## **Introduction**

For the secondary and higher education communities to achieve the timely, uniform, accurate, and secure exchange of academic records for current or previous secondary students, the Postsecondary Electronic Standards Council (PESC) has developed and seeks approval for a standard format in eXtensible Markup Language (XML) for the High School Transcript. This Draft Implementation Guide proposes a format for electronically exchangeable high school records and can help non-technical users to implement the electronic records exchange process.

Besides its obvious use for secondary and postsecondary educational institutions, this Guide should also be useful for software vendors and state and federal education agencies.

Secondary educational institutions use high school transcripts to transmit current and historical student academic records to postsecondary educational institutions. When a student intends to transfer from a secondary school to a postsecondary school, it is essential that the student's academic record be made available to the receiving school as quickly as possible so that the receiving institution can make a faster admissions decision. In addition, the prompt transmission of the secondary school academic record allows the receiving institution to evaluate the record in a more timely fashion and thereby to advise the student on the applicability of past courses to current program requirements.

The secondary student transcript contains personal history and identifying information about the student, the current academic status, dates of attendance, courses completed with grades earned, diplomas and certificates awarded, and selected test scores.

This Implementation Guide is based on the Approved PESC XML High School Transcript Schema version 1.0.0. For the electronic exchange of these student records to be completely automated, it is essential that all users adhere strictly to the requirements of this Schema and understand and comply with the requirements outlined in this Guide. Although not required in the Schema, this Implementation Guide also makes recommendations for acceptable practice based on "The Academic Record and Transcript Guide," a publication by the American Association of Collegiate Registrars and Admissions Officers (AACRAO).

## **Organization and Format**

The schema for the High School Transcript is made up of four main parts:

1. Transmission Data
2. Student
3. Note Message
4. User Defined Extensions

However, three of these main parts branch to form other parts, which in turn branch out further. This Guide is organized so that each level of branching is documented in the order as follows:

```

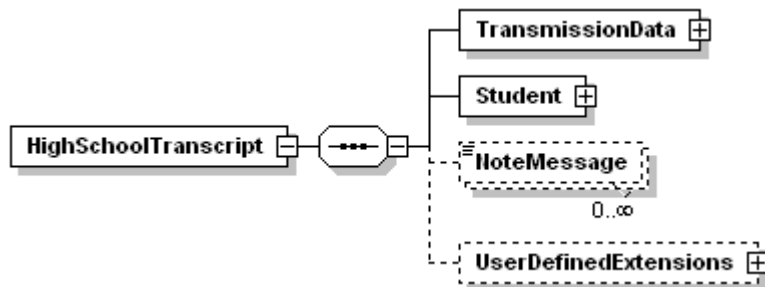

Transmission Data Level I
  Sub-level IA
    Sub-level IA1
      Sub-level IA1a
      Sub-level IA1b
      Sub-level IA1c
    Sub-level IA2
      Sub-level IA2a
      Sub-level IA2b
  Sub-level IB
    Sub-level IB1
      Sub-level IB1a
Student Data Level I
(Etc.)

```

The heading for each level and sub-level indicates the position of the subsequent diagram in the larger Schema.

Following the heading, the diagram serves to illustrate its relationship with the preceding branch. All diagrams in this Guide were copied from a graphical representation of the High School Transcript Schema using a software package from Altova Corporation called XMLSpy.

Example:

The boxes in the diagrams can illustrate two separate components of the Schema: first, certain boxes show data element groupings which branch out to form either lower-level element groupings, or the Schema's other primary component, the fields that contain actual data. A box with a solid border indicates that that particular data element or field is required. A box with a dotted line indicates an optional data element or field. Likewise, a solid line connecting two or more boxes indicates that the boxes to the right in the diagram are required fields and a dotted line indicates the fields in the boxes to the right are optional. A plus (+) sign at the right of a box indicates that the element grouping or field branches beyond the scope of a given diagram. The Schema displays such branching in subsequent diagrams.

Each diagram includes a representation of a field or data element's repeatability. Under a given box, for example, "0...∞" would indicate an optional data element or field (with a minimum number of occurrences of zero) that can be repeated an infinite number of times. On the other hand, "1...3" would indicate a mandatory field (with at least one required instance) that can be repeated up to 3 times.

Although most data elements that could theoretically be included an infinite number of times in the schema, would typically only be included once or perhaps a few times. Including a high number of occurrences of a field would present problems for the receiving agency or institution.

Under each diagram, a table will appear with five columns:

**Tag Name:** This is the name of the data element grouping or field that will appear in the Schema and in the instance document. ("Instance document" refers to a transcript with real data for an actual student that institutions would exchange.) The format for the tag name is Upper Camel Case which takes a name such as "Transmission Data" and eliminates the space between the two words, retaining the capital letters of each word making up the tag name.

**Schema Use:** This column indicates whether the data element or field is required or optional in the instance document. If a required field is not included in the instance document, the transcript will normally be rejected by the receiving institution or agency's computer program (XML Parser). This column will also include a notation if a field can be sent multiple times.

**Description:** This is a brief description of the data included with a particular XML tag name. The description normally comes from the description in the Core Main Schema for data elements.

**Recommended Use:** This column reflects recommendations from the developers of the High School Transcript Schema, standards of good practice as defined by the AACRAO Transcript Guide, and generally recommended practices for exchanging electronic transcripts. Reaching consensus on the recommended use of data elements and fields has grown into an additional task for the PESC Workgroup.

Recommendations in this column generally match the standards in Schema Use, especially if Schema Use shows an element or field as “Required.” However, a component listed as “Optional” in Schema Use may be listed as “Recommended” in Recommended Use if the Workgroup regards the element or field as essential and in keeping with good practices in the AACRAO community.

**Required:** Indicates that a sending institution must include the data element or field in its transmission.

**Recommended:** If the information for a field is available at the sending school, then ‘Recommended’ indicates that the field should be sent.

**Conditional:** This recommended use does not occur often in this Guide, but it may occur when the recommendation (recommended, optional or not recommended) is dependent on another data element being sent, or even on the value of another data element that is sent.

**Optional:** Indicates that it is generally up to the sender to include the data or not. If a paper transcript normally includes the element or field, then the sender should probably include it. In addition, within certain states, items marked as “Optional” may be essential for intrastate exchanges. Finally, it may be the case that a destination school receives all data at a single location; in such a case, the sender may need to provide optional elements to identify the specific intended recipient.

**Not Recommended:** Indicates that, in the view of the Workgroup, such a data element or field should not form part of a transmission. In general, the Workgroup recommends that institutions not send notes or comments, since most Student Information System programs cannot automatically process them. Sending these elements could thereby slow or impede automatic processing by the receiving school. However, exceptions to this rule-of-thumb may lie in the needs of individual states, as certain intrastate transmissions may require information that only a note or comment field can accommodate. In such cases, the Workgroup recommends that institutions in the state develop a protocol for maintaining and transmitting the element or field. In other cases, common practice may be to include data that is not recommended by the Workgroup.

In many cases, because of the reusability of complex data elements in XML, there are data elements included in this schema that may not be appropriate for use in the High School Transcript. In these cases, the recommended use may be designated as “Not Recommended.”

**Format:** This column shows the minimum and maximum number of occurrences of the data element. It also shows the minimum and maximum length allowable for a field, if that field does not have enumerated values and is not a special type of field, such a date field.

“**minOcc 1**” indicates a required field, since it must have at least one occurrence in the instance document. “**minOcc 0**” indicates an optional field.

“**maxOcc**” followed by a number or symbol specifies the maximum number of times that an element can recur in an instance document at a particular position. For example, “**maxOcc 5**” would indicate that the field may occur no more than 5 times in a given position of the instance document. “**maxOcc ∞**” indicates that a field may recur an unlimited number of times in the instance document. However, the use of an excessive number of occurrences

puts a burden on the receiving agency or institution, so they should always be limited to the fewest number possible.

“**minLength**” indicates the minimum number of characters that a field must contain, while “**maxLength**” indicates the maximum number of characters that a field may contain.

“**Enumeration**” is used to list the allowable values that may be used in the instance document. They must be used exactly as shown in this column. When the values are enumerated in this column, “minLength” and “maxLength” will not be indicated and are not appropriate.

“**DateTime**” always uses the same format: ccy-mm-ddThh:ii:ss(+GMT). An example would be “2005-11-20T08:15:36(+7)”. Likewise, “**Date**” always uses the format “ccyy-mm-dd”. An example would be “2005-11-20”. If either DateTime or Date is used, then “minLength” and “maxLength” will not be indicated.

“**xs:decimal**” indicates a numeric field. It has a maximum length of 18 characters including a decimal if is explicitly included. Typical values would be (1) a grade point average of “3.250”; (2) credits earned of “24”; or (3) credits included in GPA of “16”.

“**minInclusive**” indicates the lowest value of a decimal type field that can be included, while “**maxInclusive**” indicates the maximum value that can be included in a decimal type field. “**totalDigits**” indicates the maximum number of digits that can be used in the specified field.

**Comments:** The Guide may include comments beneath the rows of a given table and/or at the end of the table. The Workgroup intends for these comments to provide further explanation for the items displayed.

**Code Illustration:** Below each table, the Guide includes a snippet of what that portion of an instance document might look like in XML format. If the data element is a required data element for the schema, then that data element will be in bold type.

If the code is illustrating a complex data element that will be further explained on a subsequent page, then only the opening and closing tags will be included. For example:

```
<Course>
```

```
</Course>
```

If the code is illustrating a simple data element that is not recommended for inclusion, then an empty tag will be included. For example:

```
<NoteMessage/>
```

Appendix F shows an example of an XML Schema for a high school transcript. This example is not intended to match the Code Illustrations throughout the Guide, since a typical transcript would not include many of the optional sections of the Schema.

**NoteMessage:** You will find “NoteMessage” appearing throughout the Schema. This Guide almost always recommends against the routine use of note messages. Unless there is an agreed upon format for a note message between the sender and the receiver, notes cannot be interpreted and automatically processed by the receiver’s computer.

**UserDefinedExtensions:** The user-defined extension (UDE) design pattern is intended to address situations in which the current Schema does not accommodate sender-specific data. The Schema has to allow for additional elements that may be defined and used at a later date. The user-defined extensions pattern serves as a placeholder for these to-be-defined fields and elements. However, it can require that these fields be defined in a Schema by the organization that wants to use the extensions area.

Senders should take care not to use the user-defined extensions as a fall-back for doing appropriate research and design. They should only use the extension when in actuality, the organization defining the base Schema cannot define the additional elements that other organizations may need. Furthermore, other recipients not interested in the data these specific organizations want to exchange in the user-defined area, may then just ignore the UDE.

User-defined extensions are beneficial when both the sending and receiving institutions agree on their use. For best work practice, the Workgroup recommends the use of user-defined extensions in the following scope:

- Mutually defined sub-schemas: For the transmittal and receipt of data agreed upon by both sending and receiving institutions;
- State systems: In the California CSU system, this would be the General Education requirements; For the University of California system, this would be the UC requirements;
- Regional requirements

The benefit of using the user-defined extensions stems primarily from the open nature of the XML design. Institutions may take advantage of XML's openness, use the user-defined extensions to accommodate data for which the original Schema has not accounted, and standardize the use of the extensions among themselves. Such institution-to-institution agreements allow for the following:

- Strict standardization among institutions through design and implementation agreements,
- Ability of users outside of the agreement to ignore the data contained in the user-defined extensions.

Because the Schema recommends that institutions develop their own agreements for the use of user-defined extensions, the Workgroup also recommends against the development of national standards.

Example Code:

```
<UserDefinedExtensions>
  <YearTerm>20042</YearTerm>
  <CourseAbbrev>ENG</CourseAbbrev>
  <CourseNumb>0114</CourseNumb>
  <SectNumb>02</SectNumb>
</UserDefinedExtensions>
```

Please reference Excerpt from PESC Guidelines for XML Architecture and Data Modeling page 46 (<http://www.pesc.org/info/policies/PESC-Guidelines-for-XML-Architecture-and-Data-Modeling-v3-0.doc>) for a full explanation on the usage of user-defined extensions.

## **Development History and Acknowledgments**

The American Association of Collegiate Registrars and Admissions Officers (AACRAO) Committee on the Standardization of Postsecondary Education Electronic Data Exchange (SPEEDE) began working on a national standard format for the electronic exchange of postsecondary student records in 1989. Initially the work of the committee was funded by AACRAO. At about the same time, the US Department of Education's National Center for Education Statistics (NCES) began developing a national standard format for the electronic exchange of student records for kindergarten through high school students. The K12 community was primarily represented by the Council of Chief State School Officers (CCSSO). To gain more credibility in the creation and widespread adoption of the standards, the two groups (AACRAO and NCES) approached the American National Standards Institute's (ANSI) Accredited Standards Committee (ASC) X12 for assistance in developing and approving the two standard formats.

ASC X12 reviewed the two proposals and insisted that only one standard be developed and approved. That standard would be the Kindergarten through Postsecondary Education Student Record. At that time, NCES decided to fund the travel of the AACRAO SPEEDE Committee as well as those working on the K-12 standard. The ASC X12 Standard in the Electronic Data Interchange (EDI) format was approved in the early 1990's as ANSI ASC X12 Transaction Set 130 for the Student Educational Record (Transcript).

During this time period (before the Internet was widely available), the format stressed the transmission of as much data as possible using the fewest characters. This emphasis emerged because transmission costs were based on the number of characters or bytes being sent over the Value Added Electronic Networks (VANs).

The ASC X12 Standard is now in use by a significant number of postsecondary institutions in the United States and Canada. Approximately 500,000 postsecondary transcripts are exchanged electronically in the EDI format through the University of Texas at Austin Internet Server in the ASC X12 EDI format each year. At the secondary level, Florida schools exchange a significant number of electronic high school transcripts, because the state mandates the exchange in its proprietary format. Iowa and Maryland also have significant exchange. Overall, however, the number of electronic transcript exchanges remains small for secondary schools.

The number of transcripts exchanged electronically in the ASC X12 EDI format grows significantly each year. However, the education community felt that an alternative format should be explored. In the view of many, the perceived complexity of implementing the EDI standards was one of the reasons that many high schools did not use the EDI format.

The Postsecondary Electronic Standards Council (PESC) commissioned this exploration by creating the XML Forum. The Forum had as its purpose to determine if an XML format might result in significantly increased electronic exchange of high school student educational records.

The wide and inexpensive availability of XML software tools and the already existing and pervasive use of XML by many schools' information technology staffs made the XML process appear to have a much better chance of rapid acceptance and implementation by postsecondary educational institutions.

The early efforts of the XML Forum emphasized the creation of standard reusable core components. Once the Forum made significant progress with this work, PESC agreed to develop an XML Standard Format for the College Transcript to demonstrate that this could be done.

Bruce Marton from the University of Texas at Austin headed this effort and received the bulk of his support from the AACRAO SPEEDE Committee that had developed the earlier EDI standard.

PESC approved the XML standard for the College Transcript in May 2004.

The approval of the XML College Transcript generated considerable interest in the creation of an XML High School Transcript. Bruce Marton reviewed the ANSI ASC X12 EDI version of the transcript, which included both the College Transcript and the High School Transcript and noted many similarities.

Under Bruce's leadership, the AACRAO SPEEDE Committee created a very rough draft of a proposed schema for an XML High School Transcript in late summer of 2004.

The October 2004 PESC Meeting in Newport Beach, California, included a session on the draft XML High School Transcript Schema. Attendees expressed significant interest, and some formed an informal PESC Workgroup to review the draft and determine if it could be used to accelerate the development of a PESC XML High School Transcript.

The Workgroup began holding weekly conference calls and enhanced the rough draft from the end of 2004 through May 2005. PESC then sent out a press release to the wider educational community and invited anyone interested to participate in a special conference call on May 26, 2005. There were thirty-nine participants on that call. Many agreed to join the Workgroup and participate in future calls.

The Workgroup decided to continue the weekly calls at least through 2005 and subsequently to post the XML Schema on the PESC web site for review by a wider audience. To assist in that review, the Workgroup has prepared this draft of an Implementation Guide.

The Workgroup completed its work in January 2006 and submitted a request for approval to the PESC Change Control Board. The PESC CCB approved the request and PESC posted the proposed schema and the draft Implementation Guide on the PESC web site for a 30 day comment review. As a result of the review, eight comments were received. These comments were addressed by the Workgroup and the responses by the Workgroup were submitted to the PESC CCB for approval. These responses were approved by the PESC CCB on May 15, 2006 and the CCB requested that the PESC membership vote to approve the XML High School Transcript Schema as a PESC national standard.

This vote was held and the PESC voting membership approved the XML High School Transcript as a PESC Standard on June 9, 2006.

<p><b>Comment:</b> "Change" would be an appropriate value if the transcript had previously been sent and this is a corrected or updated transcript. "Institution Request" would be appropriate if this transcript is being sent at the request of a postsecondary institution to which the student has applied for admission. "Term Enroll" and "Term Grade" would not be typical values for this data element.</p>				

Tag Name	Schema Use	Description	Recommended Use	Format
TransmissionType	Required	The nature of the Transmission	Required	minOcc 1 maxOcc 1  <b>Enumeration:</b> Original Replace Duplicate Resubmission Reissue MutuallyDefined

Destination	Required	This field is mandatory and essential to indicate the destination or recipient of the high school transcript being sent.	Required	minOcc 1 maxOcc 1

<p><b>Comment:</b> With paper transcripts, it is normal practice for the recipient to decide if the transcript received is to be considered official or unofficial. With electronic transcripts exchanged through a secure process such as the University of Texas at Austin Internet Server, most recipients would consider them official. In some states, based on a prior agreement, some optional data elements that are not sent for official transcripts may be included in unofficial transcripts.</p>				
DocumentCompleteCode	Optional	This element indicates whether the document conveys a complete record. Partial documents may be produced for information that is recorded in multiple media or formats. If the student is still enrolled at the high school, but the record being sent includes all the available information to date for that student, then the record would be considered complete, and this data element would not be included in the transcript. A value of Partial generally means that the remainder will be sent in hard copy. <b>Comment:</b> [OrganizationIDGroup] is not an XML tag and does not appear in an instance document. It requires the choice of one and only one of the following code set tags to identify the institution/organization.				
OPEID	Required choice	The unique identifier assigned by the Office of Postsecondary Education for each data exchange partner.	Not Recommended	minOcc 0 maxOcc 1 minLength 3 maxLength 8

This would be the appropriate place in this schema to give information about the credits and GPA for the diploma that is awarded if the sending school does not include this in the academic session in which the diploma was awarded.</p>

**Student.AcademicRecord.AcademicSession**

Tag Name	Schema Use	Description	Recommended Use	Format
AcademicSessionDetail	Required	Information identifying the time period for the beginning of this session	Required	minOcc 1 maxOcc 1
<p><b>Comment:</b> The Session Designator within the Academic Session Detail is used to indicate the starting year and month of major academic terms or sessions within the sending school's calendar. For example, a typical fall term would begin in August or September. So, for a fall term that began in August of the year 2005, the value of this field would be "2005-08". All classes that began in this month and year would normally be included within this session designator, regardless of the ending dates of the classes within this session. Therefore, all classes with this same session designator would be included in the academic summary for this session. It is also possible for other courses that began later than the month and year noted here, might also have this same session designator, if they are generally considered to be within the academic session or term.</p>

<p><b>Comment:</b> Degree award information should be placed here when it is associated with an academic session, or in <i>AcademicRecord.AcademicAward</i> when not associated with an academic session. The developers of the PESC High School Transcript Schema recommend that the most appropriate place in the schema to indicate the award of the high school diploma is at the highest level of the schema, which is <i>Student.AcademicRecord.AcademicAward</i>.</p>

Tag Name	Schema Use	Description	Recommended Use	Format
CreditHoursAttempted	Optional	The total value of credit hours attempted whether or not included in the hours for GPA or hours earned.	Not Recommended	minOcc 0 maxOcc 1 xs:decimal
<p><b>Comment:</b> This would also include the credit value of a course from which the student withdrew, if it appears on the transcript. So if a student had enrolled in 10 Carnegie Units which are all included in the specified program and appear on the transcript, and had passed 5 units and withdrawn from 5 units, then the value of this field would be "10". If the student had enrolled for 10.5 units that are included in this program and are on the transcript, then the value of this field would be "10.5".</p>				
CreditHoursEarned	Optional	The total value of credit hours successfully completed or earned.	Not Recommended	minOcc 0 maxOcc 1 xs:decimal
<p><b>Comment:</b> If the student had earned 5 Carnegie Units and they all counted toward this program for this diploma, then the value of this data element would be "5". If only 4.5 units were earned, then the value would be "4.5".</p>				
CreditUnit	Optional	The type of credit (unit, semester, or quarter) associated with the credit hours earned for the course.	Not Recommended	minOcc 0 maxOcc 1  <b>Enumeration:</b> NoCredit Quarter Semester Units ClockHours CarnegieUnits ContinuingEducationUnits Unreported Other
<p><b>Comment:</b> Note that the credit unit is not necessarily directly related to the type of session in which a course is offered. A full year course, or a semester course, or a quarter course, may all offer Carnegie Units or Units as the credit unit.</p>				

Tag Name	Schema Use	Description	Recommended Use	Format
GradePointAverage	Optional	The value of the total quality points divided by the Credit Hours for Grade Point Average.	Not Recommended	minOcc 0 maxOcc 1 xs:decimal
<p><b>Comment:</b> For example, if the student had enrolled for 10 Carnegie Units that counted toward this diploma and this program, passed 8 units with grades of B worth 3 grade points for each Carnegie Unit, and 2 Carnegie Units with grades of F worth 0 grade points, then the calculation would be 24 grade points divided by 10 or a GPA of "2.4" or "2.40" or "2.400" depending on the policy of the sending school.</p>				
TotalQualityPoints	Optional	The total value of quality points used for the calculation of the Grade Point Average.	Not Recommended	minOcc 0 maxOcc 1 xs:decimal
<p><b>Comment:</b> If a student earned all grades of B (worth 3 grade points for each Carnegie Unit) in 8.5 Carnegie Units that count toward this diploma and this program, then the value of this data element would be "25.5".</p>				
CreditHoursforGPA	Optional	The total value of credit hours used to calculate the Grade Point Average.	Not Recommended	minOcc 0 maxOcc 1 xs:decimal
<p><b>Comment:</b> If a student earned grades of A (worth 4 grade points per unit) in 3 Carnegie Units in this program for this diploma; grades of F (worth 0 points per unit) in 4 units; and withdrew from 5 units, then the total credit hours for GPA for this diploma and this program would be "7".</p>				
GPARangeMinimum	Optional	The minimum possible GPA	Not Recommended	minOcc 0 maxOcc 1 xs:decimal
GPARangeMaximum	Optional	The maximum possible GPA	Not Recommended	minOcc 0 maxOcc 1 xs:decimal

<p><b>Comment:</b> The GPA in this section of the Schema is for the student's academic program for a specific session. It would be very unusual to include this on a high school transcript, since the entire portion about the student's program is not normally included on a high school transcript.</p>

	<b>Comment:</b> This is the nominal date when the award was granted. It might not be the same as the actual date of completion of the award requirements. If not the same, then this date will usually be later. The format for the date is ccyy-mm-dd.			
AcademicAwardTitle	Optional	The descriptive title for the academic award.	Recommended	minOcc 0 maxOcc 1 minLength 1 maxLength 80
	<b>Comment:</b> The typical title for the award on a high school transcript would be "diploma."			
AcademicHonors	Optional Repeatable	Honors information for the academic award.	Recommended	minOcc 0 maxOcc ∞
AcademicCompletionIndicator	Optional	An indication that the degree-seeking student completed all of the requirements for his or her academic program. Not used for Non-Degree programs.	Recommended	minOcc 0 maxOcc 1 true/false
	<b>Comment:</b> The value is "true" or "false" with all letters in lower case. The "true" condition would be typically be met on or before the date indicated in the "AcademicAwardDate" field, if that field is sent. If neither the completion date nor the award date is included, then sending this indicator is even more important.			
AcademicCompletionDate	Optional	The date on which the student's requirements for the degree were met or completed.	Recommended	minOcc 0 maxOcc 1 xs:date
	<b>Comment:</b> This is the actual date when all requirements for the award were completed. It might not be the same as the nominal date of the award.			
AcademicAwardProgram	Optional Repeatable	Information related to the specific area of study (e.g., major) under which the award was granted.	Optional	minOcc 0 maxOcc ∞
	<b>Comment:</b> The Academic Award Program would not normally be included on a high school transcript, so this part of the schema would not normally be sent.			
AcademicDegreeRequirement	Optional Repeatable	Thesis or dissertation information if required for the award.	Not Recommended	minOcc 0 maxOcc ∞
	<b>Comment:</b> Thesis or dissertation is not appropriate for the high school transcript.			
AcademicSummary	Optional Repeatable	Academic summary information pertaining to the award.	Optional	minOcc 0 maxOcc ∞
NoteMessage	Optional Repeatable	Additional information about the academic award	Not Recommended	minOcc 0 maxOcc ∞ minLength 1 maxLength 80
	<b>Comment:</b> This is the appropriate place in the Schema to include the awarding of the high school diploma if the high school normally includes it in the session in which all the requirements were met. However, the Workgroup that developed the PESC XML High School Transcript Schema recommends that the award of the high school diploma be included under Student.AcademicRecord.AcademicAward.

<p><b>Comment:</b> While academic award programs and summaries can be communicated in several different elements, it is recommended that they be reported at the highest appropriate level. E.G., use <code>AcademicAward.AcademicAwardProgram</code> to indicate degree major; <code>AcademicAward.AcademicAwardProgram.ProgramSummary</code> for degree major GPA and honors; <code>AcademicAward.AcademicSummary</code> for degree GPA and honors.</p>

Tag Name	Schema Use	Description	Recommended Use	Format
CreditHoursAttempted	Optional	The total value of credit hours attempted whether or not included in the hours for GPA or hours earned.	Recommended	minOcc 0 maxOcc 1 xs:decimal
<p><b>Comment:</b> This would include the credit value of a course from which the student withdrew, if it appears on the transcript. So if a student had enrolled in 10 Carnegie Units which are all included for this diploma in this session and are on the transcript, and had passed 5 units and withdrawn from 5 units, then the value of this field would be "10". If the student had enrolled for 10.5 units that are included for this diploma awarded in this session and are on the transcript, then the value of this field would be "10.5".</p>				
CreditHoursEarned	Optional	The total value of credit hours successfully completed or earned.	Recommended	minOcc 0 maxOcc 1 xs:decimal
<p><b>Comment:</b> If the student had earned 5 Carnegie Units and they all counted toward this diploma awarded in this session, then the value of this data element would be "5". If only 4.5 units were earned, then the value would be "4.5".</p>				
CreditUnit	Optional	The type of credit (unit, semester, or quarter) associated with the credit hours earned for the course.	Recommended	minOcc 0 maxOcc 1  <b>Enumeration:</b> NoCredit Quarter Semester Units ClockHours CarnegieUnits ContinuingEducationUnits Unreported Other

GradePointAverage	Optional	The value of the total quality points divided by the Credit Hours for Grade Point Average.	Recommended	minOcc 0 maxOcc 1 xs:decimal
<b>Comment:</b> For example, if the student had enrolled for 10 Carnegie Units that counted toward this diploma, passed 8 units with grades of B worth 3 grade points for each Carnegie Unit, and 2 Carnegie Units with grades of F worth 0 grade points, then the calculation would be 24 grade points divided by 10 or a GPA of "2.4" or "2.40" or "2.400" depending on the policy of the sending school.				
TotalQualityPoints	Optional	The total value of quality points used for the calculation of the Grade Point Average.	Recommended	minOcc 0 maxOcc 1 xs:decimal
<b>Comment:</b> If a student earned all grades of B (worth 3 grade points for each Carnegie Unit) in 8.5 Carnegie Units that count toward this diploma, then the value of this data element would be "25.5".				
CreditHoursforGPA	Optional	The total value of credit hours used to calculate the Grade Point Average.	Recommended	minOcc 0 maxOcc 1 xs:decimal
<b>Comment:</b> If a student earned grades of A (worth 4 grades points per unit) in 3 Carnegie Units for this diploma; grades of F (worth 0 points per unit) in 4 units; and withdrew from 5 units, then the total credit hours for GPA for this diploma would be "7".				
GPARangeMinimum	Optional	The minimum possible GPA	Recommended	minOcc 0 maxOcc 1 xs:decimal
<b>Comment:</b> If the lowest possible grade is an F and a grade of F is valued at 0 grade points, then this value would be "0", or "0.0" or "0.00", etc.				
GPARangeMaximum	Optional	The maximum possible GPA	Recommended	minOcc 0 maxOcc 1 xs:decimal
<b>Comment:</b> If the highest possible grade is an A and a grade of A is valued at 4 grade points, then this value would be "4" or "4.0" or "4.00", etc.				
NoteMessage	Optional Repeatable	Additional information about the GPA	Not Recommended	minOcc 0 maxOcc ∞ minLength 1 maxLength 80
<b>Comment:</b> The GPA reported in this section of the Schema is an overall GPA for all courses that count toward the diploma described in this section.

CourseCreditValue	Optional	Number indicating the credit hours that may be earned in the course.	Recommended	minOcc 0 maxOcc 1  xs:decimal
<b>Comment:</b> For example, if the course is worth 1 Carnegie Unit, and if the student withdrew from the course, but the course still appears on the high school transcript, then the value of this field is "1". Since it is a decimal field, it could also have a value of "1.0" or "1.00".				
CourseCreditEarned	Optional	The number of credits a student earned by the successful completion of a course.	Recommended	minOcc 0 maxOcc 1  xs:decimal
<b>Comment:</b> For example, if the course is worth 1 Carnegie Unit, and if the student passed the course, then the value of this field is "1". Since it is a decimal field, it could also have a value of "1.0" or "1.00".				

Tag Name	Schema Use	Description	Recommended Use	Format

Not Recommended	minOcc 0 maxOcc 1 minLength 1 maxLength 200

Recommended	minOcc 0 maxOcc 1  <b>Enumeration:</b> RepeatCounted RepeatNotCounted ReplacementCounted ReplacedNotCounted RepeatOtherInstitution NotCountedOther
<b>Comment:</b> If the sending high school has no policy on how to treat repeated courses, then this data element can be ignored by the sending high school. Likewise, if the receiving school has no policy or has a policy to ignore repeat calculations, then it can also be ignored. But if the sending school has such a policy, then this is the place to indicate that policy. For example, if the student previously took the same course, received a failing grade and has now completed this course with a passing grade, then the appropriate value might be "ReplacementCounted". Likewise, if this is the first attempt of the course, then this value might be "RepeatNotCounted".

<p><b>Comment:</b> This is a code set that is due to be approved and published by the fall of 2006. When it is completed and published, it will greatly facilitate the evaluation of courses by the receiving institution.</p> <p>It is structured as follows:</p> <p>Digits 1, 2: This is the major subject area of course content in the high school course. Its breakdown is shown as the next data element (CourseSubjectAreaCode) which follows.</p> <p>Digits 3-5: A further breakdown of the course content in the high school course.</p> <p>Digit 6: Course Level (B for basic or remedial; G for general or regular; E for enriched or advanced, and H for honors.</p> <p>Digits 7-10: Available Credit. <p><b>Comment:</b> For example, if the student earned a grade of B in the course, and if the grade of B is worth 3 grade points, and if this course was worth 1 Carnegie Unit, then the value of this data element is "3". Likewise, for a course that is worth 0.5 Carnegie Units, a grade of B would be worth "1.5" CourseQualityPointsEarned.</p>

<p><b>Comment:</b> If the sending high school has no policy on how to treat repeated courses, then this data element can be ignored by the sending high school. Likewise, if the receiving school has no policy or has a policy to ignore repeat calculations, then it can also be ignored. But if the sending school has such a policy, then this is the place to indicate that policy. For example, if the student previously took the same course, received a failing grade and has now completed this course with a passing grade, then the appropriate value might be "ReplacementCounted". <p><b>Comment:</b> This is a code set that is due to be approved and published by the fall of 2006. When it is completed and published, it will greatly facilitate the evaluation of courses by the receiving institution.</p> <p>It is structured as follows:</p> <p>Digits 1, 2: This is the major subject area of course content in the high school course. Its breakdown is shown as the next data element (CourseSubjectAreaCode) which follows.</p> <p>Digits 3-5: A further breakdown of the course content in the high school course.</p> <p>Digit 6: Course Level (B for basic or remedial; G for general or regular; E for enriched or advanced, and H for honors.</p> <p>Digits 7-10: Available Credit. UserDefinedExtensions	Optional	Additional structured information. Requires mutually defined XML schema.	Optional	minOcc 0 maxOcc 1
<p><b>Comment:</b> This is not the appropriate place in the instance document to include courses taken at the sending school. Neither is it the recommended place to include courses transferred in from another school, if enough information is available to include them as a separate session either with an override school indicated, or as another iteration of the academic record for the other school. If possible, always include courses under a session. If this is not possible, for example, if the courses were transferred in from an international school, or not enough information was included about the session at the other school to make the session meaningful, then those transfer courses may be included here.</p>

Tag Name	Schema Use	Description	Recommended Use	Format
Requirement	Optional Repeatable	Curriculum requirements satisfied by successful completion of the Additional Student Achievement	Optional	minOcc 0 maxOcc ∞
Attribute	Optional Repeatable	Attributes of the Additional Student Achievement which may require special handling by the receiving institution	Optional	minOcc 0 maxOcc ∞

NoteMessage	Optional Repeatable	Additional information about the Additional Student Achievement	Not Recommended	minOcc 0 maxOcc ∞ minLength 1 maxLength 80

**Comment:** The use of the Requirement, Attribute and Proficiency fields is normally based on previously made agreements between or among selected trading partners (usually within a state or region). For example, a specific state might have a requirement for computer competency. That state might use a requirement code of TXA, where TX is the state code and A designates the computer competency requirement. Another state might wish to identify an attribute of the student that indicates the student is the first in his or her family to attend or graduate from a high school. This attribute might be identified with a state code of IA and the attribute code of B. This attribute would be based on prior agreements among states, and it provides a great deal of flexibility to exchange previously specified data within a state or region.
