About This User's Guide

This chapter describes the content and structure of the user's guide, indicates how to obtain help, details where to find related documentation, and provides other general information.

Overview

Unsolicited Alarm and Information Messages Reference describes the EAGLE system unsolicited alarm (UAM) and unsolicited information (UIM) messages sent to the system terminal whenever there is a system fault, whenever a previous fault condition is corrected, or when a subsystem, equipment, and/or service is placed in or taken out-of-service. Each message has a trouble code and text associated with the trouble condition.

> ✎ **Note:**
>
> EAGLE supporting ANSI networks make use of the LNP and SEAS features. EAGLE supporting ITU networks do not include these systems.

The manual is organized as follows:

- About This User's Guide provides general information about the organization of this manual.
- Message Type describes the different alarms and message types used in the EAGLE.
- UAM and UIM Troubleshooting Procedures provides procedures to use in response to unsolicited alarm messages (UAMs) and unsolicited information messages (UIMs) displayed by the EAGLE.
- In addition, the appendices of this manual provide useful reference material for maintenance, diagnostic, and troubleshooting activities:
    - Appendix A: UAM Balancing Matrix
    - Appendix B: Unsolicited Output Message Groups
    - Appendix C: Auto-Inhibit Hardware Verification Codes

Scope and Audience

This manual is intended for maintenance personnel who must maintain the EAGLE. The technician should be familiar with SS7 protocols. The manual provides preventive and corrective procedures that will aid maintenance personnel in maintaining the EAGLE.

Preventive maintenance procedures are routines to be carried out on a scheduled basis to help prevent system failures. These routines are industry-standard recommendations and may be adopted to fit any company maintenance plan.

The corrective maintenance procedures are those used in response to a system alarm or output message. These procedures are EAGLE-specific and aid in the detection, isolation, and repair of faults.

Documentation Admonishments

Admonishments are icons and text throughout this manual that alert the reader to assure personal safety, to minimize possible service interruptions, and to warn of the potential for equipment damage.

Table 1-1   Admonishments

Icon	Description
DANGER	Danger: (This icon and text indicate the possibility of *personal injury*.)
WARNING	Warning: (This icon and text indicate the possibility of *equipment damage*.)
CAUTION	Caution: (This icon and text indicate the possibility of *service interruption*.)
TOPPLE	Topple: (This icon and text indicate the possibility of *personal injury* and *equipment damage*.)

Manual Organization

This document is organized into the following chapters:

- About This User's Guide contains overview information about this reference manual, scope and audience and how to get technical assistance.

- Message Type provides an overview of the format of the alarm messages and their purpose.

- UAM and UIM Troubleshooting Procedures lists the alarm and information messages and their troubleshooting procedures.

- UAM Balancing Matrix includes tables with alarm types, severity and their clearing alarms.

- Unsolicited Output Message Groups provides a list of alarms and information messages and their corresponding output groups.

- Auto-Inhibit Hardware Verification Codes lists the auto-inhibit hardware verification codes.

My Oracle Support (MOS)

My Oracle Support (MOS) is your initial point of contact for any of the following requirements:

- **Product Support**:
  The generic product related information and resolution of product related queries.

- **Critical Situations**
  A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities, and requires immediate corrective action. Critical situations affect service and/or system operation resulting in one or several of these situations:

  – A total system failure that results in loss of all transaction processing capability

  – Significant reduction in system capacity or traffic handling capability

  – Loss of the system's ability to perform automatic system reconfiguration

  – Inability to restart a processor or the system

  – Corruption of system databases that requires service affecting corrective actions

  – Loss of access for maintenance or recovery operations

  – Loss of the system ability to provide any required critical or major trouble notification

  Any other problem severely affecting service, capacity/traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.

- **Training Need**
  Oracle University offers training for service providers and enterprises.

A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at Oracle Support Contacts. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

When calling, make the selections in the sequence shown below on the Support telephone menu:

1. Select 2 for New Service Request

2. Select 3 for Hardware, Networking and Solaris Operating System Support

3. Select one of the following options:

   - For Technical issues such as creating a new Service Request (SR), Select 1

   - For Non-technical issues such as registration or assistance with MOS, Select 2

You will be connected to a live agent who can assist you with MOS registration and opening a support ticket.

MOS is available 24 hours a day, 7 days a week, 365 days a year.

Emergency Response

In the event of a critical service situation, emergency response is offered by My Oracle Support (MOS) (MOS) main number at 1-800-223-1711 (toll-free in the US), or by calling the Oracle Support hotline for your local country from the list at http://www.oracle.com/us/support/contact/index.html. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities, and requires immediate corrective action. Critical situations affect service and/or system operation resulting in one or several of these situations:

- A total system failure that results in loss of all transaction processing capability
- Significant reduction in system capacity or traffic handling capability
- Loss of the system's ability to perform automatic system reconfiguration
- Inability to restart a processor or the system
- Corruption of system databases that requires service affecting corrective actions
- Loss of access for maintenance or recovery operations
- Loss of the system ability to provide any required critical or major trouble notification

Any other problem severely affecting service, capacity/traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.

Related Publications

For information about additional publications related to this document, refer to the Oracle Help Center site. See Locate Product Documentation on the Oracle Help Center Site for more information on related product publications.

Customer Training

Oracle University offers training for service providers and enterprises. Visit our web site to view, and register for, Oracle Communications training:

http://education.oracle.com/communication

To obtain contact phone numbers for countries or regions, visit the Oracle University Education web site:

www.oracle.com/education/contacts

Locate Product Documentation on the Oracle Help Center Site

Oracle Communications customer documentation is available on the web at the Oracle Help Center (OHC) site, http://docs.oracle.com. You do not have to register to access

these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at http://www.adobe.com.

1. Access the Oracle Help Center site at http://docs.oracle.com.

2. Click `Industries`.

3. Under the Oracle Communications subheading, click the `Oracle Communications documentation` link.

   The Communications Documentation page appears. Most products covered by these documentation sets will appear under the headings "Network Session Delivery and Control Infrastructure" or "Platforms."

4. Click on your Product and then the Release Number.

   A list of the entire documentation set for the selected product and release appears.

5. To download a file to your location, right-click the `PDF` link, select `Save target as` (or similar command based on your browser), and save to a local folder.

2

Message Type

This chapter provides an overview of the format of the messages and their general purpose.

System Alarm Levels

There are three levels of alarms in the EAGLE system. They are:

Critical
A critical alarm is an indication of a severe service affecting problem that can be related to traffic, billing, and maintenance capabilities and requires immediate maintenance attention, regardless of time of day.

Major
A major alarm is an indication of a problem that seriously affects system operation, maintenance and administration, etc. and requires immediate attention. The urgency is less than in critical situations because of a lesser immediate or impending effect on system performance, customers, and operating company operations and revenue.

Minor
A minor alarm is an indication of a problem that does not have a serious impact on service, and does not require immediate maintenance attention.

> **Note:**
>
> Some UAMs are considered informational if they satisfy the following conditions in the SNMP V2 traps generated by EAGLE E5OAM:
>
> 1. The Alarm Level is stated as "No alarm condition" in this user's guide.
>
> 2. The alarm is not intended to clear any higher severity UAM as per the corresponding UAM Balancing Matrix.
>
> These UAMs are informational only and neither contribute to the total number of alarms in the system nor change the alarm state of the device on EAGLE.

Output Messages

The EAGLE generates output messages in response to command input or fault conditions in the EAGLE or in the network. The format for these messages is generally uniform. Some messages include additional data.

Network messages provide the text description of the event, and on the lines below the text line, any additional information.

The following example shows the general format of an output message.

Figure 2-1   Output Message Format
The fields in an output message (shown in the figure above) are described next:

- Host CLLI code - a maximum of one alpha character and ten alphanumeric characters. The CLLI code uniquely identifies the system in terms of its physical location. The CLLI code must be unique among all elements in the system.

   The **CLLI** code consists of the following:

   – City = 4 characters

   – State = 2 characters

   – Building = 2 characters

   – Equipment type = 3 characters

- **Date** - The date the message was generated, in the format year-month-day.

- **Time** - The time the message was generated with time zone, in the format hour: minutes: second time zone.

- **System Release Number** - contains a system identifier and the version ID number. The system identifier, can be `EAGLE` or `EAGLE5` depending on the product key enabled on the system. The version ID number has the software release specific GPL set that is expected to be installed on the system as approved loads. The format of the version ID number is in the form of **maj.min.maint**, defined as follows:

   – **maj** - the major release ID

   – **min** - the minor release ID

   – **maint** - the maintenance release ID

- **Alarm Level** - a one or two character indicator of the alarm level, defined as follows:

   – ***C** = Critical Alarm

   – ****** = Major Alarm

   – ***** = Minor Alarm

   – **blank** = No Alarm

- **Message Sequence Number** - This number is an index for all output messages. The number increments sequentially for every message. The output messages originating from the card in location 1113 has a range from 0001 through 4999. The range for location 1115 is 5000 through 9999.

- **Message Reference Number** - Messages that are associated with a specific action are numbered for reference. These messages are defined in this chapter, along with a corrective action.

- **Affected Device** - The device that caused the message to be generated. This generally describes the card type.

Network messages with additional data display the additional lines below the text string and message reference number (MRN). See individual messages for examples of output.

All network messages are non-alarm and are used to notify the user of network events. There may or may not be a procedure associated with these messages.

Unsolicited Alarm Messages (UAM)

The system sends unsolicited alarm messages to the system terminal whenever there is a system fault, whenever a previous fault condition is corrected, when a subsystem, equipment, and/or service is placed in or taken out of service. Each message has a trouble code and text associated with the trouble condition.

Unsolicited Information Messages (UIM)

The system sends unsolicited information messages to the system terminal whenever there is a non-service affecting condition. This includes **MSUs** with invalid information, conversion failures, and/or a failed gateway screening function. Each message has a numbered code and informational text associated with the condition.

3

UAM and UIM Troubleshooting Procedures

Troubleshooting Procedures

The following procedures are listed by message reference number (MRN). Locate the message reference number in the output message on your screen, find the MRN in this chapter, and follow the procedure to troubleshoot the problem.

> **✐ Note:**
>
> The outputs in the following procedures are examples. Some outputs have several variations. In most cases only one variation is shown.

If a linkset is in *test mode*, any GWS failure UIMs are reported, but the failed traffic is still switched through. The UIM displays a line identifying the test mode state. A linkset in test mode performs the GWS action, but does not screen out MSUs which do not pass screening. The GWSM action is on and the GWSA or GWS Activated action is off.

The system header information is shown in the example outputs and includes the following information:

Figure 3-1   System Header Information
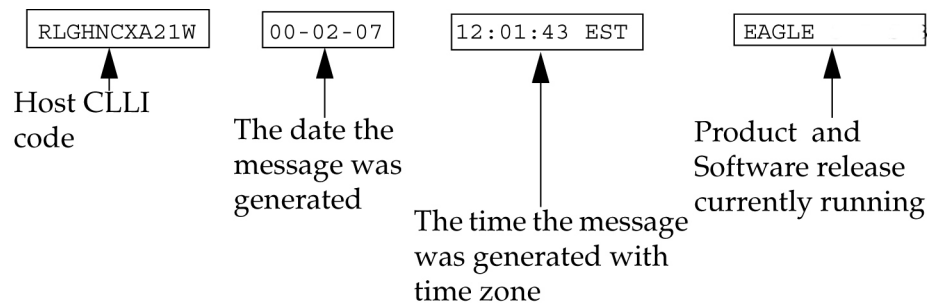

Legend

ASSY SN
Assembly Serial Number

SLC
Signaling Link Code

FECLLI

Far End CLLI - the CLLI designation, i.e., `name`, of the machine interacting with this machine.

ILSN

Incoming Linkset Name

UAMs

The following are UAMs that may be displayed.

0001 - Card Has Reset

This could have been the result of a manual reset, or software reset. If the system software detects trouble with a card, the processors on the card (application or communication processors) are reset by software. The system software is responsible for this function.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0001 ** CARD 1113 OAM   Card has reset
```

Alarm Level: Major

Recovery

1. The system recovers from this condition by reloading the card software.

   If the card continually resets, replace the affected card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

   The recovery message sequence should be similar to:

```
**  0057.0001 ** CARD 1201 SS7ANSI   Card has reset
    0058.0096    CARD 1201 SS7ANSI   Card has been reloaded
    0059.0236    SLK 1201,A nc00027  REPT-LKF: not aligned
    0060.0236    SLK 1201,B nc00027  REPT-LKF: not aligned
    0061.0200    SLK 1201,A nc00027  RCVRY-LKF: link available
    0062.0200    SLK 1201,B nc00027  RCVRY-LKF: link available
```

2. If the card resets without explanation or continues to reset, contact My Oracle Support (MOS).

0002 - Card is not Running Approved GPL

This alarm indicates a card or cards are running a generic program load (GPL) other than the approved GPL. This is determined by a system audit, which compares the GPL running on each card with the approved version for each card type. If any card(s) are running a GPL other than its approved GPL, an alarm is created. Only one alarm for each card application is displayed.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0002  * GPLSYSTEMOAM   Card is not running approved GPL
```

Alarm Level: Minor

Recovery

There are three procedures for this output. Choose the procedure based on the GPL System indicated in the alarm message. Refer to the following to help determine the correct procedure:

1. Use the Recovery Procedure for All Cards Without Flash Memory if the following GPLs are indicated in the output as the GPL System.

   ATMANSI, ATMITU, CCS7ITU, EBDABLM, EBDADCM, EMDC, EOAM, EROUTE, GLS, IMT, IPGWI, IPLIM, IPLIMI, IPS, MCP, SCCP, SS7ANSI, SS7HC, SS7IPGW, SS7ML, STPLAN, VSCCP, VXWSLAN

2. Use the Recovery Procedure for Cards With Flash Memory (Except HMUX and HIPR) if the following GPLs are indicated in the output as the GPL System.

   BLBIOS, BLCPLD, BLDIAG, BLVXW, BPDCM, BPHCAP, BPHCAPT, BPMPL, BPMPLT, IMTPCI, PLDE1T1, PLDPMC1

3. Use the Recovery Procedure for HIPR2 Card if the following GPL is indicated in the output as the GPL System.

   BPHMUX, HIPR

Recovery Procedure for All Cards Without Flash Memory

> **⚠ Caution:**
>
> This procedure causes the identified card to reload, and should be used only during periods of low traffic or the maintenance window.

1. Enter this command to verify the GPLs running for the card identified in the output:

   ```
   rept-stat-gpl:gpl=xxxxxxx
   ```
   where xxxxxxx is the GPL

   > **✎ Note:**
   >
   > Mismatched GPLs should occur only during upgrades or running a trial GPL.

   identified in the output.

   Example of the output:

   ```
   tekelecstp 03-07-03 16:53:23 EST  EAGLE5 32.0.0-55.0.0
       GPL Auditing  ON
   ```

```
GPL          CARD      RUNNING             APPROVED      TRIAL
SS7HC        1203      025-015-001 ALM     025-015-000   -----------
```

2. Verify GPL Auditing is **ON**. If not, enter this command:

   `chg-gpl:audit=on`

3. Enter the command to reload the card:

   `init-card:loc=xxxx`
   where xxxx is the card location stenciled on the shelf of the EAGLE 5 ISS

   > **✏ Note:**
   >
   > Wait for the card to finish loading before continuing.

4. Enter the command to verify the approved GPLs match the running GPLs:

   `rept-stat-gpl:gpl=xxxxxxx`
   where xxxxxxx is the GPL identified in the output.

5. If the GPLs match, you have completed this procedure.

   If the GPLs do not match, continue with the next step.

6. Enter this command to determine which cards are in alarm condition (indicated by the acronym ALM in the `rept-stat-gpl` display):

   `rept-stat-gpl`

7. Note which cards are in an alarm condition and contact My Oracle Support (MOS).

Recovery Procedure for Cards With Flash Memory (Except HMUX and HIPR)

> **⚠ Caution:**
>
> This procedure causes the identified card to reload, and should be used only during periods of low traffic or the maintenance window.

1. Enter the command to display the card locations running the GPL identified in the output.

   `rept-stat-gpl:gpl=xxxxxxx`
   where xxxxxxx is the GPL identified in the output.

   Example of the output.

   ```
   tekelecstp 03-07-03 16:53:23 EST  EAGLE5 35.0.0-55.0.0
   GPL Auditing  ON
   GPL          CARD      RUNNING             APPROVED      TRIAL
   BLCPLD       1203      025-015-001 ALM     025-025-000   -----------
   ```

> **Note:**
>
> Mismatched GPLs should occur only during upgrades or running a trial GPL.

2. Verify GPL Auditing is ON. If not enter the command:

   ```
   chg-gpl:audit=on
   ```

3. Enter the command to deactivate all links on the card.

   ```
   dact-slk:loc=xxxx:link=y
   ```
   where xxxx is the card location identified in the output and y is the link.

4. Enter the command to change the state of the appropriate card to the out of service - maintenance disabled state:

   ```
   inh-card:loc=xxxx:force=yes
   ```
   where xxxx is the card location stenciled on the shelf of the EAGLE 5 ISS.

   Example of the output:

   ```
   RLGHNCXA03W  00-06-05  11:11:28 EDT  EAGLE 35.0.0
   Card has been inhibited.
   ```

5. Enter the command to load and activate the approved GPL onto the inhibited card:

   ```
   flash-card:code=appr:loc=xxxx:force=yes
   ```
   where xxxx is the card location used in the previous step. The optional `force=yes` is used to force the command to work on an IS-NR card. Links provisioned on the card are inhibited during command execution. The card and inhibited links are restored to their previous state when the command is completed.

   Example of the output using card location 1112:

   ```
   Command Accepted - Processing

       tekelecstp 18-01-18 16:06:22 MST  EAGLE 46.5.1.5.0-73.3.0
       flash-card:code=appr:force=yes:loc=1112
       Command entered at terminal #1.
   ;
       tekelecstp 18-01-18 16:06:55 MST  EAGLE 46.5.1.5.0-73.3.0
       Flash Card: FLASH GPL required to be downloaded on card 1112
       BLMCAP    : Running version 143-001-000  Expected version
   143-002-000
   ;
       tekelecstp 18-01-18 16:07:14 MST  EAGLE 46.5.1.5.0-73.3.0
       Flash Card: Downloading BLMCAP on card 1112
       Flash Card: Card(s) will reset after the flash GPL download.
   ;
       tekelecstp 18-01-18 16:07:56 MST  EAGLE 46.5.1.5.0-73.3.0
       Flash Card: Activating BLMCAP on card 1112
   ;
       tekelecstp 18-01-18 16:08:25 MST  EAGLE 46.5.1.5.0-73.3.0
       Flash Card: Card 1112 flash activation complete.
   ;
   ```

```
      Flash Card: Activating links on card 1112.
;
      tekelecstp 18-01-11 16:09:11 EST  EAGLE5 39.0.0
      Command Completed.
```

6. Enter the command to put the card that was inhibited in 4 back into service:

   `alw-card:loc=xxxx`
   where xxxx is the card location used in 4.

   Example of the output:

   ```
   RLGHNCXA03W  00-06-05  11:11:28 EDT  EAGLE 35.0.0
   Card has been allowed.
   ```

   > **Note:**
   >
   > Allow the card to run for 5 minutes before continuing.

7. Enter the command to activate all links on the card.

   `act-slk:loc=xxxx:link=y`
   where xxxx is the card location identified in the output and y is the link.

8. Enter the command to verify all links on the card are active.

   `rept-stat-slk:loc=xxxx:link=y`
   where xxxx is the card location identified in the output and y is the link.

9. Enter the command to verify the approved GPLs match the running GPLs:

   `rept-stat-gpl:gpl=xxxxxxx`
   where xxxxxxx is the GPL identified in the output.

10. If the GPLs match, you have completed this procedure.

    If the GPLs do not match, continue with the following step.

11. Repeat this procedure for each card that shows ALM in the output.

12. If the same card shows in an alarm condition after executing the procedure, please contact My Oracle Support (MOS).

Recovery Procedure for HIPR2 Card

> **Caution:**
>
> This procedure causes the identified card to reload and resets the respective IMT bus, and should be used only during periods of low traffic or the maintenance window.

1. Enter the command to verify the GPLs running for the card identified in the output:

   `rept-stat-gpl:gpl=xxxxxx`
   where xxxxxxx is the GPL (HIPR2 identified in the output.

Example of a HIPR2 output :

```
tekelecstp 03-07-03 16:53:23 EST  EAGLE5 35.0.0-55.0.0
GPL Auditing  ON
GPL

CARD  RUNNING      APPROVED       TRIAL
HIPR2   1209  028-005-000  028-005-000
-----------

HIPR2    1210  028-005-000  028-005-000
-----------

HIPR2    1309  028-004-000  028-005-000 ALM
-----------

HIPR2    1310  028-005-000  028-005-000
-----------
```

> **✎ Note:**
>
> Mismatched GPLs should occur only during upgrades or running a trial GPL.

2. Verify GPL Auditing is **ON**.

   If not enter the command:

   `chg-gpl:audit=on`

3. Enter the command to load the GPL onto the HIPR2 card:

   `init-flash:code=appr:loc=xxxx`
   where xxxx is the HIPR2 card location with the alarm condition in 1.

   Example of the output using card location 1309:

```
RLGHNCXA03W  00-06-05  11:11:28 EDT  EAGLE 35.0.0
    FLASH Memory Downloading for card 1309 Started.
;
    RLGHNCXA03W  00-06-05  11:11:28 EDT EAGLE 35.0.0
    HIPR2 Downloading for card 1309 Complete.
;
    RLGHNCXA03W  00-06-05  11:11:28 EDT  EAGLE 35.0.0
    Command Completed.
```

4. Enter the command to initialize the HIPR2.

> **⚠ Caution:**
>
> This command boots the HIPR2 processor and brings down the respective IMT bus temporarily (approximately 10 seconds) until the HIPR2 card comes back into service.

ORACLE

- To flash an individual HIPR2 card:

  `init-mux:loc=xxxx`

  where xxxx is the card location.

- To flash all cards on a particular bus:

  `init-mux:bus=y`

  where y is the bus.

> ✎ **Note:**
>
> Allow the card to run for 5 minutes before continuing.

5. Enter the command to activate the trial GPL loaded onto the card in 4:

   `act-flash:loc=xxxx`
   where xxxx is the card location used in 3.

   Example of the output using card location 1309:

   ```
   RLGHNCXA03W  00-06-05  11:11:28 EDT  EAGLE 35.0.0
       FLASH Memory Activation for card 1309 Completed.
   ;
       RLGHNCXA03W  00-06-05  11:11:28 EDT  EAGLE 35.0.0
       Command Completed.
   ```

6. Enter the command to verify the approved GPLs match the running GPLs:

   `rept-stat-gpl:gpl=xxxxxx`
   where xxxxxxx is the GPL (HIPR2) identified in the output.

   Example of a HIPR2 output:

   ```
   tekelecstp 03-07-03 16:53:23 EST  EAGLE5 35.0.0-55.0.0
   GPL Auditing  ON
   GPL

   CARD  RUNNING      APPROVED        TRIAL
   HIPR2    1209  028-005-000  028-005-000
   -----------

   HIPR2    1210  028-005-000  028-005-000
   -----------

   HIPR2    1309  028-005-000  028-005-000
   -----------
   HIPR2    1310  028-005-000  028-005-000
   -----------
   ```

7. If the GPLs match, you have completed this procedure.

   If the GPLs do not match, continue with the procedure.

8. Enter the command to determine which cards are in alarm condition (indicated by the acronym ALM in the `rept-stat-gpl` display):

```
rept-stat-gpl
```

9. Note which cards are in an alarm condition and contact My Oracle Support (MOS).

0003 - Alarm Cleared for GPL

This message indicates that all the cards of a specific type are running the approved GPL and the alarm condition, specified by message "0002 - Card is not running approved GPL" has been cleared.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0003    GPL SYSTEM OAM   Alarm cleared for GPL
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0004 - Card is Running Non-activated GPL

This alarm indicates a card or cards are running a non-activated Trial or Approved generic program load (GPL). This output is expected when changing a flash GPL. This alarm occurs after a successful download to the card, and the card boots. This is determined by a system audit, which compares the GPL running on each card with the activated version for each card type. If any card(s) are running a GPL other than its activated GPL, an alarm is created. Only one alarm for each card application is displayed. UAM 0002 might also be produced.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0004  * GPLSYSTEMBPDCM   Card is running non-activated GPL
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the release GPLs match the GPLs on the disk: `rtrv-gpl`

> **Note:**
>
> Mismatched GPLs should occur only during upgrades or running a trial GPL.

2. Enter the following command to determine which cards are in alarm condition (indicated by the acronym ALM in the `rept-stat-gpl` display): `rept-stat-gpl`

3. If the GPLs do not match from 1, note which cards are in an alarm condition and contact My Oracle Support (MOS).

0005 - Alarm Cleared Running Non-activated GPL

This message indicates that all the cards of a specific type are running the non-activated GPL and the alarm condition, specified by message "0004 - Card is running non-activated GPL" has been cleared.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0005    GPL SYSTEM BPDCM   Alarm cleared running non-activated GPL
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- This message indicates a previous fault has been corrected.

  No further action is necessary.

0008 - Active MASP has Become Isolated

This messages indicates the active MASP has a fault and the system switched to the standby MASP. This could be caused by the MASP losing a connection to the IMT, a failure with the GPSM-II card, or a card reset.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0008  ** CARD 1113 OAM        Active MASP has become isolated
```

Alarm Level: Major

Recovery

1. Enter the following command to check the status of the IMT: `rept-stat-imt`

   If the IMT is at fault, verify the IMT cables are connected to the shelf backplane (refer to the *Installation Manual* for cable locations).

2. If the state of the IMT appears good but the GPSM-II boots repeatedly, try reseating the GPSM-II card.

   If the problem persists, replace the GPSM-II card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

3. If the trouble does not clear, obtain any obituary reports and contact My Oracle Support (MOS).

0009 - MASP Became Active

This message indicates which MASP is active.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
 0014.0009   CARD 1113 OAM   MASP became active
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault or condition has been corrected.

No further action is necessary.

0010 - MASP Became Standby

This message indicates which MASP is standby.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0012.0010   CARD 1113 OAM   MASP became standby
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- This message indicates a previous fault or condition has been corrected.

  No further action is necessary.

0012 - Invalid HW for Integrated Measurements

The E5-OAM Integrated Measurements feature runs on the E5-MASP card. This UAM indicates that the E5-OAM Integrated Measurements feature is enabled and on, but one of the paired E5-MASP cards was removed from the active or standby MASP locations and replaced with an incompatible GPSM-II (OAM) card.

Example

```
**  0014.0012 ** CARD 1113 OAM             Invalid HW for Integrated
Measurements
```

Alarm Level: Major

Recovery

- Replace the GPSM-II (OAM) card in the active or standby position with a working E5-MASP card so that the E5-OAM Integrated Measurements feature can run correctly.

  Refer to the *Maintenance Manual* for card removal/replacement procedures.

0013 - Card is Isolated from the System

This indicates a card has become isolated and is unable to communicate to other cards in the system. This could be caused by a defective card, a power failure occurred on the card, a thermtrip when the shutdown temperature is exceeded, or the system software ordering a reset.

This also appears when the card has been manually reset by a command.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0013  **  CARD 1113 OAM   Card is isolated from the system
            ASSY SN: 102199815a1234
```

Alarm Level: Major

Recovery

1. Enter the following command to check the status of the card:

   `rept-stat-card:loc=x:mode=full`
   where x is the card location stenciled on the shelf of the system.

   Following is an example of the possible output using card 1106:

```
integrat40 00-05-24 10:37:22 EST EAGLE 35.0.0
    CARD    VERSION       TYPE        APPL      PST             SST
AST
    1106    021-101-000   TSM         SCCP      IS-NR           Active
-----
        ALARM STATUS      = No Alarms.
        IMT VERSION       = 021-001-000
        PROM VERSION      = 021-001-000
        IMT BUS A         = Conn
        IMT BUS B         = Conn
        CLOCK A           = Active
        CLOCK B           = Idle
        CLOCK I           = Idle
        MBD BIP STATUS    = valid
        DB STATUS         = valid
        DBD MEMORY SIZE   = 64M
        SCCP SERVICE      = 1201, , 1214, 1215, 1217, 1102
        SCCP % OCCUP      = 0%
        SLK A   PST       = OOS-MT          LS=ls11234567  CLLI=
        SLK B   PST       = OOS-MT          LS=ls11345678  CLLI=
        SNM   TVG RESULT  = 24 hr: ------,  5 min: ------
        SLAN  TVG RESULT  = 24 hr: ------,  5 min: ------
        SCCP  TVG RESULT  = 24 hr: ------,  5 min: ------
    Command Completed.
```

2. If only one card is isolated, wait to see if the card is recovering.

   If not, reset the card.

3. If resetting the card does not clear the fault, reseat the card.

> **Note:**
>
> For EPM-B based cards, the CPU shuts down automatically when the shutdown temperature is exceeded (thermtrip). After the temperature returns to normal operating conditions, you must reseat the card to restore operation.

4. If reseating the card does not clear the fault, replace the card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

5. If the alarm still does not clear, contact My Oracle Support (MOS).

0014 - Card is Present

The card indicated was isolated from the system, but is now communicating with the active MASP. The maintenance software has begun recovery action.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0014    CARD 1201 SS7ANSI   Card is present
             ASSY SN: 102199815a1234
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No immediate action is required.

The maintenance software is attempting to recover the card by reinitialization of the card.

0021 - Clock A for Card Failed, B Normal

This indicates that the A clock signal for the indicated card is not present.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0021  * CARD 1116 OAM   Clock A for card failed, Clock B normal
```

Alarm Level: Minor

Recovery

1. Enter the following command to determine the status of the clock:

   ```
   rept-stat-clk
   ```
   The output indicates how many cards are using the specified clock, and how many cards are reporting fault with the specified clock.

   Following is an example of the possible output:

   ```
   tekelecstp 00-04-23 13:34:15 EST EAGLE 35.0.0
       CARD LOC= 1114 (Active   )    CARD LOC= 1116 (Isolated )
   ```

```
PRIMARY BITS   = Active      PRIMARY BITS    = -----
SECONDARY BITS = Idle        SECONDARY BITS = -----
                             PST          SST        AST
SYSTEM CLOCK                 IS-NR        ACTIVE     ALMINH
# Cards using CLK A = 009    # Cards with bad CLK A = 000
# Cards using CLK B = 000    # Cards with bad CLK B = 009
# Cards using CLK I = 000
Command Completed.
```

> ⚠ **Caution:**
>
> Resetting, reseating, or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the `dact-slk` command.

2. If only one card is reporting fault, reset the card.

3. If the fault has not cleared, reseat the card.

4. If the fault has not cleared, replace the card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

5. If the fault has not cleared, replace the TDM card in MASP A.

6. If more than one card is reporting fault with the designated clock, check the clock cable connection at the shelf backplane (refer to the *Installation Manual* for cable location).

   If the clock cable is at fault, replace the clock cable.

7. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the `act-slk` command.

0022 - Clock B for Card Failed, A Normal

This indicates that the B clock signal for the indicated card is not present.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0022  * CARD 1116 OAM   Clock B for card failed, Clock A normal
```

Alarm Level: Minor

Recovery

1. Enter the following command to determine the status of the clock:

   `rept-stat-clk`
   The output indicates how many cards are using the specified clock, and how many cards are reporting fault with the specified clock.

   Following is an example of the possible output:

```
tekelecstp 00-04-23 13:34:15 EST EAGLE 35.0.0
    CARD LOC= 1114 (Active   )    CARD LOC= 1116 (Isolated )
```

```
PRIMARY BITS   = Active      PRIMARY BITS   = -----
SECONDARY BITS = Idle        SECONDARY BITS = -----
                             PST         SST       AST
SYSTEM CLOCK                 IS-NR       ACTIVE    ALMINH
# Cards using CLK A = 009    # Cards with bad CLK A = 000
# Cards using CLK B = 000    # Cards with bad CLK B = 009
# Cards using CLK I = 000
Command Completed.
```

> ⚠ **Caution:**
>
> Resetting, reseating, or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the dact-slk command.

2. If only one card is reporting fault, reset the card.

3. If the fault has not cleared, reseat the card.

4. If the fault has not cleared, replace the card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

5. If the fault has not cleared, replace the TDM card in MASP B.

6. If more than one card is reporting fault with a clock, check the clock cable connection at the shelf backplane (refer to the *Installation Manual* for cable location).

   If the clock cable is at fault, replace the clock cable.

7. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the `act-slk` command.

0023 - Clocks A and B for Card Failed

The A and B clock sources for the indicated card are not present.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0023  * CARD 1116 OAM   Clocks A and B for card failed
```

Alarm Level: Minor

Recovery

1. Enter the following command to determine the status of the clocks:

   ```
   rept-stat-clk
   ```
   The output indicates how many cards are using the specified clocks, and how many cards are reporting fault with the specified clock.

   Following is an example of the possible output:

   ```
   tekelecstp 00-04-23 13:34:15 EST EAGLE 35.0.0
       CARD LOC= 1114 (Active   )    CARD LOC= 1116 (Isolated )
   ```

```
PRIMARY BITS   = Active      PRIMARY BITS   = -----
SECONDARY BITS = Idle        SECONDARY BITS = -----
                             PST          SST        AST
SYSTEM CLOCK                 IS-NR        ACTIVE     ALMINH
# Cards using CLK A = 009    # Cards with bad CLK A = 000
# Cards using CLK B = 000    # Cards with bad CLK B = 009
# Cards using CLK I = 000
Command Completed.
```

> ⚠️ **Caution:**
>
> Resetting, reseating, or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the dact-slk command.

2. If the `rept-stat-clk` command indicates both clocks are healthy, reset the affected card.

3. If the fault has not cleared, reseat the affected card.

4. If the fault has not cleared, replace the affected card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

5. If the BITS clock is not at fault, replace the TDM cards in both MASP A and B.

6. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the following command:

   `act-slk:loc=x:port=y`
   where x is the card location stenciled on the shelf of the system and y is the port on the card designated in the loc parameter.

7. If the fault has not cleared, contact My Oracle Support (MOS).

0024 - Clock A for card normal

This message indicates that the clock A distribution for the specified card is now normal.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0024    CARD 1116 OAM   Clock A for card normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault in the clock A distribution has been cleared.

No action is necessary.

0025 - Clock B for card normal

This message indicates that the clock B distribution for the specified card is now normal.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0025    CARD 1116 OAM   Clock B for card normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault in the clock B distribution has been cleared.

No action is necessary.

0026 - Clocks A and B for card normal

This message indicates that clock A and B for the indicated card has returned to a normal state.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0026    CARD 1116 OAM   Clocks A and B for card normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0027 - IMT Bus util Rate Exceeds Minor Thresh

This message indicates that the combined IMT bus utilization rate has exceeded its minor threshold level.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
*   0590.0027 *  IMT SYSTEM        IMT Bus util rate exceeds minor
thresh
```

Alarm Level: Minor

Recovery

1. Note the time, duration, and frequency of the alarm(s).

2. Enter the `rept-stat-mux` command to note the rate at which the high-speed ring is operating.

3. Note any unusual conditions, such as one IMT bus inhibited, mate failed, SS7 link failures, etc.

4. If this is an isolated occurrence, no further action is required other than monitoring the system for a re-occurrence.

5. If the problem persists and the high-speed ring is operating at "low bit rate," this is an indication that the system is operating at low capacity and an upgrade of the high-speed ring to operate at "high rate" is required. Contact My Oracle Support (MOS) for information on how to purchase the HIPR2 High Rate Mode feature.

6. If the problem persists and the high-speed ring is operating at "high rate," contact My Oracle Support (MOS) for assistance.

0028 - IMT Bus util Rate Exceeds Major Thresh

This message indicates that the combined IMT bus utilization rate has exceeded its major threshold level.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST   EAGLE 41.1.0
**  0590.0028 ** IMT SYSTEM        IMT Bus util rate exceeds major
thresh
```

Alarm Level: Major

Recovery

1. Note the time, duration, and frequency of the alarm(s).

2. Enter the `rept-stat-mux` command to note the rate at which the high-speed ring is operating.

3. Note any unusual conditions, such as one IMT bus inhibited, mate failed, SS7 link failures, etc.

4. If this is an isolated occurrence, no further action is required other than monitoring the system for a re-occurrence.

5. If the problem persists and the high-speed ring is operating at "low bit rate," this is an indication that the system is operating at low capacity and an upgrade of the high-speed ring to operate at "high rate" is required. Contact My Oracle Support (MOS) for information on how to purchase the HIPR2 High Rate Mode feature.

6. If the problem persists and the high-speed ring is operating at "high rate," contact My Oracle Support (MOS) for assistance.

0029 - IMT Bus utilization threshold cleared

This message indicates that the alarm condition specified by the previous IMT bus utilization alarm has been cleared.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST   EAGLE 41.1.0
    0590.0029    IMT SYSTEM        IMT Bus utilization threshold cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0030 - HIPR2 Detected a Minor Congested Second

The congestion on an IMT bus segment has reached a level 1 congestion threshold. A congested second is a one second time slice that contains 10 or more congestion events that happen on that node.

When there are no minor congested second events being reported for a node for a period of five minutes, all congested second alarms are cleared for that node.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
*   0594.0030 *  Card 1109         HIPR2 detected a minor Congested
Second
```

Alarm Level: Minor

Recovery

1. Note the time, duration, and frequency of the alarm(s).

2. Enter the `rept-stat-mux` command to note the rate at which the high-speed ring is operating.

3. Note any unusual conditions, such as one IMT bus inhibited, mate failed, SS7 link failures, etc.

4. Note the segment(s) reporting the congestion.

5. If this is an isolated occurrence, no further action is required other than monitoring the system for a re-occurrence.

6. If the problem persists and the high-speed ring is operating at "low rate," this is an indication that the system is operating at capacity and an upgrade of the high-speed ring to operate at "high rate" is required. Contact My Oracle Support (MOS) for information on how to purchase the HIPR2 High Rate Mode feature.

7. If the problem persists and the high-speed ring is operating at "high rate," contact My Oracle Support (MOS) for assistance.

0031 - HIPR2 Detected a Major Congested Second

This message indicates that the congestion on an IMT bus segment has reached a level 2 congestion threshold. A congested second is a one-second time slice that contains 10 or more congestion events that happen on that node.

When there are no major congested second events reported for a node for a period of five minutes, the major congested alarm is replaced with the minor congested second alarm for that node.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
**  0590.0031 ** Card 1110        HIPR2 detected a major Congested
Second
```

Alarm Level: Major

Recovery

1. Note the time, duration, and frequency of the alarm(s).

2. Enter the `rept-stat-mux` command to note the rate at which the high-speed ring is operating.

3. Note any unusual conditions, such as one IMT bus inhibited, mate failed, SS7 link failures, etc.

4. Note the segment(s) reporting the congestion.

5. If this is an isolated occurrence, no further action is required other than monitoring the system for a re-occurrence.

6. If the problem persists and the high-speed ring is operating at "low rate," this is an indication that the system is operating at capacity and an upgrade of the high-speed ring to operate at "high rate" is required. Contact My Oracle Support (MOS) for information on how to purchase the HIPR2 High Rate Mode feature.

7. If the problem persists and the high-speed ring is operating at "high rate," contact My Oracle Support (MOS) for assistance.

0032 - HIPR2 Congestion cleared

This message indicates that the alarm condition specified by the previous HIPR2 congestion alarm has been cleared.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
    0590.0032    Card 1209        HIPR2 Congestion cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0033 - Card database has been corrected

This message indicates that the database has been reloaded to the indicated card by system software. This typically occurs when the system software finds the card database is not synchronized with the other cards in the system (incoherent database).

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0033    CARD 1113 OAM      Card database has been corrected
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0034 - Card database is inconsistent

This message indicates that the database on the indicated card is not at the same level as the source database level. For more information about database management procedures, refer to the *Database Administration Manual - System Management*.

Example

```
 RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0034  * CARD 1201 LIMDS0   Card database is inconsistent
```

Alarm Level: Minor

Recovery Procedure for a MASP Card

1. Enter the following command to retrieve the terminal types and port numbers:

   ```
   rtrv-trm
   ```

2. Enter the following command to inhibit each OAP terminal displayed in the output from 1:

   ```
   inh-trm:trm=x
   ```

   where x is the port number.

   > **Note:**
   >
   > The force parameter is required for the last OAP terminal inhibited.

3. Enter the following command to check the database level on all cards:

   ```
   rept-stat-db:display=all
   ```
   Pay special attention to note the database levels on both the active and standby current partitions and the levels represented on all the network cards. It is important that the database level of the network cards matches the database level of the active MASP.

> **✎ Note:**
>
> If the database on the OAM is repaired and ends up at a lower level than the network cards, the system must be initialized.

4. If neither database is at the same level as the network cards, contact My Oracle Support (MOS).

5. Depending on what the message indicates, do one of the following:

    • If the *active* fixed disk is inconsistent, continue with 6.

    • If the *standby* fixed disk is inconsistent, continue with 9.

    • If *both* fixed disks are inconsistent, continue with 14.

6. Enter the following command on the active GPSM-II card to force it to become standby:

    ```
    init-card:loc=xxxx
    ```
    where xxxx is the card location stenciled on the shelf of the system.

7. Enter the following command to log back into the system:

    ```
    login:uid=xxxx
    ```
    where xxxx is the User ID.

8. Enter the following command to check the database level on all cards:

    ```
    rept-stat-db:display=all
    ```
    Pay special attention to note the database levels on both the active and standby current partitions and the levels represented on all the network cards. It is important that the database level of the network cards matches the database level of the active MASP.

> **✎ Note:**
>
> If the database on the OAM is repaired and ends up at a lower level than the network cards, the system must be initialized.

9. Enter the following command to copy the current and backup database partitions on the active fixed disk, to the current and backup database partitions on the standby fixed disk:

    ```
    chg-db:action=repair
    ```
    After the command is executed, the standby GPSM-II card reboots, the old database data is purged from memory, and the new database is loaded.

10. After the card has been reloaded (a message appears to confirm completion of the load), enter the following command to verify the database is consistent (same level as the other cards in the system):

    ```
    rept-stat-db:display=all
    ```

    a. If standby and current active databases are consistent, continue with 11.

    b. If the current active or standby database is inconsistent, continue with 13.

11. Enter the following command to return the OAP terminals to the in-service state:

    ```
    alw-trm:trm=x
    ```

where x is the port number of the terminals of type OAP from 1.

12. For more information on database management, refer to the *Database Administration Manual - System Management*.

   STOP! YOU HAVE COMPLETED THIS PROCEDURE.

13. Enter the following command for the inconsistent fixed disk:

    ```
    tst-disk:loc=xxxx
    ```
    where xxxx is the location of the inconsistent fixed disk. When the command completes, continue with 14.

14. Contact My Oracle Support (MOS).

Recovery Procedure for a Non-MASP Card

> ⚠️ **Caution:**
>
> Resetting, reseating, or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the dact-slk command.

1. Wait five minutes to see if the card corrects itself.

2. Enter the following command to check the database level on the card:

   ```
   rept-stat-db:display=all
   ```

3. If the problem persists, enter the following command to retrieve the terminal types and port numbers:

   ```
   rtrv-trm
   ```

4. If the card is a LIM, enter the following command to deactivate the slk:

   ```
   dact-slk:loc=xxxx:port=y
   ```
   where xxxx is the card location, and y is the port on the card specified in the location parameter.

5. Enter the following command to inhibit each OAP terminal displayed in the output from 3:

   ```
   inh-trm:trm=x
   ```
   where x is the port number.

> ✏️ **Note:**
>
> The force parameter is required for the last OAP terminal inhibited.

6. Enter the following command to change the state of the card to OOS-MT-DSBLD

   ```
   init-card:loc=xxxx
   ```
   where xxxx is the card location stenciled on the shelf of the system.

7. Enter the following command to change the state of the card to IS-NR:

   ```
   alw-card:loc=xxxx
   ```
   where xxxx is the card location stenciled on the shelf of the system.

8. If the card is a LIM, enter the following command to activate the slk:

```
act-slk:loc=xxxx:port=y
```
where xxxx is the card location, and y is the port on the card specified in the location parameter.

9. After the card has been reloaded (a message appears to confirm completion of the load), enter the following command to verify the database is consistent (same level as the other cards in the system).

```
rept-stat-card
```

10. Check the consistency of the card by entering the following command:

```
rept-stat-db:display=except
```

11. Enter the following command to return the OAP terminals to the in-service state:

```
alw-trm:trm=x
```
where x is the port number.

12. If the problem persists, contact My Oracle Support (MOS).

0035 - Card database is corrupted

This message indicates that the card database has been modified by some unknown process and is not usable. For more information about database management procedures, refer to the *Database Administration Manual - System Management*.

Example

```
  RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0035  * CARD 1113 OAM       Card database is corrupted
```

Alarm Level: Minor

Recovery Procedure for a MASP Card

1. Enter the following command to retrieve the terminal types and port numbers:

```
rtrv-trm
```

2. Enter the following command to inhibit each OAP terminal displayed in the output from 1:

```
inh-trm:trm=x
```
where x is the port number.

> **Note:**
>
> The force parameter is required for the last OAP terminal inhibited.

3. Enter the following command for each OAP terminal inhibited in 2:

```
chg-trm:trm=x:type=none
```
where x is the port number.

4. If the message indicates the standby fixed disk is corrupted, continue with 6.

If the message indicates the active fixed disk is corrupted, continue with 5.

5. Enter the following command on the active GPSM-II card to force it to become standby:

```
init-card:loc=x
```
where x is the card location stenciled on the shelf of the system.

6. Enter the following command to copy the current and backup database partitions on the active fixed disk, to the current and backup database partitions on the standby fixed disk:

```
chg-db:action=repair
```
After the command is executed, the standby GPSM-II card reboots, the old database data is purged from memory, and the new database is loaded.

7. After the card has been reloaded (a message appears to confirm completion of the load), enter the following command to verify the database is consistent (same level as the other cards in the system):

```
rept-stat-card
```

8. Enter the following command for each OAP terminal inhibited in 2:

```
chg-trm:trm=x:type=oap
```
where x is the port number.

9. Enter the following command to return the OAP terminals to the in-service state:

```
alw-trm:trm=x
```
where x is the port number.

10. If the problem persists, contact My Oracle Support (MOS).

Recovery Procedure for a Non-MASP Card

> **⚠ Caution:**
>
> Resetting, reseating, or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the dact-slk command.

1. Wait five minutes to see if the card corrects itself.

2. If the problem persists, enter the following command to retrieve the terminal types and port numbers:

```
rtrv-trm
```

3. Enter the following command to inhibit each OAP terminal displayed in the output from 2.

```
inh-trm:trm=x
```
where x is the port number.

> **✎ Note:**
>
> The force parameter is required for the last OAP terminal inhibited.

4. Enter the following command to reinitialize the indicated card and force the card to load the current level of database.

```
init-card:loc=x
```
where x is the card location stenciled on the shelf of the system.

0036 - Card backup database has been corrected

This message indicates that the backup database version level and content on the standby MASP is synchronized with the reference database.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0036    CARD 1113 OAM      Card backup database has been corrected
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0037 - Card Backup Database is Inconsistent

This message indicates that the backup database version level and/or content on the MASP is not synchronized with the database on the active MASP. This typically occurs if a different level counter, last update day/time-stamp, or contents is detected, or the database is incoherent.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0037  * CARD 1113 OAM     Card backup database is inconsistent
```

Alarm Level: Minor

Recovery

1. Enter the following command to confirm both active and standby current databases contain correct and identical information (coherent and consistent):

```
rept-stat-db
```

Example of the output from a coherent database:

```
> rept-stat-db
Command Accepted - Processing
oflnmoxa11w 00-10-08 15:56:40 CDT EAGLE 35.0.0
rept-stat-db
Command entered at terminal #4.
;
oflnmoxa11w 00-10-08 15:56:40 CDT EAGLE 35.0.0
DATABASE STATUS: >> OK <<
    TDM 1114 ( STDBY)              TDM 1116 ( ACTV )
```

```
         C    LEVEL     TIME LAST BACKUP    C    LEVEL     TIME LAST
BACKUP
         - -------- --------------------  - --------
---------------------
FD BKUP  Y   342256 00-10-07 00:40:29 CDT  Y   342256 00-10-07
00:40:29 CDT
FD CRNT  N   342374                        Y   342375
    MDAL 1117
    - --------
```

2. Enter the following command to perform a backup (to fixed disk) of both active and standby databases:

```
chg-db:action=backup:dest=fixed
```

0038 - Card backup database is corrupted

This message indicates that the backup database has been modified by some unknown process and is no longer usable.

Example

```
 RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0038  * CARD 1113 OAM       Card backup database is corrupted
```

Alarm Level: Minor

Recovery

1. Enter this command to confirm that both active and standby current databases contain correct and identical information (coherent and consistent):

```
rept-stat-db
```

Example of the output from a coherent database.

```
> rept-stat-db
Command Accepted - Processing
    oflnmoxa11w 00-10-08 15:56:40 CDT EAGLE 35.0.0
    rept-stat-db
    Command entered at terminal #4.
;
    oflnmoxa11w 00-10-08 15:56:40 CDT EAGLE 35.0.0
    DATABASE STATUS: >> OK <<
           TDM 1114 ( STDBY)                  TDM 1116 ( ACTV )
            C    LEVEL     TIME LAST BACKUP    C    LEVEL     TIME
LAST BACKUP
            - -------- --------------------  - --------
-----------------
    FD BKUP  Y   342256 00-10-07 00:40:29 CDT  Y   342256 00-10-07
00:40:29 CDT
    FD CRNT  N   342374                        Y   342375
           MDAL 1117
           - --------
```

2. Enter the following command to perform a backup (to fixed disk) of both active and standby databases:

```
chg-db:action=backup:dest=fixed
```

0039 - GPL has been corrected

All copies of the generic program load are satisfactory.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0039    GPL SYSTEM OAM     GPL has been corrected
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0040 - GPL is Corrupted

This message indicates that a generic program load (GPL) has become corrupted. This typically occurs when the system software detects that a generic program load has been unexpectedly modified.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
* 0100.0040  * GPL SYSTEM OAM     GPL is corrupted
```

Alarm Level: Minor

Recovery

1. Enter the following command to determine the status of the system generic program loads:

```
rtrv-gpl
```
This command indicates the generic program loads that have become corrupted.

2. Enter the command to reload the generic program load from a system removable cartridge.

```
chg-gpl
```
If the approved GPL is corrupted, insure that the trial GPL is the correct one using `rtrv-gpl` and activate it using the `act-gpl` command.

0041 - LSMS Bulk Load Required

This message indicates that the entire system LNP database must be repopulated, either from the LSMS or a backup disk. This process must be started manually.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
* C0009.0041 *C LSMS SYSTEM         LSMS bulk load required
```

Alarm Level: Critical

Recovery

Refer to the *LNP Database Synchronization Manual* for the LSMS Bulk Load procedure.

0042 - LSMS Bulk Load Complete

This message indicates that the alarm condition is removed, the association is reestablished, the LSMS is downloading transactions, and the automatic resynchronization is in progress.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0042   LSMS SYSTEM         LSMS bulk load complete
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0044 - Real Time Clock Battery Low

The battery power in the HC MIM card is low.

Example

```
station1234 00-11-30 16:28:08 EST  EAGLE 35.0.0
* 0012.0044 *   CARD 1201  LIMT1  Real time clock battery low
```

Alarm Level: Minor

Recovery

Replace the HC MIM card with a spare and call Tekelec for a RMA to send the card back to Tekelec for replacement.

> **✎ Note:**
>
> Refer to the *Maintenance Manual* for card removal/replacement procedures for details about replacing cards.

0045 - Real Time Clock Battery Restored

The HC MIM card has been replaced and the battery power in the HC MIM card is normal.

Example

```
station1234 00-11-30 16:28:08 EST  EAGLE 35.0.0
0012.0045    CARD 1201  LIMT1  Real time clock battery restored
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0046 - Terminal enabled

The indicated terminal has been returned to service and can handle normal user input and output.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0046    TERMINAL   15       Terminal enabled
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0047 - Card Type Not Valid for Application

This message indicates that a TSM card was replaced by an ASM card. The ASM card is automatically inhibited because it is no longer supported.

Example

```
station1234 00-11-30 16:28:08 EST  EAGLE 35.0.0
** 0012.0047  **  CARD 1109 Card type not valid for application
HW VERIFICATION CODE: xxx
```

Alarm Level: Major

Recovery

Replace the ASM card with the correct version of the TSM card.

Refer to the *Maintenance Manual* for card removal/replacement procedures.

0048 - Terminal Failed

The MASP has detected that the terminal is faulty. The maintenance software has removed the terminal from service.

Example

```
  RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0048  * TERMINAL   15        Terminal failed
```

Alarm Level: Minor

Recovery

1. Verify that the power to the terminal is on and that the terminal is physically connected to the control shelf backplane.

   If the fault does not clear, disconnect the terminal from the control shelf backplane and connect another terminal (with the same communication attributes as the old terminal) to the same port on the control shelf backplane.

2. Enter the following command to verify the communication attributes of the terminal port:

   ```
   rtrv-trm
   ```

3. If the communication attributes need to be changed, refer to the *Commands Manual* and enter the following command with the appropriate parameters to make the required changes to the communication attributes:

   ```
   chg-trm
   ```

4. Terminals are connected to ports on the TDM card.

   Enter the following command to determine which ports are idle:

   ```
   rept-stat-user
   ```

5. Move the terminal to another port on the TDM card or on the backplane.

   If the fault does not clear, replace the TDM card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

0049 - Bit Rate change ACK failure

This error is displayed when OAM does not receive the acknowledgement of the Rate change request from an all HIPR2 IMT Bus.

> ✎ **Note:**
>
> During IMT Bus Rate change execution, no physical status change of IMT Bus (such as unplugging HIPR2 cards) should take place.

Example

```
  RLGHNCXA21W 00-02-09 12:01:43 EST  EAGLE 41.1.0
*   0100.0049 *  IMT Bus A                Bit Rate change ACK failure
```

Alarm Level: Minor

Recovery

No action necessary.

0050 - Bit Rate change ACK received

This message is the clearing alarm for the previous IMT rate change alarm.

Example

```
  RLGHNCXA21W 00-02-09 12:01:43 EST  EAGLE 41.1.0
0101.0050    IMT Bus A                Bit Rate change ACK received
```

Alarm Level: None

Recovery

No action necessary.

0051 - TSC Sync is in Simplex Mode

Due to one or both GPSM-II cards being replaced with MCAPs after the feature bit has been set, the hardware configuration no longer supports the TSC Synchronization feature.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0051  ** CARD 1113  OAM    TSC sync is in simplex mode
```

Alarm Level: Major

Recovery

Replace the MCAP(s) with GPSM-II card(s).

Refer to the *Maintenance Manual* for card removal/replacement procedures.

0052 - TSC sync feature is available

This indicates that the GPSM-II card(s) is now seated in the appropriate slot and is functioning correctly.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0052    CARD 1113  OAM   TSC sync feature is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0053 - Standby TDM Failure

This message indicates the communication between the GPSM-II and TDM has failed.

Example

```
station1234 94-03-30 16:28:08 EST EAGLE 35.0.0
** 0012.0053 **  CARD 1113 OAM         Standby TDM failure
```

Alarm Level: Major

Recovery

1. Enter the following command to verify card status:

   `rept-stat-card`

2. Enter the following command to verify the database status:

   `rept-stat-db`

3. Replace the failed TDM, that is in IS-ANR state with the backup TDM.

   > **Note:**
   >
   > If possible, replace the card during the maintenance window.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0054 - Standby TDM failure cleared

This message indicates that the communication between the GPSM-II and TDM has been reestablished.

Example

```
station1234 94-03-30 16:28:08 EST EAGLE 35.0.0
0012.0054    CARD 1113 OAM          Standby TDM failure cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0055 - Persistent device state tbl corrupt

This message indicates that after attempting an automatic recovery from a first checksum error, a Persistent Device States (PDS) checksum error still exists in the standby System Configuration Manager (SCM). PDS features are disabled.

Example

```
  RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0055  * CARD 1115 OAM    Persistent device state tbl corrupt
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status of the database:

   ```
   rept-stat-db
   ```

2. Enter the following command to update the PDS table.

   This command reinitializes the card and forces the card to load the current level of the database:

   ```
   init-card:loc=xxxx
   ```

   where xxxx is the location of the card identified in output.

3. Enter the following command to verify the that the database is the same level as the active OAM:

   ```
   rept-stat-db
   ```

4. If the problem persists, contact My Oracle Support (MOS).

0056 - Persistent Device State tbl diff Version

This message indicates that the PDS table version in the standby SCM does not match the PDS table version in the active SCM. PDS features are disabled.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0056  * CARD 1115 OAM    Persistent device state tbl diff version
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status of the database:

   ```
   rept-stat-db
   ```

2. Enter the following command to update the PDS table.

   This command reinitializes the card and forces the card to load the current level of the database:

   ```
   init-card:loc=xxxx
   ```

where xxxx is the location of the card identified in output.

3. Enter the following command to verify the that the database is the same level as the active OAM:

`rept-stat-db`

4. If the problem persists, contact My Oracle Support (MOS).

0057 - Persistent device state tbl corrected

This indicates that the This message indicates that a problem PDS table has been corrected.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0057    CARD 1115  OAM   Persistent device state tbl corrected
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0058 - Critical customer trouble detected

A critical customer trouble has been detected. There are connections on the control shelf backplane for customer detected troubles (CDTs). Each connection is assigned an identifier 1-16. CDT connections 2-4 are applicable to UAM 0058. CDT connections 6-8 are applicable to UAM 0059. CDT connections 10-16 are applicable to UAM 0060. The customer determines the connections on the backplane (these are dry contact closures). The system reports the alarm according to the connection location.

Example

```
RLGHNCXA21W 96:07:02 11:02:30 EST  EAGLE 35.0.0
*C 0100.0058  *C CDT 4          Critical customer trouble detected
```

Alarm Level: Critical

Recovery

Follow local procedures for clearing the indicated trouble.

0059 - Major customer trouble detected

A major customer trouble has been detected. There are connections on the control shelf backplane for customer detected troubles (CDTs). Each connection is assigned an identifier 1-16. CDT connections 2-4 are applicable to UAM 0058. CDT connections 6-8 are applicable to UAM 0059. CDT connections 10-16 are applicable to UAM 0060. The customer determines the connections on the backplane (these are dry contact closures). The system reports the alarm according to the connection location.

Example

```
RLGHNCXA21W 96:07:02 11:02:30 EST EAGLE 35.0.0
** 0100.0059  ** CDT 8            Major customer trouble detected
```

Alarm Level: Major

Recovery

Follow local procedures for clearing the indicated trouble.

0060 - Minor customer trouble detected

A minor customer trouble has been detected. There are connections on the control shelf backplane for customer detected troubles (CDTs). Each connection is assigned an identifier 1-16. CDT connections 2-4 are applicable to UAM 0058. CDT connections 6-8 are applicable to UAM 0059. CDT connections 10-16 are applicable to UAM 0060. The customer determines the connections on the backplane (these are dry contact closures). The system reports the alarm according to the connection location.

Example

```
RLGHNCXA21W 96:07:02 11:02:30  EST EAGLE 35.0.0
* 0100.0060   * CDT 16           Minor customer trouble detected
```

Alarm Level: Minor

Recovery

Follow local procedures for clearing the indicated trouble.

0061 - Customer trouble detected

A customer trouble has been detected.

Example

```
RLGHNCXA21W 96:07:02 11:02:30  ESTEAGLE 35.0.0
0100.0061       CDT 11          Customer trouble detected
```

Alarm Level: No alarm condition. The message is informational.

Recovery

This message indicates that a customer-defined trouble is detected. Follow local procedures to clear the trouble.

0062 - Customer trouble cleared

A customer trouble has been cleared.

Example

```
RLGHNCXA21W 96:07:02 11:02:30   EST EAGLE 35.0.0
0100.0062        CDT 11             Customer trouble cleared
```

Alarm Level: No alarm condition. The message is informational.

Recovery

No action is necessary.

0063 - Critical Holdover Clock trbl Detected

A critical trouble has been detected with the holdover clock. This could include a problem with the reference input and stratum clock cards.

Example

```
RLGHNCXA21W  96:07:02 11:02:30   EST  EAGLE 35.0.0
   *C  0100.0063    *C CLOCK    Critical holdover clock trbl detected
```

Alarm Level: Critical

Recovery

Check for any visual alarms.

Note any visual alarms and refer to the *Maintenance Manual* for Holdover Clock Troubleshooting Procedures to perform the corrective action procedures.

0064 - Major Holdover Clock Trouble Detected

A major trouble has been detected with the holdover clock. This could include a problem with the reference input and/or stratum clock cards.

Example

```
RLGHNCXA21W 96:07:02 11:02:30    EST EAGLE 35.0.0
**  0100.0064   ** CLOCK    Major holdover clock trouble detected
```

Alarm Level: Major

Recovery

Check for any visual alarms.

Note any visual alarms and refer to the *Maintenance Manual* for Holdover Clock Troubleshooting Procedures to perform the corrective action procedures.

0065 - Minor Holdover Clock Trouble Detected

A minor trouble has been detected with the holdover clock. This could include a problem with the reference input and/or stratum clock cards.

Example

```
RLGHNCXA21W 96:07:02 11:02:30 EST EAGLE 35.0.0
*  0100.0065    *  CLOCK          Minor holdover clock trouble detected
```

Alarm Level: Minor

Recovery

Check for any visual alarms.

Note any visual alarms and refer to the *Maintenance Manual* for Holdover Clock Troubleshooting Procedures to perform the corrective action procedures.

0066 - Holdover clock trouble cleared

A problem with the holdover clock has been corrected.

Example

```
RLGHNCXA21W 96:07:02 11:02:30 EST EAGLE 35.0.0
0100.0066       CLOCK Holdover clock trouble cleared
```

Alarm Level: No alarm condition. The message is informational.

Recovery

This message indicates that a problem with the holdover clock has been cleared.

0077 - Card Temperature is Critical lvl:T2

An HC-MIM card, EPM based card (E5-E1T1, E5-ATM, E5-ENET, ET-IPSM, E5-TSM) EPM-B based card (E5-ATM-B, E5-ENET-B, E5-MCPM-B), or E5-SM8G-B card has reached an operating temperature that is above the operational limit.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*C 0100.0077  *C CARD 1102  LIMT1 Card temperature is critical lvl:T2
```

Alarm Level: Critical

Recovery

> **⚠ WARNING:**
>
> There is a very limited time to solve this problem. For an HC-MIM card, once the card exceeds its operation limit, all the links on the HC-MIM card will be blocked (ACT-LPO), causing the links to go into local processor outage. All traffic on the blocked links is re-directed elsewhere in the system (based on the current route provisioning). For information about EPM based, EPM-B based, and E5-SM8G-B cards, see "Changing the High-Capacity Card Temperature Alarm Thresholds" procedure in *Database Administration Manual - SS7*.

1. Verify that the fan assembly located in that shelf is working properly and that the fan filters are clean.

   - Check to make sure there is both A and B power.

   - Check the fans.

   - Check the fan controller card and verify that all LEDs are green.
     For proper operation (as a minimum B power must be present and good fans for fan 2 and fan 3 must be installed before removing the controller).

   - Check the fan filters.

   - Replace any hardware in the fan assembly that is not functioning properly. Clean or replace fan filters as needed.

   - Replace the fan tray only after checking power, fans, fan filters, and control card.
     Contact My Oracle Support (MOS) for assistance.

   The hierarchy of maintenance activity is based on Table 3-1. See the *Maintenance Manual* for card removal/replacement procedures.

Table 3-1   Maintenance Activity Hierarchy

Condition	Cntrl LED	FAN 1 LED	FAN 2 LED	FAN 3 LED	Alarm Status	Actions
Normal Operation	Green	Green	Green	Green	No Alarm**	None
A power feed fail	Blink	RED			Alarm*	Check the fuse, the power source, and cables
Interconnect card OR circuit fail	Blink		RED		Alarm*	Check the fuse, the power source, and cables
B power feed fail	Blink			RED	Alarm*	Check the fuse, the power source, and cables

Table 3-1   (Cont.) Maintenance Activity Hierarchy

Condition	Cntrl LED	FAN 1 LED	FAN 2 LED	FAN 3 LED	Alarm Status	Actions
Fan 1 fail	Green	RED			Alarm*	Make sure that there is A power Make sure that there is B power and that Fan 2 and Fan 3 are operating properly. Replace the fan.
Fan 2 fail	Green		RED		Alarm*	Make sure that there is both A and B power Make sure that Fan 1 and Fan 3 are operating properly Replace the fan
Fan 3 fail	Green			RED	Alarm*	Make sure that there is B power Make sure that there is A power and that Fan 1 and Fan 2 are operating properly Replace the fan
Fan 1 Removed	Green	Blink			Alarm*	Make sure that the fan is seated properly Replace the fan
Fan 2 Removed	Green		Blink		Alarm*	Make sure that the fan is seated properly Replace the fan

Table 3-1   (Cont.) Maintenance Activity Hierarchy

Condition	Cntrl LED	FAN 1 LED	FAN 2 LED	FAN 3 LED	Alarm Status	Actions
Fan 3 Removed	Green			Blink	Alarm*	Make sure that the fan is seated properly Replace the fan
Controller card partial fail	RED				Alarm*	Make sure there is both A and B power. Make sure the fans are working properly Remove Fan 1 Replace the Fan Tray Controller
Controller card fail	OFF	OFF	OFF	OFF	Alarm*	Make sure there is both A and B power Make sure the fans are working properly Remove Fan 1 Replace the Fan Tray Controller
Interconnect Failure						Replace shelf

> **Note:**
>
> - *If there is no alarm for this condition, it is likely that the relay on the Interconnect card has failed (opened).
> - **If there is an alarm when all 4 LEDs are green, it is likely that the relay on the Interconnect card has failed (closed).
> - Try replacing the controller before replacing the fan tray.

2. If the fan unit is working properly, employ additional cooling methods to the card reporting a high-operating temperature.

3. This Critical Temperature Alarm will remain in the system until the operational temperature of the HC-MIM card (HC Blade), EPM based card (E5-E1T1, E5-ATM, E5-ENET, ET-IPSM, E5-TSM) EPM-B based card (E5-ATM-B, E5-ENET-B, E5-MCPM-B), or E5-SM8G-B card goes below the critical temperature threshold.

4. If this procedure did not clear the fault, contact My Oracle Support (MOS).

0078 - Card Temperature Exceeds Nominal lvl:T1

An HC-MIM card, EPM based card (E5-E1T1, E5-ATM, E5-ENET, E5-IPSM, E5-TSM), EPM-B based card (E5-ATM-B, E5-ENET-B, E5-MCPM-B), or E5-SM8G-B card has reached an operating temperature that is above the pre-defined limit.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0078  ** CARD 1102  LIMT1 Card temperature exceeds nominal
lvl:T1
```

Alarm Level: Major

Recovery

> ✏ **warning:**
>
> There is a very limited time to solve this problem. Once the card exceeds its operation limit, all the links on the HC-MIM card will be blocked (ACT-LPO), causing the links to go into local processor outage. All traffic on the blocked links is re-directed elsewhere in the system (based on the current route provisioning). For information about EPM based, EPM-B based, and E5-SM8G-B cards, see "Changing the High-Capacity Card Temperature Alarm Thresholds" procedure in *Database Administration Manual - SS7*.

1. Enter the following command to verify the temperature threshold defaults are within the correct range for the card:

   `rtrv-th-alm`
   For HC-MIM cards, the maximum operating temperature is 82 degrees Celsius. For EPM based cards (E5-E1T1, E5-ATM, E5-ENET, ET-IPSM, E5-TSM), the maximum operating temperature is 95 degrees Celsius. For EPM-B based cards (E5-ATM-B, E5-ENET-B, E5-MCPM-B) and E5-SM8G-B cards, maximum operating temperature is 90 degrees Celsius. Temperature Level 1 threshold (Thermal Alarm Level 1) and Temperature Level 2 threshold (Thermal Alarm Level 2) are user configurable. Temperature Level 1 threshold can be configured between 73%–92% (default is 92%) of maximum operating temperature of the card and Temperature Level 2 threshold can be configured between 74%–100% (default is 100%) of maximum operating temperature of the card.

   If the thresholds are set incorrectly (or to temporarily suppress the alarm), go to 2. If the thresholds are correct, go to 3.

2. The threshold can be reset by entering the following command:

   `chg-th-alm:thermallvl1c=xxxx`
   where xxxx is temperature.

3. Skip this step for EPM-based cards. Verify that the fan assembly located in that shelf is working properly and that the fan filters are clean.

   - Check to make sure there is both A and B power.

   - Check the fans.

   - Check the fan controller card and verify that all LEDs are green.
     For proper operation (as a minimum B power must be present and good fans for fan 2 and fan 3 must be installed before removing the controller).

   - Check the fan filters.

   - Replace any hardware in the fan assembly that is not functioning properly. Clean or replace fan filters as needed.

   - Replace the fan tray only after checking power, fans, fan filters, and control card.
     Contact My Oracle Support (MOS) for assistance.

The hierarchy of maintenance activity is based on Table 3-2. See the *Maintenance Manual* for card removal/replacement procedures.

Table 3-2   Maintenance Activity Hierarchy

Condition	Cntrl LED	FAN 1 LED	FAN 2 LED	FAN 3 LED	Alarm Status	Actions
Normal Operation	Green	Green	Green	Green	No Alarm**	None
A power feed fail	Blink	RED			Alarm*	Check the fuse, the power source, and cables.
Interconnect card OR circuit fail	Blink		RED		Alarm*	Check the fuse, the power source, and cables.
B power feed fail	Blink			RED	Alarm*	Check the fuse, the power source, and cables.
Fan 1 fail	Green	RED			Alarm*	Make sure that there is A power. Make sure that there is B power and that Fan 2 and Fan 3 are operating properly. Replace the fan.

Table 3-2   (Cont.) Maintenance Activity Hierarchy

Condition	Cntrl LED	FAN 1 LED	FAN 2 LED	FAN 3 LED	Alarm Status	Actions
Fan 2 fail	Green		RED		Alarm*	Make sure that there is both A and B power. Make sure that Fan 1 and Fan 3 are operating properly. Replace the fan.
Fan 3 fail	Green			RED	Alarm*	Make sure that there is B power. Make sure that there is A power and that Fan 1 and Fan 2 are operating properly. Replace the fan.
Fan 1 Removed	Green	Blink			Alarm*	Make sure that the fan is seated properly. Replace the fan.
Fan 2 Removed	Green		Blink		Alarm*	Make sure that the fan is seated properly. Replace the fan.
Fan 3 Removed	Green			Blink	Alarm*	Make sure that the fan is seated properly. Replace the fan.

Table 3-2　(Cont.) Maintenance Activity Hierarchy

Condition	Cntrl LED	FAN 1 LED	FAN 2 LED	FAN 3 LED	Alarm Status	Actions
Controller card partial fail	RED				Alarm*	Make sure there is both A and B power. Make sure the fans are working properly. Remove Fan 1. Replace the Fan Tray Controller.
Controller card fail.	OFF	OFF	OFF	OFF	Alarm*	Make sure there is both A and B power. Make sure the fans are working properly. Remove Fan 1. Replace the Fan Tray Controller.
Interconnect Failure						Replace shelf.

> **Note:**
>
> - * If there is no alarm for this condition, it is likely that the relay on the Interconnect card has failed (opened).
>
> - ** If there is an alarm when all 4 LEDs are green, it is likely that the relay on the Interconnect card has failed (closed).
>
> - Try replacing the controller before replacing the fan tray.

4. If the fan unit is working properly, employ additional cooling methods to the card reporting a high-operating temperature.

5. If the running temperature of the HC-MIM card, EPM based card (E5-E1T1, E5-ATM, E5-ENET, E5-IPSM, E5-TSM), EPM-B based card (E5-ATM-B, E5-ENET-B, E5-MCPM-B), or E5-SM8G-B card exceeds its operational limit, UAM 0077 is generated. HC-MIM links go into Local Processor Outage (LPO). For information about EPM based, EPM-B based, and E5-SM8G-B cards, see "Changing the

High-Capacity Card Temperature Alarm Thresholds" procedure in *Database Administration Manual - SS7*.

6. This Temperature Alarm will remain in the system until the operational temperature of the HC-MIM card (HC Blade), EPM based card (E5-E1T1, E5-ATM, E5-ENET, E5-IPSM, E5-TSM), EPM-B based card (E5-ATM-B, E5-ENET-B, E5-MCPM-B), or E5-SM8G-B card returns to normal levels.

7. If performing the steps in this procedure did not clear the fault, contact My Oracle Support (MOS) for assistance.

8. If the threshold was changed in 2 to temporarily suppress the alarm, enter the following command to reset the threshold to the original setting:

   ```
   chg-th-alm:thermallv1c=xxxx
   ```
   where xxxx is temperature.

0079 - Card temperature again at nominal levels

The operational temperature of the HC-MIM (HC Blade), EPM based card (E5-E1T1, E5-ATM, E5-ENET, ET-IPSM, E5-TSM), EPM-B based card (E5-ATM-B, E5-ENET-B, E5-MCPM-B), or E5-SM8G-B has returned to normal levels.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0079 CARD 1102   LIMT1 Card temperature again at nominal levels
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- This message indicates a previous fault has been corrected.

  No further action is necessary.

0080 - Shelf FAN bit is OFF

The Eagle Shelf FAN bit is not turned on.

Example

```
    1           2           3           4           5           6
7          8
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    xxxx.0080 *C CARD 1103   LIMT1     Shelf FAN bit is OFF
```

Alarm Level: Major

Recovery

To turn the Shelf FAN bit on, use the following command:

```
chg-shlf
```

0081 - Shelf FAN bit is ON

The Eagle Shelf FAN bit is turned on. This UAM is an informational message that confirms that the feature is restored to operational status

Example

```
    1         2         3         4         5         6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
     xxxx.0081 *C CARD 1103  LIMT1     Shelf FAN bit is ON
```

Alarm Level: Normal

Recovery

This message indicates that the feature previously was OFF and now has been turned ON.

No further action is necessary.

0082 - Alarm in Fuse Panel

A blown fuse has been detected in the fuse panel located on top of the designated frame.

Example

```
   RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0082  ** FUSE PANEL  11xx     Alarm in Fuse panel
```

Alarm Level: Major

Recovery

1. Locate the fuse and alarm panel (FAP) indicated in the alarm message.

2. Look at the set of fuses and find the fuse with the "flag" standing out.

   This indicates the fuse is blown. Replace the fuse with a GMT 3 amp or 1 amp (depending on the type being replaced). See the *Installation Manual* for the correct fuse type.

   > ⚠ **Caution:**
   >
   > Arbitrarily removing a good fuse will cause all cards serviced by the removed fuse to fail. Verify the fuse output before pulling a fuse that appears to be good.

3. If no fuses appear to be blown, use a VOM and measure the voltage outputs on the rear of the panel (refer to the *Installation Manual* for voltage test points).

4. If the fuse blows again, visually inspect the shelf backplanes for shorts or metallic debris.

5. If nothing can be found visually, put all cards serviced by the affected fuse out of service with the following command:

```
rmv-card:loc=x
```
where x is the card location stenciled on the shelf of the system.

6. Unplug the cards serviced by the affected fuse.

7. Replace the fuse.

8. Plug in each card one at a time.

   As each card is plugged in, verify the fuse does not blow. When the fuse does blow, replace the card just plugged in.

9. Replace the fuse again.

10. Continue plugging in the remaining cards, verifying the fuse does not blow with each card.

   Each time the fuse does blow, replace the card and continue. There may be more than one card at fault. If you encounter a card which blows the fuse, do not stop the procedure. Continue until all cards have been plugged in. Refer to the *Maintenance Manual* for card removal/replacement procedures.

11. If all the cards are plugged in and the fault has cleared, place the affected cards back into service by entering the following command:

```
rst-card:loc=x
```
where x is the card location stenciled on the shelf of the system.

12. If this does not clear the fault, contact My Oracle Support (MOS).

0083 - Fuse Panel alarm has cleared

This indicates that the fuse alarm has been cleared.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
0100.0083    FUSE PANEL  11xx    Fuse Panel alarm has cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0084 - IP Connection Unavailable

The TCP/IP and SIGTRAN protocols both have an IP layer. This UAM indicates that either a TCP/IP socket or an SCTP/IP (SIGTRAN) association is unavailable.

Example

```
RLGHNCXA03W 09-11-06 16:28:08 EST EAGLE5 41.1.0
**  1234.0084 ** IP7CONN LONGSOCKETNAME1 IP Connection Unavailable
```

Alarm Level: Major

Recovery

There are six recovery procedures for this UAM. The first two procedures are for TCP/IP socket problems; the third procedure is for SCTP/IP (SIGTRAN) problems. Read the UAM to see which entity has been affected, then refer to the following scenarios to help determine which procedure to use:

- Use the Recovery Procedure for EDCMs running STC GPLwhen an IP application socket is out of service due to an IP link down (Ethernet problem) or due to the STC card.

- Use the Recovery Procedure for DSM with EPAP or ELAP when an IP link is down. The link may be a DSM (Database Service Module) to MPS link.

- Use the Recovery Procedure for IPLMx, IPGWx, and IPSG when failure at the IP level is affecting associations used for SS7-over-IP (SIGTRAN) links.

- Use the Recovery Procedure for MCP or MCPHCwhen UAM 0084 says that the problem is MCP or MCPHC.

- Use the Recovery Procedure for OAMHCwhen UAM 0084 says that the problem is OAMHC.

- Use the Recovery Procedure for SNMP when UAM 0084 says that the problem is SNMP.

Recovery Procedure for EDCMs running STC GPL

In this scenario, this message typically occurs if STC port does not get a DHCP lease from IMF/ESP side. However, it could also be due to bad hardware or bad port on STC card. This error may be due to mis-configured IMF/ESP switches that may not send DHCP lease to STC card.

1. Use the `rept-stat-card` command to view STC status.

   The following is an example of a possible output:

   ```
   tekelecstp 07-05-06 15:40:32 EST  EAGLE 37.0.0

       CARD    VERSION      TYPE      GPL        PST
   SST        AST
       1103    128-002-000  STC       ERTHC      IS-NR
   Active     -----
           ALARM STATUS       = No Alarms.
           IMTPCI  GPL version = 128-002-000
           BLVXW6  GPL version = 128-002-000
           BLDIAG6 GPL version = 128-002-000
           BLBEPM  GPL version = 128-002-000
           BLCPLD  GPL version = 128-002-000
           IMT BUS A           = Conn
           IMT BUS B           = Conn
   ```

```
        CLOCK A              = Active
        CLOCK B              = Idle
        CLOCK I              = Idle
        MBD BIP STATUS       = Valid
        MOTHER BOARD ID      = EPM A
        DBD STATUS           = Valid
        DBD TYPE             = 1G ENET
        DBD MEMORY SIZE      = 512M
        HW VERIFICATION CODE = ----
        CURRENT TEMPERATURE   =  51C (124F)
        PEAK TEMPERATURE:     =  51C (124F)     [02-09-20 10:48]
        EROUTE % OCCUP      = 0%
        NTP broadcast = VALID
        STC IP PORT A:                            IS-NR
Active      -----
        ALARM STATUS  = No Alarms.
        STC IP PORT B:                            OOS-MT
Unavail     -----
        ALARM STATUS  = **  0084 IP Connection Unavailable
        ERROR STATUS  = DHCP Lease. Physical Link.

    Command Completed.
```

If the STC is in service and one of the ports is showing UAM0084, then this port is not getting the address from the DHCP server.

2. If `rept-stat-card` shows that both ports are in UAM0084 state then use the `netstat -I` command to determine if the Ethernet interfaces are up.

   a. If they are up, then IMF/ESP support should be involved to find out why this port is not getting the DHCP.

   b. If the concerned ports are not up, then it could be a hardware issue, replace the card. See the *Maintenance Manual*, Appendix A, Card Removal/ Replacement Procedures.

3. If the alarm is not cleared, contact My Oracle Support (MOS).

Recovery Procedure for DSM with EPAP or ELAP

1. Use the `rep-stat-mps` command to obtain MPS status.

   The following is an example of a possible output:

```
> rept-stat-mps

Command Accepted - Processing
    peliscaa00w 04-08-13 11:11:04 EDT EAGLE 29.0.2-46.33.1
    rept-stat-mps
    Command entered at terminal #2.
;

    VSCCP      1103  Y  04-08-13 02:29:22       1108         -
```

3. Execute `rept-stat-trbl:display=timestamp` to see if all of the UAM 0084 occurred at nearly the same time.

   If all of the DSMs are reporting IP connection unavailable and all of the alarms came in at one time, check whether the associated EPAP or ELAP has a problem. If so, go to 7.

4. Perform the following to verify IP network connectivity.

   a. Use the following command to ping the local host:

      `pass:loc=XXXX:cmd="ping 127.0.0.1"`
      This is the loopback address and testing it will indicate if networking support is functioning.

   b. Ping the MPS using:

      `pass:loc=XXXX:cmd="ping 192.168.120.100"` for 100 Megabit Network

      `pass:loc=XXXX:cmd="ping 192.168.120.200"` for 100 Megabit Network

      `pass:loc=XXXX:cmd="ping 192.168.121.100"` for 10 Megabit Network

      `pass:loc=XXXX:cmd="ping 192.168.121.200"` for 10 Megabit Network

      Example of a possible output:

      ```
      192.168.120.100 for EPAP A, via DSM Port A / 100 Megabit Network
      192.168.120.200 for EPAP B, via DSM Port A / 100 Megabit Network,
      192.168.121.100 for EPAP A, via DSM Port B / 10 Megabit Network,
      192.168.121.200 for EPAP B, via DSM Port B / 10 Megabit Network
      ```

   c. If the ping command is not working, verify the IP network cabling.

      > ✎ **Note:**
      >
      > The network between the MPS and the DSMs is a private network.

   d. Replace the DSM card if you can't ping the local host and the IP network has been verified.

      See the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

      > ✎ **Note:**
      >
      > This step applies to a single DSM having IP connection unavailable.

5. If all of the DSMs are reporting IP connection unavailable, reboot the "primary" DSM card. If no primary card is available go to 3. If only one card is reporting IP connection unavailable, use the init command to take down the card and reload it. See the *Commands Manual* for the INIT-CARD command.

6. Power cycle the hubs between the MPS and the EAGLE STP.

7. *Task to be completed by either the customer or an Engineer from the LSMS/MPS group:* Run a syscheck on the EPAP or ELAP.

8. *Task to be completed by either the customer or an Engineer from the LSMS/MPS group:* Switch activity on the EPAP or ELAP.

   If this action does not clear the alarm, continue to 9.

9. *Task to be completed by either the customer or an Engineer from the LSMS/MPS group:* Stop and restart the software on the EPAP or ELAP.

   In case of failure of the Active EPAP, the Standby EPAP takes over the role of Active EPAP and continues to provision the database. If the main DSM network fails, the Active EPAP switches to the backup DSM network to continue provisioning the Service Module cards. The switchover to the backup DSM network is possible only when all connectivity is lost on the main DSM network. In case of HUB failure, impact on the provisioning may be partial, so switchover to the backup provisioning network might not be automatically triggered. At any given time, there is only one Active EPAP using one DSM network per EPAP system.

   If this action does not clear the alarm, continue to 10.

10. If these steps do not clear the fault, contact My Oracle Support (MOS).

When the IP connection recovers you will see an `IP Connection Available` message.

```
UAM:
1481.0085    DSM A    1101           IP Connection Available
1482.0085    DSM B    1101           IP Connection Available
```

Recovery Procedure for IPLMx, IPGWx, and IPSG

1. Enter the `rept-stat-card:loc=`<*location*>`:mode=full` command.

   Example of command and possible output:

```
rept-stat-card:loc=1301:mode=full
    Command entered at terminal #3.
;

```

2. If the hardware interface is down, there is nothing more you can do. Contact the far end, which is where the problem must be resolved. If the hardware interface is up, execute the following commands to get more troubleshooting information:

   a. Errors (collisions, etc.) on the network interface?

   ```
   netstat -d 0/1t
   ```

   b. Far end reachable?

   ```
   ping
   ```

   ```
   traceroute
   ```

   c. Near end and far end use same SCTP CRC?

   ```
   netstat -p sctp
   ```

   ```
   rtrv-sg-opts
   ```

3. Failure at the lower IP level causes problems for the Application Servers (AS) higher in the SCTP/IP stack, so you can use the `rep-stat-as` command to get more information about the association status.

4. Contact My Oracle Support (MOS).

Recovery Procedure for MCP or MCPHC

In this scenario, the message typically occurs if the Measurements application loses the connection with the measurements FTP server. The error could be caused by a network connectivity problem or a misconfiguration of the FTP server parameters.

1. Enter the `rtrv-ftp-serv` command. If a measurement server is listed, verify the parameters.

   Example of command and possible output:

   ```
   rtrv-ftp-serv
       Command entered at terminal #6.
   ;

       e1061001 11-09-30 02:31:38 MST  EAGLE5 44.0.0-64.10.0

       APP      IPADDR           LOGIN           PRIO  PATH
       -------- ---------------  --------------- ----  ----
       meas     10.241.14.62     eagleuser       1     /meas/reports

       FTP SERV table is (1  of 10)  10% full
   ```

2. If the output does not show an entry for the meas application, configure a measurements FTP server in accordance with the "Adding an FTP Server" procedure in *Database Administration Manual - System Management* to clear the alarm.

3. Verify connectivity with the FTP server with the `ping` command. Enter the `pass:loc=<mcp>:cmd="ping <server ipaddr>"` command.

   Example of command and possible output:

   ```
   > pass:loc=1105:cmd="ping 10.241.14.62"

   Command Accepted - Processing

       e1061001 11-09-30 02:53:17 MST  EAGLE5 44.0.0-64.10.0
       pass:loc=1105:cmd="ping 10.241.14.62"
       Command entered at terminal #6.
   ;

       e1061001 11-09-30 02:53:17 MST  EAGLE5 44.0.0-64.10.0
       PASS: Command sent to card
   ;

       e1061001 11-09-30 02:53:17 MST  EAGLE5 44.0.0-64.10.0

round-trip (ms) min/avg/max = 5/5/5

PING command complete.
```

If the ping test fails, verify the physical network connectivity between the EAGLE and the host servers.

4. If the alarm is not cleared, contact My Oracle Support (MOS).

0085 - IP connection available

IP system: This message indicates that for an IPLIM, MCP, MCPHC, OAMHC, or SS7IPGW link, one or more connections have been opened for SS7 traffic. IPLIM hosts multiple links, and each link corresponds to exactly one connection. SS7IPGW also hosts multiple links, but each link may have more than one corresponding connection.

EAGLE 5 ISS system: This indicates that a previously broken link with either the far end (external customer link) or between the SIGRAN card and the far end now exists and is functioning properly. This UAM is also used to indicate that a previously broken link between the EPAP and DSM card is now functioning properly.

Example

```
station1234 09-11-06 16:28:08 EST EAGLE5 41.1.0
    1234.0085    IP7CONN LONGSOCKETNAME1 IP Connection Available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0086 - IP Connection Congested

This message indicates that an IP application socket or association is congested. The card's memory has been exceeded, so the card cannot process all of the MSUs being received.

In addition to the basic number of MSUs the card is rated to handle, other factors that affect the card's capacity such as the number of connections sharing the card. Network conditions can cause extra memory to be consumed as the card stores MSUs while waiting for acknowledgments from the far end.

> **✎ Note:**
>
> IP Connection UAMs 0086 (Congested), 0535 (Restricted), and 0536 (Excess Retransmits) conditions can occur simultaneously. However, only one alarm per device can be displayed at a time. If two or more are present, the display of these alarms is prioritized as follows:
>
> 1. 0086 - IP Connection Congested (MSUs are being dropped)
> 2. 0536 - IP Connection Excess Retransmits (MSUs may be dropped. The EAGLE 5 ISS sustains a certain rate of dropped MSUs without triggering this alarm, then issues UIM 0536 when that rate is exceeded.)
> 3. 0535 - IP Connection Restricted (MSUs are being transmitted at reduced rate. A path of a multi-homed association has failed.)

Example

```
RLGHNCXA03W 99-04-10 16:28:08 EST EAGLE5 41.1.0
0046.0086  * IP7CONN LONGSOCKETNAME1 IP Connection Congested
```

Alarm Level: Minor

Recovery

1. Use your company procedures to check the network.
2. Reports on status can be obtained for each SIGTRAN card with the following commands:
   - `rept-stat-applsock` displays the status of the IP application sockets.
   - `rept-stat-ls` displays the status of the MTP linksets.
   - `rept-stat-slk` displays the status of the MTP signaling links.
   - `pass:loc=xxxx:cmd="sockrtt"` displays the application socket statistical data.
   - `pass:loc=xxxx:cmd="netstat -i"` displays TCP/IP network statistical information for all interfaces.
   - `pass:loc=xxxx:cmd="netstat -p tcp"` displays TCP/IP network statistical information for the transmission control protocol.
   - `pass:loc=xxxx:cmd="netstat -p udp"` displays TCP/IP network statistical information for the user datagram protocol.
   - `pass:loc=xxxx:cmd="netstat -p ip"` displays TCP/IP network statistical information for the internet protocol.
   - `pass:loc=xxxx:cmd="netstat -p icmp"` displays TCP/IP network statistical information for the internet control message protocol.

ORACLE®

- `pass:loc=xxxx:cmd="netstat -m"` displays TCP/IP network statistical information for buffer pools.

- `pass:loc=xxxxx:cmd="sctp -a xxxxx"` displays SS7-over IP (SIGTRAN) troubleshooting information.
  For example, to see the information for the location 1301 and the entity ipl1301a, enter

  `pass:loc=1301:cmd="sctp -a ipl1301a"`

3. Is SCTP buffering set correctly for network RTT?

   `rtrv-assoc`

   `assocrtt` pass command

   `sctp` pass command

4. Is IPTPS set correctly for IPGWx?

   `rept-stat-iptps`

   `rtrv-ls`

5. Is an interface set to half-duplex somewhere in the path to the far end, causing excessive retransmissions?

   `rtrv-ip-lnk`

   `sctp` pass command

6. Contact My Oracle Support (MOS).

0087 - IP Connection manually removed

This message indicates that an IP application socket has been manually removed from the system.

Example

```
RLGHNCXA03W 99-04-10 16:28:08 EST EAGLE 35.0.0.0
0046.0087     IP7 LONGSOCKETNAME1 IP Connection manually removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

0088 - Clocks A and B TSCs are Out of Sync

It was detected by the OAM that clocks A and B have been out of synch for a excessive period of time. This alarm indicates the clock sources being used for TSCSYNC feature have failed or a hardware failure in the OAM card. This may impact the EAGLE Integrated Monitoring Support feature functionality.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0088 ** CARD 1113 EOAM    Clocks A and B are out of sync
```

Alarm Level: Major

Recovery

1. Check the status of the OAM card by entering the following command:

   `rept-stat-card:loc=xxxx`
   where xxxx is the card location in the output.

2. Verify the status of the system clocks with the `rept-stat-clock` command. If Eagle is reporting the clock alarm indicating a problem with clock sources, then check the status of the clock sources, the cables, and termination points. Refer to Clock System Alarms for additional details on handling clock-specific UAMs.

3. Reseat the OAM card.

4. If the problem persists, replace the OAM card.

   Refer to *Maintenance Manual* for card removal/replacement procedures.

0089 - Clocks A and B TSCs are resynchronized

A previous GPSM-II card fault is cleared.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
0014.0089    CARD 1113 EOAM    Clocks A and B TSCs are resynchronized
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0092 - MDAL Not Responding

This message indicates a problem with the maintenance disk and alarm card (MDAL).

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
*C 0014.0092 *C CARD 1117 MDAL        MDAL not responding
```

Alarm Level: Critical

Recovery

1. Check the status of the MDAL card by entering the command:

   `rept-stat-card:loc=x`

where x is the card location stenciled on the shelf of the system.

Example of the output using card location 1117:

```
RLGHNCXA03W 00-09-27 16:43:42 EST
CARD    VERSION    TYPE     APPL      PST           SST        AST
1117   ----------- MDAL     --------  OOS-MT        Isolated  -----
Command Completed.
```

2. Reseat the MDAL card.

3. If the problem persists, replace the MDAL card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0093 - MDAL alarm cleared

A previous maintenance disk and alarm card (MDAL) card fault is cleared.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0093     CARD 1117 MDAL         MDAL alarm cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0096 - Card has been Reloaded

The indicated card has been reinitialized and reloaded with the appropriate data. This occurs as a result of a manual reset or software maintenance intervention.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0096     CARD 1218 SS7ANSI   Card has been reloaded
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Look for other reports associated with the indicated card.

If an obituary report exists, the card malfunctioned. If this happens continuously, replace the defective card. If this is only an occasional condition, contact My Oracle Support (MOS). Refer to the *Maintenance Manual* for card removal/replacement procedures.

0097 - IMT allowed

The IMT bus has been returned to service.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0097    IMT SYSTEM            IMT allowed
             Card 1101, 1102, 1107, 1108
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected. No further action is necessary

0098 - IMT inhibited

The IMT bus has been removed from service by using the `rmv-imt:bus=x` command. The bus is no longer available to carry traffic.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0098    IMT SYSTEM         IMT inhibited
             Card 1101, 1102, 1107, 1108
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify the bus is not inhibited for maintenance purposes.

   If the bus has been inhibited for maintenance purposes, consult with the technician responsible before placing it back into service.

   > ⚠️ **Caution:**
   >
   > The IMT bus should not be left inhibited, as this may affect system performance.

2. If the IMT bus has not been inhibited for maintenance, or the maintenance is complete, enter the following command to place the IMT back into service:

   `rst-imt:bus=x`
   where x is the IMT bus to be returned to service.

0099 - Incompatible HW for Provisioned Slot

An MPL card is in a slot provisioned for a different card type and application. The card is automatically inhibited.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0099  ** CARD 1201  SS7ANSI  Incompatible HW for provisioned
slot
              HW VERIFICATION CODE: xxx
```

Alarm Level: Major

Recovery

1. If this message contains the optional line HW VERIFICATION CODE: xxx:

    a. See Hardware Verification Codes in UAMs the section on hardware verification codes in the *Unsolicited Alarms and Information Messages* manual and decode the xxx value.

        Correct the indicated problem. A card with Verification Code 002, 003, 004, or 102 may possibly begin to boot continually before this alarm is displayed.

    b. After correcting the problem, the card will be in out-of-service maintenance-disabled state (OOS-MT-DSBLD).

        Restore the card back to in-service normal state (IS-NR) with the `alw-card` command.

2. If this message does not contain the optional line 'HWVERIFICATIONCODE: xxx', perform either of the following steps:

    a. Replace the MPL card with a DCM card.

        Refer to the *Maintenance Manual* for card removal/replacement procedures.

    b. Re-provision the slot for a LIMDS0 card.

        Refer to the *Database Administration Manual - System Management* manual for the correct procedures.

0102 - Motherboard BIP Invalid

The motherboard in the location indicated has an invalid Board ID Prom (BIP).

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0102  * CARD 1201 SS7ANSI   Motherboard BIP invalid
```

Alarm Level: Minor

Recovery

1. The indicated card must be reprogrammed.

    Contact My Oracle Support (MOS). You will need to know the part number, revision level, and serial number of the card.

2. The card can be reprogrammed with instructions from My Oracle Support (MOS), or My Oracle Support (MOS) can dial into the system and reprogram the card remotely.

0103 - Motherboard BIP Valid

The Board ID Prom (BIP) for the specified motherboard is correctly programmed.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
0014.0103    CARD 1201 SS7ANSI    Motherboard BIP valid
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0106 - IMT Bus Alarm Cleared

The specified IMT bus has recovered from a fault.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
0014.0106    IMT BUS A          IMT Bus alarm cleared
             Card 1101, 1102, 1107, 1108
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0107 - Minor IMT Failure Detected

A minor fault has been detected on one of the IMT buses. A minor fault consists of at least one card fault but no more than two card faults.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
*  0100.0107  * IMT BUS A              Minor IMT failure detected
               Card 1101, 1102
```

Alarm Level: Minor

Recovery

1. Visually check the IMTLEDS on the front of the cards.

   A red LED or LEDs denotes an IMT fault. If the top LED of the pair is red, there is a fault on IMT A. If the bottom LED is red, there is a fault on IMT B. See Figure 3-2.

Figure 3-2   Card LEDs
2. Note the card location or locations for cards with a red LED(s).

3. Using the card location(s) noted in 2, enter the following command to connect the card back to the IMT:

   `conn-imt : loc =x : bus = y`
   where x is the card location stenciled on the shelf of the system and y is the IMT bus to be returned to service.

   The following message appears using card location 1106 and IMT bus A:

   ```
   RLGHNCXA03W 00-02-07 11:02:30 EST  EAGLE 35.0.0
        Connect IMT Bus A command issued to card 1106
   ```

4. If the fault does not clear, reseat the affected card.

> ✎ **warning:**
>
> Reseating or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the `dact-slk` command.

5. If the fault does not clear, replace the affected card.

6. If the fault does not clear, replace the IPMX card servicing the affected card.

> ✎ **warning:**
>
> Replacing an IPMX card causes the IMT to go down. (IPMX in Slot 09 affects IMT A and IPMX in Slot 10 affects IMT B.) Do not perform this step if the other bus also has a fault. Contact My Oracle Support (MOS).

7. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the `act-slk` command.

8. If these steps do not clear the fault, contact My Oracle Support (MOS).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0108 - Major IMT Failure Detected

A major fault has been detected on one of the IMT buses. A major fault consists of three or more faults on the IMT bus.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
** 0100.0108 ** IMTBUS A     Major IMT failure detected
              Card 1101, 1102, 1107, 1108
```

Alarm Level: Major

Recovery

1. Enter the following command to check the status of the IMT:

   `rept-stat-imt`
   If the entire IMT is down, continue with 6.

2. Visually check the IMTLEDS on the front of the cards.

   A red LED or LEDs denotes an IMT fault. If the top LED of the pair is red, there is a fault on IMT A. If the bottom LED is red, there is a fault on IMT B. See Figure 3-3.

Figure 3-3   Card LEDs
3. Note the card location or locations for cards with a red LED(s).

4. Using the card location(s) noted in 3 enter the following command to connect the card(s) back to the IMT:

    conn-imt : loc =x : bus = y
    where x is the card location stenciled on the shelf of the system, and y is the IMT bus to be returned to service.

    The following message appears using card location 1106 and IMT bus A:

    ```
    RLGHNCXA03W 00-02-07 11:02:30 EST   EAGLE 35.0.0
        Connect IMT Bus A command issued to card 1106
    ```

5. If the connection command is successful, the Card connected message appears.

    ```
    RLGHNCXA03W 00-02-07 11:02:30 EST   EAGLE 35.0.0
        0100.0006    IMT   BUS A         Card connected to IMT
    ```

6. If the fault does not clear, enter the following command:

```
inh-imt:bus=x
```
where x = faulty IMT bus.

> ✎ **warning:**
>
> This command removes the faulty IMT bus from service, causing all cards to disconnect from the designated bus. 8 must be completed once 6 is performed. If the technician has any questions about using this command, contact My Oracle Support (MOS).

7. Enter the following command to test the IMT bus:

```
tst-imt:bus=x
```
where x = the inhibited IMT bus.

An example of the output follows:

```
RLGHNCXA03W 97-09-27 12:47:07 EST EAGLE 35.0.0
IMT Fault Isolation Bus B
Fault Location     Probable Cause  Failure(s)
Card  1201         Card 1201
                                   Pass-through Test Failed
Card  1301         Card 1301
                                   Pass-through Test Failed
```

> ✎ **Note:**
>
> When `tst-imt` completes, either through normal termination of the command or because the command is aborted, 8 MUST be completed.

8. Enter the following command to change the state of inhibited IMT to IS-ANR:

```
alw-imt:bus=x
```
where x = the inhibited IMT bus.

9. Reseat the affected card(s).

   Probable causes are listed in order of most probable to least probable. The listed components should be reseated in order listed by the output of the `tst-imt` command.

> ✎ **warning:**
>
> Reseating or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the dact-slk command.

10. If the fault does not clear, replace the affected card(s).

    Probable causes are listed in order of most probable to least probable. The listed components should be replaced in order listed by the output of the `tst-imt` command.

11. If the fault does not clear, replace the IPMX card servicing the affected card(s).

> ⚠️ **Caution:**
>
> Replacing an IPMX card causes the IMT to go down. (IPMX in Slot 09
> affects IMT A and IPMX in Slot 10 affects IMTB.)

12. If the fault has cleared and any of these cards are LIMs, place the links assigned
    to these cards back into service using the `act-slk` command.

13. If these steps do not clear the fault, contact My Oracle Support (MOS).

    Refer to the *Maintenance Manual* for card removal/replacement procedures.

0109 - All IMT System Level Alarms Cleared

Both IMT busses are functioning.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0109    IMT SYSTEM           All IMT System level alarms cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0110 - Failure Detected on One IMT bus

A fault has been detected on one IMT bus.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0110  * IMT SYSTEM          Failure detected on one IMT bus
```

Alarm Level: Minor

Recovery

1. Visually check the IMT LEDS on the front of the cards.

   A red LED or LEDs denotes an IMT fault. If the top LED of the pair is red, there
   is a fault on IMT A. If the bottom LED is red, there is a fault on IMT B. See
   Figure 3-4.

Figure 3-4   Card LEDs
2. Note the card location or locations for cards with a red LED(s).

3. Using the card location(s) noted in 2, connect the card back to the IMT with the command `conn-imt.`

   For example, enter:

   ```
   conn-imt : loc =x : bus = y
   ```
   where x is the card location stenciled on the shelf of the system and y is the IMT bus to be returned to service.

The following message appears using card location 1106 and IMT bus A :

```
RLGHNCXA03W 00-02-07 11:02:30 EST  EAGLE 35.0.0
    Connect IMT Bus A command issued to card 1106
```

4. If the connection command is successful, the `Card connected to IMT` message appears.

```
RLGHNCXA03W 00-02-07 11:02:30 EST  EAGLE 35.0.0
    0100.0006    IMT   BUS A         Card connected to IMT
```

5. If the connection command is not successful and the fault does not clear, reseat the card

> ✏️ **warning:**
>
> Resetting, reseating, or replacing a LIM will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the `dact-slk` command.

6. If the fault does not clear, replace the affected card.

7. If the fault does not clear, replace the IPMX card servicing the affected card.

> ✏️ **warning:**
>
> Replacing an IPMX card causes the IMT to go down. (IPMX in Slot 09 affects IMT A and IPMX in Slot 10 affects IMT B.) Do not perform this step if the other bus also has a fault. Contact My Oracle Support (MOS).

8. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the `act-slk` command.

9. If these steps do not clear the fault, contact My Oracle Support (MOS).

    Refer to the *Maintenance Manual* for card removal/replacement procedures.

0111 - Failure on Both IMT A and IMT B

A major fault occurred on one IMT bus and a minor fault has occurred on the other. Or, there is a minor fault on both IMT buses. A minor fault occurs when one or two cards are disconnected from the IMT bus. A major fault occurs when three or more cards are disconnected from the IMT bus.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0111 ** IMT SYSTEM          Failure on both IMT A and IMT B
```

Alarm Level: Major

Recovery

Check the status of the IMTs by entering the `rept-stat-imt` command.

Contact My Oracle Support (MOS).

0112 - Major Failures Detected on Both IMTs

Major faults have been detected on both IMT buses.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
* C0100.0112 *C IMT SYSTEM        Major failures detected on both IMTs
```

Alarm Level: Critical

Recovery

Check the status of the **IMTs** by entering the `rept-stat-imt` command.

Contact My Oracle Support (MOS).

0113 - Clock alarm(s) Cleared

All primary and secondary clock sources are functioning.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0113    CLOCK SYSTEM        Clock alarm(s) cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0115 - Linkset IP TPS Threshold Exceeded

This message indicates that the actual linkset transaction rate exceeds the provisioned linkset IPSG TPS.

This message indicates that the actual linkset transaction rate exceeds the linkset capacity alarm threshold defined by `lsusealm, tpsalmtype, slktps` (`rsvdslktps` or `maxslktps` based on `tpsalmtype`) parameters and the number of links in the linkset.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0115 **   LSN lsgw1103   Linkset IP TPS threshold exceeded
```

Alarm Level: Major

Recovery

Chapter 3
UAMs

1. Enter this command to display the current and peak IPSG TPS utilization of the
   linkset specified in the output: `rept-stat-iptps`

   Example of the output:

```
eagle10115 03-05-06 09:49:20 EST EAGLE 31.6.0
    IP TPS USAGE REPORT
               THRESH  CONFIG        TPS     PEAK
PEAKTIMESTAMP

    ---------------------------------------------------------------
    SYSTEM
    CLLI1234567  100%  100000  TX:    4127      4550   03-05-05
09:49:19
                                RCV:   3962      4450   03-05-05
09:49:19

    ---------------------------------------------------------------
    LSN
    LSGW1101      80%    4000  TX:    3700      4000   03-05-05
09:49:19
                                RCV:   3650      4000   03-05-05
09:49:19
    LSGW1103      80%     500  TX:     427       550   03-05-05
09:49:19
                                RCV:    312       450   03-05-05
09:49:19

    ---------------------------------------------------------------
    Command Completed.
```

2. Enter the `rtrv-ls:lsn=xxxxxx` command, where xxxxxx is the linkset name,
   to review current `lsusealm, tpsalmtype` (TPSALM), `rsvdslktps` and
   `maxslktps` parameter values and the number of links in the linkset:

```
Searching link set table on disk - please wait...

               1216 A2   0   IPSG      lab2m2pa

       Link set table is (16 of 1024) 2% full.
```

3. Refer to the *Commands User's Guide* to interpret the output.

   If the linkset has adequate bandwidth, then the IP TPS for the linkset can be increased (using the `chg-ls` command), provided the current IPGWx IPSG system IP TPS setting allows for this. The IP TPS LS alarm threshold percent (lsusealm) can also be adjusted if allowed by the current setting. If the linkset does not have adequate bandwidth, then more links or different routing strategies may be required to correct the problem.

0116 - Link Expected IP TPS Threshold Exceeded

This message indicates that the actual link transaction rate is approaching the link's fair share of provisioned linkset capacity.

This message indicates that the actual link transaction rate exceeds the link capacity alarm threshold defined by `slkusealm`, `tpsalmtype` and `slktps` (`rsvdslktps` or `maxslktps` based on `tpsalmtype`) parameters.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0116  * SLK 1104,A LSA01   Link expected IP TPS threshold
exceeded
            SLC=01   FECLLI=A1234567890
```

Alarm Level: Minor

Recovery

1. Enter the following command to display the current and peak IPSG TPS utilization of the linkset specified in the output:

   ```
   rept-stat-iptps:lsn=xxxxxx
   ```
   where xxxxxx is the linkset name as defined in the output.

Example of the output:

```
eagle10115 03-05-06 09:49:20 EST EAGLE 31.6.0
    IP TPS USAGE REPORT
               THRESH  CONFIG         TPS      PEAK

         Link set table is (16 of 1024) 2% full.
```

3. Refer to the *Commands User's Guide* to interpret the output.

   If the linkset has adequate bandwidth, then the IP TPS for the linkset can be increased (using the `chg-ls` command), provided the current IPGWx IPSG system IP TPS setting allows for this. The IP TPS SLK alarm threshold percent (slkusealm) can also be adjusted if allowed by the current setting. If the linkset does not have adequate bandwidth, then more links are required to correct the problem.

0118 - Linkset IP TPS Normal

This message indicates the total usage for the linkset TPS rate has fallen below the configured linkset TPS rate.

This message indicates that the actual linkset transaction rate has fallen below the linkset capacity alarm threshold defined by `lsusealm`, `tpsalmtype`, `slktps` (`rsvdslktps` or `maxslktps` based on `tpsalmtype`) parameters and the number of links in the linkset.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0118     LSN lsgw1103   Linkset IP TPS normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0119 - Link IP TPS Normal

This message indicates the total usage for the linkset exceeds the linkset threshold for the linkset's IP TPS.

This message indicates that the actual link transaction has fallen below the link capacity alarm threshold defined by `slkusealm,` `tpsalmtype` and `slktps` (`rsvdslktps` or `maxslktps` based on `tpsalmtype`) parameters.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0119    SLK 1104,A LSA01   Link IP TPS normal
              SLC=01   FECLLI=A1234567890
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0120 - ENUM SYSTEM is not available

This message indicates none of the ENUM cards is Active/IS-NR.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
*C  0002.0120 *C ENUM SYSTEM            ENUM SYSTEM is not available
```

Alarm Level: Critical.

Recovery

Activate (Active/IS-NR) any one of the ENUM cards in the system.

0121 - ENUM SYSTEM is available

This message indicates half or more of the configured ENUM cards are in IS-NR state.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    0002.0121    ENUM SYSTEM            ENUM SYSTEM is available
```

Alarm Level: None. The message is informational only.

Recovery

No further action necessary.

0122 - ENUM SYSTEM normal, card(s) abnormal

This message indicates the Active/IS-NR number of ENUM cards is less than half of the configured ENUM cards.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
**  0002.0122 ** ENUM SYSTEM             ENUM SYSTEM normal, card(s)
abnormal
```

Alarm Level: Major.

Recovery

Activate (Active/IS-NR) half or more ENUM cards in the system.

0123 - ENUM SYSTEM is removed

This message indicates all the ENUM cards are deleted from the system.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    0002.0123    ENUM SYSTEM             ENUM SYSTEM is removed
```

Alarm Level: None. The message is informational only.

Recovery

No further action necessary.

0124 - ENUM Threshold -Level1 exceeded

This message indicates the card TPS exceeds the configured level-1 value in ENUMOPTS.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
*   0002.0124 *  CARD xxxx ENUMHC       ENUM Threshold -Level1 exceeded
```

Alarm Level: Minor.

Recovery

Reduce the card TPS below the configured level-1 value in ENUMOPTS.

0125 - ENUM Threshold -Level 2 exceeded

This message indicates the card TPS exceeds the configured level-2 value in ENUMOPTS.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
```

```
**  0002.0125 ** CARD xxxx ENUMHC        ENUM Threshold -Level 2
exceeded
```

Alarm Level: Major.

Recovery

Reduce the card TPS below the configured level-2 value in ENUMOPTS.

0126 - ENUM Threshold Condition cleared

This message indicates the card TPS has been reduced to below the configured level-1 value in ENUMOPTS.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
     0002.0126   CARD xxxx ENUMHC        ENUM Threshold Condition cleared
```

Alarm Level: None. The message is informational only.

Recovery

No further action necessary.

0127 - ENUM card capacity exceeded

This message indicates the card TPS exceeds the maximum allowable TPS (4000) on a single ENUM card.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
*C  0002.0127 *C CARD xxxx ENUMHC        ENUM card capacity exceeded
```

Alarm Level: Critical

Recovery

Reduce the card TPS below the maximum allowed card TPS.

0128 - All Clocks Have Failed

A fault has been detected on all system clocks.

Example

```
RLGHNCXA21W 00-12-07 11:02:30 EST  EAGLE 35.0.0
*C 0100.0128 *C CLOCK SYSTEM        All clocks have failed
```

Alarm Level: Critical

Recovery

1. Verify the status of the clock with the `rept-stat-clk` command.

   If both clocks are idle, check the source clock into the system. Follow local maintenance procedures to repair the source clock.

2. Verify the clock cables are connected to the shelf backplane (refer to the *Installation Manual* for cable location).

   If any cables are loose, reconnect the cable.

3. If the clock source is not at fault, try reseating the TDM cards.

4. If the message appears again, replace the TDM cards.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

5. If the fault still does not clear, contact My Oracle Support (MOS).

0129 - ENUM Card TPS is normal

This message indicates the card TPS is normal.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    0002.0129   CARD xxxx ENUMHC         ENUM Card TPS is normal
```

Alarm Level: None. The message is informational only.

Recovery

No further action necessary.

0130 - Card successfully loaded with data

The indicated card has been reloaded by the system with the appropriate GPL and tables.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0130    CARD 1304 SCCP      Card successfully loaded with data
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0132 - Loading Failed: Table Not Found

This indicates an error in an upgrade procedure. Either an incorrect file or table was entered. This message could also indicate the file or table being loaded is corrupted and is not recognized by the system.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0132  ** CARD 1304 SCCP     Loading failed: table not found
```

Alarm Level: Major

Recovery

Contact My Oracle Support (MOS).

0133 - Loading Failed: Data Read Error

An error occurred on the active MASP while data tables were loaded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0133  ** CARD 1304 SCCP     Loading failed: data read error
```

Alarm Level: Major

Recovery

1. To verify that both databases are at the same level and are not corrupted, enter:

   ```
   rept-stat-db
   ```

   Example output for a corrupted database

   ```
   bothwagm03w 99-01-08 19:52:08 EST EAGLE 35.0.0
       rept-stat-lsms
       Command entered at terminal #1.
   ;
       bothwagm03w 99-01-08 19:52:08 EST EAGLE 35.0.0
                           GPL          PST          SST
   AST

       ---------------------------------------------------------------------
       LSMS SYSTEM                      IS-NR        Active
   -----
       TDM TRM      8                   IS-NR        Active
   -----
       TDM TRM      9                   IS-NR        Active
   -----
       OAP          A    023-065-000    IS-NR        Active
   -----
       OAP          B    023-065-000    IS-NR        Active
   -----
       Q.3 Assoc    A1                  IS-NR        Active
   -----
       Q.3 Assoc    B1                  IS-NR        Active
   -----
       LSMS SYSTEM ALARM STATUS  = No Alarms.
       OAP A  ALARM STATUS       = No Alarms.
       OAP B  ALARM STATUS       = No Alarms.
   ```

```
Q.3 Assoc A1 ALARM STATUS = No Alarms.
Q.3 Assoc B1 ALARM STATUS = No Alarms.
Command Completed.
```

2. To verify the integrity of the database, enter:

    `aud-data`

3. If there is a problem with the database, follow the procedures in the *Database Administration Manual - System Management* for resolving database inconsistencies.

4. If the problem still exists, contactMy Oracle Support (MOS).

0134 - Loading Failed: Bad Checksum Returned

The GPL checksum, which is used to verify the data, indicates an error during file transfer. The file (GPL) needs to be downloaded again.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0134  ** CARD 1304 SCCP   Loading failed: bad checksum returned
```

Alarm Level: Major

Recovery

1. Reseat the indicated card.

    This may have caused the transmission error.

2. When the card has been reseated, it attempts to reload automatically.

3. If the download fails again, contact My Oracle Support (MOS).

0135 - Loading failed: GPL load timeout

There was a timeout caused by the loading process.

Example

```
 RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0135  ** CARD 1304 SCCP    Loading failed: GPL load timeout
```

Alarm Level: Major

Recovery

1. Verify the card is properly seated.

    If not, reseat the indicated card.

2. If the card is properly seated, the problem corrects itself.

    No further action is necessary.

0136 - Loading Failed: Data Load Timeout

The download process timed out on the MASP. This could be caused by an improperly programmed BIP on the daughterboard of the card being loaded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0136  ** CARD 1304 SCCP    Loading failed: data load timeout
```

Alarm Level: Major

Recovery

1. Use the `rtrv-bip` command (debug command) to verify the BIP on the applique of the indicated card.

   Refer to the *Commands Manual* for details on how to use this command.

2. If the BIP is invalid, it must be reprogrammed.

   Contact My Oracle Support (MOS). You will need to know the part number, revision level, and serial number of the card.

3. The card can be reprogrammed with instructions from My Oracle Support (MOS), or My Oracle Support (MOS) can dial into the system and reprogram the card remotely.

4. If the BIP is valid, reseat the card.

   This should correct the problem. If not, contact My Oracle Support (MOS).

0137 - Loading Failed: Invalid GPL

This message indicates the GPL file is corrupt or there was a failure in the IMT bus.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0137  ** CARD 1304 SCCP    Loading failed: invalid GPL
```

Alarm Level: Major

Recovery

1. This problem should correct itself.

2. If the problem still exists, contact My Oracle Support (MOS).

0138 - Loading failed: GPL format error

This message indicates a corrupted GPL file.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0138  ** CARD 1304 SCCP     Loading failed: GPL format error
```

Alarm Level: Major

Recovery

Contact My Oracle Support (MOS).

0139 - Loading Failed: Disk Read Prep Error

This message indicates the GPL version is not current, and incompatible with the system load.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0139  ** CARD 1304 SCCP   Loading failed: disk read prep error
```

Alarm Level: Major

Recovery

Refer to the upgrade procedure sent with the software.

If this procedure was followed correctly, and the problem still exists, contact My Oracle Support (MOS).

0140 - Loading Failed: Disk Read Response Error

This message indicates there was an error in reading the fixed disk.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0140  ** CARD 1304 SCCP   Loading failed:disk read response error
```

Alarm Level: Major

Recovery

1. If the disk was just installed in the system, try the load again.
2. If the problem occurs again, contact My Oracle Support (MOS).

0141 - Loading Failed: Disk Read Failed

This message indicates there was a failure while reading the fixed disk on the active TDM.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0141  ** CARD 1304 SCCP    Loading failed: disk read failed
```

Alarm Level: Major

Recovery

1. Try the load again.

2. If the problem persists, replace the TDM with the corrupted media.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

3. If this message appears again, contact My Oracle Support (MOS).

0142 - System release alarm cleared

The **SYSREL.SYS** file has been installed on the active fixed disk and the alarm has been cleared.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0142    GPL SYSTEM OAM    System release alarm clea
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0143 - System release GPL(s) not approved

This message indicates that one or more approved GPLs do not match the version specified in the SYSREL.SYS file.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0143  * GPL SYSTEM OAM       System release GPL(s) not approved
```

Alarm Level: Minor

Recovery

1. Use the `rtrv-gpl` command to display the GPLs on the system.

   The output of the `rtrv-gpl` command can be used to identify the GPLs that do not match the versions specified in the SYSREL.SYS file.

2. Use the `chg-gpl` command to upload the required version of the GPL.

3. Use the `act-gpl` command to make the uploaded GPL the approved GPL.

0144 - System Release Version Unknown

This message indicates that a failure has occurred while accessing the SYSREL.SYS file. Either the SYSREL.SYS file could not be found on the active fixed disk or has become corrupted and is not accessible.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST
* 0014.0144  * GPL SYSTEM OAM       System release version unknown
```

Alarm Level: Minor

Recovery

1. Insert the system removable cartridge containing the SYSREL.SYS file into the maintenance disk and alarm card (MDAL). For E5-OAM, insert the system removable USB thumb drive containing the SYSREL.SYS file into the REMOVABLE MEDIA slot of the active MASP.

2. Enter the following command to upload the SYSREL.SYS file from the system removable cartridge to the active fixed disk:

   `chg-gpl:gpl=utility:ver<cdu/vcdu GPL version>`
   Since the actual name of the utility application is CDU or VCDU, the version CDU/VCDU must be specified for `appl=utility`.

3. If this message appears again, contact My Oracle Support (MOS).

0145 - HS Clock A for Card Failed, B Normal

This indicates that the High Speed clock A signal for the indicated card is not present.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
* 0053.0145    * CARD 1115 OAM   HS Clock A for card failed, B normal
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the status of the clock.

   The output indicates how many cards are using the specified clock, and how many cards are reporting fault with the specified clock.

   Example of the possible output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )      CARD LOC= 1116 (Isolated )
    PRIMARY BITS     = Active       PRIMARY BITS     = -----
    SECONDARY BITS   = Idle         SECONDARY BITS   = -----
```

```
HS PRIMARY CLK    = Active      HS PRIMARY CLK    = -----
HS SECONDARY CLK  = Idle        HS SECONDARY CLK  = -----
HS CLK TYPE       = El UNFRAMED  HS CLK TYPE       = -----
HS CLK LINELEN    = SHORTHAUL    HS CLK LINELEN    = -----
                                 PST         SST       AST
SYSTEM CLOCK                     IS-NR       ACTIVE    ALMINH
ALARM STATUS      = No Alarms.
# Cards using CLK A = 009        # Cards with bad CLK A = 000
# Cards using CLK B = 000        # Cards with bad CLK B = 009
# Cards using CLK I = 000

                                 PST         SST       AST
HS SYSTEM CLOCK                  IS-NR       ACTIVE    ALMINH
ALARM STATUS      = No Alarms.
# Cards using HSCLK A = 001      # Cards with bad HSCLK A = 000
# Cards using HSCLK B = 000      # Cards with bad HSCLK B = 002
# Cards using HSCLK I = 000
Command Completed.
```

> **⚠ Caution:**
>
> Resetting, reseating, or replacing a card will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the `dact-slk` command.

2. If only one card is reporting fault, reset the card.

3. If the fault has not cleared, reseat the card.

4. If the fault has not cleared, replace the card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

5. If the fault still has not cleared, replace the TDM card in MASP A.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

6. If more than one card is reporting fault with the designated clock, check the clock cable connection at the shelf backplane (refer to the *Installation Manual* for cable location).

   If the clock cable is at fault, replace the clock cable.

7. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the `act-slk` command.

0146 - HS Clock B for Card Failed, A Normal

This indicates the High Speed clock B signal for the indicated card is not present.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
* 0053.0146    * CARD 1115 OAM   HS Clock B for card failed, A normal
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the status of the clock.

   The output indicates how many cards are using the specified clock, and how many cards are reporting fault with the specified clock.

   Example of the possible output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
    PRIMARY BITS     = Active         PRIMARY BITS     = -----
    SECONDARY BITS   = Idle           SECONDARY BITS   = -----
    HS PRIMARY CLK   = Active         HS PRIMARY CLK   = -----
    HS SECONDARY CLK = Idle           HS SECONDARY CLK = -----
    HS CLK TYPE      = E1 UNFRAMED    HS CLK TYPE      = -----
    HS CLK LINELEN   = SHORTHAUL      HS CLK LINELEN   = -----
                                      PST            SST        AST
    SYSTEM CLOCK                      IS-NR          ACTIVE     ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using CLK A = 009         # Cards with bad CLK A = 000
    # Cards using CLK B = 000         # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                      PST            SST        AST
    HS SYSTEM CLOCK                   IS-NR          ACTIVE     ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using HSCLK A = 001       # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000       # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

> ⚠️ **Caution:**
>
> Resetting, reseating, or replacing a card will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the dact-slk command.

2. If only one card is reporting fault, reset the card.

3. If the fault has not cleared, reseat the card.

4. If the fault has not cleared, replace the card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

5. If the fault still has not cleared, replace the TDM card in MASP B.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

6. If more than one card is reporting fault with the designated clock, check the clock cable connection at the shelf backplane (refer to the *Installation Manual* for cable location).

   If the clock cable is at fault, replace the clock cable.

7. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the `act-slk` command.

0147 - High Speed Clocks A and B for Card Failed

The High Speed A and B clock sources for the indicated card are not present.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
* 0053.0147  * CARD 1115 OAM   High Speed Clocks A and B for card failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the status of the clocks.

   The output indicates how many cards are using one of the specified clocks, and how many cards are reporting faults.

   Example of the possible output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )       CARD LOC= 1116 (Isolated )
    PRIMARY BITS      = Active        PRIMARY BITS      = -----
    SECONDARY BITS    = Idle          SECONDARY BITS    = -----
    HS PRIMARY CLK    = Active       HS PRIMARY CLK     = -----
    HS SECONDARY CLK  = Idle         HS SECONDARY CLK   = -----
    HS CLK TYPE       = E1 UNFRAMED  HS CLK TYPE        = -----
    HS CLK LINELEN    = SHORTHAUL     HS CLK LINELEN    = -----
                                     PST          SST       AST
    SYSTEM CLOCK                     IS-NR        ACTIVE    ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using CLK A = 009        # Cards with bad CLK A = 000
    # Cards using CLK B = 000        # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                     PST          SST       AST
    HS SYSTEM CLOCK                  IS-NR        ACTIVE    ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using HSCLK A = 001      # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000      # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

> ⚠ **Caution:**
>
> Resetting, reseating, or replacing a card will cause both links on the card to fail. If the card is a LIM, place the links on the LIM out of service by entering the `dact-slk` command.

2. If only one card is reporting fault, reset the card.

3. If the fault has not cleared, reseat the card.

4. If the fault has not cleared, replace the card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

5. If the fault still has not cleared, replace the TDM card in MASP B.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

6. If more than one card is reporting fault with the designated clock, check the clock cable connection at the shelf backplane (refer to the *Installation Manual* for cable location).

   If the clock cable is at fault, replace the clock cable.

7. If the fault has cleared and any of these cards are LIMs, place the links assigned to these cards back into service using the `act-slk` command.

0148 - High Speed Clock A for card normal

This indicates that the High Speed clock A signal for the indicated card has returned to a normal, functional state.

Example

```
station1234 99-03-05 16:28:08 EST   EAGLE 31.6.0
0053.0148     CARD 1115 OAM    High Speed Clock A for card normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0149 - High Speed Clock B for card normal

This indicates that the High Speed clock B signal for the indicated card has returned to a normal, functional state.

Example

```
station1234 99-03-05 16:28:08 EST   EAGLE 35.0.0
0053.0149     CARD 1115 OAM       High Speed Clock B for card normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0150 - STPLAN is available

This message indicates that the application communication modules (**ACMs**) are in service with no failure conditions.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0150    SLAN SYSTEM       STPLAN is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0151 - STPLAN Capacity Normal, Card(s) Abnormal

This message indicates one or more application communication modules (ACMs) are out of service, but the STPLAN capacity of the system is within acceptable limits.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 46.0.0
*  0014.0151  *  SLAN SYSTEM    STPLAN capacity normal,card(s)
abnormal
```

Alarm Level: Minor.

Recovery

1. Enter this command to determine which ACMs are out of service:

   `rept-stat-slan`

   Example of the output:

```
tekelecstp 00-04-23 13:36:07 EST EAGLE 46.0.0
SLAN Subsystem Report   IS-ANR         Active      -----
SLAN Cards Configured= 2      Cards IS-NR= 2
CARD   VERSION    PST          SST      AST    HOST Cap.
EAGLE Cap.
-----------------------------------------------------------------
-----
1206   021-010-000  IS-NR          Active    ----       42%
16%
1104   021-010-000  IS-NR          Active    ALMINH     36%
12%
-----------------------------------------------------------------
```

```
-----
AVERAGE USAGE per HOST CAPACITY  =   39%
AVERAGE USAGE per EAGLE CAPACITY =   14%
CARDS DENIED SLAN SEVICE:
  1101, 1204
Command Completed.
```

2. Use the `init-card` command to reinitialize any cards OS-MT.

3. Use the `rept-stat-slan` command again to determine if the card(s) have returned to IS-NR.

   If not, reseat the card(s).

4. If any card(s) remain OS-MT, replace the card(s).

   Refer to *Maintenance Guide*, Appendix A, Card Removal/Replacement Procedures.

0152 - LIM(s) Have Been Denied STPLAN Service

This message indicates that a link interface module (LIM) has been denied STPLAN service and cannot send messages to an application communication module (ACM) due to underprovisioning. More ACMs are required. There should be approximately one ACM for 30-32 LIMs. However, this ratio depends upon the traffic load.

Example

```
RLGHNCXA21W 00-12-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0152 ** SLAN SYSTEM   LIM(s) have been denied STPLAN service
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-slan` command to determine which LIMs have been denied STPLAN service.

   > **✎ Note:**
   >
   > Make sure the problem persists. Adding new LIM cards can cause this condition temporarily.

2. Add ACMs one at a time.

   Monitor the performance of the STPLAN subsystem with the `rept-stat-slan` command to determine if additional cards are needed.

0153 - STPLAN Not Available

This message indicates that no application communication modules (ACMs) are in service.

Example

```
RLGHNCXA21W 00-12-07 11:02:30 EST  EAGLE 35.0.0
*C 0100.0153 *C SLAN SYSTEM      STPLAN not available
```

Alarm Level: Critical

Recovery

1. To determine the status of the ACMs, enter:

   `rept-stat-slan`

   Example of the output:

   ```
   tekelecstp 00-04-23 13:36:07 EST EAGLE 35.0.0
   SLAN Subsystem Report   IS-ANR          Active      -----
   SLAN Cards Configured= 2       Cards IS-NR= 2
   CARD    VERSION     PST             SST        AST    HOST Cap.
   EAGLE Cap.
   ----------------------------------------------------------------------
   -----
   1206    021-010-000  IS-NR          Active     ----        42%
   16%
   1104    021-010-000  IS-NR          Active     ALMINH     36%
   12%
   ----------------------------------------------------------------------
   -----
   AVERAGE USAGE per HOST CAPACITY  =  39%
   AVERAGE USAGE per EAGLE CAPACITY =  14%
   CARDS DENIED SLAN SEVICE:
     1101, 1204
   Command Completed.
   ```

2. Use the `init-card` command to reinitialize any cards OOS-MT.

3. Enter the following command to determine if the card(s) have returned to IS-NR.

   If not, reseat the card(s).`rept-stat-slan`

4. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0154 - STPLAN is Removed

This message indicates that the last application communication module (ACM) has been deleted from the database by the user. The STPLAN service is no longer available.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0154    SLAN SYSTEM       STPLAN is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message is the result of database administration, and does not indicate an alarm condition.

> **Note:**
>
> Confirm that the STPLAN removal was intentional.

0155 - STPLAN Connection Unavailable

This message indicates that the TCP/IP connection to the remote host is lost. The physical connection may be faulty or the remote host is not accepting a TCP/IP connection.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
* 0014.0155  * DLK 1104,A STPLAN     STPLAN connection unavailable
```

Alarm Level: Minor

Recovery

1. Determine if the reported card is out of service using the `rept-stat-card` command.

   If card is not OOS-MT, proceed to 3.

2. If card is OOS-MT, do the following, using the `rept-stat-card` command to check for card IS-NR state after each action:

   a. Reinitialize card using the `init-card` command.

   b. Reseat the card.

   c. Replace the card.

      Refer to the *Maintenance Manual* for card removal/replacement procedures.

3. Use the `rtrv-ip-node` command to identify the address and node of the remote host.

4. Use the `tst-dlk` command to test the TCP/IP connection.

5. If the `tst-dlk` test passes, check that the proper port designation is set at the remote host.

6. If `tst-dlk` fails, perform the following checks:

   a. Check the remote host hardware and software.

   b. Use your company procedures to check the network.

   c. Check cable connections at the system and at the remote host.

7. If the fault is not cleared, contact My Oracle Support (MOS).

0156 - STPLAN connection available

This message indicates that the **TCP/IP** connection to the host is established. All failures have been cleared.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0156    DLK 1104,A STPLAN      STPLAN connection available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates that a previous failure has been cleared.

No further action is necessary.

0157 - OA&M IP Security feature risk detected

This UAM indicates the OA&M IP Security feature is currently ON, and there is 1 or more FTP Servers not using a secure FTP or Telnet terminals not using SSH.

The EAGLE OA&M IP Security feature entry is used to control only the alarming if the SSH for terminals or Security of FTP Server entries is OFF. SSH for terminals and Security of FTP Server entries are controlled via the SECU-DFLT:SSH parameter and SECUIRTY parameter against the FTP servers entries, respectively.

Example

```
eagle11 17-12-07 09:22:34 EST  EAGLE 46.5.0.0.0-0.0.0
*   1988.0157  * SECURITY SYSTEM        OA&M IP Security feature risk
detected
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. To clear this alarm, either turn ON the SSH for terminals and security for all FTP sever entries, or turn the EAGLE OA&M IP Security feature OFF.

2. Run the `rtrv-secu-dflt` and `chg-secu-dflt` commands to view and modify the SSH parameter value.

3. Run `rtrv-ftp-serv` and `chg-ftp-serv` commands to view and modify the SECURITY parameter values for the FTP servers entries.

4. Run the `rtrv-ctrl-feat` and `chg-ctrl-feat` commands to view and modify the EAGLE OA&M IP Security feature status.

0158 - OA&M IP Security feature risk cleared

This UAM indicates the OA&M IP Security feature risk alarm has been cleared.

Example

```
eagle11 17-12-07 09:22:48 EST  EAGLE 46.5.0.0.0-0.0.0
    1991.0158    SECURITY SYSTEM        OA&M IP Security feature risk
cleared
;
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0159 - High Speed Clocks A and B for card normal

The High Speed A and B clock sources for the indicated card are now functioning normally.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 35.0.0
0053.0159    CARD 1115 OAM   High Speed Clocks A and B for card normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0160 - 1116-S Clock Failed

This message indicates the secondary BITS clock failed on the TDM card in slot 1116.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0160  * CLOCK SYSTEM    1116-S clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock status.

   Example of the output:

   ```
   tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
       CARD LOC= 1114 (Active   )    CARD LOC= 1116 (Isolated )
       PRIMARY BITS   = Active     PRIMARY BITS   = -----
       SECONDARY BITS = Idle       SECONDARY BITS = -----
                                   PST          SST       AST
       SYSTEM CLOCK                IS-NR        ACTIVE    ALMINH
   ```

```
                 # Cards using CLK A = 9     # Cards with bad CLK A = 0
                 # Cards using CLK B = 0     # Cards with bad CLK B = 9
                 # Cards using CLK I = 0
                 Command Completed.
```

2. The primary BITS clock should be active.

   Reseat the TDM card in slot 1116.

3. If the problem persists, replace the TDM card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0161 - 1116-P Clock Failed

This message indicates that the primary clock on the TDM card in slot 1116 failed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0161  * CLOCK SYSTEM    1116-P clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Standby  )    CARD LOC= 1116 (Active )
    PRIMARY BITS   = Idle        PRIMARY BITS   = Fault
    SECONDARY BITS = Active      SECONDARY BITS = Active
                                   PST            SST       AST
    SYSTEM CLOCK                   IS-NR          Idle      ------
    # Cards using CLK A = 0     # Cards with bad CLK A = 0
    # Cards using CLK B = 8     # Cards with bad CLK B = 0
    # Cards using CLK I = 0
    Command Completed.
```

2. The system automatically reverts from the primary to secondary BITS if the primary clock fails.

   Reseat the TDM card in slot 1116.

3. If the problem persists, replace the TDM card in slot 1116.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0162 - 1116-P, 1116-S Clocks Failed

This message indicates that both BITS clocks have failed on the TDM card located in slot 1116.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
**  0014.0162  ** CLOCK SYSTEM    1116-P, 1116-S clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Standby  )    CARD LOC= 1116 (Active )
    PRIMARY BITS   = ------       PRIMARY BITS   = Fault
    SECONDARY BITS = ------       SECONDARY BITS = Fault
                                  PST           SST        AST
    SYSTEM CLOCK                  IS-NR         Idle       ------
    # Cards using CLK A = 0    # Cards with bad CLK A = 8
    # Cards using CLK B = 0    # Cards with bad CLK B = 8
    # Cards using CLK I = 8
    Command Completed
```

2. Reseat the TDM card in slot 1116.

3. If the problem persists, replace the TDM card in slot 1116.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0163 - 1114-S Clock Failed

This message indicates the secondary BITS clock for the TDM card in slot 1114 has failed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*   0014.0163  * CLOCK SYSTEM    1114-S clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Active   )    CARD LOC= 1116 (Isolated )
    PRIMARY BITS   = Active       PRIMARY BITS   = Fault
    SECONDARY BITS = Fault        SECONDARY BITS = Fault
                                  PST           SST        AST
    SYSTEM CLOCK                  IS-NR         ACTIVE     ALMINH
    # Cards using CLK A = 9    # Cards with bad CLK A = 0
    # Cards using CLK B = 0    # Cards with bad CLK B = 9
```

```
          # Cards using CLK I = 0
          Command Completed.
```

2. The primary BITS clock should be active.

    Reseat the TDM card in slot 1114.

3. If the problem persists, replace the TDM card in slot 1114.

    Refer to the *Maintenance Manual* for card removal/replacement procedures.

0164 - 1114-S, 1116-S Clocks Failed

This message indicates the secondary BITS clock source has failed on both the active and standby TDM cards.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
**  0014.0164  ** CLOCK SYSTEM    1114-S, 1116-S clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock status.

    Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Isolated )   CARD LOC= 1116 (Active )
    PRIMARY BITS   = Fault        PRIMARY BITS   = Active
    SECONDARY BITS = Fault        SECONDARY BITS = Fault
                                  PST          SST        AST
    SYSTEM CLOCK                  IS-NR        ACTIVE     ALMINH
    # Cards using CLK A = 9    # Cards with bad CLK A = 0
    # Cards using CLK B = 0    # Cards with bad CLK B = 9
    # Cards using CLK I = 0
    Command Completed
```

2. Follow local procedures to troubleshoot and repair the secondary BITS clock.

3. If this message appears again, contact My Oracle Support (MOS).

0165 - 1114-S, 1116-P Clocks Failed

This message indicates the secondary BITS clock on the TDM card in slot 1114, and the primary BITS clock on the TDM card in slot 1116 have failed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0165  * CLOCK SYSTEM    1114-S, 1116-P clocks failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

   ```
   tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
       CARD LOC= 1114 (Isolated )    CARD LOC= 1116 (Active )
       PRIMARY BITS   = Fault        PRIMARY BITS   = Fault
       SECONDARY BITS = Fault        SECONDARY BITS = Active
                                     PST           SST        AST
       SYSTEM CLOCK                  IS-NR         ACTIVE     ALMINH
       # Cards using CLK A = 9     # Cards with bad CLK A = 0
       # Cards using CLK B = 0     # Cards with bad CLK B = 9
       # Cards using CLK I = 0
       Command Completed
   ```

2. Follow local procedures to troubleshoot and repair the BITS clock.

3. If one of the reference clocks is still not functioning, replace the TDM card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

4. If this message appears again, contact My Oracle Support (MOS).

0166 - 1114-S, 1116-P, 1116-S Clocks Failed

This message indicates the following clocks failed:

- The secondary clock on the TDM card in slot 1114.
- The primary clock on the TDM card in slot 1116.
- The secondary clock on the TDM card in slot 1116.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0166  ** CLOCK SYSTEM    1114-S, 1116-P, 1116-S clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

   ```
   tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
       CARD LOC= 1114 (Active   )    CARD LOC= 1116 (Isolated )
       PRIMARY BITS   = Active       PRIMARY BITS   = Fault
       SECONDARY BITS = Fault        SECONDARY BITS = Fault
                                     PST           SST        AST
       SYSTEM CLOCK                  IS-NR         ACTIVE     ALMINH
       # Cards using CLK A = 9     # Cards with bad CLK A = 0
       # Cards using CLK B = 0     # Cards with bad CLK B = 9
       # Cards using CLK I = 0
       Command Completed.
   ```

2. Follow local procedures to troubleshoot and repair the BITS clock.

3. If one of the reference clocks is still not functioning, replace the TDM card(s).

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0167 - 1114-P Clock Failed

This message indicates the primary BITS clock on the TDM card in slot 1114 has failed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0167  * CLOCK SYSTEM    1114-P clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Isolated  )   CARD LOC= 1116 (Active )
    PRIMARY BITS   = Fault        PRIMARY BITS   = Active
    SECONDARY BITS = Fault        SECONDARY BITS = Fault
                                  PST            SST        AST
    SYSTEM CLOCK                  IS-NR          ACTIVE    ALMINH
    # Cards using CLK A = 9    # Cards with bad CLK A = 0
    # Cards using CLK B = 0    # Cards with bad CLK B = 9
    # Cards using CLK I = 0
    Command Completed
```

2. Follow local procedures to troubleshoot and repair the BITS clock.

3. If the reference clock is still not functioning, replace the TDM card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0168 - 1114-P, 1116-S Clocks Failed

This message indicates the primary BITS clock on the TDM card in slot 1114, and the secondary BITS clock on the TDM card in slot 1116 have failed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0168  * CLOCK SYSTEM    1114-P, 1116-S clocks failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
CARD LOC= 1114 (Isolated)    CARD LOC= 1116 (Active )
PRIMARY BITS   = Fault       PRIMARY BITS   = Active
SECONDARY BITS = Fault        SECONDARY BITS = Fault
                              PST           SST       AST
SYSTEM CLOCK                  IS-NR         ACTIVE    ALMINH
# Cards using CLK A = 9     # Cards with bad CLK A = 0
# Cards using CLK B = 0     # Cards with bad CLK B = 9
# Cards using CLK I = 0
Command Completed
```

2. Follow local procedures to troubleshoot and repair the BITS clock.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

   Make sure the system clock reference is active on the other TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0169 - 1114-P, 1116-P Clocks Failed

This message indicates the primary BITS clock on the TDM cards in slots 1114 and slot 1116 have failed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
**  0014.0169  ** CLOCK SYSTEM    1114-P, 1116-P clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
   CARD LOC= 1114 (Isolated )    CARD LOC= 1116 (Active )
   PRIMARY BITS   = Fault        PRIMARY BITS   = Fault
   SECONDARY BITS = Fault        SECONDARY BITS = Active
                                 PST           SST       AST
   SYSTEM CLOCK                  IS-NR         ACTIVE    ALMINH
   # Cards using CLK A = 9     # Cards with bad CLK A = 0
   # Cards using CLK B = 0     # Cards with bad CLK B = 9
   # Cards using CLK I = 0
   Command Completed
```

2. Follow local procedures to troubleshoot and repair the BITS clock.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

Make sure the system clock reference is active on the other TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

Refer to the *Maintenance Manual* for card removal/replacement procedures.

0170 - 1114-P, 1116-P, 1116-S Clocks Failed

This message indicates the following clocks failed:

- The primary clock on the TDM card in slot 1114.
- The primary clock on the TDM card in slot 1116.
- The secondary clock on the TDM card in slot 1116.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
**  0014.0170  ** CLOCK SYSTEM    1114-P, 1116-P, 1116-S clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Standby )    CARD LOC= 1116 (Isolated )
    PRIMARY BITS    = ------       PRIMARY BITS    = Fault
    SECONDARY BITS = ------        SECONDARY BITS = Active
                                   PST            SST        AST
    SYSTEM CLOCK                   IS-NR          ACTIVE     ALMINH
    # Cards using CLK A = 9     # Cards with bad CLK A = 0
    # Cards using CLK B = 0     # Cards with bad CLK B = 9
    # Cards using CLK I = 0
    Command Completed
```

2. Follow local procedures to troubleshoot and repair the BITS clock.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

   Make sure the system clock reference is active on the other TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0171 - 1114-P, 1114-S Clocks Failed

This message indicates the primary and secondary BITS clocks on the TDM card in slot 1114 have failed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0171  ** CLOCK SYSTEM    1114-P, 1114-S clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Isolated )    CARD LOC= 1116 (Active )
    PRIMARY BITS   = Fault        PRIMARY BITS   = Fault
    SECONDARY BITS = Fault        SECONDARY BITS = Active
                                          PST         SST        AST
    SYSTEM CLOCK                      IS-NR         ACTIVE    ALMINH
    # Cards using CLK A = 9     # Cards with bad CLK A = 0
    # Cards using CLK B = 0     # Cards with bad CLK B = 9
    # Cards using CLK I = 0
    Command Completed.
```

2. Follow local procedures to troubleshoot and repair the BITS clock.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

   Make sure the system clock reference is active on the other TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0172 - 1114-P, 1114-S, 1116-S Clocks Failed

This message indicates the following clocks failed:

- The primary clock on the TDM card in slot 1114.

- The secondary clock on the TDM card in slot 1114.

- The secondary clock on the TDM card in slot 1116.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0172  ** CLOCK SYSTEM    1114-P, 1114-S, 1116-S clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
    CARD LOC= 1114 (Isolated )    CARD LOC= 1116 (Isolated )
    PRIMARY BITS   = Fault        PRIMARY BITS   = Fault
    SECONDARY BITS = Fault        SECONDARY BITS = Active
                                  PST          SST        AST
    SYSTEM CLOCK                  IS-NR        ACTIVE    ALMINH
    # Cards using CLK A = 9    # Cards with bad CLK A = 0
    # Cards using CLK B = 0    # Cards with bad CLK B = 9
    # Cards using CLK I = 0
    Command Completed
```

2. Follow local procedures to troubleshoot and repair the secondary BITS clock.

3. If one of the reference clocks is still not functioning, reseat that TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

    Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0173 - 1114-P, 1114-S, 1116-P clocks failed

This message indicates the following clocks failed:

- The primary clock on the TDM card in slot 1114.

- The secondary clock on the TDM card in slot 1114.

- The primary clock on the TDM card in slot 1116.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0173  ** CLOCK SYSTEM    1114-P, 1114-S, 1116-P clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

    Example of the output:

```
tekelecstp 00-04-23  13:34:15 EST  EAGLE 35.0.0
CARD LOC= 1114 (Isolated )    CARD LOC= 1116 (Active )
PRIMARY BITS   = Fault        PRIMARY BITS   = Fault
SECONDARY BITS = Fault        SECONDARY BITS = Active
                              PST          SST        AST
SYSTEM CLOCK                  IS-NR        ACTIVE    ALMINH
# Cards using CLK A = 9    # Cards with bad CLK A = 0
# Cards using CLK B = 0    # Cards with bad CLK B = 9
# Cards using CLK I = 0
Command Completed
```

2. Follow local procedures to troubleshoot and repair the primary BITS clock.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

4. If one of the reference clocks is still not functioning, replace the associated TDM card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement procedures.

0174 - %-Full Threshold Reached-Upload Required

This alarm is part of the Security Logging feature. When the security log reaches a threshold (administered by the `chg-attr-seculog` command), this alarm is raised. If the system detects that the percent full condition of new entries has reached the threshold, this alarm is raised to alert the system administrator that the security log must be uploaded to avoid an overflow condition. If the log is not uploaded before the log is completely full, entries will be lost. When the security log is uploaded, the alarm is lowered.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 46.3.0.0
*  0047.0174    *SECULOG 1114  %-Full level reached-upload required
```

Alarm Level: Minor

Recovery

> **Note:**
>
> This alarm appears only on the security administrator terminal.

1. To clear this alarm, you must copy the security log to the file transfer area (FTA) in the system.

   To do this, enter the `copy-seculog` command.

2. From the file transfer area, you can use the `act-file-trns` command to transfer the file to a remote PC.

   Follow local procedures for transferring and storing security logs.

0175 - LOGBUFROVFL-SECULOG - Upload Required

This alarm is part of the Security Logging feature. When the security log reaches a threshold (administered by the `chg-attr-seculog` command) UAM 174 is raised. When the log fills completely, new entries are lost and this alarm is raised. When the security log is uploaded, this alarm is lowered.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0175    *SECULOG 1114  LOGBUFROVFL-SECULOG - upload required
```

Alarm Level: Minor

Recovery

> **Note:**
>
> This alarm appears only on the security administrator terminal.

1. To clear this alarm, you must copy the security log to the file transfer area (FTA) in the system.

   To do this, enter the `copy-seculog` command.

2. From the file transfer area, you can use the `act-file-trns` command to transfer the file to a remote PC.

   Follow local procedures for transferring and storing security logs.

0176 - Stdby Security Log - Upload Required

This alarm is part of the Security Logging feature. All of the security log entries should be written to the active MASP and none to the standby MASP. However, should a problem occur and the standby MASP switches to active, the security logs are split between the two MASPs. If there are any new log entries on the standby MASP, the standby log should be uploaded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
* 0014.0176    *SECULOG 1116  Stdby security log - upload required
```

Alarm Level: Minor

Recovery

> **Note:**
>
> This alarm appears only on the security administrator terminal.

Enter this command to clear the alarm and copy the security log to the file transfer area (FTA) in the system: `copy-seculog:slog=stb`

0177 - Security Log Exception Cleared

This alarm is part of the Security Logging feature and indicates that a previous alarm has been cleared by doing one of the following:

- Upload the security log to the file transfer area.

- Turn off the security logging feature.

- Raise the threshold for the number of log entries that will generate UAM 174.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0177    SECULOG 1114              Security log exception cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

> **✏ Note:**
>
> This alarm appears only on the security administrator terminal.

This message indicates a previous fault has been corrected.

No further action is necessary.

0178 - Security log failed

This alarm is part of the Security Logging feature and indicates that a command could not be recorded in the security log.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0178      SECULOG 1114      Security log failed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

> **✏ Note:**
>
> This alarm appears only on the security administrator terminal.

This message indicates a logging failure has occurred.

If the problem persists, check for other alarms, such as a disk failure, and troubleshoot that alarm.

0183 - 1116-SHS Clock Failed

This message indicates that the secondary E1/T1 High Speed clock has failed for the TDM card located in slot 1116.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
*  0052.0183  * HS CLOCK SYSTEM  1116-SHS clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
    PRIMARY BITS      = Active        PRIMARY BITS      = -----
    SECONDARY BITS    = Idle          SECONDARY BITS    = -----
    HS PRIMARY CLK    = Active        HS PRIMARY CLK    = -----
    HS SECONDARY CLK  = Idle          HS SECONDARY CLK  = -----
    HS CLK TYPE       = E1 UNFRAMED   HS CLK TYPE       = -----
    HS CLK LINELEN    = SHORTHAUL     HS CLK LINELEN    = -----
                                      PST          SST        AST
    SYSTEM CLOCK                      IS-NR        ACTIVE     ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using CLK A = 009         # Cards with bad CLK A = 000
    # Cards using CLK B = 000         # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                      PST          SST        AST
    HS SYSTEM CLOCK                   IS-NR        ACTIVE     ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using HSCLK A = 001       # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000       # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Reseat the TDM card in slot 1116.

3. If the problem persists, replace the TDM card in slot 1116.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0184 - 1116-PHS Clock Failed

This message indicates that the primary E1/T1 High Speed clock has failed for the TDM card located in slot 1116.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
*  0052.0184  * HS CLOCK SYSTEM  1116-PHS clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
    PRIMARY BITS      = Active      PRIMARY BITS      = -----
    SECONDARY BITS    = Idle        SECONDARY BITS    = -----
    HS PRIMARY CLK    = Active      HS PRIMARY CLK    = -----
    HS SECONDARY CLK  = Idle        HS SECONDARY CLK  = -----
    HS CLK TYPE       = E1 UNFRAMED  HS CLK TYPE      = -----
    HS CLK LINELEN    = SHORTHAUL    HS CLK LINELEN   = -----
                                    PST          SST        AST
    SYSTEM CLOCK                    IS-NR        ACTIVE     ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using CLK A = 009       # Cards with bad CLK A = 000
    # Cards using CLK B = 000       # Cards with bad CLK B = 009
    # Cards using CLK I = 000

                                    PST          SST        AST
    HS SYSTEM CLOCK                 IS-NR        ACTIVE     ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using HSCLK A = 001     # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000     # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Reseat the TDM card in slot 1116.

3. If the problem persists, replace the TDM card in slot 1116.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0185 - 1116-PHS, 1116-SHS Clocks Failed

This message indicates that both E1/T1 High Speed clocks have failed for the TDM card located in slot 1116.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0185  ** HS CLOCK SYSTEM 1116-PHS, 1116-SHS clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
```

```
        PRIMARY BITS       = Active        PRIMARY BITS      = -----
        SECONDARY BITS     = Idle          SECONDARY BITS    = -----
        HS PRIMARY CLK     = Active        HS PRIMARY CLK    = -----
        HS SECONDARY CLK   = Idle          HS SECONDARY CLK  = -----
        HS CLK TYPE        = E1 UNFRAMED   HS CLK TYPE       = -----
        HS CLK LINELEN     = SHORTHAUL     HS CLK LINELEN    = -----
                                           PST          SST       AST
        SYSTEM CLOCK                       IS-NR        ACTIVE    ALMINH
        ALARM STATUS     = No Alarms.
        # Cards using CLK A = 009          # Cards with bad CLK A = 000
        # Cards using CLK B = 000          # Cards with bad CLK B = 009
        # Cards using CLK I = 000

                                           PST          SST       AST
        HS SYSTEM CLOCK                    IS-NR        ACTIVE    ALMINH
        ALARM STATUS     = No Alarms.
        # Cards using HSCLK A = 001        # Cards with bad HSCLK A = 000
        # Cards using HSCLK B = 000        # Cards with bad HSCLK B = 002
        # Cards using HSCLK I = 000
        Command Completed.
```

2. Reseat the TDM card in slot 1116.

3. If the problem persists, replace the TDM card in slot 1116.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0186 - 1114-SHS Clock Failed

This message indicates that the secondary E1/T1 High Speed clock has failed for the TDM card located in slot 1114.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
*  0052.0186  * HS CLOCK SYSTEM  1114-SHS clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )       CARD LOC= 1116 (Isolated )
    PRIMARY BITS       = Active       PRIMARY BITS      = -----
    SECONDARY BITS     = Idle         SECONDARY BITS    = -----
    HS PRIMARY CLK     = Active       HS PRIMARY CLK    = -----
    HS SECONDARY CLK   = Idle         HS SECONDARY CLK  = -----
    HS CLK TYPE        = E1 UNFRAMED  HS CLK TYPE       = -----
    HS CLK LINELEN     = SHORTHAUL    HS CLK LINELEN    = -----
                                      PST          SST       AST
```

```
SYSTEM CLOCK                      IS-NR         ACTIVE    ALMINH
ALARM STATUS    = No Alarms.
# Cards using CLK A = 009        # Cards with bad CLK A = 000
# Cards using CLK B = 000        # Cards with bad CLK B = 009
# Cards using CLK I = 000
                                 PST           SST       AST
HS SYSTEM CLOCK                   IS-NR         ACTIVE    ALMINH
ALARM STATUS    = No Alarms.
# Cards using HSCLK A = 001      # Cards with bad HSCLK A = 000
# Cards using HSCLK B = 000      # Cards with bad HSCLK B = 002
# Cards using HSCLK I = 000
Command Completed.
```

2. Reseat the TDM card in slot 1114.

3. If the problem persists, replace the TDM card in slot 1114.

Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0187 - 1114-SHS, 1116-SHS Clocks Failed

This message indicates the secondary E1/T1 High Speed clock source has failed for both the active and standby TDM cards.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0187  ** HS CLOCK SYSTEM 1114-SHS, 1116-SHS clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock status.

Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )     CARD LOC= 1116 (Isolated )
    PRIMARY BITS     = Active      PRIMARY BITS     = -----
    SECONDARY BITS   = Idle        SECONDARY BITS   = -----
    HS PRIMARY CLK   = Active      HS PRIMARY CLK   = -----
    HS SECONDARY CLK = Idle        HS SECONDARY CLK = -----
    HS CLK TYPE      = E1 UNFRAMED  HS CLK TYPE      = -----
    HS CLK LINELEN   = SHORTHAUL    HS CLK LINELEN   = -----
                                   PST           SST       AST
    SYSTEM CLOCK                    IS-NR         ACTIVE    ALMINH
    ALARM STATUS    = No Alarms.
    # Cards using CLK A = 009       # Cards with bad CLK A = 000
    # Cards using CLK B = 000       # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                   PST           SST       AST
```

```
        HS SYSTEM CLOCK                       IS-NR           ACTIVE      ALMINH
        ALARM STATUS      = No Alarms.
        # Cards using HSCLK A = 001      # Cards with bad HSCLK A = 000
        # Cards using HSCLK B = 000      # Cards with bad HSCLK B = 002
        # Cards using HSCLK I = 000
        Command Completed.
```

2. Follow local procedures to troubleshoot and repair the secondary E1/T1 High Speed clock.

3. If this message appears again, contact My Oracle Support (MOS).

0188 - 1114-SHS, 1116-PHS Clocks Failed

This message indicates the following High Speed clocks failed:

- The secondary High Speed clock for the TDM card in slot 1114.

- The primary High Speed clock for the TDM card in slot 1116.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
*  0052.0188  * HS CLOCK SYSTEM  1114-SHS, 1116-PHS clocks failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock status.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )       CARD LOC= 1116 (Isolated )
    PRIMARY BITS     = Active        PRIMARY BITS     = -----
    SECONDARY BITS   = Idle          SECONDARY BITS   = -----

    ALARM STATUS      = No Alarms.
    # Cards using CLK A = 009        # Cards with bad CLK A = 000
    # Cards using CLK B = 000        # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                     PST           SST       AST
    HS SYSTEM CLOCK                  IS-NR         ACTIVE    ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using HSCLK A = 001      # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000      # Cards with bad HSCLK B = 002
```

```
# Cards using HSCLK I = 000
Command Completed.
```

2. Follow local procedures to troubleshoot and repair the E1/T1 High Speed clocks.

3. If this message appears again, contact My Oracle Support (MOS).

0189 - 1114-SHS, 1116-PHS, 1116-SHS Clocks Failed

This message indicates the following High Speed clocks failed:

- The secondary High Speed clock for the TDM card in slot 1114

- The primary High Speed clock for the TDM card in slot 1116

- The secondary High Speed clock for the TDM card in slot 1116

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0189 ** HS CLOCK SYSTEM  1114-SHS, 1116-PHS,1116-SHS clocks
failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
    PRIMARY BITS      = Active        PRIMARY BITS      = -----
    SECONDARY BITS    = Idle          SECONDARY BITS    = -----
    HS PRIMARY CLK    = Active        HS PRIMARY CLK    = -----
    HS SECONDARY CLK  = Idle          HS SECONDARY CLK  = -----
    HS CLK TYPE       = E1 UNFRAMED   HS CLK TYPE       = -----
    HS CLK LINELEN    = SHORTHAUL     HS CLK LINELEN    = -----
                                      PST         SST       AST
    SYSTEM CLOCK                      IS-NR       ACTIVE    ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using CLK A = 009         # Cards with bad CLK A = 000
    # Cards using CLK B = 000         # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                      PST         SST       AST
    HS SYSTEM CLOCK                   IS-NR       ACTIVE    ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using HSCLK A = 001       # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000       # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Follow local procedures to troubleshoot and repair the E1/T1 High Speed clocks.

3. If one of the reference clocks is still not functioning, replace the TDM card(s).

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0190 - 1114-PHS Clock Failed

This message indicates the primary High Speed clock for the TDM card in slot 1114 has failed.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
*  0052.0190  ** HS CLOCK SYSTEM 1114-PHS  clock failed
```

Alarm Level: Minor

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )       CARD LOC= 1116 (Isolated )
    PRIMARY BITS     = Active        PRIMARY BITS      = -----
    SECONDARY BITS   = Idle          SECONDARY BITS    = -----
    HS PRIMARY CLK   = Active        HS PRIMARY CLK    = -----
    HS SECONDARY CLK = Idle          HS SECONDARY CLK  = -----
    HS CLK TYPE      = E1 UNFRAMED   HS CLK TYPE       = -----

                                         PST          SST       AST
       SYSTEM CLOCK                      IS-NR        ACTIVE    ALMINH
       ALARM STATUS     = No Alarms.
       # Cards using CLK A = 009         # Cards with bad CLK A = 000
       # Cards using CLK B = 000         # Cards with bad CLK B = 009
       # Cards using CLK I = 000
                                         PST          SST       AST
       HS SYSTEM CLOCK                   IS-NR        ACTIVE    ALMINH
       ALARM STATUS     = No Alarms.
       # Cards using HSCLK A = 001       # Cards with bad HSCLK A = 000
       # Cards using HSCLK B = 000       # Cards with bad HSCLK B = 002
       # Cards using HSCLK I = 000
       Command Completed.
   ```

2. Follow local procedures to troubleshoot and repair the E1/T1 High Speed clocks.

3. If this message appears again, contact My Oracle Support (MOS).

0192 - 1114-PHS, 1116-PHS Clocks Failed

This message indicates the primary E1/T1 High Speed clocks for the TDM cards in slots 1114 and 1116 have failed.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0192  ** HS CLOCK SYSTEM 1114-PHS, 1116-PHS clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )       CARD LOC= 1116 (Isolated )
    PRIMARY BITS     = Active        PRIMARY BITS      = -----
    SECONDARY BITS   = Idle          SECONDARY BITS    = -----
    HS PRIMARY CLK   = Active        HS PRIMARY CLK    = -----
    HS SECONDARY CLK = Idle          HS SECONDARY CLK  = -----
    HS CLK TYPE      = E1 UNFRAMED   HS CLK TYPE       = -----
    HS CLK LINELEN   = SHORTHAUL     HS CLK LINELEN    = -----
                                     PST          SST       AST
    SYSTEM CLOCK                     IS-NR        ACTIVE    ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using CLK A = 009        # Cards with bad CLK A = 000
    # Cards using CLK B = 000        # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                     PST          SST       AST
    HS SYSTEM CLOCK                  IS-NR        ACTIVE    ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using HSCLK A = 001      # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000      # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Follow local procedures to troubleshoot and repair the E1/T1 High Speed clocks.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

   Make sure the system clock reference is active on the other TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0193 - 1114-PHS, 1116-PHS, 1116-SHS clks Failed

This message indicates the following clocks failed:

- The primary High Speed clock for the TDM card in slot 1114

- The primary High Speed clock for the TDM card in slot 1116

- The secondary High Speed clock for the TDM card in slot 1116

Example

```
station1234 99-03-05 16:28:08 EST   EAGLE 31.6.0
** 0052.0193 ** HS CLOCK SYSTEM  1114-PHS, 1116-PHS,1116-SHS clks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )         CARD LOC= 1116 (Isolated )
    PRIMARY BITS      = Active          PRIMARY BITS      = -----
    SECONDARY BITS    = Idle            SECONDARY BITS    = -----
    HS PRIMARY CLK    = Active          HS PRIMARY CLK    = -----
    HS SECONDARY CLK  = Idle            HS SECONDARY CLK  = -----
    HS CLK TYPE       = E1 UNFRAMED     HS CLK TYPE       = -----
    HS CLK LINELEN    = SHORTHAUL       HS CLK LINELEN    = -----
                                        PST           SST        AST
    SYSTEM CLOCK                        IS-NR         ACTIVE     ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using CLK A = 009           # Cards with bad CLK A = 000
    # Cards using CLK B = 000           # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                        PST           SST        AST
    HS SYSTEM CLOCK                     IS-NR         ACTIVE     ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using HSCLK A = 001         # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000         # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Follow local procedures to troubleshoot and repair the E1/T1 High Speed clocks.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

   Make sure the system clock reference is active on the other TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0194 - 1114-PHS, 1114-SHS Clocks Failed

This message indicates the primary and secondary E1/T1 High Speed clocks for the TDM card in slot 1114 have failed.

Example

```
   station1234 99-03-05 16:28:08 EST   EAGLE 31.6.0
** 0052.0194  ** HS CLOCK SYSTEM 1114-PHS, 1114-SHS clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

    Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
    PRIMARY BITS      = Active         PRIMARY BITS      = -----
    SECONDARY BITS    = Idle           SECONDARY BITS    = -----
    HS PRIMARY CLK    = Active         HS PRIMARY CLK    = -----
    HS SECONDARY CLK  = Idle           HS SECONDARY CLK  = -----
    HS CLK TYPE       = E1 UNFRAMED    HS CLK TYPE       = -----
    HS CLK LINELEN    = SHORTHAUL      HS CLK LINELEN    = -----
                                       PST          SST        AST
    SYSTEM CLOCK                       IS-NR        ACTIVE     ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using CLK A = 009          # Cards with bad CLK A = 000
    # Cards using CLK B = 000          # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                       PST          SST        AST
    HS SYSTEM CLOCK                    IS-NR        ACTIVE     ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using HSCLK A = 001        # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000        # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Follow local procedures to troubleshoot and repair the E1/T1 High Speed clocks.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

    Make sure the system clock reference is active on the other TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

    Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0195 - 1114-PHS, 1114-SHS, 1116-SHS clks Failed

This message indicates the following clocks failed:

*   The primary High Speed clock for the TDM card in slot 1114

*   The secondary High Speed clock for the TDM card in slot 1114

- The secondary High Speed clock for the TDM card in slot 1116

Example

```
station1234 99-03-05 16:28:08 EST   EAGLE 31.6.0
** 0052.0194   ** HS CLOCK SYSTEM 1114-PHS, 1114-SHS clocks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
    PRIMARY BITS     = Active         PRIMARY BITS      = -----
    SECONDARY BITS   = Idle           SECONDARY BITS    = -----
    HS PRIMARY CLK   = Active         HS PRIMARY CLK    = -----
    HS SECONDARY CLK = Idle           HS SECONDARY CLK  = -----
    HS CLK TYPE      = E1 UNFRAMED    HS CLK TYPE       = -----
    HS CLK LINELEN   = SHORTHAUL      HS CLK LINELEN    = -----
                                      PST           SST        AST
    SYSTEM CLOCK                      IS-NR         ACTIVE     ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using CLK A = 009         # Cards with bad CLK A = 000
    # Cards using CLK B = 000         # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                      PST           SST        AST
    HS SYSTEM CLOCK                   IS-NR         ACTIVE     ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using HSCLK A = 001       # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000       # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Follow local procedures to troubleshoot and repair the secondary E1/T1 High Speed clock.

3. If one of the reference clocks is still not functioning, reseat that TDM card.

4. If one of the reference clocks is still not functioning, replace the TDM card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0196 - 1114-PHS, 1114-SHS, 1116-PHS clks Failed

This message indicates the following clocks failed:

- The primary High Speed clock for the TDM card in slot 1114

- The secondary High Speed clock for the TDM card in slot 1114

- The primary High Speed clock for the TDM card in slot 1116

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0196  ** HS CLOCK SYSTEM 1114-PHS, 1114-SHS,1116-PHS clks failed
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-clk` command to determine the current clock configuration.

   Example of the output:

```
rept-stat-clk
    Command entered at terminal #3.
;
    tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
    CARD LOC= 1114 (Active   )       CARD LOC= 1116 (Isolated )
    PRIMARY BITS      = Active        PRIMARY BITS      = -----
    SECONDARY BITS    = Idle          SECONDARY BITS    = -----
    HS PRIMARY CLK    = Active        HS PRIMARY CLK    = -----
    HS SECONDARY CLK  = Idle          HS SECONDARY CLK  = -----
    HS CLK TYPE       = E1 UNFRAMED   HS CLK TYPE       = -----
    HS CLK LINELEN    = SHORTHAUL     HS CLK LINELEN    = -----
                                      PST          SST       AST
    SYSTEM CLOCK                      IS-NR        ACTIVE    ALMINH
    ALARM STATUS     = No Alarms.
    # Cards using CLK A = 009         # Cards with bad CLK A = 000
    # Cards using CLK B = 000         # Cards with bad CLK B = 009
    # Cards using CLK I = 000
                                      PST          SST       AST
    HS SYSTEM CLOCK                   IS-NR        ACTIVE    ALMINH
    ALARM STATUS      = No Alarms.
    # Cards using HSCLK A = 001       # Cards with bad HSCLK A = 000
    # Cards using HSCLK B = 000       # Cards with bad HSCLK B = 002
    # Cards using HSCLK I = 000
    Command Completed.
```

2. Follow local procedures to troubleshoot and repair the primary E1/T1 High Speed clock.

3. If one of the reference clocks is still not functioning, reseat the associated TDM card.

4. If one of the reference clocks is still not functioning, replace the associated TDM card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0197 - All High Speed Clocks Have Failed

A fault has been detected on all high speed system clocks.

Example

```
RLGHNCXA21W 00-12-07 11:02:30 EST  EAGLE 31.6.0
*C 0100.0197 *C HS CLOCK SYSTEM  All high speed clocks have failed
```

Alarm Level: Critical

Recovery

1. Verify the status of the clock with the `rept-stat-clk` command.

    If both clocks are idle, check the source clock into the system. Follow local maintenance procedures to repair the source clock.

2. Verify the clock cables are connected to the shelf backplane (refer to the *Installation Manual* for cable location).

    If any cables are loose, reconnect the cable.

3. If the clock source is not at fault, try reseating the TDM cards.

4. If the message appears again, replace the TDM cards.

    Refer to the *Maintenance Manual* for card removal/replacement procedures.

5. If the fault still does not clear, contact My Oracle Support (MOS).

0198 - High speed clock alarm(s) cleared

All primary and secondary high speed clock sources are functioning.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0198    HS CLOCK SYSTEM  High speed clock alarm(s) cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0199 - OA&M IP Security feature disabled

The Eagle OA&M IP Security Enhancements Feature is not operational. This UAM is issued because the temporary key for the QA&M IP Security feature has expired.

With this feature disabled, you do not have the tools to securely pass data across an otherwise non-secure network. Until the Eagle OA&M IP Security Enhancements Feature is restored, the Eagle cannot provide secure connections from approved clients, and does not protect sensitive passwords and information while in transit between the Eagle and a host.

Example

```
RLGHNCXA21W 03-03-03 12:01:43 EST  EAGLE 35.0.0
0047.0199    SECURITY SYSTEM         OA&M IP Security feature disabled
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. First, to restore OA&M IP Security Enhancements feature, you must enable it permanently.

   To enable a control feature, you can purchase it from Oracle. You will receive a feature access key to use with the `enable-ctrl-feat` command.

2. Next, turn on the feature by using the `chg-ctrl-feat` command.

0200 - RCVRY-LKF: Link Available

The link has become available for SS7 signaling traffic. SS7 traffic has been restored to the link.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0200  SLK 1202,A nc00027  RCVRY-LKF: link available
            SLC=01    FECLLI=A1234567890        CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional. SS7IPGW and IPLIM links are considered high-speed links by the EAGLE 5 ISS. They are reported as CLASS=SAAL.

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0201 - REPT-LKF: Remote NE Loopback

This message indicates the link is in loopback. This alarm is repeated every 15 minutes until the loopback is deactivated.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0201  ** SLK 1205,A nc00027  REPT-LKF:remote NE loopback
            SLC=01    FECLLI=A1234567890            CLASS=MTP2
```

Alarm Level: Major

Recovery

If the loopback was established in error, enter the following command, specifying the location and port from the output message:

```
dact-lbp:loc=xxxx:port=y
```
where xxxx = the card location from the outputy = the port *A* or *B* from the output.

0202 - REPT-LKF: HWP - too many link interrupts

This message indicates the link has had numerous interruptions.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.202 ** SLK 1205,A nc00027 REPT-LKF:HWP - too many link
interrupts
              SLC=01   FECLLI=A1234567890              CLASS=SAAL
```

Note:

The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. The number of interruptions has exceeded the threshold.

   This situation can be caused by excessive noise from unshielded cables, loose or disconnected cables.

2. Check the physical connections to the specified card.

3. Follow local procedures to test the link facilities.

0203 - REPT-LKF: lost data

The signaling link has lost data.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0203  ** SLK 1205,A nc00027  REPT-LKF:lost data
              SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Check the physical connections to the signaling link.

2. Review current NODATA timer configuration (`rtrv-slk`, `rtrv-l2t`) for signaling link.

3. Using an analyzer, test for level 1 and level 2 functions.

   Follow local procedures to test and return links to service.

0204 - REPT-LKF: XER - ERM threshold exceeded

The signal unit error rate monitor (**ERM**) has exceeded the threshold because there are too many errors on the link.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0204 ** SLK 1205,A nc00027  REPT-LKF:XER-ERM threshold exceeded
               SLC=01    FECLLI=A1234567890            CLASS=SAAL
```

Alarm Level: Major

Recovery

Follow local procedures to test the link facilities.

0205 - REPT-LKF: APF - lvl-2 T1 expd (ready)

The signaling link did not receive a fill-in or message signal unit after the proving period.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0313.0205  ** SLK 1205,A nc00027  REPT-LKF:APF-lvl-2 T1 expd (ready)
               SLC=03    FECLLI=testclli            CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0206 - REPT-LKF: APF - lvl-2 T1 expd (not ready)

The signaling link did not receive a fill-in or message signal unit after the proving period.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0313.0206 ** SLK 1205,A nc00027 REPT-LKF:APF - lvl-2 T1 expd (not
ready)
                SLC=01    FECLLI=A1234567890           CLASS=SAAL
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

- If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0207 - REPT-LKF: APF - lvl-2 T3 expired

The link did not receive an **SIN** or an **SIE** before the T3 timer expired.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0207  ** SLK 1205,A nc00027  REPT-LKF:APF - lvl-2 T3 expired
                SLC=03   FECLLI=testclli           CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0208 - REPT-LKF: APF - lvl-2 T2 expired

The link did not receive an **SIN**, **SIE**, or **SIOS**.

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0208  ** SLK 1205,A nc00027  REPT-LKF:APF - lvl-2 T2 expired
                SLC=03   FECLLI=testclli           CLASS=SAAL
```

> ✏ **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0209 - REPT-LKF: APF - failed proving period

The signaling link has failed the proving period.

Example

```
  RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0209 ** SLK 1205,A nc00027 REPT-LKF: APF - failed proving period
                SLC=03   FECLLI=testclli           CLASS=MTP2
```

> ✏ **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0210 - REPT-LKF: OSA - received SIO

The signaling terminal has received the status indication Out of Alignment from the far end.

Example

```
  RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0210  ** SLK 1205,A nc00027  REPT-LKF: OSA - received SIO
                SLC=03   FECLLI=testclli           CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0211 - REPT-LKF: OSA - received SIN

The signaling terminal has received the status indication normal proving from the far end.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0211 **   SLK 1205,A nc00027   REPT-LKF: OSA - received SIN
                SLC=03    FECLLI=testclli            CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0212 - REPT-LKF: OSA - received SIE

The signaling terminal has received the status indication emergency alignment, from the far end.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0212  **   SLK 1205,A nc00027   REPT-LKF: OSA - received SIE
                SLC=03    FECLLI=testclli            CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0213 - REPT-LKF: OSA - received SIOS

The signaling link has received the status indication out of service from the far end.

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0213 **  SLK 1205,A nc00027  REPT-LKF: OSA - received SIOS
                SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0214 - REPT-LKF: ABN - rcvd 2 of 3 invalid BSN

The link has received 2 out of 3 invalid backward sequence numbers (**BSNs**) from the far end.

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0214 ** SLK 1205,A nc00027  REPT-LKF: ABN - rcvd 2 of 3 invalid
BSN
                SLC=03   FECLLI=testclli            CLASS=SAAL
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0215 - REPT-LKF: ABN - rcvd 2 of 3 invalid FIB

The signaling link has received 2 out of 3 invalid forward indicator bits (**FIB**) from the far end.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0215 **  SLK 1205,A nc00027  REPT-LKF: ABN-rcvd 2 of 3 invalid
FIB
                SLC=03   FECLLI=testclli              CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0216 - REPT-LKF: remote congestion timeout

The remote node has been in congestion too long. The T6 timer has timed out.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0216 ** SLK 1205,A nc00027  REPT-LKF:remote congestion timeout
                SLC=03   FECLLI=testclli              CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far end is not responding correctly.

1. Enter `rept-stat-card:mode=full:loc=xxxx` to determine if the signaling link is M2PA. If so, continue to 2. If not, skip to 3.

2. If this alarm is raised for IPSG M2PA signaling links, do the following:

   a. Enter the `rept-stat-iptps` and `msucount -l` commands to determine how much traffic is received and transmitted on the M2PA links.

    b. Enter the `rtrv-ls` command to determine the amount of **rsvdslktps** and **maxslktps** traffic that the **M2PA** signaling link can receive based on what is provisioned. (The `rsvdslktps` is the reserved-per-signaling-link TPS for IPSG linkset; this indicates the minimum guaranteed capacity for each link in the linkset. The `maxslktps` is the maximum-per-signaling-link TPS; this indicates the maximum traffic permitted when sufficient unused capacity is present on the host card.)

    c. Determine if the value exceeds the incoming traffic rate that the near end can accept. If the value is incorrect, enter the `chg-ls` command to increase or decrease the minimum and maximum **TPS** for the M2PA signaling link.

> **Note:**
>
> This step applies to only IPSG M2PA links and not to IPLIM M2PA links.

3. If the problem persists, follow local procedures to determine why the far end is not responding correctly.

0217 - REPT-LKF: XDA - excess acknowledge delay

The T7 timer has timed out. Either there is too much incoming traffic on M2PA signaling links, or the far end node is taking too long to acknowledge the messages sent to it by the signaling terminal.

Example

```
  RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0217 ** SLK 1205,A nc00027  REPT-LKF: XDA-excess acknowledge
delay
              SLC=03    FECLLI=testclli              CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Enter `rept-stat-card:mode=full:loc=xxxx` to determine if the signaling link is M2PA. If so, continue to 2. If not, skip to 3.

2. If this alarm is raised for M2PA signaling links, do the following:

    a. Enter the `rept-stat-iptps` and `msucount -l` commands to determine how much traffic is received and transmitted on the M2PA links.

    b. Enter the `rtrv-ls` command to determine the amount of **rsvdslktps** and **maxslktps** traffic that the **M2PA** signaling link can receive based on what is provisioned. (The `rsvdslktps` is the reserved-per-signaling-link TPS for IPSG linkset; this indicates the minimum guaranteed capacity for each link in the linkset. The `maxslktps` is the maximum-per-signaling-link TPS; this

indicates the maximum traffic permitted when sufficient unused capacity is present on the host card.)

   c. If the value is incorrect to handle the incoming traffic rate, enter the `chg-ls` command to increase or decrease the minimum and maximum **TPS** for the M2PA signaling link.

3. If the problem persists, follow local procedures to determine why the far end is not responding correctly.

0218 - REPT-LKF: COO - rcvd changeover order

The signaling link has received a changeover order from the far end.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0218 **   SLK 1205,A nc00027   REPT-LKF:COO-rcvd changeover order
                 SLC=03   FECLLI=testclli             CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If the problem persists, follow local procedures to determine why the far-end is not responding correctly.

0219 - REPT-LKF: False Congestion Restart

This message indicates the signaling link has entered a congestion state even though the traffic on the linkset is not high enough to cause congestion. For example, if the link has a high number of re-transmissions, the throughput on the link could drop enough to cause congestion on the link. A T31 timer has started. If the link stays in congestion for a specified period, the link is restarted.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0219 **   SLK 1205,A nc00027   REPT-LKF:false congestion restart
                 SLC=03   FECLLI=testclli             CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Activate measurements using the `chg-meas:collect=on` command.

   This starts measurements collection.

2. If the link is placed OOS-MT, use the measurements collected over the appropriate time period to determine the cause, and determine which action is now necessary.

> ✏️ **Note:**
>
> Refer to the *Measurements Manual* for traffic measurements information.

0220 - REPT-LKF: MTP Link Restart Delayed

This message indicates that a link has gone in and out-of-service. To avoid links going in and out-of-service repeatedly, the EAGLE system uses level 3 T32 timer procedure, which delays restarting a link if the link has an unstable history.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0220 **  SLK 1205,A nc00027  REPT-LKF:MTP link restart delayed
                 SLC=03   FECLLI=testclli          CLASS=SAAL
```

> ✏️ **Note:**
>
> The Class parameter in the example is optional. SS7IPGW and IPLIM links are considered high-speed links by the EAGLE 5 ISS system. They are reported as CLASS=SAAL.

Alarm Level: Major

Recovery

The link should become available.

If the problem persists, contact My Oracle Support (MOS).

0222 - REPT-LKF: remote FE loopback

This message indicates that the specified link has been looped back from the far-end.

Example

```
  RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0222 **  SLK 1205,A nc00027  REPT-LKF:remote FE loopback
                 SLC=03   FECLLI=testclli          CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

If you wish to stop the loopback testing, notify the far-end to stop the testing.

0223 - REPT-LKF: remote NE loopback cleared

This message indicates the link was in loopback and now the loopback has been deactivated.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0223   SLK 1205,A nc00027  REPT-LKF:remote NE loopback cleared
            SLC=01    FECLLI=A1234567890         CLASS=SAAL
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0224 - REPT-LKF: link test failed

This message indicates that the specified link was automatically removed from service (**OOS**) because of a failed signaling link test.

Example

```
  RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0224 **  SLK 1205,A nc00027  REPT-LKF:link test failed
              SLC=03   FECLLI=testclli         CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Check the physical connections to the signaling link.

2. Follow local procedures to check link data at both ends.

3. Using an analyzer, test for level 1 and level 2 functions.

   Follow local procedures to test and return links to service.

0225 - CARD running outdated Flash GPL

This message indicates an OAM/MCP/IPS card is running a GPL with VxWorks6.4 version or Service Module card is running 32-bit SM GPLs (SCCPHC, DEIRHC, SIPHC, ENUMHC). EAGLE release 46.6 is going to be the last release in which 32-bit SM GPLs (SCCPHC, DEIRHC, SIPHC, ENUMHC) is available. EAGLE running/getting upgraded to release 46.6 generates UAM 0225, "CARD running outdated Flash GPL", if there are SM cards running 32-bit GPLs. All SM cards should be converted to run 64-bit GPLs to clear the alarm. SM cards can be converted to 64-bit during the upgrade maintenance window or during next available maintenance window.

Example

```
            1          2          3          4          5          6
7        8
123456789012345678901234567890123456789012345678901234567890123456789012
34567890
**  5019.0225 ** CARD 1101 MCPHC         CARD running outdated Flash GPL
                 HW VERIFICATION CODE:   182
```

Alarm Level: Major

Recovery

1. Upgrade the OAM/MCP/IPS card to VXworks6.9.

2. Upgrade the SM card to 64 bit GPL.

0230 - REPT-LKF: Local Blocked - Thermal

All links to the HC MIM are blocked because the temperature of the HC MIM is above operational limits.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
**  0014.0230 **  SLK 1205,A nc00027  REPT-LKF: local blocked - thermal
                  SLC=03   FECLLI=testclli           CLASS=MTP2
```

Alarm Level: Major

Recovery

Review the output.

Correct the associated alarms to clear this alarm.

0232 - REPT-LKF: remote blocked

The link is blocked due to an event at the far-end.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0232 **   SLK 1205,A nc00027   REPT-LKF: remote blocked
                SLC=03    FECLLI=testclli               CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to verify a processor outage and correct.

0233 - REPT-LINK-MANUAV: local blocked

A local technician has put the signaling link in processor outage.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0233 **   SLK 1205,A nc00027   REPT-LINK-MANUAV: local blocked
                SLC=03    FECLLI=testclli               CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Verify the condition is not intentional.

    If it is not intentionally blocked, enter the following command to place the link in service: `ublk-slk:loc=xxxx:port=y` where *xxxx* is the card location *y* is the port

2. This should place the processor back into service.

    The following message should appear.

    ```
    RLGHNCXA03W  00-02-07  11:11:28 EST  EAGLE 35.0.0
    Local processor outage being cleared.
    ```

0234 - REPT-LKF: RMI remote inhibited

The link has been remotely inhibited by a technician at the far-end office.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0234 **   SLK 1205,A nc00027   REPT-LKF: RMI remote inhibited
                 SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to verify the reason for inhibiting the link.

0235 - REPT-LINK-MGTINH: local inhibited

The link has been inhibited locally by a technician.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0235 **   SLK 1205,A nc00027   REPT-LINK-MGTINH: local inhibited
                 SLC=03   FECLLI=testclli            CLASS=SAAL
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Ensure the link should not be inhibited.

   Enter the following command to place the link in service:

   `unhb-slk:loc=xxxx:port=y`

   where *xxxx* is the card location *y* is the port

2. The link should begin transmitting and receiving **MSUs**.

The following message should appear.

```
RLGHNCXA03W  00-02-07  11:11:28 EST  EAGLE 35.0.0
Allow link message sent to card.
```

0236 - REPT-LKF: Not Aligned

The signaling link has lost alignment. It can no longer carry traffic.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0236 **  SLK 1205,A nc00027  REPT-LKF: not aligned
                 SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Put the link into a local loopback state.

2. If the link does not align, enter the following command to determine the status of the card:

   `rept-stat-card`

3. If the card has reinitialized, the system software will restore the card.

   If both links on the card are out of service, but the card is IS-NR (In-Service-Normal), reseat the card.

4. If the links restore after reseating the card, this procedure is complete.

5. If the links do not restore after reseating the card, enter the following command:

   `rmv-card:loc=xxxx`
   where xxxx = the card location.

6. After the command is complete, enter the following command:

   `rst-card:loc=xxxx`
   where xxxx = the card location.

7. If the links restore after restoring the card, this procedure is complete.

8. If the fault does not clear, replace the indicated card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

9. If the link aligns when it is in a loopback state, enter the following command to determine the DPC of the far end office:

   `rtrv-slk:loc=xxxx`

where xxxx = the card location. Contact the far end office to determine if the trouble is at that end.

10. If the fault does not clear, determine if any other links on the same carrier are affected.

If other links on the same carrier are affected, you may have trouble in your carrier.

11. Using measurements, review the activity over the last day and determine if there were a number of retransmits, message losses and so forth.

Use this data to isolate the problem to the appropriate level (MTP level 2, MTP level 3, and so forth). Use your company maintenance procedures for testing and clearing faults in carriers.

0237 - REPT-LKF: LM Timer NO-CREDIT expired

The remote node has held the local node in a no-credit state for too long.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0237 **   SLK 1205,A nc00027   REPT-LKF: LM Timer NO-CREDIT
expired
                 SLC=03   FECLLI=testclli            CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to test and correct the link congestion problem.

0238 - REPT-LKF: XDA-Timer NO-RESPONSE expired

The far end is not responding to the outgoing **POLL** messages.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0238 **   SLK 1205,A nc00027   REPT-LKF: Timer NO-RESPONSE expired
                 SLC=03   FECLLI=testclli           CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to determine why no **STAT** messages are being sent.

0239 - REPT-LKF:MBL - Local Processor Outage

Indicates a spontaneous or management-initiated processor outage.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0239 **  SLK 1205,A nc00027  REPT-LKF:MBL - local processor
outage
                SLC=03   FECLLI=testclli           CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Enter the following command to determine whether the outage was spontaneous or management-initiated:

   `rept-stat-slk:l2stats=both`

2. Analyze the output.

   If the processor outage was spontaneous, contact My Oracle Support (MOS).

0240 - REPT-LKF: rcvd remote processor outage

The far end sent an **END** processor outage protocol data unit (**PDU**).

Example

```
  RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0240 **  SLK 1205,A nc00027  REPT-LKF: rcvd remote processor
outage
              SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to verify a processor outage and the cause.

0241 - REPT-LKF: rcvd remote out of service

The far end sent an **END** out of service protocol data unit (**PDU**).

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0241 **  SLK 1205,A nc00027   REPT-LKF: rcvd remote out of
service
                 SLC=03   FECLLI=testclli          CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to correct the problem.

0242 - REPT-LKF:rcvd remote protocol error

A protocol error has occurred on the far end.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0242 **  SLK 1205,A nc00027   REPT-LKF:rcvd remote protocol error
                 SLC=03   FECLLI=testclli          CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to test and correct the problem.

0243 - REPT-LKF:rcvd Remote mgmt Inititated

The MAAL layer (not a user) on the far end released a link.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0243 **  SLK 1205,A nc00027   REPT-LKF:rcvd remote mgmt
```

```
inititated
                        SLC=03    FECLLI=testclli                CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office for the details about releasing the link.

0244 - REPT-LKF: FAC – DS1/E1 LOS failure

A level 1 facility outage: loss of signal.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0244 **  SLK 1205,A nc00027  REPT-LKF: FAC – DS1/E1 LOS failure
                SLC=03    FECLLI=testclli            CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Enter the following command to display the service data:

   `rept-stat-slk:l2stats=both`

2. Check the physical connections to the signaling link.

3. Using an analyzer, test for level 1 and level 2 functions.

   Follow local procedures to test and return links to service.

0245 - REPT-LKF: FAC – DS1/E1 LOF failure

A level 1 facility outage: loss of frame.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0245 **  SLK 1205,A nc00027  REPT-LKF: FAC – DS1/E1 LOF failure
                SLC=03    FECLLI=testclli            CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Enter the following command to display the service data:

   ```
   rept-stat-slk:l2stats=both
   ```

2. Check the physical connections to the signaling link.

3. Using an analyzer, test for level 1 and level 2 functions.

   Follow local procedures to test and return links to service.

0246 - REPT-LKF: FAC – DS1/E1 LCD failure

A level 1 facility outage: loss of cell delineation.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0246 **  SLK 1205,A nc00027  REPT-LKF: FAC – DS1/E1 LCD failure
              SLC=03   FECLLI=testclli           CLASS=MTP2
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

1. Enter the following command to display the service data:

   ```
   rept-stat-slk:l2stats=both
   ```

2. Check the physical connections to the signaling link.

3. Using an analyzer, test for level 1 and level 2 functions.

   Follow local procedures to test and return links to service.

0247 - REPT-LKF: XER - ISERM threshold exceeded

The in-service error rate monitor (**ISERM**) maintains a counter to estimate the **PDU** error rate. The **ISERM** counter exceeded the estimated threshold.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0247 **  SLK 1205,A nc00027 REPT-LKF:XER - ISERM threshold
```

```
exceeded
                    SLC=03    FECLLI=testclli              CLASS=MTP
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Major

Recovery

Contact the far-end office to determine why the error rate is so high.

0248 - DDL Unstable

This alarm indicates the DDL unstable has been detected.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
**  0002.0248 ** Card 1212          DDL Unstable
```

Alarm Level: Major

Recovery

Contact My Oracle Support (MOS).

0249 - DDL Stable

This indicates the DDL is no longer unstable.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    0002.0249 *  Card 1212          DDL Stable
```

Alarm Level: None

No further action necessary.

0250 - MPS Available

This indicates that a previous MPS platform association loss has been reestablished and is currently functioning properly.

Example

```
station1234 99-03-30 16:28:08 EST  EAGLE 35.0.0
3535.0250    MPS A         MPS available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0261 - MPS Unavailable

This message indicates that the EAGLE 5 ISS system is unable to communicate with the MPS or the MPS has an internal failure.

Example

```
station1234 99-03-30 16:28:08 EST  EAGLE 35.0.0
*C 3535.0261  *C  MPS A        MPS unavailable
```

Alarm Level: Critical

Recovery

1. This message reports that communication with the MPS is not occurring.

   You should verify the MPS is operating and the IP link is functioning by performing the following steps.

2. Verify the IP connection from the MPS to Eagle is operating.

   If not, restore the communication link between the them.

3. Once the communications link with the MPS is assured, verify the status of the MPS.

   The following example shows a possible system response when a specified DSM card is queried with the `rept-stat-mps` command. `rept-stat-mps:loc=1205`

```
rlghncxa03w 01-03-07 10:23:93 EST  EAGLE 35.0.0
    CARD    VERSION        TYPE    PST            SST         AST
    1205    -----------    DSM     OOS-MT-DSBLD   Manual      -----
      DSM PORT A                   OOS-MT         Unavail     -----
            ALARM STATUS      = **  0084 IP Connection
Unavailable
      DSM PORT B                   OOS-MT         Unavail     -----
            ALARM STATUS      = **  0084 IP Connection
Unavailable
      INP STAT           = -------
      CARD ALARM STATUS  = No Alarms.
      DSM MEMORY USAGE   = 0%
    Command Completed.
```

Determine from the output whether the MPS is active and available for service. If it is not, refer to the *ELAP Administration and LNP Feature Actiivation* or *EPAP Administration Manual* about restoring an MPS server to the active state.

0262 - GTT Duplicate Actn processing stopped

The **Service Module** card received too many MSUs requiring **GTT** Duplicate Actions at one time. As a result, the Service Module card was generating more duplicate MSUs than the card could handle. To prevent the number of duplicates from overwhelming the Service Module card, the card stopped processing GTT Duplicate Actions.

Example

```
**  0002.0262 ** SCCP SYSTEM            GTT Duplicate Actn processing
stopped
                    Service: GTT
```

Alarm Level: Major

Recovery

The Service Module card will begin processing GTT Duplicate Actions again with no further action. To prevent the problem from occurring again, do the following:

1. Run the `rept-stat-sccp` command to see the location of the Service Module cards that are not processing GTT Duplicate Actions. Note that this command does *not* display the GTT Actions that resulted in the disabling of GTT Duplicate Actions.

2. To reduce the chance of the overwhelming the Service Module card, do one of the following:

   • Provision fewer GTT Duplicate Actions so that the Service Module card does not generate excess duplicate messages.

   • Rearrange the location of LIM and Service Module cards so that the traffic is evenly distributed among the Service Module cards.

0263 - GTT Duplicate Actn processing resumed

The Service Module card stopped GTT Duplicate Action processing temporarily, because the number of duplicate MSUs was more than the card could handle. This UAM is issued when GTT Duplicate Action processing resumes.

Example

```
   0002.0263    SCCP SYSTEM             GTT Duplicate Actn processing
resumed
                    Service: GTT
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0264 - REPT-LINK-CGST: Congestion Level 0 to 1

The amount of MSU traffic on the link has reached a congestion level 1.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0264    SLK 1205,A nc00027  REPT-LINK-CGST: congestion level 0 to 1
             SLC=03   FECLLI=testclli            CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Since congestion usually peaks and subsides quickly, a measurements report should be printed to understand what SS7 events took place.

   Use the command `rept-meas` to obtain a report.

   > **Note:**
   >
   > The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

2. Ensure that there are enough links in the linkset based on the traffic load.

0265 - REPT-LINK-CGST: Congestion Level 1 to 2

The amount of MSU traffic on the link has reached a congestion level 2.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0265    SLK 1205,A nc00027  REPT-LINK-CGST: congestion level 1 to 2
             SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Since congestion usually peaks and subsides quickly, a measurements report should be printed to understand what SS7 events took place.

   Use the command `rept-meas` to obtain a report.

   > **Note:**
   >
   > The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

2. Ensure there are enough links in the linkset based on the traffic load.

0266 - REPT-LINK-CGST: Congestion level 2 to 3

The congestion on a link has risen to level 3. That is, the amount of MSU traffic on the signaling link has reached the onset level defined for congestion level 3. This usually indicates the node is under provisioned.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
0014.0266    SLK 1205,A nc00027   REPT-LINK-CGST: congestion level 2 to 3
             SLC=03    FECLLI=testclli              CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Since congestion usually peaks and subsides quickly, a measurements report should be printed to understand what SS7 events took place.

   Use the command `rept-meas` to obtain a report.

   > **Note:**
   >
   > The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

2. Ensure that there are enough links in the linkset based on the traffic load.

0267 - RCVRY-LINK-CGST:Congestion Level 3 to 2

The congestion on a link has fallen to level 2. That is, the amount of MSU traffic on the signaling link has reached the abatement level defined for congestion level 3. This indicates congestion is clearing.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0267   SLK 1205,A nc00027   RCVRY-LINK-CGST:congestion level 3 to 2
             SLC=03   FECLLI=testclli           CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

Since congestion usually peaks and subsides quickly, a measurements report should be printed to understand what SS7 events took place.

Use the command `rept-meas` to obtain a report.

> **Note:**
>
> The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

0268 - RCVRY-LINK-CGST:Congestion Level 2 to 1

The congestion on a link has fallen to level 1. That is, the amount of MSU traffic on the signaling link has reached the abatement level defined for congestion level 2. This indicates congestion is clearing.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0268   SLK 1205,A nc00027   RCVRY-LINK-CGST:congestion level 2 to 1
             SLC=03   FECLLI=testclli           CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

Since congestion usually peaks and subsides quickly, a measurements report should be printed to understand what SS7 events took place.

Use the command `rept-meas` to obtain a report.

> **Note:**
>
> The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

0269 - RCVRY-LINK-CGST: congestion has cleared

This message is generated when the congested state of a link has been removed.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0269   SLK 1205,A nc00027 RCVRY-LINK-CGST: congestion has cleared
            SLC=03   FECLLI=testclli          CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0270 - REPT-LINK-CGST: Discard Level 0 to 1

The amount of MSU traffic on the link has reached an overflow level 1. Messages with an SIO priority of 0 are being discarded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0270   SLK 1205,A nc00027  REPT-LINK-CGST: discard level 0 to 1
            SLC=03   FECLLI=testclli          CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Since overflow conditions usually peak and subside quickly, a measurements report should be printed to understand what SS7 events took place.

   Use the command `rept-meas` to obtain a report.

   > **Note:**
   >
   > The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

2. Ensure that there are enough links in the linkset based on the traffic load.

0271 - REPT-LINK-CGST: Discard Level 1 to 2

The link has reached an overflow level 2. The percentage of MSU traffic on the signaling link has exceeded the discard/overflow level defined for level 2. Messages with SIO priority of 0 or 1 are being discarded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0271    SLK 1205,A nc00027  REPT-LINK-CGST: discard level 1 to 2
             SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Since overflow conditions usually peak and subside quickly, a measurements report should be printed to understand what SS7 events took place.

   Use the command `rept-meas` to obtain a report.

> **Note:**
>
> The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

2. Ensure that there are enough links in the linkset based on the traffic load.

0272 - REPT-LINK-CGST: Discard Level 2 to 3

The amount of MSU traffic on the link has reached an overflow level 3. Messages with an SIO priority of 0, 1, or 2 are being discarded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0272    SLK 1205,A nc00027  REPT-LINK-CGST: discard level 2 to 3
             SLC=03   FECLLI=testclli           CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Since overflow conditions usually peak and subside quickly, a measurements report should be printed to understand what SS7 events took place.

   Use the command `rept-meas` to obtain a report.

   > **Note:**
   >
   > The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

2. Ensure that there are enough links in the linkset based on the traffic load.

0273 - RCVRY-LINK-CGST: Discard Level 3 to 2

The amount of MSU traffic on the link has reached an overflow level 2 and congestion is clearing. Messages with an SIO priority of 0 or 1 are being discarded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0273    SLK 1205,A nc00027  RCVRY-LINK-CGST: discard level 3 to 2
             SLC=03   FECLLI=testclli          CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

Since overflow conditions usually peak and subside quickly, a measurements report should be printed to understand what SS7 events took place.

Use the command `rept-meas` to obtain a report.

> **Note:**
>
> The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

0274 - RCVRY-LINK-CGST: Discard Level 2 to 1

The amount of MSU traffic on the link has decreased to an overflow level 1 and congestion is clearing. Messages with an SIO priority of 0 are being discarded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0274    SLK 1205,A nc00027  RCVRY-LINK-CGST: discard level 2 to 1
             SLC=03   FECLLI=testclli          CLASS=SAAL
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

Since overflow conditions usually peak and subside quickly, a measurements report should be printed to understand what SS7 events took place.

Use the command `rept-meas` to obtain a report.

> **Note:**
>
> The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

0275 - RCVRY-LINK-CGST: discard has cleared

The overflow level of the link has reached level 0. No messages are being discarded.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0275    SLK 1205,A nc00027  RCVRY-LINK-CGST: discard has cleared
             SLC=03   FECLLI=testclli            CLASS=MTP2
```

> **Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0276 - Insufficient HW for IP7 Provisioning

The DCM or EDCM does not have enough memory to provision for sockets and associations.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0276 ** CARD  1115 DCM   Insufficient HW for IP7 provisioning
                HW VERIFICATION CODE: xxx
```

Alarm Level: Major

Recovery

1. If this message contains the optional line 'HW VERIFICATIONCODE: xxx':

   a. Decode the xxx value and correct the indicated problem.

      See Hardware Verification Codes in UAMs the section on hardware verification codes in the *Unsolicited Alarms and Information Messages* manual.

   b. After correcting the problem, the card will be in out-of-service maintenance disabled state (OOS-MT-DSBLD).

Restore the card back to in-service normal state (IS-NR) with the `alw-card` command.

If this message does not contain the optional line 'HW VERIFICATIONCODE: xxx', continue with the next step.

2. Verify the DCM/EDCM hardware.

Verify the provisioning rules.

Table 3-3   Maximum Sockets/Associations per Card

Card Type	Socket to Association Ratio	Maximum Associations	Maximum Sockets
DCM	8:1	50	4
EDCM	1:1	50	50

3. If necessary, reduce the number of associations to four or less for DCMs or 50 or less for EDCMs.

Refer to the *Database Administration Manual - IP7 Secure Gateway* for detailed provisioning information.

0277 - AS Unavailable

This Application Server (AS) is not available to carry service traffic. All ASPs in this AS are not available to carry service traffic.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0277  **  IP7    as3        AS Unavailable
```

Alarm Level: Major

Recovery

1. If the connection is in service, enter this command to generate a report of the AS association status: `rept-stat-as:asname="application_server_name"`

2. If the connection is not in service, there is nothing more you can do to fix the problem without further information from the far end, because the far end node is in control of this state.

0278 - AS Available

The Application Server (AS) is now available to carrying traffic.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0278    IP7    as2        AS Available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0279 - AS Restricted

At least half of the paths are not working, so the traffic is considered restricted. The Application Server (AS) is carrying traffic, but one of the Application Server Processes (ASPs) is not functioning properly.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 28.1.0
*  0014.0279  *  IP7    as2        AS Restricted
```

Alarm Level: Minor

Recovery

1. Enter this command to generate a report of the AS association status:

   ```
   rept-stat-as:asname="application_server_name"
   ```

2. If you have verified that the connection is established, there is nothing more you can do to fix the problem with further information from the far end. The far end node is in control of this state. Notify the PSTN associated with the restricted AS of the problem.

0280 - AS Unrestricted

The Application Server (AS) is carrying traffic. A previous restriction has been cleared.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0280    IP7    as2        AS Unrestricted
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0283 - LNP Ported LRNs approaching Feat. Cap.

The number of LNP ported LRNs is greater than the capacity this feature supports.

This UAM appears when the DSMV SCCP cards are cold-restarted after the ELAP RTDBs were pre-populated offline with LRN totals that exceed the LRN Quantity Feature keys capacities that are currently configured for the EAGLE 5 ISS.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0283 ** CARD  1115 DCM  LNP Ported LRNs approaching Feat. Cap.
```

Alarm Level: Major

Recovery

1. Enter the following command to verify the quantity of LRNs specified for this system:

   `rtrv-ctrl-feat`

2. Either reduce the number of LRNs to the level specified by the output of 1, or respecify the capacity with the `enable-ctrl-feat` command.

0284 - LNP Ported LRNs Capacity Normal

This UAM is a clearing message that appears when the operator enables the LRN feature key quantities on the Eagle that exceed the quantities currently populated in the ELAP RTDBs.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0284    CARD  1115 DCM  LNP Ported LRNs Capacity Normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0285 - LNP Ported NPAs Approaching Feat. Cap.

The number of LNP ported NPANXXs is greater than the capacity this feature supports.

This UAM appears when the DSMVSCCP cards are cold-restarted after the ELAPRTDBs were pre-populated offline with NPANXX totals that exceed the NPANXX Quantity Feature keys capacities that are currently configured for the EAGLE 5 ISS.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0285 ** CARD  1115 DCM  LNP Ported NPAs approaching Feat. Cap.
```

Alarm Level: Major

Recovery

1. Enter the following command to verify the quantity of NPANXXs specified for this system:

```
rtrv-ctrl-feat
```

2. Either reduce the number of NPANXXs to the level specified by the output of 1, or respecify the capacity with the `enable-ctrl-feat` command.

0286 - LNP Ported NPAs Capacity Normal

This UAM is a clearing message that appears when the operator enables the NPANXX feature key quantities on the Eagle that exceed the quantities currently populated in the ELAP RTDBs.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0286    CARD  1115 DCM  LNP Ported NPAs Capacity Normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0287 - RTDB Table Level 2 FAK Cap Exceeded

This UAM warns the customer that the total TNs in the LNP database has reached 95% of the LNP database Feature Access Key (FAK) capacity.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST EAGLE 35.0.0
*C 0100.0287 *C LNP 1115 DCM   RTDB Table Level 2 FAK Cap Exceeded
                TABLE: TN        Threshold Value:              95%
                                 Exceeds 88320000 of 96000000
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the database threshold:

    ```
    rtrv-th-alm
    ```
    If the threshold is below 95% go to 2 .

2. Enter the following command:

    ```
    chg-th-alm:lnptndblv2=xxxx
    ```
    where xxxx=percentage.

3. If the threshold is at 95% contact My Oracle Support (MOS).

0288 - RTDB Table Level 1 FAK Cap Exceeded

This UAM warns the customer that the total TNs in the LNP database has reached 80% of the LNP database Feature Access Key (FAK) capacity.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 ESTEAGLE 35.0.0
 ** 0100.0288 ** LNP 1115 DCM   RTDB Table Level 1 FAK Cap Exceeded
                 TABLE: TN        Threshold Value: 80%
                                  Exceeds 76800000 of 96000000
```

Alarm Level: Major

Recovery

1. Enter the following command to verify the database threshold:

   `rtrv-th-alm`
   If the threshold is below 80% go to 2.

2. Enter the following command:

   `chg-th-alm:lnptndblv2=xxxx`
   where xxxx=percentage.

3. If the threshold is at 80% contact My Oracle Support (MOS).

0289 - RTDB Table FAK Capacity Normal

This UAM appears when the LNP FAK alarm condition no longer exists.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST  EAGLE 35.0.0
   0100.0289  LNP 1115 DCM   RTDB Table FAK Capacity Normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous condition has been corrected.

No further action is necessary.

0290 - GLS is Available

The TSM cards configured as generic loader services (GLS) are functioning. These cards are used to download gateway screening (GWS) data to the LIMs.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0290    GLS SYSTEM         GLS is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous condition has been corrected.

No further action is necessary.

0291 - GLS is at Minimum Service Limit

Only one TSM configured for generic loader services (GLS) is in service. When this module fails, GLS is unavailable.

Generic loader services (GLS) are used to download gateway screening data to the LIMs. GLS consists of TSM cards configured with GLS software. They are only needed when LIMs or TSMs must be reloaded.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
** 0100.0291 ** GLS SYSTEM          GLS is at minimum service limit
```

Alarm Level: Major

Recovery

1. Use the `rept-stat-card` command to verify status of the TSM cards providing GLS.

   This command identifies the cards still IS-NR (In-Service – Normal) and those cards which are out of service. For example, enter:

   ```
   rept-stat-card
   ```

2. Use the `init-card` command to reinitialize the card and force gateway screening (GWS) data to be downloaded from the active MASP to the TSM.

3. After GWS data has been successfully downloaded, use `rept-stat-card` to verify the card(s) have returned to service.

4. If the card(s) do not return to IS-NR, then reseat the card(s).

5. If the card(s) still do not return to IS-NR, replace the card(s).

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0292 - GLS is Not Available

Generic loading services (GLS) is not able to function; the EAGLE 5 ISS may not be performing gateway screening (GWS).

At least one card should be returned to IS-NR status. This makes GLS available and changes the alarm level to major (0291 - GLS is at Minimum Service Limit). The alarm clears after two TSM cards have returned to IS-NR.

Example

```
  RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
*C 0100 0292 *C GLS SYSTEM          GLS is not available
```

Alarm Level: Critical

Recovery

1. Use the `rept-stat-card` command to verify status of the TSM cards providing GLS.

   For example, enter:

   `rept-stat-card`

   Example of the output:

   ```
   RLGHNCXA03W 00-09-27 16:43:42 EST    EAGLE   31.3.0
   CARD   VERSION   TYPE    APPL     PST           SST       AST
   1113   022-000-000 MCAP    OAM      IS-NR         Active    -----
   1114   ----------- TDM     --------  -----         -----     -----
   1115   022-000-000 MCAP    OAM      IS-NR         Standby   -----
   1116   ----------- TDM     --------  -----         -----     -----
   1117   ----------- MDAL    --------  IS-NR         Standby   -----
   1204   022-000-000 LIMOCU  SS7ANSI  OOS-MT        Isolated  -----
   1205   022-000-000 LIMOCU  SS7ANSI  IS-NR         Active    -----
   1206   022-000-000 LIMOCU  SS7ANSI  OOS-MT        Isolated  -----
   1212   022-000-000 ACMENET STPLAN   IS-NR         Active    -----
   1216   022-000-000 TSM     SCCP     IS-ANR        Standby   -----
   1218   022-000-000 TSM     GLS      OOS-MT        Isolated  -----
   1312   022-000-000 LIMDS0  SS7ANSI  IS-NR         Active    -----
   1313   022-000-000 LIMOCU  SS7ANSI  OOS-MT        Idle      -----
   Command Completed.
   ```

2. Use the `init-card` command to reinitialize the card and force gateway screening (GWS) data to be downloaded from the active MASP to the TSM.

3. The following message should appear.

   ```
   RLGHNCXA03W  00-02-07  11:11:28 EST  EAGLE 35.0.0
   Init Card command issued to card 1218
   ```

4. After GWS data has been successfully downloaded, use `rept-stat-card` to verify the card(s) have returned to service.

5. If the card(s) do not return to IS-NR, then reseat the card(s).

6. If the card(s) still do not return to IS-NR, replace the card(s).

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0293 - GLS Have Been Removed From The System

Generic loading services (GLS) has been removed from the system, because all TSMs configured for GLS have been deleted through database administration commands.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0293    GLS SYSTEM           GLS have been removed from the system
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message alerts the user that all TSMs configured for GLS have been deleted from the system.

No action is necessary unless gateway screening is required.

0294 - REPT-ALMINH: Alarm Output PERM Inhibit

This message indicates that alarms for the indicated device are permanently inhibited at the indicated level.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    6277.0294    RTXA    001-101-001    REPT-ALMINH: alarm output PERM
Inhibit
                OPCA=   004-004-004
                ALARM INHIBIT LEVEL:   MAJR
```

> **Note:**
>
> The output can vary significantly. Alarm Inhibit alarms are generic and the output varies depending on which alarm/device is inhibited. This example utilizes the CARD format.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0295 - REPT-ALMINH: Alarm Output Enabled

This message indicates the restoration of the reporting of alarms for the indicated device at the indicated level.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 31.5.0
0100.0295    CARD 1101 SCCP        REPT-ALMINH: alarm output enabled
             ALARM INHIBIT LEVEL:   MAJR
```

> **Note:**
>
> The output can vary significantly. Alarm Inhibit alarms are generic and the output varies depending on which alarm/device is inhibited.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0296 - REPT-ALMINH: Alarm Output TEMP Inhibit

This message indicates that alarms for the indicated device are temporarily inhibited at the indicated level.

Example

```
tekelecstp 09-11-06 14:56:48 EST  EAGLE 41.1.0
0045.0296    IP7CONN applsock1        REPT-ALMINH: alarm output TEMP
Inhibit       ALARM INHIBIT LEVEL:   MAJR
```

> **✎ Note:**
>
> The output can vary significantly. Alarm Inhibit alarms are generic and the output varies depending on which alarm/device is inhibited.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0297 - Incorrect Port Configuration

This message indicates that a MPL card with more than ports A and B provisioned has been replaced with a 2 port DS0-A LIM card. This alarm is also generated if an MPL card is placed in a LIM slot which has either port A or port B provisioned as non-56K bps link speed.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0297  ** CARD 1108  SS7ML     Incorrect LIM port configuration
                HW VERIFICATION CODE: xxx
```

Alarm Level: Major

Recovery

1. If this message contains the optional line 'HWVERIFICATIONCODE: xxx':

    • Decode the xxx value and correct the indicated problem.
    See Hardware Verification Codes in UAMs the section on hardware verification codes in the *Unsolicited Alarms and Information Messages* manual.

    • After correcting the problem, the card will be in *out-of-service maintenance disabled state* (OOS-MT-DSBLD).
    Restore the card back to *in-service normal state* (IS-NR) with the `alw-card` command.

2. If this message does not contain the optional line 'HWVERIFICATIONCODE: xxx', perform either of the following:

- Replace the LIM DS0-A card with an MPL card.
  OR

- This card has only 2 ports.
  Re-provision this DS0-A card and provision only ports A and B. Refer to the *Database Administration Manual - SS7* to fix the incorrect port configuration.

0298 - Card Not Using config. SCTP csum Method

The IPLIMx/IPGWx card issues this UAM alarm when the card's active SCTP checksum algorithm does not match the configured SCTP checksum algorithm in the IP OPTIONS table.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0298  * CARD  1115 DCM   Card not using config. SCTP csum
method
```

Alarm Level: Minor

Recovery

1. The SCTP checksum algorithm option is configured via the `chg-sg-opts` command and is stored in the IP OPTIONS table.

   The update applies to the IP OPTIONS tables on disk and IPLIMx/IPGWx card memory. Note that when the SCTP checksum algorithm is updated, IPLIMx/IPGWx cards may not immediately change to the updated checksum algorithm. Before IPLIMx/IPGWx cards can use the configured SCTP checksum algorithm, one of the following conditions must exist.

   - No SCTP associations exist on the IPLIMx/IPGWx card.

   - All SCTP associations provisioned on the IPLIMx/IPGWx card are `open=no`.

   - The IPLIMx/IPGWx card is initialized.

2. In an installed system, use either of two methods to condition the cards to accept the change in checksum algorithms:

   - Card initialization (use the `init-card` command) or

   - Change card association (`chg-assoc:aname=xxx:open=no`)
     For details about these commands, refer to the *Commands Manual*.

3. Issue the `chg-sg-opts:sctp_csum=value` command to define the checksum algorithm to be used in all SCTP associations.

0299 - Config. SCTP csum Method Alarm Cleared

The SCTP checksum UAM alarm is cleared when the card's active SCTP checksum algorithm matches the configured SCTP checksum algorithm.

Example

```
RLGHNCXA21W 03-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0299   CARD  1115 DCM  Config. SCTP csum method alarm cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0300 - TVG Grant Failure

This message indicates that for some card in the system, the grant mechanism (as part of the Multicast Capacity Feature) failed for at least 60 seconds, or more than one time for a 15-second period. A TVG granter failure is defined as a TVG request that completes with a time-out (hardware or software) and/or a status value where the Granter Present bit is not set.

Example

```
RLGHNCXA21W 09-04-06 11:55:14 EST  EAGLE5 40.3.0-62.15.21
**  0016.0300 ** CARD 1203 SS7ML    TVG Grant Failure
                INFO:   SCCP  --N---
```

An alternate output may be displayed when more than one service is denied.

```
RLGHNCXA21W 00-02-07 11:02:30 EST EAGLE 35.0.0
** 6054.0300  ** CARD 3106  IPLHC   TVG Grant Failure
                INFO:   +SLAN  --N---
```

where the "+" sign (`INFO: +SLAN --N---`) indicates more than one service.

Alarm Level: Major

Recovery

1. Enter the following command to verify the status of the TVG granter:

   ```
   rept-stat-card:loc=xxxx:mode=full
   ```
   where xxxx is the card location identified in the output.

   Example of the output:

   ```
   tekelecstp 08-09-25 12:06:24 IST   EST   EAGLE 39.2.0
       CARD   VERSION      TYPE      GPL        PST
   SST        AST
       1204   131-016-000  LIME1     SS7HC      IS-NR

TVG STATUS
    SNM    TVG RESULT  = 24 hr: ------, 5 min: ------
    SLAN   TVG RESULT  = 24 hr: ------, 5 min: ------
    SCCP   TVG RESULT  = 24 hr: ------, 5 min: ------
    INM    TVG RESULT  = 24 hr: ------, 5 min: ------

Command Completed.
```

2. The group ticket voucher status is displayed in these fields:

   `SCCP TVG RESULT` (for SCCP messages)

   `SLAN TVG RESULT` (for STPLAN messages)

   `INM TVG RESULT` (for INM messages)

   `SNM TVG RESULT` (for SNM messages)

   > **Note:**
   >
   > SNM represents network management messages received by the EAGLE (for example, TFP). INM represents network management events internal event processing.

Group ticket voucher status output is displayed as a series of these letters:

G
Service Granted. Indicates normal system behavior.

D
Service Denied. Indicates an overload, but the group ticket voucher hardware and software are working correctly.

N
No granter in the system. For GTT or STPLAN traffic, there may be no TSM-SCCP cards or ACMs in the system. If there are TSM-SCCP cards or ACMs in the system, then a serious failure is indicated (hardware or software bug or hardware failure)

H

Hardware time-out. Indicates the hardware timed out waiting for a group ticket voucher packet to return. Group ticket voucher packets can be lost when a card is plugged in or booted. This is a serious condition if cards have not been connecting or disconnecting from the IMT.

S

Software time-out. No result was ever returned from hardware, indicating a probable hardware failure.

I

Invalid result from hardware.

0301 - TVG Grant Recovery

This message indicates the Multicast Capacity Feature for handling SNM, SCCP, or SLAN traffic is functioning, and a previous problem has cleared.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0301    CARD 1201  OAM    TVG Grant Recovery
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0302 - Cooling Fan Failure

The cooling fan hardware is not working.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0302  *  SYSTEM      Cooling fan failure
```

Alarm Level: Minor

Recovery

1. At the fan assembly, verify that the Fan Switch on the grill panel is in the ON position.

2. At the FAP, verify the fuses for the fan assembly.

   The fuse card will be marked FAN A and FAN B, fuse positions 6, 12, and 18 (A and B). Fuse position 6 is for the fan unit directly below the control shelf. Fuse position 12 is for the fan directly below the 1200 shelf. Fuse position 18 is for the fan directly below the 1300 shelf. All fans are to be fused at 2 amps (with orange flags) per feed.

3. At the EAGLE 5 ISS terminal, enter the following command to verify that the fan feature is turned on.

   ```
   rtrv-feat
   ```

> **✏️ Note:**
>
> Once you have turned on the feature, you cannot turn it off. The feature applies to any and all fans installed within the system. When replacing a fan assembly, the feature should already be turned on.

The output displays a list of optional features and their status on the system.

```
RLGHNCXA03W 99-01-28 11:34:04 EST EAGLE 35.0.0
EAGLE FEATURE LIST
GTT = off
GWS = on
CRMD = off
X25G = on
LAN = on
SEAS = on
LNP = off
LNP12MIL = off  FAN = on
DSTN4000 = on
WNP = on
CNCF = on
SCCPCNV = on
TCAPCNV = on
TLNP = on
x252000 = on
```

4. If `FAN = on` does not appear in the output, enable the fan feature by entering the following command:

   `chg-feat:fan=on`

   After the program updates, the system returns output similar to the following:

   ```
   RLGHNCXA03W 97-03-11 11:34:04 EST EAGLE 35.0.0
   CHG-FEAT: MASP A - COMPLD
   ```

5. At the rear of the frame, verify the A power cable from the A fan assembly is securely attached.

6. At the rear of the frame, verify the B power cable from the B fan assembly is securely attached.

7. At the EAGLE 5 ISS terminal, type in this command:

   `rept-stat-trbl`

   If the EAGLE 5 ISS reports the following alarm, replace the cooling fan.

   ```
   302 COOLING FAN FAILURE
   ```

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0303 - Cooling Fans Normal

The cooling fan hardware has returned to service.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0303    SYSTEM        Cooling Fans Normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0304 - REPT-NMTSK-DSCD: SNM Discard Onset

This message indicates that the number of system network messages has exceeded the threshold and messages are being discarded.

Example

```
  RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
* 0100.0304  *  CARD 1113 OAM    REPT-NMTSK-DSCD: SNM Discard Onset
```

Alarm Level: Minor

Recovery

Check for problems in the network that would cause excessive network management messages to be broadcast.

0305 - RECVY-NMTSK-DSCD: SNM Discard Abated

This message indicates that network messages are no longer being discarded.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0305      CARD 1113 OAM      REPT-NMTSK-DSCD: SNM Discard Abated
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous condition has been corrected.

No further action is necessary.

0306 - SNM Overload Onset

This message indicates that network management messages are approaching the threshold where they will be discarded.

Example

```
   RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
*  0100.0306   *   CARD 1113 OAM        SNM Overload Onset
```

Alarm Level: Minor.

Recovery

Check for problems in the network that would cause excessive network management messages to be broadcast.

0307 - SNM Overload Abated

This message indicates that the threat of network messages being discarded no longer exists.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
0100.0307    CARD 1113 OAM         SNM Overload Abated
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous condition has been corrected.

No further action is necessary.

0308 - Node Isolated Due to SLK Failures

The EAGLE 5 ISS is isolated from other signaling points. All system links are down. Possible causes are as follows:

- Primary and secondary clock sources have failed.

- Signaling links have been manually cancelled.

- All cards have been manually inhibited.

- Both IMT busses have failed.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
*C 0100.0308 *C SYSTEM            Node isolated due to SLK failures
```

Alarm Level: Critical

Recovery

1. Contact My Oracle Support (MOS).

2. Restore the signaling links to service by entering the following:

   ```
   act-slk:loc=xx:port=x
   ```

The following message should appear:

```
RLGHNCXA03W  00-02-07  11:11:28 EST  EAGLE 35.0.0
Activate SLK message sent to card.
```

3. Enter the following to restore the cards:

```
rst-card:loc=xxxx
```

> **Note:**
>
> The card locations (xxxx) must be specified and the command repeated for each card.

Automatic recovery of the SLKs should occur.

4. Activate measurements using the `chg-meas:collect=on` command.

This starts measurements collection.

> **Note:**
>
> Refer to the *Measurements Manual* for traffic measurements information.

0309 - Node is no longer isolated

This message occurs when the node has been in node isolation due to signaling link failures. Enough links have recovered so that the node is no longer isolated and signaling can occur.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0309    SYSTEM                Node is no longer isolated
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0311 - DPC is allowed

A previous fault is corrected and the EAGLE 5 ISS system can send traffic to a specified point code.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0311    DPC 144-201-001     DPC is allowed
```

```
                        LSN=nc00027
                        Prohibited SS  1, 5, 18
                        Allowed SS     3, 6
                        Blocked SS     100, 103
                        Unblocked SS   2, 102, 221
```

Legend

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0312 - DPC is Restricted

A transfer-restricted message has been received concerning the DPC. Possible causes:

- One or more routes to this DPC are unavailable.

- A low priority route is carrying the traffic. The primary and combined routes are not available for traffic to the given DPC.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0312  * DPC 144-201-001    DPC is restricted
                LSN=nc00027
                Prohibited SS  1, 5, 18
                Allowed SS     3, 6
                Blocked SS     100, 103
                Unblocked SS   2, 102, 221
```

Legend

ALLOWED SS
Allowed subsystem

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: Minor

Recovery

1. Enter the `rept-stat-rte` command using the DPC specified from the output message to determine which linkset has a problem.

2. Enter the `rept-stat-ls` using the linkset name specified from the output of Step 1 to determine which link(s) could have a problem.

3. Use local procedures to test the link facilities.

0313 - DPC is prohibited

Traffic to the DPC is prohibited. Possible causes:

• All routes to this DPC are unavailable.

• Adjacent point code link failures or nonadjacent failure in the route.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: Critical

Recovery

1. Enter the `rept-stat-rte` command using the DPC specified from the output message to determine which linkset has a problem.

2. Enter the `rept-stat-ls` using the linkset name specified from the output of Step 1 to determine which link(s) could have a problem.

3. Use local procedures to test the link facilities.

0314 - Route is Allowed

The primary route to the DPC can carry traffic.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0314    DPC 144-201-001     Route is allowed
             LSN=nc00027
             Prohibited SS  1, 5, 18
             Allowed SS     3, 6
             Blocked SS     100, 103
             Unblocked SS   2, 102, 221
```

Legend

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0315 - Route is Restricted

Traffic in the primary route to the DPC is restricted. This could indicate signaling link failures for a non-adjacent DPC.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0315    DPC 144-201-001    Route is restricted
             LSN=nc00027
             Prohibited SS  1, 5, 18
             Allowed SS     3, 6
             Blocked SS     100, 103
             Unblocked SS   2, 102, 221
```

Legend

ALLOWED SS
Allowed subsystem

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the far-end to test and correct the problem.

0316 - Route is Prohibited

The route to the DPC cannot carry traffic to the DPC. Following are the possible causes:

- Local SLK failures
- Non-adjacent DPC SLK failures

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0316    DPC 144-201-001    Route is prohibited
             LSN=nc00027
             Prohibited SS  1, 5, 18
             Allowed SS     3, 6
             Blocked SS     100, 103
             Unblocked SS   2, 102, 221
```

Legend

ALLOWED SS
Allowed subsystem

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter the `rept-stat-rte` command using the DPC specified from the output message to determine which linkset has a problem.

   If it specifies a non-adjacent linkset, contact the far-end to test and correct the problem.

2. If it appears to be a local signaling link failure enter the `rept-stat-ls` using the linkset name specified from the output of 1 to determine which link(s) could have a problem.

3. Verify the link status using the `rept-stat-slk` command.

   For example, enter:

   `rept-stat-slk:loc=:port=b`

   Example of the output:

   ```
   RLGHNCXA03W 00-09-27 17:00:36 EST   EAGLE 35.0.0
   SLK      LSN          CLLI        PST           SST         AST
   1203,B  nsp1         ls02clli    OOS-MT        Unavail     ----
     ALARM STATUS       =  No alarm
     UNAVAIL REASON     =  FL NA LI RI
   Command Completed.
   ```

4. Check the UNAVAIL REASON field in the output of the `rept-stat-slk` command.

   Following is an explanation of the UNAVAIL REASON codes:

   FL – The signaling link has a fault.

   NA – The signaling link is not aligned.

   LI – The signaling link has been inhibited locallyRI – The signaling link has been inhibited remotely.

   LB – The signaling link has been blocked locally.

   RB – The signaling link has been blocked remotely.

   FC – The signaling link is unavailable because of false congestion.

RD(xx.xxx) - The signaling link is unavailable because of a restart delay to prevent signaling link oscillation. The number in parentheses indicates the amount of time, in seconds, remaining in the restart delay period. The link is restarted automatically after this amount of time has elapsed.

5. If the UNAVAIL REASON indicates an alignment problem or fault, activate a loopback using the `act-lpb` command, or use a physical loopback.

   (For a V.35, you must use an appropriate physical V.35 loopback.) If the signaling link aligns, contact the far-end to correct the problem.

6. If the UNAVAIL REASON still indicates an alignment problem or fault, check the status of the card by entering the `rept-stat-card` command for the specified card.

7. If the `rept-stat-card` command indicates a problem with the card, reset the card by entering the `init-card` command with the specified card location.

   If the card still does not align, try first reseating the card, then replacing the card. Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

8. If the UNAVAIL REASON indicates a locally inhibited link, enter the `unhb-slk` command with the specified card location.

9. If the UNAVAIL REASON indicates a locally blocked link, enter the `ublk-slk` command with the specified card location.

10. If the signaling is blocked or inhibited remotely, contact the far-end to place the link in-service.

0317 - RCVRY-LKSTO: Link set allowed

The linkset is returned to service.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
0014.0317    LSN a24546      RCVRY-LKSTO: Link set allowed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous condition has been corrected.

No further action is necessary.

0318 - REPT-LKSTO: Link Set Prohibited

This message indicates a linkset is out of service.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0318 **   LSN a54646     REPT-LKSTO: Link set prohibited
```

Alarm Level: Major

Recovery

1. Verify the link status using the `rept-stat-slk` command.

   For example, enter:

   `rept-stat-slk:loc=1203:port=b`

   Example of the output:

   ```
   RLGHNCX A03W 00-02-07 12:02:36 EST  EAGLE 35.0.0
       SLK     LSN          CLLI        PST           SST        AST
       1203,B  nsp1         ls02clli    OOS-MT        Unavail    ----
          ALARM STATUS      =  No alarm
          UNAVAIL REASON    =  FL NA LI RI
       Command Completed.
   ```

2. Check the UNAVAIL REASON field in the output of the `rept-stat-slk` command.

   Following is an explanation of the UNAVAIL REASON codes:

   - FC – The signaling link is unavailable because of false congestion.

   - FL – The signaling link has a fault.

   - NA – The signaling link is not aligned.

   - LI – The signaling link has been inhibited locallyRI – The signaling link has been inhibited remotely.

   - LB – The signaling link has been blocked locally.

   - RB – The signaling link has been blocked remotely.

   - RD(xx.xxx) – The signaling link is unavailable because of a restart delay to prevent signaling link oscillation. The number in parentheses indicates the amount of time, in seconds, remaining in the restart delay period. The link is restarted automatically after this amount of time has elapsed.

3. If the UNAVAIL REASON indicates an alignment problem or fault, activate a loopback using the `act-lpb` command, or use a physical loopback.

   (For a V.35, you must use an appropriate physical V.35 loopback.) If the signaling link aligns, contact the far-end to correct the problem.

4. If the UNAVAIL REASON still indicates an alignment problem or fault, check the status of the card by entering the `rept-stat-card` command for the specified card.

5. If the `rept-stat-card` command indicates a problem with the card, reset the card by entering the `init-card` command with the specified card location.

   If the card still does not align, try first reseating the card, then replacing the card. Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

6. If the UNAVAIL REASON indicates a locally inhibited link, enter the `unhb-slk` command with the specified card location.

7. If the UNAVAIL REASON indicates a locally blocked link, enter the `ublk-slk` command with the specified card location.

8. If the signaling is blocked or inhibited remotely, contact the far-end to place the link in-service.

0319 - REPT-MTPLP-DET: Circ rte det(cong)

The system automatically tests for circular routing when congestion occurs on an ANSI signaling link. If the routing data was provisioned incorrectly, or was corrupted, MSUs could be routed in an endless circular route. The incorrect routing data could be on the system or at a remote STP. This message indicates that circular routing has been detected.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
*C  0044.0319 *C RTXN24     001-101-001   REPT-MTPLP-DET: Circ rte
det(cong)
                   OPCA=   007-001-000
                   XMIT LSN=ls04   RC=20
                   RCV LSN=lsna05
                   MEMBER=011-210-004
```

Alarm Level: Critical

Recovery

1. Enter the following command to check the routing information for the specified DPC:

   ```
   rtrv-rte
   ```

   If the problem is in the routing table of an adjacent node, contact the node (identified in the `rtrv-rte` command output) to resolve the circular routing problem. If the routing information is correct, continue with 4. If there is an error in the routing information, continue with 2.

2. Enter the following command to delete the route in the error message from the database:

   ```
   dlt-rte:aaaa=xxx-xxx-xxx:lsn=yyyy
   ```
   whereaaa = dpc, dpca, dpci, or dpcn xxx-xxx-xxx = destination point code and yyyy = the linkset name associated with the route.

3. To enter the correct route information, refer to *Database Administration - SS7 User's Guide* for the procedure on adding a route to the SS7 configuration.

4. Enter the following command to reset the destination circular routing status:

   ```
   rst-dstn:dpc=x-x-x
   ```
   where x-x-x = the destination point code of the destination.

0320 - REPT-MTPLP-SUST: Sustained circ rt(cong)

The system automatically tests for circular routing when congestion occurs on an ANSI signaling link. If the routing data was provisioned incorrectly, or was corrupted, MSUs could be routed in an endless circular route. The incorrect routing data could be on the system or at a remote STP. This message indicates that circular routing has been detected.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*C 0014.0320 *C DPC 011-210-*   REPT-MTPLP-SUST: Sustained circ rt(cong)
                XMT LSN=ls01  RC=10
                RCV LSN=ls14
                MEMBER=011-210-007
```

Alarm Level: Critical

Recovery

1. Enter the following command to check the routing information for the specified DPC:

   `rtrv-rte`
   If the problem is in the routing table of an adjacent node, contact the node (identified in the `rtrv-rte` command output) to resolve the circular routing problem. If the routing information is correct, continue with 4. If there is an error in the routing information, continue with 2.

2. Enter the following command to delete the route in the error message from the database:

   `dlt-rte:aaaa=xxx-xxx-xxx:lsn=yyyy`
   where aaa = dpc, dpca, dpci, or dpcn xxx-xxx-xxx = destination point code and yyyy = the linkset name associated with the route.

3. Refer to the "Adding a Route" procedures in *Database Administration Manual - SS7* to enter the correct route information.

4. Enter the following command to reset the destination circular routing status:

   `rst-dstn:dpc=x-x-x`
   where x-x-x = the destination point code of the destination.

0321 - X-LIST occupancy threshold exceeded

This message indicates that the number of x-list entries has exceeded a specified threshold.

Example

```
  RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0321  *  XLIST           X-LIST occupancy threshold exceeded
```

Alarm Level: Minor

Recovery

1. To display the system-wide parameters for cluster routing, enter the command:

   `rtrv-stpopts`

   Example of the output:

   ```
   RLGHNCXA03W  00-07-23  16:02:34 EST  EAGLE. 31.3.0   STP OPTIONS
   ------------------------
   ```

```
MTPT31CTL               1
MTPLT1                yes
MTPLTCTDPCQ             3
MTPLTST             10000
MTPXLQ                500
MTPXLET              0100
MTPXLOT               90%
MTPDPCQ              2000
TFATFRPR             1000
MTPRSI                yes
MTPRSIT              5000
```

The **mtpxlq** parameter is the total number of dynamic status exception list (x-list) entries the EAGLE 5 ISS maintains. There are 2500 total table entries. The default values allow for 2000 entries for provisioned destinations and 500 for x-list entries. (If you increase the number of x-list entries, you must decrease the number of **DPCs** that can be provisioned by changing the **mtpdpcq** parameter.) The **mtpxlet** parameter is the maximum amount of time the EAGLE 5 ISS maintains an unreferenced x-list entry. The **mtpxlot** parameter is the threshold that this message refers to.

2. Use the `chg-stpopts` to change the number of x-list entries, the x-list expiration timer, or to raise the threshold for notification of a full x-list.

3. If the problem persists, use the `dact-rstst` command to eliminate specific x-list entries.

0322 - X-LIST occupancy below threshold

This message indicates that the number of x-list entries has fallen below a specified threshold.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0322    XLIST                X-LIST occupancy below threshold
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0324 - DPC Subsystem is Allowed

All subsystems at the indicated DPC are reachable.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0324    DPC 144-201-001    DPC subsystem is allowed
LSN=nc00027
Prohibited SS  1, 5, 18
```

```
Allowed SS     3, 6
Blocked SS     100, 103
Unblocked SS   2, 102, 221
```

Legend

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0325 - DPC Subsystem is Blocked

The DPC subsystem is blocked due to administrative action.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
*C 0014.0325 *C DPC 144-201-001     DPC subsystem is blocked
             LSN=nc00027
             Prohibited SS  1, 5, 18
             Allowed SS     3, 6
             Blocked SS     100, 103
             Unblocked SS   2, 102, 221

Recovery

Contact the far-end to correct the problem.

0327 - DPC Subsystem Has Been Deleted

This indicates a DPC subsystem has been deleted from the system global title translation (GTT) tables.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0327    DPC 144-201-001    DPC subsystem has been deleted
             LSN=nc00027
             Prohibited SS  1, 5, 18
             Allowed SS     3, 6
             Blocked SS     100, 103
             Unblocked SS   2, 102, 221
```

Legend

ALLOWED SS
Allowed subsystem

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected by deletion of the entity.

No further action is necessary.

0328 - SCCP is available

The SCCP subsystem was previously unavailable and has returned to service.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0328    SCCP SYSTEM          SCCP is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0329 - System SCCP TPS Normal

The SCCP subsystem is operating normally, using the TVG (Group Ticket Voucher load balancing algorithm) message transport method. The TPS (Transactions Per

Second) rate is below its capacity threshold, as defined by the `chg-th-alm` command.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0329    SCCP SYSTEM          SCCP capacity normal, card(s) abnormal
```

> **Note:**
>
> UAM 329 will only be raised only if there is at least one IS-ANR SCCP card in EAGLE.

Alarm Level: Minor.

Recovery

1. This alarm is used in conjunction with alarm #0330 "System SCCP TPS Threshold Exceeded." For every five minutes the Eagle is above the threshold, the ATH (Application Trouble Handler) reports the minimum, maximum and average TPS value seen during the past five minute period.

   When the TPS level drops below the threshold level for 30 seconds, the alarm stops, and alarm #0329 confirms that normal operation has resumed. (Alternatively, the user can clear this alarm by raising the threshold limit to a value greater than the maximum value, in which case, the alarm stops immediately.)

2. To obtain details, use the `rept-stat-sccp` command, which displays the status of the SCCP and VSCCP cards and other services and determines the capacity threshold of the SCCP TPS rate.

   This command also identifies which DSM cards are OOS-MT. For example, enter:

   ```
   rept-stat-sccp
   ```

   Example of the output:

   ```
   eaglestp 00-10-24 20:38:58 EST EAGLE 35.0.0
       SCCP SUBSYSTEM REPORT IS-NR          Active      -----
       SCCP Cards Configured= 1  Cards IS-NR= 1   Capacity Threshold =
   80%
       CARD    VERSION     PST         SST         AST      MSU USAGE
   CPU USAGE

       ------------------------------------------------------------------------
       -----
       1212    021-001-000 IS-NR       ACTIVE      ALMINH
   47%        32%

       ------------------------------------------------------------------------
       -----
       SCCP Service Average MSU Capacity = 47%     Average CPU
   Capacity = 32%

       Command Completed.
   ```

0330 - System SCCP TPS Threshold Exceeded

This message indicates EAGLE has exceeded its TPS (Transactions Per Second) message transport rate threshold. For every 30 seconds EAGLE is above the threshold, an ATH (Application Trouble Handler) reports the minimum, maximum and average TPS value seen during the past 30-second period.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0330 ** SCCP SYSTEM      System SCCP TPS Threshold exceeded
```

Alarm Level: Major

Recovery

1. Use `rept-stat-sccp` to determine the status of the SCCP subsystem.

    This command also identifies which SCCP cards are OOS-MT. For example, enter:

    `rept-stat-sccp`

    Example of the output:

    ```
    eaglestp 00-10-24 20:38:58 EST EAGLE 35.0.0
        SCCP SUBSYSTEM REPORT IS-NR           Ovflw-1        -----
        SCCP Cards Configured= 4 Cards        IS-NR= 4
        System TCP Alarm Threshold =  80% Total capacity
        System Peak SCCP Load =  3000 TPS
        System Total SCCP Capacity =  5000 TPS
        CARD    VERSION     PST         SST          AST      MSU USAGE
    CPU USAGE

    ----------------------------------------------------------------
    -----
        1212    021-001-000 IS-NR       ACTIVE       ALMINH
    47%        32%

    ----------------------------------------------------------------
    -----
        SCCP Service Average MSU Capacity = 47%    Average CPU
    Capacity = 32%

        Command Completed.
    ```

    Use the command `rept-stat-sccp:mode=perf` to retrieve the maximum and average values, if desired.

2. The user may clear this alarm by raising the threshold limit to a value greater than the maximum value.

    In this case, the alarm stops immediately. You should use the `rtrv-th-alm` command to list the threshold rate, and you may use the `chg-th-alm` command to change the threshold value.

3. The user should evaluate this new traffic level and determine whether additional SCCP cards are required to maintain the TPS level the system is processing.

4. Use the `rept-stat-card` command to display the card status and maintenance activity states.

   Examine the report for any cards that may be OOS-MT.

5. Use the `init-card` command to initialize any cards(s) that are OOS-MT.

   This causes the card(s) to reload the MTP data as well as GTT data tables.

6. Again using the `rept-stat-sccp` command, verify the card(s) have returned to service.

   If any card(s) have failed to return to IS-NR, reseat the card(s).

7. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0331 - SCCP is Not Available

The SCCP subsystem is not available to any LIM(s). All TSM/DSM-SCCP cards have failed.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*C 0100.0331 *C SCCP SYSTEM         SCCP is not available
```

Alarm Level: Critical

Recovery

1. Use `rept-stat-sccp` command to determine the status of the SCCP subsystem.

   This command also identifies which TSM/DSM cards are OOS-MT. For example, enter:

   ```
   rept-stat-sccp
   ```

   Example of the output:

   ```
   RLGHNCXA03W 00-02-07 16:10:50 EST  EAGLE 35.0.0
   SCCP SUBSYSTEM REPORT IS-NR          Active      -----
   SCCP Cards Configured= 1  Cards IS-NR= 1  Capacity Threshold = 100%
   CARD   VERSION     PST        SST        AST       MSU USAGE  CPU
   USAGE

   --------------------------------------------------------------------
   -
   1212   021-001-000  IS-NR      Active     ALMINH      47%       32%

   --------------------------------------------------------------------
   -
   SCCP Service Average MSU Capacity = 47%   Average CPU Capacity =
   32%
       Command Completed.
   ```

2. Reinitialize any card(s) not in an IS-NR state using the `init-card` command.

3. After the card(s) have been reloaded, use the `rept-stat-sccp` command to verify the SCCP subsystem has returned to full capacity.

4. If any card(s) fail to return to IS-NR, reseat the card(s).

5. If the card(s) still do not return to IS-NR, replace the card(s).

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

0332 - DPC Subsystem is prohibited and blocked

A subsystem is both prohibited and blocked as reported by the network.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
*C 0014.0332 *C DPC 144-201-001   DPC Subsystem is prohibited and
blocked
              LSN=nc00027
              Prohibited SS  1, 5, 18
              Allowed SS     3, 6
              Blocked SS     100, 103
              Unblocked SS   2, 102, 221
```

Legend

ALLOWED SS
Allowed subsystem

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: Critical

Recovery

Contact the far-end to test and correct the problem.

0333 - DPC Subsystem is Normal

The DPC subsystem indicated in the output message is now allowed.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0333    DPC 144-201-001     DPC Subsystem is Normal
             LSN=nc00027
             Prohibited SS  1, 5, 18
             Allowed SS     3, 6
             Blocked SS     100, 103
             Unblocked SS   2, 102, 221
```

Legend

ALLOWED SS
Allowed subsystem

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0334 - DPC Subsystem is Abnormal

The indicated DPC subsystem is not reachable through the normal route.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
*C 0014.0334 *C DPC 144-201-001     DPC Subsystem is Abnormal
             LSN=nc00027
             Prohibited SS  1, 5, 18
             Allowed SS     3, 6
             Blocked SS     100, 103
             Unblocked SS   2, 102, 221
```

Legend

ALLOWED SS
Allowed subsystem

BLOCKED SS
Blocked subsystem

LSN
Linkset name. The name must be unique.

PROHIBITED SS
Prohibited subsystem

UNBLOCKED SS
Unblocked subsystem

Alarm Level: Critical

Recovery

1. Enter the `rept-stat-rte` command using the DPC specified from the output message to determine which linkset has a problem.

2. Enter the `rept-stat-ls` using the linkset name specified from the output of Step 1 to determine which link(s) could have a problem.

3. Use local procedures to test the link facilities.

0335 - SCCP is Removed

All Service Module cards have been deleted from the database; SCCP services are not available to the system. This message is the result of a deliberate action. Removing all Service Module cards from the database may have been an action from another maintenance procedure. If you wish to restore SCCP services to the system, perform the following procedure. For more information about adding a card to the system, refer to the *Database Administration Manual - Global Title Translation*.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
0100.0335    SCCP SYSTEM          SCCP is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Use the `ent-card` command to reenter the Service Module cards into the system database.

2. Use the `rst-card` command to return the card(s) to service.

   This causes the MASP to begin downloading global title translation (GTT) tables to the Service Module card.

3. Use the `rept-stat-sccp` command to verify that the card(s) have been restored, after the MASP has completed loading.

0336 - LIM(s) Have Been Denied SCCP Service

Some LIM(s) are using the SCCP subsystem, but others have been denied service. This is due to underprovisioning, and will require more Service Module cards to be added.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0336 ** SCCP SYSTEM      LIM(s) have been denied SCCP service
```

Alarm Level: Major

Recovery

1. Use `rept-stat-sccp` command to determine which LIMs have been denied SCCP service.

   For example, enter:

   `rept-stat-sccp`

   Example of the output:

```
RLGHNCXA03W 00-02-07 16:10:50 EST  EAGLE 35.0.0
SCCP SUBSYSTEM REPORT IS-NR          Active      -----
SCCP Cards Configured= 1  Cards IS-NR= 1  Capacity Threshold = 100%
CARD   VERSION      PST         SST         AST        MSU USAGE  CPU
USAGE

----------------------------------------------------------------------
-
1212   021-001-000  IS-NR       Active      ALMINH       47%       32%

----------------------------------------------------------------------
-
SCCP Service Average MSU Capacity = 47%    Average CPU Capacity =
32%
    Command Completed.
```

2. Add TSM/DSM-SCCP cards one at a time.

   Monitor the performance of the SCCP subsystem with the `rept-stat-sccp` command to determine whether additional cards are needed.

0337 - DPC - SS Status Changed

This output is related to other DPC alarm messages. It indicates that one or more subsystems with an existing alarm condition has had a change in status. The message indicates the new status of the subsystem. A previous alarm condition has not cleared.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0337    DPC 001-001-001       DPC-SS status changed
             LSN=A1234567
             Prohibited SS 5, 20
```

Legend

LSN

Linkset name. The name must be unique.

PROHIBITED SS

Prohibited subsystem

Alarm Level: No alarm condition. The message is informational only.

Recovery

Follow the troubleshooting procedure for the previous alarm.

0338 - X-LIST space full-entry(s) discarded

This message indicates that the total number of dynamic status exception list (x-list) entries for cluster routing has exceeded the maximum number configured. No more entries can be added to the list. This can occur because the maximum number of x-list entries is set too low, the timer that eliminates x-list entries after a specified period is set too long, or the x-list needs to be culled.

Example

```
   RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0338  **  XLIST            X-LIST space full-entry(s) discarded
```

Alarm Level: Major

Recovery

1. To display the system-wide parameters for cluster routing, enter the `rtrv-stpopts` command.

   Example of the output:

   ```
   RLGHNCXA03W  00-07-23  16:02:34 EST  EAGLE. 31.3.0   STP OPTIONS
   --------------------------
   MTPT31CTL              1
   MTPLT1              yes
   MTPLTCTDPCQ           3
   MTPLTST           10000
   MTPXLQ              500
   MTPXLET             0100
   MTPXLOT              90%
   MTPDPCQ             2000
   TFATFRPR            1000
   MTPRSI              yes
   MTPRSIT             5000
   ```

   The **mtpxlq** parameter is the total number of dynamic status exception list (x-list) entries the EAGLE 5 ISS maintains. There are 2500 total table entries. The default values allow for 2000 entries for provisioned destinations and 500 for x-list entries. (If you increase the number of x-list entries, you must decrease the number of **DPCs** that can be provisioned by changing the **mtpdpcq** parameter.) The **mtpxlet** parameter is the maximum amount of time the EAGLE 5 ISS maintains an unreferenced x-list entry.

2. Use the `chg-stpopts` to change the number of x-list entries or the x-list expiration timer.

3. If the problem persists, use the `dact-rstst` command to eliminate specific x-list entries.

0339 - X-LIST space full condition abated

This message indicates the total number of dynamic status exception list (x-list) entries no longer exceeds the maximum allowed.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0339     XLIST                  X-LIST space full condition abated
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0340 - RCVRY-MTPLP-RST: Circ rte Status Cleared

The system automatically tests for circular routing when congestion occurs on an ANSI signaling link. This message indicates that the circular routing has been cleared.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0340    DPC 001-001-001     RCVRY-MTPLP-RST: Circ rte status
cleared
             XMIT LSN=A1234567
             RCV LSN=ls14
             MEMBER=011-210-007
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0341 - OAP Unavailable

This message indicates that the EAGLE 5 ISS system is unable to communicate with the OAP or the OAP has an internal failure.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0341  **  OAP B      OAP Unavailable
```

Alarm Level: Major

Recovery

1. Enter the command to determine the status of the OAP(s):

    ```
    rept-stat-seas
    ```

    Example of the output:

    ```
    RLGHNCXA03W 00-04-17 14:59:11 EST   EAGLE 35.0.0
                               GPL          PST          SST           AST
    -----------------------------------------------------------------------
    -
    SEAS SYSTEM                           IS-ANR       Restricted    -----
    TDM TRM          6                    IS-NR        Active        -----
    TDM TRM          9                    IS-NR        Active        -----

    X25 B1 PVCs OOS-MT  = 1,2,3
    Command Completed.
    ```

    Refer to the *Commands Manual* to interpret the output.

    > **Note:**
    >
    > If the OAP has an internal failure, yet it can still communicate with the
    > system, the state for the OAP appears in the output as OOS-MT/Fault
    > instead of OOS-MT/Isolated. For instance, if the OAP has a hard disk
    > failure the state would appear as OOS-MT/Fault. If the hard disk is full, it
    > will not communicate.

2. If the OAP has a hard disk failure or the hard disk is full, contact My Oracle
    Support (MOS).

3. If the OAP(s) are out-of-service, check the physical connections.

    See the *Installation Manual* for more information about these system components.

4. Check for any fuse alarms on the Fuse and Alarm Panel in the OAP frame.

    There are two 7.5 amp fuses for each OAP. The fuses for OAP1 are marked "Fuse
    1A" and "Fuse 1B". The fuses for OAP2 are marked "Fuse 2A" and "Fuse 2B". If
    there is a fuse alarm, replace the fuses for the OAP that is unavailable. Also, make
    sure the two 10 amp breakers are not tripped.

5. Enter the command to verify that the SEAS ports are functioning:

```
rept-stat-trm
```

Example of the output:

```
RLGHNCXA03W 00-02-07 09:50:17 EST  EAGLE 35.0.0
TRM  PST              SST           AST
1     IS-NR            Active         -----
2     IS-NR            Active         -----
3     IS-NR            Active         -----
4     OOS-MT-DSBLD     MANUAL         -----
5     IS-NR            Active         -----
6     IS-NR            Active         -----
7     IS-NR            Active         -----
8     IS-NR            Active         -----
9     IS-NR            Active         -----
10    IS-NR            Active         -----
11    IS-NR            Active         -----
12    IS-NR            Active         -----
13    OOS-MT-DSBLD     MANUAL         -----
14    OOS-MT-DSBLD     MANUAL         -----
15    OOS-MT-DSBLD     MANUAL         -----
16    OOS-MT-DSBLD     MANUAL         -----
Command Completed.
```

Use the output from 1 (TRM) to identify the OAP ports. Refer to the *Commands Manual* to interpret the output.

6. If a SEAS port is OOS-MT-DSBLD, enable the port with this command:

    ```
    rst-trm:trm=x
    ```
    where x is the OAP port number. If this action corrects the problem, you are done with this procedure.

7. If the problem persists, verify that the OAP cables are connected to the correct SEAS TDM port(s).

8. If the problem persists, verify that the OAP cables are connected to the correct OAP serial ports.

9. Verify the RS-232 parameters are configured properly for the SEAS port by entering the `rtrv-trm` command for the specified port.

    The port should be configured to 19200 baud, even parity, one stop bit, and hardware flow control.

10. If the problem still persists, reset the OAP by entering the `init-oap` command.

    The OAP comes back in-service within five minutes and the system clears the alarm.

11. If the problem is still not corrected, reseat the TDM card.

    If the OAP still does not respond, replace the TDM card. Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

12. If the OAP is still not available, contact My Oracle Support (MOS).

0342 - SEAS UAL Unavailable

This message indicates the SEAS User Application Layer (UAL) process on the OAP is not running. Layer 4 (UPL) is not available for the specified OAP.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0342  **  SEAS OAP B        SEAS UAL unavailable
```

Alarm Level: Major

Recovery

1. The UAL should recover automatically by restarting.

2. Enter this command to verify the status of the OAP(s):

   `rept-stat-seas`

   Example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                         GPL        PST        SST        AST
-----------------------------------------------------------------
-
SEAS SYSTEM                        IS-ANR     Restricted  -----
TDM TRM         6                  IS-NR      Active      -----
TDM TRM         9                  IS-NR      Active      -----
OAP             A   220-001-000    IS-NR      Active      -----
OAP             B   -----------    OOS-MT     Isolated    -----
X25 Link        A1                 IS-NR      Active      -----
X25 Link        B1                 OS-MT      Fault       -----
SEAS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0342 SEAS UAL unavailable
X25          ALARM STATUS = No Alarms.
X25          ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
X25 A1 PVCs IS-NR   = 1,2,3
X25 A1 PVCs OOS-MT  = ---
X25 B1 PVCs IS-NR   = ---
X25 B1 PVCs OOS-MT  = 1,2,3
Command Completed.
```

   Refer to the *Commands Manual* to interpret the output.

3. If the UAL does not recover, contact the SEAC to test from their equipment to the local synchronous modem.

   Make sure the X.25 link is activated at their end and the link tests within specifications. If possible, have the SEAC or PDN swap X.25 cards at their end with a known good card.

4. If the problem persists, contact My Oracle Support (MOS).

0343 - SEAS X.25 Link Unavailable

This message indicates the X.25 link to the specified OAP is down. Layer 2 is not available for the indicated SEAS X.25 link.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0343  **  X25 Link A1         SEAS X.25 Link unavailable
```

Alarm Level: Major

Recovery

1. Enter the command to determine the status of the SEAS subsystem:

   rept-stat-seas

   Example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                         GPL        PST        SST         AST
-----------------------------------------------------------------------
-
SEAS SYSTEM                          IS-ANR     Restricted   -----
TDM TRM          6                   IS-NR      Active       -----
TDM TRM          9                   IS-NR      Active       -----
OAP              A    220-001-000    IS-NR      Active       -----
OAP              B    -----------    OOS-MT     Isolated     -----
X25 Link         A1                  IS-NR      Active       -----
X25 Link         B1                  OS-MT      Fault        -----
SEAS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0341 OAP unavailable
X25          ALARM STATUS = No Alarms.
X25          ALARM STATUS = ** 0343 SEAS X.25 Link unavailable
X25 A1 PVCs IS-NR   = 1,2,3
X25 A1 PVCs OOS-MT  = ---
X25 B1 PVCs IS-NR   = ---
X25 B1 PVCs OOS-MT  = 1,2,3
Command Completed.
```

   Refer to the *Commands Manual* to interpret the output.

2. Check the connections from the synchronous modem (in the OAP frame) to the OAP.

   See the *Installation Manual* for more information about these system components. If the connections are firmly seated, test and if necessary, replace the modem.

3. Determine the status of the X.25 link by entering the following command:

   rept-stat-seas
   where x is the appropriate TRM number from 1.

Example of the output:

```
RLGHNCXA03W 00-01-04 15:59:06 EST EAGLE 35.0.0
SEAS COMPONENT                PST          SST         AST
----------------------------------------------------------
SEAS Interface                IS_ANR       Restricted  ------
TRM            = 2            IS-NR        Active      ------
OAP            = A            IS-NR        Active      ------
X25 port       = A1           IS-NR        Active      ALMINH
PVCs IS-NR     = 1, 3
PVCs OOS-MT    = 2
OAP  GPL       = 022-003-000
ALARM STATUS   = *   0344  PVC unavailable.
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

4. If the problem persists, contact the SEAC to test from their equipment to the local synchronous modem.

   Make sure the X.25 link is activated at their end and the link tests within specifications. If possible, have the SEAC or PDN swap X.25 cards at their end with a known good card.

5. If the problem still persists, reset the OAP by entering the `init-oap` command.

   The OAP comes back in-service within three minutes and the system clears the alarm.

6. Determine the status of the X.25 link by entering the command:

   `rept-stat-seas`
   where x is the appropriate TRM number from 1.

7. If the X.25 link is still unavailable, contact My Oracle Support (MOS).

0344 - SEAS PVC Unavailable

This message indicates that the permanent virtual circuit (PVC) connected to the OAP is not available.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0344  *  SEAS X25 Link A1          SEAS PVC unavailable
```

Alarm Level: Minor

Recovery

1. Enter the command to determine the status of the SEAS subsystem:

   `rept-stat-seas`

   Example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                        GPL          PST         SST              AST
```

```
----------------------------------------------------------------------
-
SEAS SYSTEM                             IS-ANR      Restricted   -----
TDM TRM            6                    IS-NR       Active       -----
TDM TRM            9                    IS-NR       Active       -----
OAP                A    220-001-000     IS-NR       Active       -----
OAP                B    -----------     OOS-MT      Isolated     -----
X25 Link           A1                   IS-NR       Active       -----
X25 Link           B1                   OS-MT       Fault        -----
SEAS SYSTEM   ALARM STATUS = ** 0362  LSMS is at min service limit
OAP A         ALARM STATUS = No Alarms.
OAP B         ALARM STATUS = ** 0341 OAP unavailable
X25           ALARM STATUS = No Alarms.
X25           ALARM STATUS = * 0344 SEAS PVC unavailable
X25 A1 PVCs IS-NR   = 1,2,3
X25 A1 PVCs OOS-MT  = ---
X25 B1 PVCs IS-NR   = ---
X25 B1 PVCs OOS-MT  = 1,2,3
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

2. Determine the status of the OAP and PVC by entering the command:

`rept-stat-seas`

Example of the output:

```
RLGHNCXA03W 00-01-04 15:59:06 EST EAGLE 35.0.0
SEAS COMPONENT               PST          SST          AST
---------------------------------------------------------
SEAS Interface               IS_ANR       Restricted   ------
TRM            = 2           IS-NR        Active        ------
OAP            = A           IS-NR        Active        ------
X25 port       = A1          IS-NR        Active       ALMINH
PVCs IS-NR     = 1, 3
PVCs OOS-MT    = 2
OAP  GPL       = 022-003-000
ALARM STATUS   = *   0344  PVC unavailable.
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

3. If there are any PVCs, the X.25 link physical layer is good.

4. If the problem persists, contact the SEAC to test from their equipment to the local synchronous modem.

5. If the PVC is still not available, contact My Oracle Support (MOS).

0345 - All SEAS UAL Sessions Unavailable

This message indicates the X.25 User Application Layer (UAL) is not available. If all PVCs for the indicated X.25 link have failed, UAL is no longer available, or all UAL sessions are unavailable.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
** 0100.0345  **  SEAS X25 Link B1      All SEAS UAL sessions
unavailable
```

Alarm Level: Major

Recovery

1. Enter this command to determine the status of the OAP(s):

   `rept-stat-seas`

   Example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST   EAGLE 35.0.0
                           GPL        PST        SST        AST
-------------------------------------------------------------------
-
SEAS SYSTEM                           IS-ANR     Restricted   -----
TDM TRM           6                   IS-NR      Active       -----
TDM TRM           9                   IS-NR      Active       -----
OAP               A    220-001-000    IS-NR      Active       -----
OAP               B    -----------    OOS-MT     Isolated     -----
X25 Link          A1                  IS-NR      Active       -----
X25 Link          B1                  OS-MT      Fault        -----
SEAS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0341 OAP unavailable
X25          ALARM STATUS = No Alarms.
X25          ALARM STATUS = ** 0345 All SEAS UAL sessions
unavailable
X25 A1 PVCs IS-NR   = 1,2,3
X25 A1 PVCs OOS-MT  = ---
X25 B1 PVCs IS-NR   = ---
X25 B1 PVCs OOS-MT  = 1,2,3
Command Completed.
```

2. Contact the SEAC to verify the X.25 PVCs are correctly configured and activated.

   The SEAC should also deactivate and activate the X.25 link.

3. If the problem persists, reset the OAP by entering the `init-oap` command.

   The OAP comes back in-service within three minutes and the system clears the alarm.

4. If the problem persists, contact the SEAC to test from their equipment to the local synchronous modem.

5. If the X.25 UAL is still not available, contact My Oracle Support (MOS).

0346 - SEAS UAL Session Unavailable

This message indicates that the SEAS X.25 link UAL session on one PVC is not available.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0346  *  SEAS X25 Link B1        SEAS UAL session unavailable
```

Alarm Level: Minor

Recovery

1. Enter this command to determine the status of the OAP(s):

   `rept-stat-seas`

   Example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                         GPL        PST        SST         AST
------------------------------------------------------------------
-
SEAS SYSTEM                         IS-ANR     Restricted   -----
TDM TRM          6                  IS-NR      Active       -----
TDM TRM          9                  IS-NR      Active       -----
OAP              A    220-001-000   IS-NR      Active       -----
OAP              B    -----------   OOS-MT     Isolated     -----
X25 Link         A1                 IS-NR      Active       -----
X25 Link         B1                 OS-MT      Fault        -----
SEAS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0341 OAP unavailable
X25          ALARM STATUS = No Alarms.
X25          ALARM STATUS = * 0346 SEAS UAL session unavailable
X25 A1 PVCs IS-NR   = 1,2,3
X25 A1 PVCs OOS-MT  = ---
X25 B1 PVCs IS-NR   = ---
X25 B1 PVCs OOS-MT  = 1,2,3
Command Completed.
```

   Refer to the *Commands Manual* to interpret the output.

2. If the problem persists, contact the SEAC to test from their equipment to the local synchronous modem.

3. If the problem still persists, contact My Oracle Support (MOS).

0347 - SEAS X.25 Link is available

This message indicates that a previous problem with the X.25 link has been corrected.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0347    SEAS X.25 Link B1        SEAS X.25 Link is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0348 - SEAS is at Min Service Limit

This message indicates that some part of the SEAS subsystem has failed. When there are two OAPs, this could mean that one OAP has failed, or some part of the path to the SEAC for that OAP has failed. When there is only one OAP with two X.25 links to the SEAC and two connections to the TDM serial ports, either one of the X.25 links has failed, or one of the serial port connections to the TDM has failed. One more failure in either case will cause the SEAS subsystem to fail.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0348  **  SEAS SYSTEM      SEAS is at min service limit
```

Alarm Level: Major

Recovery

1. Determine the status of the OAP(s) by entering the following command:

   ```
   rept-stat-seas
   ```

   Example of the output:

   ```
   RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                           GPL       PST       SST         AST
   --------------------------------------------------------------------
   -
   SEAS SYSTEM                        IS-ANR    Restricted  -----
   TDM TRM          6                 IS-NR     Active      -----
   TDM TRM          9                 IS-NR     Active      -----
   OAP              A   220-001-000   IS-NR     Active      -----
   OAP              B   -----------   OOS-MT    Isolated    -----
   X25 Link         A1                IS-NR     Active      -----
   X25 Link         B1                OS-MT     Fault       -----
   SEAS SYSTEM  ALARM STATUS = ** 0348  SEAS is at min service limit
   OAP A        ALARM STATUS = No Alarms.
   OAP B        ALARM STATUS = ** 0341 OAP unavailable
   X25          ALARM STATUS = No Alarms.
   X25          ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
   X25 A1 PVCs IS-NR   = 1,2,3
   X25 A1 PVCs OOS-MT  = ---
   X25 B1 PVCs IS-NR   = ---
   X25 B1 PVCs OOS-MT  = 1,2,3
   ```

   Refer to the *Commands Manual* to interpret the output.

2. If `0341 OAP unavailable` is displayed, follow recovery procedure 0341 - OAP Unavailable.

3. If `0343 SEAS X.25`

Link unavailable is displayed, follow recovery procedure 0343 - SEAS X.25 Link Unavailable .

4. If `0354 OAP TDM Port unavailable` is displayed, follow recovery procedure 0354 - One OAP Terminal Unavailable.

5. If the OAP(s) are out-of-service check the physical connections.

   See the for more information about these system components. If the connections are firmly seated, test and if necessary, replace the modem.

6. Check for any fuse alarms on the Fuse and Alarm Panel in the OAP frame.

   There are two 7.5 amp fuses for each OAP. The fuses for OAP1 are marked "Fuse 1A" and "Fuse 1B". The fuses for OAP2 are marked "Fuse 2A" and "Fuse 2B". If there is a fuse alarm, replace the fuses for the OAP that is unavailable. Also, make sure the two 10 amp breakers are not tripped.

7. Ensure that the other serial port devices are functioning by entering the following command:

   ```
   rept-stat-trm
   ```

   Example of the output:

   ```
   RLGHNCXA03W 00-02-07 09:50:17 EST  EAGLE 35.0.0
   TRM  PST              SST           AST
   1     IS-NR            Active        -----
   2     IS-NR            Active        -----
   3     IS-NR            Active        -----
   4     OOS-MT-DSBLD     MANUAL        -----
   5     IS-NR            Active        -----
   6     IS-NR            Active        -----
   7     IS-NR            Active        -----
   8     IS-NR            Active        -----
   9     IS-NR            Active        -----
   10    IS-NR            Active        -----
   11    IS-NR            Active        -----
   12    IS-NR            Active        -----
   13    OOS-MT-DSBLD     MANUAL        -----
   14    OOS-MT-DSBLD     MANUAL        -----
   15    OOS-MT-DSBLD     MANUAL        -----
   16    OOS-MT-DSBLD     MANUAL        -----
   Command Completed.
   ```

   Refer to the *Commands Manual* to interpret the output.

8. Enable the terminal port with the following command:

   ```
   rst-trm:trm=x
   ```
   where xis the OAP port number. If this action corrects the problem, you are done with this procedure.

9. Enter the following command to inhibit the unavailable OAP terminal displayed in the output from 1:

   ```
   inh-trm:trm=x
   ```
   where x is the port number.

> **Note:**
>
> The force parameter is required for the last OAP terminal inhibited.

10. If the problem persists, enter the following command to reset the OAP:

    `init-oap:oap=x`
    where x is the OAP to be initialized. Verify that the OAP comes back in-service within five minutes and the system clears the alarm. If this clears the alarm, continue with 14.

11. Enter the following command for the inhibited OAP terminal:

    `chg-trm:trm=x:type=none`
    where x is the port number.

12. If the problem is still not corrected, reseat the TDM card.

    If the OAP still does not respond, replace the TDM card. Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

13. Enter the following command for each OAP terminal inhibited:

    `chg-trm:trm=x:type=oap`
    where x is the port number.

14. Enter the command to return the OAP terminals to the in-service state:

    `alw-trm:trm=x`
    where x is the port number.

15. If the problem persists, contact the SEAC to test from their equipment to the local synchronous modem.

16. If the problem is still not corrected, contact My Oracle Support (MOS).

0349 - SEAS Unavailable

This message indicates the EAGLE 5 ISS system is unable to communicate with the SEAS subsystem.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*C 0100.0349  *C  SEAS SYSTEM         SEAS unavailable
```

Alarm Level: Critical

Recovery

1. Enter the following command to determine the status of the OAP(s):

    `rept-stat-seas`

    Following is an example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                        GPL         PST         SST         AST
----------------------------------------------------------------
-
```

```
SEAS SYSTEM                              IS-ANR      Restricted    -----
TDM TRM           6                      IS-NR       Active        -----
TDM TRM           9                      IS-NR       Active        -----
OAP             A    220-001-000  IS-NR       Active        -----
OAP             B    -----------  OOS-MT      Isolated      -----
X25 Link        A1                       IS-NR       Active        -----
X25 Link        B1                       OS-MT       Fault         -----
SEAS SYSTEM  ALARM STATUS = *C 0349  SEAS unavailable
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0341 OAP unavailable
X25          ALARM STATUS = No Alarms.
X25          ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
X25 A1 PVCs IS-NR   = 1,2,3
X25 A1 PVCs OOS-MT  = ---
X25 B1 PVCs IS-NR   = ---
X25 B1 PVCs OOS-MT  = 1,2,3
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

2. If the OAP(s) are out-of-service, check the physical connections.

   See the *Installation Manual* for more information about these system components. If the connections are firmly seated, test and if necessary, replace the modem.

3. If `0341 OAP unavailable` is displayed, follow recovery procedure 0341 - OAP Unavailable.

4. If `0342 SEAS UAL unavailable` is displayed, follow recovery procedure 0342 - SEAS UAL Unavailable.

5. If `0343 SEAS X.25 Link unavailable` is displayed, follow recovery procedure 0343 - SEAS X.25 Link Unavailable.

6. If 0345 All SEAS UAL sessions unavailable is displayed, follow recovery procedure 0345 - All SEAS UAL Sessions Unavailable.

7. If `0350 OAP terminals inhibited` is displayed, follow recovery procedure 0350 - OAP Terminals Inhibited.

8. Check for any fuse alarms on the Fuse and Alarm Panel in the OAP frame.

   There are two 7.5 amp fuses for each OAP. The fuses for OAP1 are marked "Fuse 1A" and "Fuse 1B". The fuses for OAP2 are marked "Fuse 2A" and "Fuse 2B". If there is a fuse alarm, replace the fuses for the OAP that is unavailable. Also, make sure the two 10 amp breakers are not tripped.

9. Enter the following command to verify the status of the other serial port devices:

   `rept-stat-trm`

   Example of the output:

```
RLGHNCXA03W 00-02-07 09:50:17 EST   EAGLE 35.0.0
TRM   PST               SST             AST
1     IS-NR             Active          -----
2     IS-NR             Active          -----
3     IS-NR             Active          -----
4     OOS-MT-DSBLD      MANUAL          -----
5     IS-NR             Active          -----
```

```
6       IS-NR           Active          -----
7       IS-NR           Active          -----
8       IS-NR           Active          -----
9       IS-NR           Active          -----
10      IS-NR           Active          -----
11      IS-NR           Active          -----
12      IS-NR           Active          -----
13      OOS-MT-DSBLD    MANUAL          -----
14      OOS-MT-DSBLD    MANUAL          -----
15      OOS-MT-DSBLD    MANUAL          -----
16      OOS-MT-DSBLD    MANUAL          -----
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

10. Enable the terminal port with the following command:

    `rst-trm:trm=x`
    where x is the serial port number. If this action corrects the problem, you are done with this procedure.

11. Enter the following command to inhibit the unavailable OAP terminal displayed in the output from 1:

    `inh-trm:trm=x`
    where x is the port number.

    > **Note:**
    >
    > The force parameter is required for the last OAP terminal inhibited.

12. If the problem persists, enter this command to reset the OAP:

    `init-oap:oap=x`
    where x is the OAP to be initialized. Verify that the OAP comes back in-service within five minutes and the system clears the alarm. If this clears the alarm, continue with 14.

13. Enter the following command for the inhibited OAP terminal:

    `chg-trm:trm=x:type=none`
    where x is the port number.

14. If the problem is still not corrected, reseat the TDM card.

    If the OAP still does not respond, replace the TDM card. Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

15. Enter the following command for each OAP terminal inhibited:

    `chg-trm:trm=x:type=oap`
    where x is the port number.

16. Enter the following command to return the OAP terminals to the in-service state:

    `alw-trm:trm=x`
    where x is the port number.

17. If the problem persists, contact the SEAC to test from their equipment to the local X.25 equipment.

18. If the OAP is still not available, contact My Oracle Support (MOS).

0350 - OAP Terminals Inhibited

This message indicates that the OAP terminals are inhibited.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST EAGLE 35.0.0
*C 0100.0350  *C  SEAS SYSTEM     OAP terminals inhibited
```

Alarm Level: Critical

Recovery

1. Enter the following command to determine which ports are inhibited:

```
rept-stat-seas
```

Following is an example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                          GPL         PST         SST         AST
----------------------------------------------------------------------
-
SEAS SYSTEM                          IS-ANR      Restricted   -----
TDM TRM          6                   IS-NR       Active       -----
TDM TRM          9                   IS-NR       Active       -----
OAP              A    220-001-000    IS-NR       Active       -----
OAP              B    -----------    OOS-MT      Isolated     -----
X25 Link         A1                  IS-NR       Active       -----
X25 Link         B1                  OS-MT       Fault        -----
SEAS SYSTEM  ALARM STATUS = *C 0350  OAP terminals inhibited
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0341 OAP unavailable
X25          ALARM STATUS = No Alarms.
X25          ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
X25 A1 PVCs IS-NR   = 1,2,3
X25 A1 PVCs OOS-MT  = ---
X25 B1 PVCs IS-NR   = ---
X25 B1 PVCs OOS-MT  = 1,2,3
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

2. Enter the following command to verify that the other serial port devices are functioning:

```
rept-stat-trm
```

Following is an example of the output:

```
RLGHNCXA03W 00-02-07 09:50:17 EST  EAGLE 35.0.0
     TRM  PST          SST          AST
      1    IS-NR        Active        -----
      2    IS-NR        Active        -----
```

```
3      IS-NR         Active        ALMINH
4      IS-NR         Active        -----
5      OOS-MT-DSBLD  Manual        -----
6      IS-NR         Active        -----
7      IS-NR         Active        -----
8      IS-NR         Active        -----
9      IS-NR         Active        -----
10     IS-NR         Active        -----
11     IS-NR         Active        ALMINH
12     IS-NR         Active        -----
13     IS-NR         Active        -----
14     IS-NR         Active        -----
15     IS-NR         Active        -----
16     IS-NR         Active        -----
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

3. If only the SEAS port(s) are not functioning, enable the SEAS port(s) with the following command:

   `rst-trm:trm=x`
   where x is the OAP port number. If this action corrects the problem, you are done with this procedure.

4. Enter the following command to inhibit the unavailable OAP terminal displayed in the output from 1:

   `inh-trm:trm=x`
   where x is the port number.

   > **Note:**
   >
   > The force parameter is required for the last OAP terminal inhibited.

5. Enter the following command for the inhibited OAP terminal:

   `chg-trm:trm=x:type=none`
   where x is the port number.

6. If the problem is still not corrected, reseat the TDM card.

   If the problem persists, replace the TDM card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

7. Enter the following command for each OAP terminal inhibited:

   `chg-trm:trm=x:type=oap`
   where x is the port number.

8. Enter the following command to return the OAP terminals to the in-service state:

   `alw-trm:trm=x`
   where x is the port number.

0351 - SEAS is Available

This message indicates that a problem with SEAS system has been corrected.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0351    SEAS SYSTEM           SEAS is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0352 - SEAS is Removed

This message indicates that the SEAS feature has been manually removed by removing both SEAS TDM ports.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0352    SEAS SYSTEM           SEAS is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0353 - OAP is Available

This indicates a previous problem with the OAP has been corrected.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0353    OAP A               OAP is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0354 - One OAP Terminal Unavailable

This message indicates that the OAP terminal specified in the output message is not available.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST EAGLE 35.0.0
** 0100.0354  **  OAP B         One OAP terminal unavailable
```

Alarm Level: Major

Recovery

1. Enter the following command to determine which port is unavailable:

   ```
   rept-stat-seas
   ```

   Following is an example of the output:

   ```
   RLGHNCXA03W 00-04-17 14:59:11 EST  EAGLE 35.0.0
                             GPL        PST        SST          AST
   --------------------------------------------------------------------
   -
   SEAS SYSTEM                          IS-ANR     Restricted   -----

   X25 Link           A1                IS-NR      Active       -----
   X25 Link           B1                OS-MT      Fault        -----
   SEAS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
   OAP A        ALARM STATUS = No Alarms.
   OAP B        ALARM STATUS = ** 0354 One OAP terminal unavailable
   X25          ALARM STATUS = No Alarms.
   X25          ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
   X25 A1 PVCs IS-NR   = 1,2,3
   X25 A1 PVCs OOS-MT  = ---
   X25 B1 PVCs IS-NR   = ---
   X25 B1 PVCs OOS-MT  = 1,2,3
   Command Completed.
   ```

   Refer to the *Commands Manual* to interpret the output.

2. Enter the following command to verify that the other ports are functioning:

   ```
   rept-stat-trm
   ```

   Following is an example of the output:

   ```
   RLGHNCXA03W 00-02-07 09:50:17 EST  EAGLE 35.0.0
   TRM  PST            SST            AST
   1     IS-NR          Active         -----
   2     IS-NR          Active         -----
   3     IS-NR          Active         -----
   4     OOS-MT-DSBLD   MANUAL         -----
   5     IS-NR          Active         -----
   6     IS-NR          Active         -----
   7     IS-NR          Active         -----
   8     IS-NR          Active         -----
   9     IS-NR          Active         -----
   10    IS-NR          Active         -----
   11    IS-NR          Active         -----
   12    IS-NR          Active         -----
   13    OOS-MT-DSBLD   MANUAL         -----
   14    OOS-MT-DSBLD   MANUAL         -----
   15    OOS-MT-DSBLD   MANUAL         -----
   ```

ORACLE®

```
16    OOS-MT-DSBLD    MANUAL          -----
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

3. Enable the terminal port with the following command:

   ```
   rst-trm:trm=x
   ```
   where x is the serial port number. If this action corrects the problem, you are done with this procedure.

4. Check the physical connections between the OAP and the system.

   Make sure the connectors are firmly seated. If this action corrects the problem, you are done with this procedure.

5. Enter the following command to inhibit the unavailable OAP terminal displayed in the output from 1:

   ```
   inh-trm:trm=x
   ```
   where x is the port number.

   > **Note:**
   >
   > The force parameter is required for the last OAP terminal inhibited.

6. If the problem persists, enter the following command to reset the OAP:

   ```
   init-oap:oap=x
   ```
   where x is the OAP to be initialized. Verify that the OAP comes back in-service within five minutes and the system clears the alarm. If this clears the alarm, continue with 10.

7. Enter the following command for the inhibited OAP terminal:

   ```
   chg-trm:trm=x:type=none
   ```
   where x is the port number.

8. If the problem is still not corrected, reseat the TDM card.

   If the OAP still does not respond, replace the TDM card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

9. Enter the following command for each OAP terminal inhibited:

   ```
   chg-trm:trm=x:type=oap
   ```
   where x is the port number.

10. Enter the following command to return the OAP terminals to the in-service state:

    ```
    alw-trm:trm=x
    ```
    where x is the port number.

11. If the problem is still not corrected, contact My Oracle Support (MOS).

0355 - LSMS is Available

All communication paths are complete to the LSMS.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0355    LSMS SYSTEM         LSMS is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous condition has been corrected.

No further action is necessary.

0356 - LSMS is Unavailable

There are no communication paths available to the LSMS. This condition is reached when all OAP terminals are manually inhibited or all LSMS associations are down.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
*C 0014.0356  *C   LSMS SYSTEM        LSMS is unavailable
```

Alarm Level: Critical

Recovery

1. Enter the command to verify the status of the terminals:

   `rept-stat-trm`

   Example of the output:

```
RLGHNCXA03W 00-02-07 09:50:17 EST  EAGLE 35.0.0
TRM  PST              SST            AST
1    IS-NR            Active         -----
2    IS-NR            Active         -----
3    IS-NR            Active         -----
4    OOS-MT-DSBLD     MANUAL         -----
5    IS-NR            Active         -----
6    IS-NR            Active         -----
7    IS-NR            Active         -----
8    IS-NR            Active         -----
9    IS-NR            Active         -----
10   IS-NR            Active         -----
11   IS-NR            Active         -----
12   IS-NR            Active         -----
13   OOS-MT-DSBLD     MANUAL         -----
14   OOS-MT-DSBLD     MANUAL         -----
15   OOS-MT-DSBLD     MANUAL         -----
16   OOS-MT-DSBLD     MANUAL         -----
Command Completed.
```

   Refer to the *Commands Manual* to interpret the output.

2. Enable the terminal port with the following command:

`alw-trm:trm=x`

where x is the serial port number. If this action corrects the problem, you are done with this procedure.

3. Check the physical connections between the OAP and the LSMS.

   Make sure the connectors are firmly seated.

4. Check the physical connections between the OAP and the system.

   Make sure the connectors are firmly seated.

5. Enter the command to verify the status of the LSMS:

   `rept-stat-lsms`

   Sample output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  Release 31.3.0
                           GPL          PST          SST          AST
-----------------------------------------------------------------------
-
LSMS SYSTEM                             IS-ANR       Restricted   -----
TDM TRM           6                     IS-NR        Active       -----
OAP              A     220-001-000      OOS-MT       Isolated     -----
OAP              B     -----------      OOS-MT       Isolated     -----
Q.3 Assoc        A1                     IS-NR        Active       -----
Q.3 Assoc        B1                     OS-MT        Fault        -----
LSMS SYSTEM  ALARM STATUS = *C 0356  LSMS is unavailable
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0341 OAP unavailable
Q.3 Assoc A1 ALARM STATUS = No Alarms.
Q.3 Assoc B1 ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
Command Completed.
```

   Refer to the *Commands Manual* to interpret the output.

6. If the problem still persists, reset the OAP by entering the command:

   `init-oap:oap=x`
   where x is `a`, `b`, or `both`. See the *Commands Manual* for the correct usage. This procedure is complete if the OAP comes back in-service within five minutes and the system clears the alarm.

7. Enter the command to verify the status of the LSMS:

   `rept-stat-lsms`
   Refer to 5 for a sample output.

8. Enter the command to inhibit the unavailable OAP terminal displayed in the output from 1:

   `inh-trm:trm=x`
   where x is the port number.

   > **✎ Note:**
   >
   > The force parameter is required for the last OAP terminal inhibited.

9. Enter the command for the inhibited OAP terminal:

   ```
   chg-trm:trm=x:type=none
   ```
   where x is the port number.

10. If the problem is still not corrected, reseat the TDM card.

    If the OAP still does not respond, replace the TDM card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

11. Enter the command for each OAP terminal inhibited:

    ```
    chg-trm:trm=x:type=oap
    ```
    where x is the port number.

12. Enter this command to return the OAP terminals to the in-service state:

    ```
    alw-trm:trm=x
    ```
    where x is the port number.

13. Enter the command to verify the status of the LSMS:

    ```
    rept-stat-lsms
    ```
    Refer to 5 for a sample output.

14. If the LSMS is still not available, contact My Oracle Support (MOS).

0357 - All OAP Terminals are Removed

The OAP terminals have been modified to another type using the chg-trm command.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0357    LSMS SYSTEM            All OAP terminals are removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0358 - LSMS Connection Unavailable

An LSMS connection is not available.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
** 0014.0358  **  LSMS  Q.3 Assoc. A1    LSMS connection unavailable
```

Alarm Level: Major

Recovery

1. Check the physical connections between the OAP and the LSMS.

   Make sure the connectors are firmly seated.

2. Enter the following command to verify the status of the LSMS:

```
rept-stat-lsms
```

A sample output follows:

```
RLGHNCXA03W 00-04-17 14:59:11 EST  Release 31.3.0
                         GPL         PST         SST         AST
----------------------------------------------------------------------
-
LSMS SYSTEM                         IS-ANR      Restricted  -----
TDM TRM          6                  IS-NR       Active      -----
OAP             A    220-001-000    OOS-MT      Isolated    -----
OAP             B    -----------    OOS-MT      Isolated    -----
Q.3 Assoc       A1                  IS-NR       Active      -----
Q.3 Assoc       B1                  OS-MT       Fault       -----
LSMS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0341 OAP unavailable
Q.3 Assoc A1 ALARM STATUS = No Alarms.
Q.3 Assoc B1 ALARM STATUS = ** 0358 LSMS connection unavailable
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

3. If the problem still persists, reset the OAP by entering the following command:

```
init-oap:oap=x
```
where x is a, b, or both. See the *Commands Manual* for the correct usage. This procedure is complete if the OAP comes back in-service within three minutes and the system clears the alarm.

4. Enter the following command to verify the status of the LSMS:

```
rept-stat-lsms
```
Refer to 2 for a sample output.

5. Enter the following command to inhibit the unavailable OAP terminal displayed in the output from 2:

```
inh-trm:trm=x
```
where x is the port number.

> **Note:**
>
> The force parameter is required for the last OAP terminal inhibited.

6. Enter the following command for the inhibited OAP terminal:

```
chg-trm:trm=x:type=none
```
where x is the port number.

7. If the problem is still not corrected, reseat the TDM card.

If the OAP still does not respond, replace the TDM card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

8. Enter the following command for each OAP terminal inhibited:

```
chg-trm:trm=x:type=oap
```
where x is the port number.

9. Enter the following command to return the OAP terminals to the in-service state:

```
alw-trm:trm=x
```
where x is the port number.

10. Enter the following command to verify the status of the LSMS:

```
rept-stat-lsms
```
Refer to 2 for a sample output.

11. If the LSMS connection is still not available, contact My Oracle Support (MOS).

0359 - LSMS connection available

A LSMS connection is available.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
0014.0359  LSMS   Q.3 Assoc. A1     LSMS connection available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0360 - EMS Agent Unavailable

An EMS agent is not available.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
** 0100.0360  **  OAP B         EMS Agent unavailable
```

Alarm Level: Major

Recovery

1. Reset the OAP by entering the following command:

```
init-oap:oap=x
```
where x is a, b, or both. Refer to the *Commands Manual* for the correct usage. This procedure is complete if the OAP comes back in-service within five minutes and the system clears the alarm.

2. Enter the following command to determine the reason for the failure: `rept-stat-lsms`

Following is an example of the output:

```
RLGHNCXA03W 00-04-17 14:59:11 EST   Release 31.3.0
                        GPL        PST        SST         AST
-----------------------------------------------------------------
-
LSMS SYSTEM                        IS-ANR     Restricted  -----
TDM TRM             6              IS-NR      Active      -----
```

```
OAP              A    220-001-000   OOS-MT      Isolated       -----
OAP              B    -----------   OOS-MT      Isolated       -----
Q.3 Assoc        A1                 IS-NR       Active         -----
Q.3 Assoc        B1                 OS-MT       Fault          -----
LSMS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
OAP A        ALARM STATUS = No Alarms.
OAP B        ALARM STATUS = ** 0360 EMS Agent unavailable
Q.3 Assoc A1 ALARM STATUS = No Alarms.
Q.3 Assoc B1 ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

3. Enter the following command to inhibit the unavailable OAP terminal displayed in the output from Step 2:

   `inh-trm:trm=x`
   where x is the port number.

   > **Note:**
   >
   > The force parameter is required for the last OAP terminal inhibited.

4. Enter the following command for the inhibited OAP terminal:

   `chg-trm:trm=x:type=none`
   where x is the port number.

5. If the problem is still not corrected, reseat the TDM card.

   If the OAP still does not respond, replace the TDM card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

6. Enter the following command for each OAP terminal inhibited:

   `chg-trm:trm=x:type=oap`
   where x is the port number.

7. Enter the following command to return the OAP terminals to the in-service state:

   `alw-trm:trm=x`
   where x is the port number.

8. If the EMS agent is still not available, contact My Oracle Support (MOS).

0361 - EMS Agent Available

An EMS agent is available.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0361          OAP A           EMS Agent available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0362 - LSMS is at min. Service Limit

Only one communication path is available to the LSMS.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
** 0014.0362  **   LSMS SYSTEM        LSMS is at min. service limit
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the reason for the failure:

   ```
   rept-stat-lsms
   ```

   Following is an example of the output:

   ```
                            GPL        PST         SST            AST
   RLGHNCXA03W 00-04-17 14:59:11 EST  Release 31.3.0
   -------------------------------------------------------------------
   -
   LSMS SYSTEM                         IS-ANR      Restricted     -----
   TDM TRM           6                 IS-NR       Active         -----
   OAP           A    220-001-000      OOS-MT      Isolated       -----
   OAP           B    -----------      OOS-MT      Isolated       -----
   Q.3 Assoc     A1                    IS-NR       Active         -----
   Q.3 Assoc     B1                    OS-MT       Fault          -----
   LSMS SYSTEM  ALARM STATUS = ** 0362  LSMS is at min service limit
   OAP A        ALARM STATUS = No Alarms.
   OAP B        ALARM STATUS = ** 0341 OAP unavailable
   Q.3 Assoc A1 ALARM STATUS = No Alarms.
   Q.3 Assoc B1 ALARM STATUS = ** 0358 LSMS Q.3 association unavailable
   Command Completed.
   ```

   Refer to the *Commands Manual* to interpret the output.

2. If `0341 OAP unavailable` is displayed, follow recovery procedure 0341 - OAP Unavailable.

3. If `0358 LSMS Q.3 association unavailable` is displayed, follow recovery procedure 0358 - LSMS Connection Unavailable.

4. If `0354 OAP TDM Port unavailable` is displayed, follow recovery procedure 0354 - One OAP Terminal Unavailable.

5. If the problem is not solved, contact My Oracle Support (MOS).

0363 - OAP Filesystem Full

One of the OAP file systems has exceeded a 95% threshold.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0363  * OAP A   OAP filesystem full.
```

Alarm Level: Minor

Recovery

Contact My Oracle Support (MOS).

0364 - Config. Data Checksum Mismatch

This indicates the OAP configuration data does not match the OAP configuration data stored in the system database. There is a mismatch between the system and OAP databases.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST EAGLE 35.0.0
* 0014.0364  * OAP A   Config. Data checksum mismatch
```

Alarm Level: Minor

Recovery

1. Enter the following command to retrieve the OAP configuration data stored in the system:

   `rtrv-oap-config`

   The output of the `rtrv-oap-config` command displays different fields depending on whether the SEAS feature is on, the LNP feature is on, or both features are on. The following output example shows both the SEAS and LNP features on.

```
rtrv-oap-config
    RLGHNCXA03W 99-01-07 00:57:31 EST EAGLE 35.0.0
    OAP CONFIGURATION REPORT
DATA               OAP A               OAP B
Hostname           tekelec-8           tekelec-9
IP Address         128.132.064.015     128.132.064.016
IP Netmask         <Not Configured>    <Not Configured>
Default Router     <Not Configured>    <Not Configured>
Config             dual                dual
SEAC CLLI          SEASNJPYRRC         SEASNJPYRRC
X25 Packet Size    7                   7
X25 Mode           DTE                 DTE
Active LSMS        shadow              shadow
Main LSMS NSAP     198.089.039.022     198.089.039.022
Main LSMS SSEL     emss                emss
Main LSMS PSEL     emsp                emsp
Shadow LSMS NSAP   198.089.039.023     198.089.039.023
Shadow LSMS SSEL   emss                emss
Shadow LSMS PSEL   emsp                emsp
```

2. Review the retrieved information, looking for errors or unprovisioned parameters.

Table 3-4 lists OAP configuration parameters from the above output that must be provisioned if a given feature is on.

Table 3-4   OAP Configuration Parameters

Output	Legend	Feature
Hostname	Host name of OAP A or OAP B	LNP or SEAS
IP Address	IP address of OAP A or OAP B	LNP
IP Netmask	The netmask for OAP A or OAP B	Not required
Default Router	The IP address of the default router assigned to OAP A or OAP B	Not required
Config	The number of OAPs configured (single or dual)	LNP or SEAS
SEAC CLLI	The common language location identifier (CLLI) of the SEAC to which the OAP connects.	SEAS
X25 Packet Size	The X.25 package size for the link to the SEAC (7 or 8)	SEAS
X25 Mode	The mode of the X.25 link to the SEAC (DTE or DTC)	SEAS
Active LSMS	The LSMS associated with the OAP (main or shadow)	LNP
Main LSMS NSAP	The network service access point of the main LSMS (If `lsms=shadow`, this parameter set is not mandatory.)	LNP
Main LSMS SSEL	The session selector of the main LSMS (If `lsms=shadow`, this parameter set is not mandatory.)	LNP
Main LSMS PSEL	The presentation selector of the main LSMS (If `lsms=shadow`, this parameter set is not mandatory.)	LNP
Shadow LSMS NSAP	The network service access point of the shadow LSMS (If `lsms=main`, this parameter set is not mandatory.)	LNP

Table 3-4   (Cont.) OAP Configuration Parameters

Output	Legend	Feature
Shadow LSMS SSEL	The session selector of the shadow LSMS (If `lsms=main`, this parameter set is not mandatory.)	LNP
Shadow LSMS PSEL	The presentation selector of the shadow LSMS (If `lsms=main`, this parameter set is not mandatory.)	LNP

> **Note:**
>
> If you find no errors or provision omissions, go to 4. If you find errors or provision omissions, contact your IS department to obtain the correct values and contact My Oracle Support (MOS).

3. Enter the following command to update the OAP database:

   `act-oap-config`

4. If the fault does not clear, contact My Oracle Support (MOS).

0365 - Config. Data checksum alarm cleared

This indicates that the system databases once out of sync are now back in sync.

Example

```
RLGHNCXA21W 94-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0365   OAP A   Config. Data checksum alarm cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0366 - Temp Key(s) Expiration Alarm Cleared

This message indicates that there are no temporary keys currently in the expired state, and the alarm condition, specified by message "0368 - Temp Key(s) have expired," has been cleared.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 5.0.0-32.0.0
0100.0366    SYSTEM     Temp Key(s) expiration alarm cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

> **✎ Note:**
>
> Further access to this controlled feature requires the purchase of a permanent key.

0367 - Temp Key(s) Expiring Soon

This alarm indicates that one or more temporary keys used to enable a controlled feature will expire within the next seven days.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 5.0.0-32.0.0
** 0100.0367    SYSTEM     Temp Key(s) expiring soon
```

Alarm Level: Major

Recovery

1. Enter the following command to retrieve information about controlled features:
   `rtrv-ctrl-feat:enable=temp`

   The output of the `rtrv-ctrl-feat:enable=temp` command displays information about the number of days left for temporarily enabled features.

   Following is an example of the output:

```
The following features have been temporarily enabled:
RLGHNCXA03W 99-01-07 00:57:31 EST EAGLE 5.0.0-32.0.0
Feature Name              Partnum    Status  Quantity    Trial
Period Left
TPS 893000140 on 4000 6 days 5 hrs 3 mins
```

2. If you do nothing within the remaining trial period, the critical alarm, "0368 - Temp Key(s) have expired" will display when the trial period expires.

3. If you wish to acquire this feature permanently, you can purchase it from Tekelec.

   The alarm will be cleared when the purchased feature is enabled using the `enable-ctrl-feat` command.

0368 - Temp Key(s) have expired

This alarm indicates that one or more temporary keys used to enable a controlled feature have expired.

Example

```
   RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 5.0.0-32.0.0
*C 0100.0368    SYSTEM      Temp Key(s) have expired
```

Alarm Level: Critical

Recovery

1. Enter the following command to retrieve information about controlled features:
   `rtrv-ctrl-feat:expired=yes`

   The output of the `rtrv-ctrl-feat:expired=yes` command displays information about expired temporarily enabled features.

   Following is an example of the output:

   ```
   RLGHNCXA03W 99-01-07 00:57:31 EST EAGLE 5.0.0-32.0.0
   The following features have expired temporary keys:
   Feature Name             Part Num
   TPS 8930000140
   ```

2. You can enter the `chg-ctrl-feat:partnum=893xxxxxx:alarm=clear` command to clear this alarm.

3. If you wish to acquire this feature permanently, you can purchase it from Tekelec and enable it using the `enable-ctrl-feat` command.

   The alarm will clear when the purchased feature is installed with a permanent key.

0369 - REPT-T1F:FAC-T1 unavailable

There is a problem at the far end and the far end is not communicating with the EAGLE 5 ISS.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0369 ** T1/J1PORT 1201,2     REPT-T1F:FAC-T1 unavailable
```

Alarm Level: Major

Recovery

- Contact the far-end office to determine the cause and to correct the problem.

0370 - Critical Platform Failure(s)

This message indicates the application running in the MPS server has detected a critical platform failure. The Alarm Data in the message contains a 16-character hexadecimal string in the format of h'1xxxxxxxxxxxxxxx'. This alarm will be reset when UAM #250, MPS Available is issued.

Example

```
station1234 00-09-30 16:28:08 EST EAGLE 35.0.0
*C 0259.0370 *C MPS B                  Critical Platform Failure(s)
                 ALARM DATA = h'1000000000000008'
```

Alarm Level: Critical

Recovery

1. To decode the ALARM DATA included in this alarm, write down the Alarm Data string.

2. To decode the alarm and for the correct procedure to solve the problem, refer to the *MPS Platform Software and Maintenance Manual*.

3. This alarm will be reset when the problem is resolved and you receive UIM #250 MPS Available.

0371 - Critical Application Failure(s)

This message indicates the application running in the MPS server has detected a critical application failure. The Alarm Data in the message contains a 16-character hexadecimal string in the format of h'2xxxxxxxxxxxxxxx'. This alarm will be reset when UAM #250, MPS Available is issued.

Example

```
station1234 00-09-30 16:28:08 EST EAGLE 35.0.0
*C 0259.0371 *C MPS B                  Critical Application Failure(s)
                 ALARM DATA = h'2000000000000001'
```

Alarm Level: Critical

Recovery

1. To decode the ALARMDATA included in this alarm, write down the Alarm Data string.

2. To decode the alarm and for the correct procedure to solve the problem, refer to the *MPS Platform Software and Maintenance Manual*.

3. This alarm will be reset when the problem is resolved and you receive UIM #250 MPS Available.

0372 - Major Platform Failure(s)

This message indicates the application running in the MPS server has detected a major platform failure. The Alarm Data in the message contains a 16-character hexadecimal string in the format of h'3xxxxxxxxxxxxxxx'. This alarm will be reset when UAM #250, MPS Available is issued.

Example

```
station1234 00-09-30 16:28:08 EST EAGLE 35.0.0
** 0259.0372 ** MPS B                Major Platform Failure(s)
                ALARM DATA = h'3000000000000002'
```

Alarm Level: Major

Recovery

1. To decode the ALARMDATA included in this alarm, write down the Alarm Data string.

2. To decode the alarm and for the correct procedure to solve the problem, refer to the *MPS Platform Software and Maintenance Manual*.

3. This alarm will be reset when the problem is resolved and you receive UIM #250 MPS Available.

0373 - Major Application Failure(s)

This message indicates the application running in the MPS server has detected a major application failure. The Alarm Data in the message contains a 16-character hexadecimal string in the format of h'4xxxxxxxxxxxxxxx'. This alarm will be reset when UAM #250, MPS Available is issued.

Example

```
station1234 00-09-30 16:28:08 EST EAGLE 35.0.0
** 0259.0373 ** MPS B                Major Application Failure(s)
                ALARM DATA = h'4000000000000008'
```

Alarm Level: Major

Recovery

1. To decode the Alarm Data included in this alarm, write down the Alarm Data string.

2. To decode the alarm and for the correct procedure to solve the problem, refer to the *MPS Platform Software and Maintenance Manual*.

3. This alarm will be reset when the problem is resolved and you receive UIM #250 MPS Available.

0374 - Minor Platform Failure(s)

This message indicates the application running in the MPS server has detected a minor platform failure. The Alarm Data in the message contains a 16-character hexadecimal string in the format of h'5xxxxxxxxxxxxxxx'. This alarm will be reset when UAM #250, MPS Available is issued.

Example

```
station1234 00-09-30 16:28:08 EST EAGLE 35.0.0
*  0259.0374 *  MPS B                Minor Platform Failure(s)
                ALARM DATA = h'5000000000000004'
```

Alarm Level: Minor

Recovery

1. To decode the ALARM DATA included in this alarm, write down the Alarm Data string.

2. To decode the alarm and for the correct procedure to solve the problem, refer to the *MPS Platform Software and Maintenance Manual*.

3. This alarm will be reset when the problem is resolved and you receive UIM #250 MPS Available.

0375 - Minor Application Failure(s)

This message indicates the application running in the MPS server has detected a minor application failure. The Alarm Data in the message contains a 16-character hexadecimal string in the format of h'6xxxxxxxxxxxxxxx'. This alarm will be reset when UAM #250, MPS Available is issued.

Example

```
station1234 00-09-30 16:28:08 EST EAGLE 35.0.0
*   0259.0375 *  MPS B                Minor Application Failure(s)
                 ALARM DATA = h'6000000000000001'
```

Alarm Level: Minor

Recovery

1. To decode the Alarm Data included in this alarm, write down the Alarm Data string.

2. To decode the alarm and for the correct procedure to solve the problem, refer to the *MPS Platform Software and Maintenance Manual*.

3. This alarm will be reset when the problem is resolved and you receive UIM #250 MPS Available.

0376 - REPT-T1F:FAC-T1 LOS Failure

No signal is being received on the T1 Port.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0376 ** T1PORT 1201,2   REPT-T1F:FAC-T1 LOS failure
```

Alarm Level: Major

Recovery

Check the physical connections.

0377 - REPT-T1F:FAC-T1 LOF failure

The 7-bit frame alignment signal does not match the pattern the EAGLE 5 ISS is expecting.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0377 ** T1PORT 1201,2   REPT-T1F:FAC-T1 LOF failure
```

Alarm Level: Major

Recovery

Contact the far-end office to correct their framing problem.

0378 - REPT-T1F:FAC-T1 Remote Alarm

This indicates there is some type of failure on the far end.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0378 ** T1PORT 1201,2   REPT-T1F:FAC-T1 Remote Alarm
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause and correct the problem.

0379 - REPT-T1F:FAC-T1 Alarm

The far end is transmitting an alarm indication signal (**AIS**) due to an excessive bit error rate, loss of signal, or loss of frame.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0377 ** T1PORT 1201,2   REPT-T1F:FAC-T1 Alarm
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause of the **AIS** and to correct the problem.

0380 - RCVRY-T1F:FAC-T1 Available

The T1 port 1 is back in-service.

Example

```
RLGHNCXA21W 00-11-07 11:02:30 EST  EAGLE 35.0.0
0014.0380    T1PORT  1201,2   RCVRY-T1F:FAC-T1 available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0381 - REPT-E1F:FAC-E1 LOS failure

No signal is being received on the signaling link.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0381 ** E1PORT 1201,2   REPT-E1F:FAC-E1 LOS failure
```

Alarm Level: Major

Recovery

Check the physical connections.

0382 - REPT-E1F:FAC-E1 LOF failure

The 7-bit frame alignment signal does not match the pattern the EAGLE 5 ISS is expecting.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0382 ** E1PORT 1201,2   REPT-E1F:FAC-E1 LOF failure
```

Alarm Level: Major

Recovery

Contact the far-end office to correct their framing problem.

0383 - REPT-E1F:FAC-E1 AIS detected

The far end is transmitting an alarm indication signal (**AIS**) due to an excessive bit error rate, loss of signal, or loss of frame.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0383 ** E1PORT 1201,2   REPT-E1F:FAC-E1 AIS detected
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause of the **AIS** and to correct the problem.

0384 - REPT-E1F:FAC-E1 Far End Failure

This indicates there is some type of failure on the far end.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0384 ** E1PORT 1201,2   REPT-E1F:FAC-E1 Far End Failure
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause and to correct the problem.

0385 - REPT-E1F:FAC-E1 10E-3 BER failed

A framing bit error rate is maintained for in-service links because the error rate is high.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0385 ** E1PORT 1201,2   REPT-E1F:FAC-E1 10E-3 BER failed
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause of the high framing bit error rate.

0386 - RCVRY-E1F:FAC-E1 Available

The E1 port 1 is back in-service.

Example

```
RLGHNCXA21W 00-11-07 11:02:30 EST  EAGLE 35.0.0
0014.0386    E1PORT  1201,2   RCVRY-E1F:FAC-E1 available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0387- REPT-E1F:FAC-E1 unavailable

There is a problem at the far end and the far end is not communicating with the EAGLE 5 ISS.

Example

```
   RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 35.0.0
** 0014.0387 ** E1PORT 1201,2     REPT-E1F:FAC-E1 unavailable
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause and to correct the problem.

0388 - Illegal Address Error has Cleared

This message indicates the clearing of a prior illegal address error. Previously, the HMUX-assigned shelf ID address received from OAM did not match the value read from the Assigned Shelf Address Register, resulting in major alarm UAM #0390. This message shows the previous alarm has cleared.

Example

```
station1234 00-11-30 16:28:08 EST   EAGLE 35.0.0
0012.0388          CARD 1109 HMUX    Illegal Address Error has Cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault, which was indicated by UAM #0390, has been corrected.

No further action is necessary.

0389 - Card Responding Normally

This message indicates the clearing of a prior card problem.

Example

```
0014.0389 CARD 1201 Card Responding Normally
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0390 - Illegal Address Error

This message indicates an HMUX (High Speed Multiplexer) illegal address error. The ATH (Application Trouble Handler) displays this alarm when an HMUX-assigned shelf ID address, which was received from OAM and written to the Assigned Shelf Address Register, did not match the value read from the Assigned Shelf Address Register. Furthermore, the error was not corrected after an automatic attempt to correct the address discrepancy.

Example

```
station1234 00-11-30 16:28:08 EST  EAGLE 35.0.0
** 0012.0390  **  CARD 1109 HMUX Illegal Address Error
```

Alarm Level: Major

Recovery

1. Reset the HMUX card in question by entering the command:

   `init-mux:loc=xy09 (or loc=xy10)`
   This command resets the card, but it does not take down the IMT bus on which the card resides; operation of the bus is unaffected by this command.

2. If the problem persists, then you should reseat the HMUX card in question.

   Remember that this action will take down the IMT bus of the HMUX card.

3. If the problem remains, the card must be replaced.

   Contact My Oracle Support (MOS).

0391 - Card Not Responding Error

This message indicates an HMUX (High Speed Multiplexer)/HIPR (High-Speed IMT Packet Router) is not responding. This alarm is displayed when an HMUX/HIPR in a provisioned shelf card does not respond.

Example

```
station1234 00-11-30 16:28:08 EST  EAGLE 35.0.0
** 0012.0391 **  CARD 1109 HIPR Card not responding Error
```

Alarm Level: Major

Recovery

1. Reset the HMUX/HIPR card in question by entering the command:

   `init-mux:loc=xy09 (or loc=xy10)`
   This command resets the card, but it does not take down the IMT bus on which the card resides; operation of the bus is unaffected by this command.

2. If the problem persists, then you should reseat the HMUX/HIPR card in question.

   Remember that this action will take down the IMT bus of the HMUX/HIPR card.

3. If the problem remains, the card must be replaced.

   Contact My Oracle Support (MOS).

0392 - OA&M IP Security Feature is OFF

The Eagle OA&M IP Security Enhancements Feature is not turned on. One of the following occurred: and OAM init, or OAM role change, or the `chg-ctrl-feat` command turned the feature off.

With this feature not operating, you do not have the tools to securely pass data across an otherwise non-secure network. Until the Eagle OA&M IP Security Enhancements

Feature is restored, the Eagle cannot provide secure connections from approved clients, and does not protect sensitive passwords and information while in transit between the Eagle and a host.

Example

```
eagle11 17-12-07 09:23:41 EST  EAGLE 46.5.0.0.0-0.0.0
    2001.0392    SECURITY SYSTEM         OA&M IP Security feature
status is OFF
```

Alarm Level: Major

Recovery

To restore the OA&M IP Security Enhancements feature, you turn it on permanently.

To turn the feature on, use the command.

```
enable-ctrl-feat
```

0393 - OA&M IP Security feature is ON

The Eagle OA&M IP Security Enhancements Feature is turned on. This UAM is an informational message that confirms that the feature is restored to operational status.

With this feature operating, you have the tools to securely pass data across an otherwise non-secure network. With the Eagle OA&M IP Security Enhancements Feature operational, the Eagle can provide secure connections from approved clients, and protects sensitive passwords and information while in transit between the Eagle and a host.

Example

```
RLGHNCXA21W 03-03-03 12:01:43 EST  EAGLE 35.0.0
0047.0393    SECURITY SYSTEM        OA&M IP Security feature status is
ON
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates that the feature previously was OFF and now has been turned ON.

No further action is necessary.

0394 - INP Subsystem is Available

This message indicates that a problem with the INP subsystem has been corrected.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
0056.0394    INP SYSTEM    INP Subsystem is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0395 - INP Subsystem is Not Available

The INP subsystem is not available. There are no IS-NR VSCCP cards associated with this INP subsystem. The INP subsystem was not taken off-line via command.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
*C 0056.0395  *C  INP SYSTEM    INP Subsystem  is not available
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-mps`

2. Enter the following command to move the VSCCP cards to an ACTIVE status if loading is successful:

   `rst-card:loc=xxxx`
   where xxxx is the location of the OOS-MT-DSBLD VSCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-mps`

4. Verify the VSCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0396 - INP Subsystem is disabled

The INP subsystem has been manually disabled using the `inh-map-ss` command.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
*C 0056.0396  *C  INP SYSTEM     INP Subsystem  is disabled
```

Alarm Level: Critical

Recovery

1. Enter this command to verify the status and location of the INP subsystem cards:

   `rept-stat-mps`

2. Enter this command to to reserve the subsystem number and to change the state of the INP subsystem status to on-line:

```
ent-ss-appl:appl=inp:ssn=xx:stat=online
```
where xx is primary subsystem number.

3. Enter this command to change the state of the INP subsystem to on-line:

```
alw-map-ss:ssn=xx
```
where xx is primary subsystem number.

4. Enter this command to verify the status of the INP subsystem:

```
rept-stat-mps
```

0397 - INP Subsystem is Removed

The INP subsystem is not fully equipped. There are no VSCCP cards configured with this INP subsystem.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
0056.0397      INP SYSTEM      INP Subsystem  is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the VSCCP hardware.

Configure the INP system with VSCCP cards. Refer to the *Maintenance Manual* for card removal/replacement procedures.

0398 - INP Subsystem Normal, Card(s) Abnormal

One or more of the VSCCP cards do not have an ACTIVE status.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
*  0056.0398  *   INP SYSTEM   INP Subsystem normal,card(s) abnormal
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

```
rept-stat-mps
```

2. Enter the following command to move the VSCCP card to an ACTIVE status if loading is successful:

```
rst-card:loc=xxxx
```
where xxxx is the location of the OOS-MT-DSBLDVSCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

```
rept-stat-mps
```

4. Verify the VSCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0399 - RCVRY-LKSTO:Alarm clr'd by deleting SLK

A signaling link (**SLK**) that was out of service and had an outstanding alarm has been deleted from the database. The alarm is cleared.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0399    LSN a24546   RCVRY-LKSTO:Alarm clr'd by deleting SLK
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0400 - Alarm cleared by deleting card

A card that was out of service and had an outstanding alarm has been deleted from the system database. The alarm is cleared.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0400    CARD 1202 SCCP      Alarm cleared by deleting card
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous failure has been corrected.

No further action is necessary.

0401 - Alarm cleared by deleting SLK

A signaling link (**SLK**) that was out of service and had an outstanding alarm has been deleted from the database. The alarm is cleared.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0401    SLK 1205,A SS7ANSI  Alarm cleared by deleting SLK
             SLC=01   FECLLI=A1234567890
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0402 - Alarm cleared by deleting route

A route that was out of service and had an outstanding alarm has been deleted from the database. The alarm is cleared.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.0402    DPC 001-001-001     Alarm cleared by deleting route
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0403 - 1114 E1/T1 Clock Requires TDM-GTI

This message indicates that the high speed clock is provisioned as T1 framed, E1 framed, or E1 unframed. A non TDM-GTI card has been placed in this system where recovered clocks are provisioned. The TDM-GTI version of the TDM card is required.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 35.0.0
** 0052.0403 ** HS CLOCK SYSTEM  1114 E1/T1 clock requires TDM-GTI
```

Alarm Level: Major

Recovery

Perform one of the following:

* Replace the card in location 1114 with a TDM-GTI card. Refer to the *Maintenance Manual* for card removal/replacement procedures for the replacement procedure.

  OR

* Use the `chg-clkoptschg-stpopts` command to change the `hsclksrc` parameter to RS422. Refer to the *Commands Manual* for proper usage of the command.

0404 - 1116 E1/T1 Clock Requires TDM-GTI

This message indicates the high speed clock is provisioned as T1 framed, E1 framed, or E1 unframed. A non TDM-GTI card has been placed in this system where recovered clocks are provisioned. The TDM-GTI version of the TDM card is required.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 35.0.0
** 0052.0404 ** HS CLOCK SYSTEM  1116 E1/T1 clock requires TDM-GTI
```

Alarm Level: Major

Recovery

Perform one of the following:

* Replace the card in location 1116 with a TDM-GTI card. Refer to the *Maintenance Manual* for card removal/replacement procedures for the replacement procedure.

  OR

* Use the `chg-clkoptschg-stpopts` command to change the *HSCLKSRC* parameter to RS422. Refer to the *Commands Manual* for proper usage of the command.

0405 - 1114, 1116 E1/T1 Clock Requires TDM-GTI

This message indicates that the high speed clock is provisioned as T1 framed, E1 framed, or E1 unframed. A non TDM-GTI card has been placed in this system in slots 1114 and 1116 where recovered clocks are provisioned. The TDM-GTI version of the TDM card is required.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 35.0.0
** 0052.0405 ** HS CLOCK SYSTEM  1114, 1116 E1/T1 clock requires TDM-GTI
```

Alarm Level: Major

Recovery

Perform one of the following:

* Replace the cards in locations 1114 and 1116 with a TDM-GTI card. Refer to the *Maintenance Manual* for card removal/replacement procedures for the replacement procedure.
  OR

* Use the `chg-clkoptschg-stpopts` command to change the HSCLKSRC parameter to RS422. Refer to the *Commands Manual* for proper usage of the command.

0406 - 1114 Clock selection mismatch

This message indicates that the database has been restored and the provisioned clocks do not match what is running on the TDM.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0406 ** HS CLOCK SYSTEM  1114 Clock selection mismatch
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the current clock settings on the TDM:

   ```
   rept-stat-clk
   ```

   Following is an example of the output:

   ```
       rept-stat-clk
       Command entered at terminal #3.
   ;
       tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
       CARD LOC= 1114 (Active   )         CARD LOC= 1116 (Isolated )
       PRIMARY BITS      = Active          PRIMARY BITS      = -----
       SECONDARY BITS    = Idle            SECONDARY BITS    = -----
       HS PRIMARY CLK    = Active          HS PRIMARY CLK    = -----
       HS SECONDARY CLK  = Idle            HS SECONDARY CLK  = -----
       HS CLK TYPE       = E1 UNFRAMED     HS CLK TYPE       = -----
       HS CLK LINELEN    = SHORTHAUL       HS CLK LINELEN    = -----
                                           PST           SST        AST
       SYSTEM CLOCK                        IS-NR         ACTIVE     ALMINH
       ALARM STATUS      = No Alarms.
       # Cards using CLK A = 009           # Cards with bad CLK A = 000
       # Cards using CLK B = 000           # Cards with bad CLK B = 009
       # Cards using CLK I = 000
                                           PST           SST        AST
       HS SYSTEM CLOCK                     IS-NR         ACTIVE     ALMINH
       ALARM STATUS      = No Alarms.
       # Cards using HSCLK A = 001         # Cards with bad HSCLK A = 000
       # Cards using HSCLK B = 000         # Cards with bad HSCLK B = 002
       # Cards using HSCLK I = 000
       Command Completed.
   ```

2. Use the `chg-clkoptschg-stpopts` command to update the database to match the output displayed when you issued the previous command.

   Refer to the *Commands Manual* for proper usage of the command.

0407 - 1116 Clock selection mismatch

This message indicates that the database has been restored and the provisioned clocks do not match what is running on the TDM.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0407 ** HS CLOCK SYSTEM  1116 Clock selection mismatch
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the current clock settings on the TDM:

   ```
   rept-stat-clk
   ```

   Following is an example of the output:

   ```
   rept-stat-clk
       Command entered at terminal #3.
   ;
       tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
       CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
       PRIMARY BITS      = Active       PRIMARY BITS      = -----
       SECONDARY BITS    = Idle         SECONDARY BITS    = -----
       HS PRIMARY CLK    = Active       HS PRIMARY CLK    = -----
       HS SECONDARY CLK  = Idle         HS SECONDARY CLK  = -----
       HS CLK TYPE       = E1 UNFRAMED  HS CLK TYPE       = -----
       HS CLK LINELEN    = SHORTHAUL    HS CLK LINELEN    = -----
                                        PST          SST        AST
       SYSTEM CLOCK                     IS-NR        ACTIVE     ALMINH
       ALARM STATUS      = No Alarms.
       # Cards using CLK A = 009        # Cards with bad CLK A = 000
       # Cards using CLK B = 000        # Cards with bad CLK B = 009
       # Cards using CLK I = 000
                                        PST          SST        AST
       HS SYSTEM CLOCK                  IS-NR        ACTIVE     ALMINH
       ALARM STATUS      = No Alarms.
       # Cards using HSCLK A = 001      # Cards with bad HSCLK A = 000
       # Cards using HSCLK B = 000      # Cards with bad HSCLK B = 002
       # Cards using HSCLK I = 000
       Command Completed.
   ```

2. Use the `chg-clkoptschg-stpopts` command to update the database to match the output displayed when you issued the previous command.

   Refer to the *Commands Manual* for proper usage of the command.

0408 - 1114, 1116 Clock selection mismatch

This message indicates that the database has been restored and the provisioned clocks do not match what is running on the TDM.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
** 0052.0408 ** HS CLOCK SYSTEM  1114, 1116 Clock selection mismatch
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the current clock settings on the TDM:

   ```
   rept-stat-clk
   ```

   Following is an example of the output:

   ```
   rept-stat-clk
       Command entered at terminal #3.
   ;
       tekelecstp 99-03-05 13:34:15 EST EAGLE 31.6.0
       CARD LOC= 1114 (Active   )        CARD LOC= 1116 (Isolated )
       PRIMARY BITS     = Active         PRIMARY BITS     = -----
       SECONDARY BITS   = Idle           SECONDARY BITS   = -----
       HS PRIMARY CLK   = Active         HS PRIMARY CLK   = -----
       HS SECONDARY CLK = Idle           HS SECONDARY CLK = -----
       HS CLK TYPE      = E1 UNFRAMED    HS CLK TYPE      = -----
       HS CLK LINELEN   = SHORTHAUL      HS CLK LINELEN   = -----
                                         PST         SST        AST
       SYSTEM CLOCK                      IS-NR       ACTIVE     ALMINH
       ALARM STATUS     = No Alarms.
       # Cards using CLK A = 009         # Cards with bad CLK A = 000
       # Cards using CLK B = 000         # Cards with bad CLK B = 009
       # Cards using CLK I = 000
                                         PST         SST        AST
       HS SYSTEM CLOCK                   IS-NR       ACTIVE     ALMINH
       ALARM STATUS     = No Alarms.
       # Cards using HSCLK A = 001       # Cards with bad HSCLK A = 000
       # Cards using HSCLK B = 000       # Cards with bad HSCLK B = 002
       # Cards using HSCLK I = 000
       Command Completed.
   ```

2. Use the `chg-clkoptschg-stpopts` command to update the database to match the output displayed when you issued the previous command.

   Refer to the *Commands Manual* for proper usage of the command.

0409 - Clock configuration corrected

This message indicates that a problem with the high speed clock configuration database has been corrected.

Example

```
station1234 99-03-05 16:28:08 EST  EAGLE 31.6.0
0052.0409    HS CLOCK SYSTEM      Clock configuration corrected
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0422 - Insufficient Extended Memory

At least one SCCP card does not have enough memory for the LNP application. Loading of the SCCP card is automatically inhibited.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0422 ** CARD  1113 SCCP  Insufficient extended memory
                HW VERIFICATION CODE: xxx
```

Alarm Level: Major

Recovery

1. If this message contains the optional line 'HW VERIFICATION CODE: xxx':

   a. Decode the xxx value and correct the indicated problem.

      See the Hardware Verification Codes in UAMs section on hardware verification codes in the *Unsolicited Alarms and Information Messages* manual.

   b. After correcting the problem, the card will be in `out-of-service maintenance disabled state` (OOS-MT-DSBLD).

      Restore the card back to `in-service normal state` (IS-NR) with the `alw-card` command. If this message does not contain the optional line 'HW VERIFICATION CODE: xxx', continue with the next step.

2. Verify the SCCP hardware.

   Verify the SCCP cards have at least 256M of memory.

3. If necessary, replace the SCCP card with the correct combination of motherboard and daughterboard.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0423 - Card Reload Attempted

Card loading is no longer inhibited. The once inhibited card is now attempting to load.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0423    CARD  1108 SCCP   Card reload attempted
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0424 - LNP Subsystem is Not Available

The LNP subsystem is not available. There are no IS-NR SCCP cards associated with this LNP subsystem. The LNP subsystem was not taken off-line via command.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
*C 0056.0424  *C  LNP SYSTEM     LNP Subsystem  is not available
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-lnp`

2. Enter the following command to move the SCCP cards to an ACTIVE status if loading is successful:

   `rst-card:loc=xxxx`
   where xxxx is the location of the OOS-MT-DSBLD SCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-lnp`

4. Verify the SCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0425 - LNP Subsystem Normal, Card(s) Abnormal

One or more of the SCCP cards do not have an ACTIVE status.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 46.0.0
*  0056.0425  *   LNP SYSTEM  LNP Subsystem normal, card(s) abnormal
```

Alarm Level: Minor.

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-lnp`

2. Enter the following command to move the SCCP card to an ACTIVE status if loading is successful:

   `rst-card:loc=xxxx`
   where xxxx is the location of the OOS-MT-DSBLD SCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-lnp`

4. Verify the SCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to *Maintenance Manual* for card removal/replacement procedures.

0426 - LNP Subsystem is Available

This message indicates that a problem with LNP system has been corrected.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0056.0426    LNP SYSTEM    LNP Subsystem is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0427 - LNP Subsystem degraded, card(s) abnormal

One or more LNP cards goes out of service in (N or N+1) configuration or not IS-NR.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 46.0.0
**  0056.0427   **    LNP SYSTEM   LNP Subsystem degraded, card(s)
abnormal
```

Alarm Level: Major.

Recovery

- Restore the one or more LNP out of service cards in (N or N+1) configuration or not IS-NR.

0428 - INP Subsystem degraded, card(s) abnormal

One or more INP cards goes out of service in (N or N+1) configuration or not IS-NR.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 46.0.0
0056.0428    INP SYSTEM   INP Subsystem degraded, card(s) abnormal
```

Alarm Level: Major.

Recovery

- Restore the one or more INP out of service cards in (N or N+1) configuration or not IS-NR.

0429 - ATINPQ Subsystem degraded, card(s) abnormal

One or more ATINPQ cards goes out of service in (N or N+1) configuration or not IS-NR.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 46.0.0
0056.0429      ATINPQ SYSTEM   ATINPQ Subsystem degraded, card(s)
abnormal
```

Alarm Level: Major.

Recovery

- Restore the one or more ATINPQ out of service cards in (N or N+1) configuration or not IS-NR.

0434 - LNP Subsystem is Removed

The LNP subsystem is not fully equipped. There are no SCCP cards configured with this LNP subsystem.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0056.0434      LNP SYSTEM      LNP Subsystem  is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the SCCP hardware.

Configure the LNP system with SCCP cards. Refer to the *Maintenance Manual* for card removal/replacement procedures.

0435 - LNP Subsystem is Disabled

The LNP subsystem has been manually disabled using the `inh-map-ss` command.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
*C 0056.0435  *C  LNP SYSTEM      LNP Subsystem  is disabled
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the LNP subsystem cards:

   `rept-stat-lnp`

2. Enter the following command to change the state of the LNP subsystem status to on-line:

   `ent-ss-appl:appl=lnp:ssn=xx:stat=online`
   where xx is primary subsystem number.

3. Enter the following command to change the state of the LNP subsystem to on-line:

   `alw-map-ss:ssn=xx`
   where xx is primary subsystem number.

4. Enter the following command to verify the status of the LNP subsystem:

   `rept-stat-lnp`

0436 - LNP ACG node overload

This message indicates that the number of LNP subsystem queries has exceeded the supported level.

Example

```
station1234 94-03-30 16:28:08 EST EAGLE 35.0.0
** 0056.0436 ** LNP SYSTEM            LNP ACG node overload
```

Alarm Level: Major

Recovery

1. Enter the following command to verify the status, quantity, and capacity of the SCCP cards:

   `rept-stat-lnp`

2. Refer to the *ELAP Administration and LNP Feature Activation* to verify that provisioning rules are being followed.

3. If the problem persists, contact My Oracle Support (MOS).

0437 - System SCCP TPS Capacity Exceeded

This message indicates the Eagle has exceeded its TPS (Transactions Per Second) message transport rate. The alarm will not stop until the TPS rate is below its rated TPS for the system for a period of 30 seconds. The alarm is cleared by the UIM #329 "SCCP capacity normal, card(s) abnormal".

Example

```
RLGHNCXA21W 00-11-07 11:02:30 EST  EAGLE 35.0.0
*C 0100.0437 *C SYSTEM            System SCCP TPS Capacity Exceeded
```

Alarm Level: Critical

Recovery

1. Use `rept-stat-sccp` to determine the status of the SCCP subsystem.

   This command also identifies which SCCP cards are OOS-MT. For example, enter:

   ```
   rept-stat-sccp
   ```

   Example of the output:

   ```
   eaglestp 00-10-24 20:38:58 EST EAGLE 35.0.0
       SCCP SUBSYSTEM REPORT IS-NR            Ovflw-1        -----
       SCCP Cards Configured= 4 Cards        IS-NR= 4
       System TCP Alarm Threshold =  80% Total capacity
       System Peak SCCP Load =  3000 TPS
       System Total SCCP Capacity =  5000 TPS
       CARD    VERSION     PST         SST           AST      MSU USAGE
   CPU USAGE

       ----------------------------------------------------------------------
       -----
       1212    021-001-000 IS-NR       ACTIVE       ALMINH
   47%          32%

       ----------------------------------------------------------------------
       -----
       SCCP Service Average MSU Capacity = 47%     Average CPU
   Capacity = 32%

       Command Completed.
   ```

2. The user should evaluate this new traffic level and determine whether additional SCCP cards are required to maintain the TPS level the system is processing.

0438 - Degraded Mode, Invalid OAM HW Config

This UAM alarm occurs when the system does not have the required baseline hardware. Baseline hardware required includes TDM-10 or greater. The alarm recurs every minute. Also, the `act_upgrade` command is rejected if alarm is present.

Example

```
RLGHNCXA21W 02-12-07 12:01:43 EST  EAGLE 35.0.0
*C 0014.0438 *C SECULOG 1114   Degraded Mode, Invalid OAM HW config
```

Alarm Level: Critical

Recovery

Ensure that the Eagle has the required hardware baseline, that is, the TDM-10 or greater is installed.

0439 - Exiting Degraded Mode

The Degraded Mode due to a invalid OAM hardware configuration has been cleared, and the mode has been exited. The HMUX is restored to its full operating capacity.

Example

```
RLGHNCXA21W 02-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0439    SECULOG 1114   Exiting Degraded Mode
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0441 - Incorrect MBD - CPU

An SM card does not have the required hardware configuration for the application.

Example

```
eagle11 18-10-30 09:58:56 MST  EAGLE 46.7.0.0.0-75.27.0
**  5881.0441 ** CARD 1215 SCCP64        Incorrect MBD - CPU
                HW VERIFICATION CODE:   180
```

Alarm Level: Major

Recovery

1. If this message contains the optional line HW VERIFICATION CODE: 180:

   - Decode the 180 value and correct the indicated problem.
     See the Hardware Verification Codes in UAMs section of hardware verification codes in the *Unsolicited Alarms and Information Messages* manual.

   - After correcting the problem, the card is in *out-of-service maintenance disabled* state (OOS-MT-DSBLD).
     Restore the card back to *in-service normal* state (IS-NR) with the `alw-card` command.

   If this message does not contain the optional line HW VERIFICATION CODE: 180, continue with the next step.

2. Verify the hardware.

   Verify the SM card(s) supports the provisioned database capacity.

   Refer to the *Maintenance* manual for card removal/replacement procedures.

0442 - RTDB Database Capacity is 90% Full

EPAP database capacity alarms are triggered by allocated capacity, whereas EAGLE alarms are triggered by provisioned capacity.

Allocated Capacity refers to the amount of memory that is currently dedicated to storing each RTDB entity-type. For instance when the very first DN is added to the EPAP RTDB, the EPAP allocates a block of memory large enough to store 6 million DNs. Although most of this memory is not in-use (provisioned) it has been demarcated for future use and cannot be utilized to store other non-DN entities (such as IMSIs or DN-Blocks, etc).

Provisioned Capacity refers to the provisioned RTDB entries versus the max RTDB entries allowed on an EAGLE SM card by the EPAP/ELAP related quantity features activated on EAGLE. EAGLE RTDB capacity alarms are triggered when the provisioned capacity passes the 80% and 90% levels. Furthermore, if the EAGLE RTDB provisioned capacity is below 80% and the allocation of the next memory block by EPAP would cause overallocation of the DSM Memory on an EPAP SM card, the EAGLE will report the 80% capacity alarm for that card.

Example

```
RLGHNCXA21W 14-05-07 11:02:30 EST  EAGLE 46.0.0
0100.0442  *C CARD 1108  VSCCP   RTDB database capacity is 90% full
```

Alarm Level: Critical

Recovery

1. For ELAP, perform the following:

    a. Use the `rept-stat-sccp` command to identify all SCCP cards.

```
tekelecstp 000623 13:34:22 EST  EAGLE5 36.0.0
    SCCP SUBSYSTEM REPORT IS-NR          Active
        SCCP ALARM STATUS = No Alarms

```

c. Use the `rtrv-ctrl-feat` command to verify the LNP Database feature quantity purchased for this system.

d. Refer to *ELAP Administration and LNP Feature Activation Guide* to view the DSM requirements for the LNP telephone number quantity verified under `rtrv-ctrl-feat`. Contact your Oracle Communications Sales Representative or Account Representative if larger DSMs are needed.

Proceed to next step if DSM capacity is not the issue.

e. From the ELAP GUI, execute View RTDB Status and verify the ELAP is reporting the same alarm as the EAGLE.

f. Verify the TN Counts listed on the GUI.

g. Go to View LNP Qty Features on the ELAP GUI and verify the LNP ported TNs. This value should reflect the same information as seen under rtrv-ctrl-feat in the EAGLE.

h. If the TN Count under View RTDB Status is 90% of the LNP ported TNs shown under View LNP Qty Features, this is the cause of the UAM 0442 – RTDB database capacity is 90% full.

i. If the TN Count is not 90% of the LNP ported TNs, check to see if the NPANXX or LRN Counts are 90% of the LNP ported NPANXXs or LRNs values.

j. Reduce the number of either TNs, LRNs, or NPANXXs by utilizing features/ tools on the LSMS. Refer to *Database Administrator's Guide* for LSMS.

k. If reducing the number of TNs, LRNs, or NPANXXs is not a viable option, increase the LNP telephone number quantity. Refer to the section "Activating the LNP Feature on the EAGLE" in *Administration and LNP Feature Activation Guide* for ELAP. Contact My Oracle Support (MOS) if you do not currently have the next higher TN quantity key.

2. For EPAP, perform the following:

a. Use the `rtrv-stpopts` command to determine the status of EPAP data quantity related options. The following example shows the status of the EPAP240M Feature:

```
Command Accepted - Processing
    tekelecstp 16-03-16 12:05:53 MST  EAGLE5 46.3.0.0.0-68.14.0
    STP OPTIONS
    --------------------------------
    EPAP240M                     off
```

b. Use the `rtrv-ctrl-feat:status=on` command to determine the status of EPAP data related features that are currently activated. The following example shows the status of the EPAP Data Split feature:

```
rlghncxa03w 12-03-13 16:40:40 EST EAGLE 46.4.0
The following features have been permanently enabled:

Feature Name                Partnum    Status  Quantity

EPAP Data Split             893039801  on      ----
Dual ExAP Config            893040501  on      ----
```

c. Run the `rtrv-bip:loc=<>` command and use the part number of the card to determine the hardware type:

```
Command Accepted - Processing

    eagle1 16-10-03 18:31:34 EST   EAGLE 46.3.0.0.1-68.27.0
    rtrv-bip:loc=1317
    Command entered at terminal #13.
;

    eagle1 16-10-03 18:31:34 EST   EAGLE 46.3.0.0.1-68.27.0

     Command Completed.
```

e. Refer to the "EAGLE Feature and EPAP DB Capacity Combinations" table in *Database Administration - GTT User's Guide* to determine the maximum RTDB capacity based on the installed hardware and EPAP Quantity features activated in the system.

f. Do one of the following:

- Reduce the size of the database to match the installed hardware capacities.

- Obtain and install a larger capacity SM card.

- Obtain and activate the appropriate EPAP Quantity features.

- Verify that the SM card is running the appropriate GPL type (32-bit or 64-bit).

g. If the SM card requires 64-bit GPLs and the card is currently running 32-bit GPLs, see "Conversion of SM8G-B Cards" or "Conversion of SLIC Cards" in *Database Administration - System Management User's Guide* to convert 32-bit GPLs to 64-bit.

0443 - RTDB Database Corrupted

A RTDB database is corrupt. The calculated checksum did not match the checksum value stored for one or more records.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
* 0100.0443 * CARD  1108 VSCCP     RTDB database corrupted
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status of the RTDB database:

```
rept-stat-db:display=all:db=mps
```

> **⚠ Caution:**
>
> If more than one card is corrupt, perform 2 through 5 to completion for one card at a time.

2. Enter the following command to verify the status of the corrupt card:

   ```
   rept-stat-card:loc=xxxx
   ```
   Where xxxx is the location of the card identified in the output.

3. Examine the output from 2 Verify that the SST (secondary state of the card) is not `Restrict`.

   If the SST is `Restrict`, do not continue with this procedure. Contact My Oracle Support (MOS).

4. Enter the following command to correct the VSCCP card.

   This command reinitializes the card and forces the card to load the current level of the database. Wait for the reload to complete before continuing.

   ```
   init-card:loc=xxxx
   ```
   Where xxxx is the location of the card identified in output.

5. Enter the following command to verify that the database is the same level as the other cards in the system:

   ```
   rept-stat-db:display=all:db=mps
   ```

6. If the problem persists, contact My Oracle Support (MOS).

0444 - RTDB Database is Inconsistent

One or more DSM card's real time database is not identical to the current real time database on the active EPAP fixed disks.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
* 0100.0444 * CARD  1108 VSCCP    RTDB database is inconsistent
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status of the RTDB database:

   ```
   rept-stat-db:display=all:db=mps
   ```

> **⚠ Caution:**
>
> If more than one card is inconsistent, perform 2 through 5 to completion for one card at a time.

2. Enter the following command to verify the status of the inconsistent card:

   ```
   rept-stat-card:loc=xxxx
   ```
   Where xxxx is the location of the card identified in the output.

3. Examine the output from 2. Verify the SST (secondary state of the card) is not `Restrict`.

   If the SST is `Restrict`, do not continue with this procedure. Contact My Oracle Support (MOS).

4. Enter the following command to correct the VSCCP card.

   This command reinitializes the card and forces the card to load the current level of the database. Wait for the reload to complete before continuing.

   ```
   init-card:loc=xxxx
   ```

   Where xxxx is the location of the card identified in the output.

5. Enter the following command to verify the that the database is the same level as the other cards in the system:

   ```
   rept-stat-db:display=all:db=mps
   ```

6. If the problem persists, contact My Oracle Support (MOS).

0445 - RTDB Database Has Been Corrected

This message indicates that a problem with the RTDB has been corrected.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0445    CARD  1108 VSCCP    RTDB database has been corrected
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0446 - RTDB Satabase Capacity is 80% Full

EPAP database capacity alarms are triggered by allocated capacity, whereas EAGLE alarms are triggered by provisioned capacity.

Allocated Capacity refers to the amount of memory that is currently dedicated to storing each RTDB entity-type. For instance when the very first DN is added to the EPAP RTDB, the EPAP allocates a block of memory large enough to store 6 million DNs. Although most of this memory is not in-use (provisioned) it has been demarcated for future use and cannot be utilized to store other non-DN entities (such as IMSIs or DN-Blocks, etc.).

Provisioned Capacity refers to the provisioned RTDB entries versus the max RTDB entries allowed on an EAGLE SM card by the EPAP/ELAP related quantity features activated on EAGLE. EAGLE RTDB capacity alarms are triggered when the provisioned capacity passes the 80% and 90% levels. Furthermore, if the EAGLE RTDB provisioned capacity is below 80% and the allocation of the next memory block by EPAP would cause overallocation of the DSM Memory on an EPAP SM card, the EAGLE will report the 80% capacity alarm for that card.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0.0
*   0100.0446  * CARD 1108 VSCCP   RTDB database capacity is 80% full
```

Alarm Level: Minor

Recovery

1. For ELAP, perform the following from the EAGLE STP:

   a. Use the `rept-stat-sccp` command to identify all SCCP cards.

   ```
   tekelecstp 000623 13:34:22 EST  EAGLE5 36.0.0

Command Completed.
```

    e. Refer to the "EAGLE Feature and EPAP DB Capacity Combinations" table in *Database Administration - GTT User's Guide* to determine the maximum RTDB capacity based on the installed hardware and EPAP Quantity features activated in the system.

    f. Do one of the following:

- Reduce the size of the database to match the installed hardware capacities.

- Obtain and install a larger capacity SM card.

- Obtain and activate the appropriate EPAP Quantity features.

- Verify that the SM card is running the appropriate GPL type (32-bit or 64-bit).

    g. If the SM card requires 64-bit GPLs and the card is currently running 32-bit GPLs, see "Conversion of SM8G-B Cards" or "Conversion of SLIC Cards" in *Database Administration - System Management User's Guide* to convert 32-bit GPLs to 64-bit.

0447 - RTDB Database Capacity Alarm Cleared

This message indicates that a problem with the RTDB memory has been corrected.

When the TN, LRN, or NPA control features are involved, this UAM message indicates either the feature key quantity has been increased or the RTDB database size has been reduced to clear the condition.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.0447    CARD  1108 VSCCP   RTDB database capacity alarm cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- This message indicates a previous fault has been corrected.

  No further action is necessary.

0448 - RTDB Database Incoherent

This message indicates that the RTDB database download is in-process or that the update failed.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
* 0100.0448 * CARD  1108 VSCCP      RTDB database incoherent
```

Alarm Level: Minor

Recovery

1. If the message `RTDB database has been corrected` is displayed after the download is complete, no further action is necessary.

   `0445 - RTDB database has been corrected`

2. Enter the following command to verify the status of the RTDB database:

   `rept-stat-db:display=all:db=mps`

   > ⚠ **Caution:**
   >
   > Continue with the remainder of this procedure only if 1 did not compete successfully. If more than one card is incoherent, perform 2 through 6 to completion for one card at a time.

3. Enter the following command to verify the status of the incoherent card:

   `rept-stat-card:loc=xxxx`
   Where xxxx is the location of the card identified in the output.

4. Examine the output from 3. Verify that the SST (secondary state of the card) is not `Restrict`.

   If the SST is `Restrict`, do not continue with this procedure. Contact My Oracle Support (MOS).

5. Enter the following command to correct the VSCCP card.

   This command reinitializes the card and forces the card to load the current level of the database. Wait for the reload to complete before continuing.

   `init-card:loc=xxxx`

   Where xxxx is the location of the card identified in the output.

6. Enter the following command to verify the that the database is the same level as the other cards in the system:

   `rept-stat-db:display=all:db=mps`

7. If the problem persists, contact My Oracle Support (MOS).

0449 - RTDB Resynchronization in Progress

This message indicates the MPS database resynchronization is in process.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
** 0100.0449  **  CARD  1108 VSCCP   RTDB resynchronization in progress
```

Alarm Level: Major

Recovery

When the resynchronization is complete, the `RTDB database has been corrected` message is displayed.

```
0445 - RTDB database has been corrected
No further action is necessary
```

If the MPS has been inhibited, the generic clearing alarm `0500` is displayed. Otherwise, when the resynchronization is complete, the `0445 - RTDB database has been corrected` message is displayed.

0450 - Invalid HW for Integrated GLS

The **Integrated GLS Feature** requires E5-based control cards. This UAM is generated when legacy control cards are installed in the standby MASP location after the Integrated GLS feature is turned on. This action changes the **GLS** subsystem state to **IS-ANR**.

Example

```
*   0002.0450 *  GLS System            Invalid HW for Integrated GLS
```

Alarm Level: Major

Recovery

Replace the legacy control cards (labeled GPSM-II and TDM on the cards) with E5-based control cards (labeled E5-MASP) when enabling the Integrated GLS Feature.

0451 - RTDB Reload Required

The RTDB database on the DSM card needs to be reloaded because the resynch log does not contain all of the required updates.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0451 ** CARD  1108 VSCCP    RTDB reload required
```

Alarm Level: Major

Recovery

1. Enter the following command to verify the status of the RTDB:

   ```
   rept-stat-db:display=all:db=mps
   ```

2. Enter the following command to correct the VSCCP card.

   This command reinitializes the card and forces the card to load the current level of the database:

   ```
   init-card:loc=xxxx
   ```

   where xxxx is the location of the card identified in output.

3. When the reload is complete, the `RTDB database has been corrected` message is displayed.

```
0445 - RTDB database has been corrected
No further action is necessary
```

4. If the problem persists, contact My Oracle Support (MOS).

0452 - Exceeded Service Error Threshold Lvl 1

This UAM is generated when the EAGLE 5 ISS detects SCCP or Application traffic failure rates greater than the defined level 1 Service Error Threshold.

> **Note:**
>
> UAM 527 is also expected when the errors exceed the threshold level (UAM452/453). These alarms are auto-cleared when the error condition abates (below threshold level1 for UAM 452 and level 2 for UAM 453)

Example

```
RLGHNCXA21W 00-11-07 11:02:30 EST  EAGLE 35.0.0
** 0014.0452 ** SCCP SYSTEM      Exceeded Service Error Threshold Lvl 1
```

Alarm Level: Major

Recovery

1. Enter the following command to verify the database threshold:

   `rtrv-th-alm`

2. Enter the following command to verify the Fail Ratio of the service in question:

   `rept-stat-sccp`

3. Enter the following command up to three times to ensure all DSMs are accepting updates:

   `rept-stat-db:display=all:db=mps`

   • If the DSMs are accepting updates, proceed to 4.

   • If the DSMs are not accepting the updates and they all stopped at the same level, inspect the respective EPAP or ELAP application attached to the EAGLE, and correct any issues on the EPAP or ELAP application.

4. Enter the following command to retrieve records from the active or standby Alarm and UIM logs generated by the Maintenance system:

   `rtrv-log:type=xxx`
   where: xxx=ALL, ALARM, or UIM.

   For more information on available parameters, refer to the *Commands Manual*.

5. For further assistance, contact My Oracle Support (MOS).

0453 - Exceeded Service Error Threshold Lvl 2

This UAM is generated when the EAGLE 5 ISS detects SCCP or Application traffic failure rates greater than the defined level 2 Service Error Threshold.

> **Note:**
>
> UAM 527 is also expected when the errors exceed the threshold level (UAM 452/453). These alarms are auto-cleared when the error condition abates (below threshold level1 for UAM 452 and level 2 for UAM 453).

Example

```
RLGHNCXA21W 00-11-07 11:02:30 EST  EAGLE 35.0.0
*C  0014.0453 *C SCCP SYSTEM        Exceeded Service Error Threshold Lvl
2
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the database threshold:

   ```
   rtrv-th-alm
   ```

2. Enter the following command to verify the Fail Ratio of the service in question:

   ```
   rept-stat-sccp
   ```

3. Enter the following command up to three times to ensure all DSMs are accepting updates:

   ```
   rept-stat-db:display=all:db=mps
   ```

   - If the DSMs are accepting updates, proceed to the next step.

   - If the DSMs are not accepting the updates and they all stopped at the same level, inspect the respective EPAP or ELAP application attached to the EAGLE. Correct any issues on the EPAP or ELAP application.

4. Enter the following command to retrieve records from the active or standby Alarm and UIM logs generated by the Maintenance system:

   ```
   rtrv-log:type=xxx
   ```
   where: xxx=ALL, ALARM, or UIM.

   For more information on available parameters, refer to the *Commands Manual*.

5. For further assistance, contact My Oracle Support (MOS).

0454 - Service Error Threshold Alarm Cleared

This message is generated when the Service Error Threshold alarm is cleared.

Example

```
RLGHNCXA21W 00-11-07 11:02:30 EST  EAGLE 35.0.0
0014.0454 SCCP    1205,Service Error Threshold Cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0455 - EIR Subsystem is Not Available

The EIR subsystem is not available. No IS-NR VSCCP cards are associated with this EIR subsystem. No VSCCP cards have an Active EIR status; all are either out-of-service (OOS) or loading. The EIR subsystem was not taken off-line via command.

Example

```
RLGHNCXA21W 03-08-18 12:01:43 EST  EAGLE 35.0.0
*C 0056.0455  *C  EIR SYSTEM    EIR Subsystem is not available
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   ```
   rept-stat-mps
   ```

2. Enter the following command to move the VSCCP cards to an ACTIVE status if loading is successful:

   ```
   rst-card:loc=xxxx
   ```
   where xxxx is the location of the OOS-MT-DSBLD VSCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

   ```
   rept-stat-mps
   ```

4. Verify the VSCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0456 - EIR Subsystem is Disabled

The EIR subsystem has been manually disabled with the `inh-map-ss` command. All IS-NR (in service normal) cards have EIR status of Offline, with at least one card IS-NR.

Example

```
RLGHNCXA21W 03-08-18 12:01:43 EST  EAGLE 35.0.0
*C 0056.0456  *C  EIR SYSTEM    EIR Subsystem is disabled
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the EIR subsystem cards:

```
rept-stat-mps
```

2. Enter the following command to reserve the subsystem number and to change the state of the EIR subsystem status to on-line:

```
ent-ss-appl:appl=eir:ssn=xx:stat=online
```
where xx is primary subsystem number.

3. Enter the following command to change the state of the EIR subsystem to on-line:

```
alw-map-ss:ssn=xx
```
where xx is primary subsystem number.

4. Enter the following command to verify the status of the EIR subsystem:

```
rept-stat-mps
```

0457 - EIR Subsystem Normal, Card(s) Abnormal

One or more of the VSCCP cards do not have an Active status.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 35.0.0
*C 0056.0457      EIR SYSTEM    EIR Subsystem normal, card(s) abnormal
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

```
rept-stat-mps
```

2. Enter the following command to move the VSCCP card to an ACTIVE status if loading is successful:

```
rst-card:loc=xxxx
```
where xxxx is the location of the OOS-MT-DSBLD VSCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

```
rept-stat-mps
```

4. Verify the VSCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0458 - EIR Subsystem is Available

This message indicates that a problem with the EIR subsystem has been corrected. All VSCCP cards are IS-NR and have an EIR status of Active.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0056.0458    EIR SYSTEM   EIR Subsystem is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0459 - EIR Subsystem is Removed

The EIR subsystem is not equipped. No VSCCP cards are configured with the EIR subsystem.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0056.0459     EIR SYSTEM    EIR Subsystem is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the VSCCP hardware.

Configure the EIR system with VSCCP cards. Refer to the *Maintenance Manual* for card removal/replacement procedures.

0460 - EIR Subsystem degraded, card(s) abnormal

One or more EIR cards goes out of service in (N or N+1) configuration or not IS-NR.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 46.0.0
0056.0460     EIR SYSTEM   EIR Subsystem degraded, card(s) abnormal
```

Alarm Level: Major.

Recovery

- Restore the one or more EIR out of service cards in (N or N+1) configuration or not IS-NR.

0466 - STC Network Unavailable

This indicates the network connected to the STC (port A/B) is inaccessible.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0466 ** CARD 1201 STC  STC Network Unavailable
```

Alarm Level: Major

Recovery

Re-association should take place automatically.

If it does not, contact My Oracle Support (MOS).

0467 - STC Network Available

This indicates the network connected to the STC (port A/B) is now accessible.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0467    CARD 1201 STC  STC Network Available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0468 - All STC Networks Unavailable

All connections off all the STC cards (port A/B) are inaccessible.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*C 0014.0468  *C EROUTE System  All STC Networks Unavailable
```

Alarm Level: Critical

Recovery

Re-association should take place automatically.

If it does not, contact My Oracle Support (MOS).

0469 - All STC Cards Unavailable

All the STC cards are not accessible.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*C 0014.0469 *C EROUTE System  All STC Cards unavailable
```

Alarm Level: Critical

Recovery

1. Determine if all STC cards are out of service by entering the following command:

   `rept-stat-card`

2. Reinitialize the STC cards by entering the following command:

   `init-card:appl=eroute`

3. If the fault has not cleared, reseat each faulty STC card.

4. If the alarm is not cleared, contact My Oracle Support (MOS).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0470 - EROUTE is Removed

All the STC cards have been deleted.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0470    EROUTE System  EROUTE is Removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

0471 - EROUTE System is Available

This message indicates that the EROUTE system is available and fully functional.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0471    EROUTE System  EROUTE System is Available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0472 - EROUTE System Threshold Exceeded

The EROUTE system has reached a rate higher than its threshold of 80% capacity.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0472  * EROUTE System  EROUTE System Threshold Exceeded
```

Alarm Level: Minor

Recovery

1. Decrease the number of links being monitored until more STC cards are added to the System.

2. Refer to the *Database Administration Manual - Features* for the correct procedure on adding STC cards.

0473 - EROUTE System Capacity Exceeded

The EROUTE system has reached a rate higher than its capacity. There is the possibility of a loss of traffic monitoring.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0473 ** EROUTE System  EROUTE System Capacity Exceeded
```

Alarm Level: Major

Recovery

1. Decrease the number of links being monitored until more STC cards are added to the System.

2. Refer to the *Database Administration Manual - Features* for the correct procedure on adding STC cards.

0474 - EROUTE Capacity Normal, Card(s) Abnormal

The EROUTE system is operating normally even though one or more card(s) is OOS-MT.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0474    EROUTE System  EROUTE capacity normal, card(s) abnormal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter the following command to determine which STC cards are out of service:

   ```
   rept-stat-mon
   ```

2. Reinitialize each faulty STC card using the following command:

   ```
   init-card:loc=xxxx
   ```
   Where xxxx is the location of each faulty card identified in Step 1.

3. If the fault has not cleared, reseat each faulty card.

0475 - NTP Time Unavailable

The STC cards are not able to get NTP time from the ESP.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0475  * EROUTE System  NTP Time Unavailable
```

Alarm Level: Minor

Recovery

Have the far-end (Sentinel) to verify the status of the time process.

0476 - NTP Time Available

The STC cards are now able to get NTP time from the ESP.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0476    EROUTE System  NTP Time Available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0477 - Congestion: Copy Function De-activated

The Copy Function on the SS7 cards have been de-activated.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0477 * SLK 1205,A nc00027  Congestion: Copy Function De-
activated
            SLC=03   FECLLI=testclli          CLASS=SAAL
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: Minor

Recovery

1. Since congestion usually peaks and subsides quickly, a measurements report should be printed to understand what SS7 events took place.

   Use the command `rept-meas` to obtain a report.

> **✎ Note:**
>
> The measurements collection must first be turned on so measurements can be collected. If measurements are not turned on, no report will be available. Refer to the *Measurements Manual* for traffic measurements information.

2. Ensure there are enough links in the linkset based on the traffic load.

0478 - Copy Function Activated

The congestion has cleared and the copy function on the SS7 cards have been re-activated.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0478   SLK 1205,A nc00027  Copy Function Activated
            SLC=03   FECLLI=testclli            CLASS=SAAL
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0479 - Link Not Monitored

This is a possible clearing condition for UAM 477, `Congestion: Copy Function Deactivated` or `Sentinel Socket Inactive`. This implies that the Link's attempt to establish monitoring session is not successful, hence, not being monitored. Therefore any monitoring alarms should be cleared.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0479   SLK 1205,A nc00027  Link not Monitored
            SLC=03   FECLLI=testclli            CLASS=SAAL
```

> **✎ Note:**
>
> The Class parameter in the example is optional.

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0480 - Timestamp Invalid

This indicates that the LIM card timestamp is invalid.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
*  0014.0480  * CARD 1201 STC  Timestamp Invalid
```

Alarm Level: Minor

Recovery

This alarm should clear automatically.

If it does not, contact My Oracle Support (MOS).

0481 - Timestamp Valid

This indicates that the LIM card timestamp is valid.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
0014.0467    CARD 1201 STC  STC Network Available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0482 - Card(s) Have Been Denied EROUTE Service

EROUTE service is being denied service because there is a shortage of STC cards.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 35.0.0
** 0014.0482 ** EROUTE System  Card(s) have been denied EROUTE service
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the cards that are denied EROUTE service: `rept-stat-mon`

2. Refer to the *Database Administration Manual - Features* for the correct procedure on adding STC cards.

0483 - DEIR System is not available

The S13 Feature is not ON or the System has no S23 card in ACTIVE/IS_NR.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
*C  0002.0483 *C DEIR SYSTEM            DEIR System is not available
```

Alarm Level: Critical

Recovery

- Activate (Active/IS-NR) any of the DEIR cards in the system.

0484 - DEIR System Normal, Card(s) Abnormal

The number of active S13 cards (i.e., in IS-NR state) is less than half the configured S13 cards.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
*  0002.0484 * DEIR SYSTEM             DEIR System normal, card(s)
abnormal
```

Alarm Level: Major

Recovery

- Activate (Active/IS-NR) half or more DEIR cards in the system.

0485 - DEIR System is available

The number of active (Active/IS-NR) S13 cards is equal to or more than half of the configured S13 cards.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
   0003.0485    DEIR SYSTEM             DEIR System is available
```

Alarm Level: None

Recovery

No further action necessary.

0486 - DEIR Threshold - Level1 exceeded

The DEIR Card TPS has exceeded configured level-1 value in DEIROPTS.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
*  0002.0486 * DEIR SYSTEM          DEIR Threshold - Level1 exceeded
```

Alarm Level: Minor

Recovery

- Reduce the card TPS below configured level-1 value in DEIROPTS.

0487 - DEIR System Threshold - Level2 exceeded

The DEIR Card TPS has exceeded configured level-2 value in DEIROPTS.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
**  0002.0487 ** DEIR SYSTEM          DEIR System Threshold - Level2
exceeded
```

Alarm Level: Major

Recovery

- Reduce Card TPS below configured level-2 value in DEIROPTS.

0488 - DEIR Threshold Condition Cleared

The DEIR Card TPS is below configured level-1 value in DEIROPTS..

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
  0002.0488  DEIR SYSTEM          DEIR Threshold Condition Cleared
```

Alarm Level: None

Recovery

No further action necessary.

0489 - DEIR capacity exceeded

The DEIR Card TPS has exceeded the maximum allowable cards TPS (8000).

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
*C  0002.0489 *C DEIR SYSTEM            DEIR capacity exceeded
```

Alarm Level: Critical

Recovery

- Reduce the card TPS below the overall cards TPS.

0490 - DEIR normal

The S13 card capacity has returned to normal.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
  0002.0490  DEIR SYSTEM            DEIR normal
```

Alarm Level: None

Recovery

No further action necessary.

0491 - Connection TPS exceeded

The connection present on the DEIR Card has exceeded the maximum allowable connection TPS (MaxTPS) configured in the DCONN table.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
**  0002.0491 ** DEIR SYSTEM            Connection TPS exceeded
```

Alarm Level: Major

Recovery

- Reduce the connection TPS to below the configured MaxTPS for that connection in the DCONN table.

0492 - Connection TPS normal

The TPS on a connection present DEIR card is below or equal to the maximum allowed TPS (MaxTPS) configured in the DCONN table.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
  0002.0492   DEIR SYSTEM              Connection TPS normal
```

Alarm Level: None

Recovery

No further action necessary.

0493 - Diameter Connection Down

The SCTP association is Open (open=yes) and the Diameter connection status is down.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
 **   0004.0493 ** DCONN DCNAME1         Diameter Connection Down
```

Alarm Level: Major

Recovery

- Get the diameter connection UP.

0494 - Diameter Connection UP

The SCTP association is Open (open=yes) and the Diameter connection status is UP.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
   0003.0494   DEIR SYSTEM              Diameter Connection UP
```

Alarm Level: None

Recovery

No further action is necessary.

0495 - Diameter Connection Closed

The Diameter connection or SCTP association for a diameter connection is closed.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
    0002.0495   DEIR SYSTEM              Diameter Connection Closed
```

Alarm Level: None

Recovery

No further action necessary.

0496 - DEIR System is removed

The last S13 card has been deleted from the system.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
  0002.0496   DEIR SYSTEM              DEIR System is removed
```

Alarm Level: None.

Recovery

No further action is necessary.

0497 - REPT-J1F:FAC-J1 LOS failure

This alarm is present when no signal is being received on the signaling link.

Example

```
    1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
**  0123.0497 ** J1PORT 1103,2          REPT-J1F:FAC-J1 LOS failure
```

Alarm Level: Major

Recovery

Check the physical connections.

0498 - REPT-J1F:FAC-J1 LOF failure

The 7-bit frame alignment signal does not match the pattern the EAGLE is expecting.

Example

```
   1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012
34567890
**  0124.0498 ** J1PORT 1103,2          REPT-J1F:FAC-J1 LOF failure
```

Alarm Level: Major

Recovery

Contact the far-end office to correct their framing problem.

0499 - REPT-J1F:FAC-J1 Remote Alarm

This alarm is present when there is some type of failure on the far end.

Example

```
   1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012
34567890
**  0125.0499 ** J1PORT 1103,2          REPT-J1F:FAC-J1 Remote Alarm
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause and correct the problem.

0500 - Alarm for This Entity is Being Cleared

This is a generic alarm clearing output that applies to all setting alarms (Critical, Major, or Minor). The alarm for the indicated device is being cleared.

Example

```
tekelecstp 99-01-19 14:56:48 EST  EAGLE 31.5.0
0045.0500    DLK 1104,A1             Alarm for this entity is being
cleared
```

> **Note:**
>
> The output can vary significantly. The output varies depending on which device the alarm is being cleared. In this example the alarm is being cleared for a Data Link.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0501 - OAM ITT Sample Minor Alarm

This is an alarm clearing output that applies to Minor setting alarms. The alarm for the indicated device is being cleared.

Example

```
tekelecstp 01-01-19 14:56:48 EST  EAGLE 34.0
0045.0501    DLK 1104,A1             Alarm for this entity is being
cleared
```

> **Note:**
>
> The output can vary significantly. The output varies depending on which device the alarm is being cleared. In this example the alarm is being cleared for a Data Link.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0502 - OAM ITT Sample Minor Alarm

This is an alarm clearing output that applies to Minor alarms. The alarm for the indicated device is being cleared.

Example

```
tekelecstp 01-01-19 14:56:48 EST  EAGLE 34.0
0045.0502    DLK 1104,A1             Alarm for this entity is being
cleared
```

> **Note:**
>
> The output can vary significantly. The output varies depending on which device the alarm is being cleared. In this example the alarm is being cleared for a Data Link.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0503 - OAM ITT sample Critical Alarm

This is an alarm clearing output that applies to Major alarms. The alarm for the indicated device is being cleared.

Example

```
tekelecstp 01-01-19 14:56:48 EST   EAGLE 34.0
0045.0503    DLK 1104,A1               Alarm for this entity is being
cleared
```

> **Note:**
>
> The output can vary significantly. The output varies depending on which device the alarm is being cleared. In this example the alarm is being cleared for a Data Link.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0504 - REPT-J1F:FAC-J1 Alarm

This alarm is present when the J1 port becomes unavailable.

Example

```
    1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012
34567890
**  0126.0504 ** J1PORT 1103,2          REPT-J1F:FAC-J1 Alarm
```

Alarm Level: Major

Recovery

Contact the far-end office to determine the cause and correct the problem.

0505 - RRCVRY-J1F:FAC-J1 available

This alarm is present when the J1 port is back in-service.

Example

```
   1          2          3          4          5          6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
0127.0505    J1PORT 1103,2           REPT-J1F::FAC-J1 available
```

Alarm Level: Normal

Recovery

None.

0506 - REPT-J1F:FAC-J1 unavailable

This alarm is present when the J1 port goes down.

Example

```
   1          2          3          4          5          6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
**  0128.0506 ** T1/J1PORT 1103,2           REPT-J1F::FAC-J1 unavailable
```

Alarm Level: Major

Recovery

When the J1 port becomes available.

0514 - Standby MASP Inhibited

This message indicates that the standby OAM is inhibited. Database updates will be rejected until the standby OAM is allowed.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
** 0076.0514 ** CARD 1115 OAM     Standby MASP inhibited
```

Alarm Level: Major

Recovery

1. Verify the status of the OAM entering a `rept-stat-card` command.

2. Enter the following command to allow the card:

   ```
   alw-card:loc=xxxx
   ```

where xxxx = card location (1115 or 1113)

3. If the card is restored, you have completed this procedure.

   If the card is not restored, check and follow the output to correct the problem, then enter the `alw-card` command.

4. If the problem persists, contact My Oracle Support (MOS).

0515 - Standby MASP Allowed

This message indicates that the inhibited standby OAM has been restored.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
0076.0515  CARD 1115 OAM     Standby MASP allowed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0516 - Degraded Mode - 1 Card Failed

Measurements are degraded because a card is out of service:

- If the E5-OAM Integrated Measurements feature is in use, the problem is that one E5-MCAP card is out of service.
- If the Measurements Platform is in use, the problem is that one MCPM card is out of service.

The E5-OAM Integrated Measurements feature or the Measurements Platform (depending on which is in use) can successfully complete all of its work, but with no spare E5-MCAP card or no spare MCPM card.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*  0100.0516 * MEAS SYSTEM    Degraded Mode - 1 card failed
```

Alarm Level: Minor

Recovery

1. Enter the following command to determine the status of the E5-MCAP or MCPM card:.

   `rept-stat-meas`

2. Reinitialize the faulty card using the `init-card` command.

3. If the fault has not cleared, reseat the faulty card.

4. If the fault has not cleared, replace the faulty card:

- If you use E5-OAM Integrated Measurements, the E5-MCAP card is out of service. The E5-MCAP card is part of the E5-MASP card assembly, so replace the E5-MASP card.
- If you use the Measurements platform, replace the MCPM card.

Refer to the *Maintenance Manual* for card removal/replacement procedures.

0517 - Degraded Mode - Multiple Cards Failed

The Measurements Platform subsystem is degraded because more than one MCPM card is out of service. The Measurements Platform subsystem can successfully complete all of its work, but may have no spare MCPM.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
** 0100.0517 ** MEAS SYSTEM    Degraded Mode - multiple cards failed
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the status of the MCPM cards:

   `rept-stat-meas`

2. Reinitialize the faulty card using the command.

   `init-card`

3. If the fault has not cleared, reseat the faulty card.
4. If the fault has not cleared, replace the faulty MCPM card.
5. Repeat 2 through 4 for each faulty MCPM card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0518 - Measurements Subsystem Unavailable

The Measurements Platform subsystem is not available. All MCPM cards are out of service.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
*C 0100.0518   *C   MEAS SYSTEM    Measurements subsystem unavailable
```

Alarm Level: Critical

Recovery

1. Enter the following command to determine the status of the MCPM cards:

   `rept-stat-meas`

2. Reinitialize the faulty MCPM card using the `init-card` command.
3. If the fault has not cleared, reseat the faulty card.

4. If the fault has not cleared, replace the faulty MCPM card.

5. Repeat 2 through 4 for each faulty MCPM card.

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0519 - Measurements subsystem available

This message indicates that the Measurements subsystem has been restored to service.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
0076.0519  MEAS SYSTEM     Measurements subsystem available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0520 - Frame Power Usage Reached LVL3

Frame power usage reached 98% of threshold value.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
*C 0002.0520 *C FRAME CF01 Frame power usage reached LVL3
```

Alarm Level: Critical

Recovery

1. Verify that the Frame Power Threshold value is properly configured for the frame for which UAM is generated using the following command:

   `rtrv-frm-pwr`

2. Verify that the card population is correct for that particular frame using the following command:

   `rtrv-stp:display-power`

3. Contact My Oracle Support (MOS) about the generated UAM.

0521 - Frame Power Usage Reached LVL2

Frame power usage reached 95% but is below 98% of threshold value.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
** 0002.0521 ** FRAME CF01 Frame power usage reached LVL2
```

Alarm Level: Major

Recovery

1. Verify that the Frame Power Threshold value is properly configured for the frame for which UAM is generated using the following command:

   ```
   rtrv-frm-pwr
   ```

2. Verify that the card population is correct for that particular frame using the following command:

   ```
   rtrv-stp:display-power
   ```

3. Contact My Oracle Support (MOS) about the generated UAM.

0522 - Frame Power Usage Reached LVL1

Frame power usage reached 90% but is below 95% of threshold value.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
*   0002.0521 * FRAME CF01 Frame power usage reached LVL1
```

Alarm Level: Minor

Recovery

1. Verify that the Frame Power Threshold value is properly configured for the frame for which UAM is generated using the following command:

   ```
   rtrv-frm-pwr
   ```

2. Verify that the card population is correct for that particular frame using the following command:

   ```
   rtrv-stp:display-power
   ```

3. Contact My Oracle Support (MOS) about the generated UAM.

0523 - Frame power usage normal

Frame power usage is normal.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
0002.0521 FRAME CF01 Frame power usage normal
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

0524 - REPT-ALMINH: alarm output TIMED inhibit

A device's alarm is Timed inhibited using the `inh-alm` command.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
    6277.0524    RTXA     001-101-001       REPT-ALMINH: alarm output
TIMED inhibit
                 OPCA=   004-004-004
                 ALARM INHIBIT LEVEL:    MINR
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

0525 - Timed alm inh rdy to expire

Timed inhibition on a device is about to expire in the next 12 hours.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
    6277.0525    RTXA     001-101-001       REPT-ALMINH:Timed alm inh rdy
to expire
                 OPCA=   004-004-004
  ALARM INHIBIT LEVEL:    MINR        Expires:        05/05/20 16:00
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

0526 - Service is Available

A problem with the specified SCCP service has been corrected. All SCCP cards are IS-NR and have a service status of Active.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 34.3.0
0056.0526 GFLEX SERVICE Service is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0527 - Service Abnormal

One or more of the cards providing the specified SCCP service do not have a service status of Active.

> **Note:**
>
> If UAM 527 is subsequent to UAM 452 or 453, then UAM 527 is auto cleared when the error condition abates (below threshold level 1 for UAM 452 and level 2 for UAM 453).

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 34.3.0
* 0056.0527 * GFLEX SERVICE Service abnormal
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status and location of the SCCP service cards:

   ```
   rept-stat-sccp
   ```

2. Enter the following command to move the SCCP service card to an ACTIVE status if loading is successful:

   ```
   rst-card:loc-xxxx
   ```
   where: xxxx is the location of the OOS-MT-DSBLDSCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the SCCP service cards:

   ```
   rept-stat-sccp
   ```

4. Verify the SCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

   > **Note:**
   >
   > Do not reboot the DSMs if UAM 527 is subsequent to UAM 452 or 453. This will not fix the alarm.

5. If any card(s) remain OOS-MT, replace the card(s).

   > **Note:**
   >
   > Refer to the *Maintenance Manual* for card removal/replacement procedures. for card replacement procedures.

0528 - Service is Not Available

The specified SCCP service is not available. No IS-NRSCCP cards are associated with this specified SCCP service. No SCCP cards providing the specified service have a service status of Active.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 34.3.0
*C 0056.0528 *C GFLEX SERVICE Service is not available
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the SCCP service cards:

   ```
   rept-stat-sccp
   ```

2. Enter the following command to move the SCCP service card to an ACTIVE status if loading is successful:

   ```
   rst-card:loc=xxxx
   ```
   where: xxxx is the location of the OOS-MT-DSBLD SCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the SCCP service cards:

   ```
   rept-stat-sccp
   ```

4. Verify the SCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

> **✎ Note:**
>
> Refer to the *Maintenance Manual* for card removal/replacement procedures. for card replacement procedures.

0529 - Service is Disabled

The specified SCCP service has been manually disabled with the `chg-sccp-serv` command. All IS-NR cards providing the service have service status of Offline.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 34.3.0
*C 0056.0529 *C GFLEX SERVICE Service is disabled
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the SCCP service cards:

   ```
   rept-stat-sccp
   ```

2. Enter the following command to change the state of the SCCP service status to on-line:

   ```
   chg-sccp-serv:serv-xxxx:state=online
   ```
   where: xxxx is the SCCP service name.

3. Enter the following command to verify the status of the SCCP service cards:

   ```
   rept-stat-sccp
   ```

0530 - Service is Removed

The specified SCCP service is not equipped. No SCCP cards are configured with the service.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 34.3.0
0056.0530 GFLEX SERVICE Service is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the SCCP hardware.

Configure the specified service with SCCP cards.

> **✎ Note:**
>
> Refer to the *Maintenance Manual* for card removal/replacement procedures. for card replacement procedures.

0531 - Insufficient HW Copy Function Inhibited

HIPR cards must be installed in the same shelf as the IPLIMx and IPGWx card if their links are monitored. Therefore, monitoring will be inhibited on links on IPLIMx or IPGWx cards if a HIPR card is not installed in the same shelf. This is accomplished by ignoring an EMP service accept message after a service request is sent when HPIR cards are not installed. In addition, any active EMP TCP connections on an IPLIM or IPGW link is disconnected if both HIPR cards in the same shelf are removed. A new minor link alarm is implemented to report when monitoring on a link has been inhibited in this manner.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
*0 044.0531 *SLK 1201,A lsnabcde Insufficient HW Copy Function Inhibited
```

Alarm Level: Minor

Recovery

Replace the HMUX cards in the same shelf as the IPLIMx or IPGWx cards that produced the alarm with HIPR cards.

> **✎ Note:**
>
> Refer to the *Maintenance Manual* for card removal/replacement procedures. for card replacement procedures.

0532 - RTX is Allowed

A previous fault is corrected and the EAGLE 5 ISS system can send traffic to the specified DPC using the exception route set identified by the specified class and criterion.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
0044.0532 RTX 001-101-001 RTX is allowed
          ILSN=lsn012345
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

0533 - RTX is Restricted

A transfer-restricted message has been received concerning the exception route set. Possible causes are as follows:

- One or more routes in this exception route set are unavailable.

- A low priority route is carrying the traffic. The primary and combined routes are not available for traffic in this exception route set.

Example

```
RLGHNCXA3W 00-11-06 10:55:49 EST EAGLE 35.0.0
*  0044.0533 * RTX 001-101-001 RTX is restricted
              ILSN=lsn012345
```

Alarm Level: Minor

Recovery

1. Enter the following command using the DPC and RTX exception class specified in the output message to determine which linkset has a problem:

   `rept-stat-rtx:dpc=aaaa=xxx-xxx-xxx:cccc=zzzz`

   where

   - aaaa = dpc/dpca, dpci, dpcn, or dpcn24

- xxx-xxx-xxx = the specified destination point code

- cccc = opc/opca, opci, opcn, opcn24, ilsn, cic, or si

- zzzz = the specified value of the above exception class, that establishes the exception routing criterion

2. Enter the following command using the linkset name specified from the output of 1 to determine which link(s) could have a problem:

```
rept-stat-ls
```

3. Use local procedures to test the link facilities.

0534 - RTX is Prohibited

Traffic to the DPC through this exception route set is prohibited. Possible causes are as follows:

- All routes in this exception route set are unavailable.

- Adjacent point code link failures or non-adjacent failure exist in the route.

Example

```
123456789012345678901234567890123456789012345678901234567890123456789012
34567890
*C  0044.0534 *C RTXN24    001-101-001   RTX is prohibited
                  ILSN=lsn012345
```

Alarm Level: Critical

Recovery

1. Enter the following command using the DPC and RTX class/criterion specified from the output message to determine which linkset has a problem:

```
rept-stat-rtx:dpc=<dpc>:<class>=<criterion>
```

2. Enter the following command using the linkset name specified from the output of 1 to determine which link(s) could have a problem:

```
rept-stat-ls
```

3. Use local procedures to test the link facilities.

0535 - IP Connection Restricted

Although an IP connection has failed, some traffic is still flowing through an alternate SIGTRAN (SS7-over-IP) link.

The following two scenarios exist:

- The SCTP association is established and the SCTP far-end is multi-homed and the Eagle determines one or more far-end IP destinations for the association are unreachable.

- The SCTP association is established and the SCTP far-end is uni-homed and the SCTP near_end has an LHOST and an ALHOST configured.

> **Note:**
>
> IP Connection UAMs 0086 (Congested), 0535 (Restricted), and 0536 (Excess Retransmits) conditions can occur simultaneously. However, only one alarm per device can be displayed at a time. If two or more are present, the display of these alarms is prioritized as follows:
>
> 1. 0086 - IP Connection Congested (MSUs are being dropped)
> 2. 0536 - IP Connection Excess Retransmits (MSUs may be dropped. The EAGLE 5 ISS sustains a certain rate of dropped MSUs without triggering this alarm, then issues UIM 0536 when that rate is exceeded.)
> 3. 0535 - IP Connection Restricted (MSUs are being transmitted at reduced rate. A path of a multi-homed association has failed.)

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 31.3.0
*   0014.0535  *  IP7 assoc1        IP Connection Restricted
```

Alarm Level: Minor

Recovery

1. Issue a pass command to determine which scenario is occurring. For example, for the association name (ANAME) ipl1301a at location 1301, enter the command: `pass:loc=1301:cmd="sctp -a ipl1301a"`

   Refer to the resulting output to troubleshoot the problem.

```
eagle10212 01-05-27 08:09:42 EST  UNKNOWN ??.?.?-63.18.0

                     fast retransmit count = 0
                          recv timer count = 4
                   heartbeat timer count = 1415
                          none left tosend = 0
                       none left rwnd gate = 0
                       none left cwnd gate = 0
                                  UNKNOWN = 1
```

2. Determine why the other end is unreachable (for example, is a cable pulled?).

   All connections at the far end need to be reachable. After they are reachable, the alarm will clear – IP Connection Available.
   Refer to the *SIGTRAN User Guide* for additional troubleshooting information for SS7-over-IP connections.

3. Reconfigure the association to be either both ends uni-homed or both ends multi-homed and make sure all connections are reachable.

4. Errors (collisions, etc.) on the network interface?

```
netstat –d 0/1t
```

5. Far end reachable?

```
ping
```

```
traceroute
```

6. Near end and far end use same SCTP CRC?

```
netstat –p sctp
```

```
rtrv-sg-opts
```

0536 - IP Connection Excess Retransmits

An SCTP association has excessive retransmissions. The retransmission errors may cause a connection to congest and fail in the presence of a sufficiently high load.

> **✎ Note:**
>
> IP Connection UAMs 0086 (Congested), 0535 (Restricted), and 0536 (Excess Retransmits) conditions can occur simultaneously. However, only one alarm per device can be displayed at a time. If two or more are present, the display of these alarms is prioritized as follows:
>
> 1. 0086 - IP Connection Congested (MSUs are being dropped)
>
> 2. 0536 - IP Connection Excess Retransmits (MSUs may be dropped. The EAGLE 5 ISS sustains a certain rate of dropped MSUs without triggering this alarm, then issues UIM 0536 when that rate is exceeded.)
>
> 3. 0535 - IP Connection Restricted (MSUs are being transmitted at reduced rate. A path of a multi-homed association has failed.)

Example

```
   RLGHNCXA21W 06-12-07 12:01:43 EST   EAGLE 35.6.0
*  1111.0536 * IP7 assoc1234567890        IP Connection Excess
Retransmits
```

Alarm Level: Minor

Recovery

This error may be due to:

- Misconfiguration or improper tuning of SCTP attributes to match the network conditions and traffic volumes

- Packet loss

- Excessive round-trip times

- The receive buffer of the SCTP peer being full for extended periods (probes by Eagle SCTP to update window size may result in discards by the peer)

- Timer settings that are too close in value

1. Use the following pass commands to aid in determining the cause of the error:

   - `sctp` - gives how many retransmits are occurring

   - `assocrtt` - gives round-trip time information on a per-association basis

   - `netstat` - gives information on interface and per-protocol statistics (IP, SCTP and others)

   - `ping` - gives information on reachability and round-trip times

2. If the error is due to configuration problems, correct the configuration.

3. If the number of retransmissions is within expected values, the alarm threshold can be changed.

   > **Note:**
   >
   > Changing the threshold does not affect link traffic, it only affects the alarm trigger level.

   a. Use the `rtrv-assoc:aname=xxxx` command to determine the current retransmit threshold (RTXTHR) value.

   b. Use the `chg-assoc:aname=xxxx` command to change the retransmit threshold (RTXTHR) value. Increasing the value will make the alarm less likely to occur.

   Refer to the *Commands Manual* for additional information.

4. False retransmissions can occur if the **RTO** and **SACK** timer on either side of the connection are close in value. Refer to the *SIGTRAN User Guide* for more information about these timers.

0537 - Ethernet error threshold exceeded

There are two types of error that can generate UAM 0537:

- Too much data received on the port.

- An Ethernet interface experiences excessive errors at the physical layer, such as CRC or framing errors. This error is issued when the Ethernet statistics indicate errors occurring in any 15-second window. The alarm will clear when no errors have occurred in the previous 15 second window. In full-duplex mode, collisions will not be ignored but when configured for half-duplex mode, they will be ignored, since collisions are expected in half-duplex mode. When collisions occur repeatedly for the same packet more than 16 times then the "excess collisions" error count is pegged.

Example

```
 RLGHNCXA21W 06-12-07 12:01:43 EST  EAGLE 35.6.0
**  2315.0537 ** ENET 1201,B              Ethernet error threshold
exceeded
```

Alarm Level: Major

Recovery

This error may be due to

- Too much incoming data for the port to handle.

- Faulty hardware; an EAGLE card, cable, or immediate IP switch/router.

- Configuration mismatch problems; the following items should match on both ends:

  – Duplex

  – Speed

  – Ethernet type

  – Autonegotiate used on EAGLE or immediate IP switch/router (it is recommended to lock down your IP connection and do not use AUTONEGOTIATE)

1. Perform this step if UAM 0537 is issued and the card boots; otherwise, skip to 2. If the card boots, the problem is probably too much incoming data on the port. Deactivate the port that has too much data using the `dact-ip-lnk:loc=xxxx:port=xxxx` command. Fix the network problem, then reactivate the port using the `act-ip-lnk:loc=xxxx:port=xxxx`.

> **Note:**
>
> An external hardware failure can cause IP overload on the port resulting in card boot. This problem is uncommon, but can occur when a problem with the customer network overwhelms the Ethernet port with a storm of traffic. The solution is to resolve the network problem. The `dact-ip-lnk:loc=xxxx:port=xxxx` also makes it possible to deactivate a bad Ethernet port so the other port can work.

2. Use the following command to determine the current EAGLE configuration for the IP card reporting the errors.

   `rtrv-ip-lnk:loc=xxxx`
   where*xxxx* is the card location identified in the error message.

3. Use the `netstat -d pass` command to view the driver statistics for the local interface.

   - For the A ethernet interface, `pass:loc=XXXX:cmd="netstat -d 0"`

   - For the B ethernet interface, `pass:loc=XXXX:cmd="netstat -d 1"`

     where *xxxx* is the card location identified in the error message.

   Table 3-5 and Table 3-6 show the errors that show up on the DCM/DSM/EDCM/SSEDCM and E5-ENET/E5-ENET-B card types. Because the boards use different ethernet chips, the statistics that are available are different.

   Table 3-5   See (DCM/DSM/EDCM/SSEDCM) Ethernet Error Statistics

Statistic Peg	Description	Half Duplex threshold count	Full Duplex threshold count
overflow	Number of times the RX FIFO overflowed for frames received.	1	1

Table 3-5   (Cont.) See (DCM/DSM/EDCM/SSEDCM) Ethernet Error Statistics

Statistic Peg	Description	Half Duplex threshold count	Full Duplex threshold count
CRC errors	Number of frames received or discarded with CRC errors but no framing errors.	1	1
short frame	Number of frames received or discarded with carrier sense or RX-D.V. activity less than the "ShortEventMaxTime" (74-82 bit times).	1	1
oversize frame	Number of receive frames with greater than the 1518 byte maximum frame size.	1	1
terminal count	Receive DMA tried to receive more than the buffer capacity.	1	1
excess collisions	Number of times a frame collided 16 times without successful transmission.	1	1
underflow	Count of transmit underflow errors.	1	1
CS error	Number of times the transmitter had transmit data available and was ready to transmit but had to defer transmission due to carrier sense going HIGH. (Tx defer count in the See data sheet).	n/a	1
alignment error	Number of frames received or discarded with both a framing error and a CRC error.	1	1

Table 3-5   (Cont.) See (DCM/DSM/EDCM/SSEDCM) Ethernet Error Statistics

Statistic Peg	Description	Half Duplex threshold count	Full Duplex threshold count
very long event	Number of times the transmitter is active for greater than the MAU Jabber Lockup Protection Timer allows ([4-7ms] at 10 Mbit and [0.4 – 0.75ms] at 100 Mb.11 rxerrorNumber of times RXERR is asserted by the Ethernet PHY.	1	1
num_job_q_full	Number of times the net task job queue was full.	1	1
rxerror	Number of times RXERR is asserted by the Ethernet PHY.	1	1

Table 3-6   GEI (E5-ENET/E5-ENET-B) Ethernet Error Statistics

Statistic Peg	Description	Half Duplex threshold count	Full Duplex threshold count
crcerrs	Number of receive frames with CRC errors.	1	1
algnerrc	Number of receive frames with alignment errors (the frame is not an integer number of bytes in length).	1	1
rxerrc	Number of frames received in which I_RX_ER was asserted by the PHY.	1	1
ecol	When 16 or more collisions have occurred on a frame, this register increments, regardless of the value of collision threshold.	1	1

Table 3-6   (Cont.) GEI (E5-ENET/E5-ENET-B) Ethernet Error Statistics

Statistic Peg	Description	Half Duplex threshold count	Full Duplex threshold count
tncrs	This register counts the number of successful frame transmissions in which the internal carrier sense signal from the PHY was not asserted within one slot time of start of transmission.	n/a	1
tuc	Transmit underrun count.	1	1
rlec	This register counts receive length error events.	1	1
rnbc	The number of times that frames were received when there were no available buffers in host memory to store those frames.	1	1
ruc	This register counts the number of received frames that passed address filtering, and were less than minimum size (64 bytes from <Destination Address> through <CRC>, inclusively), and had a valid CRC.	1	1
roc	This register counts the number of received frames with valid CRC field that passed address filtering, and were greater than maximum size.	1	1

4. If the error is due to configuration problems, correct the configurationso the EAGLE and the IP switch/router match.

5. If the configuration matches on both ends of the IP segment, replace the EAGLE card as identified in the error message.

If replacing the card does not fix the issue, begin local procedures to verify the local IP segment.

0538 - Ethernet error threshold cleared

A problem with the Ethernet error threshold has been corrected.

Example

```
    RLGHNCXA21W 06-12-07 12:01:43 EST   EAGLE 35.6.0
    2359.0538    ENET 1201,B                  Ethernet error threshold
cleared
```

Alarm Level: No alarm condition. The message is informational.

Recovery

This message indicates that a problem with the Ethernet error threshold has been cleared.

0539 - Ethernet Interface Down

An Ethernet interface is reporting that it is down.

Example

```
    RLGHNCXA21W 06-12-09 12:01:43 EST   EAGLE 40.1
**  2315.0539 ** DLK 1201,B1  IPSG        Ethernet Interface Down
```

Alarm Level: Major

Recovery

An Ethernet interface is provisioned (`rtrv-ip-lnk` reports a non-zero IP address and the card on which the Ethernet resides is in service), but the interface is reporting that it is down.

If this UAM comes from the E5-OAM card and `rept-stat-meas` command output shows this E5-OAM card as Primary, a loss of reports on the measurement server is possible and MASP swap must be done manually.

If this UAM comes from the E5-OAM card, `rept-stat-card` shows this card is active, and `rtrv-ctrl-feat` command output shows the SNMP feature is activated, a loss of SNMP traps is possible. MASP swap must be done manually.

0540 - Ethernet Interface Up

A problem with the Ethernet interface has been corrected.

Example

```
    RLGHNCXA21W 06-12-09 12:01:43 EST   EAGLE 40.1
    2359.0540    DLK 1201,B1  IPSG        Ethernet Interface Up
```

Alarm Level: No alarm condition. The message is informational.

Recovery

This message indicates that a problem with the Ethernet interface has been cleared.

0541 - MSU cksum Error Threshold Exceeded

One or more MSU checksum validation errors have been reported by a LIM or SCCP card during internal card integrity checks.

A LIM or SCCP card has reported a checksum validation failure for a MSU received from another card. The failure may be due to a hardware problem or other issue affecting the data transfer path on a particular card. It may indicate a problem with data corruption in an MSU sent to or received from another card.

The alarm is raised when a checksum validation failure occurs during internal card integrity checks. It remains active in the system until the Run-Time Diagnostic subsystem (RTD) statistics are reset and no further indications of MSU checksum validation failures are reported.

Example

```
    RLGHNCXA21W 06-12-07 12:01:43 EST   EAGLE 35.6.0
 *C  2315.0541 *C RTD SYSTEM                  MSU cksum error threshold
exceeded
```

Alarm Level: Critical

Recovery

1. Issue the following command with no parameters to obtain the Run-Time Diagnostic subsystem (RTD) report.

    > **Note:**
    >
    > Save all command outputs and reports obtained during this procedure to provide to My Oracle Support (MOS).

    ```
    rept-stat-rtd
    ```
    Following is an example output of the rept-stat-rtd command.

    ```
    RLGHNCXA21W 06-12-07 12:01:43 EST EAGLE 35.6.0
        Retrieving data from the cards…

        RTD   SUBSYSTEM REPORT IS-ANR          Active      -----
        RTD   ALARM STATUS =  541 MSU cksum error threshold exceeded

               MSU Validation Statistics
               ===============================
               Total Rx    Total Rx      Total
        CARD    Error       Validated       Tx
        1101        275         275        710
        1102          0         200        200
        1103          0         200       1000
        1105          0        1360        275
    ```

```
1107            0           200         100
1108            0           100         100
```

2. Record the timestamp reported for the alarm.

3. Record the locations for cards reporting 1 or more errors in the `Total Rx Error` column.

4. Determine if a single error or multiple errors were reported when the alarm occurred.

   • Multiple errors - if multiple cards report errors or a single card reports more than 1 error in the `Total Rx Error` column.

   • Single error - if only 1 card reports errors and the value in the `Total Rx Error` column is 1.

5. Issue the following command for each card reporting 1 or more errors in 1

   `rept-stat-rtd:loc=xxxx`
   Where xxxx is the card location determined from the output in 1.

   The following is an example output of a card summary for card 1101.

```
rept-stat-rtd:loc=1101

    RLGHNCXA21W 06-12-07 12:01:43 EST EAGLE 35.6.0
    Retrieving data from card …

    CARD SUMMARY: 1101      Last Alarm Timestamp: 06-12-07 12:01:43

                            MSU Validation
Statistics
                    ================================

                    Total Rx        Total Rx      Total Tx
        SRC/DEST       Error       Validated
        CARD
        1102            100             100           100
        1103              0               0             0
        1105             75              75           360
        1107            100             100           200
        1108              0              50            50
```

6. Issue the following command to clear the RTD statistics

   `rept-stat-rtd:reset=yes:force=yes`
   Following is an example output of the command.

```
rept-stat-rtd:reset=yes

    RLGHNCXA21W 06-12-07 12:09:43 EST EAGLE 35.6.0
    Reset all RTD statistics sent to each card

COMMAND COMPLETE
```

7. Issue the following command with no parameters to obtain the Run-Time Diagnostic subsystem (RTD) report.

```
rept-stat-rtd
```
Following is an example output of the command showing no alarms.

```
RLGHNCXA21W 06-12-07 12:10:43 EST EAGLE 35.6.0
    Retrieving data from the cards…

    RTD   SUBSYSTEM REPORT IS-NR          Active      -----
    RTD   ALARM STATUS =  No Alarms

            MSU Validation Statistics
            ==============================
            Total Rx   Total Rx      Total
    CARD    Error      Validated        Tx
    1101           0        275        710
    1102           0        200        200
    1103           0        200       1000
    1105           0       1360        275
    1107           0        200        100
    1108           0        100        100
```

Note that the alarm did clear.

8. Have all command outputs and reports obtained during this procedure available.

   This information will be used by My Oracle Support (MOS) in determining the cause of the alarm and monitoring the system for errors.

9. If RTD alarm status reported in step 7 indicates that the alarm did not clear, then proceed with below steps. Otherwise, continue to 26

10. Enter the `rtrv-log:dir=bkwd:snum=1355:num=10` command to retrieve the 10 latest UIM 1355 records.

11. Count the total number of times a particular card location appeared in the 10 UIM 1355 samples collected in the previous step, either as the source or as the destination location.

    For example, if card 1102 appeared as the source location in 4 UIM 1355 samples, and card 1102 appeared as the destination location in 6 UIM 1355 samples, then card 1102 appeared a total of 10 times in 10 UIM 1355 samples.

12. Notify My Oracle Support (MOS) of the occurrence of the alarm immediately if none of the locations appeared exactly 10 times. Otherwise, proceed with the next step.

13. If more than one location appeared 10 times, go to step 18. If only one card location appeared 10 times, then go to the next step.

14. Inhibit the card location that appeared 10 times.

15. Enter the `rept-stat-rtd:reset=yes:force=yes` command to reset the RTD alarm.

16. Enter the `rept-stat-rtd` command to verify the RTD alarm status.

17. Notify My Oracle Support (MOS) of the occurrence of the alarm immediately if the previous steps did not clear the RTD alarm. Otherwise, go to 26.

18. Inhibit the card location that appeared 10 times as the source card location in the UIM 1355 samples collected in 10.

19. Enter the `rept-stat-rtd:reset=yes:force=yes` command to reset the RTD alarm.

20. Enter the `rept-stat-rtd` command to verify the RTD alarm status.

21. If the previous steps did not clear the RTD alarm, allow the card location that was previously inhibited and bring it back in service.

22. Inhibit the card location that appeared 10 times as the source card location in the UIM 1355 samples collected in 10.

23. Enter the `rept-stat-rtd:reset=yes:force=yes` command to reset the RTD alarm.

24. Enter the `rept-stat-rtd` command to verify the RTD alarm status.

25. Notify My Oracle Support (MOS) of the occurrence of the alarm immediately if the previous steps did not clear the RTD alarm. Otherwise, go to the next step.

26. Notify My Oracle Support (MOS) of the occurrence of the alarm within 1 business day, along with captures covering the recovery steps performed and all necessary system logs (UIM, UAM, seculog, trouble, obit, etc.) covering the incident.

0542 - MSU cksum error threshold cleared

The MSU checksum threshold exceeded alarm has been corrected.

Example

```
    RLGHNCXA21W 06-12-07 12:01:43 EST   EAGLE 35.6.0
    2359.054238    RTD SYSTEM              MSU Cksum error threshold
cleared
```

Alarm Level: No alarm condition. The message is informational.

Recovery

This message indicates that the MSU checksum threshold exceeded alarm has been cleared.

0543 - VLR Dynamic Learning is suspended

This alarm occurs if only one SFAPP card is present in the system and the `mode` parameter "is not set to OFF" in the SFAPPOPTS table.

Example

```
        1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0543    SFAPP SYSTEM              VLR Dynamic Learning is
suspended
```

Alarm Level: Critical

Recovery

- Place more than one SFAPP card IS-NR.

0544 - VLR Dynamic Learning Started

This alarm occurs if more than one SFAPP card is present in the system and the `mode` parameter "is not set to OFF" in the SFAPPOPTS table.

Example

```
        1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0544    SFAPP SYSTEM                VLR Dynamic Learning
Started
```

Alarm Level: Normal.

Recovery

None. This alarm is a corrective alarm.

0545 - SEAS Terminal Available

This message indicates a problem with SEAS system has been corrected.

Example

```
    RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 37.5.0
*   0043.0545 ** TERMINAL   17          SEAS Terminal Available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0546 - SEAS Terminal Unavailable

This message indicates that the EAGLE 5 ISS system is unable to communicate with the SEAS subsystem.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 37.5.0
*   0043.0546 ** TERMINAL   17          SEAS Terminal Unavailable
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the status of the SEAS terminal(s):

```
rept-stat-seas
```

Following are some examples of possible outputs:

- Both Terminals Down (Duplex)

```
> rept-stat-seas

    tekelecstp 20-01-16 12:50:00 GMT   UNKNOWN ??.?.?-58.32.0
    rept-stat-seas
    Command entered at terminal #25.

Disc       -----
```

```
        ALARM STATUS = ** 0546 SEAS Terminal unavailable

        Command Completed.
```

Refer to the *Commands Manual* to interpret the output.

2. Verify that the IP addresses and ports are correct.

Correct any discrepancy found.

3. Check the physical connections.

See the *Installation Manual* for more information about these system components. If the connections are firmly seated.

4. Check for any fuse alarms on the Fuse and Alarm Panel in the frame.

5. Check that all terminals for the IPSM card are inhibited before inhibiting the card for replacement.

6. Replace the E5-IPSM card. Refer to the *Maintenance Manual* for card removal/ replacement procedures.

0547 - Service degraded

One or more SS cards goes out of service in (N or N+1) configuration or not IS-NR.

Example

```
  RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 46.0.0
0056.0547      APSS    Service degraded
```

Alarm Level: Major.

Recovery

- Restore the one or more SS out of service cards in (N or N+1) configuration or not IS-NR.

0548 - GTT HexTree DB corrupted. TPS derated

This message indicates there is a memory corruption in the HexTree DB that is affecting the lookup of GTT translations.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
**  0002.0548 ** CARD 1203                 GTT HexTree DB corrupted. TPS
derated
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Reboot the card or turn OFF GTTHITPS.

0549 - GTT HexTree DB incoherent. TPS derated

This message indicates the HexTree DB could not be updated successfully on the RADB command and the DB is incoherent..

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
**  0002.0549 ** CARD 1203                GTT HexTree DB incoherent. TPS
derated
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Reboot the card or turn OFF GTTHITPS.

0550 - GTT HexTree DB alarm cleared

This message indicates the HexTree DB error has been cleared.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    0002.0550    CARD 1203                GTT HexTree DB alarm cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0551 - V-Flex Subsystem is not available

No SCCP cards have a V-Flex status of Active. (All SCCP cards are OOS or loading)

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 37.6.0
 *C  0056.0551 *C VFLEX SYSTEM          VFLEX Subsystem is not
available
```

Alarm Level: Critical.

Recovery

• The V-Flex feature must be turned on and activated.

0552 - V-Flex Subsystem is disabled

All IS-NR SCCP cards have V-Flex status of Offline (with at least 1 card IS-NR). INH-MAP-SS command has been executed.

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 37.6.0
 *C  0056.0552 *C VFLEX SYSTEM               VFLEX Subsystem is disabled
```

Alarm Level: Critical.

Recovery

- The V-Flex feature must be enabled and turned on.

0553 - VFLX Subsystem normal, card(s) abnormal

One Service Module card has V-Flex status of Active and there are 1 or more cards with an V-Flex status other than Active (a status not equal to OOS (out of service), loading or Offline).

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 37.6.0
*C  0056.0553 *C VFLEX SYSTEM               VFLX Subsystem normal, card(s)
abnormal
```

Alarm Level: Minor.

Recovery

- No action necessary.

0554 - V-Flex Subsystem is available

All Service Module cards are IS-NR and have an V-Flex status of Active.

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST   EAGLE 37.6.0
*C  0056.0554 *C VFLEX SYSTEM               VFLEX VFLEX Subsystem is
available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- No action necessary.

0555 - V-Flex Subsystem is removed

Last Service Module card was deleted.

Example

```
    RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 37.6.0
*C  0056.0555 *C VFLEX SYSTEM              VFLEX Subsystem is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- No action necessary.

0556 - V-Flex Subsystem degraded, card(s) abnormal

One or more V-Flex cards goes out of service in (N or N+1) configuration or not IS-NR.

Example

```
    RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 46.0.0
0056.0556       VFLEX Subsystem   VFLX Subsystem degraded, cards abnormal
```

Alarm Level: Major.

Recovery

- Restore the one or more V-Flex out of service cards in (N or N+1) configuration or not IS-NR.

0560 - REPT-LKSTO: Link Set Restricted

This message indicates a linkset has been restricted.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 38.0.0
*  0014.0560  *   LSN a54646     REPT-LKSTO: link set restricted
```

Alarm Level: Minor

Recovery

1. Verify the link status using the `rept-stat-slk` command.

   For example, enter:

   ```
   rept-stat-slk:loc=1203:link=b
   ```

2. Check the UNAVAIL REASON field in the output of the `rept-stat-slk` command.

   UNAVAIL REASON codes:

FC

The signaling link is unavailable because of false congestion.

FL

The signaling link has a fault.

NA

The signaling link is not aligned.

LI

The signaling link has been inhibited locally

LB

The signaling link has been blocked locally.

RB

The signaling link has been blocked remotely.

RD (xx.xxx)

The signaling link is unavailable because of a restart delay to prevent signaling link oscillation. The number in parentheses indicates the amount of time, in seconds, remaining in the restart delay period. The link is restarted automatically after this amount of time has elapsed.

RI

The signaling link has been inhibited remotely.

3. If the UNAVAIL REASON indicates an alignment problem or fault, activate a loopback using the `act-lpb` command, or use a physical loopback.

   (For a V.35, you must use an appropriate physical V.35 loopback.) If the signaling link aligns, contact the far-end to correct the problem.

4. If the UNAVAIL REASON still indicates an alignment problem or fault, check the status of the card by entering the `rept-stat-card` command for the specified card.

5. If the `rept-stat-card` command indicates a problem with the card, reset the card by entering the `init-card` command with the specified card location.

   If the card still does not align, try first reseating the card, then replacing the card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

6. If the UNAVAIL REASON indicates a locally inhibited link, enter the `unhb-slk` command with the specified card location.

7. If the UNAVAIL REASON indicates a locally blocked link, enter the `ublk-slk` command with the specified card location.

8. If the signaling is blocked or inhibited remotely, contact the far-end to place the link in-service.

0561 - Can't Establish Hi Bit Rate; All HW OK

This message is issued if the system cannot establish high bit rate operation when it is equipped with HIPR2 cards at all MUX locations and the HIPR2 High Rate Mode feature is ON.

> **✎ Note:**
>
> This UAM might appear during transition phase when the HIPR2 High Rate Mode feature status has changed, but eventually it will be cleared if high bit rate is established on both IMT buses.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
*C  5025.0561 *C SYSTEM            Can't establish Hi Bit rate;All HW OK
```

Alarm Level: Critical

Recovery

1. Verify the status of the cards using the command: `rept-stat-mux`.

   Example of the output:

```
CARD   TYPE        PST          SST      AST      BITRATE
BITRATE
                                                  (OPER)
(ACT)
--------------------------------------------------------------------
----
1109   HIPR2       IS-ANR       Restrict -----    HIGH      LOW
1110   HIPR2       IS-NR        Active   -----    HIGH      HIGH
1209   HIPR2       IS-ANR       Restrict -----    HIGH      LOW
1210   HIPR2       IS-NR        Active   -----    HIGH      HIGH
1309   HIPR2       IS-ANR       Restrict -----    HIGH      LOW
1310   HIPR2       IS-NR        Active   -----    HIGH      HIGH
Command Completed.
```

2. Replace any faulty HIPR2 cards with a new HIPR2 card.

   Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures for information on replacing the HIPR2 cards.

3. If the alarm does not clear, contact My Oracle Support (MOS).

0562 - High Bit rate established

This message indicates that the alarm condition specified by the previous alarm has been cleared.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
0590.0562    SYSTEM               High Bit rate established
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0563 - IMT Bit rate mismatch detected

This message indicates that the the IMT Bus A and B are operating at different bit rates. This can occur if the BERT Test fails for only one bus, or if some of the HIPR2 cards have been replaced with HMUX/HIPR cards after the HIPR2 High Rate Mode feature was turned ON.

> **✎ Note:**
>
> This UAM might appear during transition phase when the HIPR2 High Rate Mode feature status has changed, but eventually it will be cleared if high bit rate is established on both IMT buses.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
**  0590.0563 ** IMT SYSTEM         IMT Bit rate mismatch detected
```

Alarm Level: Major

Recovery

1. Verify the card status. Enter this command: `rept-stat-mux`.

   Example of the output:

   ```
       CARD   TYPE         PST            SST        AST       BITRATE
   BITRATE

   (OPER)   (ACT)

   ------------------------------------------------------------------------
   ----
       1109   HIPR2        IS-ANR         Restrict   -----     HIGH
   LOW
       1110   HIPR2        IS-NR          Active     -----     HIGH
   HIGH
       1209   HIPR2        IS-ANR         Restrict   -----     HIGH
   LOW
       1210   HIPR2        IS-NR          Active     -----     HIGH
   HIGH
       1309   HIPR2        IS-ANR         Restrict   -----     HIGH
   LOW
       1310   HIPR2        IS-NR          Active     -----     HIGH
   HIGH
       Command Completed.
   ```

2. Enter the command to verify the IMT status: `rept-stat-imt`.

Example of the output:

```
IMT    PST              SST           AST
 A     IS-ANR           Restrict      -----
  ALARM STATUS       = No alarms

 IMT   PST              SST           AST
 B     IS-NR            Active        -----
 ALARM STATUS       = No alarms

  Command Completed.
```

3. Replace the faulty HIPR2 card or replace the HMUX/HIPR cards with HIPR2 cards.

0564 - IMT Bit rate mismatch cleared

This message indicates that the alarm condition specified by the previous alarm has been cleared.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
  0014.0564       IMT SYSTEM      IMT Bit rate mismatch cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0565 - ATINPQ Subsystem is Not Available

The ATINP subsystem is not available. There are no IS-NR SCCP cards associated with this ATINP subsystem. The ATINP subsystem was not taken off-line via command.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
*C  0056.0565 *C ATINP SYSTEM          ATINPQ Subsystem is not
available
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   rept-stat-mps

2. Enter the following command to move the SCCP cards to an ACTIVE status if loading is successful:

```
rst-card:loc=xxxx
```
where xxxx is the location of the OOS-MT-DSBLD SCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

```
rept-stat-mps
```

4. Verify the SCCP card(s) reset in 2 are IS-NR.

If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

Refer to the *Maintenance Manual* for card removal/replacement procedures.

0566 - ATINPQ Subsystem is disabled

The ATINP subsystem has been manually disabled using the `inh-map-ss` command.

Example

```
 RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 39.2.0
*C  0056.0566 *C ATINP SYSTEM          ATINPQ Subsystem is disabled
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the ATINP subsystem cards:

```
rept-stat-mps
```

2. Enter the following command to to reserve the subsystem number and to change the state of the ATINP subsystem status to on-line:

```
ent-ss-appl:appl=ATINPQ:ssn=xx:stat=online
```
where *xx* is primary subsystem number.

3. Enter the following command to activate the ATINP subsystem and to bring it on-line:

```
alw-map-ss:ssn=xx
```
where *xx* is primary subsystem number.

4. Enter the following command to verify the status of the ATINP subsystem:

```
rept-stat-mps
```

0567 - ATINPQ Subsystem Normal, Card(s) Abnorml

One SCCP card has ATINP status of Active and there are one or more cards with an ATINP status other than Active.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
*   0056.0567 *  ATINP SYSTEM           ATINPQ Subsystm normal, card(s)
abnorml
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-mps`

2. Enter the following command to move the SCCP card to an ACTIVE status if loading is successful:

   `rst-card:loc=xxxx`
   where xxxx is the location of the OOS-MT- DSBLDSCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-mps`

4. Verify the SCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0568 - ATINPQ Subsystem is available

This message indicates that a problem with the ATINP subsystem has been corrected.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
0056.0568    ATINP SYSTEM            ATINPQ Subsystem is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0569 - ATINPQ Subsystem is Removed

The ATINP subsystem is not fully equipped. There are no SCCP cards configured with this ATINP subsystem.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 39.2.0
    0056.0569   ATINP SYSTEM          ATINPQ Subsystem is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the SCCP hardware.

Configure the ATINP system with SCCP cards. Refer to the *Maintenance Manual* for card removal/replacement procedures.

0570 - Incompatible Flash Image for sys rel

The new card inserted into system with a flash image is not compatible with the system release. The card is auto-inhibited. A manual flash download is required.

Example

```
isht01 09-07-21 09:19:16 EST  EAGLE5 41.1

ALARM STATUS      = **  0570 Incompatible flash image for sys rel
   99  Inserted H/W is not compatible with the provisioned slot
                 HW VERIFICATION CODE: 98
```

Alarm Level: Major

Recovery

1. Enter the command to load and activate the approved GPL onto the inhibited card:

   ```
   flash-card:code=appr:loc=xxxx:force=yes
   ```
   where xxxx is the card location used in the previous step. The optional `force=yes` is used to force the command to work on an IS-NR card. Links provisioned on the card are inhibited during command execution. The card and inhibited links are restored to their previous state when the command is completed.

   Example of the output using card location 1112:

   ```
   Command Accepted - Processing

       tekelecstp 18-01-18 16:06:22 MST  EAGLE 46.5.1.5.0-73.3.0
       flash-card:code=appr:force=yes:loc=1112
       Command entered at terminal #1.
   ;

       tekelecstp 18-01-18 16:06:55 MST  EAGLE 46.5.1.5.0-73.3.0
       Flash Card: FLASH GPL required to be downloaded on card 1112
       BLMCAP    : Running version 143-001-000  Expected version
   143-002-000

   ;
       tekelecstp 18-01-18 16:07:14 MST  EAGLE 46.5.1.5.0-73.3.0
   ```

```
        Flash Card: Downloading BLMCAP on card 1112
        Flash Card: Card(s) will reset after the flash GPL download.

;

        tekelecstp 18-01-18 16:07:56 MST  EAGLE 46.5.1.5.0-73.3.0
        Flash Card: Activating BLMCAP on card 1112

;

        tekelecstp 18-01-18 16:08:25 MST  EAGLE 46.5.1.5.0-73.3.0
        Flash Card: Card 1112 flash activation complete.
;
        Flash Card: Activating links on card 1112.
;
        tekelecstp 18-01-11 16:09:11 EST  EAGLE5 39.0.0
        Command Completed.
```

2. Enter the command to put the card that was inhibited in 1 back into service:

   `alw-card:loc=xxxx`
   where xxxx is the card location used in 1.

   Example of the output:

   ```
   RLGHNCXA03W  00-06-05  11:11:28 EDT  EAGLE 35.0.0
   Card has been allowed.
   ```

   > **Note:**
   >
   > Allow the card to run for 5 minutes before continuing.

3. Enter the command to activate all links on the card.

   `act-slk:loc=xxxx:link=y`
   where xxxx is the card location identified in the output and y is the link.

4. Enter the command to verify all links on the card are active.

   `rept-stat-slk:loc=xxxx:link=y`
   where xxxx is the card location identified in the output and y is the link

5. Enter the command to verify the approved GPLs match the running GPLs:

   `rept-stat-gpl:gpl=xxxxxxx`
   where xxxxxxx is the GPL identified in the output.

6. If the GPLs match, you have completed this procedure.

   If the GPLs do not match, continue with the following step.

7. Repeat this procedure for each card that shows ALM in the output.

8. If the same card shows in an alarm condition after executing the procedure, please contact My Oracle Support (MOS).

0571 - Sentinel Socket is Inactive

The EAGLE 5 ISS - Sentinel socket connection is inactive. Any of the following conditions may be a cause.

- Turned off scopy bit through `chg-eiscopy` command if it is already on

- Lost connection with Sentinel/IMF server

- Link being monitored is deleted

- Adaptor type is changed to non-M2PA on the IPLIM card connected to IMF/ sentinel server using `chg-assoc`/`chg-appl-sock`

- Internal problem occured at the LIM card hosting the corresponding link

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 38.0.0
*   0100.0571 *  SLK 1201,A   lsn123     Sentinel Socket is inactive
```

Alarm Level: Minor

Recovery

1. Check the physical connectivity to the Sentinel/IMF server and application status running at the Sentinel/IMF servers.

   Correct any physical connection discrepancy found.

2. If the physical connectivity is good, then there may be an internal problem at the LIM card hosting the corresponding link. Contact My Oracle Support (MOS).

0572 - Sentinel socket is active

A problem with the EAGLE 5 ISS - Sentinel socket has been corrected and the socket is active.

Example

```
RLGHNCXA21W 00-12-07 12:01:43 EST  EAGLE 38.0.0
0100.0572    SLK 1201,A   lsn123     Sentinel Socket is active
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- No action neccessary

0573 - BERT Test Failed

This message is displayed when the BERT diagnostic test, which is initiated by the HIPR2 card as a part of the IMT bus alignment process, has failed. This message may indicate that a HIPR2 card has failed; it may also indicate that there is a bad high rate Fibre-Channel cable, or that the high rate Fibre-Channel cables have not been installed.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST  EAGLE 41.1.0
**  0590.0573 ** Card 1109          BERT Test Failed
```

Alarm Level: Major

Recovery

1. Determine the status of the HIPR2 cards using the command: `rept-stat-mux`.

   Replace any faulty HIPR2 card with a new HIPR2 card.

2. Verify that the high rate Fibre-Channel cables have been installed.

3. Inspect the cables and verify that the cable connections are secure.

4. The BERT test will run again during the bus alignment. Once the BERT Test is successful, the alarm will be cleared.

5. Contact My Oracle Support (MOS) for more information.

0574 - BERT Test failure cleared

This message indicates that the alarm condition specified by the UAM 0573 (BERT Test Failed) has been cleared.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST   EAGLE 41.1.0
    0590.0574   Card 1109            BERT Test failure cleared
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0575 - Card type not HIPR2

This message is displayed when the HIPR2 High Rate Mode feature is ON and a non-HIPR2 card has replaced the HIPR2 card.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST   EAGLE 41.1.0
**  0590.0575 ** Card 1309          Card type not HIPR2
```

Alarm Level: Major

Recovery

This alarm will be cleared when:

1. The HIPR/HMUX card is replaced with a HIPR2 card.

2. The HIPR2 High Rate Mode feature is turned OFF.

0576 - All FC Network Unavailable

This indicates that the FC Network is down on all FC enabled cards.

Example

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
**  0100.0576 ** FCS                     All FC Network Unavailable
```

Alarm Level: Major

Recovery

Re-association should take place automatically.

If it does not, contact My Oracle Support (MOS).

0577 - All FC cards removed

This indicates that all Fast Copy enabled cards have been deleted from the system.

Example

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
0101.0577    FCS                     All FC cards removed
```

Alarm Level: None

Recovery

No action necessary.

0578 - FC System is Available

This indicates that the FC Network is available on any of the FC enabled cards.

Example

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
0101.0578    FCS                      FC System is Available
```

Alarm Level: None

Recovery

No action necessary.

0579 - FC Network Unavailable

This indicates the FC enabled card is unable to reach any XMF server.

Example

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
*   0107.0579 *     Card 1104          FC Network Unavailable
```

Alarm Level: Minor

Recovery

Re-association should take place automatically.

If it does not, contact My Oracle Support (MOS).

0580 - FC Network Available

This indicates that FC enabled card is able to reach any XMF server.

Example

```
RLGHNCXA21W 00-12-09 12:01:43 EST   EAGLE 40.1
0108.0580          Card 1104                 FC Network Available
```

Alarm Level: None

Recovery

No action necessary.

0581 - Loss of heartbeat

This indicates that an FC enabled card did not receive a heartbeat message from XMF server before the expiry of RCV heartbeat timer.

Example

```
   RLGHNCXA21W 00-12-09 12:01:43 EST   EAGLE 40.1
*  0108.0581 *      Card 1104                 Loss of heartbeat
```

Alarm Level: Minor

Recovery

No action necessary.

1. Inspect the backplane for loose dongle cables (P/N 830-1343-0X).

2. Verify the RJ45 cables are connected completely on the backplane.

0582 - Heartbeat Available

This indicates that FC enabled card receives heartbeat from the XMF.

Example

```
   RLGHNCXA21W 00-12-09 12:01:43 EST   EAGLE 40.1
0107.0582          Card 1104                  Heartbeat Available
```

Alarm Level: None

Recovery

No action necessary.

0583 - Unexpected SAM Received

This indicates that an FC enabled card received an erroneous SAM from IMF.

Example

```
    RLGHNCXA21W 00-12-09 12:01:43 EST EAGLE 40.1
 * 0102.0583 * SLK 1201,A lsnabcde Unexpected SAM Received
          REASON: Mismatched Fast Copy Network Addresses
```

Alarm Level: Minor

Recovery

No action necessary.

0584 - Expected SAM Received

This indicates that FC enabled card received a valid SAM on a link from DAS.

Example

```
    RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
    0102.0584    SLK 1201,A   lsnabcde   Expected SAM Received
```

Alarm Level: None

Recovery

No action necessary.

0588 - FC Port De-activated

This indicates that FC enabled Card CPU Idle reached Threshold level 1 and deactivated the FCS IP port (see Example 1) or if negotiation for data rate and traffic flow do not result in 100 Mbps and full duplex mode for the FC port (see Example 2).

Example 1

```
    RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
 ** 0705.0588 ** DLK 1106,B1  IPSG      FC Port De-activated
              REASON: Onset of CPU Congestion
```

Example 2

```
    RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
 ** 0772.0588 ** DLK 1106,B1  IPSG      FC Port De-activated
              REASON: Auto-Neg Fails
```

Alarm Level: Major

Recovery - Onset of CPU Congestion

No action necessary.

Recovery - Auto-Negotiation Fails

Corrective action needs to be taken at the switch to auto-negotiate successfully with Fast Copy Ports, for data rate and traffic as 100 Mbps/Full Duplex.

0589 - FC Port Activated

This indicates that FCS IP Port on FC Enabled card CPU Idle reached the Abatement Level.

Example

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
2359.0589    DLK 1201,B1  IPSG        FC Port Activated
```

Alarm Level: None

Recovery

No action necessary.

0590 - Fast Copy Application De-activated

This UAM can be raised under the following conditions:

- Fast Copy CPU Load Shedding condition or Auto-Negotiation failure on both the FC Ports

- One FC port is down due to network failure and another one is down either due to CPU load-shedding or Auto-Negotiation failure

- Fast Copy CPU Load Shedding condition on one FC Port and Auto-Negotiation failure on another FC Port

Example 1

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
*   0642.0590  * CARD 1105 IPSG          Fast Copy Application De-
activated
             REASON:  CPU Threshold Exceeded
```

Example 2

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
*   0587.0590  * CARD 1106 IPSG          Fast Copy Application De-
activated
             REASON:  Auto-Neg Fails
```

Alarm Level: Minor

Recovery - CPU Threshold Exceeded

No action necessary.

Recovery - Auto-Negotiation Fails

Corrective action needs to be taken at the switch to auto-negotiate successfully with Fast Copy Ports, for data rate and traffic as 100 Mbps/Full Duplex.

0591 - Fast Copy Application Activated

This indicates that FC enabled Card CPU Idle reached abatement level and activated the Fact Copy application.

Example

```
RLGHNCXA21W 00-12-09 12:01:43 EST  EAGLE 40.1
0107.0591        Card 1104              Fast Copy Application Activated
```

Alarm Level: None

Recovery

No action necessary.

0592 - AIQ Subsystem is Not Available

The AIQ subsystem is not available. There are no IS-NR SCCP cards associated with this AIQ subsystem. The AIQ subsystem was not taken off-line via command.

Example

```
RLGHNCXA21W 00-02-10 12:01:43 EST EAGLE 42.0.0
*C  0135.0592 *C LSS AIQ      Subsystem is not available
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-sccp`

2. Enter the following command to move the SCCP cards to an ACTIVE status if loading is successful:

   `rst-card:loc=xxxx`
   where xxxx is the location of the OOS-MT-DSBLD SCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-sccp`

4. Verify the VSCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0593 - AIQ: Subsystem is Disabled

The AIQ subsystem has been manually disabled using the `inh-map-ss` command.

Example

```
RLGHNCXA21W 00-02-10 12:01:43 EST EAGLE 42.0.0
*C  1571.0593 *C LSS AIQ      Subsystem is disabled
```

Alarm Level: Critical

Recovery

1. Enter this command to verify the status and location of the AIQ subsystem cards:

   `rept-stat-sccp`

2. Enter this command to to reserve the subsystem number and to change the state of the AIQ subsystem status to on-line:

   `ent-ss-appl:appl=aiq:ssn=xx:stat=online`
   where xx is primary subsystem number.

3. Enter this command to change the state of the AIQ subsystem to on-line:

   `alw-map-ss:ssn=xx`
   where xx is primary subsystem number.

4. Enter this command to verify the status of the AIQ subsystem:

   `rept-stat-sccp`

0594 - AIQ: Subsystem Normal, Card(s) Abnormal

One or more of the SCCP cards do not have an ACTIVE status.

Example

```
RLGHNCXA21W 00-02-10 12:01:43 EST EAGLE 42.0.0
*   0212.0594  * LSS AIQ      Subsystem normal, card(s) abnormal
```

Alarm Level: Minor

Recovery

1. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-sccp`

2. Enter the following command to move the SCCP card to an ACTIVE status if loading is successful:

   `rst-card:loc=xxxx`
   where xxxx is the location of the OOS-MT-DSBLD SCCP card(s) identified in 1.

3. Enter the following command to verify the status and location of the subsystem cards:

   `rept-stat-sccp`

4. Verify the SCCP card(s) reset in 2 are IS-NR.

   If not, reseat the card(s).

5. If any card(s) remain OOS-MT, replace the card(s).

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

0595 - AIQ: Subsystem is available

This message indicates that a problem with AIQ system has been corrected.

Example

```
RLGHNCXA21W 00-02-10 12:01:43 EST EAGLE 42.0.0
    0144.0595    LSS AIQ      Subsystem is available
;
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected. No further action is necessary.

0596 - AIQ: Subsystem is Removed

The AIQ subsystem is not fully equipped. There are no SCCP cards configured with this AIQ subsystem.

Example

```
RLGHNCXA21W 00-02-10 12:01:43 EST EAGLE 42.0.0
    0144.0595    LSS AIQ      Subsystem is removed
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify the SCCP hardware.

2. Configure the AIQ system with SCCP cards. Refer to the *Maintenance Manual* for card removal/replacement procedures.

0597 - FC System is Deactivated

This alarm indicates that the Fast Copy application is de-activated on all FC Capable cards.

Example

```
    RLGHNCXA21W 09-08-19 12:01:43 EST  EAGLE 41.1
*   0302.0597  * FCS                      FC System is Deactivated
```

Alarm Level: Minor

Recovery

No action necessary.

0598 - Subsystem degraded, card(s) abnormal

One or more SS cards goes out of service in (N or N+1) configuration or not IS-NR.

Example

```
   RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 46.0.0
0056.0598    Subsystem   Subsystem degraded, cards abnormal
```

Alarm Level: Major.

Recovery

- Restore the one or more SS out of service cards in (N or N+1) configuration or not IS-NR.

0619 - SIP SYSTEM is Not Available

This alarm indicates SIP feature is not ON and System has no SIP card that is Active/IS-NR.

Example

```
1        2        3        4        5        6        7        8
12345678901234567890123456789012345678901234567890123456789012345678901
34567890
*C  0002.0619 *C SIP SYSTEM          SIP System is not available
```

Alarm Level: Critical

Recovery

1. Enter the following command to verify the status and location of the SIP card: `rept-stat-sip`.

2. Enter the following command to move the SIP card to an ACTIVE status if loading is successful: `rst-card:loc=xxx` where xxxx is the location of the SIP card identified in 1.

3. Enter the following command to verify the status and location of the SIP card: `rept-stat-sip`.

4. Verify the SIP card reset in 2 are ACTIVE/IS-NR.

5. If the SIP card remains INACTIVE, replace the card. Refer to the *Maintenance Manual* for card removal/replacement procedures.

0620 - SIP SYSTEM is available

This message indicates that at least one SIP card is ACTIVE/IS-NR.

Example

```
1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    0002.0620    SIP SYSTEM           SIP SYSTEM is available
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

0622 - SIP Threshold - Level 1

This UAM is generated when the EAGLE detects SIP Congestion Level 1 based on the threshold set in TH-ALM table for the SIP card.

Example

```
   1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    0002.0622    SIP SYSTEM           SIP Threshold - Level1
```

Alarm Level: Minor

Recovery

1. Use `rept-stat-sip` command to determine the status of the SIP SYSTEM. If the TPS is beyond the allowed limit, decrease the TPS.
2. Follow the procedures to add more SIP cards to handle the increased SIP traffic.

0623 - SIP Threshold - Level2

This UAM is generated when the EAGLE 5 detects SIP Congestion Level 2 based on the threshold set in TH-ALM table for the SIP card.

Example

```
   1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    0002.0623    SIP SYSTEM           SIP Threshold - Level2
```

Alarm Level: Major

Recovery

1. Use `rept-stat-sip` command to determine the status of the SIP SYSTEM. If the TPS is beyond the allowed limit, decrease the TPS.
2. Follow the procedures to add more SIP cards to handle the increased SIP traffic.

0624 - SIP Threshold Condition Cleared

This UAM is generated when the SIP Threshold congestion is cleared.

Example

```
    1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012
34567890
    0002.0624    SIP SYSTEM            SIP Threshold Condition Cleared
```

Alarm Level: No Alarm Condition.

Recovery

This alarm indicates a previous fault has been corrected.

No further action is necessary.

0625 - SIP SYSTEM Normal, Card(s) Abnormal

This message indicates that the number of active SIP cards (i.e., in IS-NR state) is less than half of the configured SIP cards.

Example

```
    1         2         3         4         5         6
7         8
12345678901234567890123456789012345678901234567890123456789012
34567890
    0002.0625    SIP SYSTEM            SIP SYSTEM normal, card(s)
abnormal
```

Alarm Level: NO alarm condition. The message is informational only.

Recovery

1. Enter the following command to determine which SIP cards are out of service: `rept-stat-sip`.

2. Use the `init-card` command to reinitialize any SIP cards OOS-MT.

3. Use the `rept-stat-sip` command again to determine if the card(s) have returned to IS-NR. If not, reseat the card(s).

4. If the SIP card remains OOS-MT, replace the card(s). Refer to the *Maintenance Manual* for card removal/replacement procedures.

0626 - SIP Threshold Level Critical

This message indicates that there is a Congestion Level of Critical based on the threshold set in TH-ALM table for the SIP card.

Example

```
     1          2          3          4          5          6
7          8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
     0002.0626    SIP SYSTEM              SIP Threshold Level Critical
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Use `rept-stat-sip` command to determine the status of the SIP SYSTEM. If the TPS is beyond the allowed limit, decrease the TPS.

2. Follow the procedures to add more SIP cards to handle the increased SIP traffic.

0627 - SFLOG SYSTEM is not available

This message indicates the system has no SFLOG card that is Active/IS_NR status.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    *C  yyyy.0627 *C SFLOG SYSTEM             SFLOG SYSTEM is not
available
```

Alarm Level: Critical.

Recovery

Activate (Active/IS-NR) any one of the SFLOG card in the system.

0628 - SFLOG SYSTEM is available

This message indicates the system has at least one SFLOG card that is Active/IS_NR status.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0628    SFLOG SYSTEM              SFLOG SYSTEM is available
```

Alarm Level: Normal.

Recovery

No further action necessary.

0629 - SFLOG SYSTEM is removed

This message indicates that all SFLOG cards are deleted from the system.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
    yyyy.0629    SFLOG SYSTEM                    SFLOG SYSTEM is removed
```

Alarm Level: Normal.

Recovery

No further action necessary.

0630 - Throttle Threshold - exceeded

This message indicates the Throttle threshold for a particular Throttling GTT Action has exceeded. Any new messages hitting this Throttling Action will be discarded for the remaining duration of the current 30-second window. This alarm is issued for each Throttling Action for which the threshold has exceeded.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
**  yyyy.0630 ** TA – abc                    Throttle Threshold – exceeded
```

Alarm Level: Major.

Recovery

Review and modify the throttle threshold for the Throttle GTT action if it is not currently set appropriately to handle the desired traffic volume.

1. Use the `rept-stat-sfthrot` command to verify the Throttle Action status.

2. Use the `rtrv-gttact` and `chg-gttact` commands to review and modify the Throttle Action settings.

0631 - Throttle Threshold - cleared

This message indicates the Throttle threshold for a particular Throttling GTT Action, or alarm threshold for UAM 0632, has cleared.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
    yyyy.0631    TA – abc                    Throttle Threshold - cleared
```

Alarm Level: Normal.

Recovery

No further action necessary.

0632 - Alarm Threshold - exceeded

This message indicates the system wide alarm threshold for the throttling GTT Action has exceeded.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
  *   yyyy.0632 *  SCCP SYSTEM                    Alarm Threshold - exceeded
```

Alarm Level: Minor.

Recovery

1. Use the `rept-stat-sfthrot` command to verify the number of MSUs currently received by the throttling GTT Action in the 30-second window.

   Example of the output:

```
Command Accepted - Processing
    tklc1181001 16-01-08 05:40:53 MST  EAGLE5 46.3.0.0.0-68.8.0
    rept-stat-sfthrot
    Command entered at terminal #3.
;
    tklc1181001 16-01-08 05:40:53 MST  EAGLE5 46.3.0.0.0-68.8.0

    SCCP Cards Configured= 5     Cards IS-NR= 5
    Average CPU Usage  =  5%

    CARD    VERSION     PST             SST             AST         TPS

        Command Completed.
    ;
```

2. Use the `rtrv-gttact` command to display throttle threshold (THRESHOLD) configured for the throttling GTT Action.

3. Use the `rtrv-th-alm` command to display the system wide alarm threshold percentage (SFTHROTTHRESH) configured for throttling GTT Actions.

4. No action is required if the throttle threshold for the throttling GTT Action and system wide alarm threshold percentage for throttling GTT Actions are configured as necessary.

5. Use the `chg-gttact` command to update the throttle threshold if the throttle threshold currently configured for the throttling GTT Action is not adequate.

6. Use the `chg-th-alm` command to update the system wide alarm threshold percentage for throttling GTT Actions, if a higher alarm threshold percentage needs to be set.

0633 - Alarm Threshold - cleared

This message indicates the system wide alarm threshold has cleared.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0633    SCCP SYSTEM                    Alarm Threshold - cleared
```

Alarm Level: Normal.

Recovery

No further action necessary.

0634 - SFAPP is available

This message indicates all the SFAPP cards are IS-NR in the system.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0634    SFAPP SYSTEM            SFAPP is available
```

Alarm Level: Normal.

Recovery

- Alarm itself is a corrective alarm.

0635 - SFAPP is not available

This message indicates all the SFAPP cards are isolated from the system.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0635    SFAPP SYSTEM            SFAPP is not available
```

Alarm Level: Critical.

Recovery

- Check if the SFAPP card is faulty or inhibited.

0636 - SFAPP is removed

This message indicates the last SFAPP card is deleted from the system.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0636    SFAPP SYSTEM            SFAPP is removed
```

Alarm Level: Normal.

Recovery

- Check if the SFAPP card is removed.

0637 - SFAPP Threshold Level1 Exceeded

This message indicates the SFAPP traffic is above the SFAPP Congestion Alarm Lvl 1 threshold.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0637    SFAPP SYSTEM            SFAPP Threshold Level1 Exceeded
```

Alarm Level: Minor.

Recovery

- Reduce the TPS of the card below the configured threshold level 1 value.

0638 - SFAPP Threshold Level2 Exceeded

This message indicates the SFAPP traffic is above the SFAPP Congestion Alarm Lvl 2 threshold.

Example

```
123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0638    SFAPP SYSTEM              SFAPP Threshold Level2 Exceeded
```

Alarm Level: Major.

Recovery

- Reduce the TPS of the card below the configured threshold level 2 value.

0639 - SFAPP Threshold Level Critical

This message indicates the SFAPP traffic is above the system supported traffic limit.

Example

```
123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0639    SFAPP SYSTEM              SFAPP Threshold Level Critical
```

Alarm Level: Critical.

Recovery

- Reduce the TPS of the card below the system maximum limit.

0640 - SFAPP Threshold Condition Cleared

This message indicates the SFAPP traffic is below the SFAPP Congestion Alarm Lvl 1 threshold.

Example

```
123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0640    SFAPP SYSTEM              SFAPP Threshold Condition
Cleared
```

Alarm Level: Normal.

Recovery

- Alarm itself is a corrective alarm..

0641 - SFAPP Capacity normal, card(s) abnormal

This message indicates that any provisioned SFAPP card is isolated from the system.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901
234567890
    yyyy.0641    SFAPP SYSTEM                SFAPP Capacity normal, card(s)
abnormal
```

Alarm Level: Minor.

Recovery

- Check if the SFAPP card is faulty or inhibited.

0642 - System SFAPP TPS normal

This message indicates the isolated SFAPP card comes in service.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901
234567890
    yyyy.0642    SFAPP SYSTEM              System SFAPP TPS normal
```

Alarm Level: Normal.

Recovery

Alarm itself is a corrective alarm.

0643 - System SFAPP Threshold Exceeded

This message indicates the SFAPP TPS is above the SFAPP TPS Threshold Lvl (`rtrv-th-alm`).

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901
234567890
    yyyy.0643    SFAPP SYSTEM              System SFAPP Threshold
Execeeded
```

Alarm Level: Major.

Recovery

- Reduce the overall TPS of the SFAPP subsystem below the SFAPP TPS threshold Lvl.

0644 - System SFAPP capacity exceeded

This message indicates the SFAPP capacity exceeds the maximum system limit.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901
234567890
     yyyy.0644    SFAPP SYSTEM              System SFAPP Capacity Exceeded
```

Alarm Level: Critical.

Recovery

• Reduce the overall TPS of the SFAPP subsystem below the Maximum system capacity.

0645 - LIM/SCCP card(s) denied SFAPP service

This message indicates the isolated SFAPP card comes in service.

Example

```
e1061501 17-12-22 11:03:03 EST  EAGLE 46.5.1.5.0-73.10.0
**  0141.0645 ** SFAPP SYSTEM             LIM/SCCP card(s) denied
SFAPP service
```

Alarm Level: Major.

Recovery

• Configure the LIM/SCCP card for SFAPP service.

0646 - SFAPP Dynamic Learning Alarm Cleared

This occurs if alarm 0543 (VLR Dynamic Learning is suspended) is raised and changed the value of the `mode` parameter of the SFAPPOPTS table to OFF.

```
          1          2          3          4          5          6
7         8
12345678901234567890123456789012345678901234567890123456789012345678901
234567890
     yyyy.0646    SFAPP SYSTEM             SFAPP Dynamic Learning
Alarm Cleared
```

Alarm Level: Normal.

Recovery

None. This alarm is a clearing alarm.

0647 - EEDB Connectivity Down

This occurs when connectivity between the EAGLE and its EEDB has been lost.

```
            1         2         3         4         5         6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0647   SYSTEM                  EEDB Connectivity Down
```

Alarm Level: Major.

Recovery

1. Check the connectivity between the EAGLE and its EEDB.

0648 - EEDB Connectivity Up

This occurs when connectivity between the EAGLE and its EEDB has been restored.

```
            1         2         3         4         5         6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    yyyy.0648   SYSTEM                  EEDB Connectivity Up
```

Alarm Level: Normal.

Recovery

None. This alarm is a clearing alarm.

0901 - Card DB Load Timeout, Check GLS SS

This message indicates that the database of a card or subsystem has been in a transition for 9 minutes. This alarm shows the unavailability of the GLS subsystem. If the Integrated GLS feature is OFF or not yet enabled, this alarm shows that no TSM/E5-TSM is in IS-NR state or no TSM/E5-TSM card is responding to GWS requests. If the Integrated GLS feature is ON, this alarm shows that the E5-OAM cards are not performing the GLS functionality properly.

Example

```
tekelecstp 02-09-21 17:09:58 EST EAGLE5 42.0.2-63.38.33
** 0076.0901 ** CARD 1201 SS7ANSI Card DB load timeout, check GLS SS
```

Alarm Level: Major

Recovery

1. Use the `rtrv-ctrl-feat` command to check the state of Integrated GLS feature. If the Integrated GLS feature is enabled and ON, the GLS subsystem is running. Go to step 6.

2. If the Integrated GLS feature is OFF or not yet enabled, the GLS subsystem is a collection of TSM/E5-TSM cards running the GLS application. Verify that at least one TSM/E5-TSM card is in IS-NR state using the `rept-stat-card:appl=gls` command.

3. If TSM/E5-TSM card(s) are not in IS-NR state, enter the `init-card:appl=gls` command to boot the GLS subsystem.

4. Verify that the cards come back in service. Use the `rept-stat-card:appl=gls` command.

5. Run the `rept-stat-db:display=all` command to identify which cards are in transition, and note all cards that are in transition state (T column set to "Y"). If the transition is not cleared, turn the Integrated GLS feature ON again, then contact My Oracle Support (MOS).

Example of `rept-stat-db` command:

```
tekelecstp 02-09-21 16:01:58 EST  EAGLE5 42.0.2-63.38.33
    DATABASE STATUS: >> NOT OK (DMS) <<

    TDM-BKUP   1116  Y  -  1           00-00-00 00:00:00  DIFF LEVEL
```

6. If the Integrated GLS feature is ON, turn it OFF with the `CHG-CTRL-FEAT:partnum=893038901:status=OFF` command.

7. Wait for 5 minutes, and use the `rept-stat-db:display=all` command to verify that there are no cards in transition. Turn the Integrated GLS feature back on using the `CHG-CTRL-FEAT:partnum=893038901:status=ON` command.

8. If the problem persists, contact My Oracle Support (MOS).

0902 - Card DB is stable

This message indicates that the database of a card was in transition but has recovered.

Example

```
RLGHNCXA3W 99-12-06 10:56:18 EST EAGLE 35.0.0
0104.0902    CARD 1201 SS7ANSI     Card DB is stable
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is needed.

0903 - IP Link A is Down

This message indicates that an IP application socket is out of service due to a IP link down (ethernet problem) or due to the signaling link being deactivated.

Example

```
RLGHNCXA03W 01-01-10 16:28:08 EST EAGLE 35.0.0
** 0046.0903  ** CARD 1111  EBDADCM   IP Link A is down
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the IP address of the link:

   `rtrv-ip-lnk:loc=xxxx:port=a`
   Where xxxx is the card identified in the alarm output.

2. Enter the following command to retrieve the name of the local host:

   `rtrv-ip-host:ipadr=xxxx.xxxx.xxxx.xxxx`
   Where xxxx.xxxx.xxxx.xxxx = the link IP address from 1.

3. Enter the following command to get the name of the remote host:

   `rtrv-appl-sock:lhost=xxxxxxxx`
   Where xxxxxxxx = local host name from 2.

4. Enter the following command to test the TCP/IP connection:

   `pass:loc=xxxx:cmd="ping yyyyyyyyyy"`
   Where: xxxx = Card location from the alarm output. yyyyyyyyyy = logical name of the remote host from 3.

5. If the `ping` command fails, perform the following checks:

   a. Check the remote host hardware and software.

   b. Use your company procedures to check the network.

   c. Check cable connections at the IP[7] Secure Gateway and at the remote host.

6. If the UNAVAIL REASON still indicates an alignment problem, enter the following command:

`rept-stat-slk:loc=xxxx:port=a`
Where xxxx is the card identified in the alarm output. If the DCM card is not OOS-MT, proceed to 8.

7. If the DCM card is OOS-MT, do the following, using the `rept-stat-card` command to check for card IS-NR state after each action:

   a. Reinitialize card using the `init-card` command.

   b. Reseat the card.

   c. Replace the card.

      Refer to the *Maintenance Manual* for card removal/replacement procedures.

8. If the fault is not cleared, contact My Oracle Support (MOS).

0904 - IP Link A is Up

This indicates that a previously broken link between the DCM card and the OAP now exists and is functioning properly.

Example

```
RLGHNCXA03W 01-01-10 16:28:08 EST EAGLE 35.0.0
0046.0904   CARD 1111  EBDADCM    IP Link A is up
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0905 - IP Link B is Down

This message indicates that an IP application socket is out of service due to a IP link down (ethernet problem) or due to the signaling link being deactivated.

Example

```
RLGHNCXA03W 01-01-10 16:28:08 EST EAGLE 35.0.0
** 0046.0905 ** CARD  1111 EBDADCM    IP Link B is down
```

Alarm Level: Major

Recovery

1. Enter the following command to determine the IP address of the link:

   `rtrv-ip-lnk:loc=xxxx:port=b`

   Where xxxx is the card identified in the alarm output.

2. Enter the following command to retrieve the name of the local host:

   `rtrv-ip-host:ipadr=xxxx.xxxx.xxxx.xxxx`

Where xxxx.xxxx.xxxx.xxxx = the link IP address from 1.

3. Enter the following command to get the name of the remote host:

`rtrv-appl-sock:lhost=xxxxxxxx`

Where xxxxxxxx = local host name from 2.

4. Enter the following command to test the TCP/IP connection:

`pass:loc=xxxx:cmd="ping yyyyyyyyyy"`

Where xxxx = Card location from the alarm output. yyyyyyyyyy = logical name of the remote host from 3.

5. If the `ping` command fails, perform the following checks:

   • Check the remote host hardware and software.

   • Use your company procedures to check the network.

   • Check cable connections at the IP^7 Secure Gateway and at the remote host.

6. If the UNAVAIL REASON still indicates an alignment problem, enter the following command:

`rept-stat-slk:loc=xxxx:port=b`

Where xxxx is the card identified in the alarm output. If the DCM card is not OOS-MT, proceed to 8.

7. If the DCM card is OOS-MT, do the following, using the `rept-stat-card` command to check for card IS-NR state after each action:

   • Reinitialize card using the `init-card` command

   • Reseat the card

   • Replace the card

   Refer to the *Maintenance Manual* for card removal/replacement procedures.

8. If the fault is not cleared, contact My Oracle Support (MOS).

0906 - IP Link B is Up

This indicates that a previously broken link between the DCM card and the OAP now exists and is functioning properly.

Example

```
RLGHNCXA03W 01-01-10 16:28:08 EST EAGLE 35.0.0
0046.0906   CARD 1111   EBDADCM    IP Link B is up
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0907 - HW limiting TPS Rate Alarm Cleared

This message indicates that the alarm condition, specified by message "0908 - HW cannot support purchased TPS rate," has been cleared.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 5.0.0-32.0.0
0100.0907    CARD 1101 SS7IPGW   HW limiting TPS rate alarm cleared
             ASSY SN:  102199815a1234
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

0908 - HW Cannot Support Purchased TPS Rate

This message indicates that the purchased transactions per second (TPS) rate running on the DCM(s) is higher than can be supported by you current hardware.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 5.0.0-32.0.0
** 0100.0908 ** CARD 1101 SS7IPGW  HW cannot support purchased TPS rate
                ASSY SN:  102199815a1234
```

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 5.0.0-32.0.0
** 0100.0908 ** CARD 1101 SS7IPGW  HW cannot support purchased TPS rate
                ASSY SN:  102199815a1234
```

Alarm Level: Major

Recovery

1. Upgrade your DCM hardware.

   This alarm can be cleared only when the concerned DCM hardware is unplugged.

2. Contact My Oracle Support (MOS) for information about upgrading your DCM hardware.

0911 - Dynamic Database is Inconsistent

The dynamic database (DDB) audit (whether running automatically or on-demand) has detected that checksums are inconsistent. This means that one or more cards do not concur with the current network configuration. (The UIM lists a maximum of four affected cards.)

The dynamic database audit looks for checksum errors in dynamic database tables on LIM and Service Module cards. The fixed database, which is entered via the

OAM card, includes all provisionable tables and options. The dynamic database has information about the *state* of those static-database entries (for example, which links are actually available). Each LIM and Service Module card has a copy of the fixed database and the dynamic database. The entries in the tables in the dynamic database on each card change as network conditions change. Cards calculate and record dynamic database checksums in real time as updates are applied.

If the dynamic database is being updated during the dynamic database audit, then the inconsistent checksums might not indicate a true problem. To ensure that all dynamic database changes have been received and applied, the OAM processes audit replies after a required quiet period.

> **Note:**
>
> You can use the "DDBAUDTIMER" SS7OPTS option to enable and disable the background audit.

Typically, when the dynamic database copies are consistent among all the cards except one, then there is a problem on that one card. It is possible, however, for one card to have the correct information when the other cards do not (for example, a card might have a link on it that is actually available when the other cards incorrectly show the link as unavailable). When this alarm occurs, further troubleshooting is necessary to determine the actual status of the routes, links, linksets, and subsystems.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 41.0
**  0100.0911 ** SYSTEM                    Dynamic database is
inconsistent
                Card 1101, 1102, 1107, 1108, ... (3 others)
```

Alarm Level: Major

Recovery

The Eagle cannot automatically determine which cards are inconsistent. Do the following to address a dynamic-database inconsistency alarm:

1. Run the `rept-stat-ddb` command to display the last dynamic database audit report.

2. Initialize the affected cards identified in the dynamic database audit report:

   a. If a small number of cards are reported inconsistent, initialize them using the `init-card:loc=` command. You should initialize the affected cards immediately.

   b. If all cards of the same type report inconsistencies, initialize them using the `init-card:appl=`command.

> **⚠ Caution:**
>
> This command could affect service as it will boot all the appl cards at the same time (for example, the command could cause loss of SCCP if the `init-card:appl=VSCCP` command is run).

3. Run the `rept-stat-card:mode=full:loc=` command on each card identified as inconsistent to verify the card is IS-NR.

4. If a large number of cards of various types report inconsistent, you might need to issue the `init-network` or the `init-sys` command to clear the inconsistency.

> **⚠ Caution:**
>
> These commands *will* cause a nodal outage.

5. After the cards are initialized, run the `aud-data:type=DDB` command. If the report shows no inconsistency, then the problem is fixed.

6. Next, you can use the `dbg-ddb` command to troubleshoot the problem. The parameters to use in the `dbg-ddb` command depend on the type of dynamic database update that was missed (route/link/linkset).

   When a system reports dynamic database inconsistencies, first check the IMT buses statistics to make sure they are clean. This is important because multicast updates resulting from network activity transit via the IMT buses and any outstanding issue on this part of the system may lead some cards to miss the updates and OAM to report dynamic database inconsistencies. When a checksum is identified to be incorrect and is updated by a wild write audit, you may want to know that a dynamic database inconsistency reported on a card was due to a wild write (rather than any other cause, such as a missed multicast). In the scenario where one or a group of cards miss a dynamic database update related to a network state change, then the counter collecting the total number of update misses is incremented. Use the `dbg-ddb` command to retrieve this counter.

7. Contact My Oracle Support (MOS).

0912 - Dynamic database is now consistent

The dynamic database audit has run and determined that the checksums are consistent.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
0100.0912  SYSTEM       Dynamic database is now consistent
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This message indicates a previous fault has been corrected.

No further action is necessary.

UIMs

The following are UIMs that may be displayed.

1000 - MTP rcvd UPU - User Part is not SCCP

The system forwarded a unit data (UDT) message to a distant node that does not support SCCP. In response, the distant node sent back a user part unavailable (UPU) message.

The message provides the affected point code (which sent the UPU), as well as the service information octet (SIO) field of the message and the cause code.

All fields are in decimal values. The SIO field values applicable to this message are:

03 – SCCP

04 – Telephone User Part (TUP)

05 – ISDN User Part (ISUP)

06 – Data User Part (call and circuit related messages)

07 – Data User Part (facility registration and cancellation)

08 – MTP Testing User Part

The message also provides the value for the User Part that was unavailable (UPU=). The values shown above apply to this field as well.

The Cause Codes (Unavail Cause =) applicable to this message are:

000 – Unknown

001 – Unequipped Remote User

002 – Inaccessible User Part

Unequipped remote user indicates the distant node is not equipped for SCCP. Inaccessible user part indicates that the distant node is equipped with SCCP capability, but there has been a failure in SCCP making it impossible to handle messages sent to it by MTP.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
0100.1000    CARD 1201,A   INFO   MTP rcvd UPU - user part is not SCCP
SIO=03    OPC=003-232-000   DPC=001-004-000
AFTPC=004-000-001   UPU=03   UNAVAIL CAUSE=001
LSN=A1234567
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1001 - MTP rcvd Transfer Controlled (TFC)

The system is generating traffic for a remote node that is congested. The distant node sent a transfer controlled (TFC) message in response.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
   0100.1001    CARD 1201,A  INFO   MTP rcvd Transfer Controlled (TFC)
                SIO=0a   OPC=003-232-000  DPC=000-000-000
                AFTPC=004-000-000  CONG STATUS=000
LSN=A1234567
```

Legend

AFTPC
Affected point code (for SCCP messages)

CONG STATUS
Congestion status

DPC
Destination point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. The affected point code field of the output message identifies the node that is congested.

   The system discards MSUs with a priority lower than the congestion status value sent with the TFC.

2. The system sends only messages with a priority higher or equal to the congestion status value of the TFC.

   Refer to *TR-NPT-000246, Issue 2, June 1987, Chapter 1.111.5, Annex A* for priority assignments.

3. Contact the far-end to determine the reason for congestion.

1002 - MTP rcvd invalid TFC - status 0

The EAGLE 5 ISS system received a transfer controlled (TFC) message with a status of 0 (protocol violation). No action on the part of the EAGLE 5 ISS system has been taken.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
   0100.1002    CARD 1205,B  INFO   MTP rcvd invalid TFC - status 0
SIO=0a   OPC=003-234-000  DPC=000-024-000
AFTPC=055-000-046  CONG STATUS=000
LSN=A1234567
```

Legend

AFTPC
Affected point code (for SCCP messages)

CONG STATUS
Congestion status

DPC
Destination point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. The EAGLE 5 ISS system does not take any action based on this TFC message.

   The output above is provided only to indicate the event took place, but does not require any action by maintenance personnel.

2. Contact the far-end to determine the reason for congestion.

1003 - MTP rcvd invalid H0/H1 code

SS7 received a level 3 message with an unrecognized H0H1 code.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
   0100.1003    CARD 1205,B  INFO   MTP rcvd invalid H0/H1 code
             SIO=0a   OPC=003-235-000  DPC=000-024-000
H0H1=43
LSN=A1234567
```

Legend

DPC
Destination point code

H0H1
H0/H1 heading code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This message could indicate that the MTP restart feature is not enabled. If the MTP restart feature should be enabled, use the `chg-feat` to turn on the MTP restart feature.

> **✎ Note:**
>
> Once the feature is enabled using the `chg-feat` command, it cannot be turned off, contact My Oracle Support (MOS) before executing the `chg-feat` command.

2. This output is informational only.

   The SS7 traffic is not interrupted and service is not affected.

3. Contact the far-end to determine the reason for congestion.

1004 - MTP rcvd unknown DPC

The EAGLE 5 ISS system received an MSU with a DPC that is not in the routing table.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.1004    CARD 1205,B  INFO   MTP rcvd unknown DPC
SIO=0a   OPC=003-236-000  DPC=000-071-000
LSN=A1234567
```

Legend

DPC
Destination point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If the EAGLE 5 ISS system should be able to route to the DPC (indicated in the message output), add the DPC to the EAGLE 5 ISS system routing table using the `ent-rte` and `ent-dstn` commands.

2. If the DPC is not one that the EAGLE 5 ISS system should be able to route to, no action is necessary.

1005 - GWS rcvd OPC that is not allowed

This message indicates the EAGLE 5 ISS received an MSU with an origination point code (OPC) that is not allowed in gateway screening (GWS).

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.1005    CARD 1205,A  INFO   GWS rcvd OPC that is not allowed
SIO=b2   OPC=003-237-000  DPC=003-003-003
H0H1=32  AFTPC=03-03-03
SR=osp3   LSN=A1234567
```

> **Note:**

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If this origination point code (OPC) is one that should be allowed to pass through the network, add the OPC to the gateway screening (GWS) tables assigned to the link reporting this message.

   Use the `ent-scr-opc` command to add the OPC to the list of allowed OPC codes. Refer to the *Database Administration Manual - Gateway Screening* for instructions on how to add an OPC to gateway screening (GWS).

2. If the OPC should not be allowed to pass through the network, no action is necessary.

1006 - GWS rcvd DPC that is not allowed

This message indicates the EAGLE 5 ISS received an MSU with a destination point code (DPC) that is not allowed in gateway screening (GWS).

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.1006    CARD 1205,A  INFO   GWS rcvd DPC that is not allowed

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If this destination point code (DPC) is one that should be allowed to pass through the network, add the DPC to the gateway screening (GWS) tables assigned to the link reporting this message.

   Use the `ent-scr-dpc` command to add the DPC to the list of allowed DPC codes. Refer to the *Database Administration Manual- Gateway Screening* for instructions on adding a DPC to gateway screening (GWS).

2. If the DPC should not be allowed to pass through the network, no action is necessary.

1007 - GWS rcvd OPC That is Blocked

This message indicates the EAGLE 5 ISS received an MSU from an origination point code (OPC) that is blocked from this network by gateway screening (GWS).

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.1007    CARD 1205,A  INFO   GWS rcvd OPC that is blocked

Subsystem number

TT
Translation type

TYPE
SCCP management message type

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This indicates that a MSU was discarded because it failed screening.

   No action is necessary, unless the MSU should have passed. If the MSU should have passed (verified by the fields displayed in the above message), go to 2.

2. Using the `rtrv-scr-sio` command, verify that the screening reference specified in the above message does not allow MSUs with the *SI/H0/H1* values indicated.

3. If the MSU should have passed screening, use the `ent-scr-sio` command to add the si data to the screening reference assigned to this link.

1010 - GWS rcvd a priority that is not allowed

This message indicates gateway screening (GWS) has discarded an MSU because the priority is listed as one that is not allowed in this network.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST  EAGLE 35.0.0
0100.1010    CARD 1205,A  INFO   GWS rcvd a priority that is not allowed
SIO=0a   OPC=003-242-000  DPC=000-071-000

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This indicates that a MSU was discarded because it failed screening.

   No action is necessary, unless the MSU should have passed. If the MSU should have passed (verified by the fields displayed in the above message), go to 2.

2. Using the `rtrv-scr-sio` command, verify that the screening reference specified in the above message does not allow MSUs with the priority value indicated.

3. If the MSU should have passed screening, use the `chg-scr-sio` command to add the pri data to the screening reference.

1011 - GWS rcvd TFC, AFTPC not in routing tbl

This indicates that a transfer controlled message was received by a gateway link and failed screening because of an affected point code value in the message.

Example

```
RLGHNCXA21W 00-02-07 11:02:30 EST   EAGLE 35.0.0
0100.1011    CARD 1105,B   INFO   GWS rcvd TFC, AFTPC not in routing tbl
SIO=0a    OPC=003-243-000   DPC=000-024-000
H0H1=35   AFTPC=099-099-003
SR=osp3    LSN=A1234567
```

Legend

Destination point code

H0H1
H0/H1 heading code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

SR
Screening reference name

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify the affected point code in the message, and verify whether the affected point code is required to be in the EAGLE 5 ISS routing tables.

2. If the affected point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

3. If the affected point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the affected point code to the EAGLE 5 ISS routing tables.

1012 - GWS rcvd Clg Party That is Not Allowed

This indicates an MSU was received on a gateway link but failed screening because of the SCCP calling party address.

Example 1 (non-SCMG)

```
RLGHNCXA21W 00-04-18 18:59:23 EST  EAGLE 31.3.0
0101.1012    CARD 1205,B1  INFO   GWS rcvd Clg Party that is not
allowed SIO=0a   OPC=003-244-000  DPC=000-071-000

SCCP management message

SIO
Service information octet

SR
Screening reference name

SSN
Subsystem number

TT
Translation type

TYPE
SCCP management message type

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This output indicates that a SCCP message was discarded because it failed screening.

   No action is necessary, unless the message should have passed. If the message should have passed (verified by the fields displayed in the above message), continue with 2.

2. Using the `rtrv-scr-cgpa` command, verify the screen name specified in the output does not allow SCCP messages.

   Check the following fields in the output:

   • For non-SCMG messages, check the SCCP MT, SSN, and OPC.

   • For SCMG messages, check the TYPE, AFTSS, and AFTPC (or OPC if the AFTPC is not present).

3. If the SCCP message should have passed screening, use the `ent-scr-cgpa` or `chg-scr-cgpa` command to add the appropriate information to the screening reference.

1013 - GWS rcvd Cld Party that is not allowed

This indicates an MSU was received on a gateway link but failed screening because of the called party value in the SCCP called party address field.

Example

The following is an output example when an SCCP management message, such as SSP, SST, SSA, or SSC generates this UIM.

```
RLGHNCXA21W 00-04-18 18:59:30 EST  EAGLE 35.0.0
0102.1013    CARD 1205,B  INFO  GWS rcvd Cld Party that is not allowed

TYPE
SCCP management message type

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This output indicates that a SCCP message was discarded because it failed screening.

   No action is necessary, unless the message should have passed. If the message should have passed (verified by the fields displayed in the above message), go to 2.

2. Using the `rtrv-scr-cdpa` command, verify that the screening reference specified in the above message does not allow SCCP messages with the called party address indicated.

3. If the SCCP message should have passed screening, use the `ent-scr-cdpa` command to add the called party address to the screening reference.

1014 - GWS rcvd Translation Type not allowed

This indicates an MSU requiring global title was received on a gateway link but failed screening because of the translation type indicated in the message.

Example

```
RLGHNCXA21W 00-04-18 18:59:23 EST  EAGLE 31.3.0
0101.1014    CARD 1205,B  INFO   GWS rcvd Translation Type not allowed

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This output indicates that an MSU requiring global title translation was discarded because it failed screening.

   No action is necessary, unless the message should have passed. If the message should have passed (verified by the fields displayed in the above message), go to 2.

2. Using the `rtrv-scr-tt` command, verify that the screen name specified in the above message does not allow MSUs with the translation type indicated.

3. If the MSU should have passed screening, use the `ent-scr-tt` command to add the translation type to the screening reference.

1015 - GWS rcvd SCMG with not allowed AFTPC

This message indicates that an SCCP management message (SCMG) was received on a gateway link and failed gateway screening because of the affected point code.

Example

```
RLGHNCXA21W 00-04-18 18:59:30 EST  EAGLE 31.3.0
0102.1015    CARD 1205,B  INFO   GWS rcvd Cld Party that is not allowed
SIO=03   OPC=003-245-000  DPC=001-004-000

OPC
Origination point code

SCMG
SCCP management message

SIO
Service information octet

SR
Screening reference name

TYPE
SCCP management message type

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This output indicates that an SCCP management message was discarded because it failed screening.

   No action is necessary, unless the message should have passed. If the message should have passed (verified by the fields displayed in the above message), go to 2.

2. Using the `rtrv-scr-aftpc` command, verify that the screening reference specified in the above message does not allow SCCP management messages with the affected point code indicated.

3. If the message should have passed screening, use the `ent-scr-aftpc` command to add the affected point code to the screening reference.

1016 - MTP Adj PC not in routing table

This message indicates that an MSU was received with an adjacent point code not found in the EAGLE 5 ISS routing table.

Example

```
RLGHNCXA21W 00-11-18 19:12:00 EST  EAGLE 35.0.0
0147.1016    CARD 1201,A  INFO   MTP Adj PC not in routing table
OPC=001-001-001  CPC=002-002-002
LSN=lsn01a
```

Legend

CPC
Capability point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This output indicates that an MSU was discarded because the DPC did not appear in the system linkset table.

   Network messages are valid only from adjacent point codes.

2. If the MSU should have passed screening, use the `chg-scr-sio` command to add the pri data to the screening reference.

1018 - REPT-MTPERR: MTP rcvd invalid SIO

A MSU is discarded when the EAGLE 5 ISS is unable to perform MTP-level routing.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST  EAGLE 31.3.0
0140.1018  CARD 1201,A  INFOREPT-MTPERR: MTP rcvd invalid SIO
```

```
SIO=07    OPC=001-001-001    DPC=002-002-002
LSN=A1234567
```

Legend

DPC
Destination point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This indicates that a MSU was discarded because of an undefined point code or an invalid SIO.

   This message is displayed only when the total number of discarded SIOs is less than a specified limit over a specified period time. No action is necessary, unless the MSU should have passed. If the MSU should have passed (verified by the fields displayed in the above message), go to 2.

2. Using the `rtrv-scr-sio` command, verify that the screening reference specified in the above message does not allow MSUs with the value indicated.

   a. If the MSU should have passed screening, use the `chg-scr-sio` command to add the appropriate data to the screening reference.

   b. If the SIO is not one that the EAGLE 5 ISS should be able to route to, no action is necessary.

1019 - SCCP rcvd invalid UDTS/XUDTS msg

SCCP received a user data service (UDTS)/extended user data service (XUDTS) message from the network that was discarded because of an invalid message type indicator.

Example

```
RLGHNCXA21W 00-04-18 19:00:05 EST   EAGLE 31.3.0
0106.1019    CARD 1103,A   INFO    SCCP rcvd invalid UDTS/XUDTS msg
SIO=03    OPC=003-251-000   DPC=001-004-000
CDPA: SSN=005     TT=250
CGPA: SSN=000     TT=000
RETURN CAUSE=001
DATA=26 80 03 09 0e 06 09 00 fe 08 50 55 05
43 00 00 00 00 00

TT
Translation type

Alarm Level: No alarm condition. The message is informational only.

Recovery

This indicates that SCCP received a UDTS/XUDTS message that was discarded because the message type field contained a value invalid in the system.

No action is necessary.

> **Note:**
>
> The UDTS/XUDTS message is used in the SCCP protocol to indicate an error in a UDT message. The UDT was sent to another node, an error was found, and the UDTS/XUDTS message was returned with the following fields:
>
> - Message type
> - Return cause
> - Called party address
> - Calling party address
> - Data

1020 - IARCDPN NPP Service is off

This message is issued when the IARCDPN NPP service is called for at run-time, but the service status is currently set to OFF instead of ON.

Example

```
RLGHNCXA21W 09-07-21 16:20:19 EST   EAGLE 41.1.0
0002.1020    CARD 1113     INFO      IARCDPN NPP Service is off
             Report Date:09-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Use the `chg-npp-serv` command to change the service status to ON. Enter `chg-npp-serv:srvn=iarcdpn:status=on`.

1021 - IARCGPN NPP Service is off

This message is issued when the IARCGPN NPP service is called for at run-time, but the service status is currently set to OFF instead of ON.

Example

```
RLGHNCXA21W 09-07-21 16:20:19 EST   EAGLE 41.1.0
0002.1021    CARD 1113     INFO      IARCGPN NPP Service is off
             Report Date:09-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Use the `chg-npp-serv` command to change the service status to ON. Enter `chg-npp-serv:srvn=iarcgpn:status=on`.

1022 - System Meas. Limit Exceeded for LSONISMT

This UIM alarm is issued when the either of these limits is exceeded:

•   Maximum of 3000 LSONISMT measurements, or

•   Maximum of 100 ISUP message type measurements per linkset.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST   EAGLE 31.3.0
0140.1022  SYSTEM  INFO   System Meas. limit exceeded for LSONISMT
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Each link in a linkset collects measurements for 100 ISUP message type measurements.

   Only the first 100 types collected per linkset are reported. Those links that are not reported in the LSONISMT Report have their counts added to the totals in the LSORIGNI Gateway Report and the STP Report (*MSUDSCRD* field).

2. If the system total exceeds 3000, only the first 3000 collected are reported in the LSONISMT Gateway Report.

   Any counts not included in this report are added to the totals in the LSORIGNI Gateway Report and the STP Report (*MSUDSCRD* field).

1023 - SCCP rcvd unknown msg type

This UIM may indicate that the SCCP received a message from the network that was discarded because of an unknown message type indicator. The generation of this UIM does not necessarily mean that an MSU has been discarded, however. This UIM can indicate that some feature did not handle an MSU due to its package type. (For example, features such as PPSMS or MO SMS NP/NPP feature that do not handle some SCCP MSU types.) In this case, the feature issues this UIM and passes the MSU to GTT to process.

Example

```
RLGHNCXA21W 00-04-18 19:01:09 EST  EAGLE 31.3.0
0109.1023    CARD 1103,A  INFO   SCCP rcvd unknown msg type

Alarm Level: No alarm condition. The message is informational only.

Recovery

The SCCP received a message that was discarded because the global title field in the called party address was invalid in the EAGLE 5 ISS.

No action is necessary.

1030 - Inh EIR SS request already outstanding

An `inh-map-ss` command is already entered and queued.

For more information about the `inh-map-ss` command, refer to the *Commands Manual*.

Example

```
RLGHNCXA21W 03-08-18 19:09:14 EST  EAGLE 31.3.0
0140.1030  CARD 1201  INFO  Inh EIR SS request already outstanding
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1031 - Failure Inhibiting EIR SS

The `inh-map-ss` command was unsuccessful in taking the EIR subsystem off-line. For more information about the `inh-map-ss` command, refer to the *Commands Manual*.

Example

```
RLGHNCXA21W 03-08-18 19:09:14 EST  EAGLE 31.3.0
0140.1031  CARD 1201  INFO  Failure Inhibiting EIR SS
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Enter the `inh-map-ss` command specifying the `force=yes` parameter.

1032 - Set ETS Mismatch

There is a discontinuity between the ETS broadcast and what the card expects. A discontinuity can occur when both OAM cards are booted at the same time and ETS gets reset to zero.

Example

```
RLGHNCXA21W 03-08-18 19:09:14 EST  EAGLE 31.3.0
0140.1032  CARD 1201  INFO  Set ETS Mismatch
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

The affected LIM/ATM/STC card recalibrates to the new ETS value and should continue to operate correctly.

If not, this is a reference point for possible invalid timestamps to Sentinel.

1033 - SCCP rcvd inv Cld Party - bad network

The SCCP received a message from the network that it could not route and was discarded because of an invalid network indicator in the called party address.

Example

```
RLGHNCXA21W 00-04-18 19:02:12 EST  EAGLE 31.3.0
0113.1033    CARD 1103,A1  INFO   SCCP rcvd inv Cld Party - bad network

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This indicates a SCCP message was received with an invalid global title.

   The translation type indicator was invalid in the EAGLE 5 ISS. If this message
   should have been routed (verified by the output shown above), continue to 2.

2. Use the command `rtrv-tt`, and verify that the indicated translation type does not
   appear in the translation types table.

3. If there is no entry for the translation type indicated in the message, and there
   should be, use the `ent-tt` command to add the translation type to the Eagle STP
   translation type table.

Refer to the *Database Administration Manual - Global Title Translation* for more information about entering translation types.

1043 - SCCP did not route - bad translation

The SCCP did not route a message because it could not translate the global title. The message was discarded.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST  EAGLE 37.5.0

Recovery

The SCCP received a message with a global title translation it could not interpret.

The message was discarded. Check translations on the originating switch to determine the trouble.

1044 - SCCP did not route - DPC OOS

The SCCP did not route a message because the destination point code (DPC) was out-of-service (OOS). The message was discarded.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST   EAGLE 37.5.0

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Check the route and linksets by entering the `rept-stat-dstn` and `rept-stat-ls` commands.

2. Verify the link status using the `rept-stat-slk` command.

For example, enter:

```
rept-stat-slk:loc=:port=b
```

Example of the output:

```
RLGHNCXA03W 00-09-27 17:00:36 EST  EAGLE 35.0.0
SLK      LSN          CLLI         PST            SST        AST
1203,B  nsp1          ls02clli     OOS-MT         Unavail    ----
   ALARM STATUS       =  No alarm
   UNAVAIL REASON     =  FL NA LI RI
Command Completed.
```

3. Check the UNAVAIL REASON field in the output of the `rept-stat-slk` command.

   UNAVAIL REASON codes:

   FL – The signaling link has a fault.

   NA – The signaling link is not aligned.

   LI – The signaling link has been inhibited locallyRI – The signaling link has been inhibited remotely.

   LB – The signaling link has been blocked locally.

   RB – The signaling link has been blocked remotely.

   FC – The signaling link is unavailable because of false congestion. RD (xx.xxx) – The signaling link is unavailable because of a restart delay to prevent signaling link oscillation. The number in parentheses indicates the amount of time, in seconds, remaining in the restart delay period. The link is restarted automatically after this amount of time has elapsed.

4. If the UNAVAIL REASON indicates an alignment problem or fault, activate a loopback using the `act-lpb` command, or use a physical loopback.

   (For a V.35, you must use an appropriate physical V.35 loopback.) If the signaling link aligns, contact the far-end to correct the problem.

5. If the UNAVAIL REASON still indicates an alignment problem or fault, check the status of the card by entering the `rept-stat-card` command for the specified card.

6. If the `rept-stat-card` command indicates a problem with the card, reset the card by entering the `init-card` command with the specified card location.

   If the card still does not align, try first reseating the card, then replacing the card. Refer to the *Maintenance Manual*, Appendix A, Card Removal/Replacement Procedures.

   a. If the UNAVAIL REASON indicates a locally inhibited link, enter the `unhb-slk` command with the specified card location.

   b. If the UNAVAIL REASON indicates a locally blocked link, enter the `ublk-slk` command with the specified card location.

7. Otherwise, this indicates a failure at the distant node.

   Routing to this node has been halted as a result of network management. Maintenance personnel should be aware of the OOS condition, but no action is necessary. Monitor the links to the DPC and verify the DPC status changes to IS-NR (In-Service - Normal).

1045 - SCCP did not route - DPC congested

The SCCP did not route a message because the destination point code (DPC) was congested. The message was discarded.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST  EAGLE 37.5.0

Alarm Level: No alarm condition. The message is informational only.

Recovery

This indicates an SCCP message was discarded due to congestion at a distant node. Maintenance personnel should monitor the network and verify the nodes congestion status changes to zero (no congestion).

> **✎ Note:**
>
> A transfer controlled (TFC) should have been received on the link to indicate congestion to this node. When the congestion status changes, the congestion status indicator in the flow control messages indicates what message type priorities can be transmitted to the distant node. If the condition persists, follow normal company procedures in dealing with congestion at distant nodes.

1046 - SCCP didn't route - PC/SSN not in MAP tbl

SCCP did not route a message because the destination point code was not in the mated application (MAP) table. The message was discarded.

Example

This output indicates an error against the original destination rather than the redirected destination.

```

Recovery

Perform one of the following actions:

- Enable the GTCNVDFLTSTP Option, which would cause a default GT conversion to occur.
  Refer to the *Database Administration Manual - Global Title Translation* for details.

- Add the proper ANSI to ITU entry (matching TT) into the Default GT Conversion Table.
  Refer to the *Database Administration Manual - Global Title Translation* for details.

- Add a wildcard ANSI to ITU entry into the Default GT Conversion Table.
  Refer to the *Database Administration Manual - Global Title Translation* for details.

1051 - SCCP-CNV: Unable to convert ANSI CGPA GT

This message indicates that a SCCP MSU contained an undefined CGPA PC. The GTCNVDFLT STP Option is not enabled.

Alarm Level: No alarm condition. The message is informational only.

Recovery

The EAGLE 5 ISS supports only one subsystem.

All other local subsystem numbers are invalid. Check translations on the originating switch to determine the problem.

1055 - SCCP rcvd inv SCMG - bad AFTPC

SCCP received an SCCP management message (SCMG) that was discarded because of a bad affected point code (AFTPC). The point code does not appear in the EAGLE 5 ISS routing tables.

Example

```
RLGHNCXA21W 00-04-18 19:04:15 EST  EAGLE 31.3.0
0124.1055    CARD 1106  INFO   SCCP rcvd inv SCMG - bad AFTPC

MSG TYPE
Message type

MULT
SCCP management message multiplicity indicator

OPC
Origination point code

SCMG
SCCP management message

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify the point code in the message, and verify whether the point code is required to be in the EAGLE 5 ISS routing tables.

2. If the point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

3. If the point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the point code to the EAGLE 5 ISS routing tables.

   Refer to the *Database Administration Manual - SS7* for more information about the procedure used to enter point codes to the EAGLE 5 ISS routing tables.

1056 - SCCP rcvd inv SCMG - bad subsystem

SCCP received an SCCP management message (SCMG) that was discarded because of an invalid subsystem.

Example

```
RLGHNCXA21W 00-04-18 19:04:15 EST  EAGLE 31.3.0
0124.1056    CARD 1106  INFO   SCCP rcvd inv SCMG - bad subsystem

MSG TYPE
Message type

MULT
SCCP management message multiplicity indicator

OPC
Origination point code

SCMG
SCCP management message

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify the point code in the message, and verify the subsystem number as a valid SSN for the network.
2. Add the subsystem number to the EAGLE 5 ISS map tables using the `ent-map` command.

1057 - SCCP rcvd inv SCMG - bad length

SCCP received an SCCP management message (SCMG) that was discarded because of an invalid length indicator.

SCCP received an SCCP/Subsystem congested (SSC) SCMG message (MSG TYPE=006) that was discarded because EAGLE does not support SSC procedures. However, for through switched SCMG, EAGLE handles SSC messages, and there should not be an issue.

Example

```
RLGHNCXA21W 00-04-18 19:04:15 EST  EAGLE 31.3.0
0124.1057    CARD 1106  INFO   SCCP rcvd inv SCMG - bad length

Alarm Level: No alarm condition. The message is informational only.

Recovery

This indicates an SCCP message was discarded due to an invalid message type.

No further action is necessary.

1059 - Telnet terminal connection disconnected

Indicates that an established telnet connection on the EAGLE has disconnected.

Example

```
RLGHNCXA21W 02-08-08 20:52:04 EST   EAGLE 39.0
5024.1059    CARD 1105     INFO      Telnet terminal disconnected.
```

```
                            REASON=Remote End Unreachable
                            RIPADDR=192.168.57.52
                            RIPORT=2336
                            LIPADDR=192.168.53.46
                            LIPORT=23
                            Report Date:02-08-08  Time:20:52:04
```

Legend

LIPADDR
Local IP Address

LIPORT
Local TCP Port Number

REASON
REASON is only displayed when the reason for the disconnection is ping failure. The
REASON field is not displayed if the disconnection is due to any other reason.

RIPADDR
Remote IP Address

RIPORT
Remote TCP Port Number

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1060 - Map Screening cannot generate ATIER

This message is generated because the MSU passed the SCCP conversion before
the MAP screening and is of a different domain than the OPC of the inbound MSU.
Therefore, the MSU is discarded and the Any Time Interrogation error (ATIER) is not
generated.

Example

```
RLGHNCXA21W 00-11-18 18:59:23 EST  EAGLE 35.0.0

Alarm Level: No alarm condition. The message is informational only.

Recovery

The MSU indicated in the message was discarded.

No further action is necessary.

1061 - Meas Sync Not Allowed From Old Version

This UIM is generated when the secondary MCP receives measurements data from a primary MCP that is running an older version of the software. This message indicates that measurements data was discarded by the secondary MCP due to the version mismatch. This problem occurs during a system upgrade to a new release.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST  EAGLE 31.4.0
0140.1061  CARD 1201  INFO   Meas sync not allowed from old version
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This UIM should only occur during an upgrade.

Complete the upgrade per approved procedure.

1062 - String Data Dump

A **screen set** was created with too many rows.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    9912.1062    CARD 1113     INFO    a50 too large
        Report Date:14-08-01  Time:13:32:14
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This message indicates that the **screen set** is too large to be loaded.

    Remove some of the entries (one entry at a time).

2. If the screen set is still too large, use the `rtrv-scrset` command to see if there are any unnecessary entries already in the screen set that can be deleted.

3. Retry adding to the screen set with the `chg-scrset` command.

    If the message appears again, your screen set is too large. Try a different screen set or change the existing screen set.

1063 - SCCP Screen Set is Too Large

The screen set is too large to fit on a LIM or SCCP card and has failed loading.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
```

```
5946.1063    CARD 1113    INFO    SCCP screen set is too large
      Report Date:14-08-02  Time:17:01:45
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This message indicates the screen set is too large to be loaded to a LIM or SCCP.

    Remove some of the entries (one entry at a time).

2. If the screen set is still too large, use the `rtrv-scrset` command to see if there are any unnecessary entries already in the screen set that can be deleted.

3. Retry adding to the screen set with the `chg-scrset` command.

    If the message appears again, your screen set is too large. Try a different screen set or change the existing screen set.

1064 - GWS rcvd TFP, AFTPC not in routing tbl

The EAGLE 5 ISS has received a transfer controlled (TCP) for an affected point code (AFTPC) which does not appear in the EAGLE 5 ISS routing tables. The message was discarded by Gateway Screening (GWS).

Example

```
RLGHNCXA21W 00-04-18 19:05:52 EST  EAGLE 31.3.0
0129.1064    CARD 1105,A  INFO   GWS rcvd TFP, AFTPC not in routing tbl
SIO=b0   OPC=004-040-000  DPC=000-001-000
H0H1=41  AFTPC=099-099-003
SR=scrb   LSN=A1234567
```

Legend

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the affected point code in the message, and verify whether the affected point code is required to be in the EAGLE 5 ISS routing tables.

- If the affected point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

- If the affected point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the affected point code to the EAGLE 5 ISS routing tables.

1065 - GWS rcvd TFR, AFTPC not in Routing tbl

The EAGLE has received a transfer restricted (TFR) for an affected point code (AFTPC) which does not appear in the EAGLE routing tables. The message was discarded by gateway screening (GWS).

Example

```
RLGHNCXA21W 00-04-18 19:05:57 EST  EAGLE 31.3.0
0130.1065    CARD 1201,A  INFO   GWS rcvd TFR, AFTPC not in routing tbl

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the affected point code in the message, and verify whether the affected point code is required to be in the EAGLE 5 ISS routing tables.

- If the affected point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

- If the affected point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the affected point code to the EAGLE 5 ISS routing tables.

1066 - GWS rcvd TFA, AFTPC not in routing tbl

The EAGLE 5 ISS has received a transfer allowed (TFA) for an affected point code (AFTPC) that does not appear in the EAGLE 5 ISS routing tables. The message was discarded by the gateway screening (GWS) feature.

Example

```
RLGHNCXA21W 00-04-18 19:06:35 EST  EAGLE 31.3.0
0131.1066    CARD 1201,A  INFO   GWS rcvd TFA, AFTPC not in routing tbl

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the affected point code in the message, and verify whether the affected point code is required to be in the EAGLE 5 ISS routing tables.

- If the affected point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

- If the affected point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the affected point code to the EAGLE 5 ISS routing tables.

1067 - GWS rcvd UPU, AFTPC not in routing tbl

The EAGLE 5 ISS has received a user part unavailable (UPU) for an affected point code (AFTPC) which does not appear in the EAGLE 5 ISS routing tables. The message was discarded by gateway screening (GWS).

Example

```
RLGHNCXA21W 00-04-18 19:06:42 EST  EAGLE 31.3.0
0132.1067    CARD 1201,A  INFO   GWS rcvd UPU, AFTPC not in routing

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the affected point code in the message, and verify whether the affected point code is required to be in the EAGLE 5 ISS routing tables.

- If the affected point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

- If the affected point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the affected point code to the EAGLE 5 ISS routing tables.

1068 - GWS rcvd RSP, AFTPC not in Routing tbl

The EAGLE 5 ISS has received a signaling route set test prohibited message (RSP) for an affected point code (AFTPC) which does not appear in the EAGLE 5 ISS routing tables. The message was discarded by gateway screening (GWS).

Example

```
RLGHNCXA21W 00-04-18 19:06:48 EST  EAGLE 31.3.0
0133.1068   CARD 1201,A  INFO   GWS rcvd RSP, AFTPC not in routing tbl

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the affected point code in the message, and verify whether the affected point code is required to be in the EAGLE 5 ISS routing tables.

- If the affected point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

- If the affected point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the affected point code to the EAGLE 5 ISS routing tables.

1070 - SLTC failure: invalid Point Code (OPC)

The signaling link test control has reported an invalid point code in the signaling link test message (SLTM) received from the far end. The point code for the adjacent signaling point does not match the point code in the adjacent point code field in the linkset table.

Example

```
RLGHNCXA21W 00-04-18 19:08:05 EST  EAGLE 31.3.0
0135.1070    CARD 1201,A  INFO   SLTC failure: invalid Point Code
(OPC)SIO=0a   OPC=003-236-000  DPC=000-071-000
LSN=A1234567
```

Legend

DPC
Destination point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter this command to display the linkset names and the adjacent point codes:
   `rtrv-ls`

   Example of the output:

```
RLGHNCXA03W 00-06-10 11:43:04 EST EAGLE 35.0.0
                                L3T SLT              GWS GWS GWS
LSN           APCA   (SS7)  SCRN  SET SET BEI LST LNKS ACT MES DIS
SLSCI NIS
lsa1          240-020-000  none  1   1   no  A   1    off off off
no    off
lsa2          240-030-000  none  1   1   no  A   3    on  on  on
yes   off

Link set table is (114 of 255)  45 % FULL
```

2. The adjacent point code should match the adjacent point code in the message (004-046-000, for example).

   If it does not match, the link is not physically connected to the adjacent node. Determine the correct linkset name and adjacent point code. Use the `ent-ls` command to enter the correct information in the linkset table.

1071 - SLTC failure: invalid SLC

The signaling link test control has reported an invalid signaling link code (SLC) in the signaling link test message (SLTM) received from the far end.

Example

```
RLGHNCXA21W 00-04-18 19:08:13 EST  EAGLE 31.3.0
0136.1071    CARD 1201,A  INFO   SLTC failure: invalid SLC

SLC

Signaling link code

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the far-end to make sure both ends have provisioned the same SLC for the signaling link.

1072 - SLTC failure: no response

The signaling link test control has reported "No Response" received for a signaling link test message (**SLTM**) sent to the far end.

Example

```
tekelecstp 13-07-11 06:06:31 EST   EAGLE5 44.0.4-64.34.24
5757.1072    CARD 4205,B1  INFO    SLTC failure: no response
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the far-end to find out why there is no response to the **SLTM**.

1073 - SLTC failure: bad data pattern

The signaling link test control has detected an invalid data pattern in the signaling link test message (SLTM) received from the far end.

Example

```
RLGHNCXA21W 00-04-18 19:08:28 EST   EAGLE 31.3.0
0138.1073    CARD 1201,A  INFO    SLTC failure:bad data pattern

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the far-end and use your company procedures to test the facilities for the signaling link.

1074 – MSU Arrived on Wrong SM Card

SCCP MSU ended up on an Service Module card, which does not contain the needed RIDB/RTDB table (ELAP, DN, or IMSI).

Format

```
"MSU for xxxx needs ExAP yyyy data"
```

where $xxxx$ = Service Name (LNP, INPQ, INPMR, VFLEX, IDPR, IAR, APORT, GPORT, TATI, ATINPQ, SMSMR, GFLEX, EIR), $ExAP$ = ELAP/EPAP, and $Yyyy$ = IMSI/DN

Example

```
0226.1074    CARD 1101,A1  INFO      MSU for INPMR needs EPAP DN data
               SIO=05   OPC=1-200-2            DPC=3-054-4
               CDPA: AI=05  SSN=006  TT=007
                   ADDR=ABCDEF0123456789ABCDE
               CGPA: AI=14  PC=2-054-2            SSN=022
               DATA=3a e2 38 c7 04 e7 04 35 ae e8 30 e9
                   2e cf 01 00 d0 02 83 01 f2 25 aa 0b
                   84 09 01 00 11 0a 19 49
               LSN=ABCD123
               Report Date:02-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is only informational and MSU will be discarded.

Recovery: Make sure that the EAGLE has the SM card available for the service for which UIM is generated.

1075 - MTP: Link Bypassed SLT Phase

The link has aligned and may be brought into service without a successful signaling link test (SLT).

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST  EAGLE 31.3.0
0140.1075    CARD 1201,A  INFO   MTP: link bypassed SLT phase
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter the `rtrv-slk` command with the card location and port shown in this message (for example, card location 1201, port A).

   Example of the output:

   ```
   tekelecstp 00-02-19 21:17:04 EST EAGLE 35.0.0
   rtrv-slk:loc = 1202:port = a
   Command entered at terminal #3.
   tekelecstp 94-02-19 21:17:04 EST EAGLE 35.0.0
                                         L2T         L1
   PCR  PCR
   LOC  PORT LSN       SLC TYPE     SET  BPS    MODE TSET  ECM
   N1   N2

                   b    1   LIMOCU   1    56000  ---  ---   BASIC ---
   -----
                 1211  a    2   LIMDS0   1    56000  ---  ---   BASIC
   ---  -----
       Link set table is (114 of 255) 45% full.
   ```

3. Enter the `rtrv-slt` command with the `sltset` parameter and the value shown in the SLTSET column from the output of Step 2 to determine whether the signaling link test message is on or off.

4. If the signaling link test message is off, enter the `chg-slt` command with the `sltset` parameter and the value used in Step 3, and the `enabled=on` parameter.

5. If the signaling link test message is on, enter the `rept-stat-card` command to verify the status of the card that contains the specified signaling link.

The status of the card should be IS-NR (In-Service - Normal).

6. If the card is out of service, put it back into service by entering the `rst-card` command.

7. If the fault is not cleared, enter the `rept-stat-slk` command to verify the status of the signaling link.

   The status of the signaling should be IS-NR (In-Service - Normal).

8. If the signaling link is out of service, enter the `act-slk` command to put the signaling link back into service.

9. If the fault is not cleared, enter the `tst-slk` command specifying the signaling link that generated this message.

10. If the fault is not cleared, contact My Oracle Support (MOS).

1076 - SLTC Failure: Invalid Point Code (DPC)

The signaling link test control (SLTC) has detected an invalid data pattern in the signaling link test message (SLTM) received from the adjacent point code.

Example

```
RLGHNCXA21W 00-04-18 19:09:22 EST   EAGLE 31.3.0
0141.1076    CARD 1201,A  INFO   SLTC failure:invalid Point Code (DPC)
ADJ PC=004-046-000   SLC=02      LEN=0f
DATA= 01 02 03 04 05 06 07 08 09 11 12 13 14 15
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the far-end and use local procedures to test the facilities for the signaling link.

1077 - GTT Action TCAP ERROR DISCARDED MSU

This UIM indicates that the TCAP Error Action executed and UIMREQD is ON.

There are two cases in which this alarm is generated:

1. When this GTT Action (DISC, UDTS or TCERR) is provisioned as the main GTT Action for the translation (GTA)

2. When this GTT Action (DISC, UDTS or TCERR) is provisioned as the default action (ENT/CHG-GTTACT:DEFACTID) for some other GTT Action (FWD, DUP, SFTHROT or SCPVAL) that is provisioned for the translation (GTA), and this default action is executed when the main GTT Action fails.

When these DISCARD Actions are executed as main GTT Action for the translation, the output will look like the following example:

Example

```
6053.1077    CARD 1101     INFO    GTT Action TCAP ERROR DISCARDED MSU
             OPC=   1-001-4        DPC=   1-001-5
             CDPA:  NI=0  RI=0  GTI=02  SSNI=1  PCI=1
                    TT=010  NP=--  NAI=---  ADDR=9818316478
                    PC=   1-001-1         SSN=016
             CGPA:  NI=0  RI=0  GTI=02  SSNI=1  PCI=1
                    TT=011  NP=--  NAI=---  ADDR=9910929095
                    PC=   1-002-3         SSN=049
             Op-Code=--- Action Set=tcapset
             Report Date:03-01-03  Time:16:45:01
```

When these DISCARD Actions are executed as the "failure outcome" of the main GTT Action for the translation, this UIM generates an additional line displaying the cause of that main GTT Action failing:

Example

```
tekelecstp 15-12-08 13:55:11 MST  EAGLE5 46.3.0.0.0-66.18.1
6053.1077    CARD 1101     INFO    GTT Action TCAP ERROR DISCARDED MSU
             Cause: SMRPOA-CGPA Digits Mismatch
             OPC=   1-001-4        DPC=   1-001-5
             CDPA:  NI=0  RI=0  GTI=02  SSNI=1  PCI=1
                    TT=010  NP=--  NAI=---  ADDR=9818316478
                    PC=   1-001-1         SSN=016
             CGPA:  NI=0  RI=0  GTI=02  SSNI=1  PCI=1
                    TT=011  NP=--  NAI=---  ADDR=9910929095
                    PC=   1-002-3         SSN=049
             Op-Code=--- Action Set=tcapset
             Report Date:15-12-08  Time:13:55:11
```

Recovery:

- To prevent the MSU from being discarded post-GTT, remove the "TCAP Error" GTT action associated with the GTT translation.

  If you want to suppress this UIM, turn off the UIMREQD option for the given "TCAP ERROR" GTT action.

1078 - GTT Action Duplicate Failed

This UIM indicates that the EAGLE 5 ISS failed to route or prepare Duplicate MSU for the reason indicated in the UIM.

Example

```
6618.1078    CARD 1105     INFO    GTT Action DUPLICATE FAILED
             OPC=   1-001-4        DPC=   001-001-002

Alarm Level: No alarm condition. The message is informational only.

Recovery:

The cause of the error is included as a reason string in the UIM. Refer to the following table for the recovery steps:

Table 3-7   Error Recovery

Cause	Recovery
CDPA GTMOD Failure	CdPA GT Modification failed resulting in Forward action failure.
	Correct the GT Modification data in CDGTMODID associated with the GTT Action.
CGPA GTMOD Failure	CgPA GT Modification failed resulting in Forward action failure.
	Correct the GT Modification data in CGGTMODID associated with the GTT Action.
Encoding Failure	Encoding of forward MSU failed resulting in Forward action failure.
	The True PC for the DPC or EAGLE for destination Network must be configured AND/OR The SCCP data (GTI/SSN) must be corrected such that the message length does not exceed the Maximum MSU length limit.
MAP Lookup Failure	Error in MAP load sharing caused Forward action failure.
	Configure the DPC/SSN displayed in UIM within the MAPSETID associated with GTT Action. OR Configure correct MAP SETID (which contains the DPC/SSN displayed in UIM) in GTT Action entry.
Routing Failure	Error in routing the forward MSU caused Forward action failure.
	The route for DPC must be provisioned and at least one route to the DPC must be available.

Table 3-7   (Cont.) Error Recovery

Cause	Recovery
DFLT GT Conv Failure	Default GT conversion failed while creating Forward MSU.
	Provision correct Default GT Conversion data for successful network conversion of the MSU.
CLG PC Conv fail	Error in conversion of Calling PC.
	Provision correct Conversion data for Calling PC for successful network conversion of the MSU.
Unknown Error	Error in creating Forward MSU for any other reason.
	Correct the data associated with Forward GTT Action.

1079 - GTT Action Forward Failed

This UIM indicates that the EAGLE 5 ISS failed to route or prepare Forward MSU for the reason indicated in the UIM.

Example

```
6618.1079    CARD 1105     INFO    GTT Action FORWARD FAILED
             OPC=   1-001-4       DPC=   001-001-002
             CDPA:  NI=0  RI=0  GTI=02  SSNI=1  PCI=0
                    TT=200  NP=--  NAI=---  ADDR=123456
                    PC=--------------    SSN=005
             CGPA:  NI=0  RI=0  GTI=02  SSNI=0  PCI=1
                    TT=010  NP=--  NAI=---  ADDR=234567
                    PC=--------------    SSN=---
             Op-Code=--- Action Set=aset1
             Cause=CLG PC Conv fail
             Report Date:03-04-27  Time:07:42:09
```

Alarm Level: No alarm condition. The message is informational only.

Recovery:

The cause of the error is included as a reason string in the UIM. Refer to Table 3-8 for the recovery steps.

Table 3-8   Error Recovery

Cause	Recovery
CDPA GTMOD Failure	CdPA GT Modification failed resulting in Forward action failure.
	Correct the GT Modification data in CDGTMODID associated with the GTT Action.

Table 3-8   (Cont.) Error Recovery

Cause	Recovery
CGPA GTMOD Failure	CgPA GT Modification failed resulting in Forward action failure.
	Correct the GT Modification data in CGGTMODID associated with the GTT Action.
Encoding Failure	Encoding of forward MSU failed resulting in Forward action failure.
	The True PC for the DPC or EAGLE for destination Network must be configured AND/OR The SCCP data (GTI/SSN) must be corrected such that the message length does not exceed the Maximum MSU length limit.
MAP Lookup Failure	Error in MAP load sharing caused Forward action failure.
	Configure the DPC/SSN displayed in UIM within the MAPSETID associated with GTT Action. OR Configure correct MAP SETID (which contains the DPC/SSN displayed in UIM) in GTT Action entry.
Routing Failure	Error in routing the forward MSU caused Forward action failure.
	The route for DPC must be provisioned and at least one route to the DPC must be available.
DFLT GT Conv Failure	Default GT conversion failed while creating Forward MSU.
	Provision correct Default GT Conversion data for successful network conversion of the MSU.
CLG PC Conv fail	Error in conversion of Calling PC.
	Provision correct Conversion data for Calling PC for successful network conversion of the MSU.
Unknown Error	Error in creating Forward MSU for any other reason.
	Correct the data associated with Forward GTT Action.

1080 - disk measurement status unreadable

The active MASP could not determine the measurement collection status so that the measurements task could perform routine polling and measurement collection. If the measurement collection status cannot be determined, the routine polling and measurement collection tasks cannot be performed.

Example

```
RLGHNCXA21W 00-04-18 19:10:54 EST  EAGLE 31.3.0
0145.1080    CARD 1116  INFO   disk measurement status unreadable
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter the `rept-meas` command.

   If the `rept-meas` command fails, a system problem is the likely cause.

   a. If any messages are generated with the `rept-meas` command failure, take the appropriate action for that message.

   b. If no messages are generated, contact My Oracle Support (MOS).

2. If the `rept-meas` command is rejected with a system busy message, the disk is reserved by another command (for example, `copy-disk`).

   Check to see if another command is running (`copy-disk` or a `chg-db` command).

1081 - MTP: Changeback T5 Timeout

When a link changes back, the EAGLE 5 ISS sends up to six changeback declaration messages and starts the T4 timer. The EAGLE 5 ISS waits for a changeback acknowledgment message for each of these declarations. If the T4 timer expires before the EAGLE 5 ISS receives an acknowledgment message, the EAGLE 5 ISS sends the changeback declaration message again and starts the T5 timer. If the T5 timer expires before the EAGLE 5 ISS receives an acknowledgment message, this message is generated and the EAGLE 5 ISS restarts traffic on the link.

Example

```
RLGHNCXA21W 00-04-18 19:11:03 EST  EAGLE 31.3.0
0146.1081    CARD 1105, A  INFO   MTP: Changeback T5 timeout
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

The system restarts traffic and no further action is necessary.

1082 - Amem single bit error report

This message indicates that an SCCP, GLSHC, SIP or S13 (DEIR) card encountered a single bit dynamic ram error. This message gives the user a record of single bit errors for the last 24 hours.

Example

```
RLGHNCXA21W 14-05-18 19:12:00 EST  EAGLE 46.0.0
0147.1082    CARD 1101        INFO   Amem single bit error report
Any Errors    :  YES   current hour-------v
24 Hour History:  NNNYNN NNNNNN NNNNYN NYNNNY
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that the error was encountered and corrected.

If many errors are reported then the card may be beginning to fail and should be targeted for replacement in the future.

1083 - REPT COND: system alive

This message is a periodic system message indicating that the system is alive.

Example

```
RLGHNCXA21W 00-04-18 19:12:00 EST  EAGLE 31.3.0
0147.1083    SYSTEM       INFO   REPT COND: system alive
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1084 - GWS MSU discarded by redirect function

This message indicates that an MSU has been discarded rather than redirected to the SCP as part of the Database Transport Access (DTA) feature.

Example

```
RLGHNCXA21W 00-04-18 19:12:00 EST  EAGLE 31.3.0
0003.1084    CARD 1205,A   INFO   GWSMSU discarded by redirect function
SIO=01 OPC=003-237-002 DPC=006-006-000
SR=scrb
LSN=A1234567
```

> **Note:**
>
> Four outputs are possible. The Legend includes abbreviations found in all variations.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Check to see if the redirect function is disabled by entering the following: `rtrv-gws-redirect`

2. If the enabled parameter is set to OFF as in the following output, the redirect function needs to be enabled.

```
RLGHNCXA03W 00-02-10 11:43:04 EST EAGLE 35.0.0
ENABLED DPC RI SSN TT GTA

off 001-030-001 GT 10 25 1800833
```

3. Enter the following command to enable the redirect function: `chg-gws-redirect:enabled=on`

1085 - GWS MSU too large to be redirected

This message indicates that the system tried to encapsulate an MSU for redirection to an SCP (as part of the Database Transport Access feature).

The DTA feature encapsulates the entire data packet including level 2 MTP. Because the DTA feature requires approximately 24 octets, the original packet can contain a maximum of about 248 octets of "user data." If the size of the data is larger, the MSU cannot be redirected and is routed to its original destination.

Example

```
RLGHNCXA21W 00-04-18 19:12:00 EST  EAGLE 31.3.0
0003.1085    CARD 1205,A   INFO   GWSMSU too large to be redirected
SIO=01 OPC=003-237-002 DPC=006-006-000
SR=scrb
LSN=A1234567
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If MSUs are frequently discarded, there may be a problem on the origination end.

   To determine the number of MSUs that are discarded because the MSU is too large to be encapsulated, enter the following command:

   ```
   rept-meas:type=systot:enttype=stp:period=last
   ```

2. Check the DTAMSULOST report in the output message.

   If the number of discarded MSUs is low, no further action is necessary. If large quantities are MSUs are lost, the originating node may need to be reconfigured.

1086 - LFS Test Aborted with OAM Switch Over

The link fault sectionalization (LFS) test aborted with OAM switch over.

Example

```
RLGHNCXA21W 14-05-18 19:11:03 EST  EAGLE 46.0.0
1111.1086 CARD 1115 LFS test terminated with OAM switch over
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1087 - MTP RSTRT rcvd Unexpected User Traffic

This message indicates the system encountered traffic during the MTP restart process.

Example

```
RLGHNCXA21W 00-04-18 19:12:00 EST  EAGLE 31.3.0
0147.1087    CARD 1101     INFO   MTP RSTRT rcvd unexpected user traffic
Report Date:00-03-30      Time:  16:27:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that the error was encountered.

1088 - REPT-MTP-RSTRT MTP Restart Started

This message indicates that a full MTP Restart has begun.

Example

```
RLGHNCXA21W 00-04-18 19:12:00 EST  EAGLE 31.3.0
0147.1088    CARD 1101     INFO   REPT-MTP-RSTRT MTP Restart started
Report Date:00-03-30      Time:  16:27:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that MTP Restart has begun.

1089 - RCVRY-MTP-RSTRT MTP Restart Completed

This message indicates a full MTP Restart is complete.

Example

```
RLGHNCXA21W 00-04-18 19:12:00 EST  EAGLE 31.3.0
0147.1089    CARD 1101    INFO   RCVRY-MTP-RSTRT MTP Restart completed
             Report Date:00-03-30     Time:  16:27:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that MTP Restart is complete.

1090 - ITU GWY:CPC conversion failure

This message indicates a protocol conversion failure. There are three possible reasons for the conversion failure.

- The point code was not in the database.

- The appropriate point code type was unavailable. There is no true point code or alias point code that matches the CPC.

- The database is corrupted. The master database and the card database must be synchronized.

Example

```
station5 00-04-18 19:12:00 EST  EAGLE 31.3.0
0010.1090    CARD 1205,B  INFO  ITU GWY: CPC conversion failure
SIO=0a   OPC=3-236-1  DPC=1-014-2
CPC=3-095-6
LSN=A1234567890
```

Legend

CPC
Capability point code

DPC
Destination point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Check the database to make sure the card database is synchronized with the master database.

Enter the `rept-stat-db:display=except` command. If the databases are not synchronized, reload the card data by initializing the card. If the databases are synchronized, go to Step 2.

2. Enter the `rtrv-dstn:dpc`command.

   If the `rtrv-dstn` command fails, the point code is undefined or the destination point code is an alias and not a true point code.

3. To verify that the point code is an alias, enter the `rtrv-dstn:alias` command.

   If the command succeeds, you must provision the database with the true point code using the `chg-dstn:dpc=xxx:alias=yyy`command.

4. If the point code is not an alias, you must define the point code using the `ent-dstn:dpci=xxx:aliasi=yyy` command.

5. Check translations on the originating switch to determine the trouble.

1091 - ITU GWY:OPC conversion failure

This message indicates a protocol conversion failure. There are three possible reasons for the conversion failure.

- The point code is not in the database.

- The appropriate point code type was unavailable. There is no true point code or alias point code that matches the OPC.

- The database is corrupted.

Example

```
station5 00-04-18 19:12:00 EST  EAGLE 31.3.0
0010.1091    CARD 1205,B  INFO  ITU GWY: OPC conversion failure

Check translations on the originating switch to determine the trouble.

1094 - ITU GWY:Invalid ISUP msg structure

This message indicates that an ISUP parameter or pointer to a parameter was invalid.

Example

```
station5 00-04-18 19:12:00 EST   EAGLE 31.3.0
0110.1094    CARD 1205,B  INFO    ITU GWY:Invalid ISUP msg structure
SIO=0e  OPC=4-013-1      DPC=1-003-0
MSG TYPE=07
LSN=A1234567890
```

Legend

DPC
Destination point code

LSN
Linkset name. The name must be unique.

MSG TYPE
Message type (for example, connection request, connection confirm, connection refused)

OPC
Origination point code

SIO
Service information octet

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that the error was encountered.

1095 - ITU GWY:GRS Buffer Full

This message indicates the circuit group reset (GRS) buffer is full.

Example

```
station5 00-04-18 19:12:00 EST   EAGLE 31.3.0
0110.1095    CARD 1205,B  INFO    ITU GWY:GRS buffer full
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that the error was encountered.

1096 - ITU GWY:RSC Buffer Full

This message indicates the reset circuit (RSC) buffer is full.

Example

```
station5 00-04-18 19:12:00 EST  EAGLE 31.3.0
0110.1096    CARD 1205,B  INFO   ITU GWY: RSC buffer full
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that the error was encountered.

1097 - ITU GWY:CGB Buffer Full

This message indicates the circuit group blocking (CGB) buffer is full.

Example

```
station5 00-04-18 19:12:00 EST  EAGLE 31.3.0
0110.1097    CARD 1205,B  INFO   ITU GWY: CGB buffer full
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that the error was encountered.

1098 - Unexpected Disk Access Timeout

This message is used to determine whether there are problems with the disk access system.

Example

```
station5 00-04-18 19:12:00 EST  EAGLE 31.3.0
0110.1098    CARD 1113    INFO   Unexpected disk access timeout
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

If the target disk is the same CARD that corresponds to the GPSM-II, there is a software timing issue that needs to be addressed.

If the target disk is the mate GPSM-II/TDM or the removable and access is physically impossible, no action is necessary.

1099 - String Data Dump

This is a generic UIM. The informational message in the UIM varies.

Example

```
FTP Transfer Failed due to network congestion
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1100 - GWS rcvd H0/H1 that is not allowed

This message indicates the STP has received an H0/H1 that is not allowed.

Example

```
RLGHNCXA21W 00-04-18 18:59:58 EST EAGLE 31.3.0
0105.1100    CARD 1201,A INFO GWS rcvd H0H1 that is not allowed
             SIO=02   OPC=009-009-009 DPC=006-006-006
             H0H1=01  AFTPC=255-009-009
             SR=osp3  LSN=A1234567
```

Recovery

There is no immediate action needed, but the message indicates that the error was encountered and corrected.

1101 - SDRAM Single Bit Error Report

This message indicates SDRAM memory on HIPR (or IMTPCI) is detecting Single Bit Errors (SBEs). This may be an indication that the card should be replaced (memory becoming faulty) before Multi Bit Errors (MBEs) begin to occur, which results in an OBIT of the card.

Example

```
RLGHNCXA21W 02-07-21 16:20:19 EST EAGLE 35.0
    0024.1101    CARD 1109     INFO      SDRAM single bit error report
                 Any Errors    : YES     current hour------v
                 24 Hour History : NNNYNN NNNNNN NNNNYN NYNNNY
                 Microengine Count : 12345678
                 PCI         Count : 12345678
                 StrongARM   Count : 12345678
                 Report Date:02-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

The card generating the error may need replacement. Refer to the *Maintenance Manual* for card removal/replacement procedures. Contact My Oracle Support (MOS).

1102 - Invalid Length for Map IMEI Parameter

This message indicates that the EIR subsystem received a Check-IMEI message in which the Map IMEI parameter had an invalid length.

Example

```
RLGHNCXA21W 00-04-18 19:00:11 EST EAGLE 31.3.0
0107.1102    CARD 1103,A1 INFO Invalid Length for Map IMEI Parameter

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1104 - IP Connection Failed

Reports that either an attempt to connect to an IP server failed, or that a client socket failed to establish a connection with the system (IP7 Secure Gateway).

Example

```
RLGHNCXA03W 99-04-10 16:28:08 EST EAGLE 35.0.0
0003.1104 DCM 1213,A IP Connection Failed
          RIPADDR = 123.123.123.123
          RPORT = 1314
          LIPADDR = 123.123.123.124
          LPORT = 1315
          SNAME=LONGSOCKETNAME1
          Report Date: 02-04-10 Time: 16:27:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

Reports on connection status can be obtained for each DCM card with the following commands:

```
pass:loc=xxxx:cmd="connmgr -l"
```
displays the connection manager event log.
```
pass:loc=xxxx:cmd="connmgr -c"
```
displays socket client data.
```
pass:loc=xxxx:cmd="connmgr -s"
```
displays socket server data.

1105 - REPT EVT:IMT GPL Reloading

This message indicates the IMT software download procedure is initiated. This is the first message that the system displays.

Example

```
RLGHNCXA21W 00-04-18 18:59:58 EST EAGLE 31.3.0
0105.1105 SYSTEM INFO REPT EVT:IMT GPL reloading
        cards loaded : 1 of 25
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1106 - REPT COND:IMT GPL Reloading

This message displays the progress of the IMT software downloading procedure.

Example

```
RLGHNCXA21W 00-04-18 18:59:58 EST EAGLE 31.3.0
0105.1106 SYSTEM INFO REPT COND:IMT GPL reloading
        cards loaded : 10 of 25
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1107 - SCCP XUDT (S) msg: Hop Counter violation

This message indicates that the incoming MSU has a Hop counter value of zero or greater than 15 and the F bit in the segmentation parameter is not set. An XUDTS error response is generated and sent to the originating node. The message is discarded.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST  EAGLE 37.5.0

Alarm Level: No alarm condition. The message is informational only.

Recovery

The sender of the discarded message is using an invalid message format.

If there is only one occurrence, no action is necessary. However, if the condition continues, there may be a problem at the node that is sending the invalid message. Contact that node and inform them of the problem.

1108 - SCCP XUDT (S) msg: inv opt portion len

This message indicates that the incoming MSU has an invalid length in the optional portion (optional parameter length exceeding the MSU length or no end of optional parameters octet). The message is discarded.

Example

```
RLGHNCXA21W 00-04-18 19:02:05 EST EAGLE 31.3.0
0112.1108 CARD 1103,A1 INFO SCCP XUDT (S) msg: inv opt portion len

Screening reference name

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify the affected point code in the message, and verify whether the affected point code is required to be in the EAGLE 5 ISS routing tables.

2. If the affected point code is not required to be in the EAGLE 5 ISS routing tables, no further action is necessary.

3. If the affected point code is required to be in the EAGLE 5 ISS routing table, use the `ent-dstn` command to add the affected point code to the EAGLE 5 ISS routing tables.

1114 - Database BACKUP Started

A local database backup is beginning. This UIM follows the issue of the `chg-db:action=backup` command.

Example

```
RLGHNCXA21W 00-06-18 19:12:00 EST EAGLE 31.3.0
0147.1114 CARD 1201,A INFO Database BACKUP started
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1115 - Database RESTORE Started

A local database restore is beginning. This UIM follows the issue of the `chg-db:action=restore` command.

Example

```
RLGHNCXA21W 00-06-18 19:12:00 EST EAGLE 31.3.0
0147.1115 CARD 1201,A INFO Database RESTORE started
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1116 - Database Action Ended - OK

A local database backup or restore has successfully completed. This UIM follows the issue of the `chg-db` command.

Example

```
RLGHNCXA21W 00-06-18 19:12:00 EST EAGLE 31.3.0
0147.1116 CARD 1201,A INFO Database action ended - OK
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1117 - Database action ended - FAIL

This error message indicates that one or more cards specified in the `init-flash`/`act-flash` command is out of phase with the command.

Example

```
RLGHNCXA21W 00-06-18 19:12:00 EST EAGLE 31.3.0
0147.1117 CARD 1201,A INFO Database action ended - FAILED
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1118 - TOD change affects MEAS collection

This message indicates that due to a time change, the measurements in a specific period may be inaccurate.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    0020.1118    CARD 1106    INFO        TOD change affects MEAS
collection
                    Report Date:02-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1119 - Cards out of phase with flash procedure

This message indicates that the collection sequence has been disrupted and the 60-minute and/or 30-minute data may be inaccurate.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
0020.1119    CARD 1115    INFO        Cards out of phase with flash
procedure
                                    Card List: 1101, 1201,
1302, 2103, 2204, ... (2 others)
                    Report Date:02-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1120 - TRBL Queue is full:elements overwritten

This message indicates that too many **UIMs** per second are being output. One or more might be lost.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1120 CARD 1113 INFO RBL Queue is full;elements overwritten
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1121 - LNP rcvd query from unknown CGPA PC

The LNP query receives a calling party point code that is not in the routing table. The system LNP subsystem normally sends a response back to the calling party PC in the query. The system did not respond to this query.

Example

```
RLGHNCXA21W 00-04-18 19:00:11 EST EAGLE 31.3.0
0107.1121 CARD 1103,A1 INFO LNP rcvd query from unknown CGPA PC

Alarm Level: No alarm condition. The message is informational only.

Recovery

Provision a route to the Calling Party Point Code using the `ent-dstn` and `ent-rte` commands.

1122 - LNP rcvd query with undefined TT/SERV

The LNP Query Subsystem received a message with an undefined Service. The Called Party Translation type in the incoming message determines the format of the MSU. This UIM can be issued when there is no LNP Service associated with the Translation Type of this MSU.

If the Translation Type of the MSU is provisioned as a Translation Type for LNPQS Service, the Eagle attempts to determine the actual LNP Service for this message by examining the OP CODE value. If the OP CODE does not match any supported by the Eagle Service (IN, AIN, IS-41), this UIM is issued.

This UIM can also be issued as a result of an error response from an end office because the Eagle LNP database response returned an LRN that was not provisioned in the end office.

Trace tools and/or the hex dump in the UIM can be used to determine the TCAP information. Note that the GTT data is not contained in the SCCP layer because the Eagle does not return this information in the LNP response to the end office.

Example

```
RLGHNCXA21W 00-04-18 19:00:11 EST EAGLE 31.3.0
0107.1122 CARD 1103,A1 INFO LNP rcvd query with undefined TT/SERV

TT
Translation type

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If the IN, AIN, IS-41, PCS 1900, or LNPQS LNP Query translation type has not been provisioned, it needs to be provisioned using the `ent-lnp-serv` command.

   If any of the above LNP Query Translation Types has not been provisioned, it can be changed using the `chg-lnp-serv` command.

2. If the Translation Type has been provisioned correctly, an SSP node in the network is using the wrong Translation Type or an invalid query.

1123 - LNP rcvd query with Message Relay TT

The LNP Query Subsystem received a message with a Translation Type reserved for Message Relay. This happens if another node sent a message to the system for Message Relay with the routing indicator set to rt-on-ssn and ssn set to system's LNP subsystem.

Example

```
RLGHNCXA21W 00-04-18 19:00:11 EST EAGLE 31.3.0
0107.1123 CARD 1103,A1 INFO LNP rcvd query with Message Relay TT

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1130 - IS412GSM not provisioned

The GSMOPTS: IS412GSM digits have not been provisioned.

To be able to perform the IS-41 GSM Migration feature and to accept LOCREQ Request messages, first specify the IS412GSM prefix in GSMOPTS.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 08-01-13 16:20:19 EST   EAGLE 37.5.0
0712.1130    CARD 1105     INFO    IS412GSM not provisioned
             SIO=83   OPC=   00100          DPC=    00456

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter the `rtrv-gsmopts` command to display the IS412GSM setting in the GSM System Options.

   Example of the output:

```
rlghncxa03w 03-05-20 09:04:14 EST   EAGLE 30.1.0
    GSM OPTIONS
    -----------------------
    DEFMCC       = NONE
    DEFMNC       = NONE
    SRFADDR      = 123456789abcdef
    MSRNDIG      = RN
    DEFMAPVR     = 1
    SRIDN        = TCAP
    IS412GSM     = 0123456789abcde

    rlghncxa03w 03-03-20 09:04:14 EST   EAGLE 30.1.0
    SRFADDR=123456789abcdef     SRFNAI=7     SRFNP=15
    MSRNDIG=CCRNDN
    MSRNNAI=7     MSRNNP=15 DEFMAPVR=2
```

   This example shows a setting supporting the IS-41 LOC Request message.

   If the IS412GSM parameter is not specified, proceed to Step 2. However, if it is set with a valid value, proceed to Step 3.

2. Use the `chg-gsmopts` command to specify the IS-41 to GSM migration prefix.

   Refer to the *Commands Manual* for details. Then re-issue the command that caused this UIM.

3. If the problem persists with the IS412GSM parameter specified, contact My Oracle Support (MOS).

1131 - Invalid Digits in IS41 MAP Digits Parm

A LOC Request message contained invalid data and will be passed to the GTT. G-Port determined a received Location Request message had invalid data in the called party number parameter fields. The verified fields must contain:

- Digits: from 5 to 21 digits

- Encoding scheme: BCD

- Numbering plan: Telephony

Example

```
RLGHNCXA21W 00-04-18 19:02:05 EST EAGLE 31.3.0

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1132 - SLAN DLK ping test completed

This message indicates that the manual TCP/IP ping test has completed. The ping test is initiated by the `tst-dlk` command.

Example

```
RLGHNCXA21W 00-06-18 19:12:00 EST EAGLE 31.3.0
0147.1132 CARD 1201 INFO SLAN DLK ping test completed.
TESTS REQUESTED= 0 PASSED COUNT=0 FAILED COUNT =00
AVR RND TRIP=0 MAX RND TRIP=06 MIN RND TRIP=0 HOST IPADDR =194.4.201.50
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If the test passes with FAILED COUNT = 00, no further action is necessary.

2. If the test fails:

    a. confirm that IP addresses are correct

    b. confirm with the end user that their equipment and software is up and functioning properly

    c. have the end user check their network and their cable connections

    d.   check the cable connections at the EAGLE 5 ISS

    e.   Contact My Oracle Support (MOS).

1133 - Diameter msg decode failed

This message indicates that the Diameter message parsing has failed. This may be cause by:

- ECR Message does not have IMEI AVP or a value in IMEI AVP

- CER Message does not have mandatory AVP present

- DPR message received does not have disconnect cause AVP present

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    xxxx.1133    CARD 1103,B    INFO     Diameter msg decode failed

                       Origin Host=---
                       Error Cause=---
```

Alarm Level: No alarm condition. The message is informational only.

1136 - Invalid Diameter Msg length

This message indicates one of the following conditions:

1. The total Diameter message length specified in the diameter header does not match the actual diameter message length.

2. The diameter message length is greater than the maximum length of 448 bytes supported by current EIR S13/S13's implementation.

Example

```
123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    xxxx.1136      CARD 1101,B INFO      Invalid Diameter Msg length
                   DCNAME= dcon1

                   Command Code=  (R)           AVP Code=
                   Origin Host=---
                   Error Cause=AVP Decode Error
```

Alarm Level: No alarm condition. The message is informational only.

1138 - Connection Refused

This message indicates that the Origin host and Origin Realm AVPs in the CER message does not match the host and real values provisioned in the IPAPSOCK table. The Source IP Address of the CER does not match the IP Address present in the Host-IP-Address AVP. This may be cause by:

- Origin Host Mismatch
- Origin Realm Mismatch
- IP Address Mismatch
- No common Application

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
xxxx.1138    CARD 1101,B INFO     Connection Refused

             Command Code=  (R)
             Origin Realm=aricent.com
             Error Cause=Origin Realm Mismatch
```

Alarm Level: No alarm condition. The message is informational only.

1139 - DEIROPTS: DEIR Global Response is ON

This message indicates that the DEIR Global response is ON.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
6056.1139    CARD 1115    INFO    DEIROPTS: DEIR Global Response
is ON
```

Alarm Level: No alarm condition. The message is informational only.

1140 - DEIROPTS: DEIR Global Response is OFF

This message indicates that the DEIR Global response is OFF.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
6056.1140    CARD 1115    INFO    DEIROPTS: DEIR Global Response
is OFF
```

Alarm Level: No alarm condition. The message is informational only.

1141 - AIN INP Qry Rejected: AINPQ is OFF

The EAGLE 5 ISS has rejected an ANSI INP query that is decoded as an AIN query because the appropriate AINPQ (ANSI INP Query) feature key is not on.

Example

```
6812.1141    CARD 1103     INFO    AIN INP Qry rejected: AINPQ is OFF
                 TRANSLATED PC= 001-001-001        TRANSLATED SS=002
                 CDPA:  NI=0  RI=0  GTI=02  SSNI=1  PCI=1
                        TT=006  NP=--  NAI=---  ADDR=234567
                        PC=   003-003-001    SSN=002
                 CGPA:  NI=0  RI=1  GTI=00  SSNI=1  PCI=1
                        PC=   002-002-001    SSN=002
                 LSN=ls221
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If you want to support the AINPQ feature, issue the following commands to process ANSI AIN queries: enable-ctrl-feat:partnum:893017801:fak=<ANSI-41 INP Query FAK>

2. Enter chg-ctrl-feat:partnum:893017801:status=on command.

3. If you do not want to support the AINPQ feature, ignore this informational message.

4. For additional information or assistance about the AINPQ or any feature to purchase, contact My Oracle Support (MOS).

1142 - GWS Strip Stop Action Failed

GWS Strip stop action has failed to de-encapsulate the MSU.

Example

```
6812.1142    CARD 1103     INFO     GWS Strip Stop Action Failed
                 Report Date:13-10-10  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Send the redirected MSU for the STRIP action to be applied.

2. Verify that the filtering criteria of the 'STRIP' action matches the parameters encoded by REDIRECT stop action.

1143 - GTT(FLOBR) failure: duplicate settype

This message indicates that any one of the MBR GTT Settypes (IMSI\MSISDN\VLRnb\SMRPOA\SMRPDA) is found twice in the FLOBR search path, and the fallback is set to "NO" in the last matched translation. This results in GTT failure.

Example

```
   0018.1143    CARD 1103     INFO     GTT(FLOBR) failure: duplicate
settype
```

```
                         SIO=03 OPC=4-123-5 DPC=6-018-7
                  CDPA:  NI=1  RI=0  GTI=04  SSNI=0  PCI=1
                         TT=25   NP=04  NAI=010
ADDR=123456789012345678901
                         PC=3-026-5            SSN=005
                  CGPA:  NI=1  RI=0  GTI=04  SSNI=0  PCI=1
                         TT=100  NP=07  NAI=012
ADDR=012345678901234567890
                         PC=-----------        SSN=004
                         LSN=ls2314n2 GTTSETIDX=211 215
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- Update the FLOBR GTT search path configuration via the `chg-gta` command so that the same MBR GTT settype is not encountered in the search path again.

1144 - GTT(FLOBR) warning: duplicate settype

This message indicates that any one of the MBR GTT Settypes (IMSI\MSISDN\VLRnb\SMRPOA\SMRPDA) is found twice in the FLOBR search path, and the fallback is set to "Yes" in the last matched translation. GTT is then performed on the basis of the last matched translation. This is a successful scenario.

Example

```
   0028.1144     CARD 1103     INFO      GTT(FLOBR) warning: duplicate
settype
                  SIO=03 OPC=4-123-5 DPC=6-018-7
                  CDPA:  NI=1  RI=0  GTI=04  SSNI=0  PCI=1
                         TT=25   NP=04  NAI=010
ADDR=123456789012345678901
                         PC=3-026-5            SSN=005
                  CGPA:  NI=1  RI=0  GTI=04  SSNI=0  PCI=1
                         TT=100  NP=07  NAI=012
ADDR=012345678901234567890
                         PC=-----------        SSN=004
                         LSN=ls2314n2 GTTSETIDX=211 215
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- Update the FLOBR GTT search path configuration via the `chg-gta` command so that the same MBR GTT settype is not encountered in the search path again.

1145 - MBR decoding failed

This message indicates that there is a problem with decoding the TCAP portion of the incoming MSU. The UIM information displays the error reason and the parameter value. The GTT will be performed on the basis of the "fallback" value set in the last matched translation.

Example

```
0018.1145    CARD 1103     INFO      MBR decoding failed
                 Reason= MSISDN decoding failed (Extension bit is zero)

0147.1147 CARD 1201,A INFO MTP Invalid TFA received
```

```
        OPC=001-001-001 CPC=002-002-002
        LSN=lsn01a
```

Legend

CPC
Capability point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

Alarm Level: No alarm condition. The message is informational only.

Recovery

Notify the craftsperson at the adjacent node of this error.

1148 - MTP Invalid TFR received

This message indicates the network elements of an adjacent node have not been configured properly.

Example

```
RLGHNCXA21W 00-06-18 19:12:00 EST EAGLE 31.3.0
0147.1148 CARD 1201,A INFO MTP Invalid TFR received
        OPC=001-001-001 CPC=002-002-002
        LSN=lsn01a
```

Legend

CPC
Capability point code

LSN
Linkset name. The name must be unique.

OPC
Origination point code

Alarm Level: No alarm condition. The message is informational only.

Recovery

Notify the craftsperson at the adjacent node of this error.

1149 - SLK Level-3 T19 Timer Expired

The link has been down for 5 minutes or the timer T19 has timed out.

Example

```
RLGHNCXA21W 00-06-18 19:12:00 EST EAGLE 31.3.0
0147.1149    CARD 1201,A INFO SLK Level-3 T19 timer expired
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Activate measurements using the `chg-meas:collect=on` command.

   This starts measurements collection.

2. If the link is placed OOS-MT, use the measurements collected over the appropriate time period to determine the cause, and determine which action is now necessary.

> **✎ Note:**
>
> Refer to the *Measurements Manual* for traffic measurements information.

1150 - SLK Inhibit Denied

The request to inhibit the link has been denied.

Example

- The following is an example of an error occurring at the near end.

```
RLGHNCXA21W 03-12-22 21:49:03 EST EAGLE 40.1
7271.1150    CARD 1202,A   INFO    SLK Inhibit denied
             Source:  Local
             Reason:  Only one link available in the linkset
Report Date:03-12-22  Time:21:49:03
```

- The following is an example of an error occurring at the far end.

```
RLGHNCXA21W 03-12-22 21:49:03 EST EAGLE 40.1
7271.1150    CARD 1202,A   INFO    SLK Inhibit denied
             Source:  Remote
             Reason:  Unknown
Report Date:03-12-22  Time:21:49:03
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- If denied locally, inhibiting the link would cause the far end to prohibit the point code. If remotely denied, contact the far-end office to determine the cause and to correct the problem.

1151 - SLK Inhibit Response Timeout

The system has sent a link inhibit request, but no inhibit acknowledge was received.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1151    CARD 1205,A nc00027 SLK Inhibit Response Timeout
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Try the inhibit command again.

If still unsuccessful, contact the far-end office and verify the status.

1152 - SLK Uninhibit Denied

The far end has denied the craftsperson's request to uninhibit the link.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1152    CARD 1205,A nc00027 SLK Uninhibit Denied
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the far end office to determine why this was denied.

1153 - SLK Uninhibit Response Timeout

An uninhibit request was sent, but an uninhibit acknowledge was not received.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1153    CARD 1205,A nc00027 SLK Uninhibit Response Timeout
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Try the uninhibit request again.

If still unsuccessful, contact the far-end.

ORACLE

1154 - MSU received threshold exceeded

This UIM is produced by the OAM. It is produced whenever the cumulative count of MSUs received due to gateway screening on a given linkset exceeds the specified GWS activity threshold (MSU_recvd_threshold) within a specified time period.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1154    SYSTEM   INFO   MSU-received threshold exceeded
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

1155 - MSU-rejected threshold exceeded

This UIM is produced by the OAM. It is produced whenever the cumulative count of MSUs discarded due to gateway screening on a given linkset exceeds the specified GWS activity threshold (MSU_reject_threshold) within a specified time period.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1155    SYSTEM   INFO   MSU-rejected threshold exceeded
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

1156 - Minor congestion event detected

This message is issued when a HIPR2 card detects a minor congestion event. A congestion event is one 10 millisecond time slice that exceeds the specified bus utilization for that time slice on a segment as detected by the HIPR2.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST EAGLE 41.1.0
    0023.1156    CARD 1109    INFO    Minor congestion event detected
              Report Date:09-02-07  Time:12:01:43
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Although no action is required, the message can serve as a notification that this particular section of the IMT bus is reaching its saturation.

Contact My Oracle Support (MOS) for more information.

1157 - Major congestion event detected

This message is issued whenever a HIPR2 card detects a major congestion event. A congestion event is one 10 millisecond time slice that exceeds the specified bus utilization for that time slice on that segment.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST EAGLE 41.1.0
    0023.1157    CARD 1109    INFO    Major congestion event detected
                Report Date:09-02-07  Time:12:01:43
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Although no action is required, the message can serve as a notification that this particular section of the IMT bus is reaching its saturation.

Contact My Oracle Support (MOS) for more information.

1158 - Minor HIPR2 switching capacity reached

This message is issued when the minor switching rate is observed by the HIPR2 card. This rate is a measure of the switching capacity of the HIPR2 card.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST EAGLE 41.1.0
    0023.1158    CARD 1109    INFO    Minor HIPR2 switching capacity
reached
                Report Date:09-02-07  Time:12:01:43
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact My Oracle Support (MOS).

1159 - Major HIPR2 switching capacity reached

This message is issued when the major switching rate is observed by the HIPR2 card. This rate is a measure of the switching capacity of the HIPR2 card.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST EAGLE 41.1.0
    0023.1159    CARD 1109    INFO    Major HIPR2 switching capacity
reached
                Report Date:09-02-07  Time:12:01:43
```

Alarm Level: No alarm condition. The message is informational only.

ORACLE

Recovery

Contact My Oracle Support (MOS).

1160 - GWS rcvd ISUP that is not allowed

This message indicates gateway screening (GWS) has discarded an MSU because the ISUP is listed as one that is not allowed in this network.

Example

```
RLGHNCXA21W 00-04-18 18:59:58 EST EAGLE 31.3.0
0105.1160   CARD 1205,A INFO GWS rcvd ISUP that is not allowed
            SIO=0a OPC=003-247-000 DPC=002-000-000
            DATA=12 34 56 78 90 12 34 56 78 90 12 34
                     56 78 90 12 34 56 78 90 12 34 56 78
            SR=scrb LSN=A1234567
```

SR
Screening reference name

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This indicates that a MSU was discarded because it failed screening.

   No action is necessary, unless the MSU should have passed. If the MSU should have passed (verified by the fields displayed in the above message), go to Step 2.

2. Using the `rtrv-scr-sio` command, verify that the screening reference specified in the above message does not allow MSUs with the priority value indicated.

3. If the MSU should have passed screening, use the `chg-scr-sio` command to add the pri data to the screening reference.

1161 - GWS rcvd nonSNM DESTFLD screening msg

This message indicates gateway screening (GWS) received a message that is not a MTP network management message. Affected Destination (DESTFLD) screening makes sense only for MTP Network Management (SNM) messages. When a non-SNM message is screened for Affected Destination, it is forced to pass screening and this message is generated.

Example

```
RLGHNCXA21W 00-04-18 18:59:58 EST EAGLE 31.3.0
0105.1161 CARD 1103,A INFO GWS rcvd ISUP nonSNM DESTFLD screening msg

No further action is necessary.

1162 - GWS rcvd nonSCCP CGPA/CDPA Screen Msg

This message indicates that a message that was not a SCCP message passed CGPA/CDPA screening. CDPA orCGPA screening makes sense only for SCCP messages. When a non-SCCP message is screened for CDPA or CGPA, it is forced to pass screening and this message is generated.

Example

```
RLGHNCXA21W 00-04-18 18:59:58 EST EAGLE 31.3.0
0105.1162 CARD 1103,A INFO GWS rcvd nonSCCP CGPA/CDPA screen msg

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

1163 - GWS rcvd invalid GTI in TT screening

This message indicates that a message that was not a SCCP message or an SCCP message that does not contain a TT passed the Allowed TT screening. Allowed TT screening makes sense only for SCCP messages that contain TT. When a non-SCCP message or a SCCP message that does not contain a TT is screened for Allowed TT, it is forced to pass screening and this message is generated.

Example

```
RLGHNCXA21W 00-04-18 18:59:58 EST EAGLE 31.3.0

                 Report Date:10-10-12  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1169 - SCCP rcvd inv TCAP portion

SCCP received a message with a Transaction Capabilities Application Part (TCAP) that is unsupported or not valid.This UIM can be generated by features LNP MR or GSM MAP Screening as defined in the following table.

Table 3-11   Feature Settings

LNP MR	GSM Map Screening	Description
On	Off	SCCP discarded a message. No action is necessary.
Off	On	GSM MAP Screening does not discard the MSU. The action provisioned in the GSMDECERR parameter in the STPOPTS table is performed. No action is necessary.

Table 3-11 (Cont.) Feature Settings

LNP MR	GSM Map Screening	Description
On	On	The TCAP Package Type from the DATA portion of the UIM must be decoded to determine which feature generated the message. • If ANSI TCAP (IS41), then LNP MR generated the message. See the LNP MR description above. • If ITU TCAP (GSM), then GSM MAP Screening generated the message. See the GSM MAP screening description above.

Alarm Level: No alarm condition. The message is informational only.

Recovery

Perform one of the following actions:

- Enable the proper Discard CGPA PC STP Option, based on the network type of the incoming message.
Refer to the *Database Administration Manual - Global Title Translation* for details.

  OR

- Add the proper alias for the Calling Party Point Code corresponding to the destination network.
Refer to the *Database Administration Manual - Global Title Translation* for details.

1180 - Conversion Discard: Aft. PC alias undefined

An SCCP MSU contained an undefined affected point code alias. The message was discarded.

Example

```
RLGHNCXA21W 00-04-18 19:04:15 EST  EAGLE 31.3.0

1185 - GTI input clock anomalies detected

This message indicates additional high speed clock diagnostic data is available although the high speed clocks are valid.

Example

```
RLGHNCXA21W 03-01-06 13:46:23 EST  EAGLE 35.0.0
0379.1185    CARD 1113    INFO    GTI input clock anomalies detected
             Reporting TDM Location       : 1114
             GTI Clock Status Register    : H'0021
             Primary LIU Violation Count  :  56
             Secondary LIU Violation Count : 129
             GTI Status Register          : H'0022
             Report Date:03-01-05  Time:13:46:25
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1186 - Meas data load failure: old version

This message can be generated if the primary MCP is running an older version of the GPL than the secondary MCP. This could possibly occur in an upgrade failure or upgrade back out procedure.

Example

```
 RLGHNCXA21W 02-07-21  16:20:19  EST EAGLE 31.3.0
 0002.1186    CARD 1103    INFO    Meas data load failure: old
```

```
version
                    Report Date:02-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Boot the primary and/or secondary MCPs with the approved GPL version of the system release.

1187 - Table Checksum Mismatch

This message indicates additional diagnostic information in the event of a GPL or a specific table corruption alarm. Whenever a GPL corruption alarm (UAM 0040) is raised during the GPL Audit or a subset data corruption alarm (UIM 1188) is raised during static data Audit, this UIM 1187 is also output to provide the Table ID, Reference Checksum, and Calculated Checksum of the GPL or the specific tablein question.

Example

```
RLGHNCXA21W 07-01-06 13:46:23 EST  EAGLE 41.0.0
0014.1187    CARD 1113     INFO     Table Checksum Mismatch
             TBL ID = 136  CALC CHKSUM=H'B7C0   REF CHKSUM=H'4A5F
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Refer to the recovery procedure for the appropriate UAM that accompanied this alarm.

1188 - DB Subset Checksum Mismatch

This message indicates additional diagnostic information in the event of DB corruption alarm (UAM 35, 38, or 427). Whenever a DB corruption is detected during the DB audit, this UIM 1188 is also output to provide the Table ID, Reference Checksum, and Calculated Checksum of the DB Subset in question.

Example

```
RLGHNCXA21W 03-01-06 13:46:23 EST  EAGLE 35.0.0
0008.1188    CARD 1113     INFO     DB Subset Checksum Mismatch
             SUBSET = 3  CALC CHKSUM = H'abcd  REF CHKSUM = H'
         Report Date:03-01-06  Time:13:46:25
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Refer to the recovery procedure for the appropriate UAM that accompanied this alarm.

1189 - SCCP did not Route - DPC not in RTE Table

SCCP did not route a message because the destination point code (DPC) is not in the route (RTE) table. The message was discarded.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST  EAGLE 37.5.0

> **Note:**
>
> If Global Title Translation is found, the GTTSET in which the translation is found appears. If Global Title Translation is not found, the GTTSET does not display.

Alarm Level: No alarm condition. The message is informational only.

Recovery

Check the absence of the DPC in the Routing table by entering the appropriate DPC type (DPCA, DPCN, DPCN24, whichever is applicable).

For example: `rtrv-rte:dpc=<ni-nc-ncm>`

• If routing to this destination is required, provision the Routing table.

See Configuring Destination Tables - Adding a Destination Point Code in the *Database Administration Manual - SS7*

- If routing to this destination is not required, remove the destination point code from the Routing table.
See Configuring Destination Tables - Removing a Destination Point Code in the *Database Administration Manual - SS7*.

1190 - SCCP rcvd inv Clg Party - bad GT ind

The SCCP received a message from the network that was discarded because of a bad global title indicator in the calling party address and that GTT on CGPA is required.

> ✎ **Note:**
>
> If Global Title Translation is found, the GTTSET in which the translation is found appears. If Global Title Translation is not found, the GTTSET does not display.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. This UIM indicates that Enhanced GTT was attempted, but the GTT selectors lookup failed.

   GTT selectors are GTI & TT (along with NP & NAI for ITUMSUs with GTI=4). If this MSU should have been routed, continue to 2.

2. Use the following command to check whether GTT selectors in the arrived MSU are provisioned in the GTTSEL table:`rtrv=gttsel`

3. If the GTTSEL table does not have an entry with the GTT selectors in the arrived MSU, use the following command to add a record with the GTT selectors in the arrived MSU to the GTTSEL table.`ent-gttsel`

1192 - GTT Action UDTS DISCARDED MSU

GTT is found with a UDTS action.

There are two cases in which this alarm is generated:

1. When this GTT Action (DISC, UDTS or TCERR) is provisioned as the main GTT Action for the translation (GTA)

2. When this GTT Action (DISC, UDTS or TCERR) is provisioned as the default action (ENT/CHG-GTTACT:DEFACTID) for some other GTT Action (FWD, DUP, SFTHROT or SCPVAL) that is provisioned for the translation (GTA), and this default action is executed when the main GTT Action fails.

When these DISCARD Actions are executed as main GTT Action for the translation, the output will look like the following example:

Example

```
8878.1192     CARD 1101     INFO     GTT Action UDTS DISCARDED MSU
              OPC=    7-112-0         DPC=    1-001-0
              CDPA:  NI=0  RI=0  GTI=04  SSNI=1  PCI=0
                     TT=111  NP=01  NAI=002  ADDR=123456
                     PC=--------------     SSN=006
              CGPA:  NI=0  RI=1  GTI=02  SSNI=1  PCI=1
                     TT=017  NP=--  NAI=---  ADDR=999997999999990999999
                     PC=    7-112-0         SSN=008
              SMRPOA: NP=1     NON=5     ADDR=55566677770000
              LSN=ls711200  Op-Code= 46  GTT Action Set=scpval1
              Report Date:02-12-09  Time:01:22:05
```

When these DISCARD Actions are executed as the "failure outcome" of the main GTT Action for the translation, this UIM generates an additional line displaying the cause of that main GTT Action failing:

Example

```
tekelecstp 15-12-08 13:55:11 MST  EAGLE5 46.3.0.0.0-66.18.1
8878.1192     CARD 1101     INFO     GTT Action UDTS DISCARDED MSU
              Cause: SMRPOA-CGPA Digits Mismatch
              OPC=    7-112-0         DPC=    1-001-0
              CDPA:  NI=0  RI=0  GTI=04  SSNI=1  PCI=0
                     TT=111  NP=01  NAI=002  ADDR=123456
                     PC=--------------     SSN=006
```

> If Global Title Translation is found, the GTTSET in which the translation is found appears. If Global Title Translation is not found, the GTTSET does not display.

Alarm Level: No alarm condition. The message is informational only.

Recovery

To prevent the MSU from being discarded post-GTT, remove the "UDTS" GTT action associated with the GTT translation. If you want to suppress this UIM, turn off the UIMREQD option for the given "UDTS" GTT action.

1193 - GTT Action DISCARD DISCARDED MSU

GTT is found with a DISCARD action.

There are two cases in which this alarm is generated:

1. When this GTT Action (DISC, UDTS or TCERR) is provisioned as the main GTT Action for the translation (GTA)

2. When this GTT Action (DISC, UDTS or TCERR) is provisioned as the default action (ENT/CHG-GTTACT:DEFACTID) for some other GTT Action (FWD, DUP, SFTHROT or SCPVAL) that is provisioned for the translation (GTA), and this default action is executed when the main GTT Action fails.

When these DISCARD Actions are executed as main GTT Action for the translation, the output will look like the following example:

Example

```
8872.1193    CARD 1101      INFO    GTT Action DISCARD DISCARDED MSU
             OPC=   1-202-1        DPC=    1-202-4
             CDPA:  NI=0  RI=0  GTI=02  SSNI=1  PCI=1
                    TT=010  NP=--  NAI=---  ADDR=9818316478
                    PC=   3-003-3        SSN=241
             CGPA:  NI=0  RI=1  GTI=04  SSNI=0  PCI=1
                    TT=000  NP=01  NAI=000  ADDR=00
                    PC=   1-202-1        SSN=---
             Op-Code=--- Action Set=disc1
             Report Date:02-12-09  Time:01:20:45
```

When these DISCARD Actions are executed as the "failure outcome" of the main GTT Action for the translation, this UIM generates an additional line displaying the cause of that main GTT Action failing:

Example

```
tekelecstp 15-12-08 13:55:11 MST  EAGLE5 46.3.0.0.0-66.18.1
8872.1193   CARD 1101     INFO    GTT Action DISCARD DISCARDED MSU
            Cause: SMRPOA-CGPA Digits Mismatch

>
> If Global Title Translation is found, the GTTSET in which the translation is found appears. If Global Title Translation is not found, the GTTSET does not display.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

- To prevent the MSU from being discarded post-GTT, disassociate the "DISCARD" GTT action from the GTT translation.

  If you want to suppress this UIM, turn off the UIMREQD option for the given "DISCARD" GTT action.

1194 - IP Connection Refused, RHOST Mismatch

This message indicates that an association in MATCH validation mode cannot be established due to mismatch in configured RHOST or ARHOST with the INIT message contents.

Example

```
station1234 09-09-21 16:28:08 EST Rel 41.0.0-62.6.0
0003.1194    CARD 1213,A   INFO     IP Connection Refused, RHOST
mismatch
                RIPADDR = 123.123.123.123
                RPORT   = 1314
                LIPADDR = 123.123.123.124
                LPORT   = 1315
                SNAME   = LONGSOCKETNAME1
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Check ARHOST provisioning.

Reports on connection status can be obtained for each DCM card with the following commands:

`pass:loc=xxxx:cmd="connmgr -l"` displays the connection manager event log.

`pass:loc=xxxx:cmd="connmgr -c"` displays socket client data.

`pass:loc=xxxx:cmd="connmgr -s"` displays socket server data.

1195 - SCCP did not route - DPC/SS not in mapset

The SCCP did not route a message because the destination point code and destination subsystem was not in the mapset. The message was discarded.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST  EAGLE 37.5.0
0018.1195    CARD 1103,A     INFO    SCCP did not route - DPC/SS not in

>
> If Global Title Translation is found, the GTTSET in which the translation is found appears. If Global Title Translation is not found, the GTTSET does not display.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If the DPC/SS indicated in the message should not be routed to, no further action is necessary.

2. If the DPC/SS should be routed to from the EAGLE 5 ISS, use the `ent-map` command to enter the DPC/SS into the mapset (obtained as outcome of GT translation, with which load sharing is desired) in the MAP table.

1196 - IP Connection Congestion Timeout

This UIM indicates an M3UA or SUA association on the IPGWx GPL has been congested for 30 seconds. At the end of the 30 second period, the congested association is moved to the out-of-service state. All traffic buffered for the association is discarded, at which time this UIM message is displayed.

To prevent a M3UA or a SUA association from remaining congested forever, a 30 second timer is started when an association becomes congested. A separate timer is started for each association that becomes congested.

Approximately one second after the traffic has been discarded, the association is automatically allowed to accept incoming requests to reestablish the association. The timer is not configurable and is not displayed.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0003.1196    CARD 1213,A   INFO      IP Connection Congestion Timeout
ANAME   = LONGASSOCNAME1
```

Legend

ANAME
Long Association Name

Alarm Level: No alarm condition. The message is informational only.

Recovery

This is an informational message. No further action is necessary.

1197 - IP Connection Refused

Reports that an attempt to connect to an IP client was rejected by the client.

Example

```
RLGHNCXA03W 99-04-10 16:28:08 EST EAGLE 35.0.0
0003.1197    DCM 1213,A    IP Connection refused
RIPADDR = 123.123.123.123
RPORT = 1314
LIPADDR = 123.123.123.124
LPORT = 1315
SNAME=Unknown
Report Date: 02-04-10  Time: 16:27:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

Reports on connection status can be obtained for each DCM card with the following commands:

`pass:loc=xxxx:cmd="connmgr -l"` displays the connection manager event log.

`pass:loc=xxxx:cmd="connmgr -c"` displays socket client data.

`pass:loc=xxxx:cmd="connmgr -s"` displays socket server data.

1198 - IP Connection, Cannot resolve RHOST(S)

Reports that an attempt to connect to an IP client failed because the hostname, RHOST and ARHOST (if configured), could not be found on the IP network.

Example

```
RLGHNCXA03W 02-07-21 16:20:19 EST EAGLE 41.0.0
    0003.1198    CARD 1213,A   INFO       IP Connection, Cannot resolve
RHOST(S)
                    RIPADDR = Unknown
                    RPORT   = 1314
                    LIPADDR = 123.123.123.124
                    LPORT   = 1315
                    SNAME   = LONGSOCKETNAME1
              Report Date:02-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

Reports on connection status can be obtained for each DCM card with the following commands:

`pass:loc=xxxx:cmd="connmgr -l"` displays the connection manager event log.

`pass:loc=xxxx:cmd="connmgr -c"` displays socket client data.

`pass:loc=xxxx:cmd="connmgr -s"` displays socket server data.

1199 - LNP DTH Measurements Discarded for DPC

Reports that LNP DTH measurements are being discarded because the capacity of the SSP DTH table has been exceeded.

Example

```
RLGHNCXA03W 00-04-10 16:28:08 EST EAGLE 35.0.0
1234.1199    SYSTEM       INFO LNP DTH Measurements Discarded for DPC
DPC=001-001-001
Non-Zero Measurements Discarded: Yes
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If the Non-Zero Measurements Discarded flag is set **No**, the discarded measurements are all zero, no action is necessary.

> **Note:**
>
> If the Non-Zero Measurements Discarded flag is set **Yes**, Daily LNP Measurements will be lost for the specified DPC from the time of the LIM 1199 occurrence until the end of the day.

2. To retrieve the prior hour LNP SSP measurement pegs. Refer to the *Measurements Manual*.

   To retrieve the prior hour LNP measurements or other specific periods, set the Accessible Collection Period: **Last or Specific**.

   ```
   Example: rept-meas:type=mtch:enttye=lnp:period=last
   ```

1200 - INW ALT Card as First to be Preloaded

Reports the alternate card the system selected to be loaded with GPLs and data.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1200   SYSTEM     INFO  INW ALT card as first to be preloaded
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1201 - INW MAIN Card as Last to be Reset

Reports the main card the system selected to be loaded with GPLs and data.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1201   SYSTEM     INFO  INW MAIN card as last to be reset
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1202 - INW Asserted DDL Inhibition

Reports that card cross loading is inhibited.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1202   SYSTEM      INFO  INW Asserted DDL inhibition
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1203 - INW Card reset command issued

Reports that a card reset command has been issued.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1203   SYSTEM      INFO  INW Card reset command issued
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1204 - INW Waiting for Card Loading Validation

Reports that INW is waiting for validation of card loading.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1204   SYSTEM      INFO  INW Waiting for card loading validation
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1205 - INW Detected Card Loaded

Reports that INW has detected a successful completion of a card loading.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1205   SYSTEM      INFO  INW Detected card loaded
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1206 - INW Detected Card Reset or Removed

Reports that INW has detected the reset or removal of a card.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1206   SYSTEM      INFO  INW Detected card reset or removed
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1207 - INW Allowed Card to Skip DDL Inhibited

Reports that a card is being allowed to crossload.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 35.0.0
0014.1207   SYSTEM      INFO  INW Allowed card to skip DDL inhibited
CARD=1203   GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1208 - INW Removed DDL inhibition

Reports that **INW** has removed the Dynamic Data Loading (**DDL**) inhibition on a card.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1208 SYSTEM INFO INW Removed DDL inhibition
CARD=1203 GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1209 - INW Need to reset/remove/inhibit card

Reports that card must be manually reset, removed, or inhibited.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1209 SYSTEM INFO INW Need to reset/remove/inhibit card
CARD=1203 GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1210 - INW Card failed to reset

Reports that card has failed to reset.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1210 SYSTEM INFO INW Card failed to reset
CARD=1203 GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1211 - INW Failed to assert DDL inhibition

Reports that a **DDL** inhibition has failed.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1211 SYSTEM INFO INW Failed to assert DDL inhibition
CARD=1203 GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1212 - INW Failed to remove DDL inhibition

Reports that an attempt to remove **DDL** inhibition has failed.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1212 SYSTEM INFO INW Failed to remove DDL inhibition
CARD=1203 GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1213- INW Card failed to DDL crossload

Reports that a card failed to **DDL** crossload.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014. SYSTEM INFO INW Card failed to DDL crossload
CARD=1203 GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1214 - INW Allowed card to DDL crossload

Reports that a card was allowed to crossload.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1214 SYSTEM INFO INW Allowed card to DDL crossload
CARD=1203 GPL=SS7ANSI
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1215 - GWS rcvd CDPA That Could Not be CNCFd

This message indicates the EAGLE 5 ISS received an MSU, with a called party address (CDPA) that is not allowed in gateway screening (GWS) and cannot be converted.

Example

```
RLGHNCXA21W 00-04-18 18:59:23 EST EAGLE 31.3.0
0101.1215 CARD 1205,B INFO GWS rcvd CDPA that could not be CNCFd

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the distant end node this message refers to and verify action is being taken to correct the SCCP encode failure problem.

1. Determine whether the MSU was processed by a service that does not support network crossing (ANSI <-> ITU).

   The following are some of the services that do not support network crossing (not a complete list):

   - AIQ
   - APORT
   - GPORT
   - ATINPQ
   - EIR
   - INPQ
   - MNP SMS

- VFLEX

2. If the MSU was processed by a service that does not support network crossing, check the originating network domain and the destination network domain to determine whether network crossing (ANSI <-> ITU) occurred. If so, the MSU was discarded and UIM 1332 was issued. Correct the network crossing problem.

3. If the problem is not caused by a service that does not support network crossing, contact the distant end node that this message refers to and verify that action is being taken to correct the SCCP encode failure problem.

1233 - MTP Invalid ITU TFR RCVD

This message indicates an ITU TFR (Transfer Restricted) procedure was received on a linkset that is not configured to receive these procedures.

Example

```
RLGHNCXA21W 00-11-18 19:12:00 EST EAGLE 35.0.0
0147.1233 CARD 1201,A INFO MTP Invalid ITU TFR RCVD
OPC=001-001-001 CPC=002-002-002
LSN=lsn01a
```

Legend

CPC
Concerned point code

LSN
Linkset name

OPC
Origination point code

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify whether the MTP (Message Transfer Part) is supposed to support an ITU TFR on the linkset on which it was received.

   The ITUTFR procedure is valid for ITU national linksets only. As currently configured, the linkset does not accept TFRs.

2. If ITUTFRs are to be accepted on the linkset, you must reconfigure the linkset to accept them.

   Use the `itutfr=on` parameter in the `chg-ls` command to enable the transfer restricted procedure. You must specify this parameter on each ITU national linkset you want to receive ITUTFRs.

1234 - LNP Day Meas. Discarded for NPANXX

This message is indicates the Daily LNP NPANXX measurement counts are incorrect because of discards due to provisioning.

Example

```
station5 00-04-18 19:12:00 EST EAGLE 31.0
0002.1234 CARD 1201 INFO LNP Day Meas. Discarded for NPANXX
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Correct counts can be derived via calculation from LNP queries - discards - LRN pegs.

1235 - Unable to connect Primary SFLOG Server

This message indicates the connection to Primary SFLOG server cannot be established.

Example

```
0002.1235    CARD 1201     INFO    Unable to connect Primary SFLOG
server
                IP: 123.678.123.467   FTP Error: 24
                File Name: tekelecstp_sflog_150429_031655.pcap

  Report Date: 15-04-30  Time: 16:27:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1236 - Unable to connect both SFLOG Servers

This message indicates the connection to the Primary and Secondary SFLOG servers cannot be established.

Example

```
0002.1236    CARD 1202     INFO    Unable to connect both SFLOG servers
                IP: 123.678.123.467   FTP Error: 11
                File Name: tekelecstp_sflog_150429_031655.pcap

  Report Date: 15-04-30  Time: 16:27:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1237 - Dynamic database audit not current

The dynamic database audit cannot determine whether the dynamic database is inconsistent because there has not been the required quiet period (500 milliseconds

by default) to perform the audit. There are always inconsistencies among the copies of the dynamic database on the LIM and Service Module cards while the networks is updating the cards.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1237 SYSTEM INFO Dynamic database audit not current
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Determine whether there are issues with links, point codes, linksets, or SSN that are causing network status changes. If so, use your site's normal procedures to address the problems.

2. Contact My Oracle Support (MOS).

1238 - Full LNP Database Reload Initiated

This message indicates that a cold restart is required for a TSM/BLM card. In this case, the entire LNP database is reloaded to the card.

Example

```
station1234 96-08-01 16:28:08 EST EAGLE 35.0.0
1234.1238 SYSTEM INFO Full LNP database reload initiated:
CARD=1101 GPL=SCCP CAUSE=<xxxxxxxx>
```

where <xxxxxxxx> is one of the following parameters:

Table 3-12   CAUSE Parameters

Parameter	Description
XILINX	M256 Xilinx version has changed.
POWER ON	Power on reset.
DB VER	LNP database version has changed.
DB LVL	Database level is not supported or difference exceeds incremental loading capability.
HW ERR	Hardware error bit checks on the card fail.
CHECKSUM	Checksum comparisons of the LNP database fail.
NO AUDIT	Unable to perform LNP DB audit. LNP audit not on or excessive number of unknown checksums.
USER REQ	User initiated init-card or init-sys command reload type cold.
OTHER	Other or unknown.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. If this UIM indicates that there is a hardware error or the database checksum test failed, there may be a hardware problem.

   When this condition repeats (the board resets and displays the same conditions again), do the following:

   a. Reseat the card.

   b. Replace the card to determine if it is defective.

2. For additional support, contact My Oracle Support (MOS).

1239 - Ntwrk Card Reload Failed during Upg

This message indicates the OAM has determined that a card has failed to load.

Example

```
xxxx.1239    SYSTEM        INFO       Ntwrk Card Reload Failed during Upg
                        CARD=1103    GPL=SS7ANSI
                        Report Date:02-01-08   Time:01:24:34
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- Manually download card(s) running non-approved flash.

1240 - MAP SCCP Validation Fail

This message indicates that the MAP and SCCP parameter validation performed by SCPVAL GTT Action has failed. Look for the validation failure reason printed by the UIM.

Example

```
5072.1240    CARD 1105     INFO     GTT Action MAP-SCCP validation FAILED
                Cause: SMRPDA-CDPA Digits Mismatch
                OPC=    7-101-0        DPC=    1-001-0
                CDPA:  NI=0  RI=0  GTI=04  SSNI=0  PCI=1
                       TT=010  NP=01  NAI=004  ADDR=9192051234
                       PC=    1-001-0        SSN=---
                CGPA:  NI=0  RI=1  GTI=00  SSNI=1  PCI=1
                       PC=    7-101-0        SSN=008
                SMRPDA: NP=1    NON=1    ADDR=9192056000
                LSN=ls710100  Op-Code= 46  GTT Action Set=scpval1
                Report Date:15-08-01  Time:15:50:30
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1241 - SCCP/SFAPP Card logging capacity exceeded

This message indicates the SCCP/SFAPP card logging capacity has been exceeded.

Example

```
XXXX.1241    CARD XXXX    INFO     SCCP/SFAPP Card logging capacity
exceeded
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Reduce the card logging below the recommended capacity level.

1242 - Conv to intl num - Dflt CC not found

This message indicates that the default country code is not defined.

Example

This output indicates an error against the original destination rather than the redirected destination.

```

Enter the E214 part for the E214 code in the database using the `chg-gsmopts:ccnc=xxxxxxxx:mccmnc=xxxxxxx` command. Refer to the *Commands Manual* for the proper usage.

1248 - GSM MAP Screening rcvd unknown originator

This message occurs when an MSU arrives with a SSN and MAP Op-Code that exist in the GSM SSN and MAP Op-Code tables, but the CGPA address does not exist in the GSM MAP Screening table or the CgPA address exists in the table but with an incorrect NPV/NAIV. In this case, the default action for the Op-Code applies.

Example

```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. To prevent the GSM screening from disallowing this MSU, you can add the CgPA address to the GSMMAP or correct the CgPA address NPV or NAIV.

2. Alternatively, you may choose to disable MPS Screening on the specific linkset entirely.

   In an emergency situation for example, you can prevent MAP Screening from occurring on any suspected linkset with the `chg-ls:gsmscrn=off` command. Using this command means no MAP Screening will be performed on any MSU arriving through the linkset, which results in UIM #1248 no longer appearing.

3. Another choice is to change the default action shown in the example.

   It shows the `Action=Discard` for any MSU with `Op-Code=61`. This choice lets you set the default action to `Pass`; specify the command `chg-gsms-opcode:opname=` <insert the `opname` corresponding to the Op-Code> `:ndfltact=pass`. This action does not prevent UIMs from being reported, but it does prevent the specified Op-Code from being discarded.

4. If the frequency of UIM #1248 messages is distracting, you can limit the number of UIMs displayed per time interval for a specific UIM.

   Use the command `set-uim-acthresh:limit=1:intrvl=5:uimn=1248` to limit the output of UIM #1248 to one output every 5 minutes.

> **✎ Note:**
>
> Use this suggestion sparingly, if at all. This action has value in temporarily suppressing a large volume of UIMs while diagnosing a MAP Screening situation.

1249 - SCCP rcvd GSM MAP Opcode w/forbidden param

This message occurs when an MSU is screened in the GSM MAP Screening table and the MSU was found to contain a forbidden parameter as provisioned in the GSM MAP Screening table. The action that applies is taken from the matching entry in the GSM MAP Screening table.

Example

```
RLGHNCXA21W 00-11-18 18:59:23 EST EAGLE 35.0.0
0018.1249 CARD 1103 INFO SCCP rcvd GSM MAP Op-Code w/forbidden param

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. The GSM MAP Screening table has successfully screened the forbidden parameter.

   The resultant action is performed from the matching entry.

2. To alter the screening being performed, redefine the GSM MAP Screening table using the `gsmmap` commands.

1250 - SCCP rcvd undefined MAP Op-Code

This message occurs when an MSU passes the origination or destination SSN screening process and the MAPOp-Code table is searched, but the Op-Code of the MSU is not found in the MAP Op-Code table. In this case, the default action from the STPOPTS table applies.

Example

```
RLGHNCXA21W 00-11-18 18:59:23 EST EAGLE 35.0.0

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. The GSM MAP Op-Code table was searched, and the Op-Code of the MSU was not found.

2. The GSM MAP Op-Code table has successfully screened an Op-Code that was not included in the GSM MAP Opcode table.

3. However, if the Op-Code should not be screened, you can add it into the GSM MAP Op-Code table.

4. To alter the screening being performed, change the default action for GSM screening when the Op-Code is not defined with the STPOPTS commands.

1251 - Measurements Data Copy Failure

Measurements data is copied to all MCPM cards after collection. Measurements data copy to a Secondary MCPM failed.

Example

```
station5 00-04-18 19:12:00 EST EAGLE 31.3.0
0002.1251 CARD 1201 INFO Measurements data copy failure
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

There is no immediate action needed, but the message indicates that the error was encountered.

1252 - Report Generation Failure

This message is generated by the Primary MCPM. The measurement report identified in the output message did not generate.

Example

```
station5 00-04-18 19:12:00 EST EAGLE 31.3.0
0002.1252 CARD 1201 INFO Report generation failure
IP:111.111.111.111 FTP Error: XXXX
File Name: tues_serv.csv
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Enter the `rept-ftp-meas` command to manually initiate the generation and FTP transfer of the indicated measurement report.

Refer to the *Commands Manual* for the correct usage of this command.

1253 - Report transfer failure FTP Server

This message is generated by the Primary MCPM. The FTP transfer of the indicated report failed.

Example

```
station5 00-04-18 19:12:00 EST EAGLE 31.3.0
0002.1253 CARD 1201,A INFO Report transfer failure FTP Server
IP:111.111.111.111 FTP Error: XXXX
File Name: tues_serv.csv
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Enter the `rept-ftp-meas` command to manually initiate the generation and FTP transfer of the indicated measurement report. Refer to the *Commands Manual* for the correct usage of this command.

1254 - Scheduled transfer failure

This message is generated by the Primary MCPM. Some of the reports scheduled to be generated and transferred were not transferred.

Example

```
station5 00-04-18 19:12:00 EST EAGLE 31.3.0
0002.1254 CARD 1201 INFO Scheduled transfer failure
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Enter the `rept-ftp-meas` command to manually initiate the generation and FTP transfer of the affected measurement report. Refer to the *Commands Manual* for the correct usage of this command.

1255 - IS-41 LNP Qry rejected: WNP is OFF

The EAGLE has rejected an LNPQS query that is decoded as an IS-41 Query because the appropriate WNP (Wireless Number Portability) feature is not on.

Example

```
RLGHNCXA21W 03-04-18 19:02:05 EST EAGLE 31.3.0
0112.1255 CARD 1103,A1 INFO IS-41 LNP Qry rejected: WNP is OFF

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify and update number portability data.

1257 - DB restore has cleared and Disabled PDS

A DB restore has rendered the data on PDS table obsolete. The PDS table will be updated when the OAM is rebooted.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0014.1257 SYSTEM INFO DB restore has cleared and Disabled PDS
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1258 - Map Screening cannot Forward MSU

This message occurs when an MSU selected by MAP Screening for the Forward screening action cannot be forwarded.

> **✎ Note:**
>
> Additional reasons for this alarm include:
>
> 1. If unsupported domain crossing is occurring (from or to ANSI/ITUN24)
> 2. If Alias PC was not found for CgPA PC
> 3. If there is no space to insert CdPA PC when it was not there in the original MSU

Example

```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. The LSS received a message that does not have a corresponding SSP point code entry in the Eagle routing table.

2. You must decide whether you want to accept queries from that SSP.

   a. If you choose to not respond to queries from that SSP, use the gateway screening feature to stop this information message from re-appearing by having the Eagle system reject queries from that specific SSP.

      No further action is necessary.

   b. If you want to respond to queries from that SSP, continue with the next step.

3. List the routing table entry for the SSP in question with the `rtrv-rte` command.

   a. If the retrieve route command shows the SSP point code has an Eagle routing table entry, which is not expected since this message says no entry exists, contact My Oracle Support (MOS) about this situation.

      Do not continue to other steps of this procedure.

   b. If the retrieve route command shows no entry in the routing table, which is expected here, continue with the next step.

4. List the destination table entry for the SSP in question with the `rtrv-dstn` command.

   a. If the SSP point code is not in the Eagle destination table, add that entry with the `ent-dstn` command.

      (For detailed information about using the `ent-dstn`command, refer to "Adding a Destination Point Code" in Chapter 2, "Configuring Destination Tables" in the *Database Administration Manual - SS7* manual.) Proceed to 5.

   b. If the SSP point code is in the Eagle destination table, continue with the next step.

5. Enter the route set for the SSP point code by issuing one of more `ent-rte` commands.

   (For detailed information about using the `ent-rte` command, refer to "Adding a Route" in the chapter "SS7 Configuration" in the *Database Administration Manual - SS7* manual.)

1285 - LSS: No SCCP CGPA SSN

This message indicates that the LSS (local subsystem) received an SCCP message in which the subsystem number (SSN) for the calling party (CGPA) is missing.

Example

```
RLGHNCXA21W 99-12-18 18:59:23 EST EAGLE 31.3.0

Alarm Level: No alarm condition. The message is informational only.

Recovery

Change the attempted digit action or decrease the length of the entity ID or the GT digits to a length of 21 digits or less.

Provision the digit action or the entity ID length from the EPAP. Refer to the *EPAP Administration Manual* for details.

1298 - SIP message decode failed

SIP message parsing FAILS. Examples of decoding fail:

1. TEL-URI with a Local Number does not contain a "phone-context" parameter

2. SIP-URI does not contain "user=phone" parameter

3. SIP INVITE does not have E164 num

Example

```
          1         2         3         4         5         6

AFTPC=004-000-001 UPU=03 UNAVAIL CAUSE=001
LSN=A1234567
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1306 - GSMOPTS: EIR Global Response is ON

The EIR Global Response Type is on. The EIR Global Response Type is set by the `chg-gsmopts` command and the `eirgrsp` parameter.

The Global Response Type is used to override the response that is returned to the MSC (Mobile Switching Center). The default value is OFF. When this parameter to OFF, the normal list logic is applied to the IMEI. If the Global Response Type is set to a value other than OFF, there is no list logic processing, and the response corresponding to the `eirgrsp` value is sent to the MSC.

For more information about `eirgrsp`, refer to the `chg-gsmopts` command in the *Commands Manual*.

Example

```
RLGHNCXA21W 03-08-18 19:09:14 EST EAGLE 31.3.0
0140.1306 CARD 1201 INFO GSMOPTS: EIR Global Response is ON
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No corrective action is required.

1307 - GSMOPTS: EIR Global Response is OFF

The EIR Global Response Type is off. The EIR Global Response Type is set by the `chg-gsmopts` command and the `eirgrsp` parameter.

The Global Response Type is used to override the response that is returned to the MSC (Mobile Switching Center). The default value is OFF. When this parameter to OFF, the normal list logic is applied to the IMEI. If the Global Response Type is set to a value other than OFF, there is no list logic processing, and the response corresponding to the `eirgrsp` value is sent to the MSC.

For more information about `eirgrsp`, refer to the `chg-gsmopts` command in the *Commands Manual*.

Example

```
RLGHNCXA21W 03-08-18 19:09:14 EST EAGLE 31.3.0
0140.1307 CARD 1201 INFO GSMOPTS: EIR Global Response is OFF
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No corrective action is required.

1308 - Updates inhibited: Target-Cell CRC Fail

This message appears if the new source-cell and the target-cell checksums do not match. This message, similar to UIM 1239, but including the table id, shall be issued by the Eagle User Interface (UI) for each event.

Example

```
station1234 96-08-01 16:28:08 EST EAGLE 34.0.0
1234.1308   SYSTEM INFO    Updates inhibited:Target-Cell CRC Fail
      CARD=1107 TABLE=50  OFFSET=XXXX TRGT CRC=1423697
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This is an automatic process and no action is necessary.

1309 - Updates inhibited: Source-Cell CRC Fail

If the source cell fails validation this message, similar to UIM 1239, but including the table ID, shall be issued by the Eagle User Interface (UI) for each event.

Example

```
station1234 96-08-01 16:28:08 EST EAGLE 34.0.0
1234.1309 SYSTEM INFO Updates inhibited:Source-Cell CRC Fail
       CARD=1107 TABLE=50 OFFSET=XXXX
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

This is an automatic process and no action is necessary.

1310 - System Meas. Limit Exceeded for LRN

This UIM is issued if the Measurements Platform is not enabled and if the number of provisioned LRNs exceeds 100,000. When the limit of 100,000 is exceeded, this UIM is notification that the LNP LRN measurements report will be truncated, and additional LRN measurements will not be collected or reported.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 31.3.0
0140.1310 CARD 1201 INFO System Meas. Limit exceeded for LRN
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

You have two options if this UIM appears:

- Install the Measurements Platform to increase the reporting limits, or
- If you have any unused LRN entries, you can remove them such that the number of provisioned LRNs does not exceed the limit of 100,000.

1311 - System Meas. Limit exceeded for NPANXX

This UIM is issued if the Measurements Platform is not enabled and if the number of provisioned NPANXXs exceeds 150,000. When the limit of 150,000 is exceeded, this UIM is notification that the LNP NPANXX measurements report will be truncated, and additional NPANXX measurements will not be collected or reported.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 31.3.0
0140.1311 CARD 1201 INFO System Meas. limit exceeded for NPANXX
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

You have two options if this UIM appears:

- Install the Measurements Platform to increase the reporting limits, or
- If you have any unused NPANXX entries, you can remove them such that the number of provisioned NPANXXs does not exceed the limit of 150,000.

1312 - Dynamic VLR Profile Table Full

This UIM occurs when the VLR profile table is full.

Example

```
1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
    0002.1312    SYSTEM      INFO     Dynamic VLR profile table full
                 Report Date:28-06-18  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Delete entries in the VLR profile table.

1313 - Dynamic VLR Roaming Table Full

This UIM occurs when the VLR roaming table is full.

Example

```
1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234567890
34567890
```

```
     0002.1313    SYSTEM        INFO     Dynamic VLR roaming table full
                  Report Date:28-06-18  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Delete entries in the VLR roaming table.

1314 - IPS TCP Connection Established

This UIM occurs when any IPS TCP connection is established.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    6731.1314    CARD 1112     INFO    IPS TCP connection established
                 Connection Name : ipstcp
                 Report Date:18-09-21  Time:16:38:33
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

1315 - IPS TCP connection terminated

This UIM occurs when any IPS TCP connection is terminated.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    6730.1315    CARD 1112     INFO    IPS TCP connection terminated
                 Connection Name : ipstcp
                 Report Date:18-09-21  Time:16:38:33
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Check that the network cable is properly inserted for this card.

2. Check the remote host to determine if the connection is pingable or not.

3. Execute the `chg-ip-conn:cname=<>:open` command.

1316 - SFAPP(P) to OAM Sync Started

This UIM occurs when an SFAPP(P) to OAM Sync has started.

Example

```
RLGHNC1234567890123456789012345678901234567890123456789012345678901234567890123456
78901234567890
    0007.1316    SYSTEM        INFO      SFAPP(P) to OAM Sync started
                 Report Date:18-09-25  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

1317 - SFAPP(P) to OAM Sync Completed

This UIM occurs when the SFAPP(P) to OAM Sync is complete.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    0007.1317    SYSTEM        INFO      SFAPP(P) to OAM Sync Completed
                 Report Date:18-09-25  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is necessary.

1318 - ICNP: OPC/DPC Correlation Problem

This UIM occurs when the DPC of the IAM is not the True or Secondary Point Code assigned to the OPC in the routing table.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 33.2.0
0140.1318 CARD 1201 INFO ICNP:  OPC/DPC correlation problem
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Make sure that the OPC is using the True or Secondary Point code assigned to it in the routing table as the DPC of the IAM.

1319 - ICNP: IDCA Not Reachable

This UIM when the required IDCA application is not currently reachable.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 31.3.0
0140.1319 CARD 1201 INFO ICNP:  IDCA is not reachable
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

If this UIM appears, take these actions:

- Bring the IDCA application online.
- Verify the connection between the EAGLE and IDCA.

1320 - FPT value Unprovisioned for Frame

This UIM is periodically raised at hourly intervals, starting at the system initialization time, for all the provisioned frames if the Frame Power Threshold value is not provisioned for that frame.

Example

```
RLGHNCXA21W 00-04-18 19:05:43 EST EAGLE 35.0
0021.1320 CARD 1113 INFO FTP value unprovisioned for frame CF00
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Verify that the Frame Power Threshold value is not configured for the provisioned frame for which the UIM is generated by using the following command:

   `rtrv-frm-pwr`

2. Configure the appropriate Frame Power Threshold value for the frame using the following command:

   `ent-frm-pwr`

   Otherwise, contact My Oracle Support (MOS) about the generated UIM.

1321 - Eagle RTDB Birthdate Mismatch

This message appears if the EAGLE 5 ISS connects to an ELAP and the birthdates do not match between the RTDB on the ELAP and the RTDB on the EAGLE 5 ISS.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 35.0.0
0008.1321 SYSTEM INFO Eagle RTDB Birthdate Mismatch
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact My Oracle Support (MOS).

1322 - EAGLE RTDB Levels Invalid

This message appears if the EAGLE 5 ISS connects to an ELAP and the ELAP's RTDB db-level is less-than the EAGLE 5 ISS's RTDB db-level.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 35.0.0
0008.1322 SYSTEM INFO Eagle RTDB Levels Invalid
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact My Oracle Support (MOS).

1323 - EAGLE/ELAP TN Quantity Mismatch

This message appears if the EAGLE 5 ISS connects to an ELAP that has a greater number of TNs provisioned than the EAGLE 5 ISS's quantity keys allow.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 35.0.0
0008.1323 SYSTEM INFO Eagle/Elap TN Quantity Mismatch
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact My Oracle Support (MOS).

1324 - Eagle/Elap NPANXX Quantity Mismatch

This message appears if the EAGLE 5 ISS connects to an ELAP that has a greater number of NPANXXs provisioned than the EAGLE 5 ISS's quantity keys allow.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 35.0.0
0008.1324 SYSTEM INFO Eagle/Elap NPANXX Quantity Mismatch
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact My Oracle Support (MOS).

1325 - EAGLE/ELAP LRN Quantity Mismatch

This message appears if the EAGLE 5 ISS connects to an ELAP that has a greater number of LRN s provisioned than the EAGLE 5 ISS's quantity keys allow.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 35.0.0
0008.1325 SYSTEM INFO Eagle/Elap LRN Quantity Mismatch
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact My Oracle Support (MOS).

1326 - Eagle RTDB Depth Alert

RTDB data is stored as inverse tree structures the trees have a maximum depth allowed. This alarm indicates that the maximum depth has been reached for a tree. If the alarm was initiated during a data update, the update will continually fail until there is manual intervention.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 35.0.0
0008.1326 SYSTEM INFO Eagle RTDB Depth Alert
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact My Oracle Support (MOS).

1327 - Mate PC not Found in table

This UIM indicates the Mate Point Code was not found in the table.

Example

```
         1         2         3         4         5         6
7        8
12345678901234567890123456789012345678901234567890123456789012
34567890
    3281.1327    SYSTEM        INFO      Mate PC not Found in table
                 Report Date:28-06-18  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action necessary.

1328 - Incorrect network domain

This UIM indicates the incorrect network domain was entered.

Example

```
1         2         3         4         5         6         7         8

34567890
     3281.1328    SYSTEM       INFO      Incorrect network domain
                  Report Date:28-06-18   Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Check the network domain entry.

1330 - Mismatched UA Routing Context

This message is issued in the following scenarios:

1. If routing context is present in a M3UA Data message received by the EAGLE 5 ISS, and no routing key for the receiving M3UA association contains a matching routing context value.

2. If routing context is absent in a M3UA Data message received by the EAGLE 5 ISS, and the receiving M3UA association's application server is referenced by a routing key containing routing context.

3. If routing context is present in a M3UA ASP-Active or ASP-Inactive or DAUD message received by the EAGLE 5 ISS, and no routing key for the receiving M3UA association contains a matching routing context value, then a UIM will be generated.

4. If routing context is present in a SUA message received by the EAGLE 5 ISS, and no routing key for the receiving SUA association contains a matching routing context value.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
3409.1330 CARD 1305,A INFO Mismatched UA Routing Context
ANAME = m3ua_assoc_0003 M3UA RC=3
```

Legend

ANAME
The name of the M3UA or SUA Association. This is followed by the user adapter type (M3UA or SUA) and the value of the Routing Context received in the message. If the Routing Context is absent from the message, RC will be displayed as "none."

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. The use of Routing Context in the Eagle Routing Key configuration and the use of the Routing Context by the far-end Application Server should be made to match so that they are either both using Routing Context –OR- they are both not using Routing Context.

2. Contact My Oracle Support (MOS).

1331 - IP Route Table Entry Conflict

A conflict exists between user configured static IP routes and dynamically added routes. (The Integrate Message Feeder application monitoring dynamically creates host specific IP routes to an IMF VIP address.) There are two scenarios in which such a conflict can result:

1. If an Integrated Message Feeder application receives a service accept message and attempts to add a host specific IP route for the IP address received in the service accept message and there is an user configured static IP route (entered by `ent-ip-rte`EAGLE 5 ISS command) whose destination is the same IP address, then the route is not added and the UIM is sent indicating the route and result.

2. If a user enters a host specific IP route using the `ent-ip-rte` command and there currently exists a dynamically added route with the same destination IP address, then the dynamic route is deleted, the static route is added, and this UIM indicating the result is generated.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0003.1331 CARD 1213 INFO IP Route Table Entry Conflict
Dynamic IP Route Add Fail
Destination = 172.130.155.110
Gateway = 172.120.154.111
Mask = 255.255.255.255
Report "Date:02-02-21 Time:02:07:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Resolve the IP Address conflict.

One must either change the Integrated Message Feeder application VIP address or delete the static IP address using the following command:

`dlt-ip-rte`

1332 - Invalid Initial M2PA FSN Received

The Eagle received an initial M2PA DATA message with an invalid FSN (Forward Sequence Number). The expected FSN in M2PA for the first DATA message received after link alignment is 0 for M2PA RFC. Older versions of M2PA (before Draft 9) used an initial FSN of 1. This UIM indicates that the two ends of the link have mismatched configurations.

- Eagle versions prior to 34.3 support M2PA Draft 6 but do not support M2PA RFC.

- If both ends of the M2PA association are on Eagle release 34.3 or later, verify that both ends have the VER parameter set to match on the M2PA association (VER=D6 or VER=M2PA must be the same on both ends).

- If one end of the M2PA association is on an Eagle release prior to 34.3 and the other is 34.3 or greater, verify that the association VER parameter in the later release is set to D6 for backward compatibility.

Example

```
RLGHNCXA21W 00-04-18 19:09:14 EST EAGLE 34.3.0
5781.1332 CARD 1301,A INFO Invalid Initial M2PA FSN Received
```

Legend

FSN
Forward Sequence Number

M2PA
SS7 MTP2 - User Peer-to-Peer Adaptation Layer

Alarm Level: No alarm condition. The message is informational only. However, the link will not stay aligned and a link alarm will be present.

Recovery

1. To change the M2PA version used by the signaling link at the Eagle perform the following commands:

    a. Use the `dact-slk:loc=xxxx:link=yy` command to deactivate the signaling link.

    b. Use the `chg-assoc:open=no` command to close the M2PA association used by the signaling link.

    c. Use the `chg-assoc:ver=<d6/rfc>` command to change the M2PA version on the association used by the signaling link to match the configured M2PA version of the M2PA peer.

    d. Use the `chg-assoc:open=yes` command to activate the M2PA association used by the signaling link.

    e. Activate the signaling using the `act-slk:loc=xxxx:link=yy` command.

2. Otherwise change the M2PA version at the M2PA peer to match the version configured for the signaling link/association at the Eagle.

3. If the fault is not cleared, contact My Oracle Support (MOS).

1333 - UA RCVD MSG DISCARDED

When processing a received PDU at the UA L2 layer, various errors can be detected which cause the MSU to be pegged and discarded. The SG responds to a number of these MSU's with error messages and transmits them to the customer. Some scenarios exist where a received PDU causes an error to be pegged, the message to be discarded, and the SG to not respond with an error message. A new UIM is issued when a PDU excluding UA ERROR messages is received at the UA L2 layer and results in the SG discarding the message plus pegging an error count. The generation of this UIM is paced (every 30 seconds), and in situations where multiple messages are discarded within a 30 second window of time, a UIM is only generated for the first message discarded.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 38.0.0
0003.1333    CARD 1305,A   INFO    UA RCVD MSG DISCARDED
             IP CONNECTION NAME=LONGCONNECTNAME ADPTR=M3UA
```

```
                    REASON=Large MSU for IP Sig Not Supported
                    SIO=0D OPC=1-1-1            DPC=2-2-2
                    Report Date:yy-mm-dd  Time:hh:mm:ss
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. The following table summarizes why the UIM was issued.

   The reason text in the UIM identifies why the UIM was displayed. Look at the reason and take action based on that field. Most of the time, to correct the issue, the customer needs to stop issuing the message. The UIM's diagnostic field usually indicates which message was received.

Table 3-13   SG Received Messages Discarded

Reason Message Discarded and Pegged	UIM Reason Text	UIM Diagnostic Text
PDU received with invalid version	Invalid Version (Error Code=0x01)	<msg rcvd> Rcvd; Version=<version value rcvd> Ex. ASP-Inactive Rcvd; Version=0x02
1. PDU has unsupported class 2. PDU received was SUA CLDT/CLDR on an M3UA Association	Unsupported Message Class (Error Code=0x03)	Class=<Message Class Value>; Type=<Message Type Value> Ex: Class=0x09; Type=0x01
PDU has unsupported type	Unsupported Message Type (Error Code=0x04)	Type=<Msg Type Value >; Class=<Message Class Value > Ex: Type=0x15; Class=0x02
ASP-ACTIVE contains an unsupported traffic mode Type.	Unsupported Traffic Mode (Error Code=0x05)	<MSG> Rcvd; Mode=<traffic mode received > Ex : ASP-Active Rcvd; Mode=0x03
1. PDU received was DAVA/DUNA/DRST/DUPU in the ASP-Inactive/ASP-Active States(end nodes should not generate these) 2. ASP-UP received while in ASP-ACTIVE state 3. ASP-ACTIVE received while in ASP-DOWN state	Unexpected Message (Error Code=0x06)	1. DUNA Msg Rcvd 2. DAVA Msg Rcvd 3. DRST Msg Rcvd 4. DUPU Msg Rcvd 5. ASP-UP Rcvd while in ASP-Act State 6. ASP-Act Rcvd while in ASP-Down State

Table 3-13   (Cont.) SG Received Messages Discarded

Reason Message Discarded and Pegged	UIM Reason Text	UIM Diagnostic Text
1. PDU could not be decoded or invalid length. 2. ASP-UP-ACK/ASP-DOWN-ACK/ ASP-ACTIVE-ACK/ASP-INACTIVE-ACK received in the ASP-Inactive/ASP-Active States while in server mode (not client) 3. ASP-INACTIVE-ACK received while in client mode and in ASP-ACTIVE state 4. DATA contains multiple routing contexts	Protocol Error (Error Code=0x07)	1. <Message> Decode Failed 2. <Message> Encode Failed 3. <Message> Length Invalid 4. ASP-UP-Ack Rcvd 5. ASP-Down-Ack Rcvd 6. ASP-Active-Ack Rcvd 7. ASP-Inactive-Ack Rcvd 8. M3UA to MTP3 Conversion Failed
ASP-UP received on a connection this is Deactivated or Blocked.	Refused Managment Blocking (Error Code=0x0d)	ASP-Active Rcvd when SLK OOS-MT-DSBLD
Sent if a UA Message is received with an invalid parameter value.	Invalid Parameter Value (Error Code=0x11)	<msg rcvd> Rcvd; Value=<parameter value rcvd > Ex. ASP-Inactive Rcvd; Value=0x00000009
PDU has fixed length parameters of incorrect size	Parameter Field Error (Error Code=0x12)	<msg rcvd> Rcvd; Length=<invalid parameter length > Ex. ASP-Inactive Rcvd; Length=0x0200
Sent if a UA message received contains an invalid parameter.	Unexpected Parameter (Error Code=0x13)	<msg rcvd> Rcvd; Parm Tag=<parameter tag rcvd > Ex. DATA Rcvd; Parm Tag=0x0500
Invalid Network Appearance value received in a M3UA message	Invalid Network Appearance (Error Code=0x15)	<Msg Type> Rcvd; NA=<NA value rcvd > Ex: DAUD Rcvd; NA=0x00000011
1. PDU is missing one or more mandatory parameters 2. DATA contains no routing context and the association the PDU was received on is configured with more than 1 routing context	Missing Parameter (Error Code=0x16)	1. <Msg Type> Rcvd; Missing Tag=<tag value > 2. Hdr Len Invalid

Table 3-13   (Cont.) SG Received Messages Discarded

Reason Message Discarded and Pegged	UIM Reason Text	UIM Diagnostic Text
1. ASP-ACTIVE received with routing context but no routing key(s) are provisioned for linkset 2. PDU contains one or more routing contexts that could not be matched to one associated with the connection the PDU was received on	Invalid Routing Context (Error Code=0x19)	For this error code, use existing UIM "Mismatched UA Routing Context" only if the message is still processed. If the message is discarded, issue UIM format 62. <msg rcvd> Rcvd; RC=<routing context value> Ex: DAUD Rcvd; RC=0x00000008
DATA received while in the ASP-Inactive State (server mode)	Invalid ASP State	DATA Rcvd while in ASP-Inact State
A message was discarded and there is no error code.	No ERR Received	Reason Unknown

2. Otherwise change the M2PA version at the M2PA peer to match the version configured for the signaling link/association at the Eagle.

3. If the fault is not cleared contact My Oracle Support (MOS).

1334 - UA TX MSG Discarded

The generation of this UIM is paced (every 30 seconds), and in situations where multiple messages are discarded within a 30-second window of time, a UIM is only generated for the first transmitted message that is discarded.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 37.0.0
    0003.1334    CARD 1305,A   INFO    UA TX MSG DISCARDED
                 IP CONNECTION NAME=LONGCONNECTNAME ADPTR=M3UA
                 REASON=M3UA Conversion Error
                 SIO=0D OPC=1-1-1          DPC=2-2-2
                 Report Date:yy-mm-dd  Time:hh:mm:ss
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Correct the problem based on the reason text displayed.

The reasons listed in this UIM cause a discard in the transmit path.

Table 3-14   SG Messages Discarded in the Transmit Path

UIM Reason Text	UIM Specific Text
M3UA Conversion Error	MTP3 to M3UA Conversion Failed

1335 - Table Information

An update to the SCCP contained an invalid table identifier.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0003.1335 CARD 1105 INFO Table Information
Table 4294967296 Invalid Table ID
Report Date:02-07-21 Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1336 - UA Error Msg Received

This UIM is issued for message discards in the transmit path. The generation of this UIM is paced (every 30 seconds), and in situations where multiple messages are discarded within a 30-second window of time, a UIM is only generated for the first transmitted message that was discarded.

This UIM is being displayed because the customer is sending an error message to the SG. The following is a list of all the possible error codes that can appear in the UIM for received UA ERROR messages. Each one has the error code appended in parenthesis.

- Invalid Version (0x01)
- Unsupported Message Class (0x03)
- Unsupported Message Type (0x04)
- Unsupported Traffic Mode (0x05)
- Unexpected Message (0x06)
- Protocol Error (0x07)
- Invalid Stream Identifier (0x09)
- Refused Management Blocking (0x0d)
- ASP Identifier Required (0x0e)
- Invalid ASP Identifier (0x0f)
- Invalid Parameter Value (0x11)
- Parameter Field Error (0x12)
- Unexpected Parameter (0x13)
- Destination Status Unknown (0x14)
- Invalid Network Appearance (0x15)
- Missing Parameter (0x16)
- Invalid Routing Context (0x19)

- No Configured AS for ASP (0x1a)

- Subsystem Status Unknown (0x1b)

- Invalid Loadsharing Label (0x1c)

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 38.0.0
0003.1336    CARD 1305,A    INFO    UA ERROR MSG RECEIVED
             IP CONNECTION NAME=association1 ADPTR=M3UA
             ERROR CODE=Missing Parameter (0x16)
             Report Date:02-07-21 Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact far end node and investigate reason for error.

1337 - UA HEARTBEAT TIMEOUT

If T(beat ack) expires before a Heartbeat Ack message is received from the customer, the association is torn down. A new UIM is issued when the association is torn down and the existing format I53 is used for this UIM. The generation of this UIM is paced (every 30 seconds).

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST EAGLE 35.0.0
0003.1337 CARD 1305,A INFO UA HEARTBEAT TIMEOUT
ANAME = LONGASSOCNAME1 M3UA
```

Legend

ANAME
Long Association Name

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Reestablish the connection.

   If this UIM was displayed on the screen, then the connection was torn down.

2. If this scenario keeps repeating after reestablishing a connection, then there is a problem with the connection and that will need to be investigated.

1338 - SCCP did not route - no PC in CgPA

GTT on CgPA PC is required, but CgPA PC is not present in the MSU.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST  EAGLE 37.5.0
0018.1338   CARD 1103,A    INFO    SCCP did not route - no PC in CgPA
          SIO=03   OPC=001-001-001     DPC=002-002-002
              SCCP MSG TYPE=04

Alarm Level: No alarm condition. The message is informational only.

Recovery

Check translations on the originating switch to determine the trouble.

1340 - REPT COND: TRBL Resynch Required

Under conditions of prolonged, high alarm activity the alarm processing capacity of the EAGLE 5 ISS can be reached. In an effort to keep the internal state machine current, alarms normally generated to the UI are discarded.

Under this scenario, when alarm processing recovers sufficiently, this message is generated to indicate to the attached network or element management systems that they should resynchronize with the EAGLE 5 ISS.

The generation of this message is expected to be limited to large configurations during severe outages, and the expected occurrence rate of this message is low; however, it has been added as a precaution. Although alarms may have been discarded, the internal alarm state of the EAGLE 5 ISS has been maintained and is stable.

Example

```
tekelecstp 99-03-09 12:01:43 EST EAGLE 35.0.0
5061.1340 SYSTEM INFO REPT COND: TRBL resynch required
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

The attached network or element management systems (such as Harris NetBoss) should use this message as an indication that they should perform the following command to synchronize alarm status with the EAGLE 5 ISS:

```
rept-stat-trbl
```

> **Note:**
>
> Network or element management systems attached through terminals configured as EMSALM type terminals must not filter this message. See the `chg-trm` command in the *Commands Manual* for further details.

1. Use the following command to check whether GTT selectors in the arrived MSU are provisioned in SCCPOPTS table:

   ```
   rtrv=sccpopts
   ```

2. If the SCCPOPTS table does not have an entry with the GTT selectors in the arrived MSU, use the following command to add a record with the GTT selectors in the arrived MSU to the SCCPOPTS table:

   ```
   ent-sccpopts
   ```

1341 - SRI rcvd - GSM2IS41 not provisioned

The system received an SRI Query message for which it attempted to generate a response. However, IS41 GSM Migration(IGM) feature found the GSM to IS-41 Migration prefix (specified by the GSM2IS41 parameter) is not provisioned on this system. With this UIM, IGM is notifying the operator it cannot process the SRI messages and is allowing it to fall through to the GTT for handling.

To be able to perform the IS-41GSM Migration feature and to accept SRI Request messages, you must first specify the GSM2IS41 prefix in GSMOPTS.

Example

This output indicates an error against the original destination rather than the redirected destination.

```
RLGHNCXA21W 02-07-21 16:20:19 EST  EAGLE 37.5.0

   GSM2IS41 = 0123456789abcde
   rlghncxa03w 03-03-20 09:04:14 EST  EAGLE 30.1.0
   SRFADDR=123456789abcdef     SRFNAI=7     SRFNP=15
   MSRNDIG=CCRNDN
   MSRNNAI=7     MSRNNP=15 DEFMAPVR=2
   ```

   If the GSM2IS41 parameter is not specified, proceed to 2. However, if it is set with a valid value, proceed to 3.

2. Use the `chg-gsmopts` command to specify the GSM to IS-41 migration prefix.

   Refer to the *Commands Manual* for details. Then re-issue the command that caused this UIM.

3. If the problem persists with the GSM2IS41 parameter specified, contact My Oracle Support (MOS).

1342 - ANSI IS-41 INP Qry rejected: AINPQ is OFF

The EAGLE 5 ISS has rejected an INP query that is decoded as an ANSI-41NPREQ query because the appropriate AINPQ (ANSI-41 INP Query) feature key is not on.

Example

```
RLGHNCXA21W 03-04-18 19:02:05 EST EAGLE 35.0.0

> If Global Title Translation is found, the GTTSET in which the translation is found appears. If Global Title Translation is not found, the GTTSET does not display.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Use `rtrv-mrn` and `rtrv-map` to determine the MRN and MAP Group information for that PC/PC+SSN combination.

2. Validate that the In-Service Threshold (THR) parameter is set correctly for each Group.

   If not, use the `chg-mrn` or `chg-map` command to change the THR parameter to the correct value.

3. If THR is correct, validate that the weight parameter is set correctly for each member of the group.

   If not, use the `chg-mrn` or `chg-map` command to alter the weights to the correct values.

4. Use `rept-stat-dstn` to determine which PC/PC+SSNs are not available.

   Perform corrective maintenance to get the unavailable PC/PC+SSNs back into service. Potential causes for unavailability are link deactivation, prohibited routes, network congestion or subsystem outages.

1345 - CRD Auto-Clear Sent to All MTP Cards

EAGLE 5 ISS generates this UIM when Circular Route Auto-Recovery procedure clears the Circular Route Detection (CRD) status of a destination that was marked prohibited.

Example

```
RLGHNCXA21W 03-04-18 19:02:05 EST  EAGLE 36.0.0
1234.1345    CARD 1203     INFO     CRD Auto-Clear Sent to All MTP
Cards
DPC=001-001-001
Report Date:06-06-19  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1346 - IS-41 Missing Mandatory Parameters

EAGLE 5 ISS has rejected the ANSI IS-41 INP Query message, because the TCAP portion of the message does not contain mandatory parameters (e.g. digits).

Example

```
tklc1091301 07-01-19 03:47:19 EST EAGLE5 36.0.0-57.9.0

01 01 11 18 76 18 79 70
LSN=ls1102n0
Report Date:07-01-19 Time:03:34:40
```

Alarm Level: No Alarm condition. Message is for information only.

Recovery

Ensure ANSI IS 41 INP Query message's DIGITS parameter contains less than 21 digits.

1349 - MSU invalid size – discarded

An MSU less than 5 bytes or greater than 279 bytes was detected by the MTP layer 3 software in an ATM card. A four byte MSU may cause the ATM connection to bounce (four byte PDUs are used for SSCF control). MSU length limit is 279 bytes.

Example

```
2864.1349   CARD 6112,A  INFO    MSU invalid size - discarded
            LEN=114
            SIO=93  OPC=  227-040-000    DPC=  209-122-150
            DATA=09 81 03 0c 15 09 89 06 0a 21 80 95
                 97 10 89 09 89 95 0a 21 80 95 89 30
                 03 44 62 42
            LSN=n209068063
            Report Date:13-11-09  Time:09:48:33
```

> **✎ Note:**
>
> The length of the MSU (for example, LEN=114) includes the length of the SIF plus some other parameters. The length of these other parameters varies depending on the protocol managed by the LIM card issuing the UIM.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1350 - Discrd Rcvd Lrg MSU CTRL-FEAT Off

IPL receives on a M2PA connection a large MSU greater than 272 bytes and the feature is not enabled.

Example

```
  0047.1350   CARD 1113     INFO    Discrd Rcvd Large MSU CTRL-FEAT
Off
            LEN=50
            SIO=04   OPC=   016-032-048    DPC=   032-032-048
            DATA=01 02 03 04 05 06 07 08 09 0a 0b 0c
                 0d 0e 0f 10 11 12 13 14 15 16 17 18
                 19 1a 1b 1c
            LSN=ls211
            Report Date:12-12-15  Time:11:01:50
;
```

> **Note:**
>
> The length of the MSU (for example, LEN=50) includes the length of the SIF plus some other parameters. The length of these other parameters varies depending on the protocol managed by the LIM card issuing the UIM.

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter the following command to retrieve information about controlled features:

   `rtrv-ctrl-feat`

   The output of the `rtrv-ctrl-feat` command displays information about the enabled features.

2. The alarm will be cleared when the feature is enabled using the `enable-ctrl-feat` command.

1351 - Discrd Trans Lrg MSU Unsupported SLK

An MSU less than 5 bytes or greater than 279 bytes was detected by the MTP layer 3 software in an ATM card. A four-byte MSU may cause the ATM connection to bounce (four byte PDUs are used for SSCF control). The MSU length limit is 279 bytes. IN this case, an SSEDCM-IPLIM SAAL/TALI signaling link receives from IMT a large MSU greater than 272 bytes. The discard occurs on the outbound card.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST   EAGLE 37.0.0
0003.1351    CARD 1105,B   INFO     Discrd Trans Lrg MSU Unsupported SLK
             LEN=475
             SIO=0D   OPC=001-001-001    DPC=002-002-002
             LSN=ABCD123
             Report Date:yy-mm-dd  Time:hh:mm:ss
```

> **Note:**
>
> The length of the MSU (for example, LEN=50) includes the length of the SIF plus some other parameters. The length of these other parameters varies depending on the protocol managed by the LIM card issuing the UIM.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

ORACLE

1352 - Discrd Rcvd Lrg MSU Unsptd Outbnd SLK

An IP7 GPL receives a large MSU greater than 272 bytes, the BICC controlled feature is on, there are available routes for the destination point code, but selected outbound card does not support large MSUs.

Example

```
    0049.1352    CARD 1113     INFO    Discrd Rcvd Lrg MSU Unsprtd
Outbnd SLK
                 LEN=50
                 SIO=04   OPC=   016-032-048    DPC=   032-032-048
                 DATA=01 02 03 04 05 06 07 08 09 0a 0b 0c
                      0d 0e 0f 10 11 12 13 14 15 16 17 18
                      19 1a 1b 1c
                 LSN=ls211
                 Report Date:12-12-15  Time:11:02:11
;
```

> **✎ Note:**
>
> The length of the MSU (for example, LEN=50) includes the length of the SIF plus some other parameters. The length of these other parameters varies depending on the protocol managed by the LIM card issuing the UIM.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1353 - DTA Bypassed for Rcvd Lrg MSU

An IP7 GPL receives a large MSU that triggers DTA processing instead of converting the MSU (the MSU is routed normally, DTA is bypassed).

Example

```
    0050.1353    CARD 1113     INFO    DTA Bypassed for Rcvd Large MSU
                 LEN=50

0010.1357    CARD 1103     INFO     Negotiation at 100Mbps/Full Duplex
failed
             DLK configuration: SPEED = 100 Mbps, DUPLEX = HALF
             Report Date:00-02-07  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Use a valid combination of speed and duplex parameters on the card and Ethernet switch for configuring a data link. An invalid combination may cause link degradation and unreliable behavior.

1358 - MSU discarded - too big after MTP conv.

- When ITUI or ITUN MSU, routed to ANSI or ITUN24 network, with SI less than or equal to 5 is received on any card type where the original MSU is of sufficient size that when the 14-bit point codes are converted to 24-bit point codes the resulting converted MSU will have SIF greater than 272 bytes.

- When ITUI or ITUN MSU, routed to ANSI or ITUN24 network, with SI ranging from 6 to 15 is received on any non-IP card type where the original MSU is of sufficient size that when the 14-bit point codes are converted to 24-bit point codes the resulting converted MSU will have SIF greater than 272 bytes. The MSU will be discarded even if the outbound linkset is on IP card type and Large MSU Support is enabled (Large MSU for IP Sig, Feature P/N 893018401) because conversion is performed on the inbound card, so both the inbound and outbound cards must be able to support MSU greater than 272 bytes.

- When ITUI or ITUN MSU, routed to ANSI or ITUN24 network, with SI ranging from 6 to 15 is received on any IP card type where the original MSU is of sufficient size that when the 14-bit point codes are converted to 24-bit point codes the resulting converted MSU will have SIF greater than 4095 bytes.

Example

```
 0055.1358    CARD 1113      INFO     MSU discarded - too big after
MTP conv.
             LEN=50
             SIO=04   OPC=   016-032-048     DPC=   032-032-048
             DATA=01 02 03 04 05 06 07 08 09 0a 0b 0c
                  0d 0e 0f 10 11 12 13 14 15 16 17 18
                  19 1a 1b 1c
             LSN=ls211
```

```
                    Report Date:12-12-15  Time:11:03:11
;
```

> **✎ Note:**
>
> The length of the MSU (for example, LEN=50) includes the length of the SIF
> plus some other parameters. The length of these other parameters varies
> depending on the protocol managed by the LIM card issuing the UIM.

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action required.

1359 - SCCP Looping Detected

When a SCCP Looping condition is found, the mode of operation of the loopset will be
notify or discard (based on provisioning). The mode of operation either only notifies the
user (via this UIM), or notifies the user (via this UIM) and discards the MSU. The data
shown in the output will be from the original MSU, before any GTT modifications were
applied to it.

A hop counter violation message is also sent by EAGLE to the UDTS. The message
indicates either ANSI or ITU Networks based on the provisioned GTT Translation point
code type.

Example

```
nbsa01 12-01-23 19:41:10 BRA  EAGLE5 41.1.1-62.67.1
    0527.1359    CARD 3217    INFO    SCCP Looping Detected
                 SIO=83  OPC=  000-004-666      DPC=  000-006-500
                 SCCP MSG TYPE=09
                 CDPA:  NI=0  RI=0  GTI=04  SSNI=1  PCI=0
                        TT=000  NP=01  NAI=004  ADDR=554197388383
                        PC=--------------    SSN=008
                 CGPA:  NI=0  RI=0  GTI=04  SSNI=1  PCI=0
                        TT=000  NP=01  NAI=004  ADDR=551181134001
                        PC=--------------    SSN=008
                 LSN=ylrjo1
GTTSETIDX=(0)
                 Report Date:12-01-23  Time:19:41:00
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Analysis of measurements and messages is required to ensure messages are
correctly being discarded.

> **Note:**
>
> Entering the wrong data in the SCCP Loop Table and/or incorrectly connecting a GTT translation with a particular SCCP Loop Table entry could result in unwanted traffic loss.

Refer to the *Commands Manual* for more information using `ENT/CHG/DEL/RTRV-LOOPSET` commands.

1. Remove invalid or unwanted entries from the SCCP Loop Tables.

2. Create a valid SCCP Loop Table entry for a GTT translation if the available tables are valid for other translations, but not the one in error.

3. Set the "notify only" mode until confidence is gained in the EAGLE SCCP Loop Tables, this is also the recommended setting for initial provisioning with a subsequent change.

4. Periodic auditing of UIMs to ensure that valid messages are not being discarded.

1360 - Inv SR-5129 msg rcvd, Bad Src.

An SR-5129 message was received with a bad source name in the message header.

Example

```
station1234 06-12-21 16:28:08 EST Rel 37.5.0-58.12.0

No action necessary.

1372 - SLTC Failure-SLTM not sent, Invalid SIO

The EAGLE attempted to send SLTM with SIO=2 for ITU APC.

Example

```
RLGHNCXA21W 00-02-07 12:01:43 EST  EAGLE 37.0.0
1230.1372    CARD 1201,A   INFO    SLTC Failure-SLTM not sent, Invalid
SIO
             ADJ PC=001-001-001       SLC=02    LEN=0f
             DATA=01 02 03 04 05 06 07 08 09 10 11 12 13 14 15
             Report Date:00-02-07  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Change the sltset corresponding to the link/port to the one that has sio=1 (Regular SLTM message).

> **Note:**
>
> Special maintenance messages are not supported for ITU PCs.

1373 - TFC Generated for Congested Link

Implementation of auto decrementing of congestion abatement is multicast to all MTP cards (SRC and DEST).

In both ANSI and ITU networks, UIM 1373 indicates the level of congestion; for example, CONG STATUS=00**1** is a lower level of congestion than CONG STATUS=00**3** (the highest level of congestion).

For **M3UA** links, signaling congestion (**SCON**) network-management messages also report congestion:

- In an **ANSI** network, the value in the SCON always matches the value in UIM 1373.

- In a non-ANSI (**ITU**) network, SCON messages report only 0 (not congested) or 1 (congested), so the congestion value reported in UIM 1373 can differ from the value in the SCON. For example, if UIM 1373 reports CONG STATUS=00**2** or CONG STATUS=00**3**, then the value in the related SCON will be **1** (not 2 or 3).

Example

```
    station1234 02-07-21 16:28:08 EST Rel 37.0.0 -46.12.0
    8441.1373    CARD 1101,A   INFO      TFC Generated for Congested
Link
                 DPC=   001-115-000    CPC=   008-001-001
                 CONG SLK: 1305,A3     CONG STATUS=001
  Report Date:07-01-05  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

- Use local troubleshooting procedures to determine the cause for congestion.

1374 - SMS B-Party address decode failed

An error was detected during decode of SMS message destination address.

Example

```
    tekelecstp 02-03-20 07:40:50 EST  EAGLE 39.1.0-61.4.0

                  LSN=ls221
                  Report Date:02-03-20  Time:07:40:50
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

The message should be analyzed to determine the error, and the originating node should be contacted to send corrected message.

When processing MSU for SMS MO, this UIM is generated when one of the following occurs:

- Mandatory SM-RP-UI parameter is absent from the MO ForwardSM message.

- The TPDU type is SMS-SUBMIT and the parameter length is less then 4 + number of digit bytes specified in the number of digit field.

- The TPDU type is SMS-COMMAND and the parameter length is less then 7 + number of digit bytes specified in the number of digit field.

- Number of digits is 0 or greater than 20.

1375 - SMS B-party Failed to modify TCAP MSU

The formatted outbound digit string length generated by SMS NP for encoding the TCAP message exceeded system limits.The formatted outbound digit string length generated by SMS NP or MO SMS B-Party Routing for encoding the TCAP message exceeded system limits.

Example

```
 tekelecstp 02-03-20 07:40:50 EST   EAGLE 39.1.0-61.4.0
 6815.1375    CARD 1103     INFO     SMS B-party Failed to modify TCAP
MSU
              SIO=83    OPC=    002-002-001    DPC=    009-008-007

                   01 00 9f 74 02 00 00 89
              LSN=ls221
              Report Date:02-03-20  Time:07:40:50
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

The message and outbound digits formatting options should be analyzed to determine the error and the originating node or the requested outbound digit formatting option should be modified to correct the encoding error.

This UIM is generated when processing MSU for SMS MO and TCAP message needed to be expanded to accommodate new digits and either

- New SM-RP-UI parameter length exceeds 127 digits.

- The length of new parameter sequence, Invoke component, component portion or TCAP package exceeds 127 bytes.

- The SCCP user data length (TCAP payload size) exceeds 255 bytes.

- The MSU length exceeds 279 bytes.

1376 - SMS Failed to modify B-Party digits

During processing of SMS message, the formatted outbound digit string length exceeded limit for number of digits.

This message is raised when:

- During processing of SMS message, the formatted outbound digit string length exceeded limit for number of digits.

- For MO SMS B-Party routing, AMGTT data provisioned in the GTT Table entry corresponding to MAP B-Party number is used to modify MAP B-Party digits. If outbound length exceeds 20 or becomes less than 0.

Example

```
    tekelecstp 02-03-20 07:40:50 EST   EAGLE 39.1.0-61.4.0

                 Report Date:02-03-20  Time:07:40:50
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

The message and the digit format provisioning should be analyzed to determine the error and the originating node or the requested outbound digit formatting option should be modified to correct the encoding error. For MO SMS B-Party Routing, AMGTT data (NSDD/NPDD/NSDS/NPDS) provisioned in GTT entry corresponding to MAP B-Party number should be modified to correct the encoding error.

This UIM is generated when SMS NP or MO SMS B-Party Routing feature generated an outbound digit string for encode in TCAP message, which exceeded 20 digits in length or is less than 0 digits in length forcing SMS NP/MO SMS B-Party Routing to route original MSU.

1377 - SSH session disconnected - server busy

Indicates that an established SSH connection on the EAGLE has disconnected.

Example

```
RLGHNCXA21W 02-08-08 20:52:04 EST  EAGLE 39.0
5024.1377    CARD 1105     INFO      SSH session disconnected - server
busy

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1378 - Inh VFlex SS request already outstanding

A second attempt to inhibit the V-Flex subsystem has been made while the first is still being processed. The second attempt will be ignored.

Example

```
tekelecstp 07-03-09 12:01:43 EST EAGLE 37.6.0
5061.1378 SYSTEM INFO Inh VFlex SS request already outstanding
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1379 - Failure Inhibiting VFlex SS

The attempted inhibit of the V-Flex subsystem failed. A response SOG was not received from the mate.

Example

```
tekelecstp 07-03-09 12:01:43 EST EAGLE 37.6.0
5061.1379 SYSTEM INFO Failure Inhibiting VFlex SS
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1380 - VFLEX: No RN digits provisioned

The digits in the VMS at the requested VMRN index were not provisioned. The provisioning information for the VMS ID accessed via the MSU information should be verified.

Example

```
RLGHNCXA21W 07-07-21 12:01:43 EST  EAGLE 37.6.0
0002.1380    SYSTEM        INFO      VFlex: RN is not provisioned

                            intl   4
                            natl   3
                            nai1   none
                            nai2   none
                            nai3   none
   ;
   ```

2. Use the following command to enable the IDPRCDPN service: `chg-npp-serv:srvn=idprcgpn:status=ON`

1394 - Flushing undelivered MSUs

The destination EAGLE card for an SS7 message is not reachable by the origination EAGLE card and the dynamic database is not updated to reflect the unreachable status.

Example

```
tekelecstp 02-01-05 20:39:14 MST   EAGLE 41.0
   0010.1394    CARD 1108     INFO    Flushing undelivered MSUs
                Card List: 1101, 1201, 1302, 2103, 2204
                LSN=lg1104a0
                Report Date:02-01-05   Time:20:39:14
;
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Enter the following command to check the IMT bus status for both the source and destination card.

   `rept-stat-card:loc=x:mode=full`
   where *x* is the card location. The source card is identified in the message. The destination card can be obtained from the linkset name in UIM.

> **✎ Note:**
>
> There could be several cards involved with the linkset name and thus they all should be checked.

Following is an example of the possible output using card 1106:

```
 RLGHNCXA21W 08-01-21 12:01:43 EST  EAGLE 38.0.0
     CARD    VERSION      TYPE     APPL     PST            SST

     1106    021-101-000  TSM      SCCP     IS-NR          Active
-----
        ALARM STATUS     = No Alarms.
        IMT VERSION      = 021-001-000
        PROM VERSION     = 021-001-000
        IMT BUS A        = Conn
        IMT BUS B        = Conn
        CLOCK A          = Active
        CLOCK B          = Idle
        CLOCK I          = Idle
        MBD BIP STATUS   = valid
        DB STATUS        = valid
        DBD MEMORY SIZE  = 64M
        SCCP SERVICE     = 1201, 1214, 1215, 1217, 1102
        SCCP % OCCUP     = 0%
        SLK A   PST      = OOS-MT          LS=ls11234567  CLLI=
        SLK B   PST      = OOS-MT          LS=ls11345678  CLLI=
        SNM   TVG RESULT = 24 hr: ------,  5 min: ------
        SLAN  TVG RESULT = 24 hr: ------,  5 min: ------
        SCCP  TVG RESULT = 24 hr: ------,  5 min: ------
     Command Completed.
```

2. Make sure the cards are correctly connected to both A and B buses of the IMT.

1395 - Inh ATINPQ SS request alrdy outstanding

A second attempt to inhibit the ATINPQ subsystem has been made while the first is still being processed. The second attempt will be ignored.

Example

```
    station1234 06-12-21 16:28:08 EST Rel 39.2.0
    0020.1395   CARD  1106    INFO     Inh ATINPQ SS request alrdy
outstanding
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1396 - Failure Inhibiting ATINPQ SS

The attempted inhibit of the ATINPQ subsystem failed. A response SOG was not received from the mate.

Example

```
station1234 06-12-21 16:28:08 EST Rel 39.2.0
0020.1396    CARD  1106    INFO     Failure Inhibiting ATINPQ SS
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1397 - LSS: Missing Mandatory Parameter

A required parameter was missing in ATI NP query.

Example

1416 - MAP Missing Mandatory Parameters

MOSMS Feature could not decode the GSM MAP message, since there are missing mandatory parameters in the TCAP portion of the message, e.g., SM-RP-UI or SM-RP-OA.

Example

```
tekelecstp 02-03-20 07:40:50 EST  EAGLE 40.1
    6815.1416    CARD 1103     INFO    MAP Missing Mandatory Parameters
                 SIO=83   OPC=   002-002-001    DPC=   009-008-007
                 CDPA: AI=8b  SSN=002  TT=006
                     ADDR=110000
                 CGPA: AI=43  PC=   002-002-001     SSN=002
                 DATA=49 e2 47 c7 04 47 04 25 1e e8 3f e9
```

```
                        3d cf 01 e9 d1 02 09 35 f2 34 9f 69
                        01 00 9f 74 02 00 00 89
                     LSN=ls221
                     Report Date:02-03-20  Time:07:40:50
```

Alarm Level: No Alarm condition. Message is for information only.

Recovery

Ensure the message contains all mandatory parameters.

1417 - PublicKey doesn't match known-host file

This message indicates that the SSH public key that is exchanged between the host and server has changed. This could be due to a legitimate configuration change on the server, or it could be caused by a security breach, such as a man-in-the-middle attack.

If strict-host-key-checking is in effect, the connection will be rejected. Otherwise, the new key will be automatically added to the known-host file

Example

```
    RLGHNCXA21W 13-07-30 21:18:09 EDT  EAGLE5 45.0.0-64.70.1
0130.1417    CARD 1113    INFO    PublicKey doesnt match known-host
file
FTP Server IP Address =  xxx.xxx.xxx.xxx
;
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Contact the server system administrator to determine if the host key change is legitimate.

1418 - SCCP did not route - no SSN in CgPA

This message indicates the GTT failed because a CgPA SSN Set Type was encountered, but no CgPA SSN in MSU. The MSU is discarded.

Example

```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify the provisioning of the GTT information using the `rtrv-gta`, `rtrv-gttsel`, and `rtrv-gttset` commands to determine if the GTT processing path and fallback options are set properly for the incoming MSU.

1419 - SCCP did not route - no SSN in CdPA

This message indicates the GTT failed because a CdPA SSN Set Type was encountered, but no CdPA SSN in MSU. The MSU is discarded.

Example

```
    stpa1071501 09-04-24 13:05:10 EDT  EAGLE5 41.0.0-62.23.1

1424 - IMT A [B] requested to re-align at LOW [HIGH] Rate

This message is issued when a rate change request is sent by the OAM to the HIPR2 cards on a particular bus (to re-align at the requested rate). The HIPR2 cards will initiate the alignment protocol on receiving the request.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST EAGLE 41.1.0
    0023.1424    CARD 1115    INFO    IMT A requested to re-align at
HIGH Rate
                Report Date:09-02-07  Time:12:01:43
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1425 - SMS A-party Address decode failed

Decoding fields of the SMS_OOA parameter of IS41 SMDPP message failed.

Example

```
tekelecstp 02-03-20 07:40:50 EST  EAGLE 40.1
6815.1425    CARD 1103     INFO    SMS A-party Address decode failed
             SIO=83   OPC=   002-002-001    DPC=   009-008-007
             CDPA: AI=8b  SSN=002  TT=006
                  ADDR=110000
             CGPA: AI=43  PC=   002-002-001     SSN=002
             DATA=49 e2 47 c7 04 47 04 25 1e e8 3f e9
                  3d cf 01 e9 d1 02 09 35 f2 34 9f 69
                  01 00 9f 74 02 00 00 89
             LSN=ls221
             Report Date:02-03-20  Time:07:40:50
```

Alarm Level: No Alarm condition. Message is for information only.

Recovery

Ensure that SMDPP message contains properly formatted SMS_OOA parameter.

1426 - S-Port: Missing GRN for srvc prtd subs

Service Portability required RTDB data "GRN" to format outbound digits, which was not found.

Example 1

```
 0017.1042    CARD 1103,A   INFO       S-Port: Missing GRN for srvc prtd
subs
             SIO=03   OPC=001-001-001       DPC=002-002-002
             INCM DN: 4605500
             COND DN: 19194605500
             LSN=ABCD123
```

Example 2

```
  6850.1426    CARD 1103     INFO    S-Port: Missing GRN for srvc prtd
subs
             SIO=83   OPC=   002-002-001    DPC=   009-008-007
             CDPA: AI=8b  SSN=002  TT=006
                  ADDR=987654
             CGPA: AI=09  PC=--------------    SSN=003
             INCM DN: 4605500
             COND DN: 19194605500
             LSN=ABCD123
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Verify that a GRN has been provisioned for the conditioned DN (specified in the *COND DN* field in the UIM output) in EPAP.

1427 - IAR CdPN parameter invalid or not found

This message is issued when the IAR Base feature cannot find a CdPN parameter within a message, when it cannot decode the parameter after it finds it, or when the parameter does not contain the required information in a usable format.

Example

```
RLGHNCXA21W 09-07-21 16:20:19 EST   EAGLE 41.1.0
   0002.1427    CARD 1113     INFO      IAR CdPN parameter invalid or
not found
              Report Date:09-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1428 - IAR CgPN parameter invalid or not found

This message is issued when the IAR Base feature cannot find the CgPN parameter within a message, when it cannot decode the parameter after it finds it, or when the parameter does not contain the required information in a usable format.

Example

```
RLGHNCXA21W 09-07-21 16:20:19 EST   EAGLE 41.1.0
   0002.1428    CARD 1113     INFO      IAR CgPN parameter invalid or
not found
              Report Date:09-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1429 - IAR TRIGTYPE invalid or not found

This message is issued when the IAR Base feature cannot find the **TRIGTYPE** parameter within a message, when it cannot decode the parameter after it finds it, or when the parameter does not contain the required information in a usable format.

Example

```
RLGHNCXA21W 09-07-21 16:20:19 EST   EAGLE 41.1.0
    0002.1429    CARD 1113      INFO      IAR TRIGTYPE invalid or not
found
                     Report Date:09-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1430 - IAR CdPN parameter encoding failed

This message is issued when the IAR Base feature cannot encode the message after modifying its CdPN parameter. One way that this can occur without invalid data is when a CdPN parameter length increases, and the containing message grows too large.

Example

```
RLGHNCXA21W 09-07-21 16:20:19 EST   EAGLE 41.1.0
    0002.1430    CARD 1113      INFO      IAR CdPN parameter encoding
failed
                     Report Date:09-07-21  Time:16:20:19
```

Alarm Level: No Alarm condition. Message is for information only.

Recovery

No action necessary.

1431 - IAR CgPN parameter encoding failed

This message is issued when the IAR Base feature cannot encode the message after modifying its CgPN parameter. One way that this can occur without invalid data is when a CgPN parameter length increases, and the containing message grows too large.

Example

```
RLGHNCXA21W 09-07-21 16:20:19 EST   EAGLE 41.1.0
    0002.1431    CARD 1113      INFO      IAR CgPN parameter encoding
failed
                     Report Date:09-07-21  Time:16:20:19
```

Alarm Level: No Alarm condition. Message is for information only.

Recovery

No action necessary.

1432 - IGM Relay Failed - Bad IS41SMSC Xlation

This message indicates that the GTT translation lookup on DEFIS41SMSC digits (within GTTSET specified by IS41SMSCGTTSN) failed.

Example

```
station1234 09-08-30 16:28:08 EST EAGLE5 41.1.0
1234.1432    CARD 1101     INFO    IGM Relay Failed - Bad IS41SMSC

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Provision the translation entry for DEFIS41SMSC digits within the GTTSET specified by IS41SMSCGTTSN. Use the `rtrv-gttset` command to search the GTT set name based on the GTTSET index displayed in the UIM.

2. Change the IS41SMSCGTTSN option value in the GSMOPTS table to a valid GTT set name that contains translation for DEFIS41SMSC digits.

1433 - AIQ: Inhibit request already pending

An `inh-map-ss` command is already entered and queued.

Example

```
RLGHNCXA21W 00-02-10 12:01:43 EST EAGLE 42.0.0
0014.1433 SYSTEM INFO AIQ: Inhibit request already pending
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1434 - AIQ: Failure Inhibiting SS

The `inh-map-ss` command did not take the AIQ subsystem off-line.

Example

```
RLGHNCXA21W 00-02-10 12:01:43 EST EAGLE 42.0.0
0014.1434 SYSTEM INFO AIQ: Failure Inhibiting SS
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Enter the `inh-map-ss` command with the force parameter.

1435 - AIQ: TriggerType not provisioned

This message indicates that the **AIQ** subsystem received an AIQ message where the value of the TriggerType parameter is not provisioned in the AIQOPTS table.

Example

```
5193.1435    CARD 1105     INFO    AIQ: TriggerType not provisioned
             SIO=83   OPC=   001-001-001    DPC=   009-008-007
             CDPA: AI=cb  SSN=014  TT=004
                  ADDR=9873946354
             CGPA: AI=cb  PC=   001-001-001    SSN=014
             DATA=3f e2 3d c7 04 00 01 02 03 e8 35 e9
                  33 cf 01 2a d1 02 09 40 f2 29 81 07
                  00 00 00 00 00 00 00 84
             LSN=ls1
             Report Date:20-08-29  Time:02:55:22
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Ensure the AIQ message's TriggerType parameter value is one of those provisioned in the AIQOPTS table.

1436 - AIQ: Unsupported Digits(Dialed) length

This message indicates that the **AIQ** subsystem received an AIQ message where the length of the Digits(Dialed) parameter is outside of the range provisioned in the AIQOPTS table.

Example

```
 0643.1436    CARD 1105     INFO    AIQ: Unsupported Digits(Dialed)
length
             SIO=83   OPC=   001-001-001    DPC=   009-008-007
             CDPA: AI=cb  SSN=014  TT=004
                  ADDR=9873946354
             CGPA: AI=cb  PC=   001-001-001    SSN=014
             DATA=3f e2 3d c7 04 00 01 02 03 e8 35 e9
                  33 cf 01 2a d1 02 09 40 f2 29 81 07
                  00 00 00 00 00 00 00 84
             LSN=ls1
             Report Date:20-08-29  Time:03:04:25
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Ensure the AIQ message's Digits(Dialed) parameter length is within the range provisioned in the AIQOPTS table.

1437 - IMT [A|B]: Rate change not initiated

This message is issued when the IMT Rate change could not proceed due to bus being in alarming state.

Example

```
RLGHNCXA21W 09-02-07 12:01:43 EST EAGLE 41.1.0
    0023.1437    CARD 1115    INFO       IMT A: Rate change not
initiated
                    Report Date:09-02-07  Time:12:01:43
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Although no action is required, this message can serve as a notification to verify status of the IMT bus and to start recovery procedures if needed.

1. Enter the `rept-stat-imt` command to verify the status of the IMT bus.

2. Replace any faulty cards with a new HIPR2 card.

3. Contact My Oracle Support (MOS) for more information.

1439 - SIP card exceeded threshold TPS

The alarm indicates that the SIP card has reached maximum TPS.

Example

```
1         2         3         4         5         6         7         8
12345678901234567890123456789012345678901234567890123456789012345678901234
34567890
    xxxx.1439    CARD 1106    INFO     SIP card exceeded threshold TPS
                  Report Date:13-09-03  Time:18:57:35
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Traffic must be reduced to the SIP card. Failure to reduce SIP card traffic may result in traffic or card failure.

1440 - G-Flex MLR: Op with bad MSISDN skipped

The G-Flex MLR Function encountered an MSISDN parameter that contains fewer than 5 digits or more than 15 digits

Example

```
    station1234 06-12-21 16:28:08 EST Rel 42.0.0
    0020.1440    CARD  1106    INFO     G-Flex MLR: Op with bad MSISDN
```

```
skipped
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Abnormal length of the MSISDN indicates a configuration issue on the far-end node, which can be confirmed with a message trace.

1441 - IP Info mismatch, card reset required

The card stated in the message has an IP mismatch and must be reset. This occurs when the database is updated and a manual reset must be performed for the newly provisioned values to be used.

The IP configuration commands support the MCAP locations when OAMHC is running. Usually these commands require the target card to be inhibited, however for MCAP locations, the command is expected to be run while the card is IS-NR. Since these commands result in a database update, they require the MCAP to be IS-NR. Once the database has been modified, manual reset of the card must be performed for the newly provisioned values to be used. A notice is displayed to the user regarding the reset requirement for an MCAP location. If the MCAP location is not reset, then a UIM is displayed once every hour indicating that the card has an IP Mismatch and must be reset.

Example

```
RLGHNCXA03W 10-01-11 16:20:19 EST EAGLE 42.0.0
    0020.1441    CARD 1113     INFO       Active OAM IP mismatch, 1113
reset req
                 Report Date:10-01-11  Time:16:20:19

    0020.1441    CARD 1113     INFO       Standby OAM IP mismatch, 1115
reset req
                 Report Date:10-01-11  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Reset the card in the appropriate slot as specified in the message text.

1442 - Invalid EMP SCR Message Received

This UIM indicates that the EAGLE 5 ISS received and rejected an invalid Service Configuration Request (**SCR**) EMP message. The UIM includes the IP address where the request originated and the reason the EAGLE 5 ISS rejected the SCR message.

Example

```
    0020.1442    CARD 1106,A   INFO       Invalid EMP SCR Message
Received
                 MSG Length=6
```

```
             REQ EMP Version=4       RSP EMP Version=4
             REQ Transaction ID=123  RSP Transaction ID=123
             IMF IP Address= 172.21.48.15
             Reason=Invalid Message Length
             Report Date:10-02-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary if there is only one occurrence. If the condition continues, use the information provided in the message to debug the problem.

1443 - GTT Action Failed to Send TCAP Error

This UIM indicates that the TCAP error action could not generate a TCAP error response due to any failure in decoding TCAP.

Example

```
6054.1443   CARD 1101     INFO    GTT Action FAILED TO SEND TCAP ERROR

Alarm Level: No alarm condition. The message is informational only.

Recovery:

Do just one of the following to fix the problem:

1. Correct the TCAP Portion.
2. Disassociate "TCAP Error" GTT Action from the GTT Translation.
3. Change the "TCAP ERROR" action to either "UDTS" or "DISCARD" GTT Action.

1444 - GTT Loadsharing fail: PC not in MRNSET

This UIM indicates that the EAGLE 5 ISS failed to loadshare a MSU, because the translated DPC is not present in the specified non-default MRNSET.

Example

```
0019.1444    CARD 1104,A   INFO      GTT Loadsharing fail: PC not in
MRNSET
          TRANSLATED PC=003-003-003        TRANSLATED SS=005

Alarm Level: No alarm condition. The message is informational only.

Recovery:

Do *one* the following to fix the problem:

1. Configure the DPC displayed in UIM within the displayed MRNSETID.

2. Configure correct MRNSETID (which contains the DPC displayed in the UIM) in associated GTT Translation entry.

3. Configure "Default" MRNSETID in the GTT Translation entry.

1445 - LNP Day Meas. Discarded for LRN

This message is indicates that the Daily LNR measurement counts are incorrect because of discards due to provisioning.

Example

```
RLGHNCXA03W 10-01-11 16:20:19 EST EAGLE 42.0.0
     0020.1015    CARD 1106     INFO       LNP Day Meas. Discarded for
LRN
                Report Date:02-07-21   Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action required.

1446 - XUDT UDT conversion failed

The conversion from XUDT to UDT (or UDT to XUDT) failed, and the message was routed without the XUDT UDT conversion. Depending on which features are applied after XUDT UDT conversion, other processing of the message may occur after the failed XUDT UDT conversion.
Example

```
0018.1446    CARD 1103,A     INFO     XUDT UDT conversion failed

Recovery

Contact far end note and investigate reason for error.

1449 - Binding Failed for screen set: <screen set name>

This UIM indicates a screen-set binding failure in Gateway Screening (**GWS**).

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
    0023.1449    CARD 1105    INFO       Binding Failed for screen set:
ayyy
                  Report Date:11-05-26  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Refer to the UIM for the name of the failed screen set. The LIM or Service Module card regenerates a binding request.

1450 - IDPRCDPN CDPN Encoding Failed

This UIM is raised if IDPRCDPN encoding fails.

Example

```
    1          2          3          4          5          6

                 Report Date:02-03-06  Time:14:31:03
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

One or more of following actions must be taken:

1. The Formatting Action list in the **NPP** Action Set that processed the **IDP** Query must be corrected.

2. The data associated with **DN** in the **RTDB** must be corrected.

3. The message must have enough space for the **CDPN** parameter expansion.

1451 - IDPRCGPN CGPN Encoding Failed

This UIM is raised if IDPRCGPN encoding fails.

Example

```
1234567890123456789012345678901234567890123456789012345678901234567890123456789012

                COND DN: 9992222227
                LSN=itu1
                Report Date:02-03-06  Time:14:37:31
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

One or more of following actions must be taken:

1. The Formatting Action list in the **NPP** Action Set that processed the **IDP** Query must be corrected.

2. The data associated with **DN** in the **RTDB** must be corrected.

3. The message must have enough space for the **CGPN** parameter expansion.

1452 - Invalid IP Address from SCTP Heartbeat Response

This UIM indicates an **SCTP** layer received a Heartbeat Response (HB) with a source IP address that did not match the IP address from where the original HB message was sent.

Example

```
    1         2         3         4         5         6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
0388.1452    CARD 1308,A   INFO     SCTP HB ACK from unexpected IP
address
   HB RESP IPADDR = 10.254.111.21
   HB RESP PORT   = 4002
   HB INFO IPADDR = 10.254.111.21
   HB INFO PORT   = 4002
   SNAME          = sg1308b
                Report Date:12-07-10  Time:13:45:24
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

Correct the IP network setup for the **SCTP** association.

1453 - EE Collection started

This UIM indicates collection has started on a network card when Eagle Eyes proper is in Active state.

Example

```
    1          2          3          4          5          6
7          8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
0023.1453    CARD 1105    INFO     Collection started on card
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

None.

1454 - EE Collection end

This UIM indicates the collection ends when Eagle Eyes proper enters idle state.

> **✎ Note:**
>
> EAGLE may not output this UIM when Eagle Eye Collection termination is initiated by the system based on the set capture limit (SECLIM, PKTLIM, and KBLIM).

Example

```
    1          2          3          4          5          6
7          8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
0023.1454    CARD 1105    INFO     EE Collection end
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

None.

1455 - EE Queue full, Packets Dropped

This UIM indicates the message queue on the GEDTI card is full; no more packets can be enqueued..

Example

```
    1          2          3          4          5          6
7          8
12345678901234567890123456789012345678901234567890123456789012
34567890
0023.1455    CARD 1105    INFO      EE Queue Full Packets Dropped
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

None.

1456 - Hub Congested, Packets Dropped

This UIM indicates the message queue between the GEDTI and EEPC is full.

Example

```
    1          2          3          4          5          6
7          8
12345678901234567890123456789012345678901234567890123456789012
34567890
0023.1456    CARD 1105    INFO      Hub Congested Packets Dropped
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

None.

1457 - GEDTI Port Enabled

This UIM indicates the GEDTI port is enabled on the IPSM card.

Example

```
    1          2          3          4          5          6
7          8
12345678901234567890123456789012345678901234567890123456789012
34567890
9671.1457    CARD 1112    INFO      GEDTI Port Enable
             PORT = 5555
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

None.

1458 - GEDTI Port Disabled

This UIM indicates the GEDTI port is disabled on the IPSM card.

Example

```
    1         2         3         4         5         6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
9642.1458    CARD 1112    INFO     GEDTI Port Disabled
               PORT = 5555
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

When the GEDTI port is enabled.

1459 - TCP Connection lost b/w IPSM and EEPC

This UIM indicates the TCP Connection between the IPSM card and network card has been lost.

Example

```
    1         2         3         4         5         6
7         8
1234567890123456789012345678901234567890123456789012345678901234567890123456789012
34567890
0023.1459    CARD 1105    INFO     TCP Connection lost b/w IPSM and
EEPC
               SESSION ID = 1
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

When the TCP Connection is re-established.

1460 - GWS Duplicate Stop Action Failed

This message indicates the gateway screening (GWS) Duplicate and Route stop action failed to duplicate an incoming MSU.

Example

```
5347.1460    CARD 1103    INFO     GWS Duplicate Stop Action Failed
               Report Date:13-10-10  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No further action is required.

1461 - Link status on card needs re-sync

This message indicates the Link status on the card needs to be re-synched and the system has initiated a re-synchronization.

Example

```
0020.1461    CARD 1106    INFO      Link status on card needs re-sync
                   Card=xxxx Port=xxx
                   Report Date:02-07-21  Time:16:20:19
```

Alarm Level: No alarm condition. The message is informational only.

1462 - EE not Configured

This message indicates the EE capture does not start when the network card under capture is not configured as Eagle Eyes Proper.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
    0023.1462    CARD 1105    INFO      EE not Configured
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1463 - ENUM connection established

This message indicates the ENUM connection has come into IS-NR state.

Example

```
12345678901234567890123456789012345678901234567890123456789012
34567890
    xxxx.1463    CARD 1463    INFO    ENUM connection established

                 PRIMARY_SFAPP: LOC=1101
                 Report Date:18-05-21  Time:15:24:13
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1487 - SFAPP Dyn VLR ROAM Entry Deleted

This message indicates an SFAPP Dynamic VLR Roaming entry has been deleted.

Example

```
1         2         3         4         5         6         7         8

    5039.1487    CARD 1101    INFO    SFAPP Dyn VLR ROAM Entry Deleted
                 OLD_VLR=727272        : NEW_VLR=999999
                 THRESHOLD=999
                 Report Date:18-05-21  Time:15:32:00
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1488 - SFAPP Velocity Threshold Crossed

This message indicates the SFAPP velocity threshold has been crossed.

Example

```
1         2         3         4         5         6         7         8

                  Report Date:18-05-21  Time:15:32:00
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action is necessary.

1490 - Telnet terminal connection successful

Indicates that a telnet connection has been established with the EAGLE from the specified location, but no terminal has yet been selected.

Example

```
RLGHNCXA21W 00-04-18 18:59:30 EST EAGLE 39.0
    0010.1490    CARD 1105    INFO    Telnet terminal connection
successful.
                 RIPADDR=192.168.210.48
                 RIPORT=3805
                 LIPADDR=192.168.63.116
                 LIPORT=23
                 Report Date:03-01-01  Time:12:41:11
```

Legend

LIPADDR
Local IP Address

LIPORT
Local TCP Port Number

RIPADDR
Remote IP Address

RIPORT
Remote TCP Port Number

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1491 - Terminal enabled

This message indicates that the specified telnet terminal has been successfully selected by a user via telnet.

Example

```
RLGHNCXA21W 00-04-18 18:59:30 EST EAGLE 31.3.0
0105.1491 SYSTEM INFO Terminal enabled.
TERMINAL 20
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1492 - Terminal failed

This message indicates that the specified telnet terminal has been disconnected.

Example

```
RLGHNCXA21W 00-04-18 18:59:30 EST EAGLE 31.3.0
0105.1492 SYSTEM INFO Terminal failed.
TERMINAL 20
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1493 - SSH Host Keys Regenerated

This message indicates that the OA&M IP Security Enhancements feature has successfully generated new host pubic/private key pairs. This occurs during cold restarts of an IPSM card. During initialization, this UIM displays the new key.

> **Note:**
>
> This UIM indicates a new public/private key is in effect. The old key is now invalid. The new key must be installed on SSH clients (on the FTRA) before any connections are permitted.

Example

```
RLGHNCXA21W 03-08-18 18:59:30 EST EAGLE 30.2.0
0105.1493 SYSTEM INFO SSH Host Keys Regenerated
DSA Server Host Key FTRA-formatted Fingerprint=
xx xx xx xx xx xx xx xx xx xx xx xx xx xx xx xx
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Record the DSA Server Host Key FTRA-formatted fingerprint that is in the last line of the UIM.

2. Save the fingerprint.

   The fingerprint will be installed on the FTRA if the FTP Retrieve and Replace feature is used.

> **Note:**
>
> Refer to the *FTP-Based Table Retrieve Application (FTRA) User Guide* for the fingerprint installation procedure.

1494 - SSH Host Keys Loaded

This message indicates that the OA&M IP Security Enhancements feature has successfully preserved existing host pubic/private key pairs. This occurs during reloads, init-card, and alw-card operations. During initialization, this UIM shows the state of the existing host key.

Example

```
RLGHNCXA21W 03-08-18 18:59:30 EST EAGLE 30.2.0
0105.1494 SYSTEM INFO SSH Host Keys Loaded
DSA Server Host Key FTRA-formatted Fingerprint=
xx xx xx xx xx xx xx xx xx xx xx xx xx xx xx xx
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

No action necessary.

1495 - TCP IPS Message Failure

This UIM occurs when a TCP IPS message Failure has occurred.

Example

```
12345678901234567890123456789012345678901234567890123456789012345678901234567890
    6729.1495    CARD 1112    INFO    TCP IPS Message Failure
                 Reason: INCORRECT CHECKSUM
                 Connection Name : ipstcp
                 Report Date:18-09-21  Time:16:38:33
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Executing the `rtrv-ip-conn:open` command should display `open=yes`. If not, execute the `chg-ip-conn` command and set `open=yes`.

2. Execute the `rept-stat-ipconn` command and check if the connection is down. Ping the EEDB server, which is added as RHOST for this connection. If the ping response is not received, check the network connection.

3. Check the error cause to determine why the error occurred; some errors are autocorrected. If not autocorrected, execute the following commands: `chg-ip-conn:cname=<>:open=no` and `chg-ip-conn:cname=<>:open=yes`

1496 - EAGLE EEDB Message Failure

This UIM occurs when an EAGLE EEDB Message Failure has occurred.

Example

```
7643.1496    CARD 1101    INFO    EAGLE EEDB Message Failure
             Reason: EEDB RESPONSE TIMEOUT
             VLR=7171              : STATUS=Whitelist
             IMSI=69980645
             Report Date:18-09-21  Time:17:45:33
```

Alarm Level: No alarm condition. The message is informational only.

Recovery

1. Executing the `rtrv-ip-conn:open` command should display `open=yes`. If not, execute the `chg-ip-conn` command and set `open=yes`.

2. Execute the `rept-stat-ipconn` command and check if the connection is down. Ping the EEDB server, which is added as RHOST for this connection. If the ping response is not received, check the network connection.

3. Check the error cause to determine why the error occurred; some errors are autocorrected. If not autocorrected, execute the following commands: `chg-ip-conn:cname=<>:open=no` and `chg-ip-conn:cname=<>:open=yes`

4. check if the maximum TPS limit is exceeded. If so, stop the traffic.

A

UAM Balancing Matrix

The tables in this appendix are in alphabetical order and list Critical, Major, Minor, and Normal alarms that appear for device conditions, and indicate the clearing alarm that appears when each condition is resolved in the system. (Some device conditions are categorized as Normal, and have an associated clearing alarm when the device changes to another Normal condition.)

> **✎ Note:**
>
> A generic clearing alarm, UAM 0500 "Alarm for this entitiy is being cleared," addresses scenarios where an alarm used to silently remove an active alarm did not make sense for the condition that was being cleared. This UAM is a generic alarm clearing output that applies to all setting alarms (Critical, Major, and Minor).

AIQ System Alarms

Table A-1 shows the AIQ System alarms and the clearing alarm that appears when each condition is resolved.

Table A-1   AIQ System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0592	AIQ Subsystem is not available	0595	AIQ Subsystem is available
		0594	AIQ Subsystem normal, card(s) abnormal
0593	AIQ Subsystem is disabled	0596	AIQ Subsystem is removed
		0594	AIQ Subsystem normal, card(s) abnormal
Minor		**Normal**	
0594	AIQ Subsystem normal, card(s) abnormal	0595	AIQ Subsystem is available
		0596	AIQ Subsystem is removed

ATINP System Alarms

Table A-2 shows the critical and minor ATINP System alarms and the clearing alarm that appears when each condition is resolved.

Table A-2   ATINP System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0565	ATINPQ Subsystem is not available	0568	ATINPQ Subsystem is available
		0569	ATINPQ Subsystem is removed
0566	ATINPQ Subsystem is disabled	0568	ATINPQ Subsystem is available
		0569	ATINPQ Subsystem is removed
Major		**Normal**	
0429	ATINPQ Subsystem degraded, card(s) abnormal	0568	ATINPQ Subsystem is available
		0569	ATINPQ Subsystem is removed
Minor		**Normal**	
0567	ATINPQ Subsystem normal,card(s) abnormal	0568	ATINPQ Subsystem is available
		0569	ATINPQ Subsystem is removed

Card Alarms

Table A-3 shows the critical, major, and minor card alarms and the clearing alarm that appears when each condition is resolved.

Table A-3   Card Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0077	Card temperature is critical lvl:T2	0079	Card temperature again at nominal levels
0092	MDAL not responding	0093	MDAL alarm cleared
0127	ENUM card capacity exceeded	0126	ENUM Threshold Condition cleared
0442	RTDB database capacity is 95% full	0447	RTDB database capacity alarm cleared
Major		**Normal**	
0001	Card has reset	0014	Card is present
		0096	Card has been reloaded
0008	Active MASP has become isolated	0009	MASP became active
		0010	MASP became standby

Table A-3   (Cont.) Card Alarms

UAM	Text	UAM	Text
0012	Invalid HW for Integrated Measurements	0519	Measurements subsystem available
0013	Card is isolated from the system	0014	Card is present
		0096	Card has been reloaded
0031	HIPR2 detected a major Congested Second	0032	HIPR2 Congestion cleared
0053	Standby TDM failure	0054	Standby TDM failure cleared
0078	Card temperature exceeds nominal lvl:T1	0079	Card temperature again at nominal levels
0088	Clocks A and B TSCs are out of sync	0089	Clocks A and B TSCs are re-synchronized
0125	ENUM Threshold - Level 2 exceeded	0126	ENUM Threshold Condition cleared
0132	Loading failed: table not found	0096	Card has been reloaded
0133	Loading failed: data read error		
0134	Loading failed: bad checksum returned		
0135	Loading failed: GPL load timeout		
0136	Loading failed: data load timeout		
0137	Loading failed: invalid GPL		
0138	Loading failed: GPL format error		
0139	Loading failed: disk read prep error		
0140	Loading failed: disk read response error		
0141	Loading failed: disk read failed		
0300	TVG Grant Failure	0301	TVG Grant Recovery
0306	SNM Overload Onset	0307	SNM Overload Abated
0043	Incorrect feature configuration	0423	Card reload attempted
0047	Card type not valid for application		
0099	Incompatible HW for provisioned slot		
0276	Insufficient HW for IP7 provisioning

0064	Major holdover clock trouble detected	0066	Holdover clock trouble cleared

Table A-5   (Cont.) Clock (Holdover) Alarms

UAM	Text	UAM	Text
Minor		**Normal**	
0065	Minor holdover clock trouble detected	0066	Holdover clock trouble cleared

Clock System Alarms

Table A-6 shows the critical, major, and minor clock alarms and the clearing alarm that appears when each condition is resolved.

Table A-6   Clock System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0128	All clocks have failed	0113	Clock alarm(s) cleared
Major		**Normal**	
0162	1116-P, 1116-S clocks failed	0113	Clock alarms cleared
0164	1114-S, 1116-S clocks failed		
0166	1114-S, 1116-P, 1116-S clocks failed		
0169	1114-P, 1116-P clocks failed		
0170	1114-P, 1116-P, 1116-S clocks failed		
0171	1114-P, 1114-S clocks failed		
0172	1114-P, 1114-S, 1116-S clocks failed		
0173	1114-P, 1114-S, 1116-P clocks failed		
Minor		**Normal**	
0160	1116-S clock failed	0113	Clock alarms cleared
0161	1116-P clock failed		
0163	1114-S clock failed		
0165	1114-S, 1116-P clocks failed		
0167	1114-P clock failed		
0168	1114-P, 1116-S clocks failed		

DCM Alarms

DCM Alarms shows the major DCM alarm and the clearing alarm that appears when the condition is resolved.

Table A-7   DCM Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0084	IP Connection Unavailable	0085	IP Connection Available

DLK Alarms

Table A-8 shows the major and minor DLK alarm and the clearing alarm that appears when the condition is resolved.

Table A-8   DLK Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0537	Ethernet error threshold exceeded	0538	Ethernet error threshold cleared
0539	Ethernet Interface Down	0540	Ethernet Interface Up
0588	FC Port De-activated	0589	FC Port Activated
Minor		**Normal**	
0155	STP LAN connection unavailable	0156	STP LAN connection available
0536	IP Connection Excess Re-transmits	0084	IP Connection Available
		0085	IP Connection Available

DPC Alarms

DPC Alarms shows the critical, minor, and normal DPC alarms and the clearing alarm that appears when each condition is resolved.

Table A-9   DPC Alarms

UAM	Text	UAM	Text	UAM	Text
Critical		**Other Alarm Conditions Which Clear Given Alarm**		**Normal**	
0313	DPC is prohibited	0312	DPC is restricted	0311	DPC is allowed

Table A-10   (Cont.) DPC System Alarms

UAM	Text	UAM	Text	UAM	Text
				0337	DPC-SS status changed. When DPC subsystem transitions between prohibited and blocked to either blocked or prohibited only, this UAM is raised.

DSM Alarms

DSM Alarms shows the major DSM alarm and the clearing alarm that appears when the condition is resolved.

Table A-11   DSM Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0084	IP Connection Unavailable	0085	IP Connection Available

E1 Port Alarms

Table A-12 shows the major E1 alarms and the clearing alarm that appears when each condition is resolved.

Table A-12   E1 Port Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0381	REPT-E1F:FAC-E1 LOS failure	0386	RCVRY-E1F:FAC-E1 available
0382	REPT-E1F:FAC-E1 LOF failure		
0383	REPT-E1F:FAC-E1 AIS detected		
0384	REPT-E1F:FAC-E1 Far End failure		
0385	REPT-E1F:FAC-E1 10E-3 BER failed		
0387	REPT-E1F:FAC-E1 unavailable		

EIR Alarms

Table A-13 shows the critical and minor EIR alarms and the clearing alarm that appears when each condition is resolved.

Table A-13   EIR Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0455	EIR System is not available	0458	EIR Subsystem is available
		0459	EIR Subsystem is removed
0456	EIR Subsystem is disabled	0458	EIR Subsystem is available
		0459	EIR Subsystem is removed
Major		**Normal**	
0460	EIR Subsystem degraded, card(s) abnormal	0458	EIR Subsystem is available
		0459	EIR Subsystem is removed
Minor		**Normal**	
0457	EIR Subsystem normal,card(s) abnormal	0458	EIR Subsystem is available
		0459	EIR Subsystem is removed

ENET System Alarms

Table A-14 shows the ENET System alarms and the clearing alarm that appears when each condition is resolved.

Table A-14   ENET System Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0537	Ethernet error threshold exceeded	0538	Ethernet error threshold cleared
0539	Ethernet Interface Down	0540	Ethernet Interface Up
Minor		**Normal**	
0536	IP Connection Excess Retranmists	0085	IP Connection Available

ENUM System Alarms

Table A-15 shows the ENUM System alarms and the clearing alarm that appears when each condition is resolved.

Table A-15   ENUM System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0120	ENUM SYSTEM is not available	0121	ENUM SYSTEM is available
		0123	ENUM SYSTEM is removed
Major		**Normal**	
0122	ENUM SYSTEM normal, card(s) abnormal	0121	ENUM SYSTEM is available
		0123	ENUM SYSTEM is removed

EROUTE Alarms

Table A-16 shows the critical, major, and minor EROUTE alarms and the clearing alarm that appears when each condition is resolved.

Table A-16   EROUTE Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0468	All STC Networks Unavailable	0470	EROUTE is Removed
0469	All STC Cards Unavailable	0471	EROUTE System is Available
Major		**Normal**	
0473	EROUTE System Capacity Exceeded	0470	EROUTE is Removed
0482	Card(s) have been denied EROUTE service	0471	EROUTE System is Available
Minor		**Normal**	
0472	EROUTE System Threshold Exceeded	0470	EROUTE is Removed
		0471	EROUTE System is Available
0474	EROUTE capacity normal, card(s) abnormal	0470	EROUTE is Removed
		0471	EROUTE System is Available
0475	NTP Time Unavailable	0476	NTP Time Available

Ethernet Error Threshold Alarms

Table A-17 shows the major ethernet error threshold alarms and the clearing alarm that appears when each condition is resolved.

Table A-17   Ethernet Error Threshold Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0537	Ethernet error threshold exceeded	538	Ethernet error threshold cleared
0539	Ethernet Interface Down	0540	Ethernet Interface Up

Fast Copy System Alarms

Table A-18 shows the major and minor Fast Copy System alarms and the clearing alarm that appears when the condition is resolved.

Table A-18   Fast Copy System Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0576	All FC Network Unavailable	0577	All FC cards removed
		0578	FC System is Available
Minor		**Normal**	
597	FC System is Deactivated	0578	FC System is Available

Frame Alarms

Table A-19 shows the major Frame alarms and the clearing alarms that appear when the condition is resolved.

Table A-19   Frame Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0520	Frame power usage reached LVL3	0523	Frame power usage normal
Major		**Normal**	
0521	Frame power usage reached LVL2	0523	Frame power usage normal
Minor		**Normal**	
0522	Frame power usage reached LVL1	0523	Frame power usage normal

Fuse Alarms

Table A-20 shows the major fuse alarm and the clearing alarm that appears when the condition is resolved.

Table A-20   Fuse Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0082	Alarm in fuse panel	0083	Fuse panel alarm has cleared

GLS Alarms

Table A-21 shows the critical and major GLS alarms and the clearing alarm that appears when each condition is resolved.

Table A-21   GLS Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0292	GLS is not available	0290	GLS is available
		0293	GLS have been removed from the system
Major		**Normal**	
0291	GLS is at minimum service limit	0290	GLS is available
		0293	GLS have been removed from the system
0450	Invalid HW for Integrated GLS	0290	GLS is available

GPL Alarms

GPL Alarms shows the minor GPL alarms and the clearing alarm that appears when each condition is resolved.

Table A-22   GPL Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0002	Card is not running approved GPL	0003	Alarm cleared for GPL
0004	Card is running non-activated GPL	0005	Alarm cleared running non-activated GPL
0040	GPL is corrupted	0039	GPL has been corrected

Group Broadcast Alarms

Table A-23 shows the critical and minor Group Broadcast alarms and the clearing alarm that appears when each condition is resolved.

Table A-23   Group Broadcast Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0015	Group Broadcast Registration Failed	0017	Group Broadcast Registration Succeeded
Minor		**Normal**	
0016	Single IMT Bus GB Registration	0017	Group Broadcast Registration Succeeded

GTT Alarms

Table A-24 shows the major GTT alarm and the clearing alarm that appears when the condition is resolved.

Table A-24   GTT System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0630	Throttle Threshold - exceeded	0631	Throttle Threshold - cleared

HS Clock System Alarms

Table A-25 shows the critical, major, and minor HS Clock System alarms and the clearing alarm that appears when each condition is resolved.

Table A-25   HS Clock System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0197	All high speed clocks have failed	0198	High Speed clock alarm(s) cleared
Major		**Normal**	
0185	1116-PHS, 1116-SHS clocks failed	0198	High Speed clock alarm(s) cleared
0187	1114-SHS, 1116-SHS clocks failed		
0189	1114-SHS, 1116-PHS,1116-SHS clks failed		
0192	1114-PHS, 1116-PHS clocks failed		
0193	1114-PHS, 1116-PHS,1116-SHS clks failed		

Table A-25   (Cont.) HS Clock System Alarms

UAM	Text	UAM	Text
0194	1114-PHS, 1114-SHS clocks failed		
0195	1114-PHS, 1114-SHS, 1116-SHS clks failed		
0196	1114-PHS, 1114-SHS, 1116-PHS clks failed		
403	1114 E1/T1 clock requires TDM-GTI	409	Clock configuration corrected
404	1116 E1/T1 clock requires TDM-GTI		
405	1114, 116 E1/T1 clock requires TDM-GTI		
406	1114 Clock selection mismatch		
407	1116 Clock selection mismatch		
408	1114, 1116 Clock selection mismatch		
Minor		**Normal**	
0183	1116-SHS clock failed	0198	High speed clock alarm(s) cleared
0184	1116-PHS clock failed		
0186	1114-SHS clock failed		
0188	1114-SHS, 1116-PHS clocks failed		
0190	1114-PHS clock failed		
0191	1114-PHS, 1116-SHS clocks failed		

IMT Bus Alarms

Table A-26 shows the major, minor, and normal IMT Bus alarms and the clearing alarm that appears when each condition is resolved.

Table A-26   IMT Bus Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0108	Major IMT failure detected	0106	IMT bus alarm cleared
Minor		**Normal**	
0107	Minor IMT failure detected	0106	IMT bus alarm cleared
Normal		**Normal**	
0098	IMT inhibited	0097	IMT allowed

IMT System Alarms

Table A-27 shows the critical, major, and minor IMT System alarms and the clearing alarm that appears when each condition is resolved.

Table A-27   IMT System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0112	Major failures detected on both IMTs	0109	All IMT system level alarms cleared
Major		**Normal**	
0028	IMT Bus util rate exceeds major thresh	0029	IMT Bus utilization threshold cleared
0111	Failure on both IMT A and IMT B	0109	All IMT system level alarms cleared
0563	IMT Bit rate mismatch detected	0564	IMT Bit rate mismatch cleared
Minor		**Normal**	
0027	IMT Bus util rate exceeds minor thresh	0029	IMT Bus utilization threshold cleared
0110	Failure detected on one IMT bus	0109	All IMT system level alarms cleared

INP System Alarms

INP System Alarms shows the critical and minor NP System alarms and the clearing alarm that appears when each condition is resolved.

Table A-28   INP System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0395	INP Subsystem is not available	0394	INP Subsystem is available
0396	INP Subsystem is disabled	0397	INP Subsystem is removed
Major		**Normal**	
0428	INP Subsystem degraded, card(s) abnormal	0394	INP Subsystem is available
Minor		**Normal**	
0398	INP Subsystem normal, card(s) abnormal	0394	INP Subsystem is available
		0397	INP Subsystem is removed

IP7CONN Alarms

IP7CONN Alarms shows the major and minor IP Connection alarms and the clearing alarm that appears when each condition is resolved.

Table A-29   IP Connection Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0084	IP Connection Unavailable	0085	IP Connection Available
		0087	IP Connection manually removed
Minor		**Normal**	
0086	IP Connection Congested	0085	IP Connection Available
		0087	IP Connection manually removed
0535	IP Connection Restricted	0085	IP Connection Available
0536	IP Connection Excess Retransmits	0085	IP Connection Available

IP7 Alarms

IP7 Alarms shows the major and minor IP Connection alarms and the clearing alarm that appears when each condition is resolved.

Table A-30   IP Connection Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0277	AS Unavailable	0278	AS Available
Minor		**Normal**	
0279	AS Restricted	0280	AS Unrestricted

Linkset Alarms

Table A-31 shows the Linkset alarm and the clearing alarms that appears when the condition is resolved.

Table A-31   Linkset Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0115	Linkset IP TPS threshold exceeded	0118	Linkset IP TPS threshold normal

Table A-31   (Cont.) Linkset Alarms

UAM	Text	UAM	Text
0318	REPT-LKSTO: link set prohibited	0317	RCVRY-LKSTO: link set allowed
		0399	RRCVRY-LKSTO:Alarm clr'd by deleting SLK
0560	REPT-LKSTO: link set restricted	0317	REPT-LKSTO: link set restricted

LNP System Alarms

Table A-32 shows the critical and major LNP System alarms and the clearing alarm that appears when each condition is resolved.

Table A-32   LNP System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0424	LNP Subsystem is not available	0426	LNP Subsystem is available
0435	LNP Subsystem is disabled	0434	LNP Subsystem is removed
0287	RTDB Table Level 2 FAK Cap exceeded	0289	RTDB Table FAK Capacity Normal
Major		**Normal**	
0283	LNP Ported NPAs approaching Feat. Capacity	0284	LNP Ported NPAs Capacity Normal
0285	LNP Ported LRNs approaching Feat. Capacity	0286	LNP Ported LRNs Capacity Normal
0288	RTDB Table Level 1 FAK Cap exceeded	0289	RTDB Table FAK Capacity Normal
0427	LNP Subsystem degraded, card(s) abnormal	0426	LNP Subsystem is available
0436	LNP ACG node overload	0426	LNP Subsystem is available
Minor		**Normal**	
0425	LNP Subsystem normal, card(s) abnormal	0426	LNP Subsystem is available

LSMS Connection Alarms

LSMS Connection Alarms shows the critical and major LSMS Connection alarms and the clearing alarm that appears when each condition is resolved.

Table A-33   LSMS Connection Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0041	LNP DB Maintenance required.	0042	LSMS bulk load complete.
Major		**Normal**	
0358	LSMS connection unavailable	0359	LSMS connection available

LSMS System Alarms

LSMS System Alarms shows the critical and major LSMS System alarms and the clearing alarm that appears when each condition is resolved.

Table A-34   LSMS System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0356	LSMS unavailable	0355	LSMS is available
		0357	All OAP terminals are removed
0350	OAP terminals inhibited	0355	LSMS is available
		0357	All OAP terminals are removed
Major		**Normal**	
0341	OAP unavailable	0353	OAP is available
0354	One OAP terminal unavailable	0357	All OAP terminals are removed
0362	LSMS is at min service limit	0355	LSMS is available
		0357	All OAP terminals are removed

MCPM Alarms

MCPM Alarms shows the major MCPM alarm and the clearing alarm that appears when the condition is resolved.

Table A-35   MCPM Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0084	IP Connection Unavailable	0085	IP Connection Available

MEAS System Alarms

MEAS System Alarms shows the critical, major, and minor MEAS System alarms and the clearing alarm that appears when each condition is resolved.

Table A-36   MEAS System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0518	Measurements subsystem unavailable	0519	Measurements subsystem available
Major		**Normal**	
0517	Degraded Mode - multiple cards failed	0519	Measurements subsystem available
Minor		**Normal**	
0516	Degraded Mode - 1 card failed	0519	Measurements subsystem available

MPS (ELAP/EPAP) Alarms

Table A-37 shows the critical, major, and minor MPS (ELAP/EPAP) alarms and the clearing alarm that appears when each condition is resolved.

Table A-37   MPS (ELAP/EPAP) Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0370	Critical Platform Failure(s)	0250	MPS available
0371	Critical Application Failure(s)		
0261	MPS unavailable		
Major		**Normal**	
0372	Major Platform Failure(s)	0250	MPS available
0373	Major Application Failure(s)		
Minor		**Normal**	
0374	Minor Platform Failure(s)	0250	MPS available
0375	Minor Application Failure(s)		

> **✎ Note:**
>
> Critical Platform/Application alarms cause the MPS to go OOS-MT and Major/Minor Platform/Applications alarms cause the MPS to go IS-ANR.

MPS Alarm Support

The MPS running software release 2.0 (ELAP) or higher. Release 27.0 supports MPS alarms (370-375) and UAMs 442-451 against a card.

Table A-38   MPS Alarm Support

	Release 27.0 and higher
UAM	**Format**
0442	CARD
0446	
0447	
0443-0445	CARD
0448-0451	
0370-0375	MPS1
0250	MPS2

RTX System Alarms

Table A-39 shows the major RTX system alarms and the clearing alarm that appears when the condition is resolved.

Table A-39   RTX System Alarms

UAM	Text	UAM	Text	UAM	Text
Critical		**Other alarm conditions which clear given alarm**		**Normal**	
0534	RTX is prohibited	0533	RTX is restricted	0532	RTX is allowed
		0319	REPT-MTPLP-DET: Circ rte det(cong)	0402	Alarm cleared by deleting route
Minor		**Other alarm conditions which clear given alarm**		**Normal**	
0533	RTX is restricted	0534	RTX is prohibited	0532	RTX is allowed
		0319	REPT-MTPLP-DET: Circ rte det(cong)	0402	Alarm cleared by deleting route

SCCP Service Alarms

Table A-40 shows the critical, major, and minor SCCP service alarms and the clearing alarm that appears when each condition is resolved.

Table A-40   SCCP Service Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0528	Service is not available	0526	Service is available
		0530	Service is removed
0529	Service is disabled	0526	Service is available
		0530	Service is removed
Major		**Normal**	
0547	Service degraded	0526	Service is available
		0530	Service is removed
Minor		**Normal**	
0527	Service abnormal	0526	Service is available
		0530	Service is removed

SCCP System Alarms

Table A-41 shows the critical, major, and minor SCCP system alarms and the clearing alarm that appears when each condition is resolved.

Table A-41   SCCP System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0331	SCCP is not available	0328	SCCP is available
0335	SCCP is removed		
0437	System SCCP TPS Capacity Exceeded	0329	System SCCP TPS normal
0453	Exceeded Service Error Threshold Lvl 2	0454	Service Error Threshold Alarm Cleared
Major		**Normal**	
0262	GTT Duplicate Actn processing stopped	0263	GTT Duplicate Actn processing resumed
0336	LIM(s) have been denied SCCP service	0328	SCCP is available
		0335	SCCP is removed
0452	Exceeded Service Error Threshold Lvl 1	0454	Service Error Threshold Alarm Cleared
Minor		**Normal**	
0330	System SCCP TPS Threshold exceeded	0329	System SCCP TPS normal
		0335	SCCP is removed
0632	Alarm Threshold - exceeded	0631	Throttle Threshold - cleared
		0633	Alarm Threshold - cleared

SCTP Retransmit Alarms

SCTP Retransmit Alarms shows the critical, major, and minor SCTP retransmit alarms and the clearing alarm that appears when each condition is resolved.

Table A-42   SCTP Retransmit Alarms

UAM	Text	UAM	Text
Minor		**Normal**	
0536	IP Connection Excess Retransmits	0085	IP Connection Available

SEAS OAP Alarms

Table A-43 shows the major and minor SEAS OAP alarms and the clearing alarm that appears when each condition is resolved.

Table A-43   SEAS OAP Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0341	OAP unavailable	0353	OAP is available
0342	SEAS UAL unavailable		
0354	One OAP terminal unavailable		
0360	EMS Agent unavailable	0361	EMS Agent available
Minor		**Normal**	
0364	Configuration data checksum mismatch	0365	Configuration data checksum alarm cleared
0363	OAP filesystem full	0361	EMS Agent available

SEAS System Alarms

SEAS System Alarms shows the critical and major SEAS System alarms and the clearing alarm that appears when each condition is resolved.

Table A-44   SEAS System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0349	SEAS unavailable	0351	SEAS is available
0350	OAP terminals inhibited	0352	SEAS is removed
Major		**Normal**	

ORACLE

Table A-44   (Cont.) SEAS System Alarms

UAM	Text	UAM	Text
0348	SEAS is at min service limit	0351	SEAS is available
		0352	SEAS is removed

SEAS X25 Alarms

Table A-45 shows the major and minor SEAS X25 alarms and the clearing alarm that appears when each condition is resolved.

Table A-45   SEAS X25 Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0343	SEAS X.25 Link unavailable	0347	SEAS X.25 Link is available
0345	All SEAS UAL sessions unavailable		
Minor		**Normal**	
0344	SEAS PVC unavailable	0347	SEAS X.25 Link is available
0346	SEAS UAL session unavailable		

Security Log Alarm

Security Log Alarm shows the minor and normal Security Log alarms and the clearing alarm that appears when each condition is resolved.

Table A-46   Security Log Alarms

UAM	Text	UAM	Text
Minor		**Normal**	
0174	%full threshold reached-upload required	0177	Security log exception cleared
0175	LOGGUFROVFL-SECUL–G - upload required		
0176	Stby security log – upload required		
Normal		**Normal**	
0178	Security log failed	0177	Security log exception cleared

Security System Alarms

Table A-47 shows the major Security System alarm and the clearing alarm that appears when the condition is resolved.

Table A-47   Security System Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0392	OA&M IP Security feature status is OFF	0393	OA&M IP Security feature status is ON
		0199	OA&M IP Security feature disabled
Minor		**Normal**	
0157	OA&M Security Feature Risk detected	0158	OA&M Security Feature Risk cleared

SFAPP System Alarms

SFAPP System Alarms shows the critical, major, and minor SFAPP system alarm and the clearing alarm that appears when the condition is resolved.

Table A-48   SFAPP System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0543	VLR Dynamic Learning is suspended	0544	VLR Dynamic Learning Started
		0646	SFAPP Dynamic Learning Alarm Cleared
0635	SFLOG SYSTEM is not available	0634	SFLOG SYSTEM is available
0639	SFAPP Threshold Level Critical	0640	SFAPP Threshold Condition Cleared
0644	System SFAPP capacity Exceeded	0636	SFAPP is removed
Major		**Normal**	
0638	SFAPP Threshold Level2 Exceeded	0640	SFAPP Threshold Condition Cleared
0643	System SFAPP TPS Exceeded	0642	SFAPP Threshold normal
0647	EEDB Connectivity Down	0648	EEDB Connectivity Up
Minor		**Normal**	
0637	SFAPP Threshold Level1 Exceeded	0640	SFAPP Threshold Condition Cleared
		0642	SFAPP Threshold normal

Table A-48   (Cont.) SFAPP System Alarms

UAM	Text	UAM	Text
0641	SFAPP Capacity normal, card(s) abnormal	0636	SFAPP is removed
		0645	LIM/SCCP card(s) denied SFAPP service

SFLOG System Alarms

Table A-49 shows the critical SFLOG system alarm and the clearing alarm that appears when the condition is resolved.

Table A-49   SFLOG System Alarms

UAM	Text	UAM	Text
Critical		**Normal**	
0627	SFLOG SYSTEM is not available	0628	SFLOG SYSTEM is available
		0629	SFLOG SYSTEM is removed

SLK Alarms

Table A-50 shows the major, minor, and normal SLK alarms and the clearing alarm that appears when each condition is resolved.

Table A-50   SLK Alarms

UAM	Text	UAM	Text
Major		**Normal**	
0201	REPT-LKF: remote NE loopback	0223	REPT-LKF: remote NE loopback cleared
		0401	Alarm cleared by deleting SLK
0202	REPT-LKF: HWP -too many interrupts	0200	RCVRY-LKF: link available
		0401	Alarm cleared by deleting SLK
0203	REPT-LKF: lost data	0200	RCVRY-LKF: link available
		0401	Alarm cleared by deleting SLK
0204	REPT-LKF: XER-ERM threshold exceeded	0200	RCVRY-LKF: link available
		0401	Alarm cleared by deleting SLK
0205	REPT-LKF: APF - lvl-2 T1 expd (ready)	0200	RCVRY-LKF: link available

Table A-50   (Cont.) SLK Alarms

UAM	Text	UAM	Text
		0401	Alarm cleared by deleting SLK
0206	REPT-LKF: APF -lvl-2 T1 expd(not ready)	0200	RCVRY-LKF: link available
		0401	Alarm cleared by deleting SLK
0207	REPT-LKF: APF - lvl-2 T3 expired	0200	RCVRY-LKF: link available
		0401	Alarm cleared by deleting SLK
0208	REPT-LKF: APF - lvl-2 T2 expired	0200	RCVRY-LKF: link available
		0401	Alarm cleared by deleting SLK
0209	REPT-LKF: APF - failed proving period	0200	RCVRY-LKF: link available
		0401	Alarm cleared by deleting SLK

0338	X-LIST space full-entry(s) discarded	0339	X-LIST space full condition abated
Minor		**Normal**	
0321	X-LIST occupancy threshold exceeded	0322	X-List occupancy below threshold

B

Unsolicited Output Message Groups

This appendix provides a list of the unsolicited alarm messages (UAMs) and unsolicited information messages (UIMs) generated by the EAGLE and the output groups to which these messages are assigned. The output message groups are shown in alphabetical order.

These messages are broadcast to the EAGLE terminals. To control which terminals these messages are broadcast, the messages have been placed into these output message groups. The `chg-trm` command is used to control to which terminals these groups of output messages are broadcast. For details about using the `chg-trm` command, see the "Changing Terminal Characteristics" procedure in *Database Administration - System Management User's Guide*, or the `chg-trm` command description in *Commands User's Guide*.

Scheduled Measurements for systems up to 700 links are sent to the Traffic Unsolicited Output Message Group and are not included in this appendix. No other unsolicited output is sent to this output group. Refer to *Measurements Reference* for traffic measurements information. Refer to *System Administration - System Management User's Guide* for information on configuring the measurements terminal for systems up to 700 links.

Each table contains the number of the UAM or UIM, the alarm level assigned to the message, and the text of the message.

Application Subsystem Unsolicited Output Message Group

Table B-1   Application Subsystem Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0283	Major	LNP Ported LRNs approaching Feat. Capacity
0284	None	LNP Ported LRNs Capacity Normal
0285	Major	LNP Ported NPAs approaching Feat. Capacity
0286	None	LNP Ported NPAs Capacity Normal
0287	Critical	RTDB Table Level 2 FAK Cap Exceeded
0288	Major	RTDB Table Level 1 FAK Cap Exceeded
0289	None	RTDB Table FAK Capacity Normal
0394	None	INP Subsystem is available
0395	Critical	INP Subsystem is not available
0396	Critical	INP Subsystem is disabled

Table B-2   (Cont.) Card Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0449	Major	RTDB resynchronization in progress
0450	Major	Invalid HW for Integrated GLS
0451	Major	RTDB reload is required
0452	Major	Exceeded Service Error Threshold Lvl1
0453	Critical	Exceeded Service Error Threshold Lvl 2
0454	None	Service Error Threshold Alarm Cleared
0486	Minor	DEIR Threshold - Level1 exceeded
0487	Major	DEIR Threshold - Level2 exceeded
0488	Normal	DEIR Threshold Condition Cleared
0489	Critical	DEIR capacity exceeded
0490	Normal	DEIR normal
0500	None	Alarm for this entity is being cleared
0548	Major	GTT HexTree DB corrupted. TPS derated
0549	Major	GTT HexTree DB incoherent. TPS derated
0550	Normal	GTT HexTree DB alarm cleared
0570	Minor	Incompatible flash image for sys rel
0573	Major	BERT Test Failed
0574	None	BERT Test Passed
0575	Major	Card type not HIPR2
0622	Minor	SIP Threshold - Level1
0623	Major	SIP Threshold - Level2
0624	None	SIP Threshold condition cleared
0625	None	SIP SYSTEM normal, card(s) abnormal
0626	None	SIP Threshold Level Critical
0901	Major	Card DB load timeout, check GLS card
0902	None	Card DB is stable
0903	Major	IP Link A is down
0904	None	IP Link A is up
0905	Major	IP Link B is down
0906	None	IP Link B is up
0907	None	HW limiting TPS rate alarm cleared

Table B-2   (Cont.) Card Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0908	Major	HW cannot support purchased TPS rate
1082	None	A mem single bit error report
1119	None	Cards out of phase with flash procedure
1141	None	AIN INP Qry rejected: AINPQ is OFF
1158	None	Minor HIPR2 switching capacity reached
1159	None	Major HIPR2 switching capacity reached
1238	None	Full database reload initiated
1241	None	SCCP Card logging capacity exceeded
1298	None	SIP message decode failed
1453	None	EE Collection started
1454	None	EE Collection end
1455	None	EE Queue Full, Package dropped
1456	None	Hub Congested, Package dropped
1457	None	GEDTI Port enabled
1458	None	GEDTI Port disabled
1459	None	TCP Connection lost b/w IPSM and EEPC
1462	None	EE not configured
1472	None	SCTP Buffer full timer expired, Restart
1473	None	Unable to connect to socket
1474	None	GTT DB reload initiated

Clock Unsolicited Output Message Group

Table B-3   Clock Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0113	None	Clock alarm(s) cleared
0128	Critical	All clocks have failed
0160	Minor	1116-S clock failed
0161	Minor	1116-P clock failed
0162	Major	1116-P, 1116-S clocks failed
0163	Minor	1114-S clock failed
0164	Major	1114-S, 1116-S clocks failed
0165	Minor	1114-S, 1116-P clocks failed

Table B-3   (Cont.) Clock Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0166	Major	1114-S, 1116-P, 1116-S clocks failed
0167	Minor	1114-P clock failed
0168	Minor	1114-P, 1116-S clocks failed
0169	Major	1114-P, 1116-P clocks failed
0170	Major	1114-P, 1116-P, 1116-S clocks failed
0171	Major	1114-P, 1114-S clocks failed
0172	Major	1114-P, 1114-S, 1116-S clocks failed
0173	Major	1114-P, 1114-S, 1116-P clocks failed
0183	Minor	1116-SHS clock failed
0184	Minor	1116-PHS clock failed
0185	Major	1116-PHS, 1116-SHS clocks failed
0186	Minor	1114-SHS clock failed
0187	Major	1114-SHS, 1116-SHS clocks failed
0188	Minor	1114-SHS, 1116-PHS clocks failed
0189	Major	1114-SHS, 1116-PHS, 1116-SHS clks failed
0190	Minor	1114-PHS clock failed
0191	Minor	1114-PHS, 1116-SHS clocks failed
0192	Major	1114-PHS, 1116-PHS clocks failed
0193	Major	1114-PHS, 1116-PHS, 1116-SHS clks failed
0194	Major	1114-PHS, 1114-SHS clocks failed
0195	Major	1114-PHS, 1114-SHS, 1116-SHS clks failed
0196	Major	1114-PHS, 1114-SHS, 1116-PHS clks failed
0197	Critical	All High Speed Clocks have failed
0198	None	High Speed Clock Alarm(s) Cleared
0403	Major	1114 E1/T1 clock requires TDM-GTI
0404	Major	1116 E1/T1 clock requires TDM-GTI
0405	Major	1114, 1116 E1/T1 clock requires TDM-GTI
0406	Major	1114 Clock selection mismatch

Table B-3   (Cont.) Clock Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0407	Major	1116 Clock selection mismatch
0408	Major	1114, 1116 Clock selection mismatch
0409	None	Clock configuration corrected
0500	None	Alarm for this entity is being cleared
1185	None	GTI input clock anomalies detected

Database Unsolicited Output Message Group

Table B-4   Database Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
1114	None	Database BACKUP started
1115	None	Database RESTORE started
1116	None	Database action ended - OK
1117	None	Database action ended - FAIL
1257	None	DB restore has cleared and Disabled PDS

GTT Unsolicited Output Message Group

Table B-5   GTT Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0262	Major	GTT Duplicate Actn processing stopped
0263	None	GTT Duplicate Actn processing resumed
0328	None	SCCP is available
0329	None	SCCP capacity normal, card(s) abnormal
0330	Major	System SCCP TPS Threshold exceeded
0331	Critical	SCCP is not available
0335	None	SCCP is removed
0336	Major	LIM(s) have been denied SCCP service
0437	Critical	System SCCP TPS Capacity Exceeded
0500	None	Alarm for this entity is being cleared

Table B-5   (Cont.) GTT Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
0630	Major	Throttle Threshold - exceeded
0631	None	Throttle Threshold - cleared
0632	Minor	Alarm Threshold - exceeded
0633	None	Alarm Threshold - cleared
1019	None	SCCP rcvd invalid UDTS/ XUDTS msg
1020	None	IARCDPN NPP Service is off
1021	None	IARCGPN NPP Service is off
1023	None	SCCP rcvd unknown msg type
1024	None	SCCP rcvd inv msg length
1025	None	SCCP rcvd inv msg class
1029	None	SCCP rcvd inv Cld Party - bad GT ind
1033	None	SCCP rcvd inv Cld Party - bad network
1034	None	SCCP rcvd inv Cld Party - no SSN
1035	None	SCCP rsp did not route - invalid GTI
1036	None	SCCP rsp did not route - invalid TT
1037	None	SCCP rsp did not route - bad Xlation
1038	None	SCCP rsp did not route - SSP not True PC
1039	None	SCCP rsp did not route - bad Selectors
1040	None	ITU <-> ANSI translation not supported
1041	None	SCCP did not route - no SSN in msg or DB
1042	None	SCCP rcvd inv GT - invalid Trans. Type
1043	None	SCCP did not route - bad translation If the UIMRD field in rtrv-stpopts is set to yes, this message is output in the UIM Redirect output group (see Table B-17).
1044	None	SCCP did not route - DPC OOS
1045	None	SCCP did not route - DPC congested
1046	None	SCCP did not route - DPC not in MAP tbl If the UIMRD field in rtrv-stpopts is set to yes, this message is output in the UIM Redirect output group (see Table B-17).

Table B-5   (Cont.) GTT Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
1047	None	SCCP did not route - SS OOS
1048	None	SCCP did not route - SS congested
1049	None	SCCP did not route - SS not in MAP tbl
1050	None	SCCP-CNV: Unable to convert ANSI CDPA GT
1051	None	SCCP-CNV: Unable to convert ANSI CGPA GT
1052	None	SCCP-CNV: Unable to convert ITU CDPA GT
1053	None	SCCP-CNV: Unable to convert ITUCGPA GT

UIM Redirect Unsolicited Output Message Group

Table B-17   UIM Redirect Unsolicited Output Message Group

UAM/UIM Number	Alarm Level	Message Text
1043	None	SCCP did not route - bad translation
1046	None	SCCP did not route - DPC not in MAP tbl

The UIM Redirect output message group is used only if the UIMRD field in rtrv-stpopts is set to yes. Otherwise, this message is output in the GTT Unsolicited Output Message Group (see GTT Unsolicited Output Message Group).

C
Auto-Inhibit Hardware Verification Codes

This appendix provides a list of the auto-inhibit hardware verification codes used in the card device format.

Hardware Verification Codes in UAMs

Table C-1 contains a list of the hardware verification codes that appear in certain UAMs and shows the card or application that it applies to, a description of the code, and the UAM code with which it is associated.

Table C-1   Auto-Inhibit Hardware Verification Codes

HW Verification Code	Card or Application Code	Description	Associated UAM Code
058	SS7IPGW, IPGWI, IPLIM, IPLIMI	E5-ENET or E5-ENET-B does not support > 16 associations (IPLIMx). E5-ENET or E5-ENET-B does not support > 50 associations (IPGWx).	422
059	VSCCP	MPS database has been detected to exceed capacity of Service Module extended memory (only for GPORT, GFLEX, INP, EIR features). UAMs 281, 283, and 285 are used for LNP and LNP ELAP Configuration features.	422
090	Various	Flash image on the card is incompatible with the current release of EAGLE.	570
099	E5-TSM	E5-TSM card equipped has one or more daughterboard.	99
101	SS7IPGW, IPGWI, IPLIM, IPLIMI	E5-ENET only supports SLK link A-7 and B-7.	276
102*	SS7IPGW, IPGWI	Non-DCM detected in slot.	99
103	SS7IPGW, IPGWI, IPLIM, IPLIMI	E5-ENET or E5-ENET-B does not support >16 associations (IPLIMx). E5-ENET or E5-ENET-B does not support >50 associations (IPGWx).	276
104	SS7IPGW, IPGWI, IPLIM, IPLIMI	E5-ENET or E5-ENET-B does not support >0 sockets (IPLIMx). E5-ENET or E5-ENET-B does not support >0 sockets (IPGWx).	276
105	SS7IPGW, IPGWI, IPLIM, IPLIMI	E5-ENET or E5-ENET-B does not support > 0 (sockets + associations) (IPLIMx). E5-ENET or E5-ENET-B does not support > 50 (sockets + associations) (IPGWx).	276

Table C-1   (Cont.) Auto-Inhibit Hardware Verification Codes

HW Verification Code	Card or Application Code	Description	Associated UAM Code
106	SS7IPGW, IPGWI, IPLIM, IPLIMI	E5-ENET or E5-ENET-B does not support >3200Kb SCTP buffers (IPLIMx). E5-ENET or E5-ENET-B does not support >3200Kb SCTP buffers (IPGWx).	276
124	HC-MIM	Card is not an HC-MIM and is provisioned as a T1 card.	99
129	HC-MIM, E5-E1T1	Card does not support CAS framing.	297
132	IPLIM, IPLIMI, HC-MIM, E5-E1T1	The actual card in the slot must be a HC-MIM, high capacity MIM or LIME1 if card is provisioned as a LIME1 card.	99
133	HC-MIM, E5-E1T1	The actual card in the slot must be a high capacity MIM card (either HC-MIM or E5-E1T1) if provisioned with any un-channelized T1 ports.	99
134	E5-E1T1	E5-E1T1 card with SLK provisioned on link greater than 15.	99
135	E5-E1T1	E5-E1T1 card supports only 1 SE-HSL link.	276
136	E5-ATM, E5-ATM-B	E5-ATM card port B is provisioned.	297
137	E5-E1T1-B	E5-E1T1-B card with SLK provisioned with more than 64 links.	297
138	E5-E1T1-B	Only 2 high speed links are allowed on an E5-E1T1-B.	99
140	MCPHC	MCP card not running with D2G memory.	422
141	IPS	E5-IPSM card not running with D2G memory.	422
142	MCP	E5-MCPM-B card not running with D4G memory.	422
150	various	Card is obsolete.	47
165	VSCCP	Hardware configuration does not support configured feature set.	99
170	EROUTE	Non-E5-ENET/E5-ENET-B card detected in slot provisioned for eroute with card type STC.	99
171	STPLAN	Non-E5-ENET/E5-ENET-B card detected in slot provisioned for STPLAN with card type DCM.	99

Table C-1   (Cont.) Auto-Inhibit Hardware Verification Codes

HW Verification Code	Card or Application Code	Description	Associated UAM Code
172	E5-ENET-B card with IPSG	An EPM-A based card has been detected ina lot provisioned for EPM-B based card, so the card will be auto-inhibited and issue a degraded mode alarm.	99
		To permit an E5-ENET to be allowed in a card slot provisioned for E5-ENET-B and to clear the alarm, a chg-card command will be required to change the card type from enetb to enet, or the E5-ENET card will need to be removed from the slot.	
		Non-SLIC card detected in slot provisioned for IPSG and card type is SLIC with `data=gtt.`	
174	IPSG	SLIC hardware detected having 32-bit flash GPL (BLSLC32) in a slot provisioned for IPSG and card type is SLIC with `data=gtt.`	99
179	E5-ATM-B, E5-ENET-B, E5-E1T1-B	EPM-B based card detected and MFC is OFF.	99
		MFC option needs to be set to ON in STPOPTS before allowing the EPM-B based card. Note that the ON/OFF format is being used.	
		For example, at least one MFC option needs to be set to ON in STPOPTS before allowing an E5-ENET-B card. The various option values that support MFC are STPOPTS:ON={mtplti, mtprsi, mtplprst, uimrd, critalminh, dispactalms, rptlnpmrss, rstrdev, cnvcgda, cnvcgdi, cnvcgdn, cnvcgdn24, gtcnvdflt, ansigflex, archbldid, mfc, cnvcgdn16}.	
		Note: This code is specific to cards that do not support TVG.	
180	DEIR, ENUM, SIP	If ports C and D are configured, the card location must be populated with SLIC cards only.	441
180	SS7ANSI SCCP	SS7ANSI card provisioned as type LIME1 with MOBR on.	441
		-or-	
		A non-SLIC card inserted in GTT-enabled IPSG card's location.	
		-or-	
		E5-SM8G-B card inserted in SM card location when EPAPX option is enabled.	
182	OAM/IPS/MCP card	CARD running outdated Flash GPL	225
