

Appleton RollMovers™

Increase Safety and Efficiency!

Compact and Highly Maneuverable!

State-of-the-Art, Easy-to-Change Battery!

High-Visibility, Ergonomic Design!

Move Large Rolls Safely and Easily

Compact, powerful and easy-to-use, the Appleton RollMover™ line has been the standard of battery-operated roll pushers for over 15 years. Appleton's newest models feature state-of-the-art battery technology and an ergonomic, high-visibility, rugged steel design that offer improved efficiency and safety. The RollMover™ is available in four models for moving paper, tissue, fiberglass, rubber membranes and almost any other rollable goods. If it rolls, the RollMover™ can move it safely and efficiently.

The RollMover™ Drives Productivity!

Features

- 24V or 36V Lithium Iron Phosphate rechargeable battery
- Compact size and user friendly
- Variable speed throttle control
- Forward & Reverse
- Rugged steel frame construction
- Superior OEM Support

Free yourself from air hoses

- 1/8" air leak can cost up to \$2k per year
- Compressed air systems can leak as much 50%
- Every 10 psi decrease saves 5% in energy costs
- Air hoses on the floor are a safety risk
- Air hoses limit reach and mobility

RollMover™ SD

RollMover™ SD

The SD model features rugged steel frame construction and excellent versatility in moving rollable loads weighing up to 6,500 lbs. This is the most popular model today for general purpose applications. An advanced, programmable speed controller provides added safety when seeking to control minimum and maximum speeds and/or throttle acceleration response.

RollMover™ HD

RollMover™ HD

The HD model features a stronger power drive along with rugged steel frame construction for easily moving rollable loads weighing in excess of 20,000 lbs. An advanced, programmable speed controller provides added safety when seeking to control minimum and maximum speeds and/or throttle acceleration response.

RollMover™ LR

RollMover™ LR

The LR model offers all the power and durability of the HD model along with a large, contoured drive roller designed for damage free moving of soft material rolls, including tissue, fiberglass mat and nonwoven loads weighing in excess of 20,000 lbs. An advanced, programmable speed controller provides added safety when seeking to control minimum and maximum speeds and/or throttle acceleration response.

RollMover™ XD

RollMover™ XD

The XD model is the most powerful RollMover™ model available. Its stronger power drive combined with its rugged steel frame and construction allow for easily moving rollable loads weighing in excess of 100,000 lbs. An advanced, programmable speed controller provides added safety when seeking to control minimum and maximum speeds and/or throttle acceleration response.

Specially Designed Battery & Charger for top performance

State-of-the-Art Lithium Battery

Every RollMover™ is supplied with a high-performance, Lithium Battery Pack. The battery pack is ergonomic and easy-to-hold and carry. Appleton's Lithium Battery Pack charges fast, holds a longer-lasting charge and offers more charging cycles over its life than other batteries. The plug-and-go battery charger with LED Display will charge your battery anywhere there is 110V or 220V power.

Demo Program to Test the RollMover™ Risk Free

See for yourself how the RollMover's mobility, ease-of-use and overall design will improve safety and productivity, demo it in your facility. Certain conditions do apply, contact:
