OUR BUSINESS IS PROTECTING YOURS

Protect your equipment and safeguard your business with Kensington – the innovators of physical computer protection, and trusted to safeguard business assets around the world.

There's a small hole integrated into the best IT hardware. It's called the Kensington Security Slot (K-Slot). We introduced it to the world in 1992.

All leading IT hardware manufacturers integrate a Kensington Security Slot into their hardware. They, like us, understand it's value to you. The K-Slot is not only relied upon to secure laptops, printers and servers but also flat TV's, digital photo frames, guitar pedals and even DJ equipment.

It makes sense that Kensington Security Slots offer the best protection when used with Kensington Security Locks. Organizations around the world specify Kensington security products. Don't let your lock be your defences' weakest link. Specify Kensington.

SIMPLER
ONE 'CLICK' AND YOU'RE SAFE

The Kensington ClickSafe™ lock is designed to be the strongest and easiest-to-use lock available without compromising security.

A keyless locking motion makes the employees' role in protecting your business easy.

All they have to do is 'click' it on and your business is safe.

ClickSafe™ Lock & Kensington Security Anchor

SETS A NEW STANDARD IN PHYSICAL COMPUTER SECURITY AND USABILITY.

Locking Mechanism

The lockhead simply 'clicks' onto the Kensington Security Anchor. The ClickSafe™ locking mechanism fastens perfectly to the anchor reducing leverage opportunities.

The Kensington Security Anchor

The Security Anchor is designed for a secure fit and simple locking, even when the anchor is in an awkward position. The Security Anchor attaches to the industry standard Kensington Security Slot in a matter of moments.

Pivot & Rotation

The lockhead pivots 180° and rotates a full 360° around the cable. The combined effect is one of complete flexibility and convenience.

SAFER
'CLICK' IT TO KEEP IT

Kensington ClickSafe™ locks are constructed from the strongest materials to deliver the best security available from a cable laptop lock.

A high carbon steel cable, all metal lockhead and rigorous real-world testing against lock-picking, corrosion, tampering and for a lifetime in excess of 10,000 key turns means that you can rest assured that ease of use is delivered without jeopardising integral strength.

Finite element analysis tests for strength against external forces such as pulling or torque.

CLICKSAFE™ ANATOMY

The ClickSafe™ lock has been engineered to deliver strength and ease of use. Quality is ensured by deploying the same manufacturing processes as used for surgical instruments.

Tamper Resistant

An advanced rotating disc-locking mechanism with thousands of possible key combinations is used making ClickSafe™ one of the most tamper-resistant locks.

Kensington Security Logo

A visual deterrent to any would be thief. This lock is made by Kensington, the inventors of laptop security.

Pivot & Rotation

A rotating head and pivoting cable allow you to easily position and engage the lock.

Lockhead

Die cast metal housing resists attack and protects the locking mechanism.

Kensington Security Anchor

The tough metal injection moulded alloy anchor is perfectly shaped for the securest engagement with the ClickSafe™ locking mechanism.

Precision Locking Mechanism

The precision spring loaded locking mechanism is chrome plated to protect against corrosion and wear and protected by the lockhead's all metal body.

Advanced Cable Construction

A 7x7 configuration is specifically used to combat cutting attacks. A protective sheath provides further protection.

SMARTER
'CLICK' TOGETHER –
SAFE TOGETHER

Organizations invest in physical security to protect themselves against network attacks, the cost of lost productivity and broken reputations. A physical lock is an investment that pays back every time it's used.

Designed to fit busy daily routines, ClickSafe's™ superior strength and ease of use makes your first line of defence even stronger. ClickSafe™ locks have been designed to protect your business, they've been designed to be used.

FACT:
WELL IMPLEMENTED SECURITY POLICIES REDUCE LAPTOP THEFT BY 85%*

As the industry leader we take security incredibly seriously. Our locks are thoroughly tested and set the industry standard.

Testing

Kensington locks are tested for resistance to common chemicals, which over time could erode cable integrity or lock head mechanisms.
A Kensington compatible lock isn't a Kensington lock. That's why we're the industry leader.

SUPPORT
SERVICES

We understand the impact a lost key can have, let alone a lost laptop.

We sympathise with IT managers monitoring multiple laptops and recognise that by facilitating effective deployment of your locks throughout your organization that you will maximise the benefit of your investment in our solutions.

Deployment Support

1. Deploy: Corporate Physical Security Policy
We've worked with independent analysts IDC to provide a 'cut & paste' policy that can be easily adopted by organizations from any sector. The policy presents a common sense approach that encourages organizations to educate and remind staff of the importance of using the equipment that their organization has invested in to protect themselves, their organization and their customers.

2. Educate: Tutorial Guide
Our Lock Registration Suite provides administrators with the ability to send each user an online tutorial showing them how to use their lock.

3. Reinforce: Customisable Awareness Campaign
Create your own internal awareness campaign advocating the use of locks. You can personalise the message, add your logo, download, print or email our posters. You may wish to reference senior managers or name and shame those that haven't used their lock.

Lock Registration Suite

Our Lock Registration Suite empowers administrators to manage their lock programmes and ensure staff benefit from Kensington support services without needing to contact their administrator. It's simpler for the administrator as it provides a single portal for the management of all locks, safer for the user as they are provided with their own unique account and smarter for an organization that wants to ensure its assets are recorded and available following personnel change.

It allows administrators to:

a. Register locks individually or en-mass to individuals or groups
b. Manage Master Keyed, Like Keyed or Shared Keyed programmes
c. Create user accounts for their end users where replacement keys can be ordered or combination codes saved
d. Prompt users to access tutorial videos and validate their account details
e. Record lock ownership and download reports
f. Find the owners of lost keys
g. Reassign locks to new users

It allows individuals to:

h. Order replacement keys
i. Retrieve stored combination codes
j. Validate account and keycode details
k. Update their personal details
