

USB to PS/2 Keyboard and Mouse Converter Adapter

Product ID: USBPS2PLATE

This USB to PS/2 Adapter connects to an internal (motherboard) USB port, letting you connect two PS/2 devices such as a keyboard and mouse, to your low profile or standard profile desktop PC.

The adapter provides a practical, cost-effective way to bridge your legacy PS/2 devices with a modern computer, by allowing you to use PS/2 devices on a computer that lacks built-on PS/2 ports.

Plus, unlike most native PS/2 connections, the USB to PS/2 adapter interfaces with the host computer through the USB bus - so PS/2 devices can be hot plugged or swapped without having to reboot the system.

Certifications, Reports and Compatibility

Applications

- Allows users to use PS/2 compatible mice and keyboards on computers equipped with a USB port

Features

- Designed with universal connectors allowing users to use either of the two PS/2 connectors for either keyboards or mice
- Does not require any external power adapter
- Easy installation and set up
- Plug and Play compatible
- Use your PS/2 devices on newer desktops or servers without PS/2 interfaces
