

PDU

Power Distribution Units (PDUs)

The most reliable rack mount power distribution for high-density IT environments. AT models feature Automatic Transfer Switching, allowing operation from a secondary input source if the primary input fails.

- Rugged all-metal housings
- Metered models display total power consumption of connected equipment, assuring maximum PDU utilization without overload risk
- Monitored models support remote monitoring of load level and site conditions
- 3-phase models provide 3-phase input and single-phase output, compatible with Tripp Lite and other 3-phase UPS Systems
- HV models support 30A maximum capacity with outlets arranged in two separately breakered 15A load banks
