100% COPPER POWER/GROUND CABLES

- Made from true 100% Oxygen-Free Copper (OFC) for a pure power transfer.
- PW Cables series meet the AWG (American Wire Gauge) industry standard requirements.
- Built to perform in extreme temperatures with minimum power loss.
- Soft touch ultra-flexible PVC casing.

Our cables are created to be dense but yet incredibly flexible which makes it easy to install and provides outstanding performance.

GM 370A Large Case Elite Series Hairpin Stator Alternator

The 370 amp Large Case Hairpin Stator GM alternator is the most Powerful unit available to replace standard AD244 alternators. This Elite series unit features our custom solid double-stack copper rectifier with (12) large 65 amp press fit diodes & an over sized output stud for excellent durability. These powerhouses crank out over 200+ amps at just 600 RPM engine speed on any standard GM truck, with full 370+ amps at anything above 1800 rpm engine speed! A 46mm Billet aluminum 6 rib pulley is used to maximize low RPM output, so a 1/2" to 1" shorter than stock length belt (not included) is recommended for optimum belt tension. 370 amp Elite series units are made in the USA and come with a 2-year warranty. **NOTE:** Some GM vehicles in this year range have an optional 4-pin rectangular or 2-pin square connector that is not compatible with this unit. Please check your vehicle's original alternator plug and compare to the plug photo to verify proper fitment before ordering. For customers desiring 14.9 to 16.0 volt charging voltage, this 4-pin oval Adjustable Voltage Boost Module is compatible with this unit. Ask a sales associate for more details!

240A S-Series GM 63-85 Chrome 1-Wire Alternator

The S-Series of 6-phase alternators offers incredible low RPM output in a compact and durable package. Highly efficient, these units use less horsepower than conventional 3-phase alternators. 12-diodes, twin rectifier plates & outstanding airflow ensure much better durability than standard Delco based alternators, even in severe conditions. This custom designed housing directly replaces standard Delco 10DN, 10SI and 12SI alternators on most 1963 through 1985 GM vehicles. A side output stud and seamless rear cover with no plug opening allow for better clearance from the back of the alternator to the front of the engine and a smooth appearance. A 1-wire self exciting internal voltage regulator makes installation of these alternators on older or customized vehicles a snap- Simply run a properly sized positive and ground cable from the alternator to the terminals of the battery and the alternator will work perfectly regardless of what kind of wiring harness you have. Because of their compact size and standard GM mounting ears, these alternators also work well in many aftermarket or custom bracket installations. *MADE IN THE U.S.A.*

DB+ Coaxial Speakers and Components

Marine Certified

The DB+ Series is IP65 rated so it's dirt - and water-resistant. It also has been tested for salt-fog, UV and humidity. A big part of that marine certification also means that each speaker has a non-corrosive plastic grille, a polypropylene UV tolerant cone, waterproof inner and outer surrounds, and stainless steel mounting hardware, ensuring that it's fully protected against the elements

Boom Swimmer Duo and Swimmer Junior

The Polk BOOM Swimmer Duo enters a new stage of evolution, letting you double down on great sound and ultimate portability no matter where adventure leads. Sticking with its original look and rugged features, little may have changed on the outside - but what's inside tells a new story. The Swimmer Duo now includes stereo linking, giving you a more robust sound and better sonic range from all of the tunes you love via a Bluetooth connection.

Add a pair of Swimmer Duo's to your arsenal, easily link them together, and listen to each one as true left and right speakers. Its new built-in mic is speakerphone-ready for those moments when you're listening to music but want to take incoming calls and keep communications hands-free. Plus, its already awesome flexible tail is now 1" longer, giving you endless opportunities to loop, twist, grip and set it however you see fit. And it still comes with a suction cup attachment, so you can stick it to just about any surface for surprisingly better low end response and even more mounting options.

Drive-By-Wire Cruise Control Systems

Drive-by-wire add-on cruise control systems by Rostra are available for many popular vehicle platforms from manufacturers like Toyota/Scion, General Motors, Suzuki, Dodge, Mitsubishi and Chrysler. Each cruise control system is designed with ease of installation in mind and more often than not consists of hardware meant to be completely plug-and-play.

What is included with a Rostra cruise control system?

A typical add-on cruise control system by Rostra includes an intelligent electronic control module with a built-in firmware package designed to deliver specific commands to a vehicle's onboard computer system or accelerator pedal position sensor. When combined with the fashionable control switch, an accelerator pedal interface har ness, and primary system power harness, Rostra's cruise control systems provide a carefree way of maintaining highway driving speeds.

Ultrasonic Parking Assist Systems

2501903-BZP

2501920-FZ

The BackZone Plus and FrontZone are revolutionary automotive reverse parking assist systems developed by Rostra Precision Controls and designed to give every driver peace-of-mind while parking their vehicle in cramped quarters. The BackZone Plus and FrontZone units provide both visual and audible alerts to the potential dangers of nearby obstacles through the use of an included buzzer built into a digital display that can be mounted on your sun visor or dashboard.

Included in every BackZone Plus and FrontZone ultrasonic parking assist system, you will find four bumper-mountable ultrasonic sensors with additional 6-degree and 12-degree angled bezels added to accommodate curved bumpers (see photos). Likewise, each kit includes four rubber sleeves to be used to reduce sensor vibration when mounting the ultrasonic sensors in steel bumpers. These sensors provide information to the main control module via the vehicle-length wiring harness, also included. The sensors included with each BackZone Plus arrive with a flat-black finish that can be painted to match the vehicle's exterior *.

DashCam Dashboard Video Recording Systems

Introducing DashCam - a series of compact, fully-featured digital video capture systems that use a standard Class 10 SD or microSD card for storage and record on-road video while you drive. The DashCam recording units and their associated accessories are specifically designed with mobility in mind. Their compact form factor means they blend seamlessly into most vehicle dashboards and windshields while providing easy access to their many features including video playback, starting and stopping recordings, and turning audio capture on or off. The software suite included with each Dashboard Video Recording System provides a sophisticated means of extracting video to a personal computer for editing, as well as providing access to many other features including overlaying GPS coordinates onto a Google Map to view driving patterns, and viewing telemetry data such as in-car G-forces experienced while driving.

Cruise in comfort! With the ComfortSeat Lumbar Support System, you can set the amount of lower back muscle support you need for your individual comfort while driving. Tucked away inside the driver or passenger seat, the Lumbar Support System provides the precise amount of extra lumbar support to your lower back, decreasing lumbar strain at your command. With just the touch of a finger, the seat or console-mounted swithc activates a pneumatic motor filling the bladder within the seat. Make every drive a comfortable drive.

ComfortSeat Lumbar FAQ

How long does it take to install the Automotive Lumbar Support?
The Lumbar Support has universal application and is easy to install. Estimated installation time is approximately 1 hour or less.

Will I need to remove the seat?
No. The Lumbar Support can be installed without removing the seat. The seat cover needs only to be pulled up, not removed.

What is the difference between a "front mount" and a "rear mount"?
A "front mount" fits between the foam and upholstery. A "rear mount" fits behind the foam.

Electric pump with pouch.   Lumbar air bladder.   Control switch.   Wiring harness

Con-Verse Hands-Free Bluetooth® by Rostra

Good driving requires two hands! Rostra Precision Controls is proud to offer an innovative product that is going to change the way you use your cellular phone while driving. The Con-Verse Automotive Bluetooth® Hands-Free System allows you to keep both hands on the wheel while driving, keeping you alert and aware of your surrounfings, ready to react without any distractions.

Customized Bluetooth® kits include factory look-a-like switches designed to fit directly into the knock-out plugs currently on your vehicle's dashboard. They allow you to retain your automobile's factory finish, all while adding the benefits of a hands-free, voice-activated calling system and include wiring harnesses designed to tie directly into your vehicle's radio.

Con-Verse Bluetooth® module

Plug and Play

Custom-fit and vehicle-specific wiring harnesses included in every Bluetooth® kit makes for quick and easy installations normally involving no cutting or splicing of existing vehicle wiring.

Full Duplex DSP

Full Duplex Digital Signal Processing of audio by every Bluetooth® system means you are assured the very best sound quality throughout every phone call or every streamed song.

Multi-Pairing

Utilizing the internal memory in every Bluetooth® module allows for the memorization of up to 5 different cellular phones! Extra phones can be added in just a few short steps, if needed.

Rapid Call Transfer

Phone calls already in progress are transferred between the Bluetooth® module and your cell phone seamlessly when your vehicle's ignition is turned on or off.

Volume Control
With the single-button volume control built into every Bluetooth® control switch, the audio playing over your vehicle's speakers is centralized, easy to find and easy to use.

Incoming Call Rejection

Got a call coming in that you don't want to take? Built into our control switches and modules is the functionality to reject a call, transferring it safely to your voicemail.

Upgradeable Software

Software upgradeability within the Bluetooth® module means that as the Bluetooth® standard grows within the cellular phone industry, your Con-Verse by Rostra system will be able to keep pace.

Multiple Switch Options

Rostra offers a variety of switches to be connected to your Bluetooth® system allowing you to keep the original fie and finish of your vehicle's interior. See above for images.

PCAM-BS1-N
Self-Adhesive Blind Spot Camera for Front, Rear or Side View with Flexible Housing

Key Features:
- •1/4" CMOS sensor
- •Operates at 0.1 LUX
- •80° viewing angle
- •IP67 water/debris-proof rating
- •Parking Lines (selectable)
- •Mirrored/non-mirrored image (selectable)

Reduce the risk of collisions and other accidents, especially when changing lanes. The PCAM-BS1 is designed for versatility, and its self-adhesive design, with flexible base can be mounted on multiple areas of a vehicle. When mounted beneath side mirrors, the PCAM-BS1 improves driver visibility during lane changes. Pairing the PCAM-BS1 with a PAC BCI video interface, or with EchoMaster's rearview mirror with monitor PMM-7333-PL, triggers the camera to turn on when a turn signal is being used, and converts the video signal to a constant.
