Dear Mr. Webster:

The Tetra Tech EM Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START) is submitting the final emergency response report for the Circle Environmental sites 1 and 2 in Dawson, Terrell County, Georgia. This report summarizes field activities conducted at each site from September 11 through December 19, 2007.

If you have any questions about the enclosed report, please call me at (206) 300-0301 or Charles Berry at (678) 775-3098.

Sincerely,

1.0 INTRODUCTION

This emergency response report has been prepared under the provisions of Technical Direction Document (TDD) Numbers (Nos.) TTEMI-05-001-0047 and TTEMI-05-001-0048, which the U.S. Environmental Protection Agency Region 4 (EPA) assigned to the Tetra Tech EM Inc. (Tetra Tech) Region 4 Superfund Technical Assessment and Response Team (START) under Contract No. EP-W-05-054. The overall scope of these TDDs, monitored by EPA On-Scene Coordinator (OSC) Mr. James Webster, was to respond to the Circle Environmental, Inc. sites 1 and 2. Although these projects were issued under separate TDDs, this report addresses activities conducted at both sites because of the similar background associated with each. Specific elements of these TDDs included providing responders and the necessary equipment to respond to an emergency release involving unknown drums; air monitoring; level B entries involving air monitoring and hazardous materials assessment as needed; air monitoring support using the Rapid Assessment Tool (RAT) system; overseeing and documenting emergency responder and contractor activities with logbook notes and photographs; and preparing a health and safety plan and a draft/final report upon completion of response activities.

This Comprehensive Environmental Response, Compensation, and Liability Act emergency response report discusses the site background (see Section 2.0), emergency response activities (see Section 3.0), waste disposal activities (see Section 4.0), and post-response sampling activities (see Section 5.0). A summary of activities conducted at each site is presented in Section 6.0. Appendix A provides a copy of the logbook notes used to document response activities. Appendix B provides a photographic log used to document response activities. Appendix C provides a drum inventory summarizing the containers discovered at each site as well as available label information and markings, hazard categorization test results, wastestream group determinations, and ultimate disposition. Appendix D provides a table of witnesses associated with this response. Attachment 1 provides copies of the waste manifests generated for waste disposal activities. Attachment 2 provides an electronic copy of the RAT air monitoring data obtained during response activities at Circle Environmental site 1. Attachment 3 provides an electronic copy of the analytical data package from Air Toxics, Ltd. and the data validation report for air samples collected from Circle Environmental site 1. Attachment 4 provides an electronic copy of the analytical data package from Shealy Environmental Services, Inc. and the data validation report for soil samples collected from Circle Environmental site 2.

2.0 BACKGROUND

According to information from their website (http://www.circle.net), Circle Environmental is involved in recycling oil-contaminated absorbent materials, including booms, pads, socks, and shop towels. Circle Environmental reportedly has 12 facilities throughout the country, primarily located in the southeast, including South Carolina, Kentucky, and Georgia.

In early September 2007, EPA received notification from officials with the City of Dawson, Georgia regarding abandoned drums and hazardous waste located at two locations in Dawson, Terrell County, Georgia; the drums were reportedly associated with Circle Environmental. Following their initial inspection on September 10, 2007, EPA notified Tetra Tech START of the situation and requested three responders to mobilize to the sites on September 11, 2007.

Circle Environmental site 1 is located at 170 5th Avenue SW in Dawson, Terrell County, Georgia (see Figure 1). The approximate geographic coordinates of the site are 31.77318 degrees north latitude and 84.4466 degrees west longitude. The site is located in a residential / commercial area within the city limits of Dawson at the intersection of 5th Avenue SW and Main Street (Route 520). Circle Environmental occupied the southwest corner of a brick building at this location. Other occupants of the block include a tattoo parlor and an automobile repair shop.

Circle Environmental site 2 is located at 2222 Albany Highway in Dawson, Terrell County, Georgia (see Figure 1). The approximate geographic coordinates of the site are 31.75199 degrees north latitude and 84.42380 degrees west longitude. The site consists of an open and grassy area in the front portion of a property owned and operated by Harris Wrecker Service, and is bordered to the west and north by the Harris Wrecker Service facility, to the east by Albany Highway (Route 520), and to the south by a mixture of wooded and open land.

3.0 EMERGENCY RESPONSE ACTIVITIES

On September 11, 2007, Tetra Tech START members Chuck Berry, Brian Croft, and Chris Jones mobilized to Dawson, Georgia to meet with OSC James Webster and representatives of WRS, Inc., the Emergency and Rapid Response Services (ERRS) contractor. According to information obtained by EPA, the two sites were formerly used by Circle Environmental for the recycling of contaminated rags and absorbent materials. The following paragraphs provide a summary of response activities conducted at each site.

Circle Environmental Site 1

On September 11, 2007, EPA, ERRS, and Tetra Tech START conducted an inspection of the building at Circle Environmental site 1 located at 170 5th Avenue SW, which included air monitoring using a flame ionization detector (FID) and photoionization detector (PID). Upon entry into the building, hundreds of drums were observed, some of which were stacked on pallets two and four levels high. Numerous drums were labeled as containing hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA); specifically, RCRA listed wastes with codes of F002 (spent halogenated solvents – tetrachloroethylene [also known as perchloroethylene]) as well as F003 and F005 (spent non-halogenated solvents – solvent/paint soaked rags) were observed. In addition, numerous drums were labeled as containing flammable materials. Air monitoring results during the initial inspection indicated maximum readings in the breathing zone of 6.8 parts per million (ppm) on the FID and 10.3 ppm on the PID. Several drums with lids missing were observed to contain paint- and solvent-soaked rags; FID readings up to 390 ppm were documented immediately above some of these rags.

On September 12 and 13, 2007, ERRS personnel initiated cleanup activities by stacking empty drums on their sides along the interior north wall of the building, clearing empty pallets from the building, and sweeping the floor to remove dust and other debris in preparation for drum staging activities. Empty pallets were removed from the site and hauled away by a local recycler. As ERRS personnel staged the drums in temporary rows to facilitate access for future sampling activities, Tetra Tech START inventoried and photographed each drum to document the drum condition and obtain available label information. Data obtained from these activities were entered into the drum inventory (Appendix C) maintained by Tetra Tech START. An extendable boom forklift was used by ERRS personnel to move the pallets of drums stacked four levels high from the western portion of the building.

From September 14 through 26, 2007, Tetra Tech START and ERRS personnel conducted drum assessment, sampling, and staging activities. Prior to the start of these activities, EPA, ERRS, and Tetra Tech START identified five preliminary wastestream groups that were expected to represent the majority of drums present at the site. The preliminary wastestream groups were determined based on information gathered through EPA's discussions with the former operator regarding previous operations conducted at the facility, information obtained during the drum inventory, and waste disposal profiling requirements. The five preliminary wastestream groups initially identified are listed below along with the methods used to make the determination for each drum.

- Perchlorethylene – Hazard categorization tests were conducted to determine if the drum contents were a "sinker" by using a disposable pipette to drop a small amount of the material into a jar containing water; if the material or some portion thereof sank to the bottom, it was categorized as perchloroethylene based on the high density associated with chlorinated compounds. Drums in this category were marked with orange spray paint.
- Petroleum Liquids – Hazard categorization tests were conducted to determine if the drum contents were a "floater" by using a disposable pipette to drop a small amount of the material into a jar containing water; if the material floated on the surface, it was categorized as petroleum liquid. Drums in this category were marked with blue spray paint.
- Pads and Boom – Based on visual observation, a determination was made to place drum contents in this category that included oily pads and absorbent booms. Drums in this category were marked with green spray paint.
- Absorbents – Based on visual observation, a determination was made to place drum contents in this category that included cat litter type materials. Drums in this category were marked with yellow spray paint.
- Rags – Based on visual observation, a determination was made to place drum contents in this category that included paint- and solvent- soaked rags. Drums in this category were marked with red spray paint.

During drum assessment and sampling activities, the RAT system was used with the Draeger MultiRAE to monitor the air for volatile organic compounds (VOC), carbon monoxide, oxygen, and the lower explosive limit at the entrance to and throughout the interior of the building. Monitoring data generated using the RAT system are provided in Attachment 2. High concentrations of carbon monoxide were periodically detected inside the building during assessment and sampling activities due to exhaust from the gasoline-powered extendable forklift used to move pallets. In these instances, personal protective equipment inside the building was upgraded to level B as a precautionary measure, and ERRS coordinated with their equipment vendor to eventually exchange the gasoline-powered forklift for one powered by propane. In addition, erratic readings for oxygen were obtained during transportation and disposal activities, and were attributed to a bad oxygen sensor. Oxygen readings returned to normal once a new sensor was received and installed.

Drum assessment and sampling activities involved the following general procedures.

- Opening each drum using level B personal protective equipment and inspecting the contents.

- Categorizing each drum into one of the preliminary wastestream groups discussed above, if appropriate.
- Collecting representative composite samples from each of the preliminary wastestream groups.
- Collecting grab samples from individual drums whose contents could not be categorized into one of the five preliminary wastestream groups initially identified because of varying chemical characteristics; further hazard categorization tests were conducted on these samples to determine wastestream groups for these drums.

During response activities, 536 drums were inventoried at the Circle Environmental site 1, including 98 empty drums. Following completion of assessment activities, ERRS and START personnel continued to prepare for future transportation and disposal operations by conducting further hazard categorization tests on the individual grab samples collected from the drums whose contents could not be categorized into one of the five preliminary wastestream groups initially identified; overpacking drums that were deemed unsuitable for transportation based on U.S. Department of Transportation regulations; and verifying information contained in the drum inventory and clarifying any discrepancies.

Composite samples were collected from each of the five wastestream groups and shipped by the ERRS contractor for waste disposal profile analyses at a fixed laboratory. As such, the drums were restaged according to the preliminary wastestream groups to facilitate the collection of composite samples as well as future transportation and disposal activities. The rags wastestream group was divided into the following subgroups.

- Rags indicating involvement by only the Circle Environmental facility located in Dawson, Georgia (127 drums).
- Rags indicating involvement by the Circle Environmental facility located in Dawson, Georgia as well as the Circle Environmental facility located in Russellville, Kentucky (11 drums).
- Rags indicating involvement by the Circle Environmental facility located in Dawson, Georgia as well as the Circle Environmental facilities located in Russellville, Kentucky and Columbia, South Carolina (1 drum).
- Rags indicating involvement by the Circle Environmental facility located in Dawson, Georgia as well as the Venture Industries facility in Hopkinsville, Kentucky (8 drums).

On September 26, 2007, all personnel demobilized from the site pending finalization of transportation and disposal arrangements. Arrangements were made by EPA with the Dawson Police (Department of Public Safety) to provide security for the site during the demobilization period.

Upon receipt of the analytical data, the wastestream groups were finalized as listed below.

1. Perchloroethylene (high concentration) – 69 drums were included in this wastestream group.
2. Perchloroethylene (low concentration) – 26 drums were included in this wastestream group, which was previously identified as petroleum liquids, but determined to also contain lower concentrations of perchloroethylene based on laboratory analyses.
3. Pads and boom – 165 drums were included in this wastestream group.
4. Absorbents – 15 drums were included in this wastestream group.
5. Rags – 147 drums were included in this wastestream group.
6. Flammable Liquids –2 drums were included in this wastestream group.
7. Grease – 2 drums were included in this wastestream group.
8. Heat Exchanger Oil – 1 drum was included in this wastestream group.
9. Paint – 4 drums were included in this wastestream group.
10. Trash – 5 drums were included in this wastestream group.
11. Water – 2 drums were included in this wastestream group.

Circle Environmental Site 2

On September 11, 2007, Tetra Tech START met with OSC James Webster and ERRS personnel at the Circle Environmental site 2 located at 2222 Albany Highway in Dawson, Terrell County, Georgia. Upon arrival hundreds of drums and three roll-off containers were observed scattered on an open and grassy area approximately 50 yards west of Albany Highway (Route 520). The drums and roll-off containers were present on property owned by the Harris Wrecker Service.

Tetra Tech START conducted a walkthrough inspection of the area. Numerous drums were labeled as containing hazardous waste as defined by RCRA. The majority of drums at this location were determined to be empty. A small number of drums were observed to contain paint- or solvent-soaked rags similar to those observed at the Circle Environmental site 1. A solvent-type odor was present in the vicinity of the drums and roll-off containers. Air monitoring results during the initial inspection indicated no readings above background in the breathing zone while readings on the PID reached 19.3 ppm immediately above an open drum containing rags and 53.2 ppm immediately above rags within two of the roll-off containers.

From September 11 through 12, 2007, ERRS personnel staged the drums on plastic sheeting while START inventoried and photographed each drum to document the drum condition and obtain available label information. Data obtained from these activities were entered into the drum inventory (Appendix C) maintained by Tetra Tech START.

From September 13 through 15, 2007, a backhoe was used to crush the empty drums and place them into three clean roll-off containers procured by ERRS and lined with plastic sheeting. In total, 364 drums were inventoried and photographed at the Circle Environmental site 2. This total includes 13 drums containing solvent-soaked rags; 3 drums containing accumulated water; 1 drum containing miscellaneous aerosol cans; 1 drum containing paint; 1 drum containing approximately 5 inches of sludge; and 345 empty drums. In addition, two roll-off containers were determined to each be approximately half full with solvent-soaked rags while the third roll-off container was determined to be empty. The two roll-off containers that contained solvent-soaked rags were covered with lumber and plastic sheeting. One composite sample was collected from the 13 drums containing solvent-soaked rags and one composite sample was collected from the 3 drums containing water. Both samples were shipped by ERRS to a fixed laboratory for waste disposal profile analyses. The 19 drums containing rags, water, aerosol cans, paint, and sludge were moved to the Circle Environmental site 1 for future transportation and disposal while the roll-off containers remained on site until transportation and disposal arrangements were finalized by ERRS.

4.0 WASTE DISPOSAL ACTIVITIES

In October and November 2007, EPA and ERRS personnel coordinated the transportation and disposal of the three roll-off containers of empty drums and the two roll-off containers of rags from the Circle Environmental site 2. On December 3, 2007, EPA, Tetra Tech START, and ERRS personnel mobilized back to the Circle Environmental site 1 for transportation and disposal activities, which were completed on December 18, 2007. ERRS personnel also swept the floor of the building at Circle Environmental site 1 and placed all sweepings into drums for disposal. Table 1 provides a summary of transportation and disposal activities. Attachment 1 provides a copy of the waste manifests generated during transportation and disposal activities.

5.0 POST-RESPONSE SAMPLING ACTIVITIES

This section provides a summary of post-response sampling activities conducted at each site following the completion of transportation and disposal activities.

Circle Environmental Site 1

Following completion of transportation and disposal activities, Tetra Tech START collected three air samples from the site on December 19, 2007 for fixed laboratory analyses of VOCs and semivolatile organic compounds (SVOC). Two samples were collected from the interior of the building while one sample was collected from outside the building near the south entrance (see Figure 2). Each air sample was collected using the following equipment: a summa canister fitted with a critical orifice (flow controller), which was cleaned and pre-calibrated by the laboratory for the collection of approximately 6 liters of air over an 8-hour period; and a polyurethane foam sampling tube in conjunction with a Gilian GilAir5® personal air sampling pump, which was calibrated on site before and after sampling to calculate the volume of air pulled for each sample. Upon completion, air samples were packaged and shipped to Air Toxics, Ltd. (Folsom, California) for the following fixed laboratory analyses: VOCs using EPA Modified Method T-015; and SVOCs using EPA Modified Method TO-13A.

Circle Environmental Site 2

On September 27, 2007, EPA and START returned to Circle Environmental site 2 to collect soil samples from the area where the drums and roll-off containers owned by the PRP had been stored. The purpose of the samples was to determine whether contaminants had been released from the drums or roll-off containers formerly stored at the location, and if so, whether a removal action was warranted. Tetra Tech START collected four composite soil samples plus one field duplicate sample from the site (see Figure 3). Each sample consisted of five aliquots with one aliquot in each sample biased toward areas receiving drainage that may have carried contaminants released from the roll-off containers owned by the PRP. The soil samples were subsequently packaged and shipped to Shealy Environmental Services, Inc. (West Columbia, South Carolina) for the following fixed laboratory analyses: VOCs using EPA Method 8260B; SVOCs using EPA Method 8270C; and RCRA Metals using EPA Methods 6010B and 7471A.

6.0 SUMMARY AND CONCLUSIONS

In early September 2007, EPA received notification from officials with the City of Dawson, Georgia regarding abandoned drums and hazardous waste located at two locations in Dawson, Terrell County, Georgia; the drums were reportedly associated with Circle Environmental. The sites were identified as Circle Environmental site 1, located at 170 5th Avenue SW, and Circle Environmental site 2, located at 2222 Albany Highway. Following their initial inspection on September 10, 2007, EPA notified Tetra Tech START of the situation and requested responders to mobilize to the sites on September 11, 2007.

Upon arrival, hundreds of drums as well as three roll-off containers partially filled with solvent-soaked rags were observed. Reportedly, Circle Environmental was involved in the recycling of oil-contaminated absorbent materials, including booms, pads, socks, and shop towels. Many of the drums were labeled as containing tetrachloroethylene, also known as perchloroethylene.

Initial response activities included the staging and inventorying of all drums at each site. Label and marking information were recorded into a drum inventory maintained by Tetra Tech START. Each drum was inspected and hazard categorization tests were performed to determine appropriate wastestream groups, which were identified based on conversations between EPA and the owner of Circle Environmental as well as field observations and waste disposal profile requirements.

Composite samples were then collected from each of the wastestream groups and shipped to a fixed laboratory by ERRS for waste disposal profile analyses. On September 26, 2007, personnel demobilized from the sites pending finalization of transportation and disposal arrangements.

Upon receipt of analytical data for waste disposal profile analyses, the wastestream groups were finalized and personnel mobilized back to the site for transportation and disposal activities. Table 3 provides a summary of waste disposal activities for each site, including the number of containers shipped as well as identification of the wastestream groups and disposal facilities used. Transportation and disposal activities were completed on December 18, 2007.

Notes:

[a] Includes one drum (2-084) that contained 5 inches of oily sludge and was transported from Circle Environmental site 2 to Circle Environmental site 1, where it was used to contain floor sweepings before being shipped for disposal.

Following completion of transportation and disposal activities, three air samples were collected from Circle Environmental site 1 and four soil samples were collected from Circle Environmental site 2 to determine if further contamination was present. Analytical data for air samples collected from Circle Environmental site 1 indicated the presence of tetrachloroethylene, 1,4-dichlorobenzene, isophorone, and di-n-butylphthalate at concentrations exceeding the respective PRGs for ambient air. Analytical data for soil samples collected from Circle Environmental site 2 indicated that no contaminants were present at concentrations above the respective PRGs for residential soil.

Dear Mr. Webster:

The Tetra Tech Superfund Technical Assessment and Response Team (START) conducted data validation of the analytical results for three air samples that were collected at the Circle Environmental No. 1 Site in Dawson, Georgia, on December 19, 2007. The samples were analyzed under laboratory work order Nos. 0712491 and 0712517 by Air Toxics LTD. (Air Toxics), of Folsom, California. The samples were analyzed for TCL VOCs by EPA Method TO-15 under work order No. 0712517 and TCL SVOCs by EPA Method TO-13A under work order No. 0712491.

Analytical data were evaluated in general accordance with all applicable data validation guidance documents, including the following: the U.S. Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines (NFG) for Organic Data Review (EPA July 2007). The analytical methods used by the fixed laboratories during this project provide guidance on procedures and method acceptance criteria that, in some areas, differ from the NFG. Where the methods and the NFG differ, the data validators followed the acceptance criteria in the methods. In addition, if laboratory-derived acceptance criteria were presented in the fixed laboratory data package, then these criteria were used to evaluate the data unless the criteria were considered inadequate.

Data were evaluated based on the following criteria:

- Data Completeness
- Sample Preservation, Sample Receipt, and Holding Times
- Gas Chromatography and Mass Spectrometry (GC/MS) Instrument Performance Checks
- Initial Calibration
- Continuing Calibration
- Calibration Verification
- Laboratory Blanks
- System Monitoring Compounds (Surrogates)

- Matrix Spike/Matrix Spike Duplicates (MS/MSD)
- Laboratory Duplicate Sample Analysis

- System Performance and Instrument Stability

The following data validation approach was used; it should meet the needs of most data uses and requirements for limits on uncertainty for decision-making using the data. This approach consisted of a review of all of the data, including the raw data. This data validation effort constituted a full validation of the data and involved a 100 percent check against applicable acceptance criteria of all quality control (QC) parameter data, including the parameters listed above. In addition, all data that pertain to analyte identification, such as chromatograms and mass spectra, were checked completely (100 percent) to evaluate the accuracy of analyte identification. This effort also involved an in-depth quantitative check of a fraction of the data; this check involved recalculation of QC results (such as percent recoveries [%R] and relative percent difference [RPD] values) and target analyte results from the raw data. Results were recalculated at a frequency of 10 percent for the data that had been transcribed and generated by hand. Results for data calculated by software were recalculated at varying frequencies and to the extent necessary to confirm the adequacy of the software. If errors or discrepancies were encountered when any data were recalculated and checked, the extent of the data check was expanded, as necessary, to identify the full extent of the problem.

Enclosure 1 presents copies of the sample analytical results sheets from the laboratory data package, with hand-entered qualifications from the data validation effort. Enclosure 2 presents the same data validation-qualified analytical results in table format.

The following sections discuss the data package and provide an overall assessment of the data. This discussion concentrates on the irregularities associated with the various parameters.

DATA COMPLETENESS

The data packages for laboratory work order Nos. 0712491 and 0712517 were complete.

SAMPLE PRESERVATION, SAMPLE RECEIPT, AND HOLDING TIMES

There were no discrepancies observed in the sample preservation, sample receipt or method-specified holding times.

GC/MS INSTRUMENT PERFORMANCE CHECKS

All GC/MS instrument performance checks for the analyses of samples for VOCs and SVOCs met the acceptance criteria.

INITIAL CALIBRATION

The initial calibrations were analyzed at the proper frequencies and concentrations and met all requirements, with the following exception. In the VOC initial calibration performed on November 24, 2007, the percent relative standard deviation values for hexachlorobutadiene and 1,2,4-trichlorobenzene

were above the QC limit of 30 percent. Therefore, the non-detect results for hexachlorobutadiene and 1,2,4-trichlorobenzene were qualified as estimated (flagged "UJ") for all samples.

CONTINUING CALIBRATION

The continuing calibrations were analyzed at the proper frequencies and concentrations and met all requirements, with the following exception. In the VOC continuing calibration performed on December 31, 2007, percent difference values for 1,4-dichlorobenzene and hexachlorobutadiene were high and exceeded the QC limit of 25 percent. Therefore, the non-detect results for 1,4-dichlorobenzene and hexachlorobutadiene were qualified as estimated (flagged "UJ") for all samples.

CALIBRATION VERIFICATION

The second source calibration verifications for the organic analyses were analyzed at the proper frequencies and concentrations and met all requirements, with the following exception. In the VOC calibration verification performed on November 25, 2007, the recovery value for Freon 113 was biased high and exceeded the specified QC limits of 70 to 130 percent. No qualifications were warranted, because Freon 113 was not detected in the associated samples.

LABORATORY BLANKS

Method blanks were free of target analytes.

SYSTEM MONITORING COMPOUNDS (SURROGATES)

All surrogate recoveries were within the laboratory-specified control limits.

MATRIX SPIKE/MATRIX SPIKE DUPLICATES

MS/MSD analyses were not performed on the air samples. No qualifications were applied for this data omission.

LABORATORY DUPLICATE SAMPLE ANALYSIS

Laboratory duplicate sample analyses were performed on sample A-01 for both VOC and SVOC analyses. All RPDs were less than 15 percent with one exception. A low-level concentration of tetrachloroethene was detected in the laboratory duplicate, but not in the original sample. No qualifications were warranted for this irregularity.

FIELD DUPLICATES

No field duplicates were provided with the samples.

LABORATORY CONTROL SAMPLES

All LCS results were within the QC limits.

DILUTION BY ADDITION OF SOLVENT

No analyses required dilution by addition of solvent.

DILUTION BY RE-EXTRACTION AND REANALYSIS

No samples required dilution by re-extraction and reanalysis.

INTERNAL STANDARDS

For the VOC and SVOC analyses, the internal standard area counts and retention times in the samples were within QC limits established using the associated continuing calibration standard data.

TARGET ANALYTE IDENTIFICATION

The relative retention times (RRT) of the reported compounds in the VOC and SVOC analyses were within ±0.06 RRT units of the standard RRTs. For each detected analyte in the VOC and SVOC analyses, all ions present in the standard mass spectrum at a relative intensity greater than 10 percent were present in the sample spectrum and agreed within ±20 percent between the standard and sample spectra.

ANALYTE QUANTITATION AND REPORTED DETECTION LIMITS

Sample results were checked for proper dilution factors, volumes, masses, and adjustments for moisture content. Sample results and reporting limits were correctly calculated. No sample results less than the laboratory reporting limits (RL), but greater than the method detection limits (MDL), were reported.

SYSTEM PERFORMANCE AND INSTRUMENT STABILITY

No signs of degraded instrument performance were observed. Analytical systems were judged to have been within control and stable during the analyses.

OVERALL ASSESSMENT OF DATA

The overall quality of this data package was acceptable. No rejection of data was required for this data validation report. The data validation flags required due to estimation of data are detailed below. All data can be used as qualified for any purpose.

Sample Designation	Flag	Analysis	Parameter	Reason
A-01, A-02, A-03	UJ	VOCs	Hexachlorobutadiene; 1,2,4-Trichlorobenzene	Initial calibration exceedances
A-01, A-02, A-03	UJ	VOCs	1,4-Dichlorobenzene; Hexachlorobutadiene	Continuing calibration exceedances

Please call me at (678) 775-3104 if you have any questions regarding this data validation report.

Sincerely,

Jessica Vickers

Notes:
ppbv = Parts per million by volume
µg/m^3 = Micrograms per cubic meter
J = The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected at or above the associated value.
UJ = The analyte was analyzed for, but was not detected at or above the associated value, which is considered approximate due to deficiencies in one or more quality control criteria.

LABORATORY NARRATIVE
Modified TO-13A
Tetra Tech EM, Inc.
Workorder# 0712491

Three PUF/XAD Cartridge-Low Volume samples were received on December 22, 2007. The laboratory performed the analysis for polycyclic aromatic hydrocarbons in air by modified EPA Method TO-13A. The PUF/XAD Cartridge-Low Volume samples were extracted using Pressurized Fluid Extraction (PFE) by EPA Method 3545A. The sample extract was then concentrated to 1.0 mL and analyzed by GC/MS in the full scan mode.

Method modifications taken to run these samples include:

Requirement	*TO-13A*	*ATL Modifications*
Extraction Solvent	10% ether in hexane for PUF; DCM for XAD sorbent. Final extract in hexane.	DCM for PUF/XAD cartridge and XAD sorbent. Final extract in DCM.
Glassware Cleaning	Muffle furnace is utilized.	Solvent cleaning procedure is used.
Extraction technique	Soxhlet extraction	Soxhlet extraction or pressurized fluid extraction (PFE).
Calibration range	0.10 to 2.5 ug/mL	1.0 ug/mL to 160 ug/mL
Field surrogates	Deuterated PAHs are spiked on media prior to sampling.	Performed by client request only.
Solvent Process Blank	Required each analytical batch.	Not performed; each solvent lot is certified prior to use.
Method Blank	<Method Detection Limit	<Reporting Limit

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

Sampling volume was supplied by the client. A sample volume of 2,700 L was assumed for all QC samples.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:
E - Exceeds instrument calibration range.
Q - Exceeds quality control limits.
S - Saturated peak.
J - Estimated value.
B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).
U - Compound analyzed for but not detected above the reporting limit.

0002

N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:

Calculation Check:

ng of compound = $\frac{Area_{sample}}{Area_{IS}} \times \frac{Conc._{IS}}{RRF} = \frac{(332728)}{(272608)} \times \frac{(40.0)}{(1.31083)} = 37.24$

Sample Discrepancy Report

Identification

Initiated By: MW **Date:** 12/22 **Discrepancy Type:** (circle all that apply) (I.) II. III.

Workorder(s) affected: 0712491 **Sample(s) affected:** All

I. Sample Receipt Discrepancies

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

Narration Not Required:

- ☐ COC was not filled out in ink.
- ☐ Sample container (cartridge/tube/VOA vial) was received broken, however sample was intact.
- ☐ Flow controller used - canister samples received at ambient or under pressure.
- ☐ No brass cap on canister.
- ☐ VOA vial for RSK-175 analysis received with headspace bubble <5mm.
- ☐ Sample date error/missing on COC but noted on sample tag (circle one).

Narration Required:

- ☐ COC improperly relinquished / received.
- ☐ Sample tags / can numbers do not match the COC.
- ☐ Samples received at wrong temperature (up to 10°C); ice / blue ice (circle one) was present. A temp. blank was / was not present (circle one).
- ☐ Custody Seal on the outside of the container was broken / improperly placed (circle one).
- ☐ Other (describe below).

☒ Other

Describe the Discrepancy: location part of ID not on tags - ok, don't narrate

II. Sample Receipt/Screening Discrepancies requiring CSR notification

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

If Section II. is filled out CSR must be notified within 24 hrs of initiation

- ☐ COC was not received with samples.
- ☐ Analysis method(s) is not specified / incorrectly specified (circle one) on the COC.
- ☐ Number of samples on the COC does not match the number of samples that were received.
- ☐ Samples were received expired.
- ☐ Sampling date / time (sulfur only) is not documented for *some* / *any* samples (circle one).
- ☐ Sample received with significant (pooling) volume of H_2O in the Tedlar Bag.
- ☐ Sample container (cartridge/tube/VOA vial/DNPH Bottle, etc.) was received broken / leaking (circle one); sample can / cannot be analyzed (circle one).
- ☐ VOA vial for RSK-175 analysis received with headspace bubble >5mm.
- ☐ Samples for RSK-175 CO_2 analysis received preserved with HCl.
- ☐ Tedlar Bag received leaking / flat (circle one). Sample can / cannot (circle one) be analyzed.
- ☐ Canister was at ambient pressure at time of pressurization and (check all that apply): ☐ canister failed leak check on two manifolds, ☐ canister valve was open, ☐ brass nut was loose. Sample can / cannot be analyzed (circle one).
- ☐ Tedlar bag / canister received emitting a strong odor; sample can / cannot (circle one) be analyzed.
- ☐ Canister sample received with a vacuum difference >7.0"Hg between the receipt vac. and the final vac. reported on the COC, indicating loss of vacuum.
- ☐ Canister sample received at >15"Hg (*not* identified as a Trip/Field Blank).
- ☐ Trip Blank received at low vacuum (< 25"Hg).
- ☐ Tedlar Bag for Sulfur analysis has metal fitting.
- ☐ Incorrect sampling media / container for analysis requested.
- ☐ Sample was received at ≥ 10°C.
- ☐ Other (describe below)

Initials: _____ (if not the original initiator) **Date:** _____ ☐ **CSR Notified** (see section below)

A	R	T	M	Q	
☐	☑	☐	☑	☐	Analysis/Reporting vs. Project Profile/SOP requirements checked (i.e. 100% Dups, J-Flag to MDL, etc)
	☑	☐	☑	☐	The final report has the correct reporting list, special units, and header info.
	☑	☐	☑	☐	Lab Narrative is correct (proper method & description/Receiving & Analytical notes correct)
☐	☑	☐	☑	☐	Corrective Action issued - #
☐	☑	☐	☑	☐	Unusual circumstances have been documented in the notes section below

LUMEN *validation report present and initialed* — ***CIRCLE (YES / NO)***

☐	☑	☐	☑	☐	Lab Blank, CCV, LCS and DUP met QC criteria
☐	☑	☐	☑	☐	Hold time is met for all samples
	☑	☐	☑	☐	Appropriate data qualifier flags are applied
	☑	☐	☑	☐	Manual integrations for samples and QC are properly documented
☐	☑	☐		☐	Samples analyzed within the project or method specific clock
	☑	☐			Retention times have been verified
☐	☑	☐		☐	Appropriate ICAL(s) included
	☑	☐	☑	☐	At least one result per sample is verified against the target quant sheets/raw data

☐	☑	☐		☐ Dilution factor correctly calculated (sample load volume, syringe and bag dilutions, can pressurization(s))
☐	☑	☐		Correct amount of sample analyzed (i.e. sample not over-diluted)
	☑	☐		Spectra verified - documentation of spectral defense included (Section 5A of eCVP pkg)
	☑	☐		TICs resemble reference spectra
	☑	☐		TICs between duplicate samples are consistent
☐	☑	☐	☑	Checked samples for trends (i.e. Influent>Effluent, Landfill or Ambient etc)
	☑		☑	Special units for all samples in the final report are correctly calculated
	☑	☐	☑	Manually entered results checked (i.e. special CCV compounds)
	☑	☐		TPH/NMOC (verify calculations and correct reference compound used)
	☑			Chain of Custody scanned correctly
		☐		Verify sample id's vs. chain of custody
☐	☑			Samples pressurized w/ appropriate gas (N_2 or He) ☐ Tedlar Bag only
☐	☑			Final pressure consistent with canister size (6L vs. 1L)
☐	☑			Verify receipt pressures against logbook and Target
☐	☑			Verify canister ID #'s
	☑			Extra printed copies are provided per client profile
	☑			Final invoice amount correct (adjusted for TAT, Penalties, Re-issue Charges etc.)
	☑	☐		☐ Client LUMEN report reviewed for accuracy and completeness

Notes: *(to include: noting samples with QA/QC problems, Blanks with positive hits, narratives, etc.)*

A/R: 1) all qc's met criteria
2) duplicate: 01AA, RPD < 25%.
3) reported in units of ug/m³ and ppbv.
4) client provided sampling volumes on coc. Used 2700 c for all qc's.
5) RL for benzoic acid raised to 40ug/sample and 10ug/sample for

M/Q: diethylphthalate due to TO15A ASL MDL.

AN ENVIRONMENTAL ANALYTICAL LABORATORY

LABORATORY NARRATIVE
Modified TO-15
Tetra Tech
Workorder# 0712517

Three 6 Liter Summa Canister samples were received on December 22, 2007. The laboratory performed analysis via modified EPA Method TO-15 using GC/MS in the full scan mode. The method involves concentrating up to 0.2 liters of air. The concentrated aliquot is then flash vaporized and swept through a water management system to remove water vapor. Following dehumidification, the sample passes directly into the GC/MS for analysis.

This workorder was independently validated prior to submittal using 'USEPA National Functional Guidelines' as generally applied to the analysis of volatile organic compounds in air. A rules-based, logic driven, independent validation engine was employed to assess completeness, evaluate pass/fail of relevant project quality control requirements and verification of all quantified amounts.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

Requirement	***TO-15***	***ATL Modifications***
Daily CCV	+- 30% Difference	</= 30% Difference with two allowed out up to </=40%.; flag and narrate outliers
Sample collection media	Summa canister	ATL recommends use of summa canisters to insure data defensibility, but will report results from Tedlar bags at client request
Method Detection Limit	Follow 40CFR Pt.136 App. B	The MDL met all relevant requirements in Method TO-15 (statistical MDL less than the LOQ). The concentration of the spiked replicate may have exceeded 10X the calculated MDL in some cases

Receiving Notes

There were no receiving discrepancies.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Eight qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit.
UJ- Non-detected compound associated with low bias in the CCV
N - The identification is based on presumptive evidence.

File extensions may have been used on the data analysis sheets and indicates as follows:
a-File was requantified
b-File was quantified by a second column and detector
r1-File was requantified for the purpose of reissue

Initial Calibration Narrative

A seven point initial calibration was analyzed on MSD-1 on 11/24/2007.

1. The following compounds used 0.25 ppbv as the lowest calibration concentration: Chloroform, Benzene, Cumene, and Styrene.

2. As noted on the accompanying analytical run log, the calibration point Level 4 was re-analyzed due to:
    a. anomalous unacceptable linearity for 1,2,4-Trichlorobenzene, Hexachlorobutadiene, and Naphthalene.

Sample Discrepancy Report

Identification

Initiated By: MG **Date:** 12/27/07 **Discrepancy Type:** (circle all that apply) (I.) II. III.

Workorder(s) affected: 0712517 **Sample(s) affected:** 01A-03A

I. Sample Receipt Discrepancies

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

Narration Not Required:

- ☐ COC was not filled out in ink.
- ☐ Sample container (cartridge/tube/VOA vial) was received broken, however sample was intact.
- ☐ Flow controller used - canister samples received at ambient or under pressure.
- ☐ No brass cap on canister.
- ☐ VOA vial for RSK-175 analysis received with headspace bubble <5mm.
- ☐ Sample date error/missing on COC but noted on sample tag (circle one).

Narration Required:

- ☐ COC improperly relinquished / received.
- ☐ Sample tags / can numbers do not match the COC.
- ☐ Samples received at wrong temperature (up to 10°C); ice / blue ice (circle one) was present. A temp. blank was / was not present (circle one).
- ☐ Custody Seal on the outside of the container was broken / improperly placed (circle one).
- ☐ Other (describe below).

☒ other

Describe the Discrepancy: - Location not noted on ID tags - won't narrate.

II. Sample Receipt/Screening Discrepancies requiring CSR notification

Document on Cover Page of Sample Receipt Confirmation and in Receiving Notes of Lab Narrative

If Section II. is filled out CSR must be notified within 24 hrs of initiation

- ☐ COC was not received with samples.
- ☐ Analysis method(s) is not specified / incorrectly specified (circle one) on the COC.
- ☐ Number of samples on the COC does not match the number of samples that were received.
- ☐ Samples were received expired.
- ☐ Sampling date / time (sulfur only) is not documented for *some* / *any* samples (circle one).
- ☐ Sample received with significant (pooling) volume of H_2O in the Tedlar Bag.
- ☐ Sample container (cartridge/tube/VOA vial/DNPH Bottle, etc.) was received broken / leaking (circle one); sample can / cannot be analyzed (circle one).
- ☐ VOA vial for RSK-175 analysis received with headspace bubble >5mm.
- ☐ Samples for RSK-175 CO_2 analysis received preserved with HCl.
- ☐ Tedlar Bag received leaking / flat (circle one). Sample can / cannot (circle one) be analyzed.
- ☐ Canister was at ambient pressure at time of pressurization and (check all that apply): ☐ canister failed leak check on two manifolds, ☐ canister valve was open, ☐ brass nut was loose. Sample can / cannot be analyzed (circle one).
- ☐ Tedlar bag / canister received emitting a strong odor; sample can / cannot (circle one) be analyzed.
- ☐ Canister sample received with a vacuum difference >7.0"Hg between the receipt vac. and the final vac. reported on the COC, indicating loss of vacuum.
- ☐ Canister sample received at >15"Hg (*not* identified as a Trip/Field Blank).
- ☐ Trip Blank received at low vacuum (< 25"Hg).
- ☐ Tedlar Bag for Sulfur analysis has metal fitting.
- ☐ Incorrect sampling media / container for analysis requested.
- ☐ Sample was received at ≥ 10°C.
- ☐ Other (describe below)

Initials: _____ (if not the original initiator) **Date:** _____ ☐ **CSR Notified** (see section below)

DATA REVIEW CHECKLIST

Work Order #: 0712517

A	R	T	M	Q	
☑	☑	☐	☐	☐	Analysis/Reporting vs. Project Profile/SOP requirements checked (i.e. 100% Dups, J-Flag to MDL, etc)
	☐	☐	☐	☐	The final report has the correct reporting list, special units, and header info.
	☐	☐	☐	☐	Lab Narrative is correct (proper method & description/Receiving & Analytical notes correct)
NA	☐	☐	☐	☐	Corrective Action issued - #_____
NA	☐	☐	☐	☐	Unusual circumstances have been documented in the notes section below

LUMEN *validation report present and initialed* ***CIRCLE (YES / NO)***

☑	☐	☐	☐	Lab Blank, CCV, LCS and DUP met QC criteria
☑	☐	☐	☐	Hold time is met for all samples
	☐	☐	☐	Appropriate data qualifier flags are applied
	☐	☐	☐	Manual integrations for samples and QC are properly documented
☑	☐		☐	Samples analyzed within the project or method specific clock (24 hr)
	☐			Retention times have been verified
☑	☐		☐	Appropriate ICAL(s) included
	☐	☐	☐	At least one result per sample is verified against the target quant sheets/raw data

☑	☑	☐	☐	Dilution factor correctly calculated (sample load volume, syringe and bag dilutions, can pressurization(s))
☑	☐	☐		Correct amount of sample analyzed (i.e. sample not over-diluted)
	☐	☐		Spectra verified - documentation of spectral defense included (Section 5A of eCVP pkg)
	☐	☐		TICs resemble reference spectra
	☐	☐		TICs between duplicate samples are consistent
NA	☐	☐	☐	Checked samples for trends (i.e. Influent>Effluent, Landfill or Ambient etc)
	☐		☐	Special units for all samples in the final report are correctly calculated
	☐	☐	☐	Manually entered results checked (i.e. special CCV compounds)
	☐	☐	☐	TPH/NMOC (verify calculations and correct reference compound used)
	☑			Chain of Custody scanned correctly
		☐		Verify sample id's vs. chain of custody
☑	☑			Samples pressurized w/ appropriate gas (N_2 or He) ☐ Tedlar Bag only
☑	☑			Final pressure consistent with canister size (6L vs. 1L)
☑	☐			Verify receipt pressures against logbook and Target
☐	☑			Verify canister ID #'s
	☐	☐		Extra printed copies are provided per client profile
	☑	☐		Final invoice amount correct (adjusted for TAT, Penalties, Re-issue Charges etc.)
	☐	☐	☐	Client LUMEN report reviewed for accuracy and completeness

Notes: *(to include: noting samples with QA/QC problems, Blanks with positive hits, narratives, etc.)*
