation to deceit on the other, especially to deceit of which no personal injury is the consequence, and which flatters the author with his own ingenuity. The Scots have something to plead for their easy reception of an improbable fiction : they are seduced by their fondness for their supposed ancestors. A Scotchman must be a very sturdy moralist, who does not love Scotland better than truth ; he will always love it better than inquiry : and if falsehood flatters his vanity, will not be very diligent to detect it. Neither ought the English to be much influenced by Scotch authority ; for of the past and present state of the whole Earse nation, the Lowlanders are at least as ignorant as ourselves. To be ignorant is painful ; but it is dangerous to quiet our uneasiness by the delusive opiate of hasty persuasion.

But this is the age in which those who could not read, have been supposed to write ; in which the giants of antiquated romance have been exhibited as realities. If we know little of the ancient Highlanders, let us not fill the vacuity with Ossian. If we have not searched the *Magellanick*

regions, let us however forbear to people them with *Patagons*.

Having waited some days at Armidel, we were flattered at last with a wind that promised to convey us to Mull. We went on board a boat that was taking in kelp, and left the isle of Sky behind us. We were doomed to experience, like others, the danger of trusting to the wind, which blew against us, in a short time, with such violence, that we, being no seasoned sailors, were willing to call it a tempest. I was sea-sick, and lay down. Mr Boswell kept the deck. The master knew not well whither to go ; and our difficulties might perhaps have filled a very pathetick page, had not Mr Maclean of Col, who, with every other qualification which insular life requires, is a very active and skilful mariner, piloted us safe into his own harbour.

COL.

In the morning we found ourselves under the isle of Col, where we landed ; and passed the first day and night with Captain Maclean, a gentleman who has lived some time in the East Indies, but having dethroned no Nabob, is not too rich to settle in his own country.

Next day the wind was fair, and we might have had an easy passage to Mull ; but having, contrarily to our own intention, landed upon a new island, we would not leave it wholly unexamined. We therefore suffered the vessel to depart without us, and trusted the skies for another wind.

Mr Maclean of Col, having a very numerous family, has, for some time past, resided at Aberdeen, that he may superintend their education, and leaves the young gentleman, our friend, to govern his dominions, with the full power of a Highland chief. By the absence of the laird's family, our entertainment was made more difficult, because the house was in a great degree disfurnished; but young Col's kindness and activity supplied all defects, and procured us more than sufficient accommodation.

Here I first mounted a little Highland steed; and if there had been many spectators, should have been somewhat ashamed of my figure in the march. The horses of the islands, as of other barren countries, are very low: they are indeed muscular and strong, beyond what their size gives reason for expecting; but a bulky man upon one of their backs makes a very disproportionate appearance.

From the habitation of Captain Maclean we went to Grissipol, but called by the way on Mr Hector Maclean, the minister of Col, whom we found in a hut, that is, a house of only one floor, but with windows and chimney, and not inelegantly furnished. Mr Maclean has the reputation of great learning: he is seventy-seven years old, but not infirm, with a look of venerable dignity excelling what I remember in any other man.

His conversation was not unsuitable to his appearance. I lost some of his good will, by treating a heretical writer with more regard than, in his opinion, a heretick could deserve. I honoured his orthodoxy, and did not much censure his asperity.

A man who has settled his opinions, does not love to have the tranquillity of his conviction disturbed; and at seventy-seven it is time to be in earnest.

Mention was made of the Earse translation of the New Testament, which has been lately published, and of which the learned Mr Macqueen of Sky spoke with commendation; but Mr Maclean said, he did not use it, because he could make the text more intelligible to his auditors by an extemporary version. From this I inferred, that the language of the translation was not the language of the isle of Col.

He has no publick edifice for the exercise of his ministry; and can officiate to no greater number than a room can contain; and the room of a hut is not very large. This is all the opportunity of worship that is now granted to the inhabitants of the island, some of whom must travel thither perhaps ten miles. Two chapels were erected by their ancestors, of which I saw the skeletons, which now stand faithful witnesses of the triumph of Reformation.

The want of churches is not the only impediment to piety: there is likewise a want of ministers. A parish often contains more islands than one; and each island can have the minister only in its own turn. At Raasay they had, I think, a right to service only every third Sunday. All the provision made by the present ecclesiastical constitution, for the inhabitants of about a hundred square miles, is a prayer and sermon in a little room, once in three weeks: and even this parsimonious distribution is at the mercy of the weather: and in those islands where the minister does not

reside, it is impossible to tell how many weeks or months may pass without any publick exercise of religion.

GRISSIPOL IN COL.

After a short conversation with Mr Maclean, we went on to Grissipol, a house and farm tenanted by Mr Macsweyn, where I saw more of the ancient life of a Highlander than I had yet found. Mrs Macsweyn could speak no English, and had never seen any other places than the islands of Sky, Mull, and Col: but she was hospitable and good-humoured, and spread her table with sufficient liberality. We found tea here, as in every other place, but our spoons were of horn.

The house of Grissipol stands by a brook very clear and quick; which is, I suppose, one of the most copious streams in the island. This place was the scene of an action, much celebrated in the traditional history of Col, but which probably no two relaters will tell alike.

Some time, in the obscure ages, Macneil of Barra married the lady Maclean, who had the isle of Col for her jointure. Whether Macneil detained Col, when the widow was dead, or whether she lived so long as to make her heirs impatient, is perhaps not now known. The younger son, called John Gerves, or *John the Giant*, a man of great strength, who was then in Ireland, either for safety or for education, dreamed of recovering his inheritance; and getting some adventurers together, which in those unsettled times was not hard to do, invaded Col. He was driven away, but was not

discouraged, and collecting new followers, in three years came again with fifty men. In his way he stopped at Artorinish in Morvern, where his uncle was prisoner to Macleod, and was then with his enemies in a tent. Maclean took with him only one servant, whom he ordered to stay at the outside; and where he should see the tent pressed outwards, to strike with his dirk; it being the intention of Maclean, as any man provoked him, to lay hands upon him, and push him back. He entered the tent alone, with his Lochaber axe in his hand, and struck such terror into the whole assembly, that they dismissed his uncle.

When he landed at Col, he saw the sentinel, who kept watch towards the sea, running off to Grissipol, to give Macneil, who was there with a hundred and twenty men, an account of the invasion. He told Macgill, one of his followers, that if he intercepted that dangerous intelligence, by catching the courier, he would give him certain lands in Mull. Upon this promise, Macgill pursued the messenger, and either killed or stopped him; and his posterity, till very lately, held the lands in Mull.

The alarm being thus prevented, he came unexpectedly upon Macneil. Chiefs were in those days never wholly unprovided for an enemy. A fight ensued, in which one of their followers is said to have given an extraordinary proof of activity, by bounding backwards over the brook of Grissipol. Macneil being killed, and many of his clan destroyed, Maclean took possession of the island, which the Macneils attempted to conquer by another invasion, but were defeated and repulsed.

Maclean, in his turn, invaded the estate of the Macneils, took the castle of Brecacig, and conquered the isle of Barra, which he held for seven years, and then restored it to the heirs.

CASTLE OF COL.

From Grissipol Mr Maclean conducted us to his father's seat; a neat new house erected near the old castle, I think, by the last proprietor. Here we were allowed to take our station, and lived very commodiously, while we waited for moderate weather and a fair wind, which we did not so soon obtain, but we had time to get some information of the present state of Col; partly by inquiry, and partly by occasional excursions.

Col is computed to be thirteen miles in length, and three in breadth. Both the ends are the property of the Duke of Argyle, but the middle belongs to Maclean, who is called Col, as the only laird.

Col is not properly rocky; it is rather one continued rock, of a surface much diversified with protuberances, and covered with a thin layer of earth, which is often broken, and discovers the stone. Such a soil is not for plants that strike deep roots; and perhaps in the whole island nothing has ever yet grown to the height of a table. The uncultivated parts are clothed with heath, among which industry has interspersed spots of grass and corns; but no attempt has been made to raise a tree. Young Col, who has a very laudable desire of improving his patrimony, purposes some time to plant an orchard; which, if it be sheltered by a wall,

may perhaps succeed. He has introduced the culture of turnips, of which he has a field, where the whole work was performed by his own hand. His intention is to provide food for his cattle in the winter. This innovation was considered by Mr Macswyen as the idle project of a young head, heated with English fancies; but he has now found that turnips will really grow, and that hungry sheep and cows will really eat them.

By such acquisitions as these, the Hebrides may in time rise above their annual distress. Wherever heath will grow; there is reason to think something better may draw nourishment; and by trying the production of other places, plants will be found suitable to every soil.

Col has many lochs, some of which have trouts and eels, and others have never yet been stocked; another proof of the negligence of the islanders, who might take fish in the inland waters when they cannot go to sea.

Their quadrupeds are horses, cows, sheep, and goats. They have neither deer, hares, nor rabbits. They have no vermin, except rats, which have been lately brought thither by sea, as to other places; and are free from serpents, frogs, and toads.

The harvest in Col and in Lewis, is ripe sooner than in Sky, and the winter in Col is never cold, but very tempestuous. I know not that I ever heard the wind so loud in any other place; and Mr Boswell observed that its noise was all its own, for there was no trees to increase it.

Noise is not the worst effect of the tempests; for they have thrown sand from the shore over a considerable part of the land, and is said still to en-

croach and destroy more and more pasture; but I am not of opinion, that by any surveys or landmarks, its limits have been ever fixed, or its progression ascertained. If one man has confidence enough to say, that it advances, nobody can bring any proof to support him in denying it. The reason why it is not spread to a greater extent, seems to be, that the wind and rain come almost together, and that it is made close and heavy by the wet before the storms can put it in motion. So thick is the bed, and so small the particles, that if a traveller should be caught by a sudden gust in dry weather, he would find it very difficult to escape with life.

For natural curiosities I was shown only two great masses of stone, which lie loose upon the ground; one on the top of a hill, and the other at a small distance from the bottom. They certainly were never put into their present places by human strength or skill; and though an earthquake might have broken off the lower stone, and rolled it into the valley, no account can be given of the other, which lies on the hill, unless, which I forgot to examine, there be still near it some higher rock, from which it might be torn. All nations have a tradition, that their earliest ancestors were giants, and these stones are said to have been thrown up and down by a giant and his mistress. There are so many more important things of which human knowledge can give no account, that it may be forgiven us, if we speculate no longer on two stones in Col.

This island is very populous. About nine-and-twenty years ago, the fencible men of Col were

reckoned one hundred and forty; which is the sixth of eight hundred and forty; and probably some contrived to be left out of the list. The minister told us, that a few years ago the inhabitants were eight hundred, between the ages of seven and of seventy. Round numbers are seldom exact. But in this case the authority is good, and the error likely to be little. If to the eight hundred be added what the laws of computation require, they will be increased to at least a thousand; and if the dimensions of the country have been accurately related, every mile maintains more than twenty-five.

This proportion of habitation is greater than the appearance of the country seems to admit; for wherever the eye wanders, it seems much waste and little cultivation. I am more inclined to extend the land, of which no measure has ever been taken, than to diminish the people, who have been really numbered. Let it be supposed, that a computed mile contains a mile and a half, as was commonly found true in the mensuration of the English roads, and we shall then allot nearly twelve to a mile, which agrees much better with ocular observation.

Here, as in Sky, and other islands, are the laird, the tacksmen, and the under-tenants.

Mr Maclean, the laird, has very extensive possessions, being proprietor, not only of far the greater part of Col, but of the extensive island of Rum, and a very considerable territory in Mull.

Rum is one of the larger islands, almost square, and therefore of great capacity in proportion to its sides. By the usual method of estimating computed

extent, it may contain more than a hundred and twenty square miles.

It originally belonged to Clanronald, and was purchased by Col; who, in some dispute about the bargain, made Clanronald prisoner, and kept him nine months in confinement. Its owner represents it as mountainous, rugged, and barren. In the hills there are red deer. The horses are very small, but of a breed eminent for beauty. Col, not long ago, bought one of them from a tenant; who told him, that as he was of a shape uncommonly elegant, he could not sell him but at a high price; and that whoever had him should pay a guinea and a half.

There are said to be in Barra a race of horses yet smaller, of which the highest is not above thirty-six inches.

The rent of Rum is not great. Mr Maclean declared that he should be very rich, if he could set his land at two-pence halfpenny an acre. The inhabitants are fifty-eight families, who continued papists for some time after the laird became a protestant. Their adherence to their old religion was strengthened by the countenance of the laird's sister, a zealous Romanist, till one Sunday, as they were going to mass under the conduct of their patroness, Maclean met them on the way, gave one of them a blow on the head with a *yellow stick*, I suppose a cane, for which the Earse had no name, and drove them to the kirk, from which they have never since departed. Since the use of this method of conversion, the inhabitants of Egg and Canna, who continue papists, call the protestantism of Rum, the religion of the *Yellow Stick*.

The only popish islands are Egg and Canna. Egg is the principal island of a parish, in which, though he has no congregation, the protestant minister resides. I have heard of nothing curious in it, but the cave in which a former generation of the islanders were smothered by Macleod.

If we had travelled with more leisure, it had not been fit to have neglected the popish islands. Popery is favourable to ceremony; and among ignorant nations ceremony is the only preservative of tradition. Since protestantism was extended to the savage parts of Scotland, it has perhaps been one of the chief labours of the ministers to abolish stated observances, because they continued the remembrance of the former religion. We therefore, who came to hear old traditions, and see antiquated manners, should probably have found them amongst the papists.

Canna, the other popish island, belongs to Clanronald. It is said not to comprise more than twelve miles of land, and yet maintains as many inhabitants as Rum.

We were at Col under the protection of the young laird, without any of the distresses which Mr Pennant, in a fit of simple credulity, seems to think almost worthy of an elegy by Ossian. Wherever we roved, we were pleased to see the reverence with which his subjects regarded him. He did not endeavour to dazzle them by any magnificence of dress: his only distinction was a feather in his bonnet; but as soon as he appeared, they forsook their work and clustered about him: he took them by the hand, and they seemed mutually delighted.

He has the proper disposition of a chieftain, and seems desirous to continue the customs of his house. The bagpiper played regularly, when dinner was served, whose person and dress made a good appearance; and he brought no disgrace upon the family of Rankin, which has long supplied the lairds of Col with hereditary musick.

The tacksmen of Col seem to live with less dignity and convenience than those of Sky; where they had good houses, and tables not only plentiful, but delicate. In Col only two houses pay the window-tax; for only two have six windows, which, I suppose, are the laird's and Mr Macsweyn's.

The rents have, till within seven years, been paid in kind; but the tenants finding that cattle and corn varied in their price, desired for the future to give their landlord money; which, not having yet arrived at the philosophy of commerce, they consider as being every year of the same value.

We were told of a particular mode of under-tenure. The tacksmen admits some of his inferior neighbours to the cultivation of his grounds, on condition that, performing all the work, and giving a third part of the seed, they shall keep a certain number of cows, sheep, and goats, and reap a third part of the harvest. Thus by less than the tillage of two acres they pay the rent of one.

There are tenants below the rank of tacksmen, that have got smaller tenants under them; for in every place, where money is not the general equivalent, there must be some whose labour is immediately paid by daily food.

A country that has no money, is by no means convenient for beggars, both because such countries are commonly poor, and because charity requires some trouble and some thought. A penny is easily given upon the first impulse of compassion, or impatience of importunity; but few will deliberately search their cupboards or their granaries to find out something to give. A penny is likewise easily spent; but victuals, if they are unprepared, require house-room, and fire, and utensils, which the beggar knows not where to find.

Yet beggars there sometimes are, who wander from island to island. We had, in our passage to Mull, the company of a woman and her child, who had exhausted the charity of Col. The arrival of a beggar on an island is accounted a sinister event. Every body considers that he shall have the less for what he gives away. Their alms, I believe, is generally oatmeal.

Near to Col is another island called *Fir-eye*, eminent for its fertility. Though it has but half the extent of Rum, it is so well peopled, that there have appeared, not long ago, nine hundred and fourteen at a funeral. the plenty of this island enticed beggars to it, who seemed so burthensome to the inhabitants, that a formal compact was drawn up, by which they obliged themselves to grant no more relief to casual wanderers, because they had among them an indigent woman of high birth, whom they considered as entitled to all that they could spare. I have read the stipulation, which was indited with juridical formality, but was never made valid by regular subscription.

If the inhabitants of Col have nothing to give,

it is not that they are oppressed by their landlord: their leases seem to be very profitable. One farmer, who pays only seven pounds a year, has maintained seven daughters and three sons, of whom the eldest is educated at Aberdeen for the ministry; and now, at every vacation, opens a school in Col.

Life is here, in some respects, improved beyond the condition of some other islands. In Sky what is wanted can only be bought, as the arrival of some wandering pedlar may afford an opportunity; but in Col there is a standing shop, and in Mull there are two. A shop in the islands, as in other places of little frequentation, is a repository of every thing requisite for common use. Mr Boswell's journal was filled, and he bought some paper in Col. To a man that ranges the streets of London, where he is tempted to contrive wants for the pleasure of supplying them, a shop affords no image worthy of attention; but in an island, it turns the balance of existence between good and evil. To live in perpetual want of little things, is a state not indeed of torture, but of constant vexation. I have in Sky had some difficulty to find ink for a letter; and if a woman breaks her needle, the work is at a stop.

As it is, the islanders are obliged to content themselves with succedaneous means for many common purposes. I have seen the chief man of a very wide district riding with a halter for a bridle, and governing his hobby with a wooden curb.

The people of Col, however, do not want dexterity to supply some of their necessities. Several arts which make trades, and demand apprenticeships in great cities, are here the practices of daily

œconomy. In every house candles are made, both moulded and dipped. Their wicks are small shreds of linen cloth. They all know how to extract from the cuddy oil for their lamps. They all tan skins, and make brogues.

As we travelled through Sky, we saw many cottages, but they very frequently stood single on the naked ground. In Col, where the hills opened a place convenient for habitation, we found a petty village, of which every hut had a little garden adjoining; thus they made an appearance of social commerce and mutual offices, and of some attention to convenience and future supply. There is not in the Western Islands any collection of buildings that can make pretensions to be called a town, except in the isle of Lewis, which I have not seen.

If Lewis is distinguished by a town, Col has also something peculiar. The young laird has attempted what no islander, perhaps, ever thought on. He has begun a road capable of a wheel-carriage. He has carried it about a mile, and will continue it by annual elongation from his house to the harbour.

Of taxes here is no reason for complaining; they are paid by a very easy composition. The malt-tax for Col is twenty shillings. Whisky is very plentiful; there are several stills in the island, and more is made than the inhabitants consume.

The great business of insular policy is now to keep the people in their own country. As the world has been let in upon them, they have heard of happier climates, and less arbitrary government; and if they are disgusted, have emissaries among them ready to offer them land and houses, as a re-

ward for deserting their chief and clan. Many have departed both from the main of Scotland, and from the islands; and all that go may be considered as subjects lost to the British crown; for a nation scattered in the boundless regions of America resembles rays diverging from a focus. All the rays remain, but the heat is gone. Their power consisted in their concentration: when they are dispersed, they have no effect.

It may be thought that they are happier by the change; but they are not happy as a nation, for they are a nation no longer. As they contribute not to the prosperity of any community, they must want that security, that dignity, that happiness, whatever it be, which a prosperous community throws back upon individuals.

The inhabitants of Col have not yet learned to be weary of their heath and rocks, but attend their agriculture and their dairies, without listening to American seducements.

There are some, however, who think that this emigration has raised terror disproportionate to its real evil; and that it is only a new mode of doing what was always done. The Highlands, they say, never maintained their natural inhabitants; but the people, when they found themselves too numerous, instead of extending cultivation, provided for themselves by a more compendious method, and sought better fortune in other countries. They did not, indeed, go away in collective bodies, but withdrew invisibly, a few at a time; but the whole number of fugitives was not less, and the difference between other times and this, is only the same as between evaporation and effusion.

This is plausible, but I am afraid it is not true. Those who went before, if they were not sensibly missed, as the argument supposes, must have gone either in less number, or in a manner less detrimental, than at present; because formerly there was no complaint. Those who then left the country were generally the idle dependents on overburdened families, or men who had no property; and therefore carried away only themselves. In the present eagerness of emigration, families, and almost communities, go away together. Those who were considered as prosperous and wealthy, sell their stock and carry away the money. Once none went away but the useless and poor; in some parts there is now reason to fear, that none will stay but those who are too poor to remove themselves, and too useless to be removed at the cost of others.

Of antiquity there is not more knowledge in Col than in other places; but every where something may be gleaned.

How ladies were portioned, when there was no money, it would be difficult for an Englishman to guess. In 1649, Maclean of Dronart, in Mull, married his sister Fingala to Maclean of Col, with a hundred and eighty kine; and stipulated, that if she became a widow, her jointure should be three hundred and sixty. I suppose some proportionate tract of land was appropriated to their pasturage.

The disposition to pompous and expensive funerals, which has at one time or other prevailed in most parts of the civilized world, is not yet suppressed in the islands, though some of the ancient solemnities are worn away, and singers are no longer hired to attend the procession. Nineteen years

ago, at the burial of the laird of Col, were killed thirty cows, and about fifty sheep. The number of the cows is positively told, and we must suppose other victuals in like proportion.

Mr Maclean informed us of an old game, of which he did not tell the original, but which may perhaps be used in other places, where the reason of it is not yet forgot. At New-year's eve, in the hall or castle of the laird, where, at festal seasons, there may be supposed a very numerous company, one man dresses himself in a cow's hide, upon which other men beat with sticks. He runs with all this noise round the house, which all the company quits in a counterfeited fright: the door is then shut. At New-year's eve there is no great pleasure to be had out of doors in the Hebrides. They are sure soon to recover from their terror enough to solicit for re-admission; which, for the honour of poetry, is not to be obtained but by repeating a verse, with which those that are knowing and provident take care to be furnished.

Very near the house of Maclean stands the castle of Col, which was the mansion of the laird, till the house was built. It is built upon a rock, as Mr Boswell remarked, that it might not be mined. It is very strong, and having been not long uninhabited, is yet in repair. On the wall was, not long ago, a stone with an inscription, importing, *that if any man of the clan of Maclonich shall appear before this castle, though he come at midnight, with a man's head in his hand, he shall there find safety and protection against all but the king.*

This is an old Highland treaty, made upon a very memorable occasion. Maclean, the son of

John Gerves, who recovered Col, and conquered Barra, had obtained, it is said, from James the Second, a grant of the lands of Lochiel, forfeited, I suppose, by some offence against the state.

Forfeited estates were not in those days quietly resigned; Maclean, therefore, went with an armed force to seize his new possessions, and, I know not for what reason, took his wife with him. The Camerons rose in defence of their chief, and a battle was fought at the head of Loch Ness, near the place where Fort Augustus now stands, in which Lochiel obtained the victory, and Maclean, with his followers, was defeated and destroyed.

The lady fell into the hands of the conquerors, and being found pregnant, was placed in the custody of Maclonich, one of a tribe or family branched from Cameron, with orders, if she brought a boy, to destroy him, if a girl, to spare her.

Maclonich's wife, who was with child likewise, had a girl about the same time at which lady Maclean brought a boy; and Maclonich, with more generosity to his captive, than fidelity to his trust, contrived that the children should be changed.

Maclean being thus preserved from death, in time recovered his original patrimony; and in gratitude to his friend, made his castle a place of refuge to any of the clan that should think himself in danger; and as a proof of reciprocal confidence, Maclean took upon himself and his posterity the care of educating the heir of Maclonich.

This story, like all other traditions of the Highlands, is variously related; but though some circumstances are uncertain, the principal fact is true. Maclean undoubtedly owed his preservation to

Maclonich ; for the treaty between the two families has been strictly observed: it did not sink into disuse and oblivion, but continued in its full force while the chieftains retained their power. I have read a demand of protection, made not more than thirty-seven years ago, for one of the Maclonichs, named Ewen Cameron, who had been accessory to the death of Macmartin, and had been banished by Lochiel, his lord, for a certain term; at the expiration of which he returned married from France; but the Macmartins, not satisfied with the punishment, when he attempted to settle, still threatened him with vengeance. He therefore asked, and obtained, shelter in the isle of Col.

The power of protection subsists no longer; but what the law permits is yet continued, and Maclean of Col now educates the heir of Maclonich.

There still remains in the islands, though it is passing fast away, the custom of fosterage. A laird, a man of wealth and eminence, sends his child, either male or female, to a tacksman, or tenant, to be fostered. It is not always his own tenant, but some distant friend, that obtains this honour; for an honour such a trust is very reasonably thought. The terms of fosterage seem to vary in different islands. In Mull, the father sends with his child a certain number of cows, to which the same number is added by the fosterer. The father appropriates a proportionable extent of ground, without rent, for their pasturage. If every cow brings a calf, half belongs to the fosterer, and half to the child; but if there be only one calf between two cows, it is the child's, and when the

child returns to the parents, it is accompanied by all the cows given, both by the father and by the fosterer, with half of the increase of the stock by propagation. These beasts are considered as a portion, and called *Macalivie* cattle, of which the father has the produce, but is supposed not to have the full property, but to owe the same number to the child, as a portion to the daughter, or a stock for the son.

Children continue with the fosterer perhaps six years, and cannot, where this is the practice, be considered as burdensome. The fosterer, if he gives four cows, receives likewise four, and has, while the child continues with him, grass for eight without rent, with half the calves, and all the milk, for which he pays only four cows when he dismisses his *dalt*, for that is the name for a fostered child.

Fosterage is, I believe, sometimes performed upon more liberal terms. Our friend, the young laird of Col, was fostered by Macsweyn of Grissipol. Macsweyn then lived a tenant to Sir James Macdonald in the isle of Sky; and therefore Col, whether he sent him cattle or not, could grant him no land. The *dalt*, however, at his return, brought back a considerable number of *Macalivie* cattle, and of the friendship so formed there have been good effects. When Macdonald raised his rents, Macsweyn was, like other tenants, discontented, and, resigning his farm, removed from Sky to Col, and was established at Grissipol.

These observations we made by favour of the contrary wind that drove us to Col, an island not

often visited; for there is not much to amuse curiosity, or to attract avarice.

The ground has been hitherto, I believe, used chiefly for pasturage. In a district, such as the eye can command, there is a general herdsman, who knows all the cattle of the neighbourhood, and whose station is upon a hill, from which he surveys the lower grounds; and if one man's cattle invade another's grass, drives them back to their own borders. But other means of profit begin to be found; kelp is gathered and burnt, and sloops are loaded with the concreted ashes. Cultivation is likely to be improved by the skill and encouragement of the present heir, and the inhabitants of those obscure vallies will partake of the general progress of life.

The rents of the parts which belong to the duke of Argyle, have been raised from fifty-five to one hundred and five pounds, whether from the land or the sea I cannot tell. The bounties of the sea have lately been so great, that a farm in Southuist has risen in ten years from a rent of thirty pounds to one hundred and eighty.

He who lives in Col, and finds himself condemned to solitary meals, and incommunicable reflection, will find the usefulness of that middle order of tacksmen, which some who applaud their own wisdom are wishing to destroy. Without intelligence, man is not social, he is only gregarious; and little intelligence will there be, where all are constrained to daily labour, and every mind must wait upon the hand.

After having listened for some days to the tempest, and wandered about the island till our curi-

osity was satisfied, we began to think about our departure. To leave Coll in October was not very easy. We, however, found a sloop which lay on the coast to carry kelp; and for a price, which we thought levied upon our necessities, the master agreed to carry us to Mull, whence we might readily pass back to Scotland.

MULL.

As we were to catch the first favourable breath, we spent the night not very elegantly nor pleasantly in the vessel, and were landed next day at Tabor Morar, a port in Mull, which appears to an unexperienced eye formed for the security of ships; for its mouth is closed by a small island, which admits them through narrow channels into a bason sufficiently capacious. They are indeed safe from the sea, but there is a hollow between the mountains, through which the wind issues from the land with very mischievous violence.

There was no danger while we were there, and we found several other vessels at anchor; so that the port had a very commercial appearance.

The young laird of Col, who had determined not to let us lose his company, while there was any difficulty remaining, came over with us. His influence soon appeared; for he procured us horses, and conducted us to the house of doctor Maclean, where we found very kind entertainment and very pleasing conversation. Miss Maclean, who was born, and had been bred at Glasgow, having removed with her father to Mull, added to other qualifications, a great knowledge of the Earse lan-

gauge, which she had not learned in her childhood, but gained by study, and was the only interpreter of Earse poetry that I could ever find.

The isle of Mull is perhaps in extent the third of the Hebrides. It is not broken by waters, nor shot into promontories, but is a solid and compact mass, of breadth nearly equal to its length. Of the dimensions of the larger islands, there is no knowledge approaching to exactness. I am willing to estimate it as containing about three hundred square miles.

Mull had suffered like Sky by the black winter of seventy-one, in which, contrary to all experience, a continued frost detained the snow eight weeks upon the ground. Against a calamity never known, no provision had been made, and the people could only pine in helpless misery. One tenant was mentioned, whose cattle perished to the value of three hundred pounds; a loss which probably more than the life of man is necessary to repair. In countries like these, the descriptions of famine become intelligible. Where by vigorous and artful cultivation of a soil naturally fertile, there is commonly a superfluous growth both of grain and grass; where the fields are crowded with cattle; and where every hand is able to attract wealth from a distance, by making something that promotes ease, or gratifies vanity, a dear year produces only a comparative want, which is rather seen than felt, and which terminates commonly in no worse effect, than that of condemning the lower orders of the community to sacrifice a little luxury to convenience, or at most a little convenience to necessity.

But where the climate is unkind, and the ground penurious, so that the most fruitful years produce only enough to maintain themselves; where life unimproved, and unadorned, fades into something little more than naked existence, and every one is busy for himself, without any arts by which the pleasure of others may be increased; if to the daily burden of distress any additional weight be added, nothing remains but to despair and die. In Mull the disappointment of a harvest, or a murrain among the cattle, cuts off the regular provision; and they who have no manufactures can purchase no part of the superfluities of other countries. The consequence of a bad season is here not scarcity, but emptiness; and they whose plenty was barely a supply of natural and present need, when that slender stalk fails, must perish with hunger.

All travel has its advantages. If the passenger visits better countries, he may learn to improve his own, and if fortune carries him to worse, he may learn to enjoy it.

Mr Boswell's curiosity strongly impelled him to survey Iona, or Icolmkill, which was to the early ages the great school of theology, and is supposed to have been the place of sepulture for the ancient kings. I, though less eager, did not oppose him.

That we might perform this expedition, it was necessary to traverse a great part of Mull. We passed a day at Dr Maclean's, and could have been well contented to stay longer. But Col provided us horses, and we pursued our journey. This was a day of inconvenience, for the country is very rough, and my horse was but little. We travelled

many hours through a track, black and barren, in which, however, there were the reliques of humanity; for we found a ruined chapel in our way.

It is natural, in traversing this gloom of desolation, to inquire, whether something may not be done to give nature a more cheerful face; and whether those hills and moors that afford heath, cannot, with a little care and labour, bear something better? The first thought that occurs is to cover them with trees, for that in many of these naked regions trees will grow, is evident, because stumps and roots are yet remaining; and the speculatist hastily proceeds to censure that negligence and laziness that has omitted for so long a time so easy an improvement.

To drop seeds into the ground, and attend their growth, requires little labour and no skill. He who remembers that all the woods, by which the wants of man have been supplied from the Deluge till now, were self-sown, will not easily be persuaded to think all the art and preparation necessary, which the georgick writers prescribe to planters. Trees certainly have covered the earth with very little culture. They wave their tops among the rocks of Norway, and might thrive as well in the Highlands and Hebrides.

But there is a frightful interval between the seed and timber. He that calculates the growth of trees, has the unwelcome remembrance of the shortness of life driven hard upon him. He knows that he is doing what will never benefit himself; and when he rejoices to see the stem rise, is disposed to repine that another shall cut it down.

Plantation is naturally the employment of a mind unburdened with care, and vacant to futurity, saturated with present good, and at leisure to derive gratification from the prospect of posterity. He that pines with hunger, is in little care how others shall be fed. The poor man is seldom studious to make his grandson rich. It may be soon discovered, why in a place, which hardly supplies the cravings of necessity, there has been little attention to the delights of fancy, and why distant convenience is unregarded, where the thoughts are turned with incessant solicitude upon every possibility of immediate advantage.

Neither is it quite so easy to raise large woods, as may be conceived. Trees intended to produce timber must be sown where they are to grow; and ground sown with trees must be kept useless for a long time, inclosed at an expence from which many will be discouraged by the remoteness of the profit, and watched with that attention, which, in places where it is most needed, will neither be given nor bought. That it cannot be plowed is evident: and if cattle be suffered to graze upon it, they will devour the plants as fast as they rise. Even in coarser countries, where herds and flocks are not fed, not only the deer and the wild goats will browse upon them, but the hare and rabbit will nibble them. It is therefore reasonable to believe, what I do not remember any naturalist to have remarked, that there was a time when the world was very thinly inhabited by beasts, as well as men, and that the woods had leisure to rise high before animals had bred numbers sufficient to intercept them.

Sir James Macdonald, in part of the wastes of his territory, set or sowed trees, to the number, as I have been told, of several millions, expecting, doubtless, that they would grow up into future navies and cities; but for want of inclosure, and of that care which is always necessary, and will hardly ever be taken, all his cost and labour have been lost, and the ground is likely to continue an useless heath.

Having not any experience of a journey in Mull, we had no doubt of reaching the sea by day-light, and therefore had not left Dr Maclean's very early. We travelled diligently enough, but found the country, for road there was none, very difficult to pass. We were always struggling with some obstruction or other, and our vexation was not balanced by any gratification of the eye or mind. We were now long enough acquainted with hills and heath to have lost the emotion that they once raised, whether pleasing or painful, and had our mind employed only on our own fatigue. We were however sure, under Col's protection, of escaping all real evils. There was no house in Mull to which he could not introduce us. He had intended to lodge us, for that night, with a gentleman that lived upon the coast, but discovered on the way, that he then lay in bed without hope of life.

We resolved not to embarrass a family, in a time of so much sorrow, if any other expedient could be found; and as the island of Ulva was over-against us, it was determined that we should pass the strait, and have recourse to the laird, who, like the other gentlemen of the islands, was known to Col. We

expected to find a ferry-boat, but when at last we came to the water, the boat was gone.

We were now again at a stop. It was the sixteenth of October, a time when it is not convenient to sleep in the Hebrides without a cover, and there was no house within our reach, but that which we had already declined.

ULVA.

While we stood deliberating, we were happily espied from an Irish ship, that lay at anchor in the strait. The master saw that we wanted a passage, and with great civility sent us his boat, which quickly conveyed us to Ulva, where we were very liberally entertained by Mr Macquarry.

To Ulva we came in the dark, and left it before noon the next day. A very exact description therefore will not be expected. We were told, that it is an island of no great extent, rough and barren, inhabited by the Macquarrys; a clan not powerful nor numerous, but of antiquity, which most other families are content to reverence. The name is supposed to be a depravation of some other; for the Earse language does not afford it any etymology. Macquarry is proprietor both of Ulva and some adjacent islands, among which is Staffa, so lately raised to renown by Mr Banks.

When the islanders were reproached with their ignorance, or insensibility of the wonders of Staffa, they had not much to reply. They had indeed considered it little, because they had always seen it; and none but philosophers, nor they always, are struck with wonder, otherwise than by novelty.

How would it surprise an unenlightened ploughman, to hear a company of sober men, inquiring by what power the hand tosses a stone, or why the stone, when it is tossed, falls to the ground!

Of the ancestors of Macquarry, who thus lie hid in his unfrequented island, I have found memorials in all places where they could be expected.

Inquiring after the reliques of former manners, I found that in Ulva, and, I think, no where else, is continued the payment of the *mercheta mulierum*; a fine in old times due to the laird at the marriage of a virgin. The original of this claim, as of our tenure of *borough English*, is variously delivered. It is pleasant to find ancient customs in old families. This payment, like others, was, for want of money, made anciently in the produce of the land. Macquarry was used to demand a sheep, for which he now takes a crown, by that inattention to the uncertain proportion between the value and the denomination of money, which has brought much disorder into Europe. A sheep has always the same power of supplying human wants, but a crown will bring at one time more, at another less.

Ulva was not neglected by the piety of ancient times; it has still to show what was once a church.

INCH KENNETH.

In the morning we went again into the boat, and were landed on Inch Kenneth, an island about a mile long, and perhaps half a mile broad, remarkable for pleasantness and fertility. It is verdant and grassy, and fit both for pasture and tillage; but it has no trees. Its only inhabitants were Sir Allan

Maclean and two young ladies, his daughters, with their servants.

Romance does not often exhibit a scene that strikes the imagination more than this little desert, in these depths of western obscurity, occupied not by a gross herdsman, or amphibious fisherman, but by a gentleman and two ladies, of high birth, polished manners, and elegant conversation, who, in a habitation raised not very far above the ground, but furnished with unexpected neatness and convenience, practised all the kindness of hospitality, and refinement of courtesy.

Sir Allan is the chieftain of the great clan of Maclean, which is said to claim the second place among the Highland families, yielding only to Macdonald. Though by the misconduct of his ancestors, most of the extensive territory, which would have descended to him, has been alienated, he still retains much of the dignity and authority of his birth. When soldiers were lately wanting for the American war, application was made to Sir Allan, and he nominated a hundred men for the service, who obeyed the summons, and bore arms under his command.

He had then, for some time, resided with the young ladies in Inch Kenneth, where he lives not only with plenty, but with elegance, having conveyed to his cottage a collection of books, and what else is necessary to make his hours pleasant.

When we landed, we were met by Sir Allan and the ladies, accompanied by Miss Macquarry, who had passed some time with them, and now returned to Ulva with her father.

We all walked together to the mansion, where we found one cottage for Sir Allan, and I think two more for the domesticks and the offices. We entered, and wanted little that palaces afford. Our room was neatly floored, and well lighted; and our dinner, which was dressed in one of the other huts, was plentiful and delicate.

In the afternoon Sir Allan reminded us, that the day was Sunday, which he never suffered to pass without some religious distinction, and invited us to partake in his acts of domestick worship; which I hope neither Mr Boswell nor myself will be suspected of a disposition to refuse. The elder of the ladies read the English service.

Inch Kenneth was once a seminary of ecclesiastics, subordinate, I suppose, to Icolmkill. Sir Allan had a mind to trace the foundation of the college, but neither I nor Mr Boswell, who *bends a keener eye on vacancy*, were able to perceive them.

Our attention, however, was sufficiently engaged by a venerable chapel, which stands yet entire, except that the roof is gone. It is about sixty feet in length, and thirty in breadth. On one side of the altar is a bas-relief of the blessed Virgin, and by it lies a little bell; which, though cracked, and without a clapper, has remained there for ages, guarded only by the venerableness of the place. The ground round the chapel is covered with grave-stones of chiefs and ladies; and still continues to be a place of sepulture.

Inch Kenneth is a proper prelude to Icolmkill. It was not without some mournful emotion that we contemplated the ruins of religious structures, and the monuments of the dead.

On the next day we took a more distinct view of the place, and went with the boat to see oysters in the bed, out of which the boatmen forced up as many as were wanted. Even Inch Kenneth has a subordinate island, named *Sandiland*, I suppose in contempt, where we landed, and found a rock, with a surface of perhaps four acres, of which one is naked stone, another spread with sand and shells, some of which I picked up for their glossy beauty, and two covered with a little earth and grass, on which Sir Allan has a few sheep. I doubt not but when there was a college at Inch Kenneth, there was a hermitage upon Sandiland.

Having wandered over those extensive plains, we committed ourselves again to the winds and waters; and after a voyage of about ten minutes, in which we met with nothing very observable, were again safe upon dry ground.

We told Sir Allan our desire of visiting Icolmkill, and entreated him to give us his protection, and his company. He thought proper to hesitate a little; but the ladies hinted, that as they knew he would not finally refuse, he would do better if he preserved the grace of ready compliance. He took their advice, and promised to carry us on the morrow in his boat.

We passed the remaining part of the day in such amusements as were in our power. Sir Allan related the American campaign, and at evening one of the ladies played on her harpsichord, while Col and Mr Boswell danced a Scottish reel with the other.

We could have been easily persuaded to a longer stay upon Inch Kenneth, but life will not be all passed in delight. The session at Edinburgh

was approaching, from which Mr Boswell could not be absent.

In the morning our boat was ready: it was high and strong. Sir Allan victualled it for the day, and provided able rowers. We now parted from the young laird of Col, who had treated us with so much kindness, and concluded his favours by consigning us to Sir Allan. Here we had the last embrace of this amiable man, who, while these pages were preparing to attest his virtues, perished in the passage between Ulva and Inch Kenneth.

Sir Allan, to whom the whole region was well known, told us of a very remarkable cave, to which he would show us the way. We had been disappointed already by one cave, and were not much elevated by the expectation of another.

It was yet better to see it, and we stopped at some rocks on the coast of Mull. The mouth is fortified by vast fragments of stone, over which we made our way, neither very nimbly, nor very securely. The place, however, well repaid our trouble. The bottom, as far as the flood rushes in, was encumbered with large pebbles, but as we advanced was spread over with smooth sand. The breadth is about forty-five feet: the roof rises in an arch, almost regular, to a height which we could not measure; but I think it about thirty feet.

This part of our curiosity was nearly frustrated; for though we went to see a cave, and knew that caves are dark, we forgot to carry tapers, and did not discover our omission till we were wakened by our wants. Sir Allan then sent one of the boatmen into the country, who soon returned with one little candle. We were thus enabled to go

forward, but could not venture far. Having passed inward from the sea to a great depth, we found on the right hand a narrow passage, perhaps not more than six feet wide, obstructed by great stones, over which we climbed, and came into a second cave in breadth twenty-five feet. The air in this apartment was very warm, but not oppressive, nor loaded with vapours. Our light showed no tokens of a feculent or corrupted atmosphere. Here was a square stone, called, as we are told *Fingal's Table*.

If we had been provided with torches, we should have proceeded in our search, though we had already gone as far as any former adventurer, except some who are reported never to have returned; and measuring our way back, we found it more than a hundred and sixty yards, the eleventh part of a mile.

Our measures were not critically exact, having been made with a walking pole, such as it is convenient to carry in these rocky countries, of which I guessed the length by standing against it. In this there could be no great error, nor do I much doubt but the Highlander, whom we employed, reported the number right. More nicety however is better, and no man should travel unprovided with instruments for taking heights and distances.

There is yet another cause of error not always easily surmounted, though more dangerous to the veracity of itinerary narratives, than imperfect mensuration. An observer deeply impressed by any remarkable spectacle, does not suppose that the traces will soon vanish from his mind, and having commonly no great convenience for writ-

ing, defers the description to a time of more leisure and better accommodation.

He who has not made the experiment, or who is not accustomed to require rigorous accuracy from himself, will scarcely believe how much a few hours take from certainty of knowledge, and distinctness of imagery; how the succession of objects will be broken, how separate parts will be confused, and how many particular features and discriminations will be compressed and conglobated into one gross and general idea.

To this dilatory notation must be imputed the false relations of travellers, where there is no imaginable motive to deceive. They trusted to memory what cannot be trusted safely but to the eye, and told by guess what a few hours before they had known with certainty. Thus it was that Wheeler and Spen described with irreconcilable contrariety things which they surveyed together, and which both undoubtedly designed to shew as they saw them.

When we had satisfied our curiosity in the cave, so far as our penury of light permitted us, we clambered again to our boats, and proceeded along the coast of Mull to a headland, called *Atun*, remarkable for the columnar form of the rocks, which rise in a series of pilasters, with a degree of regularity, which Sir Allan thinks not less worthy of curiosity than the shore of Staffa.

Not long after we came to another range of black rocks, which had the appearance of broken pilasters, set one behind another to a great depth. This place was chosen by Sir Allan for our dinner. We were easily accommodated with seats,

for the stones were of all heights, and refreshed ourselves and our boatmen, who could have no other rest till we were at Icolmkill.

The evening was now approaching, and we were yet at a considerable distance from the end of our expedition. We could therefore stop no more to make remarks in the way, but set forward with some degree of eagerness. The day soon failed us, and the moon presented a very solemn and pleasing scene. The sky was clear, so that the eye commanded a wide circle; the sea was neither still nor turbulent; the wind neither silent nor loud. We were never far from one coast or another, on which, if the weather had become violent, we could have found shelter, and therefore contemplated at ease the region through which we glided in the tranquillity of the night, and saw now a rock and now an island grow gradually conspicuous and gradually obscure. I committed the fault which I have just been censuring, in neglecting, as we passed, to note the series of this placid navigation.

We were very near an island, called *Nun's Island*, perhaps from an ancient convent. Here is said to have been dug the stone which was used in the buildings of Icolmkill. Whether it is now inhabited we could not stay to inquire.

At last we came to Icolmkill, but found no convenience for landing. Our boat could not be forced very near the dry ground, and our Highlanders carried us over the water.

We were now treading that illustrious island, which was once the luminary of the Caledonian regions, whence savage clans and roving barba-

rians derived the benefits of knowledge, and the blessings of religion. To abstract the mind from all local emotion would be impossible, if it were endeavoured, and would be foolish, if it were possible. Whatever withdraws us from the power of our senses; whatever makes the past, the distant, or the future predominate over the present, advances us in the dignity of thinking beings. Far from me and from my friends be such frigid philosophy, as may conduct us indifferent and unmoved over any ground which has been dignified by wisdom, bravery, or virtue. That man is little to be envied, whose patriotism would not gain force upon the plain of Marrathon, or whose piety would not grow warmer among the ruins of Iona.

We came too late to visit monuments: some care was necessary for ourselves. Whatever was in the island, Sir Allan could demand, for the inhabitants were Macleans; but having little, they could not give us much. He went to the headman of the island, whom fame, but fame delights in amplifying, represents as worth no less than fifty pounds. He was perhaps proud enough of his guests, but ill prepared for our entertainment; however, he soon produced more provision than men not luxurious require. Our lodging was next to be provided. We found a barn well stocked with hay, and made our beds as soft as we could.

In the morning we rose and surveyed the place. The churches of the two convents are both standing, though unroofed. They were built of unhewn stone, but solid, and not inelegant. I brought away rude measures of the buildings,

such as I cannot much trust myself, inaccurately taken, and obscurely noted. Mr Pennant's delineations, which are doubtless exact, have made my unskilful description less necessary.

The episcopal church consists of two parts, separated by the belfry, and built at different times. The original church had, like others, the altar at one end, and tower at the other; but as it grew too small, another building of equal dimension was added, and the tower then was necessarily in the middle.

That these edifices are of different ages seems evident. The arch of the first church is Roman, being part of a circle; that of the additional building is pointed, and therefore Gothick or Saracenic; the tower is firm, and wants only to be floored and covered.

Of the chambers or cells belonging to the monks, there are some walls remaining, but nothing approaching to a complete apartment.

The bottom of the church is so encumbered with mud and rubbish, that we could make no discoveries of curious inscriptions, and what there are have been already published. The place is said to be known where the black stones lie concealed, on which the old Highland chiefs, when they made contracts and alliances, used to take the oath, which was considered as more sacred than any other obligation, and which could not be violated without the blackest infamy. In those days of violence and rapine, it was of great importance to impress upon savage minds the sanctity of an oath, by some particular and extraordinary circumstances. They would not have re-

course to the black stones, upon small or common occasions, and when they had established their faith by this tremendous sanction, inconstancy and treachery were no longer feared.

The chapel of the nunnery is now used by the inhabitants as a kind of general cow-house, and the bottom is consequently too miry for examination. Some of the stones which covered the later abbesses have inscriptions, which might yet be read, if the chapel were cleansed. The roof of this, as of all the other buildings, is totally destroyed, not only because timber quickly decays when it is neglected, but because in an island utterly destitute of wood, it was wanted for use, and was consequently the first plunder of needy rapacity.

The chancel of the nuns' chapel is covered with an arch of stone, to which time has done no injury; and a small apartment communicating with the choir, on the north-side, like the chapter-house in cathedrals, roofed with stone in the same manner, is likewise entire.

In one of the churches was a marble altar, which the superstition of the inhabitants has destroyed. Their opinion was, that a fragment of this stone was a defence against shipwrecks, fire, and miscarriages. In one corner of the church the bason for holy water is yet unbroken.

The cemetery of the nunnery was, till very lately, regarded with such reverence, that only women were buried in it. These reliques of veneration always produce some mournful pleasure. I could have forgiven a great injury more easily than the violation of this imaginary sanctity.

South of the chapel stand the walls of a large

room, which was probably the hall, or refectory of the nunnery. This apartment is capable of repair. Of the rest of the convent there are only fragments.

Besides the two principal churches, there are, I think, five chapels yet standing, and three more remembered. There are also crosses, of which two bear the names of St John and St Matthew.

A large space of ground about these consecrated edifices is covered with grave-stones, few of which have any inscription. He that surveys it, attended by an insular antiquary, may be told where the kings of many nations are buried, and if he loves to sooth his imagination with the thoughts that naturally arise in places where the great and the powerful lie mingled with the dust, let him listen in submissive silence; for if he asks any questions, his delight is at an end.

Iona has long enjoyed, without any very credible attestation, the honour of being reputed the cemetery of the Scottish kings. It is not unlikely, that, when the opinion of local sanctity was prevalent, the chieftains of the isles, and perhaps some of the Norwegian or Irish princes, were repositied in this venerable inclosure. But by whom the subterraneous vaults are peopled is now utterly unknown. The graves are very numerous, and some of them undoubtedly contain the remains of men, who did not expect to be so soon forgotten.

Not far from this awful ground may be traced the garden of the monastery: the fishponds are yet discernible, and the aqueduct which supplied them is still in use.

There remains a broken building, which is called the Bishop's House, I know not by what authority. It was once the residence of some man above the common rank, for it has two stories and a chimney. We were shewn a chimney at the other end, which was only a niche, without perforation, but so much does antiquarian credulity, or patriotick vanity prevail, that it was not much more safe to trust the eye of our instructor than the memory.

There is in the island one house more, and only one, that has a chimney; we entred it, and found it neither wanting repair nor inhabitants; but to the farmers, who now possess it, the chimney is of no great value; for their fire was made on the floor, in the middle of the room, and notwithstanding the dignity of their mansion, they rejoiced, like their neighbours, in the comforts of smoke.

It is observed, that ecclesiastical colleges are always in the most pleasant and fruitful places. While the world allowed the monks their choice, it is surely no dishonour that they chose well. This island is remarkably fruitful. The village near the churches is said to contain seventy families, which, at five in a family, is more than a hundred inhabitants to a mile. There are perhaps other villages; yet both corn and cattle are annually exported.

But the fruitfulness of Iona is now its whole prosperity. The inhabitants are remarkably gross, and remarkably neglected: I know not if they are visited by any minister. The island, which was once the metropolis of learning and piety, has now no school for education, nor temple

for worship, only two inhabitants that can speak English, and not one that can write or read.

The people are of the clan of Maclean; and though Sir Allan had not been in the place for many years, he was received with all the reverence due to their chieftain. One of them being sharply reprehended by him, for not sending him some rum, declared after his departure, in Mr Boswell's presence, that he had no design of disappointing him, *for, said he, I would cut my bones for him; and if he had sent his dog for it, he should have had it.*

When we were to depart, our boat was left by the ebb at a great distance from the water, but no sooner did we wish it afloat, than the islanders gathered round it, and, by the union of many hands, pushed it down the beach; every man who could contribute his help seemed to think himself happy in the opportunity of being, for a moment, useful to his chief.

We now left those illustrious ruins, by which Mr Boswell was much affected, nor would I willingly be thought to have looked upon them without some emotion. Perhaps, in the revolutions of the world, *Jona* may be sometime again the instructress of the western regions.

It was no long voyage to Mull, where under Sir Allan's protection, we landed in the evening, and were entertained for the night by Mr Maclean, a minister that lives upon the coast, whose elegance of conversation, and strength of judgment, would make him conspicuous in places of greater celebrity. Next day we dined with Dr Maclean, another physician, and then travelled on to the house of a very

powerful laird, Maclean of Lochbuy; for in this country every man's name is Maclean.

Where races are thus numerous, and thus combined, none but the chief of a clan is addressed by his name. The laird of Dunvegan is called Macleod, but other gentleman of the same family are denominated by the places where they reside, as Raasa or Talisker. The distinction of the meaner people is made by their christian names. In consequence of this practice, the late laird of Macfarlane, an eminent genealogist, considered himself as disrespectfully treated, if the common addition was applied to him. Mr Macfarlane, said he, may with equal propriety be said to many; but I, and I only, am Macfarlane.

Our afternoon journey was through a country of such gloomy desolation, that Mr Boswell thought no part of the Highlands equally terrifick, yet we came without any difficulty, at evening, to Lochbuy, where we found a true Highland laird, rough and haughty, and tenacious of his dignity; who, hearing my name, enquired whither I was of the Johnstones of Glencoe, or of Ardnamurchan?

Lochbuy has, like the other insular chieftains, quitted the castle that sheltered his ancestors, and lives near it, in a mansion not very spacious or splendid. I have seen no houses in the islands much to be envied for convenience or magnificence, yet they bear testimony to the progress of arts and civility, as they show that rapine and surprise are no longer dreaded, and are much more commodious than the ancient fortresses.

The castles of the Hebrides, many of which are standing, and many ruined, were always built upon

points of land, on the margin of the sea. For the choice of this situation there must have been some general reason, which the change of manners has left in obscurity. They were of no use in the days of piracy, as defences of the coast; for it was equally accessible in others places. Had they been sea-marks or light-houses, they would have been of more use to the invader than the natives, who could want no such directions on their own waters: for a watch-tower, a cottage on a hill would have been better, as it would have commanded a wider view.

If they be considered merely as places of retreat, the situation seems not well chosen; for the laird of an island is safest from foreign enemies in the center: on the coast he might be more suddenly surprised than in the inland parts; and the invaders, if their enterprise miscarried, might more easily retreat. Some convenience, however, whatever it was, their position on the shore afforded; for uniformity of practice seldom continues long without good reason.

A castle in the islands is only a single tower of three or four stories, of which the walls are sometimes eight or nine feet thick, with narrow windows, and close winding stairs of stone. The top rises in a cone, or pyramid of stone, encompassed by battlements. The intermediate floors are sometimes frames of timber, as in common houses, and sometimes arches of stone, or alternately stone and timber; so that there was very little danger from fire. In the center of every floor, from top to bottom, is the chief room, of no great extent,

round which there are narrow cavities, or recesses formed by small vacuities, or by a double wall. I know not whether there be ever more than one fire-place. They had not capacity to contain many people or much provision ; but their enemies could seldom stay to blockade them ; for if they failed in their first attack, their next care was to escape.

The walls were always too strong to be shaken by such desultory hostilities ; the windows were too narrow to be entered, and the battlements too high to be scaled. The only danger was at the gates, over which the wall was built with a square cavity, not unlike a chimney, continued to the top. Through this hollow the defendants let fall stones upon those who attempted to break the gate, and poured down water, perhaps scalding water, if the attack was made with fire. The castle of Lochbuy was secured by double doors, of which the outer was an iron grate.

In every castle is a well and a dungeon. The use of the well is evident. The dungeon is a deep subterraneous cavity, walled on the sides, and arched on the top, into which the descent is through a narrow door, by a ladder or a rope, so that it seems impossible to escape, when the rope or ladder is drawn up. The dungeon was, I suppose, in war, a prison for such captives as were treated with severity ; and in peace, for such delinquents as had committed crimes within the laird's jurisdiction ; for the mansions of many lairds were, till the late privation of their privileges, the halls of justice to their own tenants.

As these fortifications were the productions of mere necessity, they are built only for safety, with little regard to convenience, and with none to elegance or pleasure. It was sufficient for a laird of the Hebrides, if he had a strong house, in which he could hide his wife and children from the next clan. That they are not large nor splendid is no wonder. It is not easy to find how they were raised, such as they are, by men who had no money, in countries where the labourers and artificers could scarcely be fed. The buildings in different parts of the islands show their degrees of wealth and power. I believe that for all the castles which I have seen beyond the Tweed, the ruins yet remaining of some one of those which the English built in Wales, would supply materials,

These castles afford another evidence that the fictions of romantick chivalry had for their basis the real manners of the feudal times, when every lord of a seignory lived in his hold lawless and unaccountable, with all the licentiousness and insolence of uncontested superiority and unprincipled power. The traveller, whoever he might be, coming to the fortified habitation of a chieftan, would, probably, have been interrogated from the battlements, admitted with caution at the gate, introduced to a petty monarch, fierce with habitual hostility, and vigilant with ignorant suspicion; who, according to his general temper, or accidental humour, would have seated a stranger as his guest at the table, or as a spy confined him in the dungeon.

Lochbuy means the *Yellow Lake*, which is the name given to an inlet of the sea, upon which the

castle of Mr Maclean stands. The reason of the appellation we did not learn.

We were now to leave the Hebrides, where we had spent some weeks with sufficient amusement, and where we had amplified our thoughts with new scenes of nature, and new modes of life. More time would have given us a more distinct view, but it was necessary that Mr Boswell should return before the courts of justice were opened; and it was not proper to live too long upon hospitality, however liberally imparted.

Of these islands it must be confessed, that they have not many allurements, but to the mere lover of naked nature. The inhabitants are thin, provisions are scarce, and desolation and penury give little pleasure.

The people collectively considered are not few, though their numbers are small in proportion to the space which they occupy. Mull is said to contain six thousand, and Sky fifteen thousand. Of the computation respecting Mull, I can give no account; but when I doubted the truth of the numbers attributed to Sky, one of the ministers exhibited such facts as conquered my incredulity.

Of the proportion which the product of any region bears to the people, an estimate is commonly made according to the pecuniary price of the necessaries of life; a principle of judgment which is never certain, because it supposes, what is far from truth, that the value of money is always the same, and so measures an unknown quantity by an uncertain standard. "It is competent enough when the markets of the same country, at different times, and those times not too distant, are to be compared;

but of very little use for the purpose of making one nation acquainted with the state of another. Provisions, though plentiful, are sold in places of great pecuniary opulence for nominal prices, to which, however scarce, where gold and silver are yet scarcer, they can never be raised.

In the Western Islands there is so little internal commerce, that hardly any thing has a known or settled rate. The price of things brought in, or carried out, is to be considered as that of a foreign market; and even this there is some difficulty in discovering, because their denominations of quantity are different from ours; and when there is ignorance on both sides, no appeal can be made to a common measure.

This, however, is not the only impediment. The Scots, with a vigilance of jealousy which never goes to sleep, always suspect that an Englishman despises them for their poverty, and to convince him that they are not less rich than their neighbours, are sure to tell him a price higher than the true. When Lesley, two hundred years ago, related so punctiliously, that a hundred hen eggs, new laid, were sold in the islands for a penny, he supposed that no inference could possibly follow, but that eggs were in great abundance. Posterity has since grown wiser; and having learned, that nominal and real value may differ, they now tell no such stories, lest the foreigner should happen to collect, not that eggs are many, but that pence are few.

Money and wealth have, by the use of commercial language, been so long confounded, that they are commonly supposed to be the same; and this prejudice has spread so widely in Scotland, that I

know not whether I found man or woman, whom I interrogated concerning payments of money, that could surmount the illiberal desire of deceiving me, by representing every thing as dearer than it is.

From Lochbuy we rode a very few miles to the side of Mull, which faces Scotland, where, having taken leave of our kind protector, Sir Allen, we embarked in a boat, in which the seat provided for our accommodation was a heap of rough brushwood; and on the twenty-second of October reposed at a tolerable inn on the main land.

On the next day we began our journey southwards. The weather was tempestuous. For half the day the ground was rough, and our horses were still small. Had they required much restraint, we might have been reduced to difficulties; for I think we had amongst us but one bridle. We fed the poor animals liberally, and they performed their journey well. In the latter part of the day we came to a firm and smooth road, made by the soldiers, on which we travelled with great security, busied with contemplating the scene about us. The night came on while we had yet a great part of the way to go, though not so dark but that we could discern the cataracts which poured down the hills on one side, and fell into one general channel that ran with great violence on the other. The wind was loud, the rain was heavy, and the whistling of the blast, the fall of the shower, the rush of the cataracts, and the roar of the torrent, made a nobler chorus of the rough musick of nature than it had ever been my chance to hear before. The streams which ran across the way from the hills to the main current, were so frequent, that after

while I began to count them; and, in ten miles, reckoned fifty-five, probably missing some, and having let some pass before they forced themselves upon my notice. At last we came to Inverary, where we found an inn, not only commodious, but magnificent.

The difficulties of peregrination were now at an end. Mr Boswell had the honour of being known to the duke of Argyle, by whom we were very kindly entertained at his splendid seat, and supplied with conveniencies for surveying his spacious park and rising forests.

After two days stay at Inverary we proceeded southward over Glencroe, a black and dreary region, now made easily passable by a military road, which rises from either end of the glen by an acclivity not dangerously steep, but sufficiently laborious. In the middle, at the top of the hill, is a seat with this inscription, *Rest, and be thankful.* Stones were placed to mark the distances, which the inhabitants have taken away, resolved, they said, *to have no new miles.*

In this rainy season the hills streamed with waterfalls, which, crossing the way, formed currents on the other side, that ran in contrary directions as they fell to the north or south of the summit. Being, by the favour of the duke, well mounted, I went up and down the hill with great convenience.

From Glencroe we passed through a pleasant country to the banks of Loch Lomond, and were received at the house of Sir James Colquhoun, who is owner of almost all the thirty islands of the loch, which we went in a boat next morning to

survey. The heaviness of the rain shortened our voyage, but we landed on one island planted with yew, and stocked with deer, and on another containing perhaps not more than half an acre, remarkable for the ruins of an old castle, on which the osprey builds her annual nest. Had Loch Lomond been in a happier climate, it would have been the boast of wealth and vanity to own one of the little spots which it incloses, and to have employed upon it all the arts of embellishment. But as it is, the islets, which court the gazer at a distance, disgust him at his approach, when he finds, instead of soft lawns and shady thickets, nothing more than uncultivated ruggedness.

Where the loch discharges itself into a river called the Leven, we passed a night with Mr Smollet, a relation of Doctor Smollet, to whose memory he has raised an obelisk on the bank near the house in which he was born. The civility and respect which we found at every place, it is ungrateful to omit, and tedious to repeat. Here we were met by a post-chaise, that conveyed us to Glasgow.

To describe a city so much frequented as Glasgow, is unnecessary. The prosperity of its commerce appears by the greatness of many private houses, and a general appearance of wealth. It is the only episcopal city whose cathedral was left standing in the rage of reformation. It is now divided into many separate places of worship, which, taken altogether, compose a great pile, that had been some centuries in building, but was never finished; for the change of religion intercept,

ed its progress, before the cross isle was added, which seems essential to a Gothick cathedral.

The college has not had a sufficient share of the increasing magnificence of the place. The session was begun; for it commences on the tenth of October, and continues to the tenth of June; but the students appeared not numerous, being, I suppose, not yet returned from their several homes. The division of the academical year into one session, and one recess, seems to me better accommodated to the present state of life, than that variation of time by terms and vacations, derived from distant centuries, in which it was probably convenient, and still continued in the English universities. So many solid months as the Scotch scheme of education joins together, allow and encourage a plan for each part of the year; but with us, he that has settled himself to study in the college is soon tempted into the country, and he that has adjusted his life in the country, is summoned back to his college.

Yet when I have allowed to the universities of Scotland a more rational distribution of time, I have given them, so far as my enquiries have informed me, all that they can claim. The students, for the most part, go thither boys and depart before they are men; they carry with them little fundamental knowledge, and therefore the superstructure cannot be lofty. The grammar-schools are not generally well supplied; for the character of a school-master being there less honourable than in England, is seldom accepted by men who are capable to adorn it, and where the school has been deficient, the college can effect little.

Men bred in the universities of Scotland cannot be expected to be often decorated with the splendours of ornamental erudition, but they obtain a mediocrity of knowledge, between learning and ignorance, not inadequate to the purposes of common life, which is, I believe, very widely diffused among them, and which, countenanced in general by a national combination so invidious, that their friends cannot defend it; and actuated in particulars by a spirit of enterprise, so vigorous, that their enemies are constrained to praise it, enables them to find, or to make their way to employment, riches, and distinction.

From Glasgow we directed our course to Auchinleck, an estate devolved, through a long series of ancestors, to Mr Boswell's father, the present possessor. In our way we found several places remarkable enough in themselves, but already described by those who viewed them at more leisure, or with much more skill; and stopped two days at Mr Campbell's, a gentleman married to Mr Boswell's sister.

Auchinleck, which signifies a *stony field*, seems not now to have any particular claim to its denomination. It is a district generally level, and sufficiently fertile, but, like all the western side of Scotland, incommoded by very frequent rain. It was, with the rest of the country, generally naked, till the present possessor finding, by the growth of some stately trees near his old castle, that the ground was favourable enough to timber, adorned it very diligently with annual plantations.

Lord Auchinleck, who is one of the judges of Scotland, and therefore not wholly at leisure for

domestick business or pleasure, has yet found time to make improvements in his patrimony. He has built a house of hewn stone, very stately and durable, and has advanced the value of his lands with great tenderness to his tenants.

I was, however, less delighted with the elegance of the modern mansion, than with the sullen dignity of the old castle. I clambered with Mr Boswell among the ruins, which afford striking images of ancient life. It is, like other castles, built upon a point of rock, and was, I believe, anciently surrounded with a moat. There is another rock near it, to which the draw-bridge, when it was let down, is said to have reached. Here, in the ages of tumult and rapine, the laird was surprised and killed by the neighbouring chief, who perhaps might have extinguished the family, had he not in a few days been seized and hanged, together with his sons, by Douglas, who came with his forces to the relief of Auchinleck.

At no great distance from the house runs a pleasing brook, by a red rock, out of which has been hewn a very agreeable and commodious summer-house, at less expence, as lord Auchinleck told me, than would have been required to build a room of the same dimensions. The rock seems to have no more dampness than any other wall. Such opportunities of variety it is judicious not to neglect.

We now returned to Edinburgh, where I passed some days with men of learning, whose names want no advancement from my commemoration, or with women of elegance, which perhaps disclaims a pedant's praise.

The conversation of the Scots grows every day less unpleasing to the English; their peculiarities wear fast away; their dialect is likely to become in half a century provincial and rustick, even to themselves. The great, the learned, the ambitious, and the vain, all cultivate the English phrase, and the English pronunciation, and in splendid companies Scotch is not much heard, except now and then from an old lady.

There is one subject of philosophical curiosity to be found in Edinburgh, which no other city has to show; a college of the deaf and dumb, who are taught to speak, to read, to write, and to practise arithmetick, by a gentleman, whose name is Braidwood. The number which attends him is, I think, about twelve, which he brings together into a little school, and instructs according to their several degrees of proficiency.

I do not mean to mention the instruction of the deaf as new. Having been first practised upon the son of a constable of Spain, it was afterwards cultivated with much emulation in England, by Wallis and Holder, and was lately professed by Mr Baker, who once flattered me with hopes of seeing his method published. How far any former teachers have succeeded, it is not easy to know; the improvement of Mr Braidwood's pupils is wonderful. They not only speak, write, and understand what is written, but if he that speaks looks towards them, and modifies his organs by distinct and full utterance, they know so well what is spoken, that it is an expression scarcely figurative to say they hear with the eye. That any have attained to the power mentioned

by Burnet, of feeling sounds, by laying a hand on the speaker's mouth, I know not; but I have seen so much, that I can believe more; a single word, or a short sentence, I think, may possibly be so distinguished.

It will readily be supposed by those that consider this subject, that Mr Braidwood's scholars spell accurately. Orthography is vitiated among such as learn first to speak, and then to write, by imperfect notions of the relation between letters and vocal utterance; but to those students every character is of equal importance; for letters, are to them not symbols of names, but of things; when they write they do not represent a sound, but delineate a form.

This school I visited, and found some of the scholars waiting for their master, whom they are said to receive at his entrance with smiling countenances and sparkling eyes, delighted with the hope of new ideas. One of the young ladies had her slate before her, on which I wrote a question consisting of three figures, to be multiplied by two figures. She looked upon it, and quivering her fingers in a manner which I thought very pretty, but of which I knew not whether it was art or play, multiplied the sum regularly in two lines, observing the decimal place; but did not add the two lines together, probably disdaining so easy an operation. I pointed at the place where the sum total should stand, and she noted it with such expedition as seemed to show that she had it only to write.

It was pleasing to see one of the most desperate of human calamities capable of so much help:

whatever enlarges hope, will exalt courage; after having seen the deaf taught arithmetick, who would be afraid to cultivate the Hebrides?

Such are the things which this journey has given me an opportunity of seeing, and such are the reflections which that sight has raised. Having passed my time almost wholly in cities, I may have been surprised by modes of life and appearances of nature, that are familiar to men of wider survey and more varied conversation. Novelty and ignorance must always be reciprocal, and I cannot but be conscious that my thoughts on national manners, are the thoughts of one who has seen but little.

END OF THE NINTH VOLUME.
