OmniView Remote IP Manager

Add secure, remote access to any KVM switch or computer.

The OmniView Remote IP Manager provides an easy way to add remote access to your existing KVM and server configurations. When connected to a KVM, the device allows you to access and control your servers from anywhere, at anytime - using a Web browser. This round-the-clock remote access lets you troubleshoot servers faster and more efficiently, dramatically reducing server downtime and service costs. The Remote IP Manager provides secure, BIOS-level access and works with any KVM switch, or may be connected to a single computer.

Benefits

- Adds one remote user to any KVM switch

- BIOS-level access to servers using a standard Web browser

- Secure, 256-bit SSL encryption over a TCP/IP connection

- Supports serial devices such as PDUs, to perform hard reboots remotely

- Virtual Media enables file and image transfers between computers

- Allows up to 25 users to view digital video for collaborative troubleshooting

- Prevents unauthorized access with multi-user password protection

- Requires no software or licensing fees
