

PTT CASE

A PROTECTIVE CASE
DESIGNED FOR PTT USE

So much more than a phone case

Loud and clear!

When you're working in the field, you need a fast and reliable tool to communicate. And with the Crosscall protective case, your phone becomes as responsive and instinctive to use as a walkie talkie. Enjoy all the benefits of a true PTT experience, with ultra-accessible shortcuts so you can communicate instantly and chat with ease, even in the most urgent situations.

PRODUCT HIGHLIGHTS

OVERSIZED KEYS

You can't miss them!

The design of the protective case means your device's keys are easier to find, with specific colours and textures that mean you always hit the right button. Even with gloves, you can instantly launch your mobile's PTT function as well as a second function of your choice.

EASY FITTING

Operational in the field

There's no time to lose. The case has a simple attachment system for quick and easy fitting. The two half-shells slide on to the sides of the phone and are secured with two screws on each side. Your phone is properly positioned and secure.

X-LINK™ COMPATIBLE

Nothing is off limits

Even when slotted inside its case, your phone is still compatible with X-LINK™ products and associated functions, such as the back-up charge, data transfer and magnetic attachment systems. Nothing has changed, you can still make the most of your device.

FULLY FUNCTIONAL

As efficient as ever

Even inside its protective shell, your smartphone stays as ergonomic as ever. You can still activate it using the power button, and unlock it with your fingerprint. There's easy access to the charging caps and 3.5mm jack, and you can even add tempered glass or a lanyard.

DESIGN

In perfect harmony with your mobile

They are literally made for each other. The protective case envelops your mobile and fits perfectly to its contours and curves. Its design uses resistant materials, offering robust and ergonomic protection for a phone you can use every day.

PROTECTION

Armour for your phone

Your smartphone was already tough, and now it's more resistant than ever, with a protective case that can withstand falls from 3 metres. The materials used for the case create a shield, to keep your smartphone safe no matter how you use it, or where. Whether you bang, scratch or drop it, it is always safe from harm.
