Re: Phase I Environmental Site Assessment
St. Albans Department of Public Works Garage
67 Aldis Street, St. Albans, Vermont
JCO Project #1-1470-19

Dear Ms. Brunswick:

The Johnson Company is pleased to present you with this report of our findings of a Phase I Environmental Site Assessment (ESA) of the St. Albans Department of Public Works Garage located at 67 Aldis Street in St. Albans, Vermont (the Site). The Site consists of an approximately 5-acre parcel with three structures. The main building hosts office space, a repair/maintenance workshop and a vehicle garage. The second building is an unheated shed used for salt/sand storage and for storage of miscellaneous items. The third building was formerly a pump house for the gasoline USTs that are no longer at the Site and is currently used to store lubricants, antifreeze, paints and other miscellaneous items. A skate park is located in the southeast corner of the Site. This ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials' (ASTM) Standard Practice for Environmental Site Assessments E 1527-13 in conformance with 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries.

We appreciate being of assistance to you on this project. Please do not hesitate to contact either Kurt Muller or me should you have questions regarding the following information.

Sincerely,
THE JOHNSON COMPANY, INC.

Phase I Environmental Site Assessment Report
St. Albans Department of Public Works Garage
St. Albans, Vermont

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Project Manager

EXECUTIVE SUMMARY

The Johnson Company Inc. (JCO) of Montpelier, Vermont was retained by the Northwest Regional Planning Commission to conduct a Phase I Environmental Site Assessment (ESA) of the St. Albans Department of Public Works (DPW) garage located at 67 Aldis Street in St. Albans, Vermont (the Site). JCO understands that the purpose of this Phase I ESA is to provide environmental due diligence in support a potential property transaction.

The Site consists of an approximately 5-acre parcel which contains three buildings. The main DPW building is a 60-foot by 160-foot, single story, steel sided, slab-on-grade structure which houses an office, a meeting room, a repair area, and a garage. The other two buildings are cold storage sheds which are used to store a wide variety of items such as oil, lead-acid batteries, lubricants, paints, used engine coolant, road salt, road sand, and non-hazardous items such as road signs and silt fence. The structures are located on the southern portion of the Site. The northern portion consists of an open area which is used as a staging area for vehicles, construction supplies, and soils excavated from DPW projects.

This ESA was performed by personnel from JCO who meet the definition of Environmental Professional as defined in 40 CFR Part 312. This ESA included reviewing existing documentation, available aerial photographs and topographic maps, determining the regulatory status of the Site, contacting personnel regarding past and present uses of the Site, investigating the potential for past releases of petroleum products and/or hazardous substances at the Site, and conducting a site reconnaissance to visually inspect accessible portions of the Site to ascertain the presence of recognized environmental conditions (RECs) in the form of present or potential release(s) of hazardous substances or petroleum products. In addition, these sources were investigated for the presence of historic recognized environmental conditions (HRECs) – a past release of hazardous substance(s) that has been addressed to residential use standards or unrestricted use criteria – and controlled recognized environmental conditions (CREC) – a past release of hazardous substance(s) that has been addressed to non-residential use standards and is subject to some type of control – at the Site. Furthermore, a HREC *is not* a REC; a CREC *is* a REC.

JCO has performed this Phase I ESA in conformance with the scope and limitations of ASTM Practice E-1527-13 of the St. Albans City Department of Public Works Garage located at 67 Aldis Street in St. Albans, Vermont. Any exception to, or deletions from, this practice are described in Section 8.1 of this report. This assessment has revealed no evidence of HRECs. This assessment has revealed no evidence of CRECs or RECs in connection with the property except for the following:

- The Site soil and groundwater are contaminated with petroleum products from two leaking underground storage tanks. Based on review of the July 28, 2009 Sites Management Activity Complete (SMAC) letter for the Site, the release has been

investigated to the satisfaction of the VTDEC and the remaining risk associated with this release is controlled through a notice to the land records. However, it should be noted that VTDEC reserves the right to return the Site to active status and require additional investigation. This constitutes a CREC.

- There is reason to suspect that the soils at the Site may be impacted by one or more of the following potential sources of contamination: 1) imported fill of unknown source or quality; 2) stockpiling of contaminated soils excavated from State listed hazardous waste sites; 3) deposition of contaminated soil and/or sediment eroded from a former manufactured gas plant; and/or 4) and aerial deposition of exhaust products from industrial activities that historically occurred in the vicinity of the Site. The most likely contaminants of concern are polycyclic aromatic hydrocarbons (PAHs) and metals, but other contaminants such as volatile organic compounds (VOCs), semi-VOCs, and polychlorinated biphenyls (PCBs) may also be present. These potential sources constitute RECs.
- An engine component or transmission was observed at the northern woods-line of the Site. This object was partially buried and could not be moved. This object may contain residual oil or other potentially hazardous liquid(s) and the potential for additional buried debris and/or associated release(s) from this and/or other objects should be assessed, if additional information is desired. Furthermore, it should be noted that a former DPW employee interviewed during this investigation suggested that “stuff” may have been buried on the northern portion of the Site. Although the employee was unwilling to elaborate on his statement, the current DPW director identified that some road construction debris (concrete and asphalt chunks) may have been incorporated into the fill on the northern portion of the Site.

The following item is beyond the scope of a Phase I ESA (as defined by ASTM 1527-13) and is therefore not considered a formal REC; however this item should be considered as a potential cost during any future construction and renovation planning:

- Asbestos-containing building materials, lead-based paint, and/or PCB-containing building materials may be present in Site structures. Building materials (asbestos, lead paint, and PCB) inspections by a licensed professional may be warranted if additional information is desired regarding these potential concerns.

1.0 INTRODUCTION

The Johnson Company Inc. (JCO), of Montpelier, Vermont was retained by the Northwest Regional Planning Commission to conduct a Phase I Environmental Site Assessment (ESA) of the St. Albans Department of Public Works (DPW) Garage located at 67 Aldis Street in St. Albans, Vermont (the Site). The location of the Site is depicted in Figure 1.

The purpose of this ESA was to identify Recognized Environmental Conditions (RECs) associated with the Site that may suggest the presence or likely presence of hazardous substances or petroleum products resulting from conditions associated with an existing release, past release, or a material threat of a release at the property. JCO understands that the City of St. Albans is interested in relocating the DPW and all associated operations to a new facility and selling the Site; this Phase I ESA is intended to provide environmental due diligence in support of that potential property transaction.

This ESA included reviewing existing information made available and/or that was reasonably ascertainable regarding current and past usage of the property, determining the Site's regulatory status, contacting appropriate personnel regarding current and past uses of the Site, investigating past, present and/or the potential for releases of hazardous substances at the Site, and conducting a reconnaissance to visually inspect the accessible portions of the Site.

This ESA was performed by personnel from JCO who meet the definition of Environmental Professional as defined in 40 CFR Part 312, in general conformance within the scope and limitations of ASTM E 1527-13 in compliance with 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries.

Credentials of JCO personnel involved with the preparation of this ESA are included as Appendix 1.

2.0 SITE DESCRIPTION

The Site consists of a 5-acre parcel located on the northeast corner of the intersection of Aldis and North Elm Streets. The Site is owned by the City of St. Albans, Vermont. The Site structures consist of a main building (a 60-foot by 160-foot steel sided, slab-on-grade structure which houses office space, a repair/maintenance area, and a vehicle garage); a cold storage shed for road salt, road sand, and other miscellaneous items such as traffic cones and temporary road signs; and a smaller structure used to store lubricants, antifreeze, paints, and other miscellaneous items. The structures are located on the southern portion of the Site. The northern portion is used for storage of construction supplies and as a temporary staging area for soils excavated from DPW projects around the City. A small skate park is located at the southeast corner of the Site. Figure 2 shows the location of the Site relative to its surroundings.

2.1 SETTING AND SURROUNDING DEVELOPMENT

The Site hosts the St. Albans DPW garage and related operations. The host vicinity consists of residential properties (primarily to the north), a hardware store to the northeast, an electrical sub-station to the north, and industrial properties to the east. The Site is abutted to the south by Aldis Street, to the west by North Elm Street and by residential properties, to the east by Stevens Brook, and to the north by power lines owned by Green Mountain Power. The Site and surrounding properties are depicted on Figure 2.

Topographically, the ground surface is relatively flat but generally slopes to the east towards Stevens Brook. The majority of the Site is covered by buildings, parking lots, and/or roadways, some of which are paved. A grassy area is located along Aldis Street and along North Elm Street. Trees are present along the borders of the Site with Stevens Brook to the east, the powerlines to the north, and the residential properties to the west.

According to Mr. Allen Robtoy (DPW Director), the Site was a vacant field before the City constructed the garage and outbuildings, and he played baseball at the Site as a boy. The current structures were completed in 1979 and are of varying construction. The main building and former pump shed are both slab-on-grade foundations with steel siding. The main building

has a steel frame while the former pump shed has a wooden frame. The salt shed is of “pole barn” type construction with a wooden frame, metal siding, and an earthen floor.

2.2 HEATING, WATER AND SEWER

The office space and repair/maintenance area of the main building are heated with natural gas. The garage portion of the main building and both the storage sheds are un-heated.

The Site is currently served by St. Albans sewer and water utilities. Two storm drains are located in the parking areas to the south and east of the main building and a third (currently covered with soil) is located to the south of the larger storage shed. According to Brian Burns (DPW Superintendent) these drains discharge to Stevens Brook. The third drain was intentionally covered to prevent potential salt leachate from the onsite salt storage shed from entering the brook (Burns, 2016).

Electricity to the property is provided by Green Mountain Power via overhead lines.

2.3 GEOLOGY AND HYDROGEOLOGY

The bedrock in the area is mapped as the Skeels Corners Slate formation, a sedimentary slate dolostone described as “*Laminated black slate with thin orange dolostone beds, includes massive dolostones mapped as Saxe Brook Formation by others in the Highgate area*” (Ratcliffe, et al, 2011).

With the exception of a small portion of the Site adjacent to North Elm Street, the Site is mapped as Massena loam which is a somewhat poorly drained, partially hydric, fine to moderately fine soil. The remainder of the Site is mapped as Georgia loam, a moderately well drained, non-hydric soil with fine to moderately fine textures (EDR, 2016).

The direction of groundwater flow was not directly measured as part of this ESA. However, groundwater flow direction was measured during groundwater monitoring events in

2006 and 2008. These reports found that the groundwater flow direction is either northeast or east towards the Stevens Brook (ES, 2006; ES, 2008).

2.4 THREATENED SPECIES AND WETLANDS

Vermont Agency of Natural Resources (VTANR) Natural Resources Atlas (NRA) shows one Class 2 wetland located approximately 0.25 miles of the Site. This wetland is located to the northwest and is potentially hydraulically down-gradient of the Site. The VTANR NRA shows 14 other wetlands located between 0.25 and 1-mile of the Site (VTDEC1, 2016).

The VTANR NRA lists two “uncommon” species (both vertebrate animals) within 1 mile of the Site. One species is mapped at the southeast corner of the Site and appears to be associated with Stevens Brook. The other species is mapped approximately 4,000 feet south of the Site and also appears to be associated with Stevens Brook. No other rare, threatened, or endangered species are mapped within 1 mile of the Site (VTDEC1, 2016).

3.0 SITE HISTORY AND REVIEW OF EXISTING INFORMATION

3.1 HISTORICAL REVIEW

3.1.1 Land Records

A search of the Land Records in the St. Albans City Clerk’s office was conducted on the day of the Site walkover, January 15, 2016. It should be noted that JCO staff are not title search professionals; a formal land records review should be conducted by a qualified title search attorney. Details of historical ownership of the Site are summarized in Table 1.

3.1.2 U.S.G.S. Topographic Maps

The 1914, 1916, 1943, 1964, 1972, 1987, and 2012 United States Geological Survey (USGS) topographic quadrangle maps for the target area were provided by Environmental Data Resources, Inc. (EDR) and reviewed as part of this ESA (EDR, 2016). Map series were 15-minute (1914, 1916, and 1943), and 7.5 minute (1964, 1972, 1987, and 2012). The maps are included as Appendix 2. No structures are shown at the Site in the 1914 through 1972 maps.

The 1987 map shows a structure at the approximate location of the main DPW garage building. The 2012 map shows streets and elevation contours only – no structures are shown anywhere on this map.

3.1.3 Aerial Photographs

Aerial photographs from 1962, 1972, 1981, 1985, 1993, 1995, 2006, 2008, 2009, 2011, and 2012 were provided by EDR and reviewed as part of this ESA. The aerial photos are included as Appendix 2. The 1962 photograph shows the Site as an open field. The quality of the 1972 photograph is poor, but a parking area (with two entrances) appears to be present at the southern end of the Site. Objects appear to be present in this parking area, possibly vehicles or small structures. The 1981 photograph is also of poor quality, and little detail can be seen. The main garage building can be seen in the 1985 photograph. No structures appear to be present at the northern end of the Site in this photograph. The main garage building and the larger storage shed can be seen in the 1993 photograph. The detail is poor, but the northern portion of the Site appears to be bare earth in this photograph. The 1995 photograph shows the Site in its current configuration (with the exception of the skate park, which is not present in this photograph). The residential development located between North Elm Street and the northern portion of the Site is not present in 1995. The Site appears in its current configuration (including the skate park) in the 2006 and later photographs.

3.1.4 Sanborn Fire Insurance Maps

Historical Sanborn Fire Insurance Maps for 1920, 1926, 1946, and 1959 were provided by EDR. The maps are included in Appendix 2. The Site is not shown on any of these maps. Map coverage is from the east side of North Elm Street west and from the north side of Aldis Street south.

3.1.5 City Directories

The Cole Information Sources and Mannings Street Directories for the Site were provided by EDR (see Appendix 2). The 1967 Mannings Street Directory does not appear to

have a listing for the Site. The 1992 through 2013 Cole Information Services listings show the St. Albans DPW garage at the Site.

3.1.6 Environmental Questionnaire

JCO's standard Environmental Questionnaire was provided to the DPW Director and was received by JCO on January 8, 2016. A copy of the completed questionnaire is included in Appendix 3.

3.2 INTERVIEWS

3.2.1 Current Owner

The DPW Director and the DPW Superintendent accompanied JCO staff on the January 15, 2016 Site visit, and answered questions regarding environmental conditions at the Site to the best of their ability. During the Site walkover, a stockpile of soils that originated from the Core Lot Project, a nearby listed hazardous waste site (see Section 4.3.1 for additional details), was observed. This pile was covered with poly sheeting and was visually estimated to be approximately 2,000 cubic yards in volume. Evidence of a second former stockpile was also observed. Considering the inconsistent snow/ice coverage within the "footprint" of this second pile, it was obvious that it had been recently removed from the Site. The DPW Director referred questions regarding the stockpile to Mr. Peter Cross of Cross Consulting Engineers.

During a February 10, 2016 telephone interview regarding the stockpiles, Mr. Cross stated that the piles were supposed to have been fully encapsulated with poly sheeting. Although the existing onsite stockpile was covered and residual fragments of similar plastic were observed in the footprint of the former stockpile, when asked, Mr. Cross could not confirm that poly sheeting was indeed placed below the stockpiles. Mr. Cross did suggest that the sheeting beneath the piles may have been omitted. Mr. Cross also mentioned that the determination that all stockpile soils were removed was left up to the contractor and that he thought it would be fairly obvious if the pile had been excavated down to "native" soils. Additionally, Mr. Cross said that the contractor was not instructed to over-excavate the piles. During the January 15,

2015 Site walkover, the pile which was removed appeared to have been excavated approximately even with the surrounding grade, but did not appear to have been over-excavated. Mr. Cross said that the existing on-Site stockpile (observed by JCO during the January 15, 2016 Site walkover) was going to be removed in the next few days if it had not already been removed. He said that he was unsure of the exact schedule of removal.

Mr. Cross stated that the soils in both stockpiles originated from the 1 foot below ground surface (fbgs) to 4 fbgs interval across the Core Lot Project (the 0-1 fbgs interval was considered to be clean) and that this material was considered to be “urban fill”. The Core Lot Project is located approximately 2,500-feet southeast of the Site. He said that these materials were/will be disposed of as alternative daily cover at the Franklin County landfill in Constable, New York.

Mr. Cross also provided summary tables of laboratory analytical soil sampling results which were submitted to the disposal facility to characterize the soils. These tables showed: 1) isolated detections of volatile organic compounds (VOCs) but no VOC exceedances of the applicable soil screening values (SSVs); 2) polycyclic aromatic hydrocarbon (PAH) exceedances of residential and industrial SSVs; 3) metals exceedances of residential and industrial SSVs; and 4) no PCB detections above laboratory reporting limits for the three samples analyzed for PCBs (43 total samples collected).

Mr. Cross also provided a laboratory report for three composite samples which were analyzed for PAHs and metals by toxicity characteristic leachate procedure (TCLP); a procedure which simulates landfill conditions and assesses the potential for contaminants to leach from soils). No PAHs or metals concentrations were detected above laboratory detection limits via TCLP analysis (Cross, 2016).

3.2.2 Past Owner/Occupant

Central Vermont Railroad (former property owner) was sold and is now called the New England Central Railroad. On January 20, 2016 Mr. Jeremy Matt (JCO) left a voicemail with

Ms. Donna Killingsworth to request information regarding the Site. As of the date of this report, no response was received.

On January 20, 2016 Mr. David McWilliams (former DPW worker) was interviewed regarding the Site. Mr. McWilliams mentioned that during the time he worked for DPW, “stuff” was buried on the back portion of the Site beyond the fence. He was unwilling to elaborate on what sort of “stuff” was buried. When asked about this “stuff”, the DPW Director said that the northern portion of the Site was raised with “routine road construction debris” (gravel sub-base with the occasional asphalt or concrete chunk mixed in) but that he was confident that the DPW would not have dumped anything other than that.

3.2.3 State/Local Officials

Chief Gary Taylor (St. Albans City Chief of Police and St. Albans City Fire Chief with 11 years tenure) was contacted on January 26, 2016 and asked by JCO if he was aware of any hazardous materials incidents at the Site. Chief Taylor indicated that he is not aware of any complaints regarding spills, dumping or other releases of hazardous materials at the Site (Taylor, 2016).

3.2.4 Neighboring or Nearby Property Owner/Occupant

On February 8, 2016 Mr. Leon Barthiaume of the St. Albans Cooperative Creamery (abutting landowner) was interviewed by telephone. The St. Albans Cooperative Creamery has owned the abutting property to the east since 2004. Mr. Barthiaume was not aware of any incidents involving spills or release of hazardous chemicals or any other threats to human health or the environment at the Site (Barthiaume, 2016).

On February 8, 2016 a message was left in the general voicemail box of the Champlain Housing Trust, St. Albans Office. The Champlain Housing Trust owns a residential parcel located to the west of the northern portion of the Site. As of the date of this report, no response was received.

3.3 PRIOR INVESTIGATIONS

Since August 1996 a total of 20 environmental investigations have been conducted at the Site in response to the two leaking gasoline underground storage tanks (USTs). No record of any investigation on other portions of the Site were obtained. Additional details are provided in Section 4.3.1.

4.0 REGULATORY STATUS

4.1 ENVIRONMENTAL LIENS

A search of the files at the St. Albans City Clerk's office on January 15, 2016 revealed no environmental liens on the property. However, it should be noted that JCO are not title attorneys.

4.2 FEDERAL REGULATORY FILES

A database radius search report was provided by EDR. Information for the following sub-sections was taken from the EDR report. If the EDR results suggest that a more detailed assessment of a particular property or regulatory category is warranted, then the reason and additional search results will be detailed below. Otherwise, all information provided in this section was obtained from the EDR Radius Map Report. The EDR Radius Map Report is included as Appendix 2.

4.2.1 Federal National Priority List (NPL)

The Site is not listed on the National Priority List (NPL), i.e., Superfund site, nor is any property within a one mile search radius of the Site.

4.2.1.1 Delisted NPL sites

Neither the Site nor any other properties within the 1 mile search radius are delisted NPL sites.

4.2.2 Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List

The Site does not appear on the CERCLIS database. Two CERCLIS sites are listed between 0.25 and 0.5 miles of the Site. One of these Sites is the St Albans Gas and Light site

(CERCLIS ID #:VTD988366688) which is listed with the VTDEC Sites Management Section (SMS) with SMS number 770197 (see Section 4.2.7 and Section 4.3.1 for additional details). The second CERCLIS site is the New England Central Railroad facility at 2 Federal Street. This is listed as a low priority CERCLIS Site (ID #:VTD0048609) and is listed with the VTDEC as a medium priority site (SMS #: 20124257). No other listed CERCLIS sites within a 0.5 mile search radius of the Site.

4.2.2.1 No Further Remedial Action Planned (NFRAP) site list

Neither the Site nor any sites within a 0.5 mile search radius are listed as CERCLIS designated sites with a no further remedial action planned (NFRAP) status.

4.2.3 Federal Resource Conservation and Recovery Act (RCRA) Generators

Two RCRA conditionally-exempt small quantity generators (CESQGs) are listed at the Site. The St. Albans DPW generates used motor oil and used engine coolant during vehicle maintenance. These wastes are stored in drums located on spill containment pallets in the vehicle garage portion of the main building. In addition, one CESQG is located within 1/8-mile of the Site and two CESQGs are located between 1/8-mile and 1/4-mile of the Site. The off-site generators include Liberty Propane (within 1/8-mile), the New England Central Railway, and the St. Albans Coop Creamery.

4.2.3.1 RCRA Corrective Action Sites (CORRACTS) List

The Site is not on the list of RCRA Corrective Action sites for EPA Region 1, nor is any property within a one mile search radius of the Site.

4.2.4 RCRA Treatment, Storage and Disposal (TSD) Facilities

There are no transportation and disposal (TSD) facilities listed within a 0.5 mile search radius of the Site.

4.2.5 Federal Institutional Control/Engineering Registries

There are no federally-registered controls within a 0.5 mile search radius of the Site.

4.2.6 Federal Emergency Response Notification (ERNS) List

The EDR radius report did not identify any federal records of a spill at the Site.

4.2.7 EPA On-Scene Coordinator Emergency Environmental Response

The EPA On-scene Coordinator (EPA OSC) program performs rapid responses to remove direct contact risks by trespassers or the public. The EPA OSC records are not part of the standard EDR database search, therefore JCO conducted a separate search of OSC records. As of January 19, 2016 one OSC Site (the St Albans Gas and Light site – Sites Management Section number: 770197) is located approximately 2,000-feet south of the Site. The EPA OSC program performed two emergency removal actions to address coal tar constituents in surface soils, groundwater, and indoor air. Additional details regarding this Site are provided in Section 4.3.1. No other OSC sites were listed within a 1.0-mile search radius of the Site (EPAOSC, 2016).

4.3 STATE/TRIBAL REGULATORY FILES

There are no recognized tribal or American Indian-owned lands within Vermont; therefore, no tribal files were searched during this ESA.

4.3.1 Hazardous Sites List

The Site is listed by the VTDEC Sites Management Section (SMS) as a hazardous waste Site with SMS number 962036 as a result of contamination encountered during removal of two gasoline USTs. Additional details are provided below. Based on JCO's review of the EDR Radius Map Report and on a search of the VTANR NRA, a total of 55 hazardous waste Sites are located within the 1-mile search radius of the Site. Of these Sites, 35 are inactive, 12 are active low priority, and 8 are active medium priority (VTDEC1, 20156). The hazardous waste site information available from the NRA is summarized in Table 2. Based on the surrounding topography, contaminant types, human activity, etc. eight of the hazardous waste sites listed above were identified as sites of interest and are discussed in more detail below. Given the surrounding topography, the contaminant types present at the other 47 hazardous waste Sites, and on a review of the Site Status notes, it is considered unlikely that any significant contamination from these sites has migrated on to the Site.

DPW Garage (SMS #: 962036) – The Site

The property was listed with the VTDEC as a hazardous waste Site as a result of contamination encountered during the removal of a 3,000-gallon gasoline underground storage tank (UST) and a 1,000-gallon gasoline UST. These tanks were removed in August of 1996. A total of 20 rounds of groundwater sampling were conducted between 1996 and 2009 to determine the extent of the contaminant plume and to determine the degree of contaminant migration (NC, 1996; ES, 2006; ES, 2008). Concentrations of petroleum constituents remain in on-Site groundwater at concentrations that exceed the Vermont Groundwater Enforcement Standards (VGES), as such VTDEC concluded that concentrations are slowly decreasing, and may take years to comply with VGES. The VTDEC also determined that contamination was not shown to be migrating off-site (Schwer, 2009). A Notice to the Land Records was filed in the City of St. Albans land records on June 30, 2009 and a Sites Management Activity Complete (SMAC) letter for the Site was issued by VTDEC on July 28, 2009 (CSALT, 2009; see Section 4.3.5 for additional details).

Former Fonda Container Company (SMS #: 20083777)

The Former Fonda Container Company Site is an actively listed hazardous waste Site impacted by: polychlorinated biphenyl (PCB) contamination in concrete; chlorinated volatile organic compound (cVOC) contamination in groundwater; and PCB, semi-volatile organic compound (SVOC), metals, and cVOC contamination in soils. Given that the Stevens Brook is located between the Fonda property and the Site and based on a review of the Corrective Action Plan prepared by JCO, it is considered unlikely that soil or concrete contamination from the Fonda property has impacted the Site (JCO, 2010). Based on a review of the most recent groundwater monitoring report (October 2012) for the Fonda property which shows non-detect concentrations in the down-gradient monitoring wells, it is considered unlikely that chlorinated contamination from Fonda has impacted the Site.

Clarence Brown Aldis Street Bulk Plant (SMS #: 20073739)

The Clarence Brown Aldis Street Bulk Plant was listed as a hazardous waste site following a release of 1,217.5 gallons of #2 fuel oil during a deliver to a 15,000-gallon above-ground storage tank (AST) which occurred on June 23, 2005. Environmental Products & Services and the St. Albans fire department responded to the spill. Subsequently, a total of 343-tons of petroleum-impacted soils were excavated in two phases (one occurred in 2009 and one in 2010). The soils excavated were transported off-site for thermal desorption. Groundwater monitoring showed that the source reduction efforts had successfully reduced the petroleum contaminant concentrations to levels below the VGES. The VTDEC determined that no additional assessment was required at the time and therefore issued a SMAC letter on June 1, 2012 (Schwer, 2012). Considering the success of the contaminant mass reduction efforts and the fact that the Stevens Brook is situated between the Site and the Clarence Brown property, it is considered unlikely that petroleum contamination from this property has impacted the Site.

St. Albans Gas & Light (SMS #: 770197)

The St. Albans Gas & Light (SAGL) property is listed as a hazardous waste Site as a result of coal-tar-constituent contamination in soils, groundwater, and indoor air. The property was operated as a manufactured gas plant between approximately 1870 and the 1950s and in 1972 an apartment building complex was constructed. During construction, “coal tar like substance” was encountered at a depth of 6-8 feet below ground surface (Young, 1994). Soil borings conducted in 1991 and in 2002 confirmed the presence of coal tar like material in the sub-surface (Young, 1994; Weston, 2002). A 1992 investigation included sample collection of Stevens Brook sediments. During this investigation sheens were liberated during sediment sampling and elevated PAHs were detected in sediment. This summary comes from the Young 1994 document, but no sediment PAH concentrations were provided in this document. Additional sediment sampling conducted in 2005 also released sheens during sample collection (Weston, 2005). The 2005 sediment sampling identified multiple PAH constituents at concentrations in excess of 10 mg/kg. Benzo(a)pyrene was detected at 4.6 mg/kg (Weston, 2005). According to a summary provided in the September 8, 2005 Preliminary Site Assessment report (Weston, 2005):

Investigations conducted on the Site include the following: a 1991 Preliminary Assessment (PA) completed by the VT DEC, a 1994 Site Inspection (SI) completed by the VT DEC, a 1996 EPA Removal Program Preliminary Assessment/Site Investigation (PA/SI) completed by the Superfund Technical Assistance and Response Team (START), a 2002 Expanded Site Inspection (ESI) completed by START, and a 2004 ESI completed by START.

Considering the distance between the Site and the SAGL property (approximately 1,850-feet), it is considered unlikely that coal tar from the SAGL property has migrated to the Site via the subsurface. However, sheens and elevated PAH concentrations were identified in the Steven Brook during the EPA OSC assessment of the SAGL property which abuts the Stevens Brook at an upstream location it is possible that contaminated material migrated from the SAGL property towards the Site via Stevens Brook.

St. Albans City Core Lot Project (Various SMS numbers)

The St. Albans City Core Lot project involves four listed SMS Sites: the St. Albans Municipal Parking Lot No. 1 (SMS #: 20083818 – Low Priority), the Brickyard Tavern Building (SMS #: 20083815 - SMAC), the Moose Lodge (SMS #: 20134400 – Low Priority), and 15-17 Lake Street (SMS #: 20134401 – Low Priority). A combined Phase II investigation was conducted on the four properties by Environmental Compliance Services (ECS). The Phase II Investigation report, dated August 6, 2013 indicates that: soils at the Core Lot Project are impacted with PAHs and metals; soil vapor is impacted with VOCs; and VOCs were detected in groundwater at concentrations below VGES. Given the relatively low contaminant concentrations identified at the Core Lot Project and the distance (approximately 2,600-feet) between the Core Lot Project and the Site, it is not considered likely that contamination from the Core Lot Project has migrated to the Site via the subsurface. However, contaminated soil excavated from the Core Lot Project was temporarily stockpiled on the northern portion of the

Site pending disposal at a landfill. The corrective action plan (CAP) for this property which was prepared by ECS and is dated September 27, 2013, states that these soils may be returned to the Core Lot Project for use as backfill (ECS2, 2013). The DPW Superintendent stated during the Site walkover that these soils were being landfilled.

4.3.2 Underground Storage Tank List

There are no registered active underground storage tanks (USTs) at the Site or on adjoining properties. The Site is a UST facility with no active USTs and two closed gasoline USTs (see Section 4.3.1 for additional details). The EDR report also lists 2 UST facilities between 1/8 mile and 1/4 mile and 11 UST facilities between 1/4 mile and 1/2 mile of the nearest Site boundary (EDR, 2016).

4.3.3 Spills List

Neither the EDR report nor the Natural Resources Atlas identified spills at the Site (EDR, 2016; VTDEC1, 2016).

4.3.4 Landfills

There are no certified landfills within a 0.5 mile search radius of the Site

4.3.5 Institutional Controls/Engineering Controls Registries

A review of the records available at the St. Albans City Clerk's office revealed no institutional and/or engineering controls filed in the Land Records for the Site as of January 15, 2016. However, the VTDEC Project Status for the Site states that the Site was closed with a Notice to the Land Records (NLR). The NLR is available on the VTDEC website and lists the page as 222 and the volume as 233 (CSALR, 2009; note that presence of the NLR was not found during the January 15, 2016 review of the St. Albans land records, and a reference to the NLR was not observed in the card catalogue). The NLR, obtained during the VTDEC file review, states that on-site contamination resulted from the leaking 3,000-gallon and 1,000-gallon underground storage tanks however, no on-site or off-site receptors appear to be at risk based on the historical water quality monitoring results. The NLR also requires notification of the

VTDEC prior to any sub-surface work, excavation, or groundwater extraction in the vicinity of the contaminant plume. The NLR is provided as Appendix 4.

4.3.6 Voluntary Cleanup Sites

Vermont does not specifically have a voluntary cleanup program, but the Brownfield Reuse Environmental Liability Limitation Act (BRELLA, effective July 1, 2008), acts as one for non-responsible parties.

4.3.7 Brownfield Sites

The Site is not enrolled in the Brownfield Cleanup Program. Two Brownfield sites are located within 0.5-mile of the nearest Site boundary, the CV Railway Inc. site (SMS#: 770126) and the Brickyard Tavern Building site (SMS#: 20083815). The CV Railway site was listed as a result of diesel fuel and heating oil contamination which resulted from above-ground storage tank leaks. Because the Stevens Brook is located between CV Railway and the Site, it is considered unlikely that contamination from CV Railway has migrated to the Site. The Brickyard Tavern Building site is part of the St. Albans City Core Lot Project and is discussed in Section 4.3.1 above.

4.4 LOCAL REGULATORY FILES

4.4.1 Fire Department/Town Health Officer/Police

Details regarding interviews with local officials are provided in Section 3.2.3.

4.4.2 Local Electric Utility Company (Polychlorinated biphenyls)

Electricity to the property was served by Green Mountain Power via overhead lines. Based on a description of the property boundary location provided by the DPW Director during the Site walkover, the pole which provides power to the main building is not located on the Site. No power poles with transformers are located at the Site.

Based on the age and construction of the on-site buildings, it is possible that PCB-containing building materials (caulk, paint, sealant, mastic, etc.) were used during the construction of the buildings.

4.5 NON-AAI/ASTM SCOPE CONSIDERATIONS

4.5.1 Asbestos and Lead Paint Issues

An asbestos and lead based paint inspection was not performed as part of this ESA. However, given the age and construction of the buildings it is possible that asbestos containing materials and/or lead-based paint are present in the on-site buildings.

4.6 HISTORIC RECOGNIZED ENVIRONMENTAL CONDITION (HREC)

A HREC is defined by ASTM in the E1527-13 standard as “a past release of hazardous substance(s) that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” HRECs are not considered RECs. No HRECs were identified at the Site.

5.0 SITE RECONNAISSANCE

A Site walkover was conducted on January 15, 2016 by Jeremy Matt of JCO. Mr. Matt was accompanied by the DPW Director and the DPW Superintendent. The weather conditions on the day of the Site visit were overcast, approximately 30 degrees, with light wind. Photographs taken during the Site visit are included as Appendix 5 of this report.

5.1 EXTERIOR OBSERVATIONS

The Site is divided into two general areas. The southern portion of the Site is located immediately north of Aldis Street and consists of the main DPW building, two cold storage sheds, a skate park, and surrounding areas. The second portion consists of an open lot surrounded by a chain-link fence which is located to the north and contiguous to the southern portion.

The exterior areas of the southern portion of the Site are comprised of paved or gravel parking/driving surfaces, the skate park (located in the southeast corner of the Site), or mowed

grass lawns. A “Sewer” utility hole was noted south of the main DPW building. According to the DPW Superintendent, this is an in-ground “grit separator” to keep solids from the floor drains (see section 5.2.1 below) from entering the sewer system. In addition to the sewer utility hole, two storm drain catch basins were noted in the parking lot area. According to the DPW Superintendent, these storm drains run almost due east and discharge into the Stevens Brook. In addition to the two visible drains, the DPW Superintendent indicated that a third storm drain catch basin is present in front of the salt storage bay of the large shed, but that this third drain was intentionally covered with soil to prevent salt from the shed from entering the Stevens Brook. Two large (approximately 1,000-gallon), partially full poly tanks of magnesium chloride deicing solution were noted to the east of the large storage shed. These tanks were not stored on containment pad. While no evidence of releases was noted during the Site walkover, potential spills could have impacted either groundwater or the Stevens Brook. A number of empty (according to the DPW Superintendent) blue 55-gallon poly drums were noted to the north of the larger storage shed; the DPW Superintendent indicated that these drums were also used for storage of deicing solution. A small enclosed steel trailer was parked to the north of the main DPW building. This trailer is used for storage of gasoline and other fuels for the various DPW small engines (lawn mowers, trimmers, etc.). No evidence of spills from this trailer were observed.

The northern portion of the Site does not have any permanent structures, and appears to be used as a general staging area for equipment, DPW building materials and for soils excavated from DPW projects. On the day of the Site walkover, a large stockpile of soil (covered with poly sheeting) was present and visually estimated to be approximately 2,000 cubic yards in volume. According to the DPW Superintendent, this material was soil excavated from the Core Lot Project (see Section 4.3.1 above for additional details). The DPW Superintendent also said that until recently a second pile of soil was located adjacent to the current pile, but the former stockpile had been transported to a landfill for disposal. The footprint of this second pile appeared to have been excavated approximately evenly with the surrounding ground surface, but did not appear to have been over-excavated. Residual plastic fragments were noted in the former

footprint of the pile. Mr. Peter Cross was also interviewed regarding these piles; details of this interview are provided in Section 3.2.1. No evidence of erosion or soil migration from the existing stockpile was noted. However, the layer of snow on the ground during the Site walkover may have hidden signs of erosion or residual unexcavated soil from the stockpile.

In addition to the Core Lot Project soils, a smaller stockpile of soil was present on the northern portion. The DPW Superintendent indicated that this was soil removed during repair of water main breaks and other DPW roadworks and was being stockpiled pending transport to the DPW fill site (the fill site is inaccessible in the winter). No sheens, odors, or staining were noted when this pile was examined, but the stockpile was frozen solid and could not be thoroughly inspected. During the walkover, what appeared to be a cast iron or aluminum engine block or transmission housing was noted at the northern woods-line of the Site. The DPW Superintendent was not sure what the item was and was not sure how it got there.

In general, good housekeeping practices were observed across the exterior portions of the site and no evidence of spills of hazardous chemicals were noted. However, the thin layer of snow on the ground limited the inspection of portions of the Site exterior.

5.2 INTERIOR OBSERVATIONS

The interior portions of the Site consist of the main DPW building, a larger cold-storage shed, and a smaller cold storage shed. In general, good housekeeping practices were observed in interior portions of the Site.

5.2.1 Main DPW Building

The main DPW building is a steel-sided building with a steel roof and slab-on-grade floor. The building contains the office of the DPW Superintendent, a meeting room, bathrooms, a heated repair/workshop area, and an unheated garage area. No evidence of storage hazardous chemicals (other than “household” cleaners) were noted in the office, meeting room, or bathrooms. A number of potentially hazardous materials were observed in the repair and garage areas including lubricants, deicing solution, engine coolant, engine oil, acetylene, used oil, a

drum labeled “used speedy dry”, paints, cathode-ray tube (CRT) monitors, batteries, asphalt patching and sealant materials, “Accu-tab blue” (an oxidizer use for chlorination), and other chemicals used to perform DPW duties. These materials appeared to be well-managed and no evidence of spills was noted on the concrete floors.

During the walkover, two floor drains were noted: one in the repair area and one in the garage area. The DWP Director indicated that these were the only two floor drains in the facility and stated that these drains discharge to the City sewer system through a grit separator (see Section 5.1 above).

5.2.2 Large Cold Storage Shed

The larger shed is wooden “pole barn” construction with an earthen floor, steel siding, and steel roofing. The large bays at either end of the shed are used for storage of road salt. Two vehicle bays and a personnel door are located in the center of the building. The bay associated with the eastern vehicle door is used for storage of road sand. The remaining portion of the shed is used for the storage of a variety of non-hazardous items (a wheel barrow, sonotube concrete forms, road signs, PCV pipes, silt fence, orange snow fence, warning barricades, tarps, etc.)

5.2.3 Small Cold Storage Shed

The small cold storage shed is the former pump house for the gasoline USTs (see Sections 4.3.1 and 4.3.2 for additional details regarding USTs). The shed is slab-on-grade with a wood frame, steel siding, and steel roofing. The shed is currently used to store a variety of potentially hazardous materials including engine oils, coolant, paints, a CRT monitor, lead-acid batteries, driveway sealant, and paint thinner. This structure did not appear to see regular use, as a layer of dust and dirt was present on the floor of this structure. This dust and dirt appeared to be slightly oily, but no evidence of gross spills or releases was noted.

6.0 USER RESPONSIBILITIES

In order to comply with Phase I ESA guidance documents, the user must provide the following information (if available) to the environmental professional:

1. Environmental cleanup liens that are filed or recorded against the Site;
2. Activity and land use limitations that are in place on the Site or that have been filed or recorded in a registry;
3. Specialized knowledge or experience of the person seeking to qualify for the Limited Liability Protections (LLPs);
4. Relationship of the purchase price to the fair market value of the property if it were not contaminated;
5. Commonly known or reasonably ascertainable information about the property;
6. The degree of obviousness of the presence or likely presence of contamination at the property and the ability to detect the contamination by appropriate investigation.

All of the information listed above was addressed by Ms. Greta Brunswick of the Northwest Regional Planning Commission, and provided to JCO. A copy of a completed User Questionnaire pertaining to the Site has been included with this report as Appendix 6.

7.0 CONCLUSIONS & OPINIONS

JCO has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E-1527 of the St. Albans DPW Garage Site located at 67 Aldis Street in St. Albans, Vermont (the Site). Any exception to, or deletions from, this practice are described in Section 8.1 of this report. This assessment has revealed no evidence of historical recognized environmental conditions (HRECs) in connection with the Site. This assessment has revealed no evidence of controlled recognized environmental conditions (CRECs) or recognized environmental conditions (RECs) or in connection with the property except for the following:

7.1 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

JCO has identified the following controlled recognized environmental conditions:

- According to the VTDEC, the petroleum contamination at the Site, which originated from the two leaking gasoline USTs has been adequately characterized and does not appear to present an immediate risk to human health or the environment provided the impacted soils remain undisturbed. The residual risk associated with this petroleum contamination is managed through a notice to the land records. *Opinion: Based on a review of the VTDEC SMAC letter and the most recent groundwater monitoring reports, it is the Environmental Professional's opinion that the petroleum contamination at the Site appears to be stable and that no additional investigation in connection with the petroleum release from the leaking USTs appears to be warranted. However, it should be noted that VTDEC reserves the right to return the Site to active status and require additional investigation.*

7.2 RECOGNIZED ENVIRONMENTAL CONDITIONS

JCO has identified the following recognized environmental conditions:

The grade at northern portion of the Site has been raised with fill of unknown quality from former roadway projects. Some of this fill may have been contaminated. In addition, the Site has been used for temporary storage of soils from hazardous waste sites and from DPW projects around the City and residual contamination from these soils may be present at the Site. *Opinion: Based on a review of the available data and on discussion with Mr. Peter Cross (see Section 3.2.1), it is the Environmental Professional's opinion that PAH and metals contamination in soil are likely contaminants of concern and that VOC and PCB contamination is also possible, but less likely. If additional information regarding soil quality is desired at the Site, laboratory analysis of soil samples should be conducted.*

- The St. Albans Gas & Light (SAGL) property (SAGL) is a former manufactured gas plant (MGP) and active hazardous waste site with MGP-related contamination in a variety of media including Stevens Brook sediments. The SAGL property is located approximately 1850-feet upstream from the Site along Stevens Brook. During sediment sampling at the SAGL property sheens on Stevens Brook were observed. As such it is possible MGP-related contamination including volatile organic compounds (VOCs), semi-VOCs, and metals from the SAGL property may have migrated to the Site and resulted in bank soil and/or Stevens Brook sediment contamination at the Site. *Opinion: It is the Environmental Professional's opinion that there is only a slight chance of identifying MGP-related contamination at the Site. If additional information regarding soil or sediment quality is desired at the Site, field inspection of the near surface soils should be performed. Should visual and/or olfactory evidence of MGP contamination be observed during this inspection, laboratory analysis of soil samples should be conducted.*
- A number of coal burning industries (such as the rail road and the manufactured gas plant at the St. Albans Gas & Light property) were historically located near the Site. *Opinion: It is the Environmental Professional's opinion that it is likely that the surface soils at the Site have been impacted via aerial deposition of PAHs from the nearby historical industrial activities in the area. If additional information regarding soil quality is desired at the Site, laboratory analysis of soil samples should be conducted.*
- Evidence of dumping of debris was identified along the northern property line and therefore the potential of a release may have occurred. Furthermore, a former DPW employee interviewed during this investigation suggested that “stuff” may have been buried on the northern portion of the Site. Although the former employee was unwilling to elaborate on his statement, the current DPW director identified that some road construction debris (concrete and asphalt chunks) may have been incorporated into the fill on the northern portion of the Site (see Section 3.2.2).

Opinion: The surface soil in this area should be inspected under snow-free and above freezing conditions if additional information regarding this REC is desired. If this inspection provides visual and/or olfactory evidence that debris had been dumped and a release has occurred the magnitude and extent of the dumping and/or release(s) should be assessed. Furthermore, if the field inspection is inconclusive and more information is desired to assess the potential for buried debris having been incorporated into the fill at the northern portion of the Site, a subsurface geophysical assessment consisting of a magnetometer, ground-penetrating radar survey, and/or test pits could be conducted. It is the Environmental Professional's opinion that if no additional evidence of buried debris or a release is identified during follow-up assessment that a release(s) from the single metal automotive part identified during the Site reconnaissance effort would likely be considered de-minimis.

7.3 ADDITIONAL CONSIDERATIONS

The following items are not formal RECs either because there is not sufficient information to reasonably suspect that a release of contamination has occurred or because they are beyond the scope ASTM 1527-13. However it is the environmental professional's opinion that these items should be considered when making decisions regarding the redevelopment of the Site.

- The potential presence of asbestos-containing building materials, lead-based paint, and/or PCB-containing building materials is beyond the scope of ASTM 1527-13. However, given the age and construction of the buildings, these materials may be present in buildings on the Site.

Opinion: An asbestos, lead paint, and PCB-building materials inspection by a licensed professional may be warranted if additional information is desired about these potential concerns.

- Two floor drains and a grit separator were identified at the Site.

Opinion: While these features are reportedly connected to the City sewer and there is no specific reason to consider the drains and the grit separator to be a REC, floor drains can be of environmental concern as they are natural collection points for any potentially hazardous materials which may have been spilled on the floor. Floor drains are of particular concern if the piping connecting them to the municipal sewer system may have been compromised. An inspection of the drains and the grit separator and/or soil borings adjacent to the grit separator may be warranted if additional information regarding the drains and separator is desired.

8.0 DATA GAPS/LIMITATIONS

8.1 DATA GAPS

The Site was covered with a thin layer of snow on the day of the Site walkover (see the photos in Appendix 5 for additional details). This snow may have obscured evidence of spills of hazardous materials (such as staining or stressed vegetation). If debris had been buried in the northern portion of the property it is possible that evidence of this debris may have been covered by the snow and therefore the snow should be considered a significant data gap.

8.2 LIMITATIONS

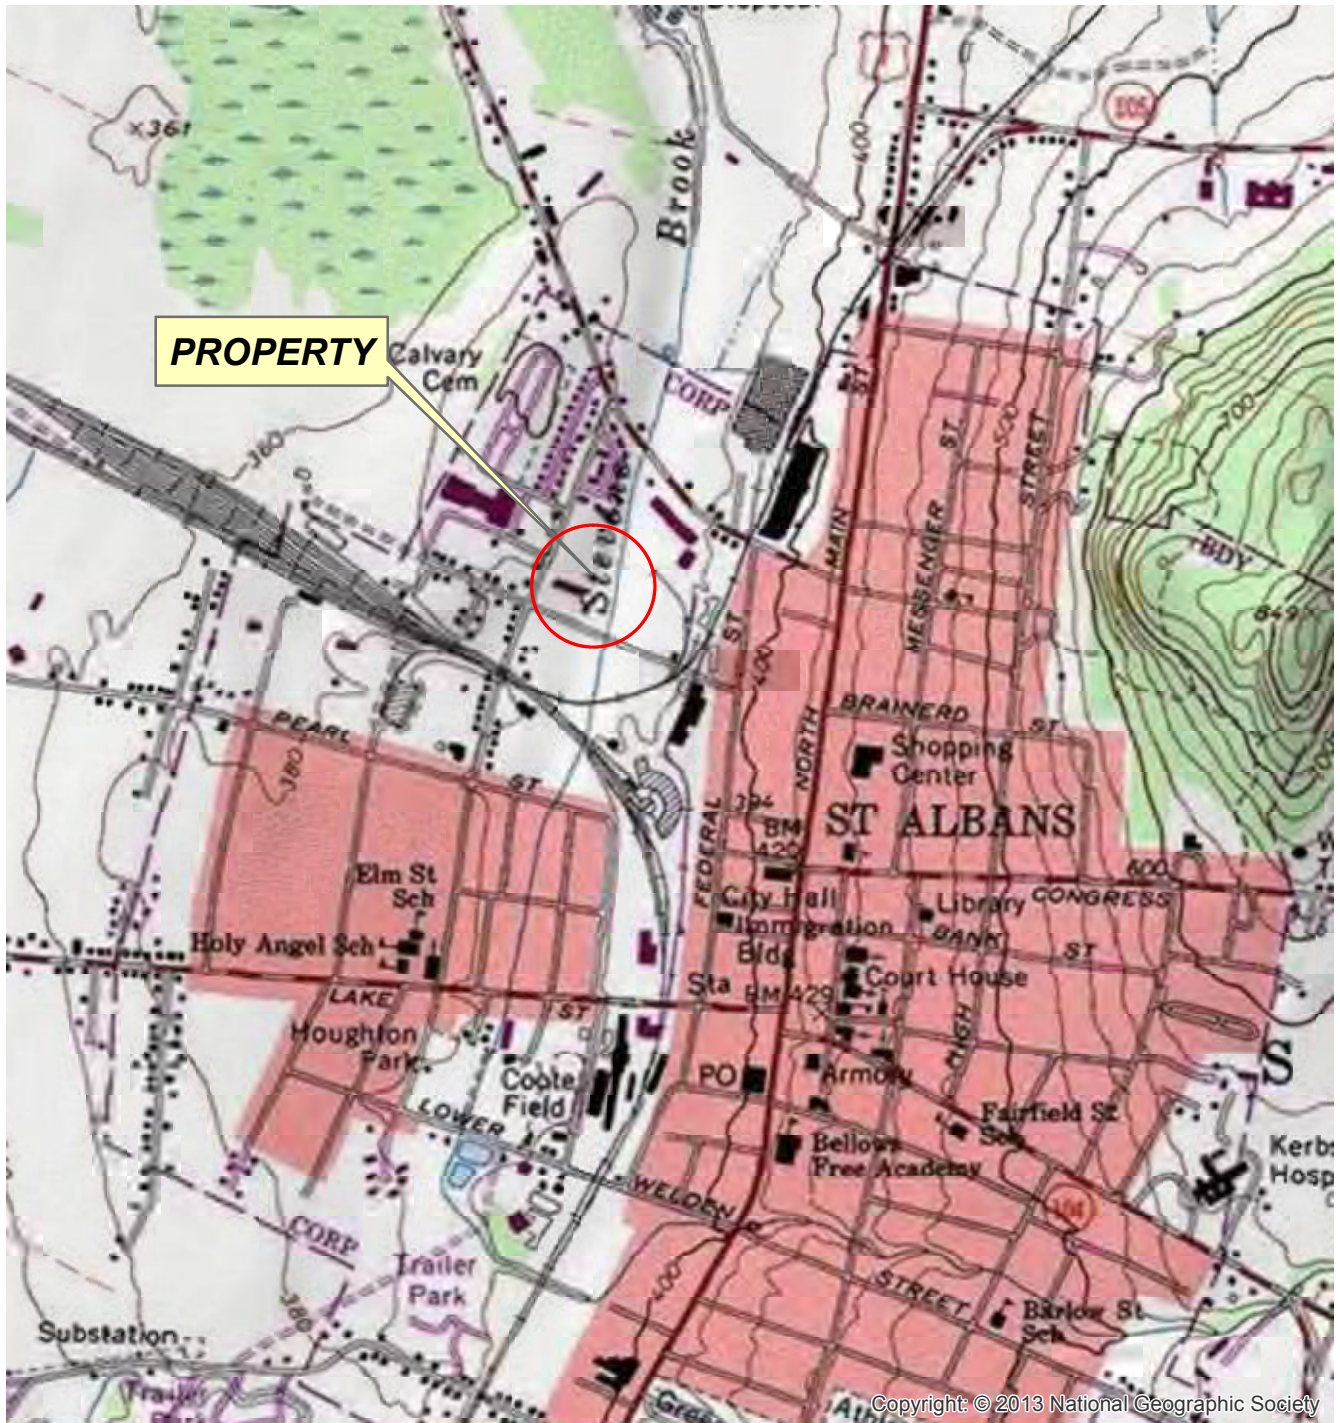

The conclusions of this ESA were based upon information obtained and made available to JCO from the following sources: the St. Albans City Clerk; EDR; the VTDEC; the Federal EPA; and from information gathered during the Site reconnaissance and interviews. This information has been intended for the sole use of the City of St. Albans and the Northwest Regional Planning Commission. No other uses, expressed or implied, are warranted. The design of the investigation was based on sound scientific techniques and experience with similar investigations. Should additional information become available pertaining to environmental concerns that may be associated with the Site, the information should be made available to JCO so that we may re-evaluate our conclusions.

Table 2 - Summary of Natural Resources Atlas Hazardous Waste Site Results
St. Albans DPW Garage, St. Albans, Vermont

Site Number	Site Name	Priority	Discovery Date	Closure Date	Address	SOURCE OF CONTAMINATION	CONTAMINANTS	Project Status (VERBATIM FROM VTDEC WASTE MANAGEMENT DATABASE)
0.25-mile radius								
20083777	Former Fonda Container Company	LOW	12/11/2007		15-21 Lower Newton Street	Manufacturing, Spill	Chlorinated Solvents, PCB	NLR to be filed.
770126	CV Railway Inc	SMAC		12/10/2012	2 Federal St.	Above Ground Storage Tank, Other	Diesel, Heating Oil	Cap Completed, New Track Pans installed in 1/98. Remediation system installed and operating. Semi annual ground water monitoring is ongoing
911110	St Albans Co-op Creamery	SMAC	1/1/1991	3/27/2014	Deal St	UST-Gasoline	Gasoline	Ongoing Monitoring, Site in Natural Attenuation. Annual monitoring at site. Property owner to remove additional soils. Large volume of soils removed during building upgrade. Evaluation into success of improving GW quality being evaluated. NLR recorded on 2/3/14
962036	D P W Garage	SMAC	9/1/1996	7/28/2009	67 Aldis St	UST-Gasoline	Gasoline	USTs removed, contam found, 4/18/03, 4/13/04 4 MWs above VGES, 1 MW below, 2 MWs ND, biennial monitoring, GW contam above VGES on site only, SMAC w/Notice to land record:
20012885	St Albans City Elem School	SMAC	6/26/2001	8/6/2002	29 Bellows St	Non-Petroleum, PCB, Spill	Non-Petroleum, PCB	Transformer spill. Contam surface soils removed. Investigation completed. Confirmatory sample: show no impact to GW. SMAC.
20073698	Former Fonda Warehouse	SMAC	8/20/2007	10/26/2007	29 Lower Newton Street	UST-Diesel, UST-Heating Oil	Diesel, Heating Oil	Contamination discovered during the removal of a small gasoline UST. Five soil borings were installed in the vicinity of the tank. PID readings in soils peaked at 5 ppm. A soil sample taken from the area of the peak readings had no VOCs exceeding the Region IX PRGs. Four monitoring wells installed and sampled. Trace levels of VOCs found in one of the four wells. All nearby properties are served by the municipal water system. Monitoring wells have been properly abandoned. No other areas of concern were identified at the warehouse.
20073739	Clarence Brown Aldis Street Bulk Plant	SMAC	6/23/2005	5/15/2012	8 Aldis Street	Above Ground Storage Tank, Free Product Present	Gasoline	Site file split from #992646. Bulk plant overflow and historic contamination. Free product clean up needed.
20093894	St. Albans Cooperative Creamery #4 UST	SMAC	1/1/2009	3/27/2014	140 Federal Street	Above Ground Storage Tank, UST-Heating Oil	Heating Oil	Soil contamination discovered during sewer work. Contamination from #4 fuel oil UST removal in 1989. Investigation or Notice to Land Record required. 30 cu. Yds. PCS stockpiled on site. Recent site work identified more soil contamination from two different sites. ECS will investigate options for cleanup. 60 cu. yds. soils removed and treated on Aldis St. NLR posted on 1/23/13.
20104102	Starr Transport - NECR Crossing	SMAC	9/16/2010	7/19/2012	North Elm St	Spill	Diesel	Driver didn't see train indicator lights. Train pushed 11 30ft west of road. Both tanks ruptured. Railway bed and road impacted. FD cleaned road & EPS retained to mitigate rail bed area. Six drums sorbent and impacted vegetation removed. Fifty tons of PCS removed to clay layer at 3.5ft. Soil borings advanced to determine lateral extent due to elevated levels remaining at extent of excavation. No VOCs detected and area on town water and sewer.
0.5-mile radius								
880225	Leblancs Citgo Superior Muffler/Mobil	LOW	1/1/1988		Rt 105	UST-Gasoline	Gasoline	Monitoring Ongoing. Old U S T's Removed. PCSs removed in 2008. 2013 approval to review additional remedial options. 2015 LAG to prepare ISCO pilot test.
900605	St. Albans Go Go (former Lesters)	LOW	1/1/1990		Lake St	UST-Gasoline	Gasoline	Pet Contam On Site Invest Proceeding. RLVallee proceeding with investigation and monitoring. Site currently in MNA monitoring
941558	St. Albans Go Go (former Lesters)	LOW	1/1/1994		277 N Main St	UST-Gasoline	Gasoline, MTBE	Gasoline UST release(s). Annual GW and PCS sampling, spring and fall 2016, respectively. Bradford Oil new lead RP for GW, with shared role with SB Collins for more recent PCS work. Modified soil gas survey plan conducted and plume does not appear to threaten offsite property. Older soil pile at Poquette property monitored by Vermont HydroGeo for SBC; next round fall 2016.
992646	Clarence Brown Inc.	LOW	7/20/1999		96 Federal Street	Above Ground Storage Tank, Batteries, UST-Diesel, UST-Gasoline, Waste Oil	Gasoline, Heating Oil, Lead, MTBE, Waste Oil	Four NOAVs sent due to hazardous waste handling practices. Investigation determined degree and extent of contamination. GW plume towards the west from the UST area. Petroleum contamination also found from site ASTs. Some dissolved metal contamination. SB Collins has purchased the property and assumed RP status. RP to remove USTs at site, CAFI and CAP pending.
992699	North Main Exxon	LOW	10/1/1999		266 North Main St	UST-Gasoline, Waste Oil	Gasoline, MTBE, Waste Oil	Underground storage tank removed. Contamination found. Investigation shows limited off-site groundwater contamination to the west of the facility. New MWs installed in 2011 to west to more fully characterize GW. Site in MNA. More investigation to occur around the pump island with possible remedial options to be determined.
992703	Grand Union Shopping Plaza	LOW	9/9/1999		Main St	UST-Heating Oil	Heating Oil, Non-Petroleum	November 2010 sampling results indicate low levels of groundwater contaminants. Wells will be resampled in November 2011. May be eligible for SMAC at that time
20083818	St. Albans Municipal Parking Lot No.1	LOW	10/22/2007	7/13/2011	Lake, Federal, Kingman Streets	Manufacturing	Manganese, Other Metals, PAH	NLR Book 247 pgs 226-227
770197	St Albans Gas And Light	MED			Corner Of Maple & Lasalle	Coal Tar	Coal Tar	EPA has completed two removal actions on the site. Shallow soils contaminated above acceptable risk levels have been removed by EPSA from several residences, the former pant site, and the Stevens Brook.
972243	North End Quick Stop	MED	8/1/1997		248 North Main St	UST-Gasoline		UST Removed. Contamination Found. Investigation is completed and long-term monitoring is underway. (9/7/99). MWs paved over. Requested RP to correct the situation (12/5/01).
20124257	St Albans Railyard	MED	2/15/2012		2 Federal St	Above Ground Storage Tank	Heating Oil	
20134356	North Main and Congress Street	MED			109 and 119 N Main St., 9, 13,		Other Petroleum, Other SVOCs	Phase I and Draft Phase II completed on properties. Buried hydraulic lifts and floor drains present. Soil borings and monitoring wells installed - VOCs detected in four monitoring wells, but only exceeded VGES in MW-2. Several owners of the parcels: Andrew Wood owns 0.10 acre lot at 109 N Main (vacant, Christopher Wood owns 0.56 acre lot at 115, 117, and 119 N Main Street, 115 N Main Street leased by State Farm Insurance and 117 and 119 N Main Street are occupied by Midas Muffler. Additional characterization necessary underneath Midas Muffler bldg, as well as north and east of property, and downgradient of MW-2 to define contaminant plume
870154	S B Collins	NFAP		9/20/1988	n/a	UST-Gasoline		Site Closed
880193	A O T	NFAP			n/a	UST-Diesel		Site Closed
911074	Courthouse	SMAC	6/7/1991	2/19/2003	45 Kingman St	UST-Heating Oil	Heating Oil	Lust Removal Revealed Contamination. MWs installed and samples were ND from 6/28/2002 sampling. MWs closed as requested.
982438	Northwood Realty	SMAC	11/2/1998	9/30/1999	56 Federal St	UST-Gasoline		USTs removed and contamination found. Followup investigation reveals low levels of dissolved phase contamination. No further work needed. SMAC.
992578	Switchyard Shopping Center	SMAC	1/1/1999	12/15/1999	120-129 Lake Street	Unknown	Other Metals	Phase II Assessment found soil and groundwater contamination. Corrective Action limits risk with property notice.
20012919	former Agway Feed Mill	SMAC	8/6/2001	5/9/2002	Walnut St Ext	Free Product Present, Spill, UST-Heating Oil	Heating Oil, Other Petroleum	UST removed. Contamin found. Investigation complete. GW impact limited to tank pit. Surface soil contam with hydraulic oil from equipment demolition- off site soil disposal. SMAC
20063482	Desrochers Residence	SMAC	1/4/2006	6/23/2006	34 Cedar St	UST-Heating Oil	Heating Oil	Underground storage tank removed. Contamination found. Verterre Group conducted site investigation. Contamination appears to be limited in extent, though vapors have impacted the indoor air. Blower has been installed to mitigate this risk. Groundwater treatment system installed in sump area- maintained for three months. Samples taken from 3 points in this system and from the groundwater monitoring well tested clean. System was disassembled and discharge permit cancelled. Indoor air showed no evidence of vapor impact following treatment of sump. Monitoring well has been properly closed.
20083815	Brickyard Tavern Building	SMAC	5/1/2008	7/13/2011	29-33 Federal Street	UST-Gasoline, UST-Heating Oil		NLR Book 247 pgs 224-225 Phase II investigation conducted in conjunction with SMS#2008-3818. See this file for results.
20104111	Blouin Property	SMAC	9/29/2010	3/25/2011	80-84 N Main St	UST-Heating Oil	Heating Oil	Abandoned fuel oil UST removed. Soil contam found. Investigation complete. no impact to groundwater.
1.0-mile radius								
931470	Handy Dodge Toyota Lake Street	LOW	10/1/1993		39 S Main St	UST-Gasoline	Gasoline	Ongoing groundwater monitoring to track historical petroleum release. Groundwater sampling reveals several wells with petroleum compounds above groundwater standards. Annual groundwater monitoring program with next round Spring 2016
931517	Texaco (Getty)	LOW	12/1/1993		224 Lake St	UST-Gasoline	Gasoline, MTBE	Ongoing Monitoring annually of 4 site MWs
20134400	Moose Lodge	LOW	8/6/2013		43 Lake Street	Manufacturing	Lead, Other Metals, PAH	CAP implementation required
20134401	15-17 Lake Street	LOW	8/6/2013		15-17 Lake Street	Manufacturing	Other Metals	CAP implementation required
890353	Joe Miller Gulf	MED			67 S. Main St	UST-Gasoline	Gasoline	Dispenser release caused explosive levels of vapors in sewer line in 1989. Immediate corrective action occurred. USTs removed in 1999, contamination encountered most likely related to earlier spill. Additional groundwater monitoring needed before site can be SMACed. No activity since 1999. State has sent RP letters requesting additional work in 1999, 2000, 2006 and 2013.
951906	S B Collins Bulk Facility	MED	12/1/1995		54 Lower Welden St	UST-Diesel, UST-Gasoline, UST-Heating Oil	Gasoline, MTBE	Monitoring PCS and MWs biennially 2009- 2015. Dissolved phase gasoline UST contamination offsite, possibly along utility corridor. No significant GW solvent impact from waste oil UST. Monitoring well network extends to CVPS site. Spring 2012, 1,000 gallon heating oil UST removed with 14 yds soil stockpiled. PCS stockpile thin spread in 2013. Biennial monitoring event performed in spring 2015; fall 2015 GW sampling event and VI investigation requested for fall 2015.
962027	Office Quarters	MED	6/1/1996		Lake Rd	UST-Gasoline	Gasoline, MTBE	Gasoline UST releases from both Office Quarters and former Cobb Chevrolet. Biennial GW & supply well sampling, next round spring 2016. >1000 yds PCS removed in area of residual free product, stockpiled, and later landfilled. Replacement wells installed
20002745	Pizzagalli (former CVPS) - St. Albans	MED	7/10/2000		Lower Welden Street	Other, UST-Diesel, UST-Gasoline	Diesel, Gasoline, MTBE, Other Petroleum	Additional SI indicated shallow MODF contamination is insignificant. Residual gasoline contamination from CVPS UST requires additional MWs. Source area excavation performed under a CAP in 2004 with approximately 700 tons PCS removed and transported to ESMI for thermal destruction. Monitoring ceased in 2004 but resumed in 2015 along with the installation of three replacement monitoring wells in the former excavation area. Benzene concentrations slightly exceed VGES in one new well (MW-102).
770204	Cootes Field	NFAP		9/25/1990	n/a			Site Closed

Table 2 - Summary of Natural Resources Atlas Hazardous Waste Site Results
St. Albans DPW Garage, St. Albans, Vermont

Site Number	Site Name	Priority	Discovery Date	Closure Date	Address	SOURCE OF CONTAMINATION	CONTAMINANTS	Project Status (VERBATIM FROM VTDEC WASTE MANAGEMENT DATABASE)
870096	C V P S	NFAP			n/a	UST-Gasoline		Site Closed
880232	R L Vallee	NFAP			n/a	UST-Gasoline		Site Closed
890312	Superior Muffler	NFAP		11/27/1989	n/a	UST-Gasoline		Site Closed
890374	Hood Dairy	NFAP		12/1/1992	Rt 7	Other, UST-Gasoline		Site Closed
900486	Bonnet's Welding	NFAP		10/29/1990	Rt 105	UST-Gasoline		Low/cl
911174	S B Collins Bulk Plant	NFAP		5/13/1992	54 Lower Welden St	UST-Gasoline		Petroleum Contamination Found At Bulk Plant
911075	S. Main St Grocery	SMAC	7/1/1991	11/22/2005	139 S Main St	UST-Gasoline		Ongoing monitoring has shown limited contamination in former UST areas. Groundwater Enforcement Standards have been met. No additional work requested.
961980	Marshall Center	SMAC	4/1/1996	7/1/1996	72 Fairfield St	UST-Heating Oil	Heating Oil	Heating oil UST removed, low level residual soil contamination, no GW impacts
982487	CVPS Diesel Plant	SMAC	8/24/1998	4/14/1999	Lower Welden St	UST-Diesel		Underground storage tank removed. Investigation conducted February 1999. Site SMACed April 1999.
20002831	Carlson Residence	SMAC	10/31/2000	8/20/2003	17 Prospect St	UST-Heating Oil		UST removed. Contam found. Investigation complete. 12/02 2 MWs slightly over VGES, 3/03 2 MWs under VGES. SMAC
20043297	Harrison Residence	SMAC	11/3/2004	11/10/2005	91 High St	UST-Heating Oil	Heating Oil	Underground storage tank rclosed in place. Contamination found. EPS conducted gw investigation at the property. No significant contamination discovered outside of tank grave
20053412	Leader Evaporator	SMAC	4/18/2005	7/17/2008	25 Stowell Street	Unknown	Lead, Other Petroleum, PAH	NLR July 9, 2008 Book 226 Pages 249-252
20053413	Lewis Auto Body	SMAC	4/18/2005	11/27/2006	22 Stebbins Street	Floor drain/Dry well, Unknown	Lead, Other SVOCs	SMAC. Notice to Land Record.
20053424	Dutkiewicz Residence	SMAC	8/18/2005	1/30/2006	128 Lower Weldon St	UST-Heating Oil	Heating Oil	Underground storage tank closed in place. Contamination found. Odors in residence. 3 drums soil removed from basement. Investigation needed. Verterre wp approved 10/05. Four wells installed and tested- no detection of petroleum related compounds. No VOCs detected in basement using a PID.
20063555	Franklin Apartments	SMAC	7/20/2006	10/9/2006	8 - 10 Maiden Lane	UST-Heating Oil	Heating Oil	Underground storage tank closed in place. Elevated PID readings detected beside tank. Several borings/wells installed adjacent to the tank. No specific petroleum compounds detected. Elevated TPH levels found in groundwater, though soils tested clean for VOCs and TPH. Recommendation was for one additional groundwater monitoring round. Most recent monitoring event showed that TPH levels in groundwater had declined. No VOCs detected in ambient indoor. Approved closure of single monitoring well for SMAC designation. Well closure was completed shortly thereafter
20114183	St. Albans House	SMAC		3/1/2013	58,60 Lake St., 1 Catherine St.	Other	PAH	NLR. Book 259, Page 388 Jan. 23, 2013
20114205	CVPS St. Albans diesel plant substation	SMAC	8/8/2011	8/21/2014	58 Lower Welden Street	UST-Diesel	Diesel, PCB	Demolished diesel generating plant & substation. Excavated & disposed of PCB soils. Low level GW contam below VGES.

NOTE: Table based on data extracted on January 19, 2016

APPENDIX 1

CREDENTIALS OF JOHNSON COMPANY PERSONNEL

KURT MULLER, P.E.
Project Manager/Engineer

Mr. Muller's engineering expertise includes project management, environmental site assessment, investigation and remediation design, clean-up oversight, and stakeholder collaboration. Specifically, Mr. Muller has acted as lead project manager and Environmental Professional on more than 15 EPA-funded brownfield site investigations in which he has overseen the preparation of Quality Assurance Project Plans, site investigation reports, and Corrective Action Plans that address a wide variety of contaminants. During all of his brownfield projects, Mr. Muller has emphasized good communication and participation amongst the stakeholders in order to ensure a successful outcome. Mr. Muller is a licensed Professional Engineer in Vermont with 10 years of experience in the private sector, nine of which have been with The Johnson Company. As a Peace Corps volunteer prior to joining The Johnson Company, he was involved in the development of public health and sanitation projects in Côte d'Ivoire, West Africa.

Selected Experience Summary

- **Brownfields Investigation and Redevelopment** - Project manager on more than 15 EPA-funded Brownfield site investigations, prepared QAPP documents and investigation reports. Performed corrective action feasibility investigations (CAFI) and prepared corrective action plans (CAP) that addressed a wide variety of contaminants. Familiar with and generated self-implementing cleanup plans for TSCA-regulated PCB sites. Designed, coordinated and implemented remediation for two former paper mills impacted by dioxins/furans and PCBs, which included developing EPA approved QAPPs for post remediation dioxins/furans indoor air clearance sampling, the first of their kind for Region 1 EPA. Prior to project management, performed soil, vapor and groundwater sampling using a variety of techniques including EPA's slow purge sampling procedures, Drive Point/Direct Push technology, Waterloo Profiling, soil and sediment coring, bathymetry assessments, and monitoring well installation. Also supervised numerous underground storage tank closures throughout Vermont.
- **Environmental Site Assessments** –Performed more than 42 Phase I Environmental Site Assessments on a variety of commercial and residential properties. Project manager/lead engineer on several subsurface Phase II hydrogeologic investigations at a variety of petroleum, chlorinated solvent and PCB contaminated sites.
- **Remediation and Construction Oversight** – Provided oversight and day-to-day project management for the US Department of the Interior for a \$40M+ former landfill remediation project in a National Park. Performed daily site inspections of a \$100M+ ski resort expansion project and responsible for implementing effective storm water management practices.

Education

B.A., Biology, University of Vermont, 1999
B.S., Environmental Engineering, University of Vermont, 2004

Note: Long Version available upon request

JEREMY E. MATT, P.E.
Project Engineer

Mr. Matt has 7 years of experience including: environmental investigation and remediation projects; construction, investigation, and remediation oversight; sediment transport; MATLAB and Visual Basic programming; and data management, visualization, and analysis. He was also the recipient of numerous academic awards during his undergraduate studies at the University of Vermont.

Selected Experience Summary

- **Brownfields Investigation and Redevelopment** – Experience with all aspects of brownfields projects including Phase I & Phase II investigations, Quality Assurance Project Plans, Corrective Action Feasibility Investigations, Corrective Action Plans, Analysis of Brownfields Cleanup Alternatives, and corrective action completion reporting. Designed investigations and corrective actions for properties contaminated with petroleum products, chlorinated solvents, metals, PCBs, dioxins/furans, and PAHs. This design experience includes development of the technical aspects of a QAPP for high volume (greater than 4,000 m³) dioxin air sampling, which was the first of its kind for Region 1 EPA. Field experience includes oversight of UST closure and managing and conducting investigations of groundwater, surface water, sediment, soil, soil vapor, and bulk concrete.

- **Remediation, Investigation, and Construction Oversight** – Provided construction oversight on multiple investigation, remediation, and restoration projects including:
 - The Burlington Waterfront Access North redevelopment project for the Chittenden County Regional Planning Commission and the City of Burlington. Duties included ensuring work plan compliance, ensuring protection of human health and the environment during intrusive activities, soil field screening, and analytical sampling, soil stockpile tracking and management, and preparing daily reports detailing progress and any problems encountered during the day.
 - A 60 million dollar remediation/restoration effort of a former dump site and a 1+ million dollar environmental investigation of a former manufactured gas plant for the US Department of the Interior. Duties included ensuring work plan compliance, confirming investigation data quality, and preparing daily reports.

- **Data Management, Visualization, & Analysis** – Produced site plans, potentiometric maps, contaminant plume cross-sections, and other graphics to clearly communicate the extent and degree of contamination numerous hazardous waste sites. Wrote Visual Basic scripts and prepared relational databases to automate repetitive data management tasks, increasing accuracy and efficiency.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by The Johnson Company were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

VT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Vermont Hazardous Waste Sites List.

A review of the VT SHWS list, as provided by EDR, and dated 08/28/2015 has revealed that there are 12 VT SHWS sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ST ALBANS CITY ELEM Project Status:: Transformer spill. Contam surface soils removed. Investigation completed. Confirmatory samples show no impact to GW.SMAC. Facility ID: 20012885	29 BELLOWS ST	NW 0 - 1/8 (0.082 mi.)	7	23
CLARENCE BROWN ALDIS Project Status:: Site file split from #992646. Bulk plant overflow and historic contamination. Free product clean up needed. Facility ID: 20073739	8 ALDIS STREET	ESE 1/8 - 1/4 (0.166 mi.)	E21	73

EXECUTIVE SUMMARY

VT LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Conservation's Vermont Hazardous Waste Sites List.

A review of the VT LUST list, as provided by EDR, and dated 08/28/2015 has revealed that there are 13 VT LUST sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
FORMER FONDA WAREHOU Closure Date: 10/26/2007 Project Status: Contamination discovered during the removal of a small gasoline UST. Five soil borings were installed in the vicinity of the tank. PID readings in soils peaked at 5 ppm. A soil sample taken from the area of the peak readings had no VOCs exceeding the Region IX PRGs. Four monitoring wells installed and sampled. Trace levels of VOCs found in one of the four wells. All nearby properties are served by the municipal water system. Monitoring wells have been properly abandoned. No other areas of concern were identified at the warehouse. Facility Id: 20073698	29 LOWER NEWTON STRE	ENE 1/8 - 1/4 (0.141 mi.)	B14	33
ST. ALBANS COOPERATI Closure Date: 03/27/2014 Project Status: Soil contamination discovered during sewer work. Contamination from #4 fuel oil UST removal in 1989. Investigaiton or Notice to Land Record required. 30 cu. Yds. PCS stockpiled on site. Recent site work identified more soil contamination from two different sites. ECS will investigate options for cleanup. 60 cu. yds. soils removed and treated on Aldis St. NLR posted on 1/23/13. Facility Id: 20093894	140 FEDERAL STREET	SE 1/8 - 1/4 (0.217 mi.)	F27	232
CLARENCE BROWN INC. Project Status: Four NOAVs sent due to hazardous waste handling practices. Investigation determined degree and extent of contamination. Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within

EXECUTIVE SUMMARY

approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ST ALBANS GAS AND LI	CNR MAPLE AND LASALL	S 1/4 - 1/2 (0.350 mi.)	34	340

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Staff: Ashley Desmond
Source: UST-Diesel
Site Use: Business
Site Status: Not reported
Contamination: Diesel, Heating Oil
Institutional Control: Not reported
Record Last Update: 07/30/2010
Project Status: Contamination discovered during the removal of a small gasoline UST. Five soil borings were installed in the vicinity of the tank. PID readings in soils peaked at 5 ppm. A soil sample taken from the area of the peak readings had no VOCs exceeding the Region IX PRGs. Four monitoring wells installed and sampled. Trace levels of VOCs found in one of the four wells. All nearby properties are served by the municipal water system. Monitoring wells have been properly abandoned. No other areas of concern were identified at the warehouse. Not reported

Recipient name: Vermont Agency of Commerce and Community Development
 Grant type: BCRLF

Actual:
387 ft.

Property name: FONDA CONTAINER/SOLO CUP - LOT 1
 Property #: Not reported
 Parcel size: 1.78

Property Description: The Fonda/Solo Company formerly owned this manufacturing facility which was used for the manufacture of paper products, including, but not limited to, paper plates, food pails, paper cups, and food trays. The facility included three attached buildings. Building 1, constructed circa 1938 is the original portion of the facility and contains office space, cafeteria, production area, and loading dock. Building 2, constructed circa 1954, is comprised of a production area and printing area. Building 3, constructed circa 1957, is comprised of production and paper shredding areas and warehouse space. Building 1 was subdivided from the other buildings subsequent to purchase by the City. Building 1, at 21 Lower Newton Street, is the property discussed in this proposal. All buildings and property have been vacant since 2006.

Recipient name: Northwest Regional Planning Commission
Grant type: Assessment
Property name: FONDA CONTAINER/SOLO CUP - LOT 2
Property #: 22054015
Parcel size: 3.73
Property Description: The site is an abandoned manufacturing facility with associated outbuildings. The property was undeveloped until 1938, when the first building was constructed. The facility was expanded in 1954 and 1957. The property has been used to manufacture paper containers since 1938 under a variety of owners.
Latitude: 44.820201
Longitude: -73.083588

Grant type: Assessment
Property name: FONDA CONTAINER/SOLO CUP - LOT 2
Property #: 22054015
Parcel size: 3.73
Property Description: The site is an abandoned manufacturing facility with associated outbuildings. The property was undeveloped until 1938, when the first building was constructed. The facility was expanded in 1954 and 1957. The property has been used to manufacture paper containers since 1938 under a variety of owners.
Latitude: 44.820201
Longitude: -73.083588
HCM label: Address Matching-House Number
Map scale: Not reported
Point of reference: Entrance Point of a Facility or Station
Datum: North American Datum of 1983

Site Use: Residential
Site Status: Not reported
Contamination: Heating Oil
Institutional Control: Not reported
Record Last Update: 03/20/2006
Project Status: Underground storage tank removed. Contamination found. Verterre Group conducted site investigation. Contamination appears to be limited in extent, though vapors have impacted the indoor air. Blower has been installed to mitigate this risk. Groundwater treatment system installed in sump area- maintained for three months. Samples taken from 3 points in this system and from the groundwater monitoring well tested clean. System was disassembled and discharge permit cancelled. Indoor air showed no evidence of vapor impact following treatment of sump. Monitoring well has been properly closed.

Property Description: The site consists of a parking lot comprised of five parcels and is located in the center of a city block bordered by Federal St., Kingman St., Lake, St., and North Main St. Historic site uses include flask yard (1896), foundary-machine shop (1912), and auto house/garage/repair (1926-1959). The site was converted to a parking area in ~1959. Historic research completed on behalf of the owner noted that 27-33 Federal Street were originally two properties: 27-29 Federal Street and 31-33 Federal Street. The buildings are now functionally and legally one property. Most recently, the building housed the Brickhouse Tavern on the ground floor and apartments on the upper floors, but it has been vacant since ~May 2007. Historical uses of the property include carriage paints shop, confectionery and tobacco shop, tailor, and sheet metal shop. In addition, an 1895 fire reportedly destroyed all of the buildings on the block in which the site is located. Prior to the City's purchase of the property, it was owned for three years by three individuals.

Recipient name: Northwest Regional Planning Commission
Grant type: Assessment
Property name: DOWNTOWN CORE BLOCK
Property #: 23048028, 23033039, 23033041, 23049019, 23033025
Parcel size: 2.4
Property Description: The site consists of a parking lot comprised of five parcels and is located in the center of a city block bordered by Federal St., Kingman St., Lake, St., and North Main St. Historic site uses include flask yard (1896), foundary-machine shop (1912), and auto house/garage/repair (1926-1959). The site was converted to a parking area in ~1959. Historic research completed on behalf of the owner noted that 27-33 Federal Street were originally two properties: 27-29 Federal Street and 31-33 Federal Street. The buildings are now functionally and legally one property. Most recently, the building housed the Brickhouse Tavern on the ground floor and apartments on the upper floors, but it has been vacant since ~May 2007. Historical uses of the property include carriage paints shop, confectionery and tobacco shop, tailor, and sheet metal shop. In addition, an 1895 fire reportedly destroyed all of the buildings on the block in which the site is located. Prior to the City's purchase of the property, it was owned for three years by three individuals.

Site Use: Residential
Site Status: Not reported
Contamination: Heating Oil
Institutional Control: Not reported
Record Last Update: 09/20/2006
Project Status: Underground storage tank closed in place. Elevated PID readings detected beside tank. Several borings/wells installed adjacent to the tank. No specific petroleum compounds detected. Elevated TPH levels found in groundwater, though soils tested clean for VOCs and TPH. Recommendation was for one additional groundwater monitoring round. Most recent monitoring event showed that TPH levels in groundwater had declined. No VOCs detected in ambient indoor. Approved closure of single monitoring well for SMAC designation. Well closure was completed shortly thereafter.

US BROWNFIELDS:

Recipient name: Northwest Regional Planning Commission
Grant type: Assessment
Property name: SAINT ALBANS HOUSE
Property #: Not reported
Parcel size: .3
Property Description: The St. Albans House was formerly the St. Albans Hotel located at 58 and 60 Lake Street and 1 Catherine Street in St. Albans City, Vermont. It consists of a four story 1,792 square foot main building known as the St. Albans House and three attached outbuildings totaling 3,600 square feet per assessors card. The four story St. Albans House structure was built prior to 1880s, the outbuildings were likely built in the early 1900s. The property is currently vacant. Past uses include tenant housing, restaurant, herbal shop, print shop, auto sales and service. The site is currently owned privately and planned for future use as residential apartments and office space.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/30/2015	Source: EPA

Number of Days to Update: 58	Next Scheduled EDR Contact: 01/18/2016
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/30/2015	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/08/2015	Telephone: 703-603-8704
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 01/06/2016

	Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 11/23/2015
Number of Days to Update: 94	Next Scheduled EDR Contact: 03/07/2016
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/09/2015
Date Data Arrived at EDR: 06/26/2015

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/28/2015	Source: Department of the Navy
Date Data Arrived at EDR: 05/29/2015	Telephone: 843-820-7326
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 11/13/2015
Number of Days to Update: 13	Next Scheduled EDR Contact: 02/29/2016
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 09/10/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/11/2015	Telephone: 703-603-0695
Date Made Active in Reports: 11/03/2015	Last EDR Contact: 11/24/2015
Number of Days to Update: 53	Next Scheduled EDR Contact: 03/14/2016
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 09/10/2015	Source: Environmental Protection Agency

Number of Days to Update: 82	Next Scheduled EDR Contact: 04/11/2016
	Data Release Frequency: Annually

State- and tribal - equivalent CERCLIS

SHWS: Sites Database

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 08/28/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 09/01/2015	Telephone: 802-241-3443
Date Made Active in Reports: 09/17/2015	Last EDR Contact: 11/19/2015
Number of Days to Update: 16	Next Scheduled EDR Contact: 03/07/2016
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Landfills and Transfer Stations

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 06/13/2015	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 06/16/2015	Telephone: 802-241-3444

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

ST. ALBANS DPW GARAGE
67 ALDIS ST
SAINT ALBANS, VT 05478

TARGET PROPERTY COORDINATES

Latitude (North):	44.8187 - 44° 49' 7.32"
Longitude (West):	73.0893 - 73° 5' 21.48"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	651071.2
UTM Y (Meters):	4964369.5
Elevation:	365 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5641182 SAINT ALBANS, VT
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> FRANKLIN, VT	<u>FEMA Flood Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	Not Reported
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> SAINT ALBANS	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Lower Ordovician and Cambrian carbonate rocks
Code:	OC (<i>decoded above as Era, System & Series</i>)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Massena

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 38 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 14.1111 Min: 4.2333	Max: 7.3 Min: 5.6
2	7 inches	25 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4.2333 Min: 0.4233	Max: 7.3 Min: 5.6
3	25 inches	44 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 4.2333 Min: 0.4233	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Georgia

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	1 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.1111 Min: 4.2333	Max: 7.3 Min: 5.1
2	1 inches	22 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14.1111 Min: 4.2333	Max: 7.3 Min: 5.1
3	22 inches	59 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4111 Min: 0.4233	Max: 7.3 Min: 5.1

Soil Map ID: 3

Soil Component Name: Enosburg

Soil Surface Texture: loamy fine sand

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.1111 Min: 42.3333	Max: 6.5 Min: 4.5
2	7 inches	22 inches	loamy fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.1111 Min: 42.3333	Max: 7.3 Min: 4.5
3	22 inches	59 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4.2333 Min: 0.4233	Max: 7.3 Min: 5.6

Soil Map ID: 4

Soil Component Name: St. Albans

Soil Surface Texture: channery loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 69 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: VT Center for Geographic Information

Telephone: 802-882-3001

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

APPENDIX 3

ENVIRONMENTAL QUESTIONNAIRE

ENVIRONMENTAL QUESTIONNAIRE

INSTRUCTIONS: Please complete the following questionnaire. If you have any questions about how to answer the question, answer to the best of your ability, and indicate your question. If additional pages are necessary to fully respond to the question, please mark each page and attach them to this questionnaire. Also, please attach copies of any requested documents. If copies cannot be made, please indicate that, and have the originals available for review during our visit to your Facility.

I. GENERAL BACKGROUND INFORMATION:

1. Address of Facility: *Public Works Garage*
67 Aldis St.
St. Albans VT 05478
 (Telephone) *802-524-1500 Ext. 267*

2. Name and position of person responding to this Questionnaire:
Allen W. Robby

3. To the best of your knowledge, provide an operational and ownership history of the site.

Name of Facility	Owner/ Operator	Year (s) Owned or Operated		Process	Current Address
		from	to		
<i>P.W. Garage</i>	<i>City of St. Albans</i>	<i>1979</i>	<i>2016</i>	<i>-</i>	<i>67 Aldis St. St. Albans VT.</i>

4. Describe the general character of the Facility site and the surrounding area (including terrain, location of wetlands, coastlines, rivers, streams, lakes, springs, drinking water wells, roads, water intake and discharge structures, landmarks, flood plains, etc.):

Residential Neighborhood
Stevens Brook is nearby

5. Describe all known former uses of the Facility, whether carried out under the current ownership, or any prior ownership: *vacant lot*

6. Does any person, firm or corporation other than the owner occupy the site or any part of it? If yes, identify them and describe their use of the property.

NO

7. Have there been any spills, releases, or unpermitted discharges at or near the Facility (including neighboring properties)? If so, describe; and attach any incident reports and the results of any investigations:

Former site for city owned gas pumps - Tanks were leaking and 2 keelov tanks have been pulled.

8. Has the Facility ever been the subject of any enforcement actions by any federal, state, or local government entities, or does the Facility have knowledge of any contemplated enforcement actions? If so, state the results of the enforcement action (consent order, penalties, no action, etc.) and describe the circumstances:

State of VT. had an ongoing monitoring with 6-7 wells which have since been capped.

9. Is the Facility now under any state, federal or local agency orders or consent decrees? If so, attach them to this response.

N/A

10. Have there been any formal or informal citizen complaints regarding the Facility? If so, did they result in the filing of a notice of citizen suit, or a civil complaint, or other administrative or criminal procedure? If so, describe in full detail:

N/A

11. Provide the Facility's RCRA number, if applicable.

N/A

12. Provide the Facility's SIC number, if applicable.

9

13. Describe past/present building/facility heating system.

NATURAL GAS

14. Name of architectural/engineering firm or contractors that erected and/or remodeled the facility.

Spates Construction

15. Has the site ever been used for excavation or fill operations?

yes - in rear part of the lot beyond the fence.

16. Are there, or have there ever been, any buildings, storage sheds, or other structures on the property?

Not sure?

If so, how many? Where are they, how big are they, how old are they, and what are they used for?

17. Describe the circumstances of the transaction that has made the present ESA necessary.

Transaction type:

Q Sale Q Foreclosure Q Re-financing Q

Other possible development

Identify the following:

Owner City of St Albans

Operator/tenant P.W.D. garage

Buyer

Financing Institution

Real Estate Agent

II. SOLID AND HAZARDOUS WASTES:

18. Does the facility generate any solid or hazardous wastes? If so, provide the Facility's EPA (or State) identification number

used oil typically under 55gals
Exempt.

19. Does the facility have any RCRA Hazardous Waste Permits? If so, please attach to this questionnaire.

- a) Generator
- b) Transporter
- c) Treatment, Storage, Disposal Facility

20. Have any of the Facility's solid or hazardous wastes been analyzed? If so, attach the results of any analyses done on those wastes.

21. Identify the transporter of any hazardous wastes, and attach a copy of the transporter's permits and invoices from the last two years for the transport of wastes.

22. Identify the solid or hazardous waste disposal or treatment facilities which receive the Facility's wastes, and attach a copy of the applicable permits and invoices from the last two years.

23. Does the Facility treat or dispose of any wastes on site (including without limitation incineration, reclamation, neutralization or recovery)? If so, describe in full, and attach any applicable permits.

24. Attach copies of the hazardous waste manifests for the last two years and all annual/biennial reports on hazardous wastes.

25. Does the Facility transfer, incinerate, process, or store any non-hazardous solid wastes or hazardous wastes, other than refuse-derived fuel or waste oil, which is generated off-site? If so, describe:

26. Does the Facility accumulate and store any hazardous wastes on site for disposal for longer than 90 days? If so identify the substance, the quantity and describe how it is stored:

27. Identify all hazardous wastes generated at the facility, and as to each, state its hazardous characteristics (toxicity, reactivity, corrosivity, ignitability) and whether it is a listed hazardous waste:

III. SURFACE WATER/WATER QUALITY/DISCHARGE TO MUNICIPAL SEWAGE TREATMENT PLANT:

28. Identify and attach all permits at the Facility relating to all Facility discharges to water, including discharges of wastewater, process water, contact or non-contact cooling water, storm water, as well as water from cafeterias and restrooms.

*Connected to COSA Municipal Sewer
" " " " Storm Sewer
" " " " Potable Water*

29. Has the Facility tested the groundwater at or around its Facility? If so, attach all analytical results.

contact state of VT.

30. If any questionnaires have been completed and submitted to any federal, state, or local agencies relating to water, including industrial pretreatment questionnaires, please attach them.

/

31. Is any waste deposited in or near surface or groundwaters? If so, describe in detail, including not only the receiving water's classification, but a description of the type and quantity of the wastes.

/

32. Attach copies of the Facility's Discharge Monitoring Reports for the last two years, if the Facility is required by regulation to complete such reports.

/

33. Provide the Facility's NPDES number.

N/A

34. Are there any drinking water wells, or other wells, on the property? If so, give location.

/

IV. AIR POLLUTION:

35. Are there any air emission sources that emit contaminants from the Facility? If so, describe each source, including whether it is a stationary combustion installation, process source, exhaust or ventilation system, incinerator, or other source:

/

36. Are any of the sources permitted? If so, attach a copy of each permit.

37. Describe past/present process ventilation system.

V. SPILLS AND UNDERGROUND STORAGE TANKS (USTs):

38. List and describe all above and below ground storage tanks used to store petroleum or gasoline products, or other chemicals or wastes, including the contents and capacity of each tank. For all USTs, provide corresponding notification and permit numbers, dates, and material. Are said tanks double lined? Do they have cathodic protection? Provide any tank tightness test results for the on-site tanks.

Former gas pumps on site

39. List and locate ALL past/present underground storage tanks on site, even if they are not now in service, and state whether any notification has been filed with the local, state or federal government concerning existence of those tanks.

State of Vt. would have info.

40. Have there been any leaks, spills, releases or other discharges (including loss of inventory) associated with any of these tanks? If so, give full details, including the response taken, all analytical results or reports developed through investigation (whether internal or external), and the agencies which may have become involved.

yes

41. Is there a septic system, leach field, or dry well, etc., on the property; or to the best of your knowledge, has there ever been such a system on the property? If yes, please locate.

If so, where is it? *Not to my knowledge*

42. Have any underground storage tanks ever been removed from the property? If so, please give dates and copies of State reports, if available.

yes. approx 15+ years ago

43. Are there any floor drains in the facility? If yes, please locate.

Where do the floor drains go (choose one)?

A. Are they connected to municipal sewer system?

B. Do they drain into a septic system, leach field or dry well?

C. Do they drain into a stream? *- empty to COSA storm system*

D. Do they drain onto the ground surface?

E. Other? Please explain.

VI. POLYCHLORINATED BIPHENYLS ("PCB'S") AND ASBESTOS:

44. Provide any records the Facility has concerning any on-site PCBs or PCB equipment, whether used or stored, and whether produced as a byproduct of the manufacturing process or otherwise. (PCBs are generally associated with transformers or capacitors, circuit breakers, voltage regulators, switches or cables.)

45. Have there been any PCB spills, discharges or other accidents? If so relate all the circumstances:

?

46. Does the Facility have any asbestos containing materials, including materials used to construct the building? If yes, please list locations:

?

47. Does the facility have any UREA formaldehyde foam containing materials, including materials used to insulate the building? If so, list:

?

APPENDIX 4

ST. ALBANS DPW GARAGE NOTICE TO THE LAND RECORDS

222
Vol 233

NOTICE TO CITY OF ST. ALBANS LAND RECORDS
ST. ALBANS PUBLIC WORKS GARAGE PROPERTY SMS Site #96-2036
TO
VERMONT WASTE MANAGEMENT DIVISION
Rec. for record June 30, 2009 @ 8AM

Notice to the City of St. Albans Land Records

This is to serve notice to the City of St. Albans, Vermont, that at the Public Works Garage property located at 31 Aldis Street soil and groundwater in the subsurface is impacted by petroleum released from two leaking underground storage tanks that were removed in August 1996. This 2.3 acre property is further described in city records as tax parcel #22002031. The property is filed in the Waste Management Division records as the St. Albans Public Works Garage property, SMS Site #96-2036.

On site contamination resulted from leaking 3,000 gallon and 1,000 gallon underground storage tanks (USTs) which had released gasoline to the soil and groundwater. An initial site investigation and routine groundwater monitoring performed since that time has indicated the presence of the petroleum chemicals benzene, ethylbenzene, toluene, naphthalene, xylene, and the gasoline additive MTBE at levels above the Vermont Groundwater Enforcement Standards (VGES). Previous site investigations have also determined that the highest contaminant concentrations are found within the immediate vicinity of the former UST grave and that there is not significant contaminant migration. Results of the investigation indicate that soils located approximately 125 to 150 feet downgradient of the tank grave have been impacted by petroleum hydrocarbons and that the contaminant plume is approximately 80 to 100 feet wide. The estimated volume of impacted soils is approximately 1,500 to 3,000 cubic yards. Based on the observed fine soil textures and shallow groundwater gradients, limited contaminant migration is expected to persist. Additionally, no on-site or off-site sensitive receptors appear to be at risk based on historical water quality monitoring or observations made during test pit activities

Details are outlined in the report titled Initial Site Investigation prepared by North Country Environmental Services dated October 30, 1996, and in the report titled Supplemental Site Investigation prepared by Ruggiano Engineering, Inc. dated January 8, 2009. Copies of these reports are in the site file and are available for review at the Vermont Department of Environmental Conservation (VTDEC) offices in Waterbury, Vermont.

Prior to conducting any subsurface work, excavation, or groundwater extraction in the vicinity of the above described contamination on the property, the Agency of Natural Resources, Department of Environmental Conservation, Waste Management Division (VTANR/DEC/WMD), must be notified. The status of this site may only be updated or altered by the Vermont ANR/DEC/WMD. For further information contact:

Vermont Agency of Natural Resources

APPENDIX 5
PHOTOGRAPHIC PLATES

Photo 1: Photograph taken facing east along the south side of the main DPW building (the darker green structure at the left side of the photograph). The large cold storage shed (lighter blue) is visible in the background beyond the skid-steer. The small cold storage shed (formerly the UST pump building) is visible just left of center. Note the storm drain in the foreground.

Photo 2: View of the south side of the main DPW building looking west. The telephone pole with the transformer visible in the background provides power to the main DPW building. This pole is not located at the Site according to information provided by Mr. Allen Robtoy.

Photo 3: Sewer utility hole to the grit separator for the floor drains.

Photo 4: The small cold storage shed (photo taken facing east). The skate park is visible within the chain-link fence in the background.

Photo 5: The view looking north between the main DPW building (left) and the large cold storage shed (right). The second storm drain is present to the left of the main DPW building. The gate to the northern portion of the Site is visible at the center of the photograph.

Photo 6: The south side of the large cold storage shed.

Photo 7: The skate park at the southeast corner of the Site.

Photo 8: The east end of the main DPW building looking northwest. The small white trailer at the northeast corner of the main DPW building is used to store fuel for the small engines used by the DPW.

Photo 9: The tanks of deicing solution at the east end of the large cold storage shed.

Photo 10: The northern portion of the Site facing north. The large soil stockpile just beyond the pickup truck was excavated from the St. Albans Core Lot Project. The excavator to the left of the soil stockpile is located on the “footprint” of the former Core Lot Project stockpile which was recently transported to a landfill. The smaller stockpile in the foreground was generated during water main breaks and other DPW projects and will be transported to the DPW fill site once weather permits.

Photo 11: Drainage swale with check dams

Photo 12: View of the Core Lot Project soil stockpile facing east. The other stockpile which was transported to the landfill was formerly located where the bare ground is visible.

Photo 13: Engine or transmission part located at the northern woods-line.

Photo 14: Poly sheeting remnants from beneath the pile which was transported to the landfill.

Photo 15: View of the Site looking south from the Core Lot Project stockpile.

Photo 16: Close view of the stockpile of Core Lot Project soils. The soil on the exterior of the pile was placed to weigh down the plastic.

Photo 17: View of the Stevens Brook looking north

Photo 18: The meeting area in the main DPW building

Photo 19: The garage portion of the main DPW building

Photo 20: Drums of engine oil on a spill-containment pallet in the garage portion of the main DPW building.

Photo 21: A drum of used oil on a spill containment pallet and a drum of used speedy dry. These items are located in the garage portion of the main DPW building.

Photo 22: View of the repair area in the main DPW building. Note the floor drain in the foreground.

Photo 23: Chemical storage in the main DPW building

Photo 24: Paint storage in the main DPW building

Photo 25: Miscellaneous items stored in the small cold storage shed.

Photo 26: Salt storage in the large cold storage shed

Photo 27: Miscellaneous items stored in the large cold storage shed.

Photo 28: Gasoline cans in the flammables storage trailer located to the northeast of the main DPW building.

APPENDIX 6
USER'S QUESTIONNAIRE

USER QUESTIONNAIRE¹

A. GENERAL BACKGROUND INFORMATION:

1. Name and Address of Facility:

St. Albans City Public Works Garage, 67 Aldis Street, St. Albans, VT

(Telephone) 802-524-5958 x259

2. Name and position of person responding to this Questionnaire:

Greta Brunwick, Senior Planner, Northwest Regional Planning Commission

B. USER SUPPLIED INFORMATION

(1.) Environmental Cleanup liens that are filed or recorded against the Site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

I am not aware of any environmental cleanup liens filed against this property.

(2.) Activity and land use limitations that are in place at the site or that have been filed or recorded in a registry (40CFR 312.26).

Are you aware of any AULs such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal tribal, state or local law?

I am not aware of any land use limitations for this property.

¹ In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments") the User must provide the above-listed information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemical and processes used by this type of business?

There is currently no person seeking to qualify for the LLP. The City of St. Albans is completing these assessments to help in the marketing and redevelopment of this property.

(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

This property is not currently for sale.

(5.) Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example as user:

(a.) Do you know the past uses of the property?

The property has been used as the St. Albans City Public Works Garage since it was acquired from the Central Vermont Railroad in 1979. Previous to City ownership the property was used by the railroad.

(b.) Do you know the specific chemicals that are present or once were present at the property?

I am not aware of the specific chemicals that may be present at the property.

(c.) Do you know of spills or other chemical releases that have taken place at the property?

I am not aware of specific spills or other chemical releases at the property.

(d.) Do you know of any environmental cleanups that have taken place at the property?

I am not aware of any environmental cleanups that have taken place at the property.

(6.) The degree of obviousness of the presence or likely presence of contamination at the property and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence of likely presence of contamination at the property?

Both the historic use by the railroad and the use of the site by the St. Albans City Public Works Department for decades could have potentially caused the site to be contaminated.
