GL505

Waterproof Hibernating Asset Tracking Device

📶 **Waterproof, IPX7 Compliant**

📶 **Long Standby Time, More Than 1000 Days**

📶 **Rapid and Covert Installation - No Wiring, No External Antennas**

📶 **User Serviceable CR123A Batteries**

The GL505 is a powerful waterproof GPS tracker designed for fixed asset tracking applications. It is powered by two user replaceable CR123A lithium batteries. Configuration allows it to wake up on a preset schedule to check if it needs to shift from dormant to active status and/or send update of its current location, then returning to a dormant state. Optimally configured, it will operate autonomously for 1000 days. Its built-in 3-axis accelerometer allows the GL505 to detect asset movement and transmit an alert message. The integrated @Track interface protocol allows the GL505 to communicate with a customer mobile phone or a backend server via GPRS/SMS and transfer reports of GPS position, etc. System integrators can easily incorporate the GL505 into existing tracking systems based on this full featured protocol.
