

# **IE300 Series**

## **Industrial Ethernet Layer 3 Switches**

Our ruggedized IE300 Industrial Ethernet switches provide enduring performance in harsh environments, such as those found in manufacturing, transportation and physical security. Offering high throughput, rich functionality and advanced security features, IE300 switches deliver the performance and reliability demanded by industrial deployments in the age of the Internet of Things (IoT).

## Securing the network edge

Ensuring data protection means controlling network access. Protocols such as IEEE 802.1X port-based authentication guarantee that only known users are connected to the network. Unknown users who physically connect can be segregated into a pre-determined part of the network. This offers network guests Internet access, while ensuring the integrity of private network data.

## Gigabit and fast Ethernet support

The IE300 Series SFP ports support both gigabit and Fast Ethernet Small Form-Factor Pluggables (SFPs). This makes the IE300 Series ideal for environments where gigabit fiber switches will be phased in over time. This allows for connectivity to the legacy 100FX hardware until it is upgraded to gigabit Ethernet.

Support for both speeds of SFPs allows organizations to stay within budget as they migrate to faster technologies.

## High network resiliency

The IE300 Series supports highly stable and reliable network switching with a recovery time of less than 50ms. You can customize the IE300 with the most appropriate mechanism and protocol to prevent network connection failure. Choices include Allied Telesis Ethernet Protection Switched Ring (EPSRing™), and the standard ITU-T G.8032.

## Configurable power budget

On the PoE sourcing IE300 switches, you can configure both the overall power budget and the power feeding limit on a per-port basis, to establish a close relationship between the power sourcing feature and the real capabilities of the external Power Supply Unit (PSU).1

## Overview

Allied Telesis IE300 Series are a highperforming and feature-rich choice for today's networks. The IE300 are ideal for Industrial Ethernet applications, being qualified for Manufacturing, Railway Transportation (Telco & Signaling), Roadway Transportation (Traffic Control) and Smart Cities.

With a fanless design and a wide operating temperature range of -40°C to 75°C, they tolerate harsh and demanding environments, such as those found in industrial and outdoor deployment.

Device management is provided via industry standard CLI, web-based Graphical User Interface (GUI), SNMP, Telnet and SSH, as well as the Allied Telesis Autonomous Management Framework<sup>TM</sup> (AMF).

## Powerful network management

The Allied Telesis Autonomous Management Framework™ (AMF) meets the increased management requirements of modern converged networks, automating many everyday tasks including configuration management. AMF has powerful centralized management features that manage a complete network as a single virtual device. The network can be expanded with plug-and-play simplicity, and network node recovery is fully zero-touch.

AMF secure mode increases network security with management traffic encryption, authorization, and monitoring. AMF Guestnode allows third party devices, such as security cameras, to be part of an AMF network.

# AMF™ EPSRing™

## **Key Features**

- ▶ AlliedWare Plus<sup>TM</sup> functionality
- ➤ Allied Telesis Autonomous Management Framework<sup>TM</sup> (AMF) node
- OpenFlow for SDN
- Routing capability (ECMP, OSPF, RIP, Static and BGP)
- ▶ Active Fiber Monitoring<sup>TM</sup>
- ► Ethernet Protection Switched Ring (EPSRing<sup>TM</sup>)
- ► Ethernet Ring Protection Switching (ITU-T G.8032)
- ▶ Upstream Forwarding Only (UFO)
- ➤ Deterministic real-time Ethernet (IEEE 1588v2 PTP)
- ▶ IEEE 802.3at PoE+ sourcing (30W)
- ► Hi-PoE sourcing (60W)
- ▶ Continuous PoE
- ► Enhanced Thermal Shutdown
- ▶ Redundant power inputs
- ▶ Alarm input/output
- ▶ Fanless design

## **Future-proof**

The IE300 Series ensures a futureproof network with a comprehensive feature set, and are Software Defined Networking (SDN) ready supporting OpenFlow v1.3.

<sup>1</sup> Power supply must be compliant with local/national safety and electrical code requirements. Select the supply with the most appropriated output power derating curve.

## **Key Details**

## Allied Telesis Autonomous Management Framework (AMF)

- ► AMF is a sophisticated suite of management tools that provide a simplified approach to network management. Common tasks are automated or made so simple that the every-day running of a network can be achieved without the need for highly-trained, and expensive, network engineers. Powerful features like centralized management, auto-backup, auto-upgrade, auto-provisioning and auto-recovery enable plug-and-play networking and zero-touch management.
- AMF secure mode encrypts all AMF traffic, provides unit and user authorization, and monitors network access to greatly enhance network security.

## **Software Defined Networking (SDN)**

 OpenFlow is a key technology that enables the use of SDN to build smart applications that unlock value and reduce cost.

## **High Availability**

- ► EPSRing™ and ITU-T G.8032 enable a protected ring capable of recovery within as little as 50ms. These features are perfect for high performance and high availability.
- Spanning Tree Protocol compatible, RSTP; MSTP; static Link Aggregation Group (LAG), and dynamic Link Aggregation Control Protocol (LACP) support

## Industry-leading Quality of Service (QoS)

Comprehensive low-latency wire-speed QoS provides flow-based traffic management with full classification, prioritization, traffic shaping and min/max bandwidth profiles. Enjoy boosted network performance and guaranteed delivery of business-critical Ethernet services and applications. Time-critical services such as voice and video take precedence over non-essential services such as file downloads, maintaining responsiveness of your applications.

## sFlow

SFlow is an industry standard technology for monitoring high speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure it always has a real-time view of network traffic.

## **Active Fiber Monitoring**

 Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent

## Link Layer Discovery Protocol – Media Endpoint Discovery (LLDP – MED)

▶ LLDP-MED extends LLDP basic network endpoint discovery and management functions. LLDP-MED allows for media endpoint specific messages, providing detailed information on power equipments, network policy, location discovery (for Emergency Call Services) and inventory.

## **VLAN Translation**

- VLAN Translation allows traffic arriving on a VLAN to be mapped to a different VLAN on the outgoing paired interface.
- ▶ In Metro networks, it is common for a network Service Provider (SP) to give each customer their own unique VLAN, yet at the customer location give all customers the same VLAN-ID for tagged packets to use on the wire. SPs can use VLAN Translation to change the tagged packet's VLAN-ID at the customer location to the VLAN-ID for tagged packets to use within the SP's network.
- ➤ This feature is also useful in Enterprise environments where it can be used to merge two networks together, without manually reconfiguring the VLAN numbering scheme. This situation can occur if two companies have merged and the same VLAN-ID is used for two different purposes.

## **VLAN Mirroring (RSPAN)**

VLAN mirroring allows traffic from a port on a remote switch to be analyzed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

## Security (Tri-Authentication)

▶ Authentication options on the IE300 Series also include alternatives to IEEE 802.1X port-based authentication, such as web authentication, to enable guest access and MAC authentication for endpoints that do not have an IEEE 802.1X supplicant. All three authentication methods—IEEE 802.1X, MAC-based and Web-based—can be enabled simultaneously on the same port for tri-authentication.

## **Access Control Lists (ACLs)**

AlliedWare Plus delivers industry-standard Access Control functionality through ACLs. ACLs filter network traffic to control whether routed packets are forwarded or blocked at the port interface. This provides a powerful network security mechanism to select the types of traffic to be analyzed, forwarded, or influenced in some way.

## **Upstream Forwarding Only (UFO)**

 UFO lets you manage which ports in a VLAN can communicate with each other, and which only have upstream access to services, for secure multi-user deployment.

## Dynamic Host Configuration Protocol (DHCP) Snooping

▶ DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks against this DHCP snooping database to ensure only clients with specific IP and/or MAC address can access the network. DHCP snooping can be combined with other features, like dynamic ARP inspection, to increase security in layer 2 switched environments, and also provides a traceable history, which meets the growing legal requirements placed on service providers.

## Deterministic Real-Time Ethernet (IEEE 1588v2 PTP)

▶ IEEE 1588v2 Precise Time Protocol is a fault tolerant method enabling clock synchronization in a distributed system that communicates using an Ethernet network; this deterministic communication network is designed to provide

- precise timing for automation applications and measurement systems.
- ► IE300 supports IEEE 1588v2, one-step Transparent Clock, End-to-End mode, performs an active role on Ethernet networks reducing the effects of Jitter; as transparent switch, it adjusts the timing content of PTP packets as a function of the delay caused by the switch.

## PoE, PoE+ and Hi-PoE

- ▶ IE300 is a Power Sourcing Equipment (PSE), compliant with IEEE802.3af, IEEE802.3at standards. Each port supplies either 15.40W (PoE), or 30.00W (PoE+); four ports are configurable for Hi-PoE, which uses all four pairs in the cable to supply up to 60W. When supplying Hi-PoE, the IE300 supports both single signature and dual signature negotiation with power devices. Practical use is to support PTZ cameras with heater/blowers for outdoor application, enhanced infrared lighting, lighting controller and LED lighting fixtures, Remote Point of Sale (POS) kiosks, as well as other devices.
- ▶ IE300 allows the configuration of the overall power budget as well as the power feeding limit on port basis; that establishes a close relationship between power sourcing feature with the real capabilities of the external PSU.

#### Continuous PoE

- Enabling the unique Continuous PoE feature, the switch retains PoE sourcing during restart events, such as those due to operator command, software exception, watchdog timeout or diagnostic failures.
- The restart event is not propagated to the end devices, and camera operation is not affected.

## Alarm Input/Output

▶ Alarm Input/Output are useful for security integration solution; they respond to events instantly and automatically by a pre-defined event scheme, and notify alert message to the monitoring control center. The 2-pin terminal blocks may be connected to sensors and actuator relays. Alarm Input receives signal from external devices like motion sensor and magnets; that will trigger subsequent actions if something changes. Alarm output controls external device upon a event (i.e. sirens, strobes, PTZ camera).

## **Enhanced Thermal Shutdown**

➤ The enhanced Thermal Shutdown feature acts when the switch exceeds the safe operating temperature; different stages allow to preserve services and prevent damage. When the operating temp reaches critical levels, the system cuts the PoE sourcing to non-critical interfaces first, then to critical interfaces; if the temp still increases, then all services will be disabled and the system will enter the standby mode. The system restores operation when the temperature returns at acceptable levels.

## **Premium Software License**

▶ By default, the IE300 Series offers a comprehensive Layer 2 and basic Layer 3 feature set that includes static routing and IPv6 management features. The feature set can easily be upgraded with premium software licenses.

## **Key Solutions**

EPSRing<sup>™</sup> and ITU-T G.8032 provide high speed resilient ring connectivity. This diagram shows the IE Series in a double ring network topology.

The IE Series operates at a large -40°C to +75°C temperature range and allows deployment in outdoor and harsh industrial environments.

PoE models feed 30 Watts per port, and support remotely controlled Pan, Tilt and Zoom (PTZ) video cameras.

The IE300 can source up to 60 Watts on four ports. The Hi-PoE utilizes all four pairs in the cable to provide power and expands the range of devices that can be added to the network, such as PTZ cameras with a heater/blower, enhanced infrared lighting, POS terminals, and thin client computer.

Management can be automated with the Allied Telesis Autonomous Management Framework™ (AMF).

## **Specifications**

PRODUCT	10/100/1000T (RJ-45) COPPER PORTS	100/1000X SFP PORTS	TOTAL PORTS	POE+ ENABLED PORTS	SWITCHING FABRIC	FORWARDING RATE
IE300-12GP	8	4	12	8	24Gbps	17.8Mpps
IE300-12GT	8	4	12	-	24Gbps	17.8Mpps

## Performance

MAC address 16K entries Packet Buffer 1.5 MBytes (12.2 Mbits)

Priority Queues Simultaneous VLANs 4K 1 - 4094 VLANs ID range 9KB iumbo packets Jumbo frames Multicast groups 1,023 (Layer 2), or

## Reliability

- ► Modular AlliedWarePlus<sup>™</sup> operating system
- Redundant power input
- ▶ Full environmental monitoring of temperature and internal voltages. SNMP traps alert network managers in case of any failure
- ► Enhanced Thermal Shutdown

## Flexibility and Compatibility

▶ Gigabit SFP ports supports any combination of Allied Telesis 10Mbps, 100Mbps and 1Gbps SFP modules listed in this document under Ordering Information

## **Diagnostic Tools**

- ► Active Fiber Monitoring detects tampering on optical links
- ► Automatic link flap detection and port shutdown
- ▶ Built-In Self Test (BIST)
- ► Connectivity Fault Management (CFM) Continuity Check Protocol (CCP) for use with G.8032 ERPS
- ► Cable fault locator (TDR)
- ► Event logging via SYSlog over IPv4
- Find-me device locator
- ► Optical Digital Diagnostics Monitoring (DDM)
- Automatic link flap detection and port shutdown
- ▶ Ping polling for IPv4 and IPv6
- Port and VLAN mirroring (RSPAN)
- ► TraceRoute for IPv4 and IPv6

## <sup>2</sup>When PIM is enabled; see the Command Reference guide for recommended settings

#### **IPv4 Features**

- Black hole routing
- Directed broadcast forwarding
- DHCP server and relay
- DNS relav
- Equal Cost Multi Path (ECMP) routing
- Route redistribution (OSPF, RIP, and BGP)
- Static unicast and multicast routes for IPv4
- UDP broadcast helper (IP helper)

#### **IPv6 Features**

- ▶ DHCPv6 relav. DHCPv6 client
- Device management over IPv6 networks with
- SNMPv6, Telnetv6 and SSHv6
- IPv4 and IPv6 dual stack
- IPv6 hardware ACLs
- NTPv6 client and server
- Static unicast routing for IPv6

## Management

- Front panel LEDs provide at-a-glance PSU status, PoE status, and fault information
- Allied Telesis Autonomous Management Framework (AMF) node
- Console management port on the front panel for ease of access
- Eco-friendly mode allows ports and LEDs to be disabled to save power
- Industry-standard CLI with context-sensitive help
- Powerful CLI scripting engine
- Built-in text editor
- Event-based triggers allow user-defined scripts to be executed upon selected system events
- SNMPv1/v2c/v3 support
- Comprehensive SNMP MIB support for standards based device management
- USB interface allows software release files, configurations and other files to be stored for backup and distribution to other devices
- Recessed Reset button

## **Quality of Service**

- 8 priority queues with a hierarchy of high priority queues for real-time traffic, and mixed scheduling, for each switch port
- Extensive remarking capabilities
- IP precedence and DiffServ marking based on Layer 2, 3 and 4 headers
- Limit bandwidth per port or per traffic class down
- Policy-based QoS based on VLAN, port, MAC and general packet classifiers
- Policy-based storm protection
- Strict priority, weighted round robin or mixed scheduling
- Taildrop for queue congestion control
- Wirespeed traffic classification with low latency essential for VoIP and real-time streaming media applications

## **Resiliency Features**

- ► Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
- ▶ Dynamic link failover (host attach)
- ▶ Ethernet Protection Switching Ring (EPSR) with SuperLoop Prevention (EPSR-SLP)
- ▶ Ethernet Ring Protection Switching (G.8032 ERPS)
- ▶ Loop protection: loop detection and thrash limiting
- ► PVST+ compatibility mode
- ▶ Router Redundancy Protocol (RRP) snooping
- Spanning Tree Protocol (STP) root guard

## **Security Features**

- ▶ Access Control Lists (ACLs) based on layer 3 and 4 headers
- Access Control Lists (ACLs) for management traffic
- ► Authentication, Authorisation and Accounting (AAA)
- ► Auth fail and guest VLANs
- ▶ BPDU protection
- ▶ Bootloader can be password protected for device security
- ▶ DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
- ▶ DoS attack blocking and virus throttling
- ▶ Dynamic VLAN assignment
- ▶ MAC address filtering and MAC address lock-down
- Network Access and Control (NAC) features manage endpoint security
- ► Port-based learn limits (intrusion detection)
- Private VLANs provide security and port isolation for multiple customers using the same VLAN
- RADIUS local server (100 users) and accounting
- Secure Copy (SCP)
- ▶ Strong password security and encryption
- ► TACACS+ authentication and accounting
- Tri-authentication: MAC-based, Web-based and IFFF 802.1X

## **Software Defined Networking (SDN)**

► OpenFlow v1.3 support

## **Environmental Specifications**

- Operating temperature range: -40°C to 75°C (-40°F to 167°F)
- Storage temperature range:
- -40°C to 85°C (-40°F to 185°F) Operating humidity range:
- 5% to 95% non-condensing Storage humidity range: 5% to 95% non-condensing
- Operating altitude: 3,000 meters maximum (9,843 ft)

#### Switches

The DIN rail and wall mount kits are included.

## AT-IE300-12GP-80

8x 10/100/1000T, 4x 100/1000X SFP,

Industrial Ethernet, Layer 3 Switch, Hi-PoE Support

## AT-IE300-12GT-80

8x 10/100/1000T,

4x 100/1000X SFP,

Industrial Ethernet, Layer 3 Switch

## Supported SFP Modules

Refer to the installation guide for the recommended  ${\sf Max}.$ Operating Temperature according to the selected SFP module.

## 1000Mbps SFP Modules

## AT-SPBD10-13

10 km, 1G BiDi SFP, LC, SMF (1310Tx/1490Rx)

## AT-SPBD10-14

10 km, 1G BiDi SFP, LC, SMF (1490Tx/1310Rx)

## AT-SPBD20-13/I

20 km, 1G BiDi SFP, SC, SMF, I-Temp (1310Tx/1490Rx)

## AT-SPBD20-14/I

20 km, 1G BiDi SFP, SC, SMF, I-Temp (1490Tx/1310Rx)

#### AT-SPBD20LC/I-13

20 km, 1G BiDi SFP, LC, SMF, I-Temp (1310Tx/1490Rx)

## AT-SPBD20LC/I-14

20 km, 1G BiDi SFP, LC, SMF, I-Temp (1490Tx/1310Rx)

## AT-SPEX

2 km, 1000EX SFP, LC, MMF, 1310 nm

## AT-SPEX/E

2 km, 1000EX SFP, LC, MMF, 1310 nm, Ext. Temp

## AT-SPLX10

10 km, 1000LX SFP, LC, SMF, 1310 nm

## AT-SPLX10/I

10 km, 1000LX SFP, LC, SMF, 1310 nm, I-Temp

## AT-SPLX10/E

10 km, 1000LX SFP, LC, SMF, 1310 nm, Ext. Temp

## AT-SPLX40

40 km, 1000LX SFP, LC, SMF, 1310 nm

## AT-SPLX40/E

40 km, 1000LX SFP, LC, SMF, 1310 nm, Ext. Temp

## AT-SPSX

550 m, 1000SX SFP, LC, MMF, 850 nm

## AT-SPSX/I

550 m, 1000SX SFP, LC, MMF, 850 nm, I-Temp

550 m, 1000SX SFP, LC, MMF, 850 nm, Ext. Temp

#### AT-SPTX

100 m, 10/100/1000T SFP, RJ-45

## AT-SPTX/I

100 m, 10/100/1000T SFP, RJ-45, I-Temp

## AT-SPZX80
