Thermal management accessories

Roof mounted return air ducts

A simple, scalable solution to more effectively manage the ever-increasing heat loads in today's Data Centre. This design mounts easily onto the SRS, ARS and DRS rack systems.

Combining the roof mounted return air duct with the in-rack air management ensures that the hot exhaust air, from the IT equipment, is contained in the rear of the rack avoiding recirculation. The return air duct directs the exhaust air from the rack to room air conditioners via a plenum ceiling or return duct work.

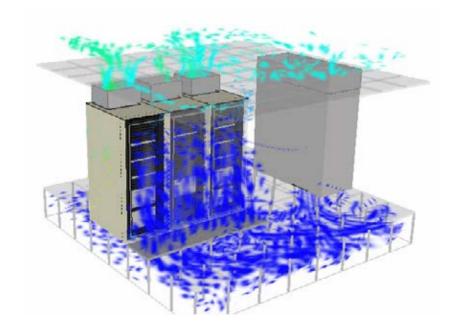

FEATURES

- · Retro fitted onto standard rack configurations
- 600W and 800W options
- Replaces a single full size top panel
- Adjustable in height from 460mm 840mm
- · Available in grey and black
- Ships flat packed for easy on-site assembly

Roof mounted return air ducts	Width mm	Colour	SRS	ARS	DRS	Order Code

SRS - 600W duct fits directly to 800W roof panel - no adapter required

Thermal management accessories

In-rack heat exchangers

In-rack heat exchangers are ideal for rooms with either solid or raised floors. Providing true flexibility, the units remove the need to pre-plan or over provision cooling at day one, avoiding unnecessary capital expenditure. Their design allows users the ability to scale the cooling provision to match demand, helping to reduce operational costs whilst offering optimal efficiency. B-Line's in-rack solutions provides the perfect balance, optimising users CAPEX and OPEX demands.

Duties vary according to supply temperatures. Normal operation is based on a "coolant on" temperature of 12°C and a "coolant off" temperature of 16°C. Designed to mount within the 19" aperture in racks with a minimum rack depth of 1000mm, the coolers can be mounted into B-Line's entire rack range as well as third party racks.

Universal high density standard width server cooler kit

Thermal management accessories

Floor grommets

By sealing gaps around pipe work or cabling infrastructure, floor grommets reduce air loss and leakage, eliminating the possibility of the hot air return mixing with the cold air feed.

FEATURES

- Manufactured from high strength flame retardant ABS with Nylon 6 brush (where applicable)
- Overlapping brush to improve efficiency
- Easy to install
- RoHS compliant

Small server boot

Server boots with extension rails

Large server boots

Patch panel protectors

Security accessories

At B-Line, we know that it is critical to protect your equipment and network. That's why our range of security products provide an easy to implement solution for physical layer security for all IT applications.

B-Line Rack Patch Panel Protectors and Server Boots provides a low cost option for your next Data Centre project.

Features:

- Secure access
 - Hardware attaches inside the enclosure and is not accessible when door is locked.
- Easy access control

Access requires only the key, eliminating the need for special equipment or passwords and access codes.

Visibility

Mesh doors provide equipment visibility and air delivery whilst locked.

Retrofit

Can be installed on racks with existing equipment.

• Bend radius protection

Patch panel protectors come with special drop outs to protect cable bend radius.

Server boots

Eaton's B-Line Business rack security server boots are designed to help restrict access to 1U, 2U, 4U, 5U or 20U servers, and can work with any rack or enclosure application.

- · Limits access to server
- Designed for shallow equipment that does not extend in front of the rack
- Suitable for DVR applications and switches
- Fully enclosed top, bottom, and sides
- · All front server attachment hardware is enclosed inside server boot
- Deep enclosure extends out in front of the rack for patching and gear on 5U and 20U sizes
- Keys are keyed alike
- Each includes: One server boot enclosure with lock and two keys
- Finish: Black

.

Patch panel protectors

B-Line's rack security patch panel protectors help restrict unauthorised access to 1U or 4U patch panels by fully enclosing the front of the panel and the adjacent rack space.

- Limits access to 1U or 4U patch panel
- Fully enclosed top and bottom
- All front patch panel hardware is enclosed inside patch panel
- Keys are keyed alike
- Openings on side for cable exit
- Drop outs included to support cable bend
- Each includes: One patch panel protector enclosure with lock, two keys and two plastic drop outs
- Supplied with mounting hardware
- Finish: black

Enclosure power distribution units

Eaton ePDUs are enclosure based Power Distribution Units, designed to provide reliable, cost-effective power distribution together with highly accurate monitoring and control for Data Centre IT equipment. Eaton ePDUs enable the Data Centre manager to:

- Optimise and utilise all available power
- Control the operational expenditure involved in running a Data Centre
- Effectively manage and plan for new and existing infra-structure.

Maximise and manage available power by choosing your required level of monitoring and control – with true V, W, kWh and A (1% accuracy above 2A) consumption monitoring to enable you to track, trend, analyse and utilise all your available power.

Eaton ePDUs give you complete control of your power distribution and consumption. Remote and secure individual outlet switching allows control over individual outlets as well as customised groups of outlets and branch circuits, together with sequencing outlets with programmable delays. It is also possible to remotely reboot outlets and outlet groups for remote restart of servers and related equipment.

FlexPDUs & HotSwap MBP

FlexPDUs allow you to easily add supplemental Schuko or IEC output sockets. The HotSwap maintenance bypass enables you to bypass the UPS for servicing without powering off IT equipment – while providing IEC or Schuko output sockets to your IT equipment.

Eaton intelligent rack PDUs and maintenance bypass units - 1 phase

Uninterruptable Power Systems (UPS)

Regardless of your needs, the depth and breadth of Eaton's product range ensures the right UPS power protection for your application.

Eaton's UPSs are well known for offering the highest possible quality, reliability and state of the art performance, all in best-inclass power density form factor (1U - 6U). LCD interfaces provide quick and easy access to key measurement information and advanced parameters, while Network Management Cards enable powerful remote monitoring. High efficiencies and advanced Ecomodes guarantee cost effective operation, and Eaton's unique integration with VMWare, Hyper-V and Citrix make our UPSs the ideal choice for virtualised Data Centres.

Environmental Monitoring Probe

Monitoring your IT infrastructure

There are many factors that affect the availability of IT systems, including power, temperature, and sudden events like intrusion, flooding or fire to name a few. In many cases damage can be minimised or completely avoided if alarms are received promptly.

Eaton offers the necessary monitoring options and software to maximise the up-time of critical IT.

Uninterruptible power systems are designed to protect your IT equipment from power anomalies, including surges, sags and frequency variations. But when the power goes out for longer than your available battery runtime, Intelligent Power Software allows automatic actions including graceful shutdown of computers, relocation of virtual machines or disaster recovery plans.

Link to IT systems and virtualisation

Intelligent Power Manager is a productivity tool for administrators of several power devices and shutdown applications. It delivers the big picture and highlights key factors by concentrating information from multiple sources and displaying it in a single view. It also centralises alarm propagation ensuring important events are brought to the attention of those who need to know.

Intelligent power software

- Intelligent power manager for monitoring and managing power equipment in IT environments reduces total cost of ownership for the whole monitoring system.
- Plugs into VMware vCenter, Microsoft SCVMM and Citrix XenCenter with the ability to trigger live migration of virtual machines.
- Intelligent Power Protector for graceful shutdown of operating systems and VMware ESXi, Microsoft Hyper-V, Citrix XenServer and RedHat KVM hypervisors

Use each piece of software independently or as a powerful combination. Together with your UPS, and ePDUs they provide end to end power management for maximum uptime and data integrity.

Network card for UPS

- Intuitive, Cloud / Virtual Computing-based user interface
- Alerts via email and mobile devices minimise downtime
- Stores events and values in logs for analysis
- Connection to monitoring systems like SpiceWorks, Nagios, CiscoWorks and many others. Multilingual interface with automatic recognition of browser language.

Environmental monitoring probe

- Connects to ePDUs and UPS web cards
- Adds temperature and humidity monitoring and two configurable status inputs.

Rack intelligence

Today's businesses are becoming more and more reliant on their IT infrastructure to sustain a competitive edge. Businesses are therefore looking to maximise their capital investments in IT systems by striving to achieve 100% network availability. "Human Error" remains the largest threat to network integrity. Something as simple as incorrect or unauthorised modification to cable patching can cause systems to fail resulting in lost time and lost revenues. The first line of defence is therefore the proactive control of who has access to the infrastructure and when!

Whilst building control systems have been developed to manage room access, historically rack level security has been managed with conventional barrel key locks. On larger sites this has required the adoption of complex and time-consuming systems to manage the authorisation of personnel and the issuing of keys. Even with these elaborate processes in place the risk from the loss of keys, not to mention the potential.

Partnering with Austin Hughes, B-Line offers a choice of scalable integrated solutions. The following section gives an overview of the options available under each system platform, helping users to identify the platform which best suits their requirements.

Rack intelligence

InfraSolution S™

Rack level access security has become critically important for all data centres and server rooms. More and more IT managers have recognised this need and are upgrading their racks with smartcard access control. To meet the increasing needs, Austin Hughes offers the InfraSolution Standalone Smart Card Handle at an affordable price. The Smart Card handles are available with MIFARE or HID Proximity readers. The handles are fully compatible with the SRS, ARS and DRS platforms, offering a seamless upgrade path.

Once installation of the handles is complete the only thing left to do is to program your additional Smart Cards, each swipe card must be programmed to each individual handle and will only allow access to the handles that it has been programmed to.

For further security, handles can be programmed to only accept dual authorisation, this requires two Smart Cards to be presented to the handle before the door is unlocked.

Easy installation

- S-800P Proximity or S-800M MiFARE smartcard handle : 2 3 4 2pcs for front & rear door, with cables to connect
- 2 Optional door sensor with cable: 2pcs for front & rear door (2m)
- 3 Power cable (door section) : 2pcs for front & rear door (2m)
- Data input connector (for handle activation / data input / configuration)
- 5 Joint connector of 3 & 6
- 6 Y-Power cable (rack section)
- Universal Auto switching 2.5A power adapter and 6 foot power cord

ENVIRONMENTAL MANAGEMENT

The free management software IGM-03 supports up to 30 x IP.

Up to 16 x InfraGuard control boxes can be connected by daisy chain and remotely accessed by one single IP.

Under "one box two racks" scenario, environmental remote management of up to 960 racks can be achieved.

- EC 300M as the 1st level master EC box
- The EC box can be cascaded up to 16 levels
- Only 1 x IP for 16 x EC box remote access

InfraGuard Master EC

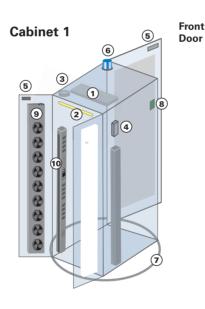

Rack intelligence

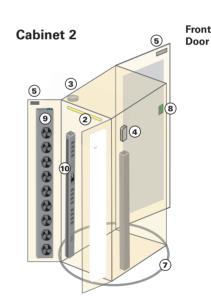

InfraGuard™

The InfraGuard platform provides the following features:

- Switching and monitoring of up to four PDUs per system box. Each PDU can be fitted with up to two temperature and humidity sensors.
- The monitoring of the opening / closing of up to two doors and two side panels.
- Control of InfraCool fan trays.
- Monitoring of temperature, humidity, smoke, shock and leak detection. The system box provides local status reading via two large visual LED screens as well as full remote alarm functionality.
- Each system box can be configured to report on up to 10 temperature and humidity sensors. Sensor connected via the PDUs can viewed through the software GUI or via the PDU LCD screen itself.

The web based GUI (graphic user interface) management software allows users to access and control different racks. One InfraGuard master box can be configured to support up to 15 slave boxes on a single IP address. The management software allows a maximum of 30 master boxes per installation allowing up to 480 boxes to be configured on a single system network.
