markets and buy-side

ihsmarkit.com/FinancialRiskAnalytics

Financial risk analytics for sell-side traded markets and buy-side

The Financial Risk Analytics division of IHS Markit has a team of 110+ full-time employees across the globe made up of financial engineers, software engineers, product specialists, client sales and professional services. Customers are supported with professional services available on the ground in all regions with 24/7 support.

Financial Risk Analytics provides products and solutions to financial institutions to measure and manage their counterparty credit risk, market risk, regulatory risk capital and derivative valuation adjustments.

Using the latest analytics and technology such as a fully vectorized pricing library, Machine Learning and a Big Data stack for scalability, our products and solutions are relied upon by the largest tier-one banks to smaller niche buy-side firms.

Our risk analytics solutions are available deployed, in the cloud or can be run as a service so we free up your internal resources to focus on your business priorities.

XVA

Lead the competition in the fast-paced world of derivatives trading with our XVA solution giving deal-time insight into the P&L and capital costs of potential trades. Get a complete picture of valuation adjustments arising from counterparty credit risk, funding, collateral and regulatory capital (SA-CCR, SA-CVA).

- State of the art pre-deal performance with all valuation adjustment returned in under a minute
- Sensitivities available on all valuation adjustments for hedging and P&L explain

The screenshot displays the IHS Markit XVA software interface. The top navigation bar is green with the IHS Markit logo. The main content area is divided into several sections:

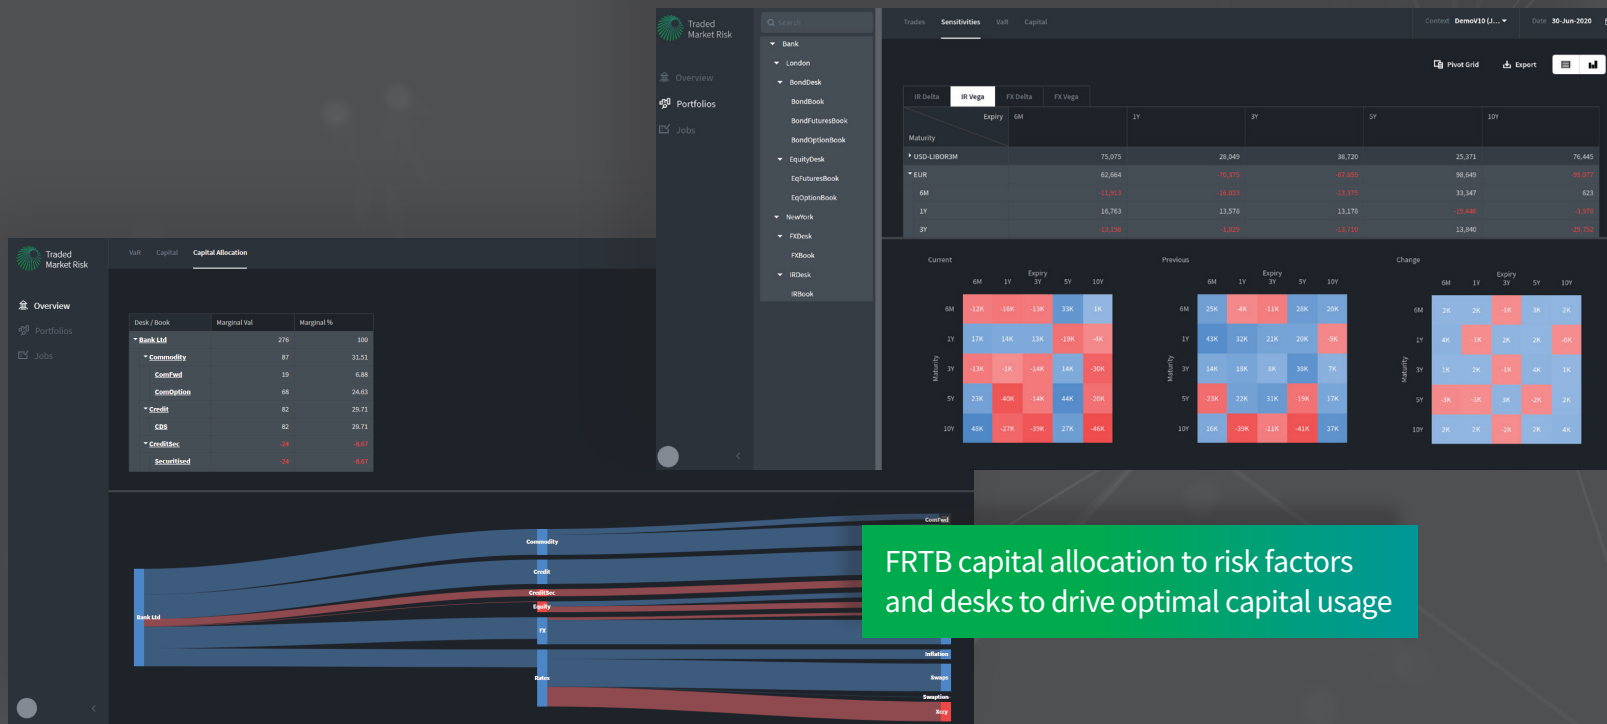

- SELECT CONTEXT:** Includes 'Context' (XVA_EOD), 'Valuation Date' (29 Jan 2019), and 'NAVIGATION' (Internal Entities, Counterparties).
- COUNTERPARTIES:** A table showing data for various counterparties. The table has columns for Name, COL_VA, CVA, DVA, FBA, FCA, and FVA. The data is presented in two columns, with the first column showing the counterparty name and the second column showing the corresponding values.
- INTERNAL ENTITIES:** A table showing data for internal entities. The table has columns for Name, FBA_FS, FCA_FS, FVA_FS, K_BA_CVA, K_BA_CVA_REDUCED, and K_BA_CVA_REDUCED. The data is presented in two columns.
- Reference Data (Internal Entity):** A section showing various reference data points for the selected internal entity.
- Charts:** A bar chart showing the breakdown of valuation adjustments for internal entities. The y-axis ranges from -0.75M to 7.25M. The x-axis shows categories: FBA_FS, FCA_FS, FVA_FS, K_BA_CVA, and K_BA_CVA_REDUCED.
- Airbus Group SE:** A section showing exposure profiles and CDS spreads. It includes a line chart with 'Amount' on the y-axis and dates on the x-axis. The chart shows two lines: ENE (red) and EPE (green).
- Reference Data (Counterparty):** A section showing various reference data points for the selected counterparty.

A green text box overlay on the right side of the screenshot reads: "Full calculation transparency with intermediate results stored and accessible".

Traded Market Risk

Future proof your market risk capabilities with our multi award winning Traded Market Risk solution. Our next generation analytics platform extends full revaluation VaR and Stress Testing into FRTB compliance with full support for the Standardised (SA) and Internal Model Approach (IMA).

- Comprehensive VaR/ES calculation across all asset classes and trade types
- Immediate insight into the capital contribution of non-modellable risk factors (NMRF) through award-winning analytics fuelled by market-leading transaction coverage

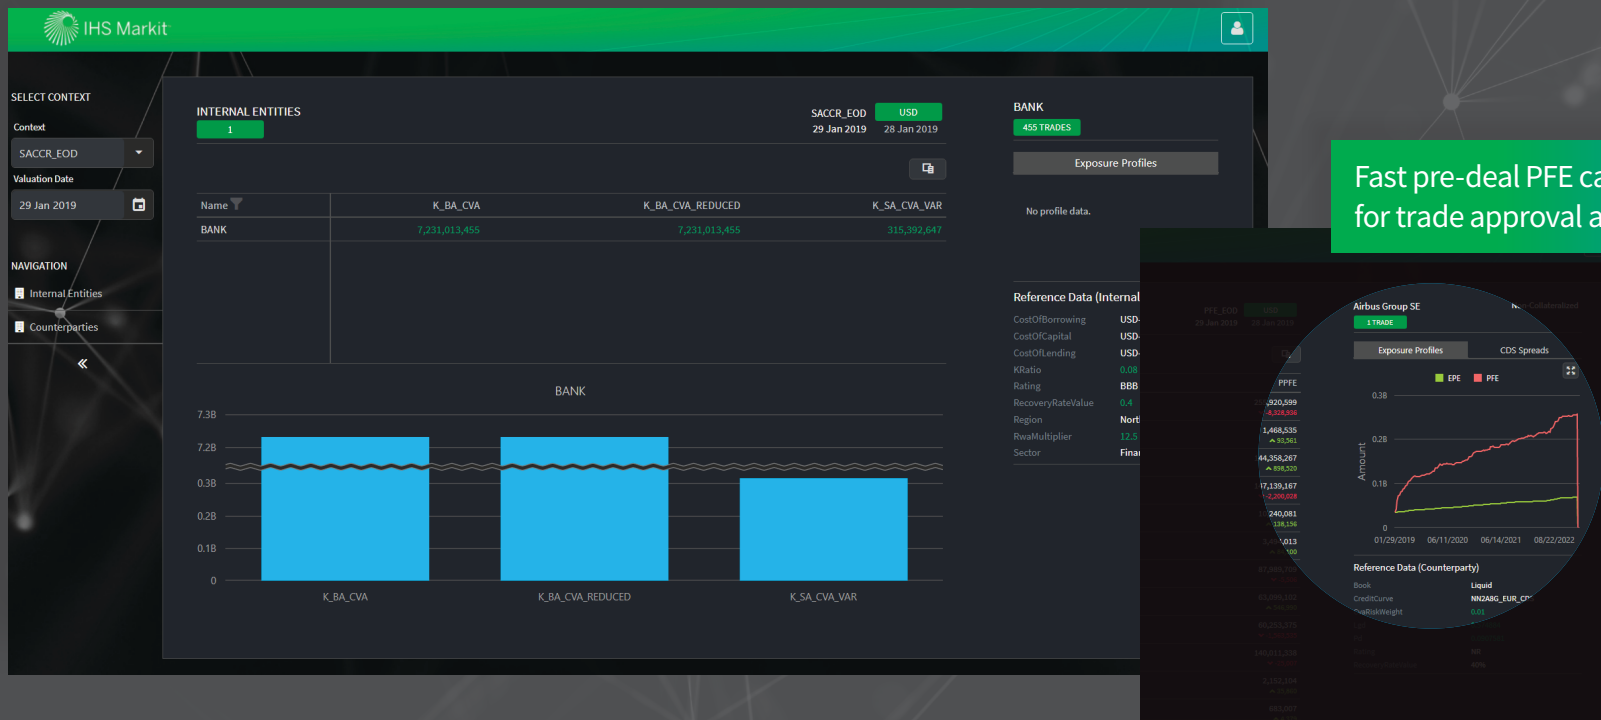

FRTB capital allocation to risk factors and desks to drive optimal capital usage

Counterparty Credit Risk

Fast track your Internal Model Method (IMM) approval with our Counterparty Credit Risk solution. Supporting both standardised (SA-CCR) and advanced (IMM) capital approaches, our solution also calculates multi-asset PFE for controlling your counterparty exposure.

- Track record of IMM approval across regions and regulators
- Comprehensive valuation library with scripting language for exotics

Scenario Stress Testing

Simplify the ever-growing complexity of regulatory stress tests with our Scenario Stress Testing solution. Our flexible cloud-based scenario engine can expand regulatory prescribed shocks to the risk factors in your portfolio. Determine the P&L and capital impact on your trading book by feeding the shocks into our companion products: Traded Market Risk, Counterparty Credit Risk and XVA.

- Preloaded market data for scenario expansion
- Full audit trail of scenario expansion so you can explain and replay portfolio shocks

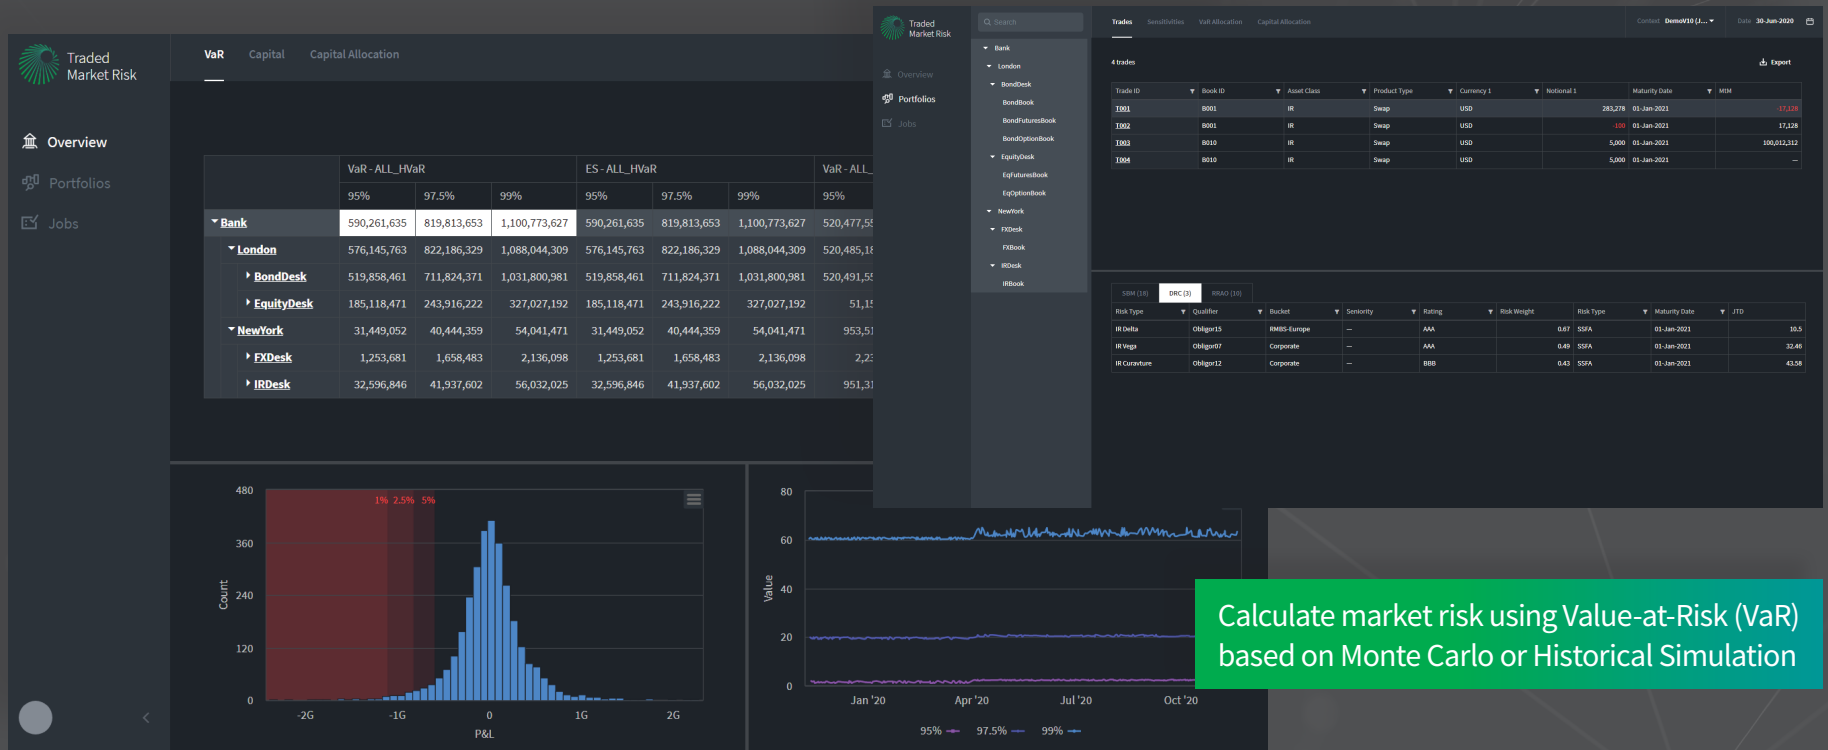

The image displays the SST (Scenario Stress Testing) dashboard and a detailed view of a scenario. The dashboard includes a sidebar with navigation options: Dashboard, Jobs, Scenarios, and Resources. The main dashboard area shows a 'Scenario Status' section with 2 In Progress, 8 Completed, 6 Approved, and 1 Failed scenarios. It also displays 'Recent Jobs' for 'COVID-19 Stress Test 2020', 'Interest Rate', 'Credit', 'Test EBA 2019', and 'EBA 2017'. A 'Scenario Summary' section features a donut chart showing the distribution of scenario statuses: 10% (2) In Progress, 50% (8) Completed, 35% (6) Approved, and 5% (1) Failed. A 'Reverse stress testing by fast search algorithm through plausible shock permutations' callout box is overlaid on the right side of the dashboard.

The detailed view for the 'Interest Rate 2020' scenario shows a 'Sorted Scenario P&L' chart and a 'Scenario P&L Distribution' chart. The 'Sorted Scenario P&L' chart shows a distribution of P&L values across scenarios, and the 'Scenario P&L Distribution' chart shows a histogram of P&L values. Below these charts are 'Drill-downs' for 'Book Drill-down' and 'Risk Factor Drill-down', which are circular charts showing the breakdown of P&L by book and risk factor.

Buy Side Risk

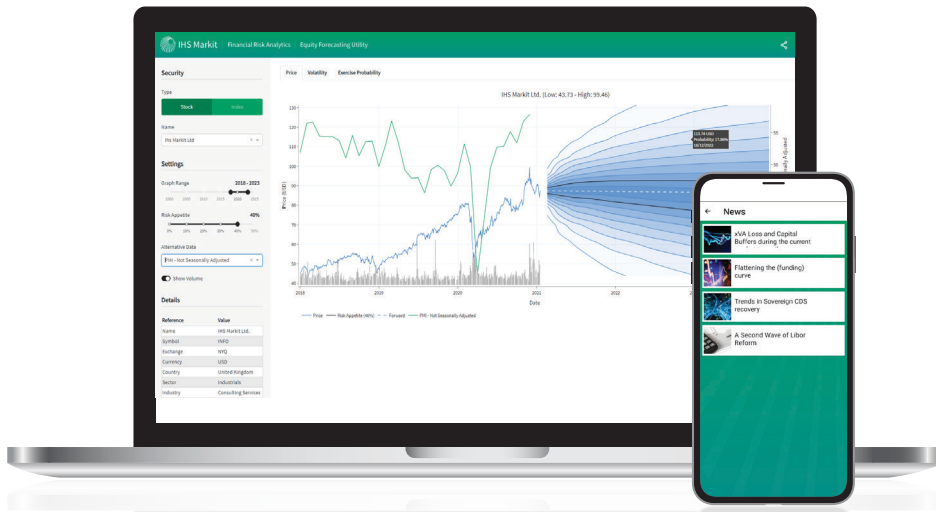

Break away from legacy buy side risk systems and access our next generation technology on the cloud. Our Buy Side Risk solution brings together an efficient simulation engine, Value at Risk and multiple decision support tools like stress testing and pre-trade analytics. All available online and in the cloud to minimise the total cost of ownership.

- Apply the tools used by tier one banks such as CVA and PFE to assess your counterparty credit risk
- Multiple decision support tools like stress testing and pre-trade what-if give you an edge when building your portfolio

Risk Bureau

Gain unique insights into a variety of risk topics through our Risk Bureau. A collection of on-demand web and mobile apps give buy and sell side institutions immediate access to decision support tools:

XVA Neural Net Pricer

Quickly understand the XVA and XVA sensitivities of trading with a given counterparty using a Machine Learning based pricing tool

XVA & Capital Hypercube

Gain insight into the XVA and capital costs for a variety of derivative instruments

Credit Forecasting Utility

View simulated credit spreads and overlay relevant Alternative Data to gain insights into future portfolio performance

Equity Forecasting Utility

View simulated equity prices implied from option markets and overlay relevant Alternative Data to gain insights into future portfolio performance

Risk Free Rates Hypercube

Get an up-to-date view of the implied fallback spreads for the forthcoming libor cessation

Risk Bureau Services

Bespoke on-demand risk calculations across any of our products with results delivered through a secure web UI on a daily/weekly/monthly basis
