Your customer may ask - Why MotoBatt?

Typical PowerSports battery designs available on the market today have not changed for many years. By listening to you, our valued customers and by studying the way PowerSports batteries are used in today's marketplace, MotoBatt has re-invented its products specifically for today's PowerSports market where the "Triple Threat" of 1. High Vibration; 2. High Starting Loads and now more than ever; 3. Additional high powered accessory loads are all very common.

Motobatt 's innovative internal "Power Balanced" design has been developed to overcome these problems. Many claims are made by different manufacturers about cranking capacity; in fact there is little to be gained from a battery that cranks harder than what is required to start your bike. In battery design there is always a tradeoff. Since physical battery size is limited by the application / case size, the more cranking power (increased number of thinner plates) you have, the less Amp Hour capacity you get, and vice versa. The key is to "balance" the design to offer maximum AH and CCA's to properly power all of your "thirsty" OE and aftermarket accessories.

In today's market to beat that "triple threat" we talked about earlier, what is required is the combination of strong cranking power with the highest Amp Hour (thicker, larger or heavier plates) capacity for additional accessory loads, repeated starts and fast power recovery for strong re-starts.

Motobatt has improved on conventional designs by packing as much lead into our batteries in the smartest way as possible. Many low-cost batteries are only cheaper for one reason; they have less lead in them. These types of batteries can and likely will leave you stranded!

Our patented "Quad Flex" terminal design also creates a shorter current path to the battery cable resulting in quicker power delivery to the starter and improved starting ability. And in many applications, provides improved, safer fitment for additional accessory leads through supplementary terminal location.

AGM Design
MotoBatt being a premium Absorbed Glass Mat battery is superior by design. AGM batteries have been used in demanding military and off -road applications for many years. The sealed, glass mat design has many longevity and reliability based benefits.

Each plate in the battery is wrapped in a fiberous glass matting which not only absorbs all liquid electrolyte but keeps the plates separated in a cushioned environment. This stops the plates from vibrating which can breakdown the plate and cause short circuits between the plates or break plate welds which result in battery failure. The thick, heavy plates used in MotoBatt designs really make the difference here.

AGM batteries also have a much lower inherent self discharge rate than wet flooded types. And, as a higher amp hour AGM battery, the MotoBatt battery can also discharge more deeply and recover repeatedly under vehicle alternator charge or through maintenance charging. A standard flooded cell battery is not capable of withstanding this type of cycling, without pre-mature failure.

Your Motobatt is a Factory Activated battery. It comes to you pre-conditioned and fully charged for optimum performance and ready to install out of the box. 80% of early PowerSports battery failure is caused by faulty activation of the dry battery plates. Additionally, you never have to mess with acid or top up fluid levels or remove corrosion from the terminals caused by gassing; common with standard flooded battery types.

Battery Preparation for Installation

How to fit your new MotoBatt battery

Step 1: Check that you have a set of terminals, fastening screws and / or cable connectors inside the battery carton with the battery. All batteries come with the appropriate wrench, terminals, connectors and/or spacers for proper fitment.

Step 2: Check the battery voltage to assure that it is fully charged somewhere between 12.85V and 12.7V.

Step 3: Match the terminal placement and height and/or width adaptor compared to your old battery. Do not be concerned if you do not need to use all of the spacers, if any to match your old batteries size – simply don't use them.

Step 4: Lift off the protective red and black caps with a small screwdriver or knife. The threaded brass button terminals will be revealed. If you are not using a side spacer or additional accessories, be sure to use the appropriate red and black caps to plug the unused terminals.

Step 5: Attach terminals with stainless steel hex cap screws in appropriate location for the required polarity. It is not necessary to put thread locker on the terminal screws as the threaded button type terminals in the batteries are tapered for a lock- fit. Unlike the small OE battery terminal bolt and nut fitment, the cap screws are very easy to fit onto the threaded brass terminals using the hex key included in the box. Do not over tighten.

Note: You can use the terminals to face the front top, or the sides of the battery to accept whatever location your vehicles battery cable routing requires.

Step 6: Place your MotoBatt battery in your vehicle and install battery cables to the brass terminals on the battery with the wrench and stainless steel cap screws provided.

Note: For fitting of aftermarket accessories the alternate set of terminals can be used to simplify attachment of extra eyelet leads for a maintenance charger, heated clothing, GPS, mobile phone chargers and the like. Just ask you dealer for an extra terminal kit available at a small additional cost.

Thank you for purchasing Motobatt!

MotoBatt - Intelligent Battery Maintenance

MotoBatt's Unique 9 Stage Charging and Maintenance Process

1. Qualification Phase:

Initially ensures that the battery is in good condition prior to launching charge processing. As a safety measure charge process will not begin if battery is below 2.0V.

2. Battery Rescue Phase:

MOTOBATT Battery Rescue starts if battery voltage has risen unusually high in the early portion of the re-charge cycle. This is usually caused by plate sulfation. Once the battery rescue phase has succeeded in getting the battery to accept power, normal battery charging will begin.

3. Soft Start Phase:

Soft Start is used when the charger has detected a battery at a very low initial state of charge. Voltage and current are delivered at specified rate to help the battery to recover prior to entering Pulse charge mode.

4. Pulse Mode Phase:

MOTOBATT Pulse mode provides a sulfate busting pulse charge to help the newly recovered battery to continueto accept charge as it enters the reconditioning phase.

5. Recondition Phase:

The MOTOBATT reconditioning phase continues to work the battery at a slightly higher voltage and amperage to "re-activate" the battery plates for improved depth of charge and charge acceptance.

6. Bulk Charge Phase:

With the battery now through Pulse and reconditioning phases and well on its way to full recovery the MOTOBATT bulk charge phase gives the battery constant current taking the battery up to 80% of its capacity.

7. Absorption Phase:

In the MOTOBATT absorption phase the battery is given constant voltage while the current is reduced based on action taken from monitoring the batteries current state until the battery is 100% charged.

8. Check Phase:

Battery will now be checked to be sure that it is holding a charge properly and the charger will make a determination and classify the battery for use, or not.

9. Maintenance Phase:

Battery can be left safely on the charger indefinitely. The unit will monitor the battery and "turn-on" again as needed to maintain the battery at a full state of readiness.

▼ MotoBatt Battery Charger – Commonly asked questions and answers

Q1: Are "Smart" MAINTAINERS or simple "Trickle" CHARGERS required for PowerSports battery applications?

A1: Yes, because of the way PowerSports vehicles are generally used, they require the twofold benefits of a "smart" microprocessor controlled CHARGER and MAINTAINER to charge and maintain the battery at all times during non-use is best; and for possible periods of long inactivity, and/or for offsetting any parasitic loads (vehicle computers, clocks, alarms, etc). This will extend the life of your battery and keep your battery maintained at a full charge safely, and always ready for use.

Q2: What should be used to charge or maintain modern AGM batteries?

A2: Smart chargers are required for use on all AGM or GEL batteries. Sealed Valve Regulated batteries (AGM and Gel) may be damaged or dried out and ruined if they are overcharged. The damage that can be caused by improper charging becomes permanent and gets worse over time. All major PowerSports vehicle manufacturers now use AGM batteries from the factory. The correct way to charge or maintain these AGM batteries is with a smart charger, and with its exclusive 9 step algorithm technology MOTOBATT is the best option.

Q3: What can happen if a manual or "non-smart" charger is used on a AGM or GEL battery?

A3: Bottom line is manual chargers are NOT suitable for AGM or GEL batteries. Unless monitored constantly they may cause overcharging from too high constant voltage, which is the cause of swelling of the battery case in AGM and GEL batteries during charging (a faulty charging system may also cause overcharging and subsequent swelling of the battery case). Note this is NOT a valid warranty claim on any GEL or AGM battery. The message is simple, use a suitable Motobatt smart charger with all lead acid batteries, especially AGM and GEL batteries.

Q4: Which MOTOBATT MAINTAINER for which size battery?

A4: Matching a MOTOBATT CHARGER AND MAINTAINER with battery capacity is not required, as voltage and amperage are constantly monitored, and reduced or increased by the unique Motobatt 9 stage charging and maintenance process. However you may wish to choose a MOTOBATT CHARGER AND MAINTAINER to suit your budget or your performance requirements.

MOTOBATT models: Little Boy, Water Boy, Fat Boy, Dual bank and Four bank are a microprocessor controlled "Charger and Maintainer" in one unit, and enable a regular consumer without battery knowledge to properly charge and maintain any lead acid battery safely.

MOTOBATT models: Baby Boy Charger will charge 6 or 12V Power Sports batteries to full charge then move into automatic maintenance mode and monitor the battery for potential need for additional charge. The Baby Boy Charger is not designed to charge a large dead flat or sulphated battery.

Q5: Can Motobatt Maintainers be used on automotive and marine batteries?

A5: Yes, Motobatt Charger/Maintainers (models Little Boy, Water Boy, Fat Boy, Dual Bank and Four Bank) are suitable for use on all domestic lead acid batteries, including automotive and marine. Fat Boy model and up are of higher specification and will provide subsequent greater performance on larger batteries.

▼ MotoBatt Battery Tester - Commonly asked questions and answers

Q1: What is the MB-VM tester designed to be used for?
A1: The MB-VM is simple and inexpensive voltmeter that shows the open circuit state of charge of a battery in the form of % of charge. When used with the engine is started it will also indicate overcharge voltage going to the battery with the "bad" indicator light and passing charge voltage with the "good" indicator light. Another cool part about the meter is that it can be used to remotely test the battery, without actual access to the battery by inserting the probes (in the fixed position) into the battery charge / maintenance lead and if the battery is accessible or on the workbench you can remove the negative lead from its fixed position and test the battery at each terminal location. It's a great tool for every dealership counterperson in a dealership or any consumer.

Q2: Does MotoBatt have an actual resistance load tester available?
A2: Yes, The MotoBatt part # MBT is an inexpensive tester uniquely designed specifically for the PowerSports market and is a great blend of a newer digital microprocessor controlled meter with the old tried and true fixed resistance load tester. It actually loads the battery to simulate the resistance of a starter load on the battery and allows you to compare the result to your batteries rating on a matrix on the face of the tester to determine final results. By using the unique performance matrix on the face of the tester you will dramatically increase the accuracy of this fixed load tester. It also enables you to test your starter and alternator output using the pass/fail information found on the right of the voltage screen.

Q3: Why would I want to test my battery if it is still starting my bike?
A3: The reason behind any type of ongoing battery maintenance whether its charge or testing related is all about YOU. There is always the time when your battery will become worn out or you're starting / charging system will fail. With tools available from MotoBatt, ongoing maintenance is simple and it will help to find problems prior to a no-start situation and ensure that you will be able to ride when YOU want and not be held hostage by a failure. Keeping your battery on charge at all times through a simple battery maintenance lead and testing the battery periodically will help you to keep riding and out of the shop.

Q4: Can any of the testers available from MotoBatt test a discharged battery?
A4: Yes, all of the electronic testers available from MotoBatt (MBMini, MBPro and MBProPLUS) can test discharged batteries. As you might imagine when trouble arises with a no-start situation the battery is usually discharged; when testing with standard load based testers the battery must be charged to give an accurate test. Through use of an electronic type of tester you can test your discharged battery to determine if the battery is simply discharged or bad and needs to be replaced. This family of testers will also do a more invasive starting and charging system test to help spot problems before they "spot" you.

Q5: Can my battery be tested and charged through the same remote charging lead?
A5: Well...yes and no.... simple voltage testing – Yes. But for advanced testing; due to the need for very a uniform amount of resistance required on the input and output side of the test circuit, the standard charge maintenance lead cannot be used for testing anything outside of open circuit voltage.

Q6: Does MotoBatt have a Tester that prints out test results for attachment to a work order?
A6: Yes, the MotoBatt MBproPLUS is our best tester. It prints all results and tests PowerSports batteries, automotive and commercial batteries alike

Q7: What MotoBatt testers are the best Consumer based units and which are the best for Shop use?
A7: The MB-VM, MBT and MBMini are all 12V only testers and are your best for consumer testers and should be in a dealer stock. The MBPro would be a high end consumer unit (and can test 6V batteries). For a shop the MBT, MBPro and/or MBProPLUS are a must.
