## Section 1—Catalog Numbering

### PowerPact™ with Micrologic™ Circuit Breakers

The PowerPact H-, J-, and L-frame circuit breakers are designed to protect electrical systems from damage caused by overloads and short circuits. H- and J-frame circuit breakers are available with either thermal-magnetic or Micrologic electronic trip units. L-frame circuit breakers are available with Micrologic electronic trip units only.

#### Direct Access to Energy Management

The new generation PowerPact with Micrologic circuit breakers set the standard with direct access to energy management. Integrated metering enhances their protective functions. For the first time, Schneider Electric™ users can monitor energy from 15 to 3000 A, offering new performance in a remarkably compact device.

- Smart – A meter in every breaker
- Safe – Combines safety and performance in one compact device
- Simple – To select, install, and use

YQ	Handle Padlock, OFF Only	S37422	NJPAF
YQ	Handle Padlock, OFF Only 2P	H2PHLA	—

<sup>1</sup> Except for 24 Vdc Power Supply Terminal Block, installation requires IFM (STRV00210) for Modbus communication and/or FDM (STRV00121) for external display.

<sup>2</sup> YH1 = all installed accessories but ZSI and ENCT.  
YH2 = ENCT and all installed accessories.  
YH3 = ZSI and all installed accessories.  
YH4 = ZSI, ENCT and all installed accessories.

<sup>3</sup> I-Line wire harness included for communication network accessories.  
Optional wire harness for unit mount requires YH1 suffix.

<sup>4</sup> If using with a motor operator, requires Communicating Motor Operator (suffix NC).

<sup>5</sup> Requires Micrologic trip unit U43, U44, U53, or U54 and communication accessories EG, EH, EK, or EL.

## Section 2—General Information

The PowerPact™ H-, J-, and L-frame circuit breakers are designed to protect electrical systems from damage caused by overloads and short circuits. H- and J-frame circuit breakers are available with either thermal-magnetic or Micrologic™ electronic trip units. L-frame circuit breakers are available with Micrologic electronic trip units only.

H- and J-frame circuit breakers with thermal-magnetic trip units contain individual thermal (overload) and instantaneous (short circuit) sensing elements in each pole. The amperage ratings of the thermal trip elements are calibrated at 104°F (40°C) free air ambient temperature. Per the National Electric Code® (NEC®) and the Canadian Electrical Code, standard circuit breakers may only be applied continuously at up to 80% of their rating. Circuit breakers rated for 100% operation are available but require specially-designed enclosures and 194°F (90°C) rated wire.

Devices with the Micrologic electronic trip unit provide adjustable protection settings for greater system flexibility. In addition to electronic protection, Micrologic trip units allow users to monitor both energy and power. Through direct access to in-depth information and networking using open protocols, PowerPact circuit breakers with Micrologic trip units let operators optimize the management of their electrical installations. Far more than just a circuit breaker, these devices are a measurement and communication tool ready to meet energy-efficiency needs through optimized power requirements, increased energy availability, and improved installation management.

## Applications

PowerPact H-, J-, and L-frame circuit breakers offer high performance and a wide range of interchangeable trip units to protect most applications.

Electronic trip units provide highly accurate protection with wide setting ranges and can integrate measurement, metering and communication functions. They can be combined with the front display module (FDM121) to provide functions similar to a power meter.

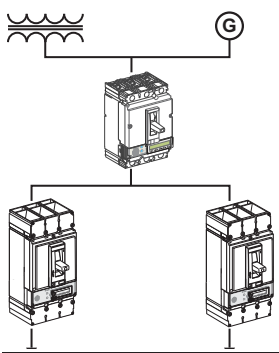

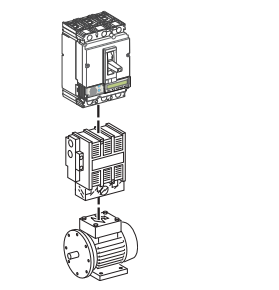

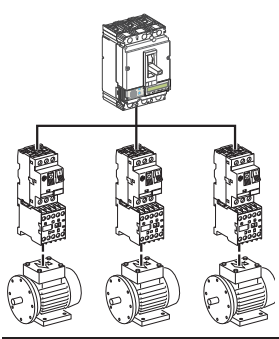

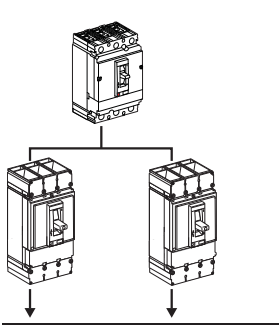

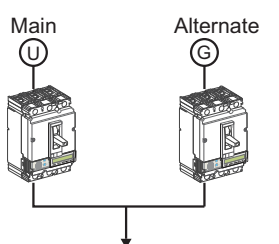

**Table 5: Applications**

	Power Meter	PowerPact H-, J-, and L-frame circuit breakers equipped with Micrologic 5/6 trip units offer type A (ammeter) or E (energy) metering functions as well as communication capability. Using Micrologic trip unit sensors and intelligence, PowerPact H-, J-, and L-frame circuit breakers provide access to measurements of all the main electrical parameters on the built-in screen, on a dedicated front display module (FDM121) or through the communication network.
	Operating assistance	Integration of measurement functions provides operators with operating assistance functions including alarms tripped by user-selected measurement values, time-stamped event tables and histories, and maintenance indicators.
	Front display module	The main measurements can be read on the built-in screen of Micrologic 5/6 trip units. They can also be displayed on the equipment FDM121 along with pop-up windows signalling the main alarms.
	Communication Network	PowerPact H-, J-, and L-frame circuit breakers equipped with Micrologic 5/6 trip units provide communication capabilities. Simple RJ45 cables connect to a Modbus communication interface module.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## General Information

**Table 5: Applications**

	<p>Protection of distribution systems</p> <p>Mission critical applications</p>	<p>The PowerPact H-, J-, and L-frame circuit breakers provide protection against short circuits and overloads for:</p> <ul style="list-style-type: none"> <li>• distribution systems supplied by transformers</li> <li>• distribution systems supplied by engine generator sets</li> </ul> <p>They are easily installed at all levels in distribution systems, from the main LV switchboard to the subdistribution boards and enclosures. All PowerPact circuit breakers can protect against insulation faults by adding an external Vigirex relay.</p> <p>The PowerPact H-, J-, and L-frame mission critical circuit breakers provide high levels of selective coordination with QO and ED/EG/EJ circuit breakers.</p>
	<p>Protection of motors</p>	<p>The PowerPact H-, J-, and L-frame circuit breakers include a number of versions to protect motor applications:</p> <ul style="list-style-type: none"> <li>• basic short-circuit protection with electronic instantaneous only MCP or the electronic Micrologic 1.3 M trip units, combined with a special overload relay to provide thermal protection</li> <li>• protection against overloads, short circuit and phase unbalance or loss with Micrologic 2 M trip units</li> </ul> <p>The exceptional limiting capacity of the PowerPact circuit breakers automatically provides coordination with the motor starter.</p>
	<p>Protection of special applications</p>	<p>The PowerPact H-, J-, and L-frame circuit breakers offer a number of version for special protection applications:</p> <ul style="list-style-type: none"> <li>• industrial control panels with: <ul style="list-style-type: none"> <li>— compliance with international standards IEC 60947-2 and UL 508/CSA 22.2 N°14</li> <li>— compliance with UL 489</li> <li>— installation in universal and functional enclosures</li> </ul> </li> <li>• 400 Hz systems</li> </ul>
	<p>Control using automatic switches</p>	<p>An automatic switch version of PowerPact H-, J-, and L-frame circuit breakers is available for circuit control. All add-on functions for the circuit breakers may be combined with the basic automatic switch function, including motor operators.</p> <p>For information on other automatic switches, contact Schneider Electric.</p>
	<p>Manual transfer systems</p>	<p>To ensure a continuous supply of power, some electrical installations are connected to two power systems:</p> <ul style="list-style-type: none"> <li>• the normal source, usually the utility (U)</li> <li>• a replacement source to supply the installation when the normal source is not available, generally from a generator (G)</li> </ul> <p>A mechanical and/or electrical interlocking system between two circuit breakers or automatic switches avoids all risk of parallel connection of the sources during switching.</p> <p>A system can be manual transfer mechanical device interlocking.</p>

## Mission Critical Circuit Breakers

The PowerPact™ J- and L-Frame Mission Critical circuit breakers deliver high levels of selective coordination in a flexible design that can be easily configured for a variety of applications. Tested to be selectively coordinated with the QO™ family of miniature circuit breakers and the ED, EG, and EJ circuit breakers, this solution provides peace of mind when power availability is critical.

An electronic trip unit provides adjustable long-time settings in three sensor sizes, allowing coverage from 70 through 600 A on 120-240, 208Y/120, 240, and 480Y/277 V systems.

Ratings	Available Configurations
UL 489 Listed CSA Certified Voltage: 480Y/277 V	<ul style="list-style-type: none"><li>• I-Line mounting</li><li>• Main circuit breaker in NQ and NF panelboards</li><li>• Unit mount for OEM users</li><li>• Plug-in base for OEM users</li><li>• Drawout base for OEM users</li></ul>

In addition to unique design attributes, the PowerPact Mission Critical circuit breakers have also undergone rigorous testing procedures to certify the coordination with downstream circuit breakers—combining innovative engineering with validated test results.

Apply Schneider Electric Mission Critical circuit breakers in emergency power distribution systems, data centers, hospitals, or anywhere continuity of service is desired.

### Theory of Operation

There are several dynamic forces between the PowerPact Mission Critical circuit breakers and downstream circuit breakers when a fault occurs downstream of the branch circuit breaker. Many of these events cannot be shown on the trip curve.

The PowerPact Mission Critical circuit breakers analyze the fault current to make decisions which maximize selectivity with downstream circuit breakers. The trip units deploy a special selectivity delay to allow downstream circuit breakers to clear. However, on very high faults or if the downstream circuit breaker does not trip, the circuit breaker trips the mechanism instantaneously.

The combination of the PowerPact Mission Critical circuit breaker and downstream circuit breakers shown in the selectivity charts in the instruction bulletin are selective due to the fact that the series impedance and the let-through from the downstream circuit breaker does not produce enough energy to trip the PowerPact Mission Circuit circuit breaker.

This system maximizes the interaction of the circuit breakers in series to allow selectivity.

### Trip Units and Trip Curves

The PowerPact J- and L-Frame Mission Critical circuit breakers deliver high levels of selective coordination with the QO™ family of miniature circuit breakers and the ED, EG, and EJ circuit breakers in a flexible design that can be easily configured for a variety of applications. These circuit breaker can be equipped with 3.2-W, 3.2S-W, 5.2A-W, 5.2E-W, 6.2A-W, 3.3S-W, 5.3A-W, 6.3A-2, and 6.3E-2 Micrologic trip units. See the catalog numbers and references beginning in Table 21.

The mission critical trip units have the same settings and trip curves as the standard trip units described in this document.

For more information see the trip unit user guides 48940-310-01 and 48940-312-01 on the Schneider Electric website.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## General Information

J-frame mission critical circuit breakers are selective with QO or E-frame circuit breakers per Table 6 when the amperage of the main circuit breaker is at least two times the amperage of the branch circuit breaker.

**Table 6: J-Frame Selectivity with QO and E-Frame Circuit Breakers<sup>1</sup>**

Circuit Breaker			Voltage	Current	One-Line Diagram	
Main	Branch					
J-W, 250 A	QO(B) QO(B)-H QO(B)-VH QH	1P, 2P	10–30 A	240/120 V 120 V	18 kA	
			35–60 A		15 kA	
			70–125 A		12 kA

			480Y/277 V	30 kA		

<sup>1</sup> Including AFI, CAFI, EPD and GFI circuit breakers.

## Flexible Configurations

The PowerPact H-, J- and L-frame circuit breakers may be configured with lugs, bus bar connections, rear connections, I-Line™, drawout cradle, or plug-in base.

#### Codes and Standards

H-, J-, and L-frame circuit breakers, automatic switches and electronic motor circuit protectors are manufactured and tested in accordance with the following standards.

**NOTE:** Apply circuit breakers according to guidelines detailed in the National Electric Code (NEC) and other local wiring codes.

**Table 8: Codes and Standards (Domestic)**

## Vibration

PowerPact H-, J-, and L-frame devices resist mechanical vibration.

Tests are carried out in compliance with standard UL 489 SA and SB for the levels required by merchant-marine inspection organizations (Veritas®, Lloyd's®, etc.):

PowerPact H-, J-, and L-frame circuit breaker meet IEC 60068-2-6 for vibration:

- 2.0 to 25.0 Hz and amplitude +/- 1.6 mm
- 25.0 to 100 Hz acceleration +/- 4.0 g

Excessive vibration may cause tripping, breaks in connections or damage to mechanical parts.

## Electromagnetic Disturbances

PowerPact H-, J-, and L-frame devices are protected against:

- overvoltages caused by circuit switching
- overvoltages caused by an atmospheric disturbances or by a distribution-system outage (such as from failure due to lightning)
- devices emitting radio waves (radios, walkie-talkies, radar, etc.)
- electrostatic discharges produced directly by users

PowerPact H-, J-, and L-frame devices have successfully passed the electromagnetic-compatibility tests (EMC) defined by the following international standards:

- IEC/EN 60947-2: Low-voltage switchgear and controlgear, part 2: Circuit breakers:
  - Annex F: Immunity tests for circuit breakers with electronic protection
  - Annex B: Immunity tests for residual current protection
- IEC/EN 61000-4-2: Electrostatic-discharge immunity tests
- IEC/EN 61000-4-3: Radiated, radio-frequency, electromagnetic-field immunity tests
- IEC/EN 61000-4-4: Electrical fast transient/burst immunity tests
- IEC/EN 61000-4-5: Surge immunity tests
- IEC/EN 61000-4-6: Immunity tests for conducted disturbances induced by radio frequency fields
- CISPR 11: Limits and methods of measurement of electromagnetic disturbance characteristics of industrial, scientific and medical (ISM) radio-frequency equipment.

These tests ensure that:

- no nuisance tripping occurs due to electromagnetic disturbances
- tripping times are respected

## Tropicalization

The materials used in PowerPact circuit breakers will not support the growth of fungus and mold.

PowerPact circuit breakers have passed the test defined below for extreme atmospheric conditions.

Dry cold and dry heat:

- IEC 68-2-1—dry cold at -55°C
- IEC 68-2-2—dry heat at +85°C

Damp heat (tropicalization)

- IEC 68-2-30—damp heat (temperature + 55°C and relative humidity of 95%)
- IEC 68-2-52 level 2—salt mist

# PowerPact H-, J-, and L-Frame Circuit Breakers

## General Information

### Special Ratings

The H-frame and J-frame circuit breakers also comply with the following special ratings:

- HACR rating
- SWD switch duty rating (applies only to 15 and 20 A / 277 Vac or less, two- and three-pole)
- HID high intensity discharge lighting rating (15–50 A)

The L-frame circuit breakers complies with the following special rating:

- HACR rating

### Marine Ratings

#### UL Marine Listed/CSA Certified Circuit Breakers (UL 489 Supplement SA)

The PowerPact H- and J-frame circuit breakers with thermal-magnetic trip units with D, G, J and L interruption levels meet the UL 489 Supplement SA requirements for use on vessels of any length under or over 65 ft. (19.8 m). The PowerPact H-, J-, and L-frame circuit breakers with Micrologic electronic trip units meet the UL 489 Supplement SA for use on vessels over 65 ft. (19.8 m) in length. Marine circuit breakers must not use aluminum or aluminum alloys for terminal connections and must be calibrated at an ambient temperature of 104°F (40°C). Standard circuit breakers should not be specified or used in the place of marine rated circuit breakers.

Circuit breakers can be ordered with the Marine SA listing by adding the suffix “YA” (marine) to the catalog number.

#### UL Naval Listed/CSA Certified Circuit Breakers (UL 489 Supplement SB)

The PowerPact H-, J-, and L-frame circuit breakers with Micrologic trip units with D, G, J and L interruption levels meet the UL 489 Supplement SB requirements for use on naval vessels. These circuit breakers are subject to various vibration tests as described in UL 489 Supplement SB. Naval circuit breakers must not use aluminum or aluminum alloys for terminal connections and must be calibrated at an ambient temperature of 122°F (50°C). Standard circuit breakers should not be specified or used in the place of navel rated circuit breakers.

Circuit breakers can be ordered with the Naval SB listing by adding the suffix “YA1” (naval) to the catalog number.

#### American Bureau of Shipping (ABS)

The PowerPact H-, J-, and L-Frame circuit breakers are certified to ABS-NVR (American Bureau of Shipping - Naval Vessel Rules), for use on Naval vessels.

**UL 489 SC Listed 500 Vdc Circuit Breakers**

The UL Listed/CSA Certified thermal-magnetic H-, J-, and L-frame molded case circuit breakers are specifically designed for use on ungrounded dc systems having a maximum short-circuit voltage of 500 Vdc or a maximum floating (unloaded) voltage of 600 Vdc. The circuit breakers are suitable for use only with UPS (uninterruptable power supplies) and ungrounded systems. This two-level voltage rating allows these circuit breakers to be applied to battery sources having a short-circuit availability of 20,000 or 50,000 amperes at 500 Vdc.

These circuit breakers are UL Listed/CSA Certified for the interrupting ratings shown only if applied with three poles connected in series (series connection is external to circuit breaker). See diagram below.

**NOTE:** Due to external series connection, I-Line circuit breakers are not available for this application.

**Figure 2: DC Circuit Breaker Caution Labels**

Source = 600 Vdc max. (floating)  
 500 Vdc max. (loaded)

<sup>1</sup> The LSI with 3.2S/3.3S trip units have fixed short time and long time delays.

<sup>2</sup> Requires neutral current transformer on three-phase four-wire loads.

<sup>3</sup> ZSI for H/J-frame devices is only OUT. ZSI for L-frame devices is IN and OUT.

<sup>4</sup> Indication available using the communication system only.

<sup>5</sup> % of hours in 4 current ranges: 0–49%, 50–79%, 80–89%, and >90%  $I_n$ .

### Thermal-Magnetic or Electronic Trip Unit?

Thermal-magnetic trip units (available on H- and J-frame circuit breakers only) protect against overcurrents and short-circuits using tried and true techniques. For applications requiring installation optimization and energy efficiency, electronic trip units offering more advanced protection functions combined with measurements.

Trip units using digital electronics are faster as well as more accurate. Wide setting ranges make installation upgrades easier. Designed with processing capabilities, Micrologic trip units can provide measurement information and device operating assistance. With this information, users can avoid or deal more effectively with disturbances and can play a more active role in system operation. They can manage the installation, anticipate events and plan any necessary servicing.

## Accurate Measurements for Complete Protection

PowerPact H-, J-, and L-frame circuit breakers devices offer excellent measurement accuracy from 15 amperes on up to the short-circuit currents. This is made possible by a new generation of current transformers combining “iron-core” sensors for self-powered electronics and “air core” sensors (Rogowski coils) for measurements. The protection functions are managed by an ASIC (Application Specific Integrated Circuit) component that is independent of the measurement functions. This independence ensures immunity to conducted and radiated disturbances and increases reliability.

## Numerous Security Functions

Torque-limiting screws	The screws secure the trip unit to the circuit breaker. When the correct tightening torque is reached, the screw heads break off. Optimum tightening avoids any risk of temperature rise. A torque wrench is no longer required.
Easy and sure changing of trip units	All trip units are interchangeable, without wiring. A mechanical mismatch-protection system makes it impossible to mount a trip unit on a circuit breaker with a lower rating.
“Ready” LED for a continuous self-test	The LED on the front of the electronic trip units indicates the result of the self-test running continuously on the measurement system and the tripping release. As long as the green LED is flashing, the links between the CTs, the processing electronics and the tripping mechanism are operational. The circuit breaker is ready to protect. A minimum current of 15 to 50 A, depending on the device, is required for this indication function.
A patented dual adjustment system for protection functions.	Available on Micrologic 5/6 trip units, the system consists of: <ul style="list-style-type: none"> <li>• an adjustment using rotary switches sets the maximum value</li> <li>• an adjustment using the keypad or made remotely, fine-tunes the setting. This setting may not exceed the first one. It can be read directly on the Micrologic trip unit screen, to within one ampere and a fraction of a second.</li> </ul>

## Section 3—Circuit Breakers

### Dual-Break Rotating Contacts

All PowerPact™ H-, J-, and L-frame circuit breakers are equipped with dual-break rotating contacts that reduce the amount of peak current during a short circuit fault. This reduces the let-through currents and enhances equipment protection.

### Reduced Let-Through Currents

The moving contact has the shape of an elongated “S” and rotates around a floating axis. The shape of the fixed and moving contacts are such that the repelling forces appear as soon as the circuit reaches approximately 15 times  $I_n$ .

Due to the rotating movement, repulsion is rapid and the device greatly limits short-circuit currents, whatever the interrupting level of the unit (D, G, J or L). The fault current is extinguished before it can fully develop. Lower let-through currents provide less peak energy, reducing the required bus bar bracing, lowering enclosure pressure, and delivering improved series or combination ratings. See page 25 for UL Current-Limiting labels.

### High Ampere Interrupting Ratings (AIR)

Circuit breakers are available with interrupting ratings up to:

- 200 kA at 240 Vac delta
- 200 kA at 480 Vac delta
- 100 kA at 600 Vac delta.

See Table 2 for additional performance levels.

### Internal Operating Mechanism

PowerPact H-, J-, and L-frame circuit breakers have an over-center toggle mechanism providing quick-make, quick-break operation. The operating mechanism is also trip-free, which allows tripping even when the circuit breaker handle is held in the “ON” position.

Internal cross-bars provide common opening and closing of all poles with a single operating handle.

All PowerPact circuit breakers have an integral push-to-trip button in the cover to manually trip the circuit breaker. This should be used as part of a regular preventive maintenance program.

Push-to-Trip

### Handle Position Indication

The circuit breaker handle can assume any of three positions, ON, tripped or OFF as shown. The center tripped position provides positive visual indication that the circuit breaker has tripped.

The circuit breaker can be reset by first pushing the handle to the extreme “OFF” position. Power can then be restored to the load by pushing the handle to the “ON” position.

### Circuit Breaker Ratings

The interrupting rating is the highest current at rated voltage the circuit breaker is designed to safely interrupt under standard test conditions. Circuit breakers must be selected with interrupting ratings equal to or greater than the available short-circuit current at the point where the circuit breaker is applied to the system (unless it is a branch device in a series rated combination). Interrupting ratings are shown on Table 11: Circuit Breakers on page 21 and on the faceplate label on the front of the circuit breaker.

### Reverse Feeding of Circuit Breakers

The standard unit-mount H-, J-, and L-frame circuit breakers have sealed trip units and may be reverse fed. See Tables 18, 19, and 32 through 40 for catalog numbers.

Circuit breakers with field-interchangeable trip units (designated by the suffix T and labeled “LINE” and “LOAD”) cannot be reverse fed. Neither can circuit breaker frames without terminations or trip units.

### Current-Limiting

The current-limiting attributes of PowerPact H-, J-, and L-frame circuit breakers provide greater protection for downstream devices by limiting the let-through current in the event of a fault. The current-limiting capabilities of HJ/HL/HR, JJ/JL/JR, and LJ/LL/LR frame circuit breakers are documented with Underwriters Laboratories and Canadian Standards Association. These current-limiting circuit breakers ship with a label that identifies them as UL/CSA Current-Limiting Circuit Breakers. (The HD/HG, JD/JG, and LD/LG circuit breakers do not carry the UL Current-Limiting label).

The trip curves with let-through data are available in the trip curve section in this catalog.

Please note that as let-through curves for UL Listed/CSA Certified Current-Limiting Circuit Breakers, these curves are maximum let-through values.

### 100% Rated

Some models of the H-, J-, and L-frame circuit breakers are UL Listed/CSA Certified to be applied at up to 100% of their current rating. Because of the additional heat generated, the use of specially-designed enclosures on H- and J-frame circuit breakers and 194°F (90°C) rated wire is required when applying circuit breakers at 100% of continuous current rating. (H-, J-, and L-frame circuit breakers can use aluminum or copper lugs.) Markings on the circuit breaker indicate the minimum enclosure size and ventilation required. The 194°F (90°C) wire must be sized according to the ampacities of the 167°F (75°C) wire column in the NEC. Circuit breakers with 100% rating can also be used in applications requiring only standard (80%) continuous loading.

# PowerPact H-, J-, and L-Frame Circuit Breakers

100% ratings valid for:

- three-pole H/J-frame unit mount construction only.
- three- and four-pole L-frame 250 A and 400 A unit mount construction.
- three-pole L-frame 250 A and 400 A I-Line™ construction.

## Corner Grounded Delta Ratings (1Ø-3Ø)

Circuit breakers suitable for corner-grounded circuits are marked 1Ø-3Ø. For additional information, refer to data bulletin 2700DB0202.

**Table 13: Corner Grounded Delta Ratings (1Ø-3Ø)**

	Two-Pole H-Frame					Two-Pole J-Frame				
	HD	HG	HJ <sup>1</sup>	HL <sup>1</sup>	HR <sup>1</sup>	JD <sup>1</sup>	JG <sup>1</sup>	JJ <sup>1</sup>	JL <sup>1</sup>	JR <sup>1</sup>

## Special Applications

### Protection of Industrial Control Panels

PowerPact H-, J-, and L-frame circuit breakers are also used in industrial control panels. They serve as an incoming devices or can be combined with contactors to protect motor feeders:

- compliance with worldwide standards including IEC 60947-2 and UL 508 / CSA C22.2 N°14
- overload and short-circuit protection
- installation in universal and functional type

PowerPact H-, J-, and L-frame circuit breakers equipped for motor protection functions as described in the following pages can be used in industrial control panels. The accessories for the PowerPact H-, J-, and L-frame circuit breakers are suitable for the special needs of these applications.

### 400 Hz Applications

#### Impact on Protective Devices

The current in 400 Hz systems have higher losses caused by eddy currents and an increase in the skin effect (reduction in the useful cross-sectional area of conductors). The higher losses cause additional temperature rise in circuit breakers subjected to the higher frequency current. To remain within the rated temperature-rise limits of devices, current derating is required. For circuit breakers equipped with Micrologic electronic trip units, only the current rating ( $I_r$ ) must be derated. See Table 14. On circuit breakers equipped with thermal-magnetic trip units, the current rating ( $I_n$ ) must be derated and the magnetic trip setting  $I_m$  must be increased. See Table 15.

#### Breaking Capacity in 400 Hz, 480 V Systems

The power levels of 400 Hz applications rarely exceed a few hundred kW with relatively low short-circuit currents, generally not exceeding four times the rated current.

Circuit Breaker	Max. Breaking Capacity AIR at 400 Hz
H-frame	10 kA
J-frame	10 kA
L-frame	10 kA

#### Micrologic Electronic Trip Units

Micrologic™ 3.2/3, 5.2/3 A or E and 6.2/3 with A or E measurement functions are suitable for 400 Hz. The use of electronics offers the advantage of greater operating stability when the frequency varies. However the units are still subject to temperature rise caused by the frequency.

The practical consequences are:

- limit settings: see the  $I_r$  derating table below
- the long-time, short-time and instantaneous pick-ups are not modified (see pages 87 or 89)
- the accuracy of the displayed measurements is 2% (Class II)

**Table 14: Current Derating Maximum  $I_r$  Setting**

Circuit Breaker	Maximum Setting Coefficient	Max $I_r$ Setting at 400 Hz
H-Frame, 150 A	0.9	135
J-Frame, 250 A	0.9	225
L-Frame, 400 A	0.8	320
L-Frame, 600 A	0.65	390

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Circuit Breakers

### Thermal-Magnetic Trip Units

Thermal-magnetic trip units require the current rating ( $I_n$ ) to be derated and the magnetic trip setting ( $I_m$ ) to be increased.

**Table 15: Current Rating ( $I_n$ ) and Magnetic Trip Setting ( $I_m$ ) Rerating**

Circuit Breaker	Maximum Setting Coefficient	Max $I_r$ Setting at 400 Hz	Magnetic $I_m$ Coefficient at 400 Hz
H-Frame, 150 A	0.9	135	1.6
J-Frame, 250 A	0.9	225	1.6
L-Frame, 400 A	0.8	320	1.6
L-Frame, 600 A	0.65	390	1.6

### Auxiliary Switch (OF) in 400 Hz Networks

**Table 16: Electrical Characteristics of Auxiliary Switches**

Contact Utilization cat. (IEC 60947-5-1)		Standard		Low Level	
		AC12	AC15	AC12	AC15
Operational current	24 V	6 A	6 A	5 A	3 A
	40 V	6 A	6 A	5 A	3 A
	110 V	6 A	5 A	5 A	2.5 A
	200/240 V	6 A	4 A	5 A	2 A
	380/415 V	6 A	2 A	5 A	1.5 A

### Shunt Trip (MX) or Undervoltage Trip (MN) Voltage Release at 400 Hz and 440 V

For circuit breakers on 400 Hz systems, only 125 Vdc undervoltage trip (MN) or shunt trip (MX) releases may be used. The release must be supplied by the 400 Hz system through a rectifier bridge (to be selected from the table below) and an additional resistor with characteristics depending on the system voltage.

**Table 17: Rectifier Bridges for MN or MX Releases**

Voltage	Rectifier	Additional Resistor
220/240 V	Thomson 110 BHz or General Instrument W06 or Semikron SKB at 1.2/1.3	4.2 kΩ-5 W
380/240 V	Semikron SKB at 1.2/1.3	10.7 kΩ-10 W

<sup>1</sup> UL Listed/CSA Certified as current-limiting circuit breakers.

<sup>2</sup> Three-pole circuit breakers with this trip unit can be used for two-pole applications.

<sup>3</sup> Standard lug kit: AL150HD. Terminal wire range: 14–3/0 AWG Al or Cu.

<sup>4</sup> Standard lug kit: AL250JD. Terminal wire range: 3/0 AWG–350 kcmil Al or Cu.  
For smaller wire range (4–4/0 AWG Al or Cu), replace the lug's wire binding screws with the larger binding screws provided.

## Section 4—Automatic Switches

### Automatic Switch Functions

An automatic switch can be used to open and close a circuit under normal operating conditions. They are similar in construction to circuit breakers, except that the switches open instantaneously at a factory-set, non-adjustable trip point calibrated to protect only the molded case switch.

Molded case switches are intended for use as disconnect devices only. UL489 requires molded case switches to be protected by a circuit breaker or fuse of equivalent rating. Molded case switches are labeled with their appropriate withstand ratings. The withstand rating of a switch is defined as the maximum current at rated voltage that the molded case switch will withstand without damage when protected by a circuit breaker with an equal continuous current rating.

PowerPact™ H-, J-, and L-frame automatic switches are available in unit mount, I-Line™, plug-in and drawout versions. They use the same accessories and offer the same connection possibilities as the circuit-breaker versions. They may be interlocked with another switch or circuit breaker to form a source-changeover system.

Switches are Listed under UL file E103740 and Certified under CSA file LR88980.

### Motor Operator

PowerPact H-, J-, and L-frame switches equipped with a motor operator module allow remote closing and opening.

### Ground Fault Protection (H- and J-Frame Circuit Breakers Only)

An ELM or GFM module may be added to an automatic switch to monitor all leakage currents in the outgoing circuits of the equipment on which the automatic switch is installed. When the ELM or GFM module detects an earth-leakage current, the automatic switch interrupts the load current.

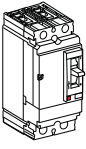

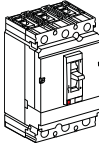

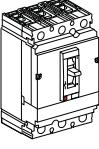

### Automatic Switch Protection

The automatic switch can make and break its rated current. For an overload or a short-circuit, it must be protected by an upstream device, in compliance with installation standards. Due to their high-set instantaneous release PowerPact H-, J- and L-frame automatic switches are self-protected.

## Section 5—Motor Circuit Protection

### General Information

The parameters to be considered for motor-feeder protection depend on:

- the application (type of machine driven, operating safety, frequency of operation, etc.)
- the level of continuity of service required by the load or the application
- the applicable standards for the protection of equipment.

The required electrical functions are:

- isolation
- switching, generally at high endurance levels
- protection against overloads and short-circuits, adapted to the motor
- additional special protection.

A motor branch circuit must comply with the requirements of standard UL 508 concerning contactors and their protection:

- coordination of feeder components
- overload relay trip classes.

### Motor Branch Circuit Protection Function

A motor branch circuit comprises a set of devices for motor protection and control, as well as for protection of the branch circuit itself.

### Switching

The purpose is to control the motor (ON / OFF), either manually, automatically or remotely, taking into account overloads upon start-up and the long service life required. This function is provided by a contactor. When the coil of the contactor's electromagnet is energized, the contactor closes and establishes, through the poles, the circuit between the upstream supply and the motor, through the circuit breaker.

### Basic Protection

- Short-circuit protection  
Detection and breaking, as quickly as possible, of high short-circuit currents to avoid damage to the installation. This function is provided by a circuit breaker.
- Overload protection  
Detection of overload currents and motor shutdown before temperature rise in the motor and conductors damages insulation. This function is provided by a circuit breaker or a separate motor overload relay.
- Phase unbalance or phase loss protection  
Phase unbalance or phase loss can cause temperature rise and braking torques that can lead to premature aging of the motor. These effects are even greater during starting, therefore protection must be virtually immediate.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Motor Circuit Protection

### Additional Electronic Protection

- Locked rotor
- Under-load
- Long starts and stalled rotor
- Insulation faults

### Trip Class of a Overload Relay Device

The motor branch circuit includes thermal protection that may be built into the circuit breaker. The protection must have a trip class suited to motor starting. Depending on the application, the motor starting time varies from a few seconds (no-load start) to a few dozen seconds (high-inertia load).

**Table 48: Trip Class of Overload Relays as a Function of Their FLA Setting**

Class	1.05 FLA <sup>1</sup>	1.2 FLA <sup>1</sup>	1.5 FLA <sup>2</sup>	6.0 FLA <sup>1</sup>
5	t > 2 h	t < 2h	t < 2 mn	2 s < t ≤ 5 s
10	t > 2 h	t < 2h	t < 4 mn	4 s < t ≤ 10 s
20	t > 2 h	t < 2h	t < 8 mn	6 s < t ≤ 20 s

<sup>1</sup> Time for a cold start (motor off and cold).

<sup>2</sup> Time for warm start (motor running under normal conditions).

Example: In class 20, the motor must have finished starting within 20 seconds (6 to 20 s) for a starting current of 6 x FLA.

### Asynchronous-Motor Starting Parameters

The main parameters of direct on-line starting of three-phase asynchronous motors (90% of all applications) are listed below.

- FLA: full load amperes  
This is the current drawn by the motor at full rated load.
- Id: locked rotor current  
This is the current drawn by the motor during starting, on average  $6.0 \times I_n$  for a duration of 5 to 30 seconds depending on the application. These values determine the trip class and any additional “long-start” protection devices that may be needed.
- Id: peak starting current  
This is the subtransient current during the first two half-waves when the system is energized, on the average  $14 I_n$  for 10 to 15 ms (e.g. 1840 A peak).

The protection settings must effectively protect the motor, notably through a suitable overload relay trip class, but let the peak starting current through.

### Motor-Feeder Solutions

PowerPact™ H-, J-, and L-frame circuit breakers motor circuit breakers are designed for motor-feeder solutions using:

- three devices, including an electronic MCP or 1.3 M instantaneous-only trip unit
- two devices including a 2 M electronic trip unit.

# PowerPact H-, J-, and L-Frame Circuit Breakers Motor Circuit Protection

## PowerPact H-, J-, and L-Frame with Micrologic™ Trip Units Motor-Protection Range

PowerPact H-, J-, and L-frame circuit breakers with Micrologic trip units can be used to create motor-feeder solutions comprising two or three devices. The protection devices are designed for continuous duty at 104°F (40°C).

Three-device solutions

- 1 PowerPact circuit breaker with Micrologic 1.3 M trip unit
- 1 contactor
- overload relay

Two-device solutions

- 1 PowerPact circuit breaker with a Micrologic 2 M electronic trip unit.
- 1 contactor

## Motor Circuit Protection

### Electronic Motor Circuit Protectors (AC Only)

PowerPact H- and J-frame Electronic Motor Circuit Protectors (MCP) are instantaneous-trip circuit breakers. They are designed to offer short circuit protection and are National Electrical Code® (NEC®) compliant when installed as part of a combination controller having motor overload protection. MCP circuit breakers accept the same accessories and terminals as the equivalent thermal-magnetic circuit breakers. (See Section 3 for Accessories.)

The unique design of the PowerPact MCPs includes two rotary switches to allow quick setting adjustments based on the characteristics of the motor.

The first rotary switch allows for Full Load Amperes (FLA) adjustment across the range of the frame size.

The second rotary switch selects the type of motor protection based on Automatic 1 for Standard Efficiency or Automatic 2 for High Energy Efficient. When using the automatic settings the MCP microprocessor automatically adjusts the trip settings for both current and time to align with the start-up characteristic for the motor type, whether it is a standard or energy-efficient motor. This includes a dampening means to accommodate a transient motor in-rush current without nuisance tripping of the circuit breaker. Rotary switch 2 also allows for traditional motor protection from 8 to 13 times the selected FLA.

The MCP rotary switches are detented and allow the device to be set to specific trip values within a typical accuracy range of +/-5%.

### Full Load Amp Settings

1. Determine the motor's full-load current by referring to the nameplate on the motor.
2. Set the trip range by turning the FLA rotary switch to the setting closest to the motor's full load current.

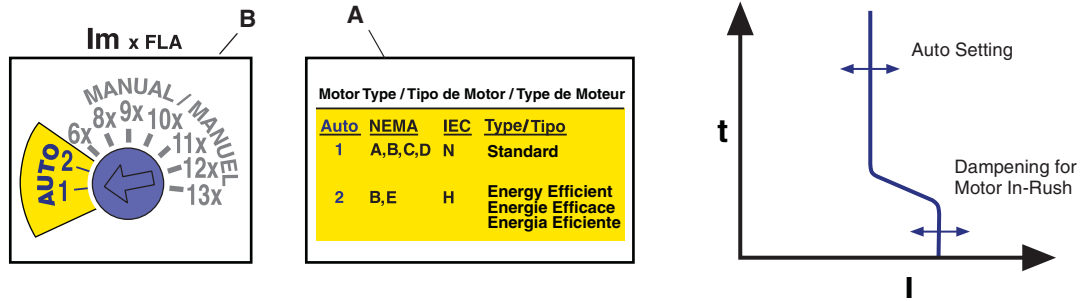

### Automatic Protection Settings

The MCP microprocessor automatically adjusts the trip settings for both current and time to align with the start-up characteristics for the motor type selected. This includes a dampening means to accommodate a transient motor in-rush current without nuisance tripping of the circuit breaker.

# PowerPact H-, J-, and L-Frame Circuit Breakers Motor Circuit Protection

Figure 4: Automatic Protection Settings

## Manual Protection Settings

The manual settings may be adjusted to multiples of current based on the rotary switch setting for motor Full Load Amps (FLA).

$$\text{Instantaneous Trip Point} = (\text{FLA}) \times (I_m)$$

For example, if FLA rotary switch is set to 20 and  $I_m$  rotary switch is set to 9x, then the instantaneous trip point will be 180 A.

See Tables 55 thru 57 for more information.

■ Shaded area is not covered by J-frame electronic motor circuit protector.

## Micrologic 1.3 M Electronic Trip Units for Instantaneous Protection Only (L-Frame Circuit Breakers Only)

Micrologic 1.3 M trip units are used in 3-device motor-feeder solutions on PowerPact L-frame circuit breakers with performance levels G/J/L. They provide short-circuit protection for motors up to 250 kW at 400 V.

Micrologic 1.3 M trip units provide instantaneous protection only, using electronic technology. They are dedicated to 600 A three-pole (3P 3D) circuit breakers or four-pole circuit breakers with detection on three poles (4P, 3D). They are especially used in three-pole versions for motor protection.

Circuit breakers equipped with Micrologic 1.3 M trip units, without thermal protection, are used in certain applications to replace automatic switches. Micrologic 1.3 M trip units are available on PowerPact L-frame circuit breakers only.

**NOTE:** All Micrologic trip units have a transparent, sealable cover that protects access to the adjustment rotary switches.

They also provide the benefits of electronic technology:

- accurate settings
- tests
- “Ready” LED.

Circuit breakers with a Micrologic 1.3 M trip unit are combined with an overload relay and a contactor. Protection settings are made using a rotary switch.

### Protection Version

Three pole (3P): three-pole frame circuit breakers equipped with detection on all three poles.

### Indications

The green “Ready” LED blinks slowly when the electronic trip unit is ready to provide protection. It indicates the trip unit is operating correctly.

**NOTE:** All the trip units have a transparent sealable cover that protects access to the adjustment rotary switches.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Motor Circuit Protection

**Table 53: Micrologic 1.3 M Electronic Trip Unit**

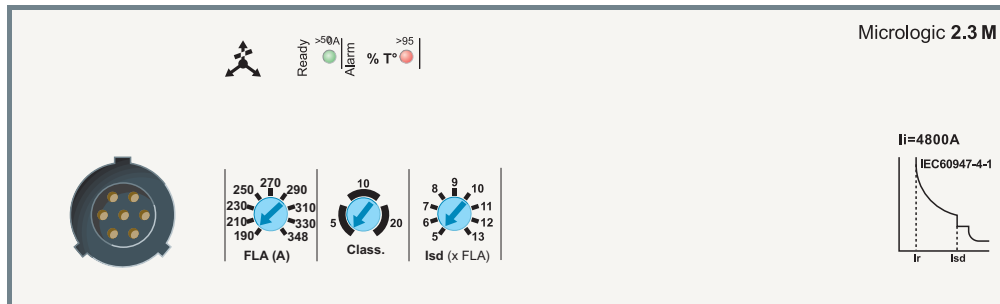

Rating: $I_n$ at 104°F (40°C) <sup>1</sup>		400 A	600 A
Circuit Breaker	PowerPact L-frame	X	X
Short-time protection			
Pick-up (A) accuracy ±15%	$I_{sd}$ There is a very short delay to let through motor starting currents	Adjustable directly in amps	
		9 settings: 2000-2400-2800-3200-3600-4000-4800 A	9 settings: 3000-3600-4200-4800-5400-6000-6600-7200 A
Time delay (ms)	$t_{sd}$	Non-adjustable	
	Non-tripping time Maximum break time	20 60	
Instantaneous protection			
Pick-up (A) accuracy ±15%	$I_i$ non-adjustable	4800	7200
	Non-tripping time Maximum break time	0 30 ms	

<sup>1</sup> Motor standards require operation at 104°F (40°C). Circuit-breaker ratings are derated to take this requirement into account.

## Micrologic 2.2 M and 2.3 M Electronic Trip Units

Micrologic 2.2 M and 2.3 M trip units provide built-in thermal and instantaneous protection. They are used in 2-device motor-feeder solutions on PowerPact H-, J-, and L-frame circuit breakers with performance levels J/L. They provide protection for motors up to 315 kW at 400 V against:

- short-circuits
- overloads with selection of a trip class (5, 10 or 20)
- phase unbalance.

Circuit breakers with a Micrologic 2.2 M/ 2.3 M trip unit include protection similar to an inverse-time overload relay. They are combined with a contactor.

Protection settings are made using a rotary switch.

### Overloads (or Thermal Protection)

Long-time protection and trip class (FLA)

- Inverse-time thermal protection against overloads with adjustable pick-up FLA.
- Settings are made in amperes. The tripping curve for the long-time protection, which indicates the time delay  $t_r$  before tripping, is defined by the selected trip class.

### Trip Class

- The class is selected as a function of the normal motor starting time.
  - Class 5: starting time less than 5 s
  - Class 10: starting time less than 10 s
  - Class 20: starting time less than 20 s
- For a given class, it is necessary to check that all motor-feeder components are sized to carry the 6 x FLA starting current without excessive temperature rise during the time corresponding to the class.

### Short-Circuits

Short-time protection ( $I_{sd}$ )

- Provides protection with an adjustable pick-up  $I_{sd}$ .
- There is a very short delay to let through motor starting currents.

Non-adjustable instantaneous protection ( $I_i$ )

- Instantaneous protection with non-adjustable pick-up  $I_i$ .

### Phase Unbalance or Phase Loss ( $I_{unbal}$ )

- This function opens the circuit breaker if a phase unbalance occurs:
  - that is greater than the 30% fixed pick-up  $I_{unbal}$
  - following the non-adjustable time delay  $t_{unbal}$  equal to:
    - 0.7 s during starting
    - 4 s during normal operation
- Phase loss is an extreme case of phase unbalance and leads to tripping under the same conditions.

### Indications

Front indications

- The green “Ready” LED blinks slowly when the electronic trip unit is ready to provide protection. It indicates the trip unit is operating correctly.
- Red alarm LED for motor operation goes ON when the thermal image of the rotor and stator is greater than 95% of the permissible temperature rise.

Remote indications using SDTAM module

- PowerPact H-, J-, and L-frame devices with a Micrologic 2 M trip unit can be equipped with an SDTAM module dedicated to motor applications for:
  - A contact to indicate circuit-breaker overload.
  - A contact to open the contactor. In the event of a phase unbalance or overload, this output is activated 400 ms before circuit-breaker tripping to open the contactor and avoid circuit breaker tripping
- This module takes the place of the shunt trip (MN)/undervoltage trip (MX) coils and an auxiliary switch (OF) contact

SDTAM remote indication relay module with its terminal block.

Note: All the trip units have a transparent sealable cover that protects access to the adjustment rotary switches.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Motor Circuit Protection

**Table 54: Micrologic 2.2 M and 2.3 M Electronic Trip Unit**

Rating: $I_n$ at 104°F (40°C) <sup>1</sup>		30 A	50 A	100 A	150 A	250 A	400 A	600 A
Circuit Breaker	PowerPact H-frame	X	X	X	X	—	—	—
	PowerPact J-frame	—	—	—	—	X	—	—
	PowerPact L-frame	—	—	—	—	—	X	X

### Overloads (or Thermal Protection): Long-Time Protection and Trip Class

Pick-Up (A) Tripping between 1.05 and 1.20 FLA	FLA		Value depending on trip unit rating ( $I_n$ ) and setting on rotary switch								
	$I_n = 30$ A	FLA =	14	16	18	20	21	22	23	24	25
$I_n = 50$ A	FLA =	14	17	21	24	27	29	32	36	42	
$I_n = 100$ A	FLA =	30	35	41	45	51	56	63	71	80	
$I_n = 150$ A	FLA =	58	71	78	86	91	97	110	119	130	
$I_n = 250$ A	FLA =	114	137	145	155	163	172	181	210	217	
$I_n = 400$ A	FLA =	190	210	230	250	270	290	310	330	348	
$I_n = 600$ A	FLA =	312	338	364	390	416	442	468	484	520	

### Time Delay

Trip Class		5	10	20		
Time Delay (s) Depending on selected trip class	$t_r$	1.5 x FLA	120	240	480	For warm start
		6 x FLA	6.5	13.5	26	For cold start
		7.2 x FLA	5	10	20	For cold start

### S Short Circuits: Short-time protection with fixed time delay

Pick-up (A) accuracy $\pm 15\%$	$I_{sd} = FLA \times$	5	6	7	8	9	10	11	12	13
Time delay (ms)	$t_{sd}$	Non-adjustable								
	Non-tripping time	20								
	Maximum break time	60								

### I Short Circuit: Non-adjustable instantaneous protection

Pick-up (A) accuracy $\pm 15\%$	$I_i$ non-adjustable	450	750	1500	2250	3750	4800	7200
Time delay (ms)	Non-tripping time	0						
	Maximum break time	30 ms						

### Phase unbalance or phase loss

Pick-up (A) accuracy $\pm 20\%$	$I_{unbal}$ in % average current <sup>2</sup>	30%
Time delay (ms)	Non-adjustable	0.7 s during starting 4 s during normal operation

<sup>1</sup> Motor standards require operation at 104°F (40°C). Circuit-breaker ratings are derated to take this requirement into account.

<sup>2</sup> The unbalance measurement takes into account the most unbalanced phase with respect to the average current.

Additional Technical Characteristics

Table 55: Additional Technical Characteristics

 <p>Unbalance of Phase Currents and Voltages</p>  <p>Motor Starting and Long Starts</p>	<p><b>Phase unbalance</b></p> <p>An unbalance in three-phase systems occurs when the three voltages are not equal in amplitude and/or not displaced 120° with respect to each other. It is generally due to single-phase loads that are incorrectly distributed throughout the system and unbalance the voltages between the phases.</p> <p>These unbalances create negative current components that cause braking torques and temperature rise in asynchronous machines, thus leading to premature aging.</p>	<p><b>Phase loss</b></p> <p>Phase loss is a special case of phase unbalance.</p> <ul style="list-style-type: none"> <li>• During normal operation, it produces the effects mentioned above and tripping must occur after four seconds.</li> <li>• During starting, the absence of a phase may cause motor reversing, i.e. it is the load that determines the direction of rotation. This requires virtually immediate tripping (0.7 seconds).</li> </ul> <p>Starting time in compliance with the class (Micrologic 2 M)</p> <p>For normal motor starting, Micrologic 2 M checks the conditions below with respect to the thermal-protection (long-time) pick-up FLA:</p> <ul style="list-style-type: none"> <li>• current &gt; 10% x FLA (motor-off limit)</li> <li>• overrun of 1.5 x FLA threshold, then return below this threshold before the end of a 10 s time delay.</li> </ul> <p>If either of these conditions is not met, the thermal protection trips the device after a maximum time equal to that of the selected class. Pick-up FLA must have been set to the current indicated on the motor rating plate.</p>
	<p><b>Starting time in compliance with the class (Micrologic 2 M)</b></p> <p>For normal motor starting, Micrologic 2 M checks the conditions below with respect to the thermal-protection (long-time) pick-up FLA:</p> <ul style="list-style-type: none"> <li>• current &gt; 10% x FLA (motor-off limit)</li> <li>• overrun of 1.5 x FLA threshold, then return below this threshold before the end of a 10 s time delay</li> </ul> <p>If either of these conditions is not met, the thermal protection trips the device after a maximum time equal to that of the selected class.</p> <p>Pick-up FLA must have been set to the current indicated on the motor rating plate.</p>	

Table 56: L-Frame Electronic Trip Unit Magnetic Only 3 Pole, 600 Vac, 50/60 Hz—Three Device Solutions<sup>1</sup>

Sensor Rating	Trip Unit	Adjustable <sup>2</sup> Trip Range (A)	G-Interrupting Cat. No.	J-Interrupting Cat. No.	L-Interrupting Cat. No.	R-Interrupting Cat. No.
PowerPact	400	500–1200%	LGL36400M37X	LJL36400M37X	LLL36400M37X	LRL36400M37X
L-Frame	600	500–1200%	LGL36600M37X	LJL36600M37X	LLL36600M37X	LRL36600M37X

<sup>1</sup> Three-device solutions are the traditional solutions: motor circuit protector plus motor starter plus overload relay.

<sup>2</sup> UL magnetic trip tolerances are -20%/+30% from the nominal values shown.

## PowerPact H-, J-, and L-Frame Circuit Breakers Motor Circuit Protection

**Table 57: H-Frame (150 A), J-Frame (250 A) and L-Frame (600 A) Electronic Motor Protector Circuit Breakers (UL Ratings)—Two Device Solutions<sup>1</sup>**

<sup>1</sup> Two-device solutions (these electronic motor protector circuit breakers include short circuit and overload protection)

—1 electronic motor circuit protector with a Micrologic 2.2 M electronic trip unit, plus  
—1 contactor

<sup>2</sup> The standard trip unit offers Class 5, 10 and 20 and phase unbalance or phase loss protection.

## Section 6—Energy Management

### Energy Management Using the Smart System

Use the Smart System to connect your building to real savings in three steps:

- A. Measure
  - Embedded and stand-alone metering and control
- B. Connect
  - Integrated communication interfaces
  - Ready to connect to energy management platforms
- C. Save
  - Data-driven energy efficiency actions
  - Real-time monitoring and control
  - Access to energy and site information through on-line services

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Energy Management

### Measure

Smart System communications mean visible information.

Grouping most of the electrical protection, command and metering components, the switchboards are now significant sources of data locally displayed and sent via communication networks.

### Connect

Smart Systems use reliable, simple-to-install-and-use displays, and Ethernet and Modbus interfaces.

Information is safely transmitted through the most efficient networks:

- Modbus SL inside switchboards, between components,
- Ethernet, on cable or WiFi, inside the building and connecting switchboards and computers,
- Ethernet or GPRS, for access to on-line services by Schneider Electric.
- Energy experts, no matter where they are located, can now provide advise based on the updated data of the building.

### Save

#### On-Site Real-Time Monitoring and Control

The FDM128 touch screen display connected to the Ethernet:

- shows essential electrical information and alarms concerning the electrical network,
- allows control (open, close, reset...) of various equipment.

The FDM128 touch screen provides real-time value checking and control, directly on the front panel of the main switchboard.

On a PC display with common browser:

- shows monitoring web pages hosted into the local Ethernet interface,
- alarm events generate automatic email notifications,
- allows control (open, close, reset...) of various equipment.

The data is displayed graphically or recorded into files for optimizing the use of energy in the building.

As an example, the data can help validate the change of temperature settings, time scheduling in a Building Management System or other automated devices.

#### On-Line Energy Management Services

StruXureWare Energy Operation automates data collection using an open, scalable, and secure energy management information system.

With the help of the Schneider Electric energy management services team, data is turned into information to enable customers to understand their facilities' performance on an ongoing basis.

Energy Operation leverages companies' current investments in their existing systems, and can be used to communicate advanced results and performance to a broad audience for a shared understanding throughout an organization.

## Power Meter Functions

In addition to protection functions, Micrologic A/E trip units offer all the functions of Power Meter products as well as operating assistance for the circuit breaker.

Micrologic A/E trip unit measurement functions are made possible by the Micrologic trip unit's intelligence and the accuracy of the sensors. They are handled by a microprocessor that operates independent of protection functions.

## Display Functions

### Micrologic Trip Unit LCD

Trip Unit LCD

The user can display all the protection settings and the main measurements on the LCD screen of the trip unit.

- Micrologic A trip unit: instantaneous rms current measurements
- Micrologic E trip unit: voltage, frequency and power measurements and energy metering, in addition to the measurements offered by Micrologic A

To make the display available under all conditions and increase operating comfort, an external power supply is recommended for Micrologic A trip unit. It is required to:

- display faults and interrupted current measurements
- use all the functions of Micrologic E trip unit (such as metering of low power and energy values)
- ensure operation of the communication network

The external power supply can be shared by several devices. For description, see page 109.

### FDM121 Display Unit (One to One)

Display Function

The FDM121 switchboard display unit can be connected to a communication (COM) option (Breaker Communication Module [BSCM]) using a circuit breaker ULP cord to display all measurements on a screen. The LCD screen is 3.78 x 3.78 in. (96 x 96 mm). The FMD121 display unit requires a 24 Vdc power supply. The COM option (BSCM) unit is supplied by the same power supply via the circuit breaker ULP cord connecting it to the FDM121. See page 72 for more information.

FDM121 Display Navigation

FDM121 Display Current

FDM121 Display: Voltage

FDM121 Display: Power

FDM121 Display: Consumption

## FDM128 Display Unit (One to Eight)

The FDM128 display unit uses an IFE Ethernet interface for low-voltage circuit breakers.

FDM128 Display:  
Voltage

FDM128 Display:  
Power

FDM128 Display:  
Consumption

For all FDM, in addition to the information displayed on the Micrologic trip unit LCD, the FDM screen shows demand, power quality, and maximum/minimum ammeter values along with histories and maintenance indicators.

## Measurement Function

Measurement Function

### Instantaneous RMS Measurements

The Micrologic trip unit continuously displays the RMS value of the highest current of the three phases and neutral ( $I_{max}$ ). The navigation buttons can be used to scroll through the main measurements.

In the event of a fault trip, the trip cause is displayed.

The Micrologic A trip unit measures phase, neutral, and ground fault currents.

Micrologic E trip units offer voltage, power, frequency, and energy metering in addition to the measurements provided by Micrologic A trip units.

### Maximum / Minimum Ammeter

Every instantaneous measurement provided by Micrologic A/E trip units can be associated with a maximum/minimum ammeter. The maximum for the highest current of the three phases, neutral, and demand current can be reset using the Micrologic trip unit keypad, FDM display unit, or the communication system.

### Energy Metering

The Micrologic E trip units also measures the energy consumed since the last reset of the meter. The active energy meter can be reset using the Micrologic trip unit keypad, the FDM display unit, or the communication system.

### Demand and Maximum Demand Values

Micrologic E trip units also calculate demand current and power values. These calculations can be made using a block or sliding interval that can be set from five to sixty minutes in steps of one minute. The window can be synchronised with a signal sent through the communication system. Whatever the calculation method, the calculated values can be recovered on a PC through the communication network.

Ordinary spreadsheet software can be used to provide trend curves and forecasts based on this data. They provide a basis for load shedding and reconnection operations used to adjust consumption to the subscribed power.

# PowerPact H-, J-, and L-Frame Circuit Breakers Energy Management

## Power Quality

The Micrologic E trip unit calculates power quality indicators taking into account the presence of harmonics up to the fifteenth harmonic, including the total harmonic distortion (THD) of current and voltage.

# PowerPact H-, J-, and L-Frame Circuit Breakers Energy Management

## Energy Management

### Additional Technical Characteristics

Measurement accuracy of the entire measurement system, including the sensors:

- Current: +/- 1%
- Voltage: +/- 0.5%
- Power and energy: +/- 2%
- Frequency: +/- 0.1%

### Operating-Assistance Functions Characteristics

#### Micrologic Trip Unit Alarms with Time-Stamping

##### Alarm Types

The user can assign an alarm to all Micrologic A or E trip unit measurements or events:

- up to 12 alarms can be used together:
  - two alarms are predefined and activated automatically:
    - Micrologic 5 trip unit: overload ( $I_r$ )
    - Micrologic 6 trip unit: overload ( $I_r$ ) and ground fault ( $I_g$ )
  - thresholds, priorities and time delays can be set for ten other alarms.
- the same measurement can be used for different alarms to precisely monitor certain values, e.g. the frequency or the voltage
- alarms can also be assigned to various states: phase lead/lag, four quadrants, phase sequence selection of display priorities, with screen displaying a window showing high priority alarm
- alarm time-stamping.

##### Alarm Settings

Alarms cannot be set using the keypad or the front display module. They are set through the communication network with the PC. Set-up includes the threshold, priority, activation delay before display and deactivation delay. It is also possible to reprogram the standard assignment for the two SDx relay outputs to user-selected alarms.

##### Alarm Reading

Remote alarm indicators:

- reading on the front display module or on a PC through the communication network
- system remote indicators using SDx relay with two output contacts for alarms
- Micrologic trip unit built-in LCD display

#### Histories and Event Tables

Micrologic A and E trip unit have histories and event tables that are always active.

##### Three types of time-stamped histories

- Tripping due to overruns of  $I_r$ ,  $I_{sd}$ ,  $I_i$ ,  $I_g$ : last 17 trips
- Alarms: last 10 alarms
- Operating events: last 10 events

Each history record is stored with:

- indicators in clear text in a number of user-selectable languages
- time-stamping: date and time of event
- status: pick-up / drop-out

### Two types of time-stamped event tables

- Protection settings
- Minimums / maximums

### Display of alarms and tables

The time-stamped history and event tables may be displayed on a PC through the communication network.

### Embedded memory

Micrologic A and E trip units have a non-volatile memory that saves all data on alarms, histories, event tables, counters and maintenance indicators even if power is lost.

### Maintenance Indicators

Micrologic A and E trip units have indicators for, among others, the number of operating cycles, contact wear and operating times (operating hours counter) of the PowerPact H-, J-, and L-frame circuit breakers.

It is possible to assign an alarm to the operating cycle counter to plan maintenance. The various indicators can be used together with the trip histories to analyze the level of stresses the device has been subjected to. The information provided by the indicators cannot be displayed on the Micrologic trip unit LCD. It is displayed on the PC through the communication network.

### Management of Installed Devices

Each circuit breaker equipped with a Micrologic 5 or 6 trip unit can be identified using the communication network:

- serial number
- firmware version
- hardware version
- device name assigned by the user

This information together with that previously described provides a clear view of the state of the installed devices.

**NOTE:** Please refer to page 64 for more details on display formats.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Energy Management

**Table 59: Micrologic 5/6 Trip Units Operating Assistance Functions**

			Type		Display	
			A	E	Trip Unit LCD	Front Display Module

			X	X	—	1

<sup>1</sup> Available through the communication network only.

<sup>2</sup> The BSCM (page 108) is required for these functions.

# PowerPact H-, J-, and L-Frame Circuit Breakers Energy Management

## Additional Technical Characteristics:

- **Contact wear**  
Each time PowerPact H-, J-, and L-frame circuit breakers open, the Micrologic 5/6 trip unit measures the interrupted current and increments the contact-wear indicator as a function of the interrupted current, according to test results stored in memory. Breaking under normal load conditions results in a very slight increment. The indicator value may be read on the front display module. It provides an estimation of contact wear calculated on the basis of the cumulative forces affecting the circuit breaker. When the indicator reaches 80%, it is advised to replace the circuit breaker to ensure the availability of the protected equipment.
- **Circuit breaker load profile**  
Micrologic 5/6 trip units calculate the load profile of the circuit breaker protecting a load circuit. The profile indicates the percentage of the total operating time at four current levels (% of  $I_n$ ):
  - 0 to 49%  $I_n$
  - 50 to 79%  $I_n$
  - 80 to 89%  $I_n$
  - $\geq 90\%$   $I_n$This information can be used to optimize use of the protected devices or to plan ahead for expansion.

## Motor Circuit Protectors (AC Only)

See Section 5 for information about PowerPact H-, J- and L-frame electronic motor circuit protectors (MCP) with trip units:

- Micrologic 1.3 M
- Micrologic 2 M

## **FDM121 Display**

Micrologic trip unit measurement capabilities come into full play with the FDM121 display. It connects with a circuit breaker ULP cord and displays the Micrologic trip unit information. The result is a true integrated unit combining a circuit breaker and a power meter. Additional operating assistance functions can also be displayed.

An FDM121 display unit can be connected to ULP communication devices using a prefabricated cord to display all measurements, alarms, histories and event tables, maintenance indicators, and management of installed devices on a screen.

The FMD121 display unit requires a 24 Vdc power supply.

The FDM121 is a display that can be integrated with the PowerPact H/J/L/P/R or Masterpact NW/NT circuit breaker systems. It uses the sensors and processing capacity of the Micrologic trip unit. It is easy to use and requires no special software or settings. It is immediately operational when connected to the circuit breaker by a ULP cord.

It also provides monitoring and control with the use of the I/O application module, the motor mechanism module, or the circuit breaker communication module.

The FDM121 has a large display, but requires very little depth. The anti-glare graphic screen is backlit for very easy reading even under poor ambient lighting and at sharp angles.

## **Display of Micrologic Trip Unit Measurements and Alarms**

The FDM121 is intended to display Micrologic trip unit measurements, alarms and operating information. It cannot be used to modify the protection settings.

Measurements can be easily accessed using a menu. All user-defined alarms are automatically displayed. The display mode depends on the priority level selected during alarm set-up:

- high priority: a pop-up window displays the time-stamped description of the alarm and the orange Alarm LED flashes;
- medium priority: the orange Alarm LED goes continuously on;
- low priority: no display on the screen.

All faults resulting in a trip automatically produce a high-priority alarm, without any special settings required. In all cases, the alarm history is updated. The Micrologic trip unit saves the information in its non-volatile memory in the event of an FDM121 power loss.

## Status Indications and Remote Control

FDM121 Display

When the circuit breaker is equipped with the Breaker Communications Module (BSCM), the FDM121 display can also be used to view circuit breaker status conditions:

- O/F: ON/OFF
- SD: trip indication
- SDE: fault-trip indication (overload, short-circuit, or ground fault).

When the circuit breaker system is equipped with the I/O application module, the FDM121 can monitor and control:

- cradle management
- circuit breaker operation
- light and load control
- custom applications.

Surface Mount  
Accessory

When the circuit breaker is equipped with the communication motor operator etc., the FDM121 display can also be used to control (open/close) the circuit breaker.

Two operating mode are available:

- local mode: open/close commands are enabled from the FDM121 while disabled from the communication network;
- remote mode: open/close commands are disabled from the FDM121 while enabled from the communication network.

Connection with FDM121  
Display Unit

## Main Characteristics

- A 3.78 x 3.78 x 1.18 in. (96 x 96 x 30 mm) screen requiring 0.39 in. (10 mm) behind the door (or 0.79 in. [20 mm] when the 24 V power supply connector is used).
- White backlighting.
- Wide viewing angle: vertical  $\pm 60^\circ$ , horizontal  $\pm 30^\circ$ .
- High resolution: excellent reading of graphic symbols.
- Alarm LED: flashing orange for alarm pick-up, steady orange after operator reset if the alarm condition persists.
- Operating temperature range: +14°F (-10°C) to +131°F (+55°C).
- CE / UL / CSA marking.
- 24 Vdc power supply, with tolerances 24 V -20% (19.2 V) to 24 V +10% (26.4 V).

When the FDM121 is connected to the communication network, the 24 Vdc can be supplied by the communication system wiring system. Consumption is 40 mA.

## Mounting

The FDM121 is easily installed in a switchboard.

- Standard door cut-out is 3.6 x 3.6 in. (92 x 92 mm).
- Attached using clips.

To avoid a cut-out in the door, an accessory is available for surface mounting by drilling only two 0.87 in. (22 mm) diameter holes.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Energy Management

### Connection

The FDM121 is equipped with a 24 Vdc terminal block:

- A plug-in type terminal block with two wire inputs per point for easy daisy-chaining.
- A power supply range of 24 Vdc -20% (19.2 V) to 24 Vdc +10% (26.4 V).  
A 24 Vdc type auxiliary power supply must be connected to a single point on the ULP system. The FDM121 display has a two-point screw connector on the rear panel of the module for this purpose. The ULP module to which the auxiliary power supply is connected distributes the supply via the ULP cable to all the ULP modules connected to the system and therefore also to Micrologic trip unit. See wiring diagram later in this section.
- Two RJ45 jacks.

The Micrologic trip unit connects to the internal communication terminal block on the PowerPact or Compact circuit breaker with the circuit breaker ULP cord. Connection to one of the RJ45 connectors on the FDM121 automatically establishes communication between the Micrologic trip unit and the FDM121 and supplies power to the Micrologic trip unit measurement functions.

When the second connector is not used, it must be fitted with a line terminator.

### Navigation

Five buttons are used for intuitive and fast navigation.

The “Context” button may be used to select the type of display (digital, bargraph, analogue).

The user can select the display language (Chinese, English, French, German, Italian, Portuguese, Spanish, etc.).

- 1 Escape
- 2 Down
- 3 OK
- 4 Up
- 5 Context
- 6 Alarm LED

Services

## Screens

### Main Menu

When powered up, the FDM121 screen automatically displays the ON/OFF status of the device.

When not in use, the screen is not backlit. Backlighting can be activated by pressing one of the buttons. It goes off after three minutes.

### Fast Access to Essential Information

- “Quick view” provides access to five screens that display a summary of essential operating information (I, U-V, f, P, E, THD, circuit breaker ON/OFF).

### Access to Detailed Information

- “Metering” can be used to display the measurement data (I, U-V, f, P, Q, S, E, THD, PF) with the corresponding min/max values.
- “Alarms” displays active alarms and the alarm history.
- “Services” provides access to the operation counters, energy and maximum ammeter reset function, maintenance indicators, identification of modules connected to the internal bus, and FDM121 internal settings (language, contrast, etc.).

## Communication Components and FDM121 Connections

The FDM121 degree of protection is IP54 in front. IP54 is maintained after switchboard mounting by using the supplied gasket during installation.

# PowerPact H-, J-, and L-Frame Circuit Breakers Energy Management

Figure 5: FDM121 Connections

### Connections

PowerPact circuit breaker is connected to the I/O module or FDM121 display unit via the internal terminal block for the NSX cord equipped with an RJ45 connector:

- Cord is available in three lengths: 0.98 ft. (0.35 m), 4.3 ft. (1.3 m) and 9.8 ft. (3 m).
- Lengths up to 32.9 ft. (10 m) are possible using extensions.

The FDM121 display unit and the I/O module are connected to:

- the IFM Modbus interface by a communication cable with RJ45 connectors on both ends
- or
- the IFE Ethernet interface module by a communication cable with RJ45 connectors on both ends.

### Communication Components and Connections, IFM

### Communication Components and Connections, IFE

## **FDM128 Display**

The Micrologic trip unit measurement capabilities are fully utilized with the FDM128 display. The FDM128 display connects to Ethernet communication using the RJ45 port and displays Micrologic trip unit information. The result is an integrated unit combining a circuit breaker with a power meter. Additional operating assistance functions can also be displayed.

The FDM128 display unit can be connected to a Micrologic COM option (BSCM). It uses the sensors and processing capacity of the Micrologic trip unit and requires no special software or settings. The FDM128 is a large display, but requires very little depth. The anti-glare graphic screen is backlit for easy reading even under poor ambient lighting and at sharp angles.

The FDM128 display is designed to manage up to eight devices (PowerPact H/J/L/P/R or Masterpact NW/NT circuit breakers).

### **Display of Micrologic Trip Unit Measurements and Trips**

The FDM128 is intended to display Micrologic 5/6 trip unit measurements, trips, and operating information. It cannot be used to modify the protection settings.

- Measurements may be easily accessed using a menu.
- Trips are automatically displayed.
- A pop-up window displays the time-stamped description of the trip.

### **Status Indications**

When the circuit breaker is equipped with the COM option (BSCM) (including its set of sensors) the FDM128 display can also be used to view circuit breaker status conditions:

- O/F: ON/OFF
- SDE: Fault-trip indication (overload, short-circuit, ground fault)
- CE, CD, CT cradle management with I/O application module.

### **Remote Control**

When the circuit breaker is equipped with the COM option (BSCM) (including connection to a communicating motor operator), the FDM128 display can also be used to operate (open/close) the circuit breaker.

Two operating mode are available:

- Local mode: open/close commands are enabled from the FDM128 while disabled from the communication network.
- Remote mode: open/close commands are disabled from the FDM128 while enabled from the communication network.

# PowerPact H-, J-, and L-Frame Circuit Breakers Energy Management

## Main Characteristics

- 4.54 x 3.40 in. (115.2 x 86.4 mm) with 5.7 in. (145 mm) QVGA display 320 x 240 pixels.
- Color TFT LCD, with LED backlight.
- Wide viewing angle: vertical  $\pm 80^\circ$ , horizontal  $\pm 70^\circ$ .
- High resolution: excellent reading of graphic symbols.
- Operating temperature range:  $+14^\circ\text{F}$  ( $-10^\circ\text{C}$ ) to  $+131^\circ\text{F}$  ( $+55^\circ\text{C}$ ).
- CE / UL / CSA marking.
- 24 Vdc power supply,  $-10\%/+20\%$  (limit 20.4 - 28.8 Vdc).
- Consumption 6.8 W.

FDM128 Display

Surface Mount Accessory

## Mounting

The FDM128 is easily installed in a switchboard.

- Standard door hole  $\varnothing$  0.87 in. (22 mm).
- The FDM128 degree of protection is IP65 at the touch screen cover. IP54 is maintained after installation by using the supplied gasket.

## Connection

The FDM128 is equipped with:

- a 24 Vdc terminal block:
  - with a power supply range of 24 Vdc (limit 20.4 - 28.8 Vdc).
  - secures to the FDM128 display unit using a 2-point screw connector on the rear panel of the module.
- one RJ45 Ethernet jack.

The Micrologic trip unit connects to the internal communication terminal block on the PowerPact circuit breakers through the circuit breaker ULP cord and Ethernet connection through the IFE.

Connection with Display Unit

## Navigation

- A touch screen is used for intuitive and fast navigation.
- The user can select the display language (Chinese, English, French, German, Italian, Portuguese, Spanish, etc.).

## Section 7—Trip Units

### Available Trip Units

- PowerPact™ H-, J-, and L-Frame circuit breakers offer a range of thermal-magnetic and Micrologic™ electronic trip units in interchangeable cases. Thermal-magnetic trip units are designed to open automatically under overload or short circuit. H-frame and J-frame thermal-magnetic circuit breakers contain individual thermal (overload) and instantaneous (short circuit) sensing elements in each pole.
- Micrologic electronic trip units provide intelligent operation, with wide setting ranges make installation upgrades easier. Designed with processing capabilities, Micrologic trip units can provide measurement information and device operating assistance to supply all of the information required to manage the electrical installation and optimize energy use.

Micrologic trip units offer excellent measurement accuracy, using a new generation of current transformers combining “iron-core” sensors for self-powered electronics and “air-core” sensors (Rogowski coils) for measurements. The protection functions are managed by an ASIC component that is independent of the measurement functions. This independence ensures immunity to conducted and radiated disturbances and a high level of reliability.

An LED on the front of the electronic trip units indicates the result of the self-test running continuously on the measurement system and the tripping release. When the green LED is flashing, the links between the CTs, the processing electronics and the Mitop release are operational. The circuit breaker is ready to protect. A minimum current of 15 to 50 A, depending on the device, is required for this function.

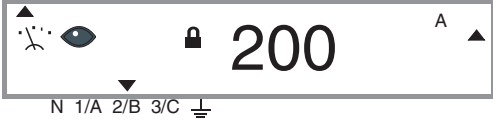

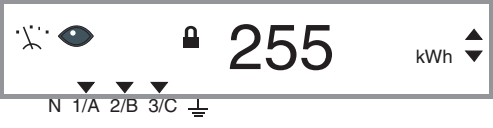

The dual adjustment for protection functions on Micrologic 5/6 consists of:

- an adjustment using rotary switches sets the maximum value
- an adjustment, made using the keypad or remotely, fine-tunes the setting. This setting may not exceed the first one. It can be read directly on the Micrologic screen, to within one ampere and a fraction of a second.

**NOTE:** All the trip units have a transparent sealable cover that protects access to the adjustment rotary switches.

## Micrologic 3 Trip Units

Micrologic 3 trip units can be used on PowerPact H-, J-, and L-Frame circuit breakers with performance levels D/G/J/L.

They provide:

- standard protection of distribution cables
- indication of:
  - overloads (using LEDs)
  - overload tripping (using the SDx relay module)

Circuit breakers equipped with Micrologic 3 trip units can be used to protect distribution systems supplied by transformers.

### Protection

Settings are made using the adjustment rotary switches.

Overloads: Long time protection ( $I_r$ )

Inverse time protection against overloads with an adjustable current pick-up  $I_r$  set using a rotary switch and an adjustable time delay  $t_r$ .

### Neutral protection

- On three-pole L-frame circuit breakers, neutral protection is not possible.
- On four-pole L-frame circuit breakers, neutral protection may be set using a three-position switch:
  - switch position 4P 3D: neutral unprotected
  - switch position 4P 3D + N/2: neutral protection at half the value of the phase pick-up, ( $0.5 \times I_r$ )
  - switch position 4P 4D: neutral fully protected at  $I_r$

### Indicators

#### Front indicators

- The green “Ready” LED blinks slowly when the electronic trip unit is ready to provide protection. It indicates the trip unit is operating correctly.
- Orange overload pre-alarm LED: steady on when  $I > 90\% I_r$
- Red overload LED: steady on when  $I > 105\% I_r$

#### Remote indicators

An overload trip signal can be remotely checked by installing an SDx relay module inside the circuit breaker. This module receives the signal from the Micrologic electronic trip unit through an optical link and makes it available on the terminal block. The signal is cleared when the circuit breaker is reclosed. See page 120.

# PowerPact H-, J-, and L-Frame Circuit Breakers Trip Units

$I_n = 400$ A	$I_r =$		125	150	175	200	225	250	300	350	400
$I_n = 600$ A	$I_r =$		200	225	250	300	350	400	450	500	600
Time Delay (s) Accuracy 0 to -20%	$t_r$		0.5	1	2	4	8	16			
		$1.5 \times I_r$	15	25	50	100	200	400			
		$6 \times I_r$	0.5	1	2	4	8	16			
		$7.2 \times I_r$	0.35	0.7	1.4	2.8	5.5	11			
Thermal memory			20 minutes before and after tripping								

### I Instantaneous

Pick-up (A) accuracy $\pm 15\%$	$I_i \times$	60 A, 100 A	1.5	2	3	4	6	8	10	12	15
		150 A	1.5	2	3	4	6	8	10	12	15
		250 A	1.5	2	3	4	5	6	8	10	12
		400 A	1.5	2	3	4	5	6	8	10	12
		600 A	1.5	2	3	4	5	6	8	10	11
	Non-tripping time Maximum break time		10 ms 50 ms for $I > 1.5 I_i$								

## Micrologic 3.2S / 3.3S trip units<sup>2</sup>

### L Long-time protection

Pick-Up (A) Tripping between 1.05 and 1.20 $I_r$	$I_r$		Value depending on sensor rating ( $I_n$ ) and setting on rotary switch								
	$I_n = 60$ A	$I_r =$		15	20	25	30	35	40	45	50
$I_n = 100$ A	$I_r =$		35	40	45	50	60	70	80	90	100
$I_n = 150$ A	$I_r =$		50	60	70	80	90	100	110	125	150
$I_n = 250$ A	$I_r =$		70	80	100	125	150	175	200	225	250
$I_n = 400$ A	$I_r =$		125	150	175	200	225	250	300	350	400
$I_n = 600$ A	$I_r =$		200	225	250	300	350	400	450	500	600
Time Delay (s) Accuracy 0 to -20%	$t_r$		non-adjustable								
		$1.5 \times I_r$	400								
		$6 \times I_r$	16								
		$7.2 \times I_r$	11								
Thermal memory			20 minutes before and after tripping								

### S Short-time protection

Pick-up (A) accuracy $\pm 10\%$	$I_{sd} - I_r \times \dots$		1.5	2	3	4	5	6	7	8	10
Time delay (ms)	$t_{sd}$		non-adjustable								
	Non-tripping time Maximum break time		20 80								

### I Instantaneous

Pick-up (A) accuracy $\pm 15\%$	$I_i \times$	60 A, 100 A	1.5	2	3	4	6	8	10	12	15
		150 A	1.5	2	3	4	6	8	10	12	15
		250 A	1.5	2	3	4	5	6	8	10	12
		400 A	1.5	2	3	4	5	6	8	10	12
		600 A	1.5	2	3	4	5	6	8	10	11
	Non-tripping time Maximum break time		10 ms 50 ms for $I > 1.5 I_i$								

<sup>1</sup> If the trip units are used in high-temperature environments, the Micrologic trip unit setting must take into account the thermal limitations of the circuit breaker. See the temperature derating information on page 150.

<sup>2</sup> Mission Critical trip units have a "-W" at the end of the number (for example 3.2-W). All other protections are the same and have the same trip curves.

### Micrologic 5/6 A or E Trip Units

Micrologic 5/6 A (Ammeter) or E (Energy) trip units can be used on PowerPact H-, J-, and L-frame circuit breakers with performance levels D, G, J, or L. They all have a front display module. They offer basic LSI protection (Micrologic 5 trip unit) or LSI and ground-fault protection G (Micrologic 6 trip unit). They also offer measurement, alarm and energy values.

The capabilities of Micrologic 5/6 A and E trip units come into full play with the front display module. When the two are connected using a simple cable with RJ45 connectors, the combination offers full Power Meter capabilities and all the measurements required to monitor the electrical installation.

	Measurements	Operating and Maintenance Assistance	Communication Network
Ammeter (Micrologic A Trip Unit)	<p>Current measurements</p> <ul style="list-style-type: none"> <li>Phase and neutral currents <math>I_A, I_B, I_C, I_N</math></li> <li>Average current of the 3 phases <math>I_{avg}</math></li> <li>Highest current of the three phases <math>I_{max}</math></li> <li>Ground-fault current <math>I_g</math> (Micrologic 6.2 / 6.3 A) trip units</li> <li>Maximum and minimum current measured</li> </ul>	<p>Indicators, alarms and histories</p> <ul style="list-style-type: none"> <li>Fault types</li> <li>Alarms for high/low alarm thresholds linked to I measurements</li> <li>Trip, alarm and operating histories</li> <li>Time-stamped tables for settings and maximum current</li> </ul> <p>Maintenance indicators</p> <ul style="list-style-type: none"> <li>Operation, trip and alarm counters</li> <li>Operating hours counter</li> <li>Contact wear</li> <li>Load profile and thermal image</li> </ul>	Modbus with add-on module
Energy (Micrologic E Trip Unit)	<p>Current measurements</p> <ul style="list-style-type: none"> <li>Phase and neutral currents <math>I_A, I_B, I_C, I_N</math></li> <li>Average current of the 3 phases <math>I_{avg}</math></li> <li>Highest current of the three phases <math>I_{max}</math></li> <li>Ground-fault current <math>I_g</math> (Micrologic 6.2 / 6.3 A trip units)</li> <li>Maximum and minimum current measured</li> <li>Current unbalance between phases</li> </ul> <p>Voltage measurements</p> <ul style="list-style-type: none"> <li>Phase-to-phase (V) and phase-to-neutral (U) voltages</li> <li>Average voltages <math>V_{avg}, U_{avg}</math></li> <li>Ph-Ph (V) and Ph-N (U) voltage unbalance</li> </ul> <p>Frequency measurements</p> <ul style="list-style-type: none"> <li>Frequency (f)</li> </ul> <p>Power-quality indicators</p> <ul style="list-style-type: none"> <li>Total harmonic distortion (THD) for current and voltage</li> </ul> <p>Power measurements</p> <ul style="list-style-type: none"> <li>Active, reactive and apparent power, total and per phase</li> <li>Power factor and <math>\cos \phi</math></li> </ul> <p>Maximum and minimum</p> <ul style="list-style-type: none"> <li>For all I, V, f, P, E measurements</li> </ul> <p>Demand current and power measurements</p> <ul style="list-style-type: none"> <li>Demand values, total and per phase</li> <li>Maximum demand</li> </ul> <p>Energy metering</p> <ul style="list-style-type: none"> <li>Active, reactive and apparent energy, total and per phase</li> </ul>	<p>Indicators, alarms and histories</p> <ul style="list-style-type: none"> <li>Fault types</li> <li>Alarms for high/low thresholds linked to I, V, f, P, E measurements</li> <li>Trip, alarm and operating histories</li> <li>Time-stamped tables for settings and I, V, f, P, E maximum values</li> </ul> <p>Maintenance indicators</p> <ul style="list-style-type: none"> <li>Operation, trip and alarm counters</li> <li>Operating hours counter</li> <li>Contact wear</li> <li>Load profile and thermal image</li> </ul>	Modbus with add-on module

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Trip Units

### Power Requirements

The amount of current needed to power the trip unit is printed in the upper left hand corner of the trip unit by the Ready LED.

**Table 65: Trip Unit Power Requirements**

Frame		Power-Up Requirement
H-Frame, 60 A	60 A	> 15 A
	100 A	> 15 A
	150 A	> 30 A
J-Frame, 250A	250A	> 30 A
L-Frame, 600 A	400 A	> 50 A
	600 A	> 50 A

### Protection

Settings can be adjusted in two ways, using the rotary switches and/or the keypad.

- The keypad can be used to make fine adjustments in 1 A steps below the maximum value defined by the setting on the rotary switch.
- Access to setting modifications using the keypad is protected by a locking function displayed on the screen and controlled by a microswitch.
- The lock is activated automatically if the keypad is not used for 5 minutes.
- Access to the microswitch is protected by a transparent, sealable cover.
- With the cover closed, it is still possible to display the various settings and measurements using the keypad.

#### Overloads: Long-Time Protection ( $I_r$ )

Inverse time protection against overloads with an adjustable current pick-up  $I_r$  is set using a rotary switch or the keypad for fine adjustments. The time delay  $t_r$  is set using the keypad.

#### Short-Circuits: Short-Time Protection ( $I_{sd}$ )

Short-circuit protection with an adjustable pick-up  $I_{sd}$  and adjustable time delay  $t_{sd}$ , with the possibility of including a portion of an inverse time curve ( $I^2t$  On).

#### Short-Circuits: Instantaneous Protection ( $I_i$ )

Instantaneous protection with adjustable pick-up  $I_i$ .

#### Additional Ground Fault Protection ( $I_g$ ) on Micrologic 6 Trip Units

Residual type ground-fault protection with an adjustable pick-up  $I_g$  and adjustable time delay  $t_g$ . Possibility of including a portion of an inverse time curve ( $I^2t$  On).

#### Neutral Protection

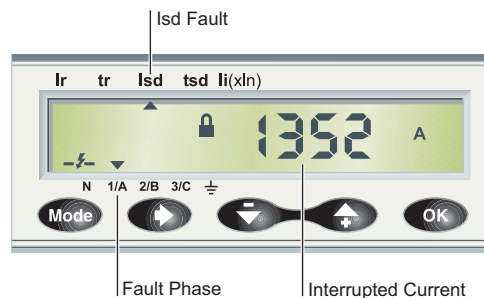

- On four-pole circuit breakers, this protection can be set using the keypad:
  - Off: neutral unprotected
  - 0.5: neutral protection at half the value of the phase pick-up ( $0.5 \times I_r$ )
  - 1.0: neutral fully protected at  $I_r$
  - OSN: Oversized neutral protection at 1.6 times the value of the phase pick-up.  
Used when there is a high level of 3rd order harmonics (or orders that are multiples of 3) that accumulate in the neutral and create a high current. In this case, the device must be limited to  $I_r = 0.63 \times I_n$  for the maximum neutral protection setting of  $1.6 \times I_r$ .
- With three-pole circuit breakers, the neutral can be protected by installing an external neutral sensor with the output (T1, T2) connected to the trip unit.

# PowerPact H-, J-, and L-Frame Circuit Breakers Trip Units

## Zone Selective Interlocking (ZSI)

A ZSI terminal block may be used to interconnect a number of Micrologic trip units to provide zone selective interlocking for short-time ( $I_{sd}$ ) and ground-fault ( $I_g$ ) protection, without a time delay. For PowerPact H- and J-frame circuit breakers, the ZSI function is available only in relation to the upstream circuit breaker (ZSI out). For PowerPact L-frame circuit breakers, the ZSI function is available in relation to the upstream circuit breaker (ZSI out) and downstream circuit breakers (ZSI in).

## Display of Type of Fault.

On a fault trip, the type of fault ( $I_r$ ,  $I_{sd}$ ,  $I_i$ ,  $I_g$ ), the phase concerned and the interrupted current are displayed. An external power supply is required.

Display of Interrupted Current.

## Indicators

### Front Indicators

- The green “Ready” LED blinks slowly when the electronic trip unit is ready to provide protection. It indicates the trip unit is operating correctly.
- Orange overload pre-alarm LED stays on when  $I > 90\% I_r$
- Red overload LED stays on when  $I > 105\% I_r$

### Remote Indicators

An SDx relay module installed inside the circuit breaker can be used to remote the following information:

- overload trip
- overload prealarm (Micrologic 5 trip units) or ground fault trip (Micrologic 6 trip units)

This module receives the signal from the Micrologic electronic trip unit through an optical link and makes it available on the terminal block. The signal is cleared when the circuit breaker is closed.

Note: all the trip units have a transparent sealable cover.

These outputs can be reprogrammed to be assigned to other types of tripping or that protects access to the adjustment rotary switch. The module is described in detail in the section dealing with accessories.

SDx Module

## Smart System Communication Wiring System

### Wiring System ULP

The wiring system is designed for low-voltage power switchboards. Installation does not require special tools or training. The prefabricated wiring ensures both data transmission (Modbus protocol) and 24 Vdc power distribution for the communications modules on the Micrologic trip units.

- A. FDM128 display for 8 LV devices
- B. IFE Ethernet interface for LV circuit breaker and gateway
- C. IFM Modbus-SL interface for LV circuit breaker
- D. FDM121 display for LV circuit breaker
- E. IO input/output interface module for LV circuit breaker
- F. Masterpact NT/NW circuit breaker

- G. PowerPact H-, J-, or L-frame circuit breaker
- H. ULP line terminator
- I. ULP cable
- J. Breaker ULP cord
- K. NSX cord
- L. PowerPact P/R or Compact NS

# PowerPact H-, J-, and L-Frame Circuit Breakers Trip Units

## Four Functional Levels

All PowerPact H-, J-, and L-frame circuit breakers devices can be equipped with the communication function using a pre-wired connection system and a Modbus™ communication interface module. The interface module can be connected directly or through the front display module (FDM121).

The PowerPact H-, J-, and L-frame circuit breakers can be integrated in a Modbus communication network. Four functional levels can be used separately or combined to adapt to all supervision requirements.

Level	Function
Communication of status indications	Compatible with PowerPact H-, J- and L-frame circuit breakers and automatic switches. Use the BSCM module to access the following information: <ul style="list-style-type: none"><li>• ON/OFF position</li><li>• trip indication</li><li>• fault-trip indication</li></ul>
Communication of commands	Available on all circuit breakers and automatic switches with communicating motor operators, the remote control can be used to: <ul style="list-style-type: none"><li>• open</li><li>• closed</li><li>• reset</li></ul>
Communication of measurements with Micrologic 5/6 A or E trip unit	This level provides access to: <ul style="list-style-type: none"><li>• instantaneous and demand values</li><li>• maximums/minimums</li><li>• energy metering</li><li>• demand current and power</li><li>• power quality</li></ul>
Communication of operating assistance with Micrologic 5/6 A or E trip unit	This level also provides access to: <ul style="list-style-type: none"><li>• protection and alarm settings</li><li>• time-stamped histories and event tables</li><li>• maintenance indicators</li></ul>

## Modbus Principle

The Modbus RS 485 (RTU protocol) system is an open bus on which communicating Modbus devices (PowerPact and Masterpact circuit breakers, Power Meter PM700, PM800, etc.) are installed. All types of PLCs and microcomputers may be connected to the bus.

### Number of Devices

The maximum number of devices that may be connected to the Modbus bus depends on the type of device (PowerPact circuit breaker with Modbus COM, PM700, PM800, Masterpact circuit breaker, etc.), the baud rate (19200 is recommended), the volume of data exchanged and the desired response time. The RS 485 physical layer offers up to thirty-two connection points on the bus (one master, thirty-one slaves).

### Length of Bus

The maximum recommended length for the Modbus bus is 3940 feet (1200 meters).

### Bus Power Source

A 24 Vdc power supply is required (less than 20% ripple, insulation class II).

## Ethernet Principle

Ethernet is a data link and physical layer protocol defined by IEEE 802.10 and 100 Mbps specifications that connects computer or other Ethernet devices. Ethernet is an asynchronous Carrier Sense Multiple Access with Collision detection (referred as CSMA/CD) protocol. Carrier Sense means that the hosts can detect whether the medium (coaxial cable) is idle or busy.

Multiple Access means that multiple hosts can be connected to the common medium. Collision Detection means a host detects whether its transmission has collided with the transmission of another host (or hosts).

IFE Ethernet interface can be connected to a PC or a laptop over Ethernet. The maximum length of Ethernet cable is 325 feet (100 meters). IFE Ethernet interface + gateway provides a Modbus TCP/IP gateway over Ethernet to enable Modbus TCP communication from a Modbus TCP master to any Modbus slave devices connected to it. The maximum active Modbus TCP client connection is twelve.

IFE Ethernet interface has an embedded web server (web page).

## IFE Ethernet Interface

### IFE Interface, IFE Interface + Gateway Description

IFE Interface

#### Introduction

The IFE interface and IFE interface + gateway enable low-voltage circuit breakers such as Masterpact and PowerPact to be connected to an Ethernet network.

#### IFE Interface

Provides Ethernet access to a single low-voltage circuit breaker.

Function: Interface - one circuit breaker is connected to the IFE interface using its ULP port.

#### IFE Interface + Gateway

Provides Ethernet access to one or several low-voltage circuit breakers.

Functions:

- Interface - one circuit breaker is connected to the IFE interface using its ULP port.
- Gateway: several circuit breakers on a Modbus network are connected using the IFE interface + gateway master Modbus port.

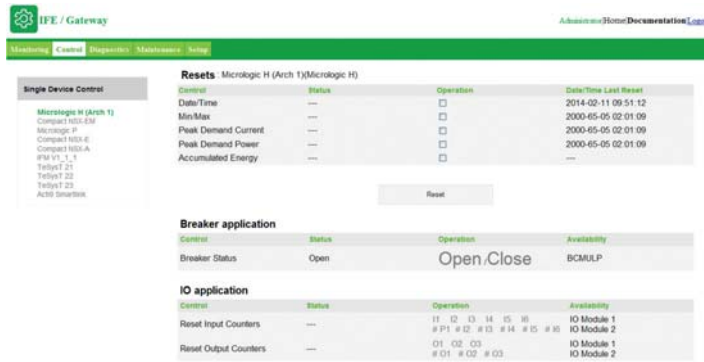

IFE Interface + Gateway

#### IFE Interface, IFE Interface + Gateway Features

- Dual 10/100 Mbps Ethernet port for simple daisy chain connection.
- Device profile web service for discovery of the IFE interface, IFE interface + gateway on the LAN.
- Ethernet interface for Masterpact and PowerPact circuit breakers.
- Gateway for Modbus-SL connected devices (IFE interface + gateway only).
- Embedded set-up web pages.
- Embedded monitoring web pages.
- Embedded control web pages.
- Built-in e-mail alarm notification.

# PowerPact H-, J-, and L-Frame Circuit Breakers Trip Units

Figure 8: IFE Interface, IFE Interface + Gateway Screen

## Mounting

The IFE interface and IFE interface + gateway are DIN rail mounting devices. A stacking accessory enables the user to connect several IFMs (ULP to Modbus interfaces) to an IFE interface + gateway without additional wiring.

## 24 Vdc Power Supply

The IFE interface and the IFE interface + gateway must always be supplied with 24 Vdc.

The IFMs stacked to an IFE interface + gateway have power supplied by the IFE interface + gateway, thus it is not necessary to supply them separately. It is recommended to use a UL listed and recognized limited voltage/limited current or a class 2 power supply with a 24 Vdc, 3 A maximum.

## Required Circuit Breaker Communication Modules

The connection to an IFE interface or IFE interface + gateway requires a communication module embedded into the circuit breaker:

- PowerPact and Compact (fixed or drawout) circuit breakers: BSCM communication module
- Drawout PowerPact and Compact circuit breakers: BSCM and its respective I/O (Input/Output) application module.

All connection configurations for PowerPact and Compact circuit breakers require the circuit breaker ULP cord. The insulated NSX cord is mandatory for system voltages greater than 480 Vac. When the second ULP RJ45 connector is not used, it must be closed with a ULP terminator (TRV00880).

## IFM Modbus Communication Interface

### Function

An IFM Modbus communication interface is required for connection of a Masterpact or PowerPact circuit breaker to a Modbus network as long as this circuit breaker is provided with a ULP (Universal Logic Plug) port. The port is available on the BSCM.

Once connected, the circuit breaker is considered as a slave by the Modbus master. Its electrical values, alarm status, open/close signals can be monitored or controlled by a Programmable Logic Controller or any other system.

### Characteristics

#### ULP Port

Two RJ45 sockets, internal parallel wiring.

- Connection of a single circuit breaker.
- A ULP line terminator or an FDM121 display unit must be connected to the second RJ45 ULP socket.
- The RJ45 sockets deliver a 24 Vdc supply fed from the Modbus socket.
- Built-in test function, for checking the correct connection to the circuit breaker and FDM121 display unit.

#### Modbus Slave Port

- Top socket for screw-clamp connector, providing terminals for:
  - 24 Vdc input supply (0 V, +24 V)
  - Modbus line (D1, D2, Gnd) 2-wire Modbus system.

IFM Modbus Communication Interface.  
Ref.: TRV00210

## PowerPact H-, J-, and L-Frame Circuit Breakers Trip Units

- Lateral socket, for DIN-rail stackable connector. Both top and lateral sockets are internally parallel wired.
- Multiple IFMs can be stacked, thus sharing a common power supply and Modbus line without individual wiring.
- On the front face:
  - Modbus address setting (1 to 99): 2 coded rotary switches
  - Modbus locking pad: enables or disable the circuit breaker remote control and modification of IFM parameters.
- Self-adjusting communication format (Baud rate, parity).

## I/O Application Module

### Description

I/O Application Module

The I/O (Input/Output) application module for a low-voltage circuit breaker is part of an ULP system with built-in functions and applications to enhance the application needs. The ULP system architecture can be built without any restrictions using the wide range of circuit breakers.

The I/O application module is compliant with the ULP system specifications.

Two I/O application modules can be connected in the same ULP network.

The ranges of low-voltage circuit breakers enhanced by the I/O application module are:

- Masterpact NW
- Masterpact NT
- PowerPact R-Frame
- PowerPact P-Frame
- PowerPact H-Frame
- PowerPact J-Frame
- PowerPact L-Frame

### I/O (Input/Output) Application Module for Low-Voltage Circuit Breaker Resources

The I/O application module resources are:

- Six digital inputs that are self powered for either NO and NC dry contact or pulse counter.
- Three digital outputs that are a bistable relay (5 A maximum).
- One analog input for PT100 temperature sensor.

### Pre-Defined Application

The pre-defined application adds new functions to the I/O application module by:

- Selection by the application rotary switch on the I/O application module, defining the application with pre-defined input/output assignment and wiring diagram.
- No additional setting with the customer engineering tool required.

The resources not assigned to the pre-defined application are free for additional user-defined applications:

- cradle management
- circuit breaker operation
- cradle management + ERMS (Energy Reduction Maintenance Setting)

**NOTE:** Use only Micrologic P or H trip units with the blue ERMS label for energy reduction maintenance setting systems. Review the I/O module user guide 0613IB1317 and ERMS installation instructions NHA37346 for details on installation, testing, and operation of the ERMS system.

- light and load control
- custom

# PowerPact H-, J-, and L-Frame Circuit Breakers Trip Units

## User-Defined Applications

User-defined applications are processed by the I/O application module in addition to the pre-defined application selected.

The user-defined applications are available depending on:

- the pre-defined application selected
- the I/O application module resources (inputs and outputs) not used by the application.

The resources required by user-defined applications are assigned using the customer engineering tool:

- protection
- control
- energy management
- monitoring.

## Mounting

The I/O application module is a DIN rail mounted device. Install on a steel DIN rail that is properly grounded near the device.

## Application Rotary Switch

The application rotary switch enables the selection of the pre-defined application. It has nine positions and each position is assigned to a pre-defined application. The factory set position of the switch is pre-defined application one.

## Setting Locking Pad

The setting locking pad on the front panel of the I/O application module enables the setting of the I/O application module by the customer engineering tool.

Refresh interval	5 s		

## Electrical Asset Manager Configuration Engineering Tool (Ecoreach™)

### Introduction

The Ecoreach engineering tool is a software application that helps the user to manage a project as part of designing, testing, site commissioning, and maintenance of the project life cycle. It enables the user to prepare the settings of the devices offline (without connecting to the device) and configure them when connected with the devices. It also provides other value-added features for the user to manage the project such as: safe repository in cloud, attach artifacts to each device or at the project level, organize devices in switchboard, manage a hierarchical structure of the installation, etc.

### Compatible Devices (Configuration and Device Management)

The Ecoreach engineering tool is compatible with the following devices:

- Compact NSX100-630 (IEC) circuit breakers
- PowerPact (UL) circuit breakers
- Compact NS630b-3200 (IEC) circuit breakers
- Masterpact NT/NW (IEC and UL) circuit breakers
- Compatible devices (Device Management in the project)
- Switches (Compact NSX, Masterpact & PowerPact Family)
- Third party devices.

References:

The Ecoreach software package can be downloaded from our website:

[www.schneider-electric.com](http://www.schneider-electric.com)

## Features

The Ecoreach engineering tool includes the Schneider Electric customer engineering tools such as the Remote Setting Utility (RSU) and Remote Control Utility (RCU) with additional features.

The Ecoreach engineering tool supports the connection of Schneider Electric communicable devices to:

- create projects by device discovery, selection of devices, and importing a Bill of Material (BOM)
- monitor the status of protection and I/O status
- read information (alarms, measurements, parameters)
- check protection discrimination between two devices
- upload and download of configuration or settings in batch mode to multiple devices.
- carry out commands and tests
- generate and print a device settings report and communication test report
- manage multiple devices with a electrical and communication hierarchy model
- manage artifacts (project documents)
- check consistency in settings between devices on a communication network
- compare configuration settings between PC and device (online)
- download latest firmware.

The Ecoreach engineering tool enables the user to access the advanced features of the software once the project is saved in the Schneider Electric cloud.

## Section 8—Accessories for Micrologic™ Trip Units

### NSX Cord

Micrologic trip units are connected to the Modbus communication interface module (IFM) or front display module through the internal terminal block for the NSX cord equipped with an RJ45 connector.

The NSX cord is available in two cable lengths:

- 4.27 ft. (1.3 m)
- 9.84 ft. (3 m)

Lengths up to 32.8 ft. (10 m) are possible using extensions.

- For voltage  $V \leq 480$  V, available in 3 prefabricated lengths: 0.35 m, 1.3 m and 3 m.
- For voltages  $V > 480$  V, a special 1.3 m cable with an insulation accessory is required.
- A set of cables with RJ45 connectors is available to adapt to different distances between devices.

**Table 73: NSX Cord Catalog Numbers**

Description	Catalog No.
NSX Cord 4.27 ft. (1.3 m), $V \leq 480$ V	S434201
NSX Cord 9.84 ft. (3 m), $V \leq 480$ V	S434202
NSX Cord 4.27 ft. (1.3 m), $V > 480$ V	S434204
NSX Cord 9.84 ft. (3 m), $V > 480$ V	S434303

### Breaker Status and Control Module (BSCM)

#### Functions

The optional BSCM Breaker Status & Control Module is used to acquire device status indications and control the communicating remote-control function. It includes a memory used to manage the maintenance indicators.

#### Status indications

Indication of device status:

Auxiliary switch (OF), alarm switch (SD), and overcurrent trip switch (SDE).

#### Maintenance indicators

The BSCM manages the following indicators:

- mechanical operation counter
- electrical operation counter
- history of status indications.

It is possible to assign an alarm to the operation counters.

#### Controls

The BSCM can be used to carry out communicating remote control operations using the communicating motor operator (open, close and reset) in different modes (manual, auto).

#### Mounting

The BSCM can be installed on all PowerPact H-, J-, and L-frame circuit breakers and automatic switches with Micrologic trip units. It simply clips into the auxiliary contact slots. It occupies the slots of one auxiliary switch (OF) and one overcurrent trip switch (SDE). The BSCM is supplied with 24 Vdc power automatically through the NSX cord when the communication network is installed.

# PowerPact H-, J-, and L-Frame Circuit Breakers Accessories for Micrologic™ Trip Units

## Catalog Numbers

**Table 74: BSCM Catalog Numbers**

Description	Catalog No.
Replacement BSCM	S434205
BSCM with NSX Cord 1.3 m, V ≤ 480 V	S434201BS
BSCM with NSX Cord 3 m, V ≤ 480 V	S434202BS
BSCM with NSX Cord 1.3 m, V > 480 V	S434204BS
BSCM with NSX Cord 3 m, V > 480 V	S434303BS

## 24 Vdc Power-Supply Terminal Block

24 Vdc Terminal Block

The Micrologic 5/6 trip unit display is operational when current is flowing through the circuit breaker. To power the Micrologic 5/6 trip unit when the trip unit is not connected to an FDM121 or to the communication network, a 24 Vdc power-supply terminal block can be installed only on Micrologic 5/6 trip units. When used, it excludes connection of an NSX cord.

**Table 75: 24 Vdc Catalog Number**

Description	Catalog No.
24 Vdc Terminal Block Unit Mount	S434210

## External 24 Vdc Power-Supply Module

An external 24 Vdc power supply is required for installation in a communication network, whatever the type of trip unit.

On installations without a communication network, the power supply is available as an option for Micrologic 5/6 trip units in order to:

- modify settings when the circuit breaker is open
- display measurements when the current flowing through the circuit breaker is low (15 to 50 A depending on the rating)
- maintain the display of the cause of tripping and interrupted current.

A single external 24 Vdc supply may be used for the entire network, depending on the number of devices in the communication network. The required characteristics are:

- output voltage: 24 Vdc ± 5%
- ripple: ± 1%

External 24 Vdc Power-Supply Module

**Table 76: Available External Power-Supply Modules (1 A)**

Available External Power-Supply Modules		Input Voltage	Output Power	Cat. No.
Power supply	Vdc (±5%)	24–30	24 Vdc 1 A	685823
		48–60		685824
		100–125		685825
	Vac (+10%, -15%)	110–130		685826
		200–240		685827
		380–415		685829

To determine the required output current of the 24 Vdc power supply, it is necessary to sum up the currents consumed by the different loads supplied.

# PowerPact H-, J-, and L-Frame Circuit Breakers Accessories for Micrologic™ Trip Units

**Table 77: Power Requirements**

Module	Typical Consumption 24 Vdc at 68°F (20°C)	Maximum Consumption 19.2 Vdc at 140°F (60°C)
Micrologic 5/6 trip units	30 mA	55 mA
BSCM	9 mA	15 mA
FDM121	21 mA	30 mA
IFM	21 mA	30 mA
Isolated Modbus Repeater Module	15 mA	19 mA

For installation recommendations, see page page 156.

Battery Module

## Battery Module

The battery module is a back-up supply for the external power-supply module. The input/output voltages are 24 Vdc and it can supply power for approximately three hours (100 mA).

**Table 78: Battery Module**

Description	Catalog No.
Battery Module	685831

Pocket Tester

## Pocket Tester

The pocket tester connects to the Micrologic trip unit test connector. It powers up the Micrologic trip unit and the Ready LED. It supplies the screen, allows settings to be made using the keypad, and provides thermal imaging inhibit functions.

**Table 79: Pocket Tester**

Description	Catalog No.
Pocket Tester	S434206

The pocket tester runs off of two Alkaline AA batteries.

## Isolated Modbus Repeater Module

Since Modbus interface modules (part number STRV00210) are not isolated, an isolated Modbus Repeater Module needs to be inserted between the Modbus network inside the equipment and the Modbus network outside the equipment.

**Table 80: Catalog Number**

Description	Catalog No.
Isolated Modbus Repeater Module	STRV00211

## UST Test Adapter (UTA) Tester for Test and Maintenance

UTA Tester Module

The UTA Tester includes:

- configuration and maintenance module
- power supply (110–220 Vac / 50-60 Hz 24 Vdc - 1 A)
- special Micrologic cable for connection to the trip-unit test connector
- standard USB cable
- standard RJ45 cable
- user manual

**Table 81: UTA Tester Catalog Numbers**

Description	Catalog No.
UTA Tester (complete)	STRV00910
Spare 110-240 V power supply	TRV00915
Spare Micrologic cable	TRV00917
Spare UTA Tester Module	STRV00911
Bluetooth/Modbus Option for UTA Tester	TCSWAAC13FB

Included in the UTA Tester, the UTA Tester module tests Micrologic trip unit operation and provides access to all parameters and settings. It connects to the Micrologic trip unit test connector and can operate in two modes.

- Stand-alone mode to:
  - supply the Micrologic trip unit with power and check operation using the Ready LED
  - Provides ground-fault inhibit and thermal memory inhibit
- PC mode, connected to a PC with a USB or Bluetooth link. This mode provides access to protection settings, alarm settings and readings of all indicators. Using the associated RSU software utility, it is possible to store, in a dedicated file for each device, all the data that can be transferred to another device.
 

This mode also offers operating-test functions:

  - check on trip time delay (trip curve)
  - check on non-tripping time (coordination)
  - check on ZSI (Zone Selective Interlocking) function
  - alarm simulation
  - display of setting curves
  - display of currents
  - printing of test reports
  - optional Bluetooth link (to PC).

# PowerPact H-, J-, and L-Frame Circuit Breakers Accessories for Micrologic™ Trip Units

## Universal Logic Plug System

ULP Symbol

The Universal Logic Plug (ULP) system allows the PowerPact H-, J- and L-frame circuit breakers to become metering and supervision tools to assist for energy efficiency. For easy connection of the different modules, the prefabricated cables are identified by a ULP symbol. The connection points on compatible modules are marked in the same manner.

**Table 82: ULP Accessories Catalog Numbers**

Description	Qty	Catalog No.

For more information about the ULP System, see bulletin 48940-329-01, *ULP (Universal Logic Plug) Connection System—User Guide*.

## External Neutral Current Transformer (ENCT)

External neutral current transformer

The external neutral current transformer is a sensor required for a three-pole circuit breaker in a system with a distributed neutral to measure the neutral current in order to:

- protect the neutral conductor
- protect against ground faults.

This current transformer can be connected to Micrologic 5/6 trip units. The transformer rating must be compatible with that of the circuit breaker.

**Table 83: Current Transformers**

Circuit Breaker	Rating	Catalog No.
H-Frame	60–100 A	S429521
	150 A	S430562
J-Frame	250 A	S430563
L-Frame	400–600 A	S432575

For installation recommendations, see page 155.

External Neutral Voltage Tap

## External Neutral Voltage Tap (ENVT)

The external neutral voltage tap is required for Micrologic E power metering with a three-pole circuit breaker in a system with a distributed neutral. It is used to connect the neutral to the Micrologic trip unit to measure phase-to-neutral (Ph-N) voltages.

The ENVT is included with the Micrologic 5/6 electronic trip unit.

## Zone Selective Interlock (ZSI) Module

A ZSI terminal block may be used to interconnect a number of Micrologic trip units to provide zone selective interlocking for short-time ( $I_{sd}$ ) and ground-fault ( $I_g$ ) protection, without a time delay. For PowerPact H- and J-frame circuit breakers, the ZSI function is available only in relation to the upstream circuit breaker (ZSI out). For PowerPact L-frame circuit breakers, the ZSI function is available in relation to the upstream circuit breaker (ZSI out) and downstream circuit breakers (ZSI in).

## Accessories for Micrologic™ Trip Units

### I-Line™ Wiring Harness

Accessories installed in I-Line circuit breakers require the use of optional wiring harnesses (not provided). The wiring harness allows the accessory wiring to exit the circuit breaker through wiring channels in the side of the circuit breakers. Wire harnesses may also be used for unit-mount applications.

**Table 85: Wiring Harness Catalog Numbers**

## Section 9—Accessories and Auxiliaries

All PowerPact™ H-, J-, and L-frame circuit breakers and automatic switches have slots for the electrical auxiliaries .

### H- and J-Frame

- 4 indication contacts
  - 2 ON/OFF (auxiliary switches [OF1 and OF2])
  - 1 trip indication (alarm switch [SD])
  - 1 fault-trip indication (overcurrent trip switch [SDE])
- one remote-tripping release
  - either 1 undervoltage trip (MN)
  - or 1 shunt trip (MX)

### L-Frame

- 5 indication contacts
  - 3 ON/OFF auxiliary switches (OF1, OF2, and OF3)
  - 1 trip indication (alarm switch [SD])
  - 1 fault-trip indication (overcurrent trip switch [SDE])
- one remote-tripping release
  - either 1 undervoltage trip (MN)
  - or 1 shunt trip (MX)

Circuit breakers equipped with Micrologic™ trip units may be equipped with a fault-trip indication to identify the type of fault by installing

- one indication module with two outputs (see page 119)
  - either an SDx module with Micrologic 3.x / 5.x A or E / 6.x A or E
  - or an SDTAM module with Micrologic 2.x M.

This module occupies the slots of one auxiliary switch (OF) contact and an undervoltage trip (MN)/shunt trip (MX).

All these auxiliaries may be installed with a motor operator.

## Communication Network

Communication networks require specific auxiliaries.

Communication of status indications:

- 1 BSCM module
- 1 NSX cord (internal terminal block) for both communication and 24 Vdc supply to the BSCM.

Communication of status conditions is compatible with a standard motor operator.

Communication of status indications and controls requires, in addition to the previous auxiliaries:

- 1 communicating motor operator connected to the BSCM.

Communication of measurements is available on Micrologic 5/6. The system consists of:

- 1 NSX cord (internal terminal block) for both communication and 24 Vdc supply to the Micrologic.

Communication of measurements is compatible with a standard or communicating motor operator.

Communication of status indications, controls and measurements is available on Micrologic 5/6. The system consists of:

- 1 BSCM module
- 1 NSX cord (internal terminal block) for both communication and 24 Vdc supply to the BSCM and the Micrologic
- 1 communicating motor operator connected to the BSCM.

Installation of SDx or SDTAM is compatible with communication network.

# PowerPact H-, J-, and L-Frame Circuit Breakers Accessories and Auxiliaries

## Accessory Connections

Electrical accessories are fitted with numbered terminal blocks for wires with the following maximum size:

- 16 AWG (1.5 mm<sup>2</sup>) for auxiliary switches (OF1 or OF2), and shunt trip (MX) or undervoltage trip (MN)
- 14 AWG (2.5 mm<sup>2</sup>) for the motor operator

Auxiliary switch wiring exits fixed mounted devices through a knock-out in the front cover.

**NOTE:** See page 140 for plug-in and page 142 for drawout options.

## Auxiliary and Alarm Indication Contacts

Auxiliary indication contacts provide remote information of the circuit breaker status and can thus be used for indications, electrical locking, relays, etc.

## **SDx and SDTAM Modules for Micrologic Trip Units**

SDx and SDTAM are relay modules with two outputs. They send different signals depending on the type of fault. They may not be used together.

### **SDx Module**

SDx module with terminal block.

The SDx module remotely monitors the trip or alarm conditions of PowerPact H-, J-, and L-frame circuit breakers equipped with electronic protection.

An SDx relay module installed inside the circuit breaker can be used to remote the overload trip signal.

This module receives the signal from the Micrologic electronic trip unit through an optical link and makes it available on the terminal block. The signal is cleared when the circuit breaker is closed. These outputs can be reprogrammed to be assigned to other types of tripping or alarm.

The SDx module may be used in 400 Hz systems for voltages from 24 to 440 V.

The SD2 output, available on all Micrologic trip units, corresponds to the overload-trip indication.

The SD4 output, available on Micrologic 5/6, is assigned to:

- overload pre-alarm (Micrologic 5)
- ground-fault trip indication (Micrologic 6)

These two outputs automatically reset when the device is closed (turned ON).

For Micrologic 5/6, the SD2 and SD4 outputs can be reprogrammed to be assigned to other types of tripping or alarm.

It is possible to assign a function output characteristics:

- latching with a time delay. Return to the initial state occurs at the end of the time delay
- permanent latching. Return to the initial state takes place through the communication function.

Static outputs: 24–415 Vac / Vdc; 80 mA max.

### **SDTAM Module**

SDTAM module with terminal block.

The SDTAM module, linked to the contactor controller, opens the contactor when an overload or other motor fault occurs, thus avoiding opening of the circuit breaker. The SDTAM module is specifically for the motor-protection Micrologic trip units 2 M (2.2 M and 2.3 M).

#### **Micrologic 2 M**

The SD4 output opens the contactor 400 ms before normal circuit-breaker opening in the following cases:

- overload (long-time protection for the trip class)
- phase unbalance or phase loss

The SD2 output serves to memorize contactor opening by SDTAM.

#### **Output characteristics**

Output reset can be:

- manual by a pushbutton included in the wiring diagram
- automatic after an adjustable time delay (1 to 15 minutes) to take into account the motor-cooling time

Static outputs: 24–415 Vac / Vdc; 80 mA max. a (+) 24–415 V.

## Shunt Trip (MX) and Undervoltage Trip (MN)

A voltage release can be used to trip the circuit breaker using a control signal.

**Table 93: Shunt Trip and Undervoltage Trip**

<b>Applications</b>	<b>Shunt Trip (MX)</b>
	<ul style="list-style-type: none"> <li>Trips the circuit breaker when the control voltage rises above 70% of its rated voltage</li> <li>Impulse type <math>\geq 20</math> ms or maintained control signals</li> <li>AC shunt trips are suitable for ground-fault protection when combined with a Class I ground-fault sensing element</li> <li>Continuous duty rated coil</li> </ul>
<b>Installation and Connection</b>	<b>Undervoltage Trip (MN)</b>
	<ul style="list-style-type: none"> <li>Trips the circuit breaker when the control voltage drops below a tripping threshold</li> <li>Drops out between 35% and 70% of the rated voltage</li> <li>Continuous duty rated coil</li> <li>Circuit breaker closing is possible only if the voltage exceeds 85% of the rated voltage. If an undervoltage condition exists, operation of the closing mechanism of the circuit breaker will not permit the main contacts to touch, even momentarily. This is commonly called "Kiss Free".</li> </ul>
<b>Operation</b>	<ul style="list-style-type: none"> <li>Accessories are common to H-, J-, and L-frame circuit breakers and snap into cavities under the front accessory cover of the circuit breaker</li> <li>Each terminal may be connected by one 18–14 AWG (1.0–2.5 mm<sup>2</sup>) stranded copper wire</li> </ul>
	<ul style="list-style-type: none"> <li>The circuit breaker must be reset locally after being tripped by shunt trip (MX) or undervoltage trip (MN)</li> <li>Tripping by the shunt trip or undervoltage trip has priority over manual (or motor operator) closing; in the presence of a standing trip order such an action does not result in any closing, even temporarily, of the main contacts</li> <li>Endurance: 50% of the rated mechanical endurance of the circuit breaker</li> </ul>

## Motor Operator

The motor operator remotely operates the circuit breaker featuring easy and sure operation:

- All circuit breaker indications and information remain visible and accessible, including trip unit settings and circuit breaker connection
- Suitability for isolation is maintained and padlocking remains possible
- Double insulation front face

1. Contact position indicator (suitability for isolation)
2. Spring status indicator (charged, discharged)
3. Manual spring-charging handle
4. Keylock device  
Locking device (off position) using one to three padlocks, diameter 0.2–0.32 in. (5–8 mm), not supplied
5. ON push button
6. OFF push button
7. Manual/auto mode selection switch; the position of the switch can be indicated remotely
8. Operation counter

### Applications:

- Local motor-driven operation, centralized operation, automatic distribution control
- Normal/standby manual transfer or switching to a replacement source to optimize energy costs
- Load shedding and reconnection to optimize energy costs
- Less than five cycle closing time for source synchronization

### Installation and Connection

- All installations are available for H- and J-frame circuit breakers.  
All installations are available for L-frame circuit breakers except I-Line
- Connections of the motor operator module are to a built-in terminal block behind its front cover
- Stranded copper wire 14 AWG (2.5 mm<sup>2</sup>)

### Automatic Operation

The motor operator is connected in series with the overcurrent trip switch (SDE).

- ON and OFF by two impulse type or continuous control signals
- Depending on the wiring, resetting can be done locally, remotely or automatically
- Mandatory manual reset following tripping due to an electrical fault (with overcurrent trip switch)

### Manual Operation

- Transfer to manual mode with possibility of remote mode indication
- ON and OFF by two push buttons
- Recharging of stored-energy system by pumping the lever
- Padlocking in off position

## Add-On Ground-Fault Module (GFM) (H- and J-Frame Only)

The Micrologic Ground-Fault Module (GFM) is a UL Listed/CSA Certified circuit breaker accessory which protects equipment from damage caused by ground faults. It is an add-on module which, when connected to a PowerPact H- or J-frame thermal-magnetic circuit breaker only, provides ground-fault sensing and ground-fault relay functions.

HD/JD ground-fault modules feature:

- Adjustable ground-fault pickup levels
- Adjustable ground-fault time delays
- Integral ground-fault push-to-test feature
- Ground-fault indicator (mechanical for local, contacts for remote)
- All GFMs are supplied for I-Line™ mounting as standard, easily convertible to unit mount by removing the I-Line bracket.
- Fault-powered (through the sensing current transformer) for electronics, shunt trip, and integral test feature. Meets NEC 230.95(C).
- A 12 Vdc shunt trip module (Catalog No. S29382) is required in the circuit breaker. This may be field installed or factory installed when the circuit breaker is ordered with an -SN suffix.
- UL 1053 – Ground-fault Sensing and Relaying Equipment

The GFM system requires the following:

- H-frame (15–150 A) or J-frame (150–250 A) molded case circuit breaker
- Shunt trip for circuit breaker (may be factory-installed or field-installed)
- Bus bar connection (terminal nut inserts) for OFF end of circuit breaker
- Optional neutral current transformer, catalog number GFM25CT (must be ordered for 4-wire applications).

J-Frame Circuit Breaker  
with GFM Installed

**Table 99: Ground-Fault Module**

Catalog No.	Rating	Sensitivity	Time Delay (Approximate)

# PowerPact H-, J-, and L-Frame Circuit Breakers Accessories and Auxiliaries

## Earth Leakage Module (ELM) (H- and J-Frame Only)

J-Frame Circuit Breaker  
with ELM Installed

The Earth Leakage Module (ELM) is an add-on module which, when connected to a PowerPact H- or J-frame MCCB, provides low-level ground-fault sensing and ground-fault relay functions.

Because these ELMs are highly sensitive (30 mA to 3 A), they provide much greater protection than GFMs (20 to 200 amperes sensitivity). The ELMs provide greater protection of control circuits and other sensitive equipment. The associated circuit breaker must have a 48 Vdc shunt trip, which may be field-installed (kit S29392) or factory-installed (suffix –SP) in the H- or J-frame circuit breaker.

The add-on Earth Leakage Module (ELM) features:

- Adjustable ground-fault pickup levels as low as 30 mA
- Adjustable ground-fault time delays from instantaneous to 500 msec (time delay can be applied to any setting)
- Integral ground fault push-to-test feature
- Ground-fault indicator; pop-up button for local status and contacts for remote indication (to be used only with the tripping option)
- All ELMs are supplied for I-Line mounting and are easily convertible to unit-mount by removing the I-Line mounting feet
- Three poles; 240 to 600 Vac maximum: 3-phase, 3-wire (no neutral) and 1-phase, 2-wire applications
- Line-power obtained through internal bus to provide power for electronics, shunt trip, and integral test feature
- A shunt trip is required in the circuit breaker; it may be field-installed or factory-installed in the PowerPact H and J circuit breakers.
- UL 1053—Ground-fault Sensing and Relaying Equipment

**Table 100: ELM Selection Chart <sup>1</sup>**

Companion Circuit Breaker		Enclosure Space Required I-Line Equipment	Catalog No.	Pick-Up Adjustments	Ground-Fault Time Delay Adjustments
Prefix	Size				
HD, HG, HJ, HL	15–150 A	LA	ELM150HD	30 mA 100 mA 300 mA	Instantaneous 60 ms 100 ms 500 msec
JD, JG, JJ, JL	150–250 A	LA	ELM250JD	1 A 3 A	

<sup>1</sup> At 250 A, the ELM250JD can be used with standard (80%) rated circuit breakers only.

### Factory-Installed ELMs

The catalog number for circuit breakers with factory-installed ELM should include the special suffixes SP and VL or VM:

H D M 3 6 150 SP VL

where

- H = H-frame (or J = J-frame)
- D = D interruption level (or G, J or L)
- M = Lugs on ON end and terminal nuts on OFF end (required)
- SP = Factory-installed 48 Vdc shunt trip (S29392, required)
- VL = Earth Leakage Module (ELM) <150 A (H-frame) or  
VM = Earth Leakage Module (ELM) <250 A (J-frame)

## Rotary Operating Handles

### Directly Mounted Rotary Operating Handles

Directly Mounted Rotary Operating Handle

<b>Installation</b>	The directly mounted rotary operating handle replaces the circuit breaker front accessory cover (secured by screws).	
<b>Operation</b>	<p>The direct rotary handle maintains:</p> <ul style="list-style-type: none"> <li>• Suitability for isolation</li> <li>• Indication of three positions: I (ON), Tripped and O (OFF)</li> <li>• Access to the “push-to-trip” button</li> <li>• Visibility of, and access to, trip unit settings</li> <li>• The circuit breaker may be locked in the OFF position by using one to three padlocks (not supplied)</li> </ul>	
<b>Models</b>	<ul style="list-style-type: none"> <li>• Standard with black handle</li> <li>• VDE type with red handle and yellow bezel for machine tool control</li> </ul>	
<b>Variations</b>	<p>Accessories transform the standard direct rotary handle for the following situations:</p> <ul style="list-style-type: none"> <li>• Motor control centers (MCCs): <ul style="list-style-type: none"> <li>– Opening of door prevented when circuit breaker is on</li> <li>– Closing of circuit breaker inhibited when door is open</li> </ul> </li> <li>• Machine tool control; complies with CNOMO E03.81.501N; degree of protection IP54</li> <li>• Early make or early break contacts may be installed into direct mount rotary handle</li> </ul>	
<b>Standards</b>	The directly-mounted rotary operating handle is UL Listed under file E103955 and CSA Certified under file LR 69561	

### Door-Mounted (Extended) Rotary Operating Handle

Door Mounted Rotary Operating Handle

<b>Installation</b>	<p>The door-mounted (extended) rotary operating handle is made up of:</p> <ul style="list-style-type: none"> <li>• A unit that replaces the front accessory cover of the circuit breaker (secured by screws)</li> <li>• An assembly (handle and front plate) on the door that is always secured in the same position, whether the circuit breaker is installed vertically or horizontally</li> <li>• An adjustable extension shaft</li> <li>• The handle mechanism can be used in NEMA 3R and 12 enclosure applications</li> </ul>	
<b>Operation</b>	<p>The door mounted operating handle makes it possible to operate a circuit breaker installed in an enclosure with the enclosure door closed. The door mounted operating handle maintains:</p> <ul style="list-style-type: none"> <li>• Suitability for isolation</li> <li>• Indication of the three positions OFF (O), ON (I) and tripped</li> <li>• Visibility of and access to trip unit settings when the door is open</li> <li>• Degree of protection: IP40 as per IEC 529</li> </ul> <p>Defeatable interlock prevents opening of door when circuit breaker is on</p> <p>The circuit breaker may be locked in the off position by using one to three padlocks, padlock shackle diameter 0.19–0.31 in. (5–8 mm); padlocks are not supplied; locking prevents opening of the enclosure door</p>	
<b>Shaft Length</b>	<p>The shaft length is the distance between the back of the circuit breaker and the door:</p> <ul style="list-style-type: none"> <li>• Minimum shaft length is 7.4 in. (185 mm)</li> <li>• Maximum shaft length is 24 in. (600 mm)</li> <li>• Extended shaft length must be adjusted</li> </ul>	
<b>Models</b>	<ul style="list-style-type: none"> <li>• Standard with black handle</li> <li>• VDE type with red handle and yellow bezel for machine tool control</li> </ul>	
<b>Variations</b>	For drawout configurations, the extended rotary handle is also available with a telescopic shaft containing two stable positions	
<b>Standards</b>	The door-mounted rotary operating handle is UL Listed under file E103955 and CSA Certified under file LR 69561

## Class 9422 Flange-Mounted Variable-Depth Operating Mechanism

Threaded-rod flange-mounted variable depth operating mechanism

Designed for installation in custom built control enclosures where main or branch circuit protective devices are required.

- All circuit breaker operating mechanisms are suitable for either right- or left-hand flange mounting, convertible on the job.
- H- and J-frame variable mounting depth range: 5.88–17.75 in. (149–451 mm).
- H- and J-frame operating mechanism 9422RQ1 does not include handle mechanism.

Designed for installation in custom-built control enclosures where main or branch circuit protective devices are required. All circuit breaker operating mechanisms are suitable for either right- or left-hand flange mounting, convertible in the field.

**Table 105: L-Frame Flange-Mounted Operating Mechanism**

Description	Depth	Kit Number
Variable Depth Mechanism	9.00–17.75 in. (229–451 mm)	9422RSI

## Locking Systems

Padlocking systems can receive up to three padlocks with diameters of 0.19–0.31 in. (5–8 mm); padlocks not supplied.

**Table 106: Device Locking, Interlocking Options**

Device	Description	Field-Installed Cat. No.	
		H- and J-Frame	L-Frame
Handle Padlocking Device <sup>1</sup>	Removable (lock OFF only)	S29370	S29370
	Fixed (lock OFF or ON)	S29371	S32631
	Fixed (lock OFF only) <sup>2</sup>	S37422	NJPAF
Key Locking	Provision and 2 locks keyed alike	Ronis	S41950
		Profalux	S42878

<sup>1</sup> Rotary handles and motor operators have integral padlocking capability.

<sup>2</sup> Not available in HD or HG two-pole modules.

## Manual Mechanical Interlocking Systems

Some installations use two power supply sources to counter any temporary loss in the main supply. A mechanical interlocking system is required to safely switch between the two sources. The replacement source can be a generator set or another network.

Managing multiple power sources can be controlled manually by mechanical interlocks.

The mechanical interlocking system is made up of:

- two H-, J-, or L-frame devices (circuit breakers or switches) controlled manually
- mechanical interlocking, which prevents handle movement from the OFF position while the other device is in the ON position.

Since it is controlled manually by a maintenance technician, switchover time from the normal source to the replacement source can vary.

**Figure 9: Interlocking Systems**

### H- and J-Frame

Interlocking with Toggle Control (S29354)

### L-Frame

Interlocking with Toggle Control (S32614)

Interlocking with Rotary Handles (S32621)

# PowerPact H-, J-, and L-Frame Circuit Breakers Accessories and Auxiliaries

## Interlocking of Circuit Breakers with Toggle Control

Two devices can be interlocked using this system. Two identical interlocking systems can be used to interlock three devices installed side by side.

Authorized positions:

- one device closed (ON), the others open (OFF)
- all devices open (OFF)

The system is locked using one or two padlocks (shackle diameter 0.19–0.31 in. [5 to 8 mm]). This system can be expanded to more than three devices.

There are two interlocking-system models:

- one for PowerPact H- and J-frame circuit breakers
- one for PowerPact L-frame circuit breakers

All toggle-controlled unit-mount or plug-in PowerPact H-, J-, and L-frame circuit breakers and automatic switches of the same frame size can be interlocked. The devices must be either all unit-mount or all plug-in versions. Interlocking is not available for I-Line constructions.

The toggle interlock system can receive one or two padlocks with diameters of 0.19–0.31 in. (5–8 mm). Both interlocked circuit breakers must be unit-mount or both plug-in. Two sliding interlocking bars can be used to interlock three circuit breakers installed side-by-side, in which case one circuit breaker is in the ON (I) position and the two others in the OFF (O) position. (Kit S29354, not available for two-pole HD and HG devices.)

## Interlocking of Two Devices with Rotary Handles

Interlocking involves padlocking the rotary handles on two devices which may be either circuit breakers or automatic switches.

Authorized positions:

- one device closed (ON), the other open (OFF)
- both devices open (OFF).

The system is locked using up to three padlocks (shackle diameter 0.19–0.31 in. [5 to 8 mm]).

There are two interlocking-system models:

- one for PowerPact H- and J-frame circuit breakers
- one for PowerPact L-frame circuit breakers

All rotary-handle unit-mount or plug-in PowerPact H-, J-, and L-frame circuit breakers and automatic switches of the same frame size can be interlocked. The devices must be either all unit-mount or all plug-in versions. Interlocking is not available for I-Line constructions

The rotary handles are padlocked with the devices in the OFF (I) position. The interlock mechanism inhibits the two devices from being closed (ON/I) at the same time, but allows for both devices to be open (OFF/O) simultaneously. (Kit S29369. Not available for two-pole HD and HG devices.)

**Table 107: Interlocking Accessories**

Accessory	Means	Kit Number	
		H-, J-Frame	L-Frame
Interlocking	Mechanical for circuit breakers with rotary handles <sup>1</sup>	S29369	S32621
(UL listed)	Mechanical for circuit breakers with toggles <sup>1</sup>	S29354	S32614

<sup>1</sup> Not available in HD or HG two-pole modules.

## **Interlocking Devices using Keylocks (Captive Keys)**

Interlocking using keylocks makes it possible to interlock two or more devices that are physically distant or that have very different characteristics, for example medium-voltage and low-voltage devices or a PowerPact H-, J-, and L-frame circuit breaker and automatic switch.

Each device is equipped with an identical keylock and the key is captive on the closed (ON) device. A single key is available for all devices. It is necessary to first open (OFF position) the device with the key before the key can be withdrawn and used to close another device.

All rotary-handle PowerPact H-, J-, and L-frame circuit breakers and automatic switches can be interlocked between each other or with any other device equipped with the same type of keylock.

For circuit breakers equipped with rotary handles or a motor operator. Interlocking with keys may be easily implemented by equipping each of the circuit breakers, either unit-mount or drawout, with a directly mounted rotary operating handle and a standard keylock, with only one key for the two keylocks. This solution enables interlocking between two circuit breakers that are geographically distant or that have significantly different characteristics.

Use:

- A keylock adapter (one required for each circuit breaker)
- Two identical keylocks with a single key

See Table 101 for more information.

## Sealing Accessory

The sealing accessory kits includes the elements required to fit seals to prevent:

- Front accessory cover removal
- Rotary handle removal
- Opening of the motor operator
- Access to accessories
- Access to trip unit settings
- Access to ground-fault protection settings
- Trip unit removal
- Terminal cover removal
- Access to power connections

**Table 108: Sealing Accessory Kits**

Description	Kit No.	Qty.
Trip Unit Sealing Accessory Kit	<b>MICROTUSEAL</b>	6
Front Cover Screws Sealing Accessory Kit	<b>S29375</b>	6

## Front-Panel Escutcheons

- For unit-mount or plug-in installation.
- Front-panel escutcheons for toggle handles secures to the panel from the front.
- Front-panel escutcheons for motor-operated or rotary-operating handle secures to the panel by four screws from the front.

**Table 109: Front-Panel Escutcheons**

Description	Kit Number	
	H-, J-Frame	L-Frame
Front Panel Escutcheon for Toggle Circuit Breakers	<b>S29315</b>	<b>32556</b>
Front Panel Escutcheon for Rotary Handle, Motor Operator or Extended Escutcheon	<b>S29317</b>	<b>S32558</b>

## Toggle Collars (For Drawout Mounting)

Toggle collars make it possible to maintain degrees of protection regardless of the circuit breaker position (connected, disconnected):

- Front panel escutcheons are required (identical to those for rotary handle and ammeter module)
- Toggle collars are secured by two screws on the circuit breaker
- Front panel escutcheons are secured on the enclosure
- Toggle extension is supplied with the toggle collar

Front panel escutcheons for motor operator and rotary operating handles are the same as for the unit-mount circuit breakers.

**Table 110: Toggle Collars**

Description	H-, J-Frame Kit Number	L-Frame Kit Number
Toggle Collar	S29284	S32534

## Toggle Boot

- NEMA 1, 2, 3, 3R protection
- Fits on front of circuit breaker

**Table 111: Toggle Boot**

Description	Kit Number	
	H-, J-Frame <sup>1</sup>	L-Frame
Toggle Boot	S29319	S32560

<sup>1</sup> Not available for HD and HG two-pole modules.

## Handle Extension

Designed to extend the circuit breaker handle for easier manual circuit breaker operation.

## Section 10—Circuit Breaker Mounting and Connections

### Mounting Configurations

The PowerPact™ H-, J-, and L-frame circuit breakers are available in a variety of configurations.

**Table 118: Mounting Options**

Termination Letter	Poles		Options Code Suffix
	H-, J-Frame	L-Frame	
A = I-Line	3 Pole Only	3 Pole Only	For factory-installed terminations, place termination letter in the third block of the circuit breaker catalog number. <b>L   G   D   3   6   4   0   0   U   3   1   X   H   J   0   0</b> Termination No.                      Options Code
F = Bus Bar	3 Pole Only	3 or 4 Pole	
L = Lugs on Both Ends	3 Pole Only	3 or 4 Pole	
M = Lugs ON End	3 Pole Only	3 or 4 Pole	
P = Lugs OFF End	3 Pole Only	3 or 4 Pole	
N = Plug-In	3 Pole Only	3 or 4 Pole	
D = Drawout	3 Pole Only	3 or 4 Pole	
S = Rear Connection	3 Pole Only	3 or 4 Pole	

Refer to circuit breaker installation bulletin before installing circuit breaker, accessories, or wiring.

### Unit-Mount Circuit Breakers

The standard lugs can be removed for the installation of compression-type lugs or bus connections. All lugs are UL Listed/CSA Certified for their proper application and marked for use with aluminum and copper (Al/Cu) or copper only (Cu) conductors. Lugs suitable for copper and aluminum conductors are made of tin-plated aluminum.

### Mounting

H-, J-, and L-frame circuit breakers may be mounted vertically, horizontally or flat on their back without any derating of characteristics.

Unit-mount H- and J-frame circuit breakers are supplied with two mounting screws, unit-mount L-frame circuit breakers are supplied with four mounting screws. These mounting screws are inserted through mounting holes molded into the circuit breaker case and threaded into the mounting enclosure, rails or through the panel door for flush mounting.

A DIN rail mounting bracket (catalog no. S29305) is available for the H- and J-frame circuit breakers.

**NOTE:** DIN rail mounting is not compatible with motor operated applications.

## Circuit Breaker Mounting and Connections

### I-Line™ Circuit breakers

PowerPact H-, J-, and L-frame circuit breakers are available in I-Line construction for easy installation and removal in I-Line applications.

I-Line circuit breakers use “blow-on” type line side connectors. In case of a short circuit, increased magnetic flux causes the plug-on connectors of the circuit breaker to tighten their grasp on the bus bars. The I-Line connectors and circuit breaker mounting bracket are integral parts of I-Line circuit breakers and cannot be removed or replaced. I-Line circuit breakers come with mechanical load side lugs, or optional terminal nut to connect to bus bars or to compression (crimp) lugs.

**Table 119: Phase Options—Example HDA36150**

Phase Option Number	Phase Connection	Two-Pole Example	three-pole Example
1	AB	HDA261501	—
2	AC	HDA261502	—
3	BA	HDA261503	—

6	CB	HDA261506	—
Standard	ABC	—	HDA36150
6	CBA	—	HDA361506

### Plug-In Circuit Breaker Mounting

The plug-in base is mounted through a panel. The plug-in configuration makes it possible to:

- Extract and/or rapidly replace the circuit breaker without having to touch connections
- Allow for addition of future circuits at a later date

When the circuit breaker is in the connected position, the primary voltage is fed through the circuit breaker by means of multiple finger disconnects. Control voltage of internal accessories is provided through secondary disconnects.

Plug-In Mounting

### Parts of a Plug-In Configuration

- Plug-in Base: The plug-in base provides mounting through a front panel or mounting on rails.
- Disconnects: Provides both primary and secondary disconnect to the circuit breaker.
- Safety Trip Interlock: The safety trip causes automatic tripping if the circuit breaker is ON before engaging or withdrawing it; the safety trip does not prevent the circuit breaker operation, even when the circuit breaker is disconnected.
- Plug-in Base: The plug-in base provides mounting through a front panel or mounting on rails.
- Mandatory short terminal shields.

Safety Trip Interlock Mounted on Back of Circuit Breaker

Drawout Mounting

## PowerPact H-, J-, and L-Frame Circuit Breakers Circuit Breaker Mounting and Connections

Accessory circuits exit the circuit breaker using one to three secondary disconnecting blocks (nine wires each). Circuit breaker connection wires for the options installed with trip unit STR53UP exit through the automatic secondary disconnecting blocks. These are made up of:

- A moving part connected to the circuit breaker through a support (one support per circuit breaker).
- A fixed part mounted on the plug-in base, equipped with connectors for wire up to 14 AWG (2.5 mm<sup>2</sup>).

For test purposes, circuit breakers may be equipped with one to three manual auxiliary connectors, which allow the auxiliaries to remain connected when in the “disconnected” position.

Disconnecting Blocks

Manual Auxiliary Connector

**Figure 11: Plug-In Base (Mounting Options)**

Mounting Through  
a Panel

Mounting on Rails

The L-frame plug-in mounting is Listed under UL file E113555 and Certified under CSA file LR 69561.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Circuit Breaker Mounting and Connections

### Drawout Mounting

The cradle is made up of two side plates installed on the plug-in base and two other plates mounted on the circuit breaker.

The drawout mounting provides all of the functions of the plug-in base, plus:

- Disconnected position—the power circuit is disconnected, the circuit breaker is simply withdrawn and may still be operated (on, off, push-to-trip)
- Circuit breaker may be locked using 1 to 3 padlocks, diameter 0.19 to 0.31 inch (5–8 mm), to prevent connection
- Auxiliaries can be tested using manual auxiliary connector

Drawout mounting is on a backplate:

- Through a front panel or on rails
- Horizontally or vertically

Accessories for drawout circuit breakers:

- *Auxiliary contacts indicator* for installation on the fixed part of the cradle, indicating the “connected” and “disconnected” position
- *Toggle collar* for circuit breakers with toggle through front panel, intended to maintain the degree of protections whatever the position of the circuit breakers (supplied with a toggle extension)
- *Keylock* which can be used to
  - Prevent insertion for connection
  - Lock the circuit breaker in the connected or disconnected position
- *Telescopic shaft* for extended rotary handles
- *Control voltage*, which is provided through automatic secondary disconnect in the connected position only. Electrical accessories can be tested in the disconnected position with an external wiring harness.

The drawout-mounted cradle is listed under UL file E113555 and certified under CSA file LR69561.

## Circuit Breaker Mounting and Connections

### Connection

#### Rear Connection

For connection of bus bars or cables with compression lugs. Rear connections are easily installed on the circuit breaker terminals. The same connection may be installed flat, edgewise or at a 45° angle. All combinations are possible. The circuit breaker is mounted on a backplate.

One Long and Two Short

Four Positions Possible for Each Connector

**Table 123: Rear Connections**

<sup>1</sup> Kit contains four short rear connections, two long rear connections (four long rear connections for four-pole), hardware and two terminal covers.

<sup>2</sup> Order two kits (two in kit x two kits for total of four).

<sup>3</sup> Parts only, no hardware is included. See Table 124, below.

<sup>4</sup> For use with three-pole circuit breakers only.

<sup>5</sup> Order two kits (kit contains only one terminal cover, two terminal covers are required per circuit breaker).

**Table 124: L-Frame Rear Connection Hardware**

Description	Cat. No.
Set of 4 M10 x 25 terminal screws and washers for one side.	<b>S36967</b>

#### Mechanical Lugs

Unit-mount H-, J-, and L-frame circuit breakers can be ordered with mechanical line and load side lugs. The standard lugs can be removed for the installation of compression-type lugs or bus connections. All lugs are UL Listed/CSA Certified for their proper application and marked for use with aluminum and copper (Al/Cu) or copper only (Cu) conductors. Lugs suitable for copper and aluminum conductors are made of tin-plated aluminum. Lugs suitable for use with copper conductors only are made of copper.

Mechanical Lugs for the H- and J-frame circuit breakers lay on top of the circuit breaker terminals and can be installed without the use of any tools. The lugs are held in place with snap features built into the insulating retainer and are secured with the clamp force applied to the wire binding screw.

Mechanical lugs are sold either factory installed or as field installable kits.

<sup>1</sup> For lug pack information, see Figure 36 on page 177.

<sup>2</sup> For control wire installation, use an 8-32 x 1/4 in. screw (not provided) into tapped control wire hole in lower left hand corner of lug.

<sup>3</sup> For terminal shield dimensions, see Figure 36 on page 177.

<sup>4</sup> Terminal shields are included in mechanical lug kits.

### Voltage Takeoff (Control Wire Terminals) for Mechanical Lugs and Terminal Nuts

Mechanical Lug Control Wire Terminal

Busbar Control Wire Terminal

Powerpact H- and J-Frame mechanical lugs may be equipped with a separate control wire termination. The kit is available factory installed or as a field installable kit. The adaptor is secured underneath the lug and has a tab extension suitable for attachment of a 0.250 inch slip-on connector.

All L-frame mechanical lugs are pre-tapped for control wires. For control wire installation, use an 8-32 x 1/4 in. screw (not provided) into tapped control wire hole in lower left hand corner of the lug.

Fully insulated type connectors must be used to prevent live parts from extending into the wiring gutter area.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Circuit Breaker Mounting and Connections

### Bus-Bar Connections

The H-, J- and L-frame circuit breakers may be equipped with captive nuts and screws for direct connection to bars or to compression (crimp) lugs.

For H- and J-frame, these are readily field-installable, simply by removing the mechanical lug and replacing with the appropriate terminal nut inset described in Table 128. They are also available factory-installed, using the Product Selector or by using the catalog suffixes below.

For L-frame, the mechanical lug can be removed, leaving the threaded nut insert intact. This configuration may be ordered with the suffixes described below. Connection hardware (terminal screws) must be ordered as in table 128.

**Table 128: Factory-Installed Terminal Nut Inserts for Bus or Crimp Lug Connection**

Cat. No. Termination (Position 4)	Special Terminations Options	Description
F	—	Terminal nut insert on both ends; no lugs either end
M	—	Terminal nut insert on OFF end; lugs on ON end only
P	—	Terminal nut insert on ON end; lugs on OFF end only
A	-TA	I-Line on ON end; English terminal nuts on OFF end <sup>1</sup>
A	-TB	I-Line on ON end; Metric terminal nuts on OFF end <sup>1</sup>
F, M, or P	-TW	For -F, Metric terminal nuts on both ends <sup>1</sup>
F, M, or P	-TX	For -M, lugs on ON end; Metric terminal nuts on OFF end For -P, Metric terminal nuts on ON end; lugs on OFF end

<sup>1</sup> For H- and J-frame only. L-frame terminal nuts are metric only.

## Section 11—Installation Recommendations

### Operating Conditions

#### Temperature Derating

- PowerPact™ H-, J-, and L-frame circuit breakers may be used between -13°F and 158°F (-2°C and +70°C). For temperatures higher than 104°F (40°C) inside the enclosure, devices must be derated.
- Circuit breakers should be put into service under normal ambient, operating-temperature conditions.
- The permissible storage-temperature range for PowerPact H-, J-, and L-frame circuit breakers in the original packing is -58°F<sup>1</sup> and 185°F (-50°C<sup>1</sup> and +85°C).

**H-Frame Trip Curve**

- (I<sub>n</sub>) Fixed threshold thermal protection against overload
- (I<sub>i</sub>) Fixed threshold instantaneous protection against short circuits

**Table 136: Temperature Derating for H-Frame Trip Unit Thermal Protection—Long-Time**

Temperature <sup>1</sup>		Rating (A) I <sub>n</sub>															
°C	°F																
-10	14	23	30	38	46	53	60	68	76	88	103	112	123	137	160	180	221
0	32	21	28	36	43	49	56	63	71	83	97	107	117	131	151	171	207
10	50	20	26	33	40	46	52	59	66	77	90	101	111	126	141	161	194
20	68	18	24	31	37	42	48	54	62	72	84	96	105	120	132	152	180
30	86	17	22	28	34	39	44	50	56	66	77	88	98	110	121	139	165
40	104	15	20	25	30	35	40	45	50	60	70	80	90	100	110	125	150
50	122	12	17	21	25	30	34	38	43	53	62	72	80	86	95	109	131
60	140	9	14	17	20	24	28	31	35	46	53	63	70	72	80	93	111

<sup>1</sup> Shaded areas indicate temperature derated values, non-shaded areas inside an enclosure are standard circuit breaker ampere ratings at 104°F (40°C).

**J-Frame Trip Unit**

- (I<sub>n</sub>) Fixed threshold thermal protection against overload
- (I<sub>m</sub>) Adjustable instantaneous protection against short circuits

**Table 137: Temperature Derating for J-Frame Trip Unit Thermal Protection—Long-Time**

Temperature <sup>1</sup>		Rating (A) I <sub>n</sub>					
°C	°F						
-10	14	221	264	289	330	377	
0	32	207	247	273	310	354	
10	50	194	230	256	290	330

<sup>1</sup> Shaded areas indicate temperature derated values, non-shaded areas are standard circuit breaker ampere ratings at 104°F (40°C).

<sup>1</sup> -40°F (-40°C) for Micrologic trip units with an LCD screen.

## PowerPact H-, J-, and L-Frame Circuit Breakers Installation Recommendations

### PowerPact H-, J- and L-Frame Circuit Breakers Equipped with Electronic Trip Units

Electronic trip units are not affected by variations in temperature. If the trip units are used in high-temperature environments, the Micrologic™ trip unit setting must nevertheless take into account the temperature limits of the circuit breaker.

Changes in temperature do not affect measurements by electronic trip units.

- The built-in CT sensors with Rogowski coils measure the current.
- The control electronics compare the value of the current to the settings defined for 104°F (40°C).

Because temperature has no effect on the CT measurements, the tripping thresholds do not need to be modified.

However, the temperature rise caused by the flow of current combined with the ambient temperature increases the temperature of the device. To avoid reaching the thermal withstand value, it is necessary to limit the current flowing through the device, that is the maximum  $I_r$  setting as a function of the temperature.

The table below indicates the maximum long-time (LT) protection setting  $I_r$  (A) depending on the ambient temperature.

**Table 138: Derating Circuit Breakers with Micrologic Trip Units**

Type of Device	Rating	Temperature						
		104°F (40°C)	113°F (45°C)	122°F (50°C)	131°F (55°C)	140°F (60°C)	149°F (65°C)	158°F (70°C)
<b>H-Frame</b>								
Unit-mount, plug-in or drawout	60 A	No derating						
	100 A	No derating						
	150 A	No derating						
<b>J-Frame</b>								
Unit-mount	250 A	250	250	250	245	237	230	225
Plug-in or drawout	250 A	250	245	237	230	225	220	215
<b>L-Frame</b>								
Unit-mount	400 A	400	400	400	390	380	370	360
Plug-in or drawout	400 A	400	390	380	370	360	350	340
Unit-mount	600 A	600	600	600	585	570	550	535
Plug-in or drawout	600 A	570	550	535	520	505	490	475

Example. A unit-mount PowerPact L-frame circuit breaker equipped with a Micrologic can have a maximum  $I_r$  setting of:

- 400 A up to 122°F (50°C)
- 380 A up to 140°F (60°C)

# PowerPact H-, J-, and L-Frame Circuit Breakers Installation Recommendations

## Altitude Derating

Altitude does not significantly affect the characteristics of PowerPact H-, J-, and L-frame circuit breakers up to 6560 ft. (2000 m). Above this altitude, it is necessary to take into account the decrease in the dielectric strength and cooling capacity of air.

The following table gives the corrections to be applied for altitudes above 6560 ft. (2000 m). The breaking capacities remain unchanged.

**Table 139: Altitude Derating**

Altitude		6560 ft (2000 m)	9840 ft (3000 m)	13120 ft (4000 m)	16400 ft (5000 m)
Dielectric withstand voltage		3000 V	2500 V	2100 V	1800 V
Insulation voltage	$V_i$	800 V	700 V	600 V	500 V
Maximum operational voltage	$V_e$	690 V	590 V	520 V	460 V
Average current capacity (A) at 104°F (40°C)	$I_n \times$	1.0	0.96	0.93	0.9

## Frequency Derating

Application of H- and J-frame circuit breakers at frequencies above 60 Hz requires that special consideration be given to the effects of high frequency on the circuit breaker characteristics. Thermal and instantaneous operations must be treated separately.

At frequencies below 60 Hz, the thermal derating of PowerPact H and J-frame circuit breakers is negligible. However, at frequencies above 60 Hz, thermal derating is required.

One of the most common high frequency applications is at 400 Hz. For 400 Hz derating information, see Page 27.

For more information, refer to Data Bulletin 0100DB0101, *Determining Current Carrying Capacity in Special Applications*.

## Installation in Equipment

### Power from the Top or Bottom

PowerPact H-, J-, and L-frame circuit breakers with factory-sealed trip units can be supplied from either the top or the bottom without any reduction in performance. This capability facilitates connection when installed in end-use equipment.

All connection and insulation accessories can be used on circuit breakers supplied either from the top or bottom.

### Weight

The table below presents the weights of the circuit breakers and the main accessories, which must be summed to obtain the total weight. The values are valid for all performance categories.

**Table 140: Weights**

Type of Device	Poles	Circuit Breakers	Base	Cradle	Motor Operator
H-frame, 100 A	2	3.95 lbs. (1.79 kg)	1.75 lbs. (0.8 kg)	4.85 lbs. (2.2 kg)	2.65 lbs. (1.2 kg)
	3	4.52 lbs. (2.05 kg)	1.75 lbs. (0.8 kg)	4.85 lbs. (2.2 kg)	2.65 lbs. (1.2 kg)
H-frame, 150 A	2	4.08 lbs. (1.85 kg)	1.75 lbs. (0.8 kg)	4.85 lbs. (2.2 kg)	2.65 lbs. (1.2 kg)
	3	4.85 lbs. (2.2 kg)	1.75 lbs. (0.8 kg)	4.85 lbs. (2.2 kg)	2.65 lbs. (1.2 kg)
J-frame, 250 A	3	5.29 lbs. (2.4 kg)	1.75 lbs. (0.8 kg)	4.85 lbs. (2.2 kg)	2.65 lbs. (1.2 kg)
L-frame, 600 A	3	13.65 lbs. (6.19 kg)	5.29 lbs. (2.4 kg)	4.85 lbs. (2.2 kg)	6.17 lbs. (2.8 kg)
	4	17.92 lbs. (8.13 kg)	6.17 lbs. (2.8 kg)	4.85 lbs. (2.2 kg)	6.17 lbs. (2.8 kg)

## Safety Clearances and Minimum Distances

### General Rules

When installing a circuit breaker, minimum distances (safety clearances) must be maintained between the device and panels, bars and other protection devices installed nearby. These distances, which depend on the voltage, are defined by tests carried out in accordance with UL standards.

If installation is not checked by type tests, it is also necessary to:

- use insulated bars for circuit-breaker connections
- segregate the busbars using phase barriers

For PowerPact H-, J-, and L-frame devices, terminal shields and interphase barriers are recommended and may be mandatory depending on the operating voltage of the device and type of installation (unit-mount, drawout, etc.).

### Power Connections

The table below indicates the connection requirements for PowerPact H-, J-, and L-frame devices to ensure insulation of live parts for the various types of connection.

- unit-mount devices with front connection or rear connection
- plug-in or drawout devices.

Connection accessories such as crimp lugs, terminal extensions (straight, right-angle, double-L and 45°) and spreaders are supplied with interphase barriers. Long terminal shields provide a degree of protection of IP40 (ingress).

# PowerPact H-, J-, and L-Frame Circuit Breakers Installation Recommendations

## Safety Clearance

### Safety Clearances

If dimension A < 0.56 in. for H- and J-frame circuit breaker, attach fiber insulating plate, not provided, to enclosure cover.

### H- and J-Frame Fiber Insulating Plate

Dimensions: in.  
(mm)

## Control Wiring

### Remote Tripping by Undervoltage Trip (MN) or Shunt Trip (MX)

Power requirements are approximately:

- 30 VA for pick-up of the undervoltage trip (MN) and shunt trip (MX)
- 300–500 VA for the motor operator.

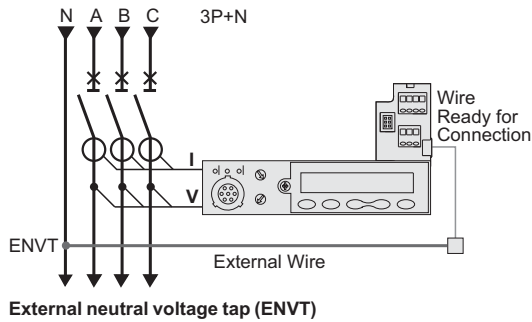

**Table 141: Recommended Maximum Cable Lengths<sup>1</sup>**

Power Supply Voltage (Vdc)		12 Vdc		24 Vdc		48 Vdc	
Cable cross-section		16 AWG (1.5 mm <sup>2</sup> )	14 AWG (2.5mm <sup>2</sup> )	16 AWG (1.5 mm <sup>2</sup> )	14 AWG (2.5mm <sup>2</sup> )	16 AWG (1.5 mm <sup>2</sup> )	14 AWG (2.5mm <sup>2</sup> )
Undervoltage Trip (MN)	V source 100%	49 ft. (15 m)	—	525 ft. (160 m)	—	2100 ft. (640 m)	—
	V source 85%	23 ft. (7 m)	—	131 ft. (40 m)	—	525 ft. (160 m)	—
Shunt Trip (MX)	V source 100%	197 ft. (60 m)	—	787 ft. (240 m)	—	3150 ft. (960 m)	—
	V source 85%	98 ft. (30 m)	—	394 ft. (120 m)	—	1575 ft. (480 m)	—
Motor Operator	V source 100%	—	—	33 ft. (10 m)	52 ft. (16 m)	213 ft. (65 m)	361 ft. (110 m)
	V source 85%	—	—	6.6 ft. (2 m)	13 ft (4 m)	56 ft. (17 m)	82 ft. (25 m)

<sup>1</sup> The indicated length is that of each of the two wires.

# PowerPact H-, J-, and L-Frame Circuit Breakers Installation Recommendations

## External Neutral Voltage Tap (ENVT)

This connection is required for accurate power measurements on three-pole circuit breakers equipped with Micrologic 5/6 E trip units in installations with a distributed neutral. It can be used to measure phase-neutral voltages and calculate power using the 3 wattmeter method.

PowerPact H-, J-, and L-frame three-pole circuit breakers come with a wire installed on the device for the connection to the ENVT. This wire is equipped with a connector for connection to an external wire with:

- cross-sectional area of 18–14 AWG (1 mm<sup>2</sup> to 2.5 mm<sup>2</sup>)
- maximum length of 32.8 ft. (10 m).

## External Neutral Current Transformer (ENCT)

This connection is required to protect the neutral on three-pole circuit breakers equipped with Micrologic 5/6 A or E trip units in installations with a distributed neutral. For Micrologic 6 A or E, it is required for ground-fault protection.

The ENCT is connected in the same way for unit-mount, plug-in or drawout devices:

- unit-mount devices are connected using terminals T1 and T2 of the internal terminal block.
- plug-in and drawout devices are not connected using the auxiliary terminals.

The wires must be connected/disconnected inside the devices using terminals T1 and T2.

The ENCT must be connected to the Micrologic trip unit by a shielded twisted pair. The shielding should be connected to the enclosure earth only at the CT end, no more than 12 in. (30 cm) from the CT.

- the power connections of the CT to the neutral (H2 and H1) must be made in the same way for power supply from the top or the bottom (see figure). Make sure they are not reversed for devices with power supply from the bottom.
- cross-sectional area of 22–16 AWG (0.4 mm<sup>2</sup> to 1.5 mm<sup>2</sup>)
- maximum length of 32.8 ft. (10 m).

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Installation Recommendations

### 24 Vdc Power Supply Module

An external 24 Vdc power supply is required for installations with communication networks, regardless of the type of trip unit.

On installations without communication networks, the power supply is available as an option for Micrologic 5/6 to:

- modify settings when the circuit breaker is open (OFF position)
- display measurements when the current flowing through the circuit breaker is low
- maintain the display of the cause of tripping

**Power supply, without the communication function, using the terminal block with a backup battery.**

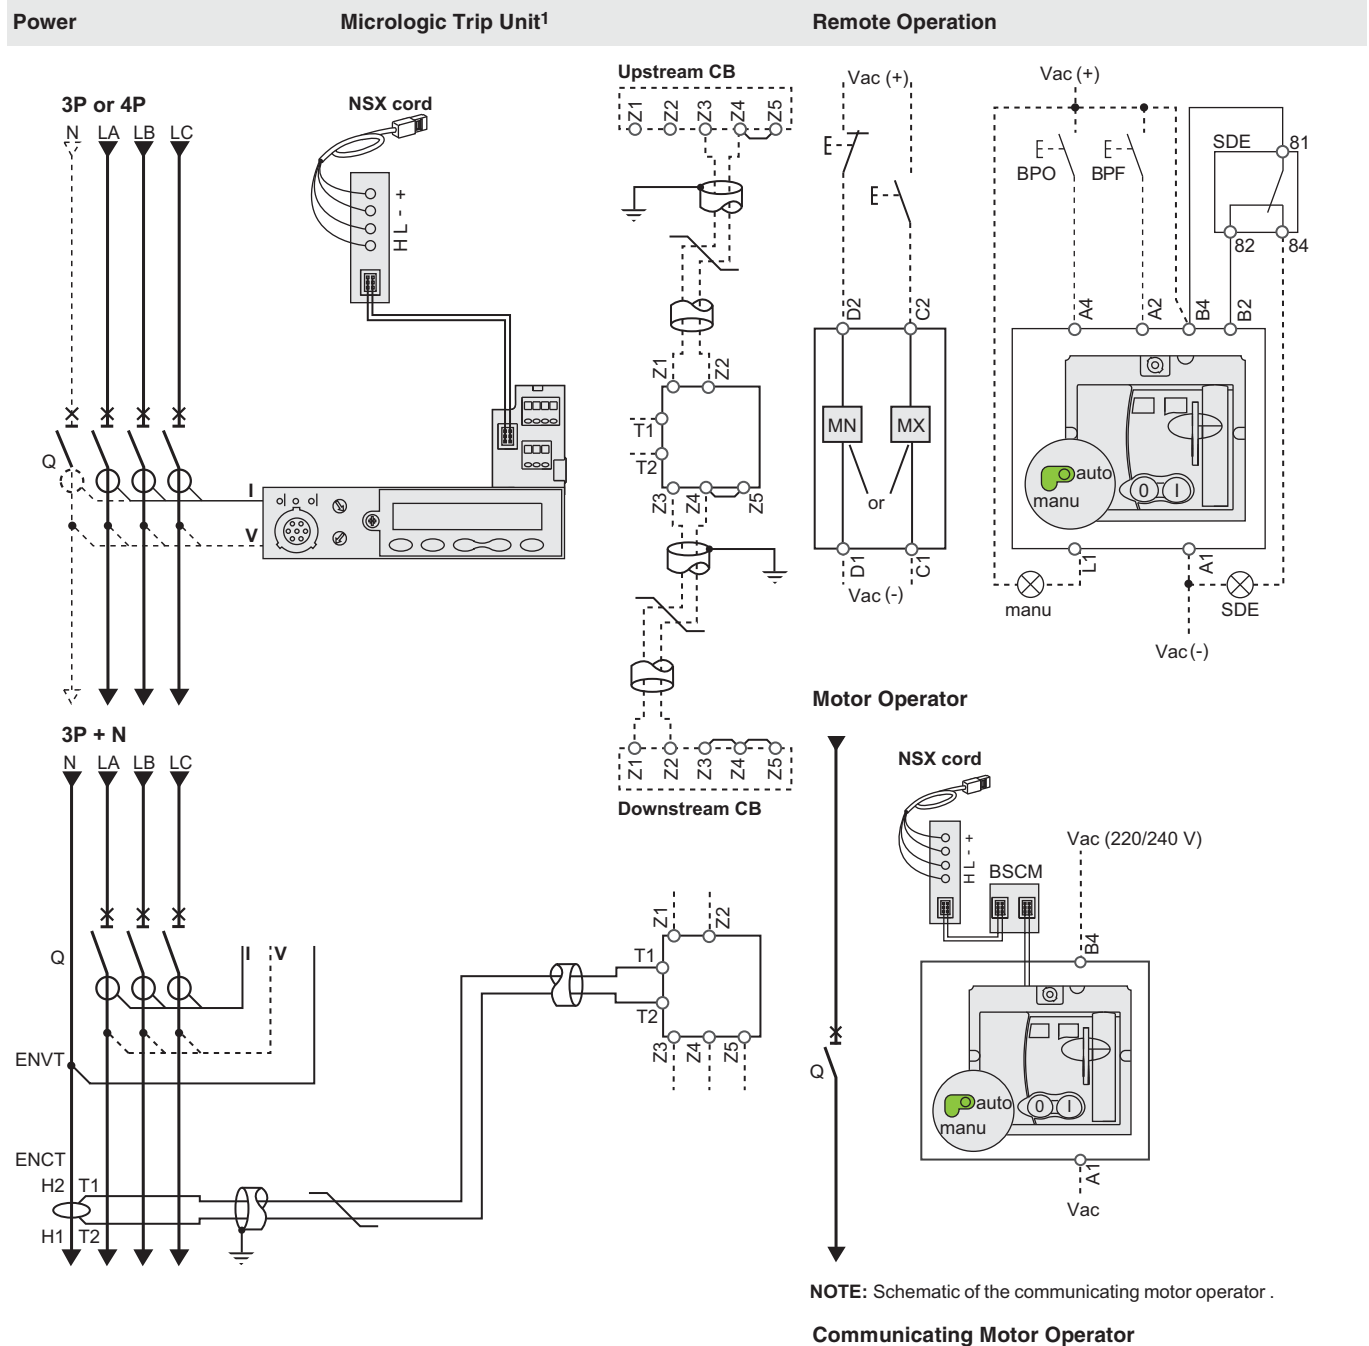

**Power supply, with the communication function, using the Modbus interface.**

To determine power requirements of devices, see page 90.

### 500 Vdc JG MOLDED CASE CIRCUIT BREAKERS CHARACTERISTIC TRIP CURVE NO. 50-20

#### CIRCUIT BREAKER INFORMATION

Circuit Breaker Prefix	Continuous Ampere Rating	Maximum DC Voltage	Number of Poles
JG	250	600	2, 3

This curve is to be used for application and coordination purposes only. The EZ-AMP overlay feature at the bottom of the page should be used during coordination studies.

All time/current characteristic curve data is based on 40°C ambient cold start. Terminations are made with conductors of appropriate length and ratings.

## POWERPACT H/J FRAME MOTOR CIRCUIT PROTECTOR WITH AUTO SETTINGS CHARACTERISTIC TRIP CURVE NO. 045-2

The time-current curve information represents the typical response and is to be used for application and coordination purposes only. Curves apply from -30C to +60C ambient temperature.

### Notes:

- The MCP is an instantaneous only breaker that detects the peaks of the current. In order to trip within the specified time-current levels, consecutive peaks of the current must exceed the selected setting's threshold.
- Total clearing times shown include the response times of the trip unit, the circuit breaker opening, and the extinction of the current.
- The time-current curve represents single-phase to three-phase fault currents.

## PowerPact H-Frame Electronic Trip Circuit Breakers— 60/100/150 A Frame

Figure 101: Micrologic 3.2 Electronic Trip Unit Long Time Trip Curve

### MICROLOGIC™ ELECTRONIC TRIP UNITS Micrologic™ 3.2 Long Time Trip Curve 60A, 100A, 150A H-Frame

The time-current curve information is to be used for application and coordination purposes only.

#### Notes:

1. There is a thermal-imaging effect that can act to shorten the long-time delay. The thermal imaging effect comes into play if a current above the long-time delay pickup value exists for a time and then is cleared by the tripping of a downstream device or the circuit breaker itself. A subsequent overload will cause the circuit breaker to trip in a shorter time than normal. The amount of time delay reduction is inverse to the amount of time that has elapsed since the previous overload. Approximately 20 minutes is required between overloads to completely reset thermal-imaging.
2. Total clearing times shown include the response times of the trip unit, the circuit breaker opening, and the extinction of the current.

Curves apply from -35°C to +70°C (-31°F to +158°F) ambient temperature.

## MICROLOGIC™ ELECTRONIC TRIP UNITS Micrologic™ 5.3A, 5.3A-W, 5.3E, 5.3E-W, 6.3A, 6.3A-W, 6.3E, and 6.3E-W Long Time Trip Curve 400A L-Frame

The time-current curve information is to be used for application and coordination purposes only.

### Notes:

1. There is a thermal-imaging effect that can act to shorten the long-time delay. The thermal imaging effect comes into play if a current above the long-time delay pickup value exists for a time and then is cleared by the tripping of a downstream device or the circuit breaker itself. A subsequent overload will cause the circuit breaker to trip in a shorter time than normal. The amount of time delay reduction is inverse to the amount of time that has elapsed since the previous overload. Approximately 20 minutes is required between overloads to completely reset thermal-imaging.
2. Total clearing times shown include the response times of the trip unit, the circuit breaker opening, and the extinction of the current.

Curves apply from -35°C to +70°C (-31°F to +158°F) ambient temperature.

### Glossary

**accessory** = An electrical or mechanical device that performs a secondary or minor function apart from overcurrent protection.

**accessory cover** = A removable cover on the front of a circuit breaker behind which are mounted the trip unit and all electrical accessories.

**adjustable rating plug** = A component which plugs into the trip unit, establishing the ampere rating of the circuit breaker

**AIC** = Amperes interrupting capacity.

**AIR** = See *amperes interrupting rating*.

**alarm switch (bell alarm)** = See *overcurrent trip switch*.

**ambient temperature rating** = Temperature at which the continuous current rating (handle rating) of a circuit breaker is based; the temperature of the air immediately surrounding the circuit breaker which can affect the thermal (overload) tripping characteristics of thermal-magnetic circuit breakers. Electronic trip circuit breakers, however, are insensitive to normal (-10° to 50°C) ambient conditions.

**ammeter (local current meter)** = A module that mounts directly to the circuit breaker trip unit and reports RMS phase and ground-fault current values as seen by the trip unit. Current values are displayed one phase at a time.

**ampacity** = The current, in amperes, that a conductor or circuit breaker can carry continuously under the conditions of use without exceeding its temperature rating.

**ampere** = The equivalent of one coulomb per second or the steady current produced by one volt applied across a resistance of one ohm.

**amperes interrupting rating** = The highest current at rated voltage that an overcurrent protective device is intended to interrupt under specified test conditions (NEC).

**ANCE (National Association of Standardization and Certification for the Electrical Sector)** = The standards and certification agency accredited by the Mexican government.

**ANSI®** = American National Standards Institute.

**automatic molded case switch** = A switch with construction similar to a molded case circuit breaker except that the switch opens only instantaneously at a non-adjustable trip point calibrated to protect only the molded case switch itself.

**auxiliary switch** = A switch mechanically operated by the main device for signaling, interlocking, or other purposes.

**bell alarm** = A mechanically-operated switch used to indicate the main contact position of a circuit breaker, which indicates when a circuit breaker has tripped. Also see *overcurrent trip switch*.

**BPFE** = See *electrical closing push button*.

**branch circuit** = The circuit between the final overcurrent device protecting the circuit and the outlet(s).

**BCM** = See *circuit breaker communications module*.

**Canadian Standards Association® (CSA®)** = Canadian product safety testing and certification organization.

**carriage** = See *cradle*.

**CCM** = See *cradle communication module*.

**CD** = See *cell switch*.

**CDM** = See *mechanical operation counter*.

**CE** = See *cell switch*.

## PowerPact H-, J-, and L-Frame Circuit Breakers Glossary

**cell switch** = A switch which indicates the position of a drawout circuit breaker in relation to the cradle.

- **CD** = Disconnected position cell switch.
- **CE** = Connected position cell switch.
- **CT** = Test position cell switch.

**CH** = A spring-charged contact inside of the spring charging motor on insulated-case and low-voltage power circuit breakers.

**charging handle** = See *spring charging handle*.

**circuit breaker** = A device designed to open and close a circuit by non-automatic means and to open the circuit automatically on an overcurrent without damage to itself when properly applied within its rating.

**circuit breaker communications module (BCM)** = A module which, when installed in a circuit breaker, receives and transmits information on the communication network.

**circuit breaker frame** = (1) The circuit breaker housing which contains the current carrying components, the current sensing components, and the tripping and operating mechanism. (2) That portion of an interchangeable trip molded case circuit breaker remaining when the interchangeable trip unit is removed.

**close button** = A button for manually closing the main contacts after the closing springs are charged.

**close button cover** = A cover which fits over the close button and blocks access to it. Access to the close button may be permitted through the use of a tool or rod inserted through a small hole in the front of the close button cover.

**closing coil (shunt close)** = A coil which closes the circuit breaker electrically using an external voltage source when a specified voltage is applied across the coil.

**coil clearing switch** = A mechanically-operated switch in series with the coil of a shunt trip device which breaks the coil current when the circuit breaker opens.

**communication network** = A network allowing the flow of information between electrical components, comprised of programmable controller interface units, protocol software and modems.

**conductor** = A substance or body that allows a current of electricity to pass continuously along it.

**continuous current rating (handle rating) (ampere rating)** = The designated RMS alternating or direct current in amperes which a device or assembly will carry continuously in free air without tripping or exceeding temperature limits.

**continuous load** = A load where the maximum current on the circuit is expected to continue.

**cradle communications module (CCM)** = An external module which allows addressing of the cradle and retention of the address when the drawout circuit breaker is in the disconnected position and which is used to transmit information about the position of the circuit breaker in the cradle to the communication network.

**cradle compartment** = A compartment containing all connectors, shields, adapters, barriers, spreaders, shutters, keys and interlocking devices for a drawout circuit breaker.

**CSA®** = See *Canadian Standards Association*.

**CT** = Current transformer. See also *cell switch*.

**current path (of a circuit breaker)** = The current-carrying conductors within a circuit breaker between, and including, line and load terminations.

**current transformer (current sensor) (CT)** = An instrument to measure current, encircling a conductor carrying the current to be measured or controlled.

**demand metering** = The metering of power or current demand seen by a circuit breaker. It is calculated over a fixed or sliding time window that can be programmed from five to 60 minutes. Depending on the contract signed with the power supplier, specific programming makes it possible to avoid or minimize the cost of overrunning the subscribed power. Maximum demand values are systematically stored and time stamped.

**disconnecting contacts** = See *main disconnecting contacts* and *secondary disconnecting contacts*.

## PowerPact H-, J-, and L-Frame Circuit Breakers Glossary

**drawout circuit breaker** = An assembly of a circuit breaker and a supporting structure (cradle) so constructed that the circuit breaker is supported and can be moved to either the main circuit connected or disconnected position without removing connections or mounting supports.

**drawout mechanism** = A mechanism which engages the drawout cradle assembly and draws the circuit breaker into or out of the equipment. The drawout mechanism includes the drawout mechanism shaft, drawout levering device arms and a drawout position indicator.

**drawout position indicator** = An indicating means which shows the position of the circuit breaker in the drawout structure.

**drawout access cover (drawout shaft cover)** = A shutter which allows or restricts access to the drawout shaft.

**electrical closing push button (BPFE)** = A push button used to electrically close a circuit breaker using a shunt close with communication option. This takes into account all safety functions that are part of the control and monitoring system of the installation.

**electrical operator (motor operator)** = An electrical device used to open and close a circuit breaker or switch and reset a circuit breaker. See also *spring charging motor*.

**electronic trip circuit breaker** = A circuit breaker which uses current sensors and electronic circuitry to sense, measure and respond to current levels.

**fixed-mounted circuit breaker** = A circuit breaker so mounted that it cannot be removed without removing primary and sometimes secondary connections and/or mounting supports.

**frame size** = The largest ampere rating available in a group of circuit breakers of similar physical configuration.

**frequency** = The number of cycles per second for an alternating current system.

**frequency rating** = The range of frequencies within which a product can be applied.

**ground fault** = An unintentional current path, through ground, back to the source.

**ground-fault delay** = The length of time the circuit breaker trip unit will delay before initiating a trip signal to the circuit breaker after a ground fault has been detected.

**ground-fault module** = An electronic accessory used in combination with thermal-magnetic circuit breakers to provide branch circuit ground-fault protection and ground-fault indication.

**ground-fault pickup** = The level of ground-fault current at which the trip system begins timing.

**handle rating** = Continuous current rating.

**IDMTL** = Long-time delay curve which can be varied in slope to enhance selectivity.

**IEC®** = International Electrotechnical Commission.

**IEEE®** = Institute of Electrical and Electronics Engineers.

**Ig** = See *ground-fault pickup*.

**Ii** = See *instantaneous pickup*.

**In** = See *sensor rating*.

**individually-mounted circuit breaker** = A circuit breaker so mounted that it cannot be removed without removing primary and sometimes secondary connections and/or mounting supports.

**instantaneous pickup** = The current level at which the circuit breaker will trip with no intentional time delay.

**instantaneous trip** = A qualifying term indicating that no delay is purposely introduced in the tripping action of the circuit breaker during short-circuit conditions.

**insulated case circuit breaker (ICCB)** = UL Standard 489 Listed non-fused molded case circuit breakers which utilize a two-step stored energy closing mechanism, electronic trip system and drawout construction.

**integral ground-fault protection for equipment** = Equipment ground-fault protection on grounded neutral systems provided by components internal to the circuit breaker.

**interchangeable trip unit** = A trip unit which can be interchanged by a user among circuit breaker frames of the same design.

**interrupting rating** = The highest current at rated voltage available at the incoming terminals of the circuit breaker. When the circuit breaker can be used at more than one voltage, the interrupting rating will be shown on the circuit breaker for each voltage level. The interrupting rating of a circuit breaker must be equal to or greater than the available short-circuit current at the point at which the circuit breaker is applied to the system.

**inverse time** = A qualifying term indicating there is purposely introduced a delay in the tripping action of the circuit breaker, which delay decreases as the magnitude of the current increases.

$I_r$  = See *long-time pickup*.

$I_{sd}$  = See *short-time pickup*.

$I^2t$  = See *let-through current*.

**$I^2 t$  IN ( $I^2 t$  ON)** = An inverse time delay characteristic.

**$I^2 t$  OUT ( $I^2 t$  OFF)** = A constant time delay characteristic.

**latch check switch** = A mechanically-operated switch which senses if the trip latch is reset.

**let-through current** = The peak current (measured in amperes) which passes through an overcurrent protective device during an interruption.

**let-through  $I^2t$**  = An expression related to energy (measured in ampere-squared seconds) which passes through an overcurrent protective device during an interruption.

**LI** = A combination of adjustable trip functions including long-time ampere rating, long-time delay, and instantaneous pickup.

**lifting adapter** = A device used with a crane, chain block or an optional lifting mechanism supplied with switchgear for removing and installing a drawout circuit breaker or fuse truck.

**LIG** = A combination of adjustable trip functions including long-time ampere rating, long-time delay, instantaneous pickup, ground-fault pickup and ground-fault delay.

**limit switch** = A switch mechanically operated by a device.

**local current meter** = An ammeter installed as part of the trip unit.

**long-time ampere rating** = An adjustment which, in combination with the installed rating plug, establishes the continuous current rating of a full-function electronic trip circuit breaker.

**long-time delay** = The length of time the circuit breaker will carry a sustained overcurrent (greater than the long-time pickup) before initiating a trip signal.

**long-time pickup** = The current level at which the circuit breaker long-time delay function begins timing.

**low voltage power circuit breaker (LVPCB)** = A circuit breaker tested to the ANSI C37 Standards with a two-step stored-energy mechanism, an electronic trip system, and drawout construction.

**LS** = A combination of adjustable trip functions including long-time ampere rating, long-time delay, short-time pickup, short-time delay and a defeatable instantaneous pickup.

**LSG** = A combination of adjustable trip functions including long-time ampere rating, long-time delay, short-time pickup, short-time delay, defeatable instantaneous pickup, ground-fault pickup and ground-fault delay.

**LSI** = A combination of adjustable trip functions including long-time ampere rating, long-time delay, short-time pickup, short-time delay and defeatable instantaneous pickup.

**LSIG** = A combination of adjustable trip functions including long-time ampere rating, long-time delay, short-time pickup, short-time delay, defeatable instantaneous pickup, ground-fault pickup and ground-fault delay.

## PowerPact H-, J-, and L-Frame Circuit Breakers Glossary

**main disconnecting contacts** = Spring-loaded and self-aligning contact on the rear of a drawout circuit breaker that provide positive electrical contact when the circuit breaker is in the connected position.

**Masterpact™** = The family of universal power circuit breakers including insulated case circuit breakers and low-voltage power circuit breakers.

**MCH** = See *spring-charging motor*.

**MDGF** = Modified differential ground-fault system.

**manual charging handle** = A manually-operated handle which charges the circuit breaker closing springs.

**mechanical operation counter (CDM)** = A mechanical device which indicates the total number of circuit breaker operating cycles.

**Micrologic™** = The family of electronic trip systems available on molded case circuit breakers, insulated case circuit breakers and low-voltage power circuit breakers.

**miniature circuit breaker (MCB)** = A small circuit breaker which is assembled as an integral unit in a supportive and enclosed housing of insulating material, rated 150 A or less and used in 120 V, 120/240 V, 240 V and 480Y/277 V ac systems and dc systems up to 125 Vdc.

**MN** = See *undervoltage release*.

**Modbus™ communication network** = A communication network comprised of programmable controller interface units, protocol software and modems.

**molded case circuit breaker (MCCB)** = A circuit breaker which is assembled as an integral unit in a supportive and enclosed housing of insulating material, generally 20 to 3000 A in size and used in systems up to 600 Vac and 500 Vdc.

**motor circuit protector** = A recognized component of construction similar to a circuit breaker except with no thermal elements so that it provides short-circuit protection only.

**MX** = See *shunt trip*.

**National Association of Standardization and Certification for the Electrical Sector** = See *ANCE*.

**neutral current transformer** = A current transformer which encircles the neutral conductor; required on circuit breakers with ground-fault protection, when applied on a grounded system.

**NMX® (Norma Mexicana X)** = Listing mark indicating certification to non-mandatory Mexican safety standards.

**NOM** = Listing mark indicating certification to mandatory Mexican safety standards

**OF** = See *auxiliary switch*.

**open/closed indicator** = An indicating means which displays the position (open or closed) of the main contacts.

**operating mechanism** = An internal mechanical system which opens and closes the circuit breaker contacts.

**OTS** = Overcurrent trip switch (alarm switch, bell alarm). A mechanical switch that operates when the circuit breaker is tripped by the trip system.

**overcurrent** = Any current in excess of the rated continuous current of equipment or the ampacity of a conductor.

**overcurrent mechanism** = An internal mechanical system which trips the circuit breaker during an overcurrent.

**overcurrent trip element** = A device which detects an overcurrent and transmits the energy necessary to open the circuit automatically (UL only).

**overcurrent trip switch (SDE)** = A mechanically-operated switch which indicates when a circuit breaker has tripped due to overcurrent conditions.

**overload delay** = The length of time the circuit breaker will carry a sustained low-level overcurrent before initiating a trip signal.

**peak current sensing** = A method of determining the current by means of detecting the current peaks.

**peak let-through current** = The maximum peak current flowing in a circuit during an overcurrent condition.

**PF** = A switch used to indicate a circuit breaker is ready to close.

**phase barrier** = A barrier which provides phase-to-phase or phase-to-ground isolation.

**PowerLogic™** = The family of electronic circuit monitoring systems available on molded case circuit breakers, insulated case circuit breakers and low-voltage power circuit breakers.

**Power-Zone™** = The family of low-voltage and medium-voltage switchgear.

**programmable contact module (M6C and M2C)** = A programmable module which indicates the type of fault and the instantaneous and delayed threshold overruns. It may be programmed with instantaneous return to the initial state, without return to the initial state, or with return to the initial state following a delay.

**primary disconnect contacts** = An electrical plug-on connector in the main current path between the drawout components and the cradle mounted in the equipment.

**push-to-close button** = A button for manually closing the main contacts after the closing springs are charged.

**push-to-open button** = A button for manually opening the circuit breaker.

**push-to-trip button** = A button for manually tripping the circuit breaker.

**racking device shutter** = See *drawout shaft cover*.

**racking interlock** = An interlock to prevent racking of a drawout circuit breaker when the enclosure door is open by not allowing the racking crank to be inserted into the circuit breaker.

**rating plug** = A component which plugs into the full-function electronic trip unit, establishing the maximum continuous current rating of the circuit breaker.

**remote reset after fault (RES)** = A component which resets the overcurrent trip switch (SDE) and the mechanical operator after tripping.

**RES** = See *remote reset after fault*.

**residual ground-fault sensing** = A means of providing equipment ground-fault protection utilizing sensors on each individual phase.

**restraint interface module (RIM)** = A component which allows zone-selective interlocking communication between Square D™ full-function electronic trip systems, add-on ground-fault modules and zero-sequence ground-fault relays.

**RIM** = Restraint interface module.

**RMS** = Root-mean-square.

**RMS current sensing** = A method of determining the true RMS current of sinusoidal and non-sinusoidal waveforms by sampling the current waveform a number of times per cycle, then calculating the true RMS value.

**safety shutter** = A device that closes to block access to the main disconnects when the circuit breaker is in the disconnected, test or withdrawn position.

**SDE** = See *overcurrent trip switch*.

**secondary disconnect contacts** = An electrical plug-on connector in the secondary (control) circuit between a drawout circuit breaker and its cradle in the equipment.

**sensor** = The current sensing element within the circuit breaker which provides the sensing function for that circuit breaker.

**sensor plug** = A component used with a Micrologic trip system to set the sensor size of a circuit breaker.

# PowerPact H-, J-, and L-Frame Circuit Breakers

## Glossary

**sensor size** = Maximum ampere rating possible for a specific circuit breaker, based on the size of the current sensor inside the circuit breaker. Sensor size is less than or equal to frame size.

**SGR** = Source ground return system.

**short-circuit delay (STD)** = The length of time the circuit breaker will carry a short circuit (current greater than the short-circuit pickup) before initiating a trip signal.

**short-circuit pickup** = The current level at which the circuit breaker short-circuit delay function begins timing.

**short-time delay** = The length of time the circuit breaker will carry a short circuit (current greater than the short-time pickup) before initiating a trip signal.

**short-time pickup** = The current level at which the circuit breaker short-time delay function begins timing.

**shunt close (closing coil) (XF)** = An accessory which closes the circuit breaker from a remote location using an external voltage source.

**shunt trip (MX)** = An accessory which trips the circuit breaker from a remote location using an external voltage source.

**spring-charging handle** = A handle located on the front of the circuit breaker used to manually charge the stored energy mechanism.

**spring charging motor** = A motor which electrically charges the stored energy closing spring(s).

**STD** = Short-time delay.

**stored energy mechanism (SEM)** = A spring mechanism that is compressed or “charged” and then released or “discharged” to close the circuit breaker.

**terminal block** = The connections for control wiring.

**tg** = See *ground-fault delay*.

**thermal imaging** = A trip unit function that accurately maps the heating and cooling effects of load behavior on rated conductors to provide thermal protection without nuisance tripping.

**thermal-magnetic circuit breaker** = A general purpose term for circuit breakers that use bimetals and electromagnetic assemblies to provide both thermal and magnetic overcurrent protection.

**thermal memory** = Provides continuous temperature rise status of the wiring for a period of time both before and after the device trips. This allows the circuit breaker to respond to a series of overload conditions which would otherwise go undetected.

**t<sub>r</sub>** = See *long-time delay*.

**t<sub>sd</sub>** = See *short-time delay*.

**two-step stored energy mechanism** = See *stored energy mechanism*.

**transformer** = A static device with primary winding, connected in series with the conductor (bus) carrying the current to be measured or controlled within the switchgear.

**trip button** = See *push-to-trip button*.

**trip curve** = A graphical representation of the response of a circuit breaker to current over a period of time.

**trip indicator** = A module that mounts directly to the circuit breaker trip unit that displays whether the circuit breaker tripped due to an overload, a short-circuit or a ground-fault condition.

**trip indicator reset** = A button on the trip indicator module used to reset the trip indicator.

**trip system** = A system which consists of a Micrologic trip unit and current transformers.

**trip unit** = A programmable device which measures and times current flowing through the circuit breaker and initiates a trip signal when appropriate.

**UL®** = See *Underwriters Laboratories Inc.*

## PowerPact H-, J-, and L-Frame Circuit Breakers Glossary

**undervoltage trip (MN, UVR)** = An accessory which trips the circuit breaker automatically when the monitored circuit voltage falls below a predetermined percentage of its specified value.

**Underwriters Laboratories Inc.® (UL®)** = An independent, not-for-profit standards development, product safety testing and certification organization.

**unit-mount circuit breaker** = A circuit breaker mounted such that it cannot be removed without removing primary and sometimes secondary connections or mounting supports.

**withstand rating** = The level of RMS symmetrical current that a circuit breaker can carry with the contacts in a closed position for a stated period of time—usually stated in cycles.

**zero-blind time** = Metering method used by the Micrologic H trip unit where a dedicated metering data chain is separate from the protection data chain so that a greater number of data samples can be used for metering. This increases the number of samples taken per time period, which in turn gives the H trip unit a higher degree of metering accuracy.

**zero-sequence ground-fault sensing** = A means of providing equipment ground-fault protection utilizing an external sensor (surrounding all phase and neutral conductors).

**zone-selective interlocking (ZSI)** = A communication capability between electronic trip systems and ground-fault relays which permits a short circuit or ground fault to be isolated and cleared by the nearest upstream device with no intentional time delay.

**ZSI** = Zone-selective interlocking.
