

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 101(3) Course ID:000128

Architectural Foundations I: Introduction to Architecture

This course introduces students to the world of design and architecture, its concepts, theory, language, practice, and ethics, and to associated and related fields (such as interior, landscape, graphic, and industrial design, to planning, construction, and development). It also introduces them to the world of the architectural student and intern and to management of the demands it will make of them. Students will learn to raise their powers of observation and design awareness, and increase their sensitivity toward the quality of the designed environment.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 102(3) Course ID:012624

Architectural Foundations II: Design Tools

The purpose of this course is to develop the student's visual thinking and communication skills and to introduce systems of architectural representation in various media. Students will develop the ability to represent three-dimensional artifacts and buildings in two dimensions (plan, section, and elevation) and in three dimensions (parallel drawings and perspectives). Representation systems to be investigated will include analog modes (hand drafting, hand drawing, and physical modeling) as well as digital modes (two- and three-dimensional computer graphics). Some diagramming will also be introduced. This is primarily a skills studio not a design studio.

Components: Studio

Enrollment Requirements: ARPL 101 or ARPL 121 (C- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 103(1) Course ID:017838 Department Consent Required

AutoCad 1

This course teaches students the basics of 2D drawing using AutoCad by Autodesk.

Components: Workshop

Enrollment Requirements: Architecture and Planning students only

Room Requirements: DEPARTMENT SPACE(1)

ARPL 104(1) Course ID:017839 Department Consent Required

Digital Drawing & Modeling

This course teaches students the basic tools for using Autodesk Revit

Components: Workshop

Enrollment Requirements: Architecture and Planning students only

Room Requirements: DEPARTMENT SPACE(1)

ARPL 105(1) Course ID:017840 Department Consent Required

Digital Post Production

This course is an introduction to digital techniques for 2D architectural visualizations. Students will experiment with rendering through Revit, and Enscape. Post-production tutorials with the Adobe Suite (including Photoshop, Illustrator, and InDesign) will show how to add depth and focus to presentation images through entourage, filters, and composition.

Components: Workshop

Enrollment Requirements: Architecture and Planning students only

Room Requirements: DEPARTMENT SPACE(1)

ARPL 201(3) Course ID:013675

Architectural Foundations III: Design Analysis & Synthesis

In this course, students will learn basic theories of graphic, architectural, and urban design composition and form, and will be introduced to basic process of design and design thinking. They will then use these theories and processes to assess the design intent of existing architectural and urban design projects and to describe, diagram, and document design intent graphically (2D and 3D, manually and digitally), orally, and in writing. The intent of the course is to prepare students for later design studios, where they will need to be able to think about and describe the design intent of their own projects.

Components: Studio

Enrollment Requirements: ARPL 102 (C- or better)

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 202(6) Course ID:000087

Architectural Design I

This studio continues to explore the Fundamental Language of Architecture. Students are expected to use and build on the knowledge gained in ARPL 101,102, 201 and the history sequence. More specifically, ARPL 202 introduces architectural problems addressing essential spatial, formal, material, and experiential dimensions of architecture. The goal is to develop a student's foundational theoretical, methodological, and communicational toolbox through a synthetic and analytical series of disciplined, systematic and open-ended design tasks involving a range of media (sketching, drafting, modeling and digital image editing / 3D). The studio uses simple programs on real locations (urban or landscape) to teach how to respond to site, program, building type, environment, and ideas through the pursuit of an all-encompassing scheme or parti.

Prerequisite 201

Components: Studio

Enrollment Requirements: ARPL 201 (C- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 211(3) Course ID:000247

History of Architecture I

This course explores the history of world architecture and city planning from its beginnings to the end of the Romanesque period (Carolingian). Examples will be discussed with respect to aesthetic principles, symbolism and cultural meaning, site and urban design, spatial sequence, detailing, and construction and systems technology, and in the context of their behavioral, cultural, political, religious, ecological, and economic environments.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 212(3) Course ID:000295

History of Architecture II

This course explores the history of world architecture from the early middle ages to the dawn of the modern era (mid-eighteenth century). Examples will be discussed with respect to aesthetic principles, symbolism and cultural meaning, site and urban design, spatial sequence, detailing, and construction and systems technology, and in the context of their behavioral, cultural, political, religious, ecological, and economic environments.

Components: Lecture

Enrollment Requirements: ARPL 211 (C- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 221(3) Course ID:000006

Pre Design

The first task in designing a project is finding out what is meant by "the project". In this course, students learn to define project problems in terms of mission, value, cost, planning, urban design, ecology, program, code, and life-cycle. Further, they learn to develop and propose design guidelines related to each, and learn to communicate their findings and recommendations to project stakeholders.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 232(3) Course ID:000357

Environmental Design I

This course teaches students the foundations of integrating passive environmental controls and ethical imperatives into the practice of sustainable architectural design. Students will analyze how climatic and site conditions are used to calculate and inform massing, daylight design, solar shading, natural ventilation, thermally efficient wall sections and water capture.

Components: Lecture

Course Equivalents: ARPL 532, ARPL 232H

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 232H(3) Course ID:017346 Department Consent Required

Honors Environmental Design I

This course teaches students the foundations of integrating passive environmental controls and ethical imperatives into the practice of sustainable architectural design. Students will analyze how climatic and site conditions are used to calculate and inform massing, daylight design, solar shading, natural ventilation, thermally efficient wall sections and water capture. This section of the class is designed for Honors students. It meets concurrently with ARPL 232 with the addition of several breakout sessions with the instructor and additional assignments.

Components: Lecture

Course Equivalents: ARPL 232, ARPL 532

Enrollment Requirements: Open only to students in the University Honors Program

Room Requirements: DEPARTMENT SPACE(1)

ARPL 241(3) Course ID:018656

Theory of the Orders

This lecture and studio format course divulges the long history, richness and meanings of the Classical Orders of Architecture.

Components: Lecture(In Person)

Topics: The Classical Language of Architecture

Course Equivalents: ARPL 641

Room Requirements: DEPARTMENT SPACE(1)

ARPL 301(6) Course ID:000085

Architectural Design II

Architectural Design I studio explores the relationship between buildings and the city via the design of a civic or cultural institution of a moderate scale. The studio focuses on the development of the tectonic expression between the building envelope, the interior spaces, and the exterior spaces of the city. In an urban context, buildings have the potential to define the public realm. In the exploration of the public/private spectrum throughout a variety of scales, from city to room to the elements of architecture and furniture, students are introduced to the ability of architecture to provide opportunities for social interaction and individual behavior. Attention should be paid to the site context as a great influence on design solutions. The resolution of site as a particular condition and building types as ideal organizations will be central to the design exploration, while structure and tectonics, basic sustainable environmental control, and some basic zoning and building code issues will also be of concern.

Components: Studio

Topics: Joint Degree Students, Civic Architecture

Enrollment Requirements: C- or better in ARPL 202

Room Requirements: DEPARTMENT SPACE(1)

ARPL 302(6) Course ID:000052

Architectural Design III

This course works at a scale larger than the individual building urban design that brings together the spatial concerns of architecture and the public policy issues of planning. It explores how the architectural concerns of the individual building can be adapted for the scale and complexity of the urban condition, looking at spatial strategies for the design of the public corridors and outdoor rooms that define a city, with a focus on appropriate use, building typologies and density for a given location. The course also emphasizes communication skills both verbal and graphic, necessary to express the big idea(s) that generate a solution, indicate the precedents that informed the design, and mine a site for clues to appropriate design.

Components: Studio

Topics: Barcelona, Spain, Rome, Italy

Enrollment Requirements: ARPL 301 (C- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 311(3) Course ID:000018

History of Architecture III

This course traces the recent history of architecture and urbanism from the dawn of industrialism and the rise of cities (mid-eighteenth century) to the present. Examples will be discussed with respect to aesthetic principles, symbolism and cultural meaning, site and urban design, and construction technology, and in the context of their behavioral, cultural, political, religious, ecological, and economic environments. Students are encouraged to understand the importance of precedents, to consider a diversity of viewpoints, and to evaluate buildings through critical inquiry.

Components: Lecture

Course Equivalents: ARPL 311H

Enrollment Requirements: ARPL 212

Room Requirements: DEPARTMENT SPACE(1)

History of Architecture III

This course traces the recent history of architecture and urbanism from the dawn of industrialism and the rise of cities (mid-eighteenth century) to the present. Examples will be discussed with respect to aesthetic principles, symbolism and cultural meaning, site and urban design, and construction technology, and in the context of their behavioral, cultural, political, religious, ecological, and economic environments. Students are encouraged to understand the importance of precedents, to consider a diversity of viewpoints, and to evaluate buildings through critical inquiry.

Components: Lecture(In Person)

Course Equivalents: ARPL 311

Enrollment Requirements: Open only to students in the University Honors Program

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ARPL 313(3) Course ID:016948 Department Consent Required

History Elective

This course will examine four crucial periods of architecture in Rome and Italy: Ancient, Medieval, Renaissance, Baroque and Fascist. The course will study the cultural and physical context of the city and its architecture in each of the four periods, including political, social and theoretical concepts that shaped the built environment. As a fifth component we will look into Contemporary architecture.

Components: Field Studies

Topics: Rome, Italy

Room Requirements: DEPARTMENT SPACE(1)

ARPL 314(3) Course ID:006907

Introduction to Architectural Theory

This course surveys the body of theories that have shaped the discourse, production, practice, reception, and representation of architecture. It explores the historical, social, and cultural milieu of architecture and the ways that architectural theory simultaneously informs and is informed by other domains of cultural production such as art, science, technology, economics, sociology, philosophy, and politics.

Components: Lecture

Topics: Barcelona, Spain, Rome, Italy

Room Requirements: DEPARTMENT SPACE(1)

ARPL 331(3) Course ID:000392

Environmental Design II

This course is intended to provide students a deeper understanding of the relationship between architectural design and active building systems. The topics include: building loads calculations, heating and cooling systems, lighting design, electrical systems, acoustical systems, building water supply, plumbing systems, and fire protection.

Components: Lecture

Course Equivalents: ARPL 331H

Enrollment Requirements: ARPL 232

Room Requirements: DEPARTMENT SPACE(1)

ARPL 331H(3) Course ID:017655

Environmental Design II (Honors)

This course is intended to provide students a deeper understanding of the relationship between architectural design and active building systems. The topics include: building loads calculations, heating and cooling systems, lighting design, electrical systems, acoustical systems, building water supply, plumbing systems, and fire protection.

Components: Lecture

Course Equivalents: ARPL 331

Enrollment Requirements: ARPL 232 and University Honors Program

Room Requirements: DEPARTMENT SPACE(1)

ARPL 333(3) Course ID:000071

Construction I: Assemblies and Detailing

This course explores the basic options in architectural construction and detailing from the perspective of a designer, including assembly options. It reviews the practical and professional considerations inherent in making decisions about building systems, with an emphasis on the desired performance characteristics of each system and its potential for effective integration throughout the design and construction process. It also introduces, at a very basic level, the concepts and techniques of technical documentation including construction drawing.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 335(3) Course ID:018543

Materials and Assemblies

This course will examine the principal criteria that determine the nature of building materials and the degree to which they can be considered `sustainable`. The criteria considered will be: carbon dioxide emissions; primary energy consumption; global warming potential; weighted resource use; air and water pollution indices; life cycle analysis. It will also examine the assembly of building components using low impact materials and technologies.

This course helps students understand how they the materials they use in buildings will affect others, so they can be good stewards of the environment and the resources we have on the earth.

Components: Lecture(In Person)

Course Equivalents: ARPL 735

Room Requirements: DEPARTMENT SPACE(1)

ARPL 383(3) Course ID:016947

Ethics and Stewardship

This course critically examines the responsibility of architects and planners as authors of the built environment. It exemplifies environmental ethics as the preservation of creation: a symbiotic relationship between human dignity, the environment, and society as applied to the built environment. Environmental ethics is explored as a symbiotic relationship between the conservancy of human dignity, the environment, and society through investigations into various scales of manmade structures from cities to buildings.

Components: Lecture

Course Equivalents: ARPL 783, CEE 383

Room Requirements: DEPARTMENT SPACE(1)

ARPL 401(6) Course ID:000360

Architectural Design IV

This studio has students choose from among several projects developed by different critics that cover different issues. In all cases, however, projects build upon the formal and tectonic body of knowledge explored in 200 and 300 level studios, though of increased scale and programmatic complexity. They require students to take project development to a greater level with emphasis on design across a range of scales including that of the region, the city, the building, the interiors, the furniture, and/or the detail. Since students with the best projects earn places in our foreign studies program, competition between them raises the bar for verbal and visual communication.

Components: Studio

Topics: Morphosis, Enrique Norten/Ten, Morphosis an EN/TEN, Paris, Joint Degree, DC-BCN:Articulations, Urban Building, Hybrid Place: Lessons from Japan, Internatinal, Transitions:Spaces for Learning in the 21st Centur, Walton Critic Vertical, Classical Architecture, Urban Building, Doing and Dancing: Rudolf Laban and the Dance Farm, Urban Practice, Sacred & Cultural Studies, Sustainable Building Design, High-rise Timber

Enrollment Requirements: C- or better in ARPL 302

Room Requirements: DEPARTMENT SPACE(1)

ARPL 402(6) Course ID:000025

Integrated Building Design Studio

This studio explores comprehensive design and team management, simulating architectural practice. Students are challenged to include conceptual and technical aspects of architectural form and the integration of the various building assemblies and systems. Each student is expected to bring the knowledge, skills, and understanding gained from all previous coursework and experiences to the development of a conceptually coherent, comprehensive, integrative, and buildable architectural design proposal. Studio work will include schematics, integrating major building systems and sustainable strategies with design at a conceptual level shown in conceptual drawings of structural, mechanical, passive environmental and lighting systems; design development: using large scale models and drawings to test initial ideas and the integration of these ideas; studying materials and details of assembly including vertical surfaces relative to framing systems, wall sections and details of assembly; and presentation: with final models and drawings of site plan, plans,

Components: Studio

Enrollment Requirements: C- or better in ARPL 331, ARPL 333, ARPL 401, ARPL 421, and ARPL 441 (or CE312);

Requires concurrent enrollment in ARPL 432

Room Requirements: DEPARTMENT SPACE(1)

Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 406(3) Course ID:018992 Department Consent Required

Portfolio Design

An overview of the process and organization of an architectural portfolio. Students will review techniques in digital photography and the use of photo editing software. Skills in transforming conventional and digital drawings into readable graphic elements within a design will be addressed. Discussions will address design intent and the communication of specific information dependent on a target audience. Students will be introduced to desktop publishing programs in order to construct and organize individual portfolios.

Components: Lecture(In Person)
Course Equivalents: ARPL 506
Room Requirements: DEPARTMENT SPACE(1)

ARPL 407(3) Course ID:019044 Department Consent Required

Design Build

Design Built (the Lab Portion) is a course designed to introduce students to general construction practices. Students will expand their knowledge and experience through various projects, lessons, and construction vocabulary. In addition, students will learn about and safely use hand tools, power tools, and woodworking machinery. The projects are designed to give students as much experience as possible using a variety of machines, tools, and technologies. The projects will also cover many aspects of the building and woodworking industries.

Upon completing this section of the course, students will have woodworking skills useful in any aspect of the construction industry. Additionally, students should have a broader understanding of construction processes and more in-depth problem-solving skills.

Components: Lecture(In Person)
Course Equivalents: ARPL 507
Room Requirements: DEPARTMENT SPACE(1)

ARPL 408(3) Course ID:019043 Department Consent Required

On Drawing

On Drawing is a highly participatory investigation into the process of drawing as it applies to understanding architecture, the built and natural environments, how we think about architecture through drawing and how we design with drawing. Hand drawing is depicted as a critical approach in the continuum of architectural drawing that exists alongside digital drawing.

Weekly assignments will focus on the use of different drawing media and methods, sketching, figure, thumbnails, diagrams, all to enhance skills and insights that help the evolving architect see architectural experience as a bodily, formal, expressive, meaningful and important part of life.

Components: Lecture(In Person)
Course Equivalents: ARPL 508
Room Requirements: DEPARTMENT SPACE(1)

ARPL 409(3) Course ID:019157 Department Consent Required

Special Topics in Design and Graphics

These classes explore various issues and scale of an assigned thematic design selected by the semester's professor and produced through the use of digital and mixed-media compositional graphics.

Tasks may include some or a combination of the following: the learning of the tools and techniques behind graphical compositions, the production of info-graphic illustrations of data and research material related to an assigned design problem, the visualization of the narrative behind a specific conceptual design issue, the design and presentation of a selected project through a graphical storytelling. Expert instructors and professionals in the field will be offering these classes through the School of Architecture and Planning.

Components: Lecture(In Person)
Topics: Watercolors, Traditional Architecture Illustration, Working with Words, Building with Books, Publishing, Learning from DC: Survey, Sketch, and Diagram
Course Equivalents: ARPL 509
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 415(3) Course ID:018993 Department Consent Required

Beauty and Brains

The seminar helps architecture students understand how the environment is really perceived, to gain a vocabulary for that perception, and a new understanding of options for shaping a designed environment that supports human needs. The cognitive (perceiving, knowing, thinking) and affective (character and emotional) basis of aesthetics is explored through readings, projects, field trips, and individual and team presentations. The course is designed to help students discover new ways of approaching the creation of architecture that enhances the quality of life of the community.

Components: Lecture(In Person)
Course Equivalents: ARPL 515
Room Requirements: DEPARTMENT SPACE(1)

ARPL 418(3) Course ID:019190 Department Consent Required

Foundations of Sacred Space/Cultural Studies

This course surveys essential ideas, methods, and paradigms behind the spiritual and cultural roots of place-making. The purpose is to introduce students to systematic ways to question, research, reason, and respond to our fundamental need to establish a meaningful connection to others, nature, cosmos, and the divine. What constitutes sacred space and how does dwelling intersect it? Are commonalities possible in a multicultural world? How do faith, rationality and service meet and inform one another in and through architecture? Are there age-proven approaches to such challenges? The class examines these and other SSOS questions with architectural design and scholarship in mind.

Components: Seminar(In Person)
Course Equivalents: ARPL 618
Room Requirements: DEPARTMENT SPACE(1)

ARPL 419(3) Course ID:018925 Department Consent Required

Topics in History/Theory

These courses explore the spectrum of theoretical developments to explain the practice, production, and reception of architecture across historical eras. These courses also analyze the historical/social/cultural milieu in which these developments occur.

Components: Lecture(In Person)
Topics: History of Architecture II 1865-1960, Human Centric Evidence Based Design for WELL-being, People, Planet and Profit, Urban Poverty and Architectural Imagination, Survey of American Architecture I, Lessons in City Building: 3000 years, Cities, Buildings, and Urbanism, From Babylon to the Eco-city
Course Equivalents: ARPL 519
Room Requirements: DEPARTMENT SPACE(1)

ARPL 420(3) Course ID:018994 Department Consent Required

Translating the New Urban Agenda into Architectural Principles

ARPL 520 is an introduction to the rapidly evolving relevance framework for professionals engaged in shaping the built environment. The course explores design principles for meeting the challenges of 21st century cities.

Components: Lecture(In Person)
Course Equivalents: ARPL 520
Room Requirements: DEPARTMENT SPACE(1)

ARPL 421(3) Course ID:000338

Digital Construction Docs

Architects and engineers document their designs so that everyone involved can come to agreement on what is to be built before construction starts. The traditional blueprints and specifications that served this purpose for decades have evolved into digital Building Information Models (BIMs). In this course, students will learn to plan, produce, and manage BIMs, and produce one of limited scope. Students will be expected to start the course already able to create 3D models using BIM-compatible software (Rhino, Revit, or other if approved by teacher).

Components: Lecture
Enrollment Requirements: ARPL102, ARPL 201, and either ARPL 101 or ARPL 121
Room Requirements: DEPARTMENT SPACE(1)

ARPL 423(3) Course ID:018996 Department Consent Required

Real Estate Development

This course is designed to give the student hands-on experience in analyzing an area market, selecting a site and conducting a feasibility analysis for development purposes. A design/development proposal, including budget, conceptual plans and presentation will be the final course submission.

Components: Lecture(In Person)
Course Equivalents: ARPL 523
Room Requirements: DEPARTMENT SPACE(1)

ARPL 432(3) Course ID:011257

Integrated Studio Supplement

This course is a supplement to 402/602 Integrated Building Design Studio (IBDS). The intent is to provide the students with the building systems and assembly content they need to apply to their design studio work.

Components: Lecture
Enrollment Requirements: Concurrent enrollment in ARPL 402
Room Requirements: DEPARTMENT SPACE(1)

ARPL 434(3) Course ID:014559

Construction II: Materials and Methods

This course exposes students to the exploration of materials and their functional implications. Information presented in this course will explore the considerations inherent in making decisions about material selection, with particular emphasis on the desired performance characteristics as well as the capacity of the material to produce or amplify the experiential.

The course is offered as the second part of the introduction to construction concepts, technical information and strategies, material and systems resources and professional-level understanding of the most important aspects of the making of contemporary buildings. While the scope of the course is broad, it is not, and could never be, a comprehensive treatment of all issues regarding material selection and specifications. However, the course will offer numerous strategies by which the young architectural professional may continue to

Building Performance Analytics

BIM and sustainability are symbiotic components of the sustainable design and evaluation process - both necessary to answer questions about sustainability within a timeframe fast enough to provide meaningful feedback to the design team throughout the design process. Together they propel our design and construction process from performance modeling, through energy evaluation, into the building's life-cycle and O&M tracking when a building is already occupied.

A significant portion of the design decisions that impact building performance are made in the early stages of project development. As a result, the entire process of design is affected. How is building performance

Topics in Construction and Environment

Courses related to the construction, materiality, tectonics and making of architecture. Thematic courses offered by experts in the field will be offered through the School of Architecture and Planning.

Components: Lecture(In Person)

Topics: Building Performance Verification, Equity in the Built Environment, Traditional Const Techniques/Notre Dame, Green Codes, Intro to Resilience and Climate Adaptation, Embodied Carbon in the Built Environment: Why is i, Sustenance & Sustainability: Urban Community Garde, Inclusive architecture in age of automated mobilit, Resilient Design Elective

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ARPL 441(3) Course ID:000020

Structures I

This course provides an introduction to structural design, exploring force (including lateral loading), statics, equilibrium, and load tracing. It introduces structural analysis of beams, trusses, and cable structures. Students experiment on structural systems including those that are form-active, vector-active, bulk-active, and surface-active.

Components: Lecture

Enrollment Requirements: (MATH 111 or MATH 121) and (PHYS 101 or PHYS 215)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 442(3) Course ID:000354

Structures II

This course continues exploring structural mechanics from Structures I and adds strength of materials, focusing on mechanical properties of structural materials, thermal effects on structures, strength, and deformation of structural components. The course introduces concepts of stress, strain, deflection, bending, and buckling of linear structural components. Additional topics include shear and bending diagrams, deflection in beams, mechanical properties of structural sections, and analysis and design of beams, and columns.

Components: Lecture

Enrollment Requirements: ARPL 441 (C- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 489(3) Course ID:019156 Department Consent Required

Topics in Planning

Courses explore architecture within the larger neighborhood, city and global contexts. Students learn planning and urban design strategies that enhance, protect and preserve our built environment using an interdisciplinary approach. The pedagogy enables students to creatively study, analyze and design with an understanding of the larger economic, cultural, social, political and environmental impacts on the communities in which we live.

Components: Lecture(In Person)

Topics: Lessons in City Building, Real Estate Development

Course Equivalents: ARPL 589

Room Requirements: DEPARTMENT SPACE(1)

ARPL 494(3) Course ID:000358 Department Consent Required

Independent Study

This course is a self-directed study of a specific issue to be determined by the student with the guidance of a faculty member. Students are required to submit an Independent Study Form (available in the Architecture Office) which must include proposed theme research, projects, products, scope of investigation and schedule. A student must receive permission to enter into an independent study from the faculty who will help guide the research prior to registering for the Independent Study.

Components: Independent Study

Topics: Engaging with Sustainable Living

Room Requirements: DEPARTMENT SPACE(1)

ARPL 499(3) Course ID:018939 Department Consent Required

Special Topics in Architecture

Courses related to the study of architecture and not covered in other specific Topics courses offered through the School of Architecture and Planning such as history/theory, construction/environment, design/graphics, etc.

Components: Lecture(In Person)
Topics: Pattern Typology, Reclaim and Remake
Course Equivalents: ARPL 599
Room Requirements: DEPARTMENT SPACE(1)

ARPL 500(6) Course ID:007271

Introduction to Design and Graphics

An introduction to design fundamentals and the basics of architectural communication, including drawing and model-making. The course will include studio, readings and discussions, lectures and field trips.

Components: Studio
Room Requirements: DEPARTMENT SPACE(1)

ARPL 501(6) Course ID:000436

Architectural Design I

Analysis of function, form development, site analysis, the integration of simple structural systems and passive energy design strategies into architectural design, and the design of small to moderate building projects.

Components: Studio
Enrollment Requirements: ARPL 500 (C- or better)
Room Requirements: DEPARTMENT SPACE(1)

ARPL 502(6) Course ID:000440

Architectural Design II

This course continues to explore design issues raised in ARPL 501 while introducing more complex studies of program, structure, site and material with advanced concepts of form and meaning of the built environment. Studio work is augmented by discussion of theory and history of architecture.

Components: Studio
Enrollment Requirements: ARPL 501 (B- or better)
Room Requirements: DEPARTMENT SPACE(1)

ARPL 503(3) Course ID:000863 Department Consent Required

Field Study

This sketching course, held at one of CUA's overseas venues, sends students on weekly site visits to various architectural and urban sites, dating from antiquity to the present day, in the area where they are studying. They also go on several multi-day field trips to other cities and regions. Through sketching, analytic diagramming, and the taking of other visual and written notes, students learn to observe, understand, and draw ideas from the built environment.

Components: Lecture
Topics: Rome, Italy, Barcelona, Spain, Turkey Foreign Studies, Hist & Theory of Turkish Arch and Urban Design, Lisbon, Portugal, Istanbul, Turkey, Jerusalem, Israel, Casa Malaparte, Paris, France, Japan: Sketching Tokyo, Kyoto and Osaka, International
Room Requirements: DEPARTMENT SPACE(1)

ARPL 504(3) Course ID:000767 Department Consent Required

Spirit of Place

A design/building project where students collaborate to develop and construct a project in a remote and inspiring site based on the spirit of the site, the users, and a metaphorical design intention. Projects have included work in the Canadian wilderness, the Amazon, and the mountains of Southern California.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 505(3) Course ID:013426 Department Consent Required

Spirit of the Place Build

Each year, The School of Architecture and Planning, in conjunction with Travis Price Architects, creates a unique Spirit of Place |Spirit of Design Design-Build Program. In this program, students travel to remote sites throughout the world to construct environmentally sensitive structures that are culture and place specific.

The design elective is offered every spring semester, and the build expedition is offered in the summer. While students can take either course, it is highly recommended that they take both the Spring Design and the Summer Build.

Components: Practicum

Enrollment Requirements: ARPL 504

Room Requirements: DEPARTMENT SPACE(1)

ARPL 506(3) Course ID:010877

Portfolio Design

An overview of the process and organization of an architectural portfolio. Students will review techniques in digital photography and the use of photo editing software. Skills in moving conventional and digital drawings into readable graphic elements within a design will be addressed. Discussions will address design intent and the communication of specific information dependent on a target audience. Students will be introduced to desktop publishing programs in order to construct and organize individual portfolios.

Components: Lecture

Course Equivalents: ARPL 406

Room Requirements: DEPARTMENT SPACE(1)

ARPL 507(3) Course ID:017070

Design Build

Design Built (the Lab Portion) is a course designed to introduce students to general construction practices. Students will expand their knowledge and experience through various projects, lessons, and construction vocabulary. In addition, students will learn about and safely use hand tools, power tools, and woodworking machinery. The projects are designed to give students as much experience as possible using a variety of machines, tools, and technologies. The projects will also cover many aspects of the building and woodworking industries.

Upon completing this section of the course, students will have woodworking skills useful in any aspect of the construction industry. Additionally, students should have a broader understanding of construction processes and more in-depth problem-solving skills.

Components: Lecture

Course Equivalents: ARPL 407

Enrollment Requirements: ARPL 302

Room Requirements: DEPARTMENT SPACE(1)

ARPL 508(3) Course ID:000850 Department Consent Required

On Drawing

On Drawing is a highly participatory investigation into the process of drawing as it applies to understanding architecture, the built and natural environments, how we think about architecture through drawing and how we design with drawing. Hand drawing is depicted as a critical approach in the continuum of architectural drawing that exists alongside digital drawing.

Weekly assignments will focus on the use of different drawing media and methods, sketching, figure, thumbnails, diagrams, all to enhance skills and insights that help the evolving architect see architectural experience as a bodily, formal, expressive, meaningful and important part of life.

Components: Lecture

Course Equivalents: ARPL 408

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 509(3) Course ID:013689

Special Topics in Design and Graphics

These classes explore various issues and scale of an assigned thematic design selected by the semester professor and produced through the use of digital and mixed-media compositional graphics. Tasks may include some or a combination of the following: the learning of the tools and techniques behind graphical compositions, the production of info-graphic illustrations of data and research material related to an assigned design problem, the visualization of the narrative behind a specific conceptual design issue, the design and presentation of a selected project through a graphical storytelling. Expert instructors and professionals in the field will be offering these classes through the School of Architecture and Planning.

Components: Lecture

Topics: Color and Architecture, Drawing the City, New City: Tactics and Concepts in Context, Architecture of the Informal, Interpreted Sketching, Descriptive Geometries, Field Sketching, Jerusalem Studies, Traditional Architecture Illustration, Working with Words, Building with, Learning from DC: Survey, Sketch, and Diagram

Course Equivalents: ARPL 409

Room Requirements: DEPARTMENT SPACE(1)

ARPL 511(3) Course ID:007766

History of Architecture I

This course explores the history of world architecture and city planning from its beginnings to the end of the Romanesque period (Carolingian). Examples will be discussed with respect to aesthetic principles, symbolism and cultural meaning, site and urban design, spatial sequence, detailing, and construction and systems technology, and in the context of their behavioral, cultural, political, religious, ecological, and economic environments.

Components: Lecture

ARPL 512(3) Course ID:008127

History of Architecture II

This course explores the history of world architecture from the early middle ages to the dawn of the modern era (mid-eighteenth century). Examples will be discussed with respect to aesthetic principles, symbolism and cultural meaning, site and urban design, spatial sequence, detailing, and construction and systems technology, and in the context of their behavioral, cultural, political, religious, ecological, and economic environments.

Components: Lecture

Enrollment Requirements: ARPL 511 (B- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 513(3) Course ID:006669 Department Consent Required

History Elective

The Undergraduate/Graduate Study Abroad Program is an intensive semester long program located in a variety of foreign cities. The History Course is comprised of weekly site visits to various architectural and urban sites in conjunction with lectures exploring the historically significant events affecting urban planning, architecture, landscape and design. In addition, the students travel to different locations for 3, 4-day field trips to experience the diversity of urban development.

Components: Field Studies

Topics: Rome, Italy, Barcelona, Spain, Paris Foreign Studies, Solar Decathlon, International

Enrollment Requirements: Requires concurrent enrollment in: 1) ARPL 590, 2) ARPL 503 (in the Fall term) or ARPL 314 (in the Spring term), and 3) one of the following courses: ARPL 302, ARPL 401, ARPL 601, ARPL 603, ARPL 701

Room Requirements: DEPARTMENT SPACE(1)

ARPL 514(3) Course ID:008403

Introduction to Theory

This course surveys the body of theories that have shaped the discourse, production, practice, reception, and representation of architecture. It explores the historical, social, and cultural milieu of architecture and the ways that architectural theory simultaneously informs and is informed by other domains of cultural production such as art, science, technology, economics, sociology, philosophy, and politics.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 515(3) Course ID:000493

Topics in History/Theory

The seminar helps architecture students understand how the environment is really perceived, to gain a vocabulary for that perception, and a new understanding of options for shaping a designed environment that supports human needs. The cognitive (perceiving, knowing, thinking) and affective (character and emotional) basis of aesthetics is explored through readings, projects, field trips, and individual and team presentations.

Components: Lecture

Topics: Notre Dame Truss, Beauty and Brains

Course Equivalents: ARPL 415

Enrollment Requirements: Junior, Senior, or Graduate Standing

Room Requirements: DEPARTMENT SPACE(1)

ARPL 516(3) Course ID:000783 Department Consent Required

Oriental/Western Landscape

Course examines aspects of historic and contemporary, public and private realm issues with focus on Oriental (India, Japan, China) and Western (France, Italy, England, Belgium, US) landscape in relation to architecture, urbanism, and culture/religion. Through a broad variety of techniques and applications, it weaves interrelated landscape and design aspects of sacred and profane, built and natural environments, stewardship and sustainability, renewable energy and green buildings, site engineering, topography, and storm water management.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 518(3) Course ID:007763

Advanced Architecture Theory

An advanced exposition of philosophical, anthropological, social, cultural, and political theories that inform the production and reception of architecture

Components: Lecture

Enrollment Requirements: ARPL 314 or ARPL 514

Room Requirements: DEPARTMENT SPACE(1)

ARPL 519(3) Course ID:013690

Special Topics in History/Theory

These courses explore the spectrum of theoretical developments to explain the practice, production, and reception of architecture across historical eras. These courses also analyze the historical/social/cultural milieu in which these developments occur.

Components: Lecture

Topics: The Baroque Attitude, Capital/Metropolis, Urban Fabric: Theory and Practice, Late Modernism, Urban Landscapes: City, Infrastructure and Landsca, Architecture and Global Urbanization, The Sustainable City, The Ecological Unconscious, Cities of the Mind: An Intellectual History, Urban Practice Research, Modern Washington, Architecture of the Informal, Architecture and Politics of Water Management, Classical Architecture, Civic Architecture for Well-Being, Theory of the Orders, NeuroArchitecture for Well-Being, The Evolving Architect, South Asian Architecture- a Critical History, Historical Exploration of Architectural Theory, Advanced Architectural Studies: Theory and App, Urban Poverty and Spatial Imagination, Survey of American Architecture 1600-1850, History of Architecture II 1865-1960, Human Centric Evidence Based Design for

Course Equivalents: ARPL 419

Room Requirements: DEPARTMENT SPACE(1)

ARPL 520(3) Course ID:017858

Translating the New Urban Agenda into Architectural Principles

This course will study the relevance revolution in architecture and emerging value propositions for the built environment to allow students develop a set of Architectural Principles for the Urban Era.

Components: Lecture

Course Equivalents: ARPL 420

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 521(3) Course ID:007768

Pre Design

The first task in designing a project is finding out what is meant by "the project". In this course, students learn to define project problems in terms of mission, value, cost, planning, urban design, ecology, program, code, and life-cycle. Further, they learn to develop and propose design guidelines related to each, and learn to communicate their findings and recommendations to project stakeholders.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 523(3) Course ID:007190

Real Estate Development

This course explores the practice of land development and architecture in the contemporary world of commercial and residential real estate development; the role of the architect as part of the real estate development team, market analysis methods and techniques to evaluate project feasibility that determine the outcome of the go/no-go decision by developers on architectural projects.. Students will meet with developers and architects in the Washington D.C. region who are on the cutting edge of real estate development.

Components: Lecture
Course Equivalents: ARPL 423
Room Requirements: DEPARTMENT SPACE(1)

ARPL 524(3) Course ID:011077

Practice Law, Real Estate, and Planning

This course addresses key legal topics and issues in modern architectural practice and real estate development projects. The course is divided into two main areas: contract law and negotiation and real property law, including the legal requirements for project approval. Contract law includes contract fundamentals and negotiation, essential elements in the contractual relationship with clients such as real estate developers, risk management and dispute resolution behavior by architects and laws governing architect liability in real estate projects. Real property law covers ownership and private properties rights, subdivision, zoning and urban planning policies that regulate design, environmental responsibilities influencing urban and suburban design and legal responsibilities of architects in project design and approval.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 525(3) Course ID:011260

Real Estate Finance

This course provides an in-depth understanding of the financial aspects of real estate development. Topics covered include revenue projections and financial analysis to determine profitability, the operation of capital markets and analysis for real estate equity investment.

Components: Seminar
Room Requirements: DEPARTMENT SPACE(1)

ARPL 526(3) Course ID:006670 Department Consent Required

Construction Management

This course provides an overview of issues and practices in the field of professional construction management. This course examines the process of product delivery in the building industry from pre-design concerns through completion from the perspectives of Owner, A/E and GC. Develops skills and techniques in the use of construction logic diagrams (CPM critical path method) to examine and track the allocation of human, financial and material resources in a construction process.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 527(3) Course ID:006909 Department Consent Required

CUAdc Design Collaborative

The mission of CUAdc is to empower architectural students to pursue civic engagement by providing pro-bono design services to nonprofits and community groups in and around the District of Columbia that could not otherwise afford these services. By applying cutting edge design and fabrication capabilities, critical thinking skills, and research tools, CUAdc hopes to become both a mechanism to encourage student engagement and an agent of positive social change.

Components: Laboratory
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 530(3) Course ID:015077

Lighting Analysis

This course aims at providing the tools necessary to integrate lighting in the overall design of a building. Through an optimized use of natural and artificial lighting, a building's environmental impacts can be reduced significantly while improving energy efficiency, and the well-being and visual comfort of the occupants. This course will be taught in three modules: fundamentals, measurement, and systems integration, in a lecture / application hybrid format so students may benefit from experience while learning about lighting design strategies.

Components: Lecture

Enrollment Requirements: (ARPL 232 or ARPL 532) and (ARPL 331 or ARPL 731)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 532(3) Course ID:008062

Environmental Design I

This course teaches students the foundations of integrating passive environmental controls and ethical imperatives into the practice of sustainable architectural design. Students will analyze how climatic and site conditions are used to calculate and inform massing, daylight design, solar shading, natural ventilation, thermally efficient wall sections and water capture.

Components: Lecture

Course Equivalents: ARPL 232, ARPL 232H

Room Requirements: DEPARTMENT SPACE(1)

ARPL 534(3) Course ID:012827 Department Consent Required

Energy Conservation and Renewable Energy in Buildings

This course explores building energy conservation and renewable energy sources beyond the introduction provided by Introduction to Sustainability.

Components: Lecture

Enrollment Requirements: ARPL 331 or ARPL 731 (B- or better for graduate students; C- or better for undergraduate students)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 535(3) Course ID:015376

Building Performance Analytics

As the field of sustainable design evolves, designers and owners concurrently are starting to measure sustainable benefits in terms of their impact on human health, environment, and cost implications. This indicates that the performance of a building is becoming a requirement for assessing sustainable building design and in evaluating post-design to document the effect of sustainability measures.

For the past decade, a broader and more comprehensive perspective of influences has been emerging in our approach to building design and evaluation. New more aggressive building standards such as those already implemented in San Francisco, New York City and Washington DC are already acting as drivers to predict energy use. Evolving codes and third-party green certification requires architectural analysis to address questions about sustainability within a timeframe fast enough to provide meaningful feedback to the design team from

Components: Lecture

Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 537(3) Course ID:015377

Sustainable Design Strategies & Synergies

Students will acquire the basic understanding of primary topics of sustainable strategies in building design, realize their inherent synergies, and assess their impact on building performance through diagrams and third party assessment.

The objective of this course is aimed to educate students in critical requirements, resources, technologies, calculations and processes of identifying specific green strategies to implement within a building design. Students will gain a fundamental comprehension of such strategies, technologies, professional reference standards, and study the structure and concepts of categories found in various building assessments ; including LEED rating systems ; in order to assess the cumulative synergies that result from a successful and logical integration of these strategies.

Components: Lecture
Enrollment Requirements: ARPL 232 or ARPL 532
Room Requirements: DEPARTMENT SPACE(1)

ARPL 538(3) Course ID:014970 Department Consent Required

LEED Lab: Sustainable Campus Building Assessment

LEED Lab is an interdisciplinary laboratory for students to experiment with various quantifiable synergies, policy revisions, and system tracking, meeting the demands of performance-driven sustainable facilities through actual third party LEED Certification.

The course implements the LEED Existing Buildings Operations and Maintenance (EB:O+M) rating system to existing CUA campus buildings seeking LEED certification for the first time and existing LEED Certified buildings seeking recertification.

The goals of this course will be mutually beneficial for students and the campus. First, the class creates a platform for direct student collaboration with the U.S. Green Building Council (USGBC), Green Building

Components: Laboratory

Room Requirements: DEPARTMENT SPACE(1)

ARPL 539(3) Course ID:013775 Department Consent Required

Topics in Construction and Environment

Courses related to the construction, materiality, tectonics and making of architecture. Thematic courses offered by experts in the field will be offered through the School of Architecture and Planning.

Components: Lecture
Topics: Deconstruction: Implications on Design, Building Enclosures, LEED Lab, Earth Building, Building Science, Housing Seminar, Solar Decathlon Research, Housing Reform Residential Design, Solar Decathlon Research & Furniture Design, Container Architecture, Deconstruction: Implications for Design, Urban Housing Typologies, Solar Decathlon, Modular & Pre-Fabricated Arch, Build Performance Verification, Design & Human Health, High Performance Green Building, Design & Global Citizenship, Case Studies Extreme Performance, Building Performance Verification, People and Planet, Design for Impact, Equity in the Built Environment, Traditional Const Techniques/Notre Dame, Green Codes, Intro to Resilience and Climate Adaptation, Embodied Carbon in the Built Environment: Why is i, Sustenance & Sustainability: Urban Community Garde, Resilient Design Elective
Room Requirements: DEPARTMENT SPACE(1)

ARPL 540(6) Course ID:017785

Sustainable Strategies + Synergies Studio

The objective of this studio course is aimed to educate students in critical requirements, resources, technologies, calculations and processes of integrating green strategies within a new building design to achieve net zero. Students will gain a fundamental comprehension of such strategies, technologies, professional reference standards, and study the structure and concepts of categories found in such building assessments as the LEED rating system in order to assess the cumulative synergies in a studio design project.

Components: Studio
Room Requirements: DEPARTMENT SPACE(1)

ARPL 541(3) Course ID:007765

Structures I

This course provides an introduction to structural design, exploring force (including lateral loading), statics, equilibrium, and load tracing. It introduces structural analysis of beams, trusses, and cable structures. Students experiment on structural systems including those that are form-active, vector-active, bulk-active, and surface-active.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 542(3) Course ID:007866

Structures II

This course continues exploring structural mechanics from Structures I and adds strength of materials, focusing on mechanical properties of structural materials, thermal effects on structures, strength, and deformation of structural components. The course introduces concepts of stress, strain, deflection, bending, and buckling of linear structural components. Additional topics include shear and bending diagrams, deflection in beams, mechanical properties of structural sections, and analysis and design of beams, and columns.

Components: Lecture
Enrollment Requirements: ARPL 541 (B- or better)
Room Requirements: DEPARTMENT SPACE(1)

ARPL 549(3) Course ID:014658

Topics in Structures

Courses related to the design and construction of various structural systems. Thematic courses offered by experts in the field will be offered through the School of Architecture and Planning.

Components: Lecture
Topics: PATTERN TYPOLOGY
Room Requirements: DEPARTMENT SPACE(1)

ARPL 550(3) Course ID:017313

Augmented Interior Architecture

This class focuses on the design of an interior architectural space, its presentation through a sequence of images (including a mood board, materials palettes, plan/section view, renderings, etc.) and experience of it through VR/AR devices. Students will learn how to "compose" and represent a specific space around an assigned theme, communicate it visually and experience it virtually. Upon availability of time, some elements of design might be developed as prototype and/or 3D printed.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 551(3) Course ID:015381 Department Consent Required

Digital Tools I

This course will provide an introduction to basic 3d modeling, rendering and fabrication of architectural projects using a variety of digital design tools. Coursework will be focus on applications that will expand a student's capacity to design, represent and explore their architectural, tectonic and spatial ideas. Emphasis will be on various 3D modeling techniques used to create and manipulate architectural space and its components as well as to produce models for various digital fabrication techniques. This class is designed for students with beginner-to-intermediate computer skills.

Components: Seminar
Room Requirements: DEPARTMENT SPACE(1)

ARPL 553(3) Course ID:000483

Parametric Modeling and Digital Fabrication

This course explores the history, theory, and practice of digital design and fabrication through Computer Aided Design (CAD), Computer Aided Manufacturing (CAM), and Computer Numeric Controlled (CNC) fabrication. Architectural practice is undergoing a radical transformation in response to developments in these fields. CAD/CAM is quickly evolving as new digital tools open vast new aesthetic territories. The digital native designer who controls these design and fabrication tools has an unprecedented opportunity to work at the cutting edge of design and/or construction.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 554(3) Course ID:009925

Basic Digital Visualization

This course will provide an introduction to the digital medium in architecture and its different tools. The focus of this course will be in the tools that will expand the student capabilities to explore their sense of architectural design. Students are able to explore the medium for future studio classes, presentations and portfolios. There will be an emphasis on 3D modeling to introduce the 3d space and understand its potential. Digital architecture is aimed at students with beginner-to-intermediate computer skills.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 555(3) Course ID:010874 Department Consent Required

The Parametric Model

This course will introduce students to the theory and techniques of parametric design using McNeel's Grasshopper plug-in for Rhinoceros, various ancillary Grasshopper plug-ins, the Arduino in/out and Autodesk's Revit Architecture.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 556(3) Course ID:009929

Interactive Design and Presentation

In addition to learning how to put together complex 2D graphic compositions, students will be able to present their projects/portfolios from a CD or the Web by using images as well as videos and audio. The course will introduce the basics of composition, portfolio and interface design, and will encourage students to explore the variety of presentation options using the digital interactive medium.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 557(3) Course ID:008163

The Digital Designed Object

This course explores the use of computer applications in the design of smaller-scale objects, exhibits and interiors, with an emphasis on materiality, function, structure and presentation. Students will explore specific aspects of an assigned object or interior space such as materials usage, assembly, production & marketing, and presentation. They will propose new design ideas and reinterpret the studied object or space in more current language using exclusively digital media. Students' study and production of realistic renderings and sophisticated graphic presentations will be a major part of each project.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 558(3) Course ID:012528

Animations in Architecture and Design

This course will be based on computer program that will explore and analyze and further the study of digital architectural design through 3Dmensional animations(s). The course will explore structure assembly animation, enveloping/ enclosing spaces with skin animation as well as the experiencing the spaces with the sun light cycle.

Components: Lecture
Enrollment Requirements: ARPL 554
Room Requirements: DEPARTMENT SPACE(1)

ARPL 559(3) Course ID:014535 Department Consent Required

Advanced Design Tools

This course looks at design tools and gives students an opportunity to advance digital drafting, rendering and presenting as well as analog tools such as model making, sketching and diagramming. This course will focus on each student's advanced tracking.

Components: Blended (Online and In Person)(Blended (in-person and online))
Topics: Lighting and Realistic V-Ray Rendering
Room Requirements: DEPARTMENT SPACE(1)

ARPL 559A(1.5) Course ID:015390 Department Consent Required

EDTM Module I

This course is based on the communication, analysis and composition of digital architectural designs through 3D renderings and animations. Though this course, students will explore a variety of animation techniques such as: camera motion settings, structure assembly animation, enveloping/enclosing spaces with skin animation as well as experiencing spaces with the sun light cycle in motion. Students will create several 3D models of the assigned design project and produce an animated presentation of their proposals.

Components: Lecture
Topics: Animations in Architecture and Design
Enrollment Requirements: concurrent enrollment in one or three of the following: ARPL 559B, ARPL 559C, or ARPL 559D
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 559B(1.5) Course ID:015391 Department Consent Required

Digital Texturing and Realistic Visualization

This course gives students hands-on experience in creating materials and textures for architectural 3D environments and compositions, as well as a solid training on how to apply those materials to Architectural scenes and objects. Students will focus on creating textures from basic images, using photo manipulation techniques as well as Photoshop procedural texturing methods and then applying such materials using proper UV setup. Students will learn how to work with material parameters and how to use shaders such as Specular, Glossiness, Bumps, Self-illuminated, Opacity and more. Individual and team oriented projects will be applied.

Components: Lecture
Topics: Digital Texturing and Shaders
Room Requirements: DEPARTMENT SPACE(1)

ARPL 559C(1.5) Course ID:015392 Department Consent Required

EDTM Module III

The module explores the proliferation of interactive architecture and the possibility of interconnecting people and objects. The goal of this workshop is to understand the key concepts of interactivity and their relation to design and architecture. Interactivity requires more than developing interactive phones, games, reading devices that confine their interactivity to surfaces of screens. Interactivity requires an understanding of the complex physical interactions facilitated by embedded computation and physical kinetic counterparts and the application of such knowledge to design and production.

Components: Lecture
Topics: Interactive Architecture
Enrollment Requirements: concurrent enrollment in one or three of the following ARPL 559A, ARPL 559B, or ARPL 559D
Room Requirements: DEPARTMENT SPACE(1)

ARPL 559D(1.5) Course ID:015393 Department Consent Required

EDTM Module IV

This course will focus on the creation of an architectural project and explore it into Real-time engines. Students will compose/design modular architectural small parts of a single class project and assemble them as a group, creating a kind of kit of parts of a whole, which will be assembled, tested and experienced through a Real-time engine. Students will also learn how to create different versions of their architectural spaces by modifying their texturing and modular components. The final architectural set will be composed of multiple pieces and propose a wide variety of architectural spaces to be experienced at the viewers' speed, time and direction.

Components: Lecture
Topics: Intro to Real Time in Architecture
Enrollment Requirements: concurrent enrollment in one or three of the following: ARPL 559A, ARPL 559B, or ARPL 559C
Room Requirements: DEPARTMENT SPACE(1)

ARPL 560(3) Course ID:017312

Classical Architecture Illustrated

The pedagogy of this course is to learn from some of the best examples of classical traditional architecture, through the process of documentation, analysis, and hand drawing, with the culminating result being beautifully executed architectural presentation drawings. This course is both field-based and studio-based, as students will be assigned exemplary buildings in Washington DC and other Regional cities, to visit and gather information on site, through sketching, physical measurements, digital documentation, and historical research. That information will then be taken to the studio, to produce accurate and beautiful representations of the subject through drafting and a variety of rendering techniques, such as: ink-line drawings, pencil & Pen rendering, ink washes, watercolor washes & analytique compositions.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 571(1) Course ID:015609

The Facilities Management Context

Provides an overview of facilities management and its challenges, the history of the profession, professional associations, and career opportunities. Prerequisite: None.

Components: Seminar
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 583(3) Course ID:000551

History of American City Planning

The City Beautiful movement; new towns, introduction of zoning; planning after World War II to the present. Specific city plans, such as L'Enfant's Washington, will be studied.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 584(3) Course ID:012668 Department Consent Required

Integrated Coastal Management

This course will explore planning principles and practices to address coastal growth and development using Integrated Coastal Management (ICM). Thematic modules illustrating different aspects of ICM will be explored through crosscutting domains of ecosystem services, resource use and governance. Through an examination of the coastal ecosystems services, students will examine the social, economic and governance frameworks that have been used to manage coastal resources. Policies and tools used to address growth management will form the basis for understanding the evolution of principles for coastal sustainability. The course will place emphasis on the application of best practices that promotes healthy coastal ecosystems.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

ARPL 586A(3) Course ID:015860

Environmental Impact Assessment

The course will provide a critical analysis of Environmental Impact Assessment (EIA) and Environmental Assessment (EA), as well as critical planning tools developed in the U.S.A. in 1969 to address "sustainable development". EIA is a multi-disciplinary predictive science designed to identify and interpret the significance of effects on the environment caused by infrastructure facilities (i.e., power plants, landfills, highways, pipelines, transit, etc.). EA is a "rational-comprehensive" planning process that uses the tools of EIA as a means of selecting alternative facilities, plans, or programs that minimize effects on the bio-geo-physical and socio-economic environment. Students will become familiar with EIA history and theory from the 1960s to the present. Since U.S. "Environmental Planners" are engaged around the world, we will examine EIA regulations at various levels of government, including the 1969 U.S. National Environmental Policy Act (NEPA), state EIA regulations, municipal Comprehensive Plan EIA policies, Canada/Europe and

Healthy Cities, Livable Places

This graduate-level course is organized around the principle that healthy residents and livability are core attributes of sustainable communities. A community lacking these attributes is not, by definition, sustainable and a sustainable community will, by virtue of its adherence to the principles of sustainability, be inherently healthy and livable. The amount and nature of the required attention to its environment, its economy, and its people assures this equivalence. Through its thirteen modules, the course explores the various methods and strategies that communities can use and are using to move toward the ideal of sustainable development, with a particular focus on underlying ethics and theories and the local institutional and instrumental dynamics related to balancing the "three Es" of economic development, social equity, and environmental protection.

Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 586F(3) Course ID:015925

Sustainable Infrastructure

This course will help students develop a holistic understanding of the "sustainable city" in terms of environmental quality, social equity, quality of life and Christian/Catholic ecological stewardship paradigms (i.e. Earthkeeping). We will critically evaluate the concept of the "green city" and whether these claims are based on empirical evidence (e.g. Ecological/Carbon Footprint Analysis); or whether these claims are "greenwashing". The emphasis of the instruction will be on the planning of "hard" infrastructure essential to a sustainable city, including potable water, wastewater (sewage) treatment, solid waste disposal/the 3Rs (reduction/reuse/recycling-composting), greenways/green roofs (natural habitat conservation) and transportation systems (roads, transit, biking and walking). We will examine the unsustainable environmental problems associated with our current rampant natural resource and energy use, and the environmental problems associated with solid (garbage), liquid (sewage, effluents) and gaseous (emissions) wastes emanating from

ARPL 589(3) Course ID:014031

Topics in Planning

Courses explore architecture within the larger neighborhood, city and global contexts. Students learn planning and urban design strategies that enhance, protect and preserve our built environment using an interdisciplinary approach. The pedagogy enables students to creatively study, analyze and design with an understanding of the larger economic, cultural, social, political and environmental impacts on the communities in which we live.

Components: Lecture

Topics: Growth Management, Introduction to GIS, Leed Lab, Urban Morphology, Transportation Planning, Environmental Planning, Energy and Climate Action Planning, Intro. To Geographic Info. Syst., Urbanism of Inclusion, Politics and Planning, Mapping, City-Region Lab, Planning Visualization, Plan Making, Politics and the City, Sustainable Infrastructure, Environmental Impact Assessments, Bicycle & Pedestrian Master Planning, Pedestrian & Bike, Real Estate Development

Course Equivalents: ARPL 489

Enrollment Requirements: Graduate Students Only

Foreign Studies Language

The Undergraduate Study Abroad Program is an intensive semester long program located alternatively in Rome or Barcelona. Students are required to take their second semester of the pertinent foreign language, while in Rome or Barcelona, to improve on their conversation, reading and writing skills.

Components: Lecture

Topics: Rome, Italy, Barcelona, Spain, Paris, France

Enrollment Requirements: Requires concurrent enrollment in: ARPL 503 and one of the following courses: ARPL 302, ARPL 401, ARPL 601, ARPL 603, or ARPL 701

Room Requirements: DEPARTMENT SPACE(1)

ARPL 594(3) Course ID:000951 Department Consent Required

Independent Studies

This course is a self-directed study of a specific issue to be determined by the student with the guidance of a faculty member. Students are required to submit an Independent Study Form (available in the Architecture office) which must include proposed theme of research, projects, products, scope of investigation and schedule. A student must receive permission to enter into an Independent Study from the faculty who will help guide the research. Please contact your advisor or a faculty member regarding Independent Study proposals before registering.

Components: Independent Study

Topics: Engaging with Sustainable Living

Concentration Studio Abroad Trip

Graduate Studio Abroad, exploring topics on location, culture and design.

Components: Abroad Trip

Topics: Ireland

Enrollment Requirements: Requires concurrent enrollment in ARPL 603

Room Requirements: ABROAD(1)

ARPL 605(3) Course ID:000934

Furniture Design: Form and Concept

Although the course title indicates the design and production of furniture, this is not the main objective. Students will explore materials, structure, mechanics, integration of scale and form, and strength of concept. Lectures will introduce ideas, objectives, and precedents. The lectures will parallel studio and model shop work, and include technical and theoretical topics. Projects include small-scale models to finished full-scale pieces.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 606(3) Course ID:000955

Advanced Rendering Techniques

Builds on the basic drawing skills learned previously: tones, textures, perspective, shades and shadows, and color. Students learn to develop perspectives from photographs, and from coloring of photographically enlarged drawings. Techniques of rendering in transparent and opaque watercolor, markers, colored pencils, and ink.

Components: Lecture

Enrollment Requirements: Junior, Senior, or Graduate Standing

Room Requirements: DEPARTMENT SPACE(1)

ARPL 611(3) Course ID:007865

History of Architecture III

This course traces the recent history of architecture and urbanism from the dawn of industrialism and the rise of cities (mid-eighteenth century) to the present. Examples will be discussed with respect to aesthetic principles, symbolism and cultural meaning, site and urban design, and construction technology, and in the context of their behavioral, cultural, political, religious, ecological, and economic environments. Students are encouraged to understand the importance of precedents, to consider a diversity of viewpoints, and to evaluate buildings through critical inquiry.

Components: Lecture

Enrollment Requirements: ARPL 512

Room Requirements: DEPARTMENT SPACE(1)

ARPL 613(3) Course ID:000841

History and Theory of Urban Form

This course explores the design of the public realm, spatial strategies for the design of the public corridors and outdoor rooms of the city. Students gain an understanding of urban morphology, building typology, building vocabulary, and sustainable design principles, methods and techniques.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 614(3) Course ID:000933

Public Realm of Private Buildings

This course focuses on the integration of the public realm, consisting of corridors (streets) and outdoor rooms (squares and plazas), with the world of private building with its own internal issues. The seminar will emphasize analysis, research and the exploration of alternatives.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 615(3) Course ID:000528

Applied Urban Design Theory

An exploration of the application and implementation of urban design principles in a democratic, free-market society. Emphasizes the effects of government policy and regulation on the development of American urbanism, especially zoning and its impact on the implementation of effective urban design strategies.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 616(3) Course ID:000477 Department Consent Required

Sacred Space Design in the Abrahamic Traditions

A survey of the history and evolution of sacred space and the interaction and influence of liturgy on the design of sacred space.

Components: Seminar
Room Requirements: DEPARTMENT SPACE(1)

ARPL 617(3) Course ID:014897

Theory of Sacred Space and Cultural Studies

This class investigates specific theoretical, historical, social, and/or philosophical issues unfolding at the intersection between contemporary architecture, culture and spirituality. The class unfolds like a seminar in which students go through a series of selected readings, discussions, case studies, field trips, presentations and/or practices with the purpose of building a reflective position in SSCS. Lectures and reviews (by guests and the instructor) establish the intellectual, methodological, and dialectic framework for the class operation. While the course often works in conjunction with the SSCS graduate studio, its pedagogy, scheduling, and design are independent so that students not enrolled in the studio may fully benefit from this offering.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 618(3) Course ID:014896 Department Consent Required

Foundations of Sacred Space/Cultural Studies

This course surveys essential ideas, methods, and paradigms behind the spiritual and cultural roots of place-making. The purpose is to introduce students to systematic ways to question, research, reason, and respond to our fundamental need to establish a meaningful connection to others, nature, cosmos, and the divine. What constitutes sacred space and how does dwelling intersect it? Are commonalities possible in a multicultural world? How do faith, rationality and service meet and inform one another in and through architecture? Are there age-proven approaches to such challenges? The class examines these and other SSCS questions with architectural design and scholarship in mind.

Course Equivalents: ARPL 418
Room Requirements: DEPARTMENT SPACE(1)

ARPL 621(3) Course ID:007767

Digital Construction Docs

Architects and engineers document their designs so that everyone involved can come to agreement on what is to be built before construction starts. The traditional blueprints and specifications that served this purpose for decades have evolved into digital Building Information Models (BIMs). In this course, students will learn to plan, produce, and manage BIMs, and produce one of limited scope. Students will be expected to start the course already able to create 3D models using BIM-compatible software (Rhino, Revit, or other if approved by teacher).

ARPL 623(3) Course ID:000833

Affordable Housing

This class is designed to give the student an introduction to the major types of affordable housing being provided with funding or incentives by government agencies, and private initiatives. We will discuss the various types of populations and their housing needs including the homeless, working poor, seniors and the workforce or moderate income housing and the types of housing being provided for these groups. This class will give the student an introduction to Federal programs, including Section 8 Public Housing, HOPE VI, and rental housing using the Federal Low Income Tax Credit program. We will also cover the tools used by local and state governments such as Inclusionary Zoning, trust funds, public/private partnerships on publicly owned land, and down payment assistance. Other major trends that will be covered include gentrification, workforce housing and the foreclosure problem. We will use the Washington region as a case study, and focus on neighborhoods such as Columbia Heights and Silver Spring. The classes will include presentations by local

Leadership Real Estate Development & Architecture

The course explores leadership management in the architectural and real estate development professions. In particular, the course focuses on emerging concepts of design and the built environment with characteristics and expectations of leadership. The course introduces the many ideas and approaches that can define leadership in the architectural and real estate development field. The class provides a platform for considering how thesis projects position students as future leaders in architecture and development, and integrates reading assignments, discussions and guest speaker lectures with the students' own thesis research and design while remaining relevant to the topics of leadership, architecture and development.

Components: Seminar

ARPL 631(3) Course ID:015375

The Aesthetics of Green

This course examines the implications of designing green building: does going green change the face of design or only its content? In a series of illuminating and challenging presentations discussions and assignments the instructor will encourage students to explore the theses that beauty is inherent to sustainability; that how things look is as important as how they are made; that form and image can enhance conservation, comfort and community at every scale of design from products to building cities; that aesthetic attraction isn't just a superficial concern, it is an environmental imperative.

Components: Lecture

Enrollment Requirements: Graduate Students Only

Room Requirements: DEPARTMENT SPACE(1)

ARPL 632(3) Course ID:000484

Integrated Studio Supplement

This course will investigate the mechanism of perception and how the brain processes visual information. Using a cognitive approach the reasons some buildings work and others don't will be examined. The relationship between experience and abstraction will also be investigated. The goal of this study of perception is to make the student of architecture a better designer.

Components: Lecture

Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 633(3) Course ID:008054

Construction I: Assemblies and Detailing

This course explores the basic options in architectural construction and detailing from the perspective of a designer, including assembly options. It reviews the practical and professional considerations inherent in making decisions about building systems, with an emphasis on the desired performance characteristics of each system and its potential for effective integration throughout the design and construction process. It also introduces, at a very basic level, the concepts and techniques of technical documentation including construction drawing.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

ARPL 634(3) Course ID:014634

Construction II: Materials and Methods

This course exposes students to the exploration of materials and their functional implications. Information presented in this course will explore the considerations inherent in making decisions about material selection, with particular emphasis on the desired performance characteristics as well as the capacity of the material to produce or amplify the experiential.

The course is offered as the second part of the introduction to construction concepts, technical information and strategies, material and systems resources and professional-level understanding of the most important aspects of the making of contemporary buildings. While the scope of the course is broad, it is not, and could never be, a comprehensive treatment of all issues regarding material selection and specifications. However, the course will offer numerous strategies by which the young architectural professional may continue to

Room Requirements: DEPARTMENT SPACE(1)

ARPL 636(3) Course ID:015501

Design Process and Methods

This class investigates architectural design processes and methods through design exercises, comparative analysis and self-criticism, both theoretically and practically. The overall premise is that every design process occurs within a general methodology that (pre)determines its ideology, universe and mode of inquiry (i.e., questions, strategies and tactics), knowledge base, representation techniques, goals, and expectations. During the first part of the semester, the focus is on understanding the fundamental nature of the design process whereas the second (and longer) part is devoted to study a variety of architectural design methods. In addition to readings and lectures geared to establish a conceptual framework, the course uses short, hands-on assignments

Components: Studio
Room Requirements: DEPARTMENT SPACE(1)

ARPL 641(3) Course ID:018714

Theory of the Orders

This lecture and studio format course divulges the long history, richness and meanings of the Classical Orders of Architecture

Components: Lecture(In Person)
Topics: The Classical Language of Architecture
Course Equivalents: ARPL 241
Room Requirements: DEPARTMENT SPACE(1)

ARPL 648(3) Course ID:016487 Department Consent Required

Advanced Architectural Analysis

In this seminar and workshop students engage with advanced analytic and synthetic concepts, methods and tools to understand and translate the designed environment. Media will include but will not be limited to digital modeling and animation, collage, painting, charcoal and color pencil. The overall intentions of this course is to expand the means and methods of analytical and synthetic thinking, develop a discourse on critical observation and produce advanced and varied analytical studies of the designed environment. Topics to be discussed will include the architect as bricoleur and the role of bricolage in terms of collage, Baudelaire's concept of the flâneur and the city, Vidler's concept of the uncanny, mapping, Walter Benjamin's dialectics of seeing and Heidegger's concepts of dwelling, place & environment.

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 651(3) Course ID:015382

Advanced Parametric Design (BIM)

This class will focus on the advanced concepts and mechanisms for creating performance-based parametric systems. The objective of this class is to provide students with advanced conceptual and technical frameworks through which to better understand the relevant application of Parametric Design to the various design problems they will encounter in professional practice. In a hands-on learning environment, you will learn techniques for using Parametric Design, Data-Based Simulation, and Component Detailing for Digital Fabrication. Through guided exercises, group discussions, and one-on-one prototyping sessions, students will design and construct a series of component assembly variations driven by a parametric model.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 655(3) Course ID:010875 Department Consent Required

Advanced Digital Design and Fabrication

This advanced workshop will focus on the use of CAD/CAM (Computer Aided Design / Computer Aided Manufacturing) and CNC (Computer Numerically Controlled) technologies in the design and fabrication of architectural spaces and constructs. Students enrolled in the course will focus on the design and development of full scale prototypes using digital techniques for analysis and fabrication focusing on the transition between computer modeling and its materialization. Students will be expected to utilize various software applications necessary to generate three dimensional models and CNC machine instructions as well as confront the physical properties of materials and details. Lectures will be accompanied by software tutorials, machine demos, and lab sessions that engage both the digital / virtual and physical / analog realms of design. Students are expected to complete a full scale design-to fabrication project during the course of the semester. This course will make use of the CNC fabrication laboratory at the School of Architecture, as well

Components: Lecture

Enrollment Requirements: ARPL 533 or ARPL 553 (B- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 656(3) Course ID:000854

Advanced Digital Visualization

This course explores computer programs that aid in the analysis and study of architectural design and in presentation. Students learn to model functions, spaces, and spatial relations in residential design, and to design facades.

Components: Lecture

Enrollment Requirements: ARPL 554 (B- or better for Graduate students; C- or better for Undergraduate students)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 659(3) Course ID:012527

Digital Imaging & Editing in Architecture

This course supplements design studio work in the digital media graduate concentration. Students will learn to deepen and refine their studio projects' graphics, focusing on film as a means of presenting their design work. The course has two components, one that introduces the idea of storyboarding and related software, and one that addresses the digital assembling and editing of a basic movie. Students will collect and edit media data in several formats including stills, video, animations, and audio, as they compose a movie linked to their studio proposals.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 671(3) Course ID:015804

Creative Problem Solving

Explores the design process as a creative, focused, strategic, and holistic way to respond to challenges. Students learn to break out of conventional thinking while working within constraints. The course makes heavy use of right- and left-brain exercises and graphic forms of communication. Prerequisite: None.

Components: Studio

Room Requirements: DEPARTMENT SPACE(1)

ARPL 672(3) Course ID:015606 Department Consent Required

Occupancy Management

A survey of the issues that underlie the management of activities and events that take place in facilities. The course explores the evolving nature of the workplace and management of the security, emergency, and disaster preparedness issues that affect facilities. Students consider facilities that serve a diverse range of needs including commercial, residential, industrial, and institutional. Prerequisite: None.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 673(3) Course ID:015610

Project & Practice Management for FM

Explores approaches to managing time, people, and resources to accomplish strategic and tactical projects, with a focus on leadership skills and communication, upward with those in the "C Suite", downward with employees, and horizontally with different sectors within an organization. The course also looks at the skills needed to effectively manage an FM practice and to coordinate with the larger organizations they serve. Prerequisite: None.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

ARPL 674(3) Course ID:015614

Facility Performance Assessment & Management

Looks at approaches to and techniques for verifying that facilities are functioning per their design intent and to minimize their impact on the environment and efficient use of energy, water, and other resources over the life of the facility. Students will learn the basics and value of assessment tools such as commissioning, occupant satisfaction surveys, and performance management approaches such as Balanced Scorecards (BSC), and will learn the basics of monitoring, analyzing, benchmarking, and adjusting facilities and their physical components to work optimally, follow traditional building certification program concepts (such as management of energy, water, materials, environmental quality and building sites), and to respond to the evolving programmatic and contextual needs of the facility.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

ARPL 675(3) Course ID:015613

Asset Management & Strategic Planning

Explores the financial side of facilities management, including the basics of real estate investment, development, and disposition. Students will learn to consider Lifecycle Cost Assessment (LCA), use different financial metrics to evaluate the Total cost of Ownership (TCO), estimate the market value of a facility and develop multiple investment holding scenarios for maximizing the return, financial and otherwise, from the owner's perspective. Students will also learn how to compute and rank-order the benefit-cost analysis of investment portfolios that include multiple types of real estate properties, both in the short-term and long term. Prerequisite: None.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

ARPL 676(3) Course ID:015607 Department Consent Required

FM Technology

Students learn multiple approaches to FM automation, including software used for financial calculations (spreadsheets, etc.), project management (PM), Geographic Information Systems (GIS), Building Information Modeling (BIM), Maintenance Management Systems (MMS), and Building Automation Systems (BAS). Prerequisite: None.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

ARPL 677(3) Course ID:015611

Construction Design and Implementation

Reviews the physical aspects of facilities. Students learn the basics of technical design and detailing, of documentation (drawings and specifications), and of construction management and administration. It reviews architectural and structural assemblies and materials; mechanical, electrical, plumbing, and fire protection systems; and landscape elements and materials. Prerequisite: None.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

ARPL 678(3) Course ID:015608

Building Operations and Maintenance

Reviews the operation and maintenance of each of the constructed elements, systems, and equipment explored in ARPL 676, Construction Design and Implementation, including the idea of budgeting for operation and reserve funds.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning

Independent Studies

This course is a self-directed study of a specific issue to be determined by the student with the guidance of a faculty member. Students are required to submit an Independent Study Form (available in the Architecture office) which must include proposed theme of research, projects, products, scope of investigation and schedule. A student must receive permission to enter into an Independent Study from the faculty who will help guide the research. Please contact your advisor or a faculty member regarding Independent Study proposals before registering. This course may not substitute for a design studio.

Components: Independent Study
Room Requirements: DEPARTMENT SPACE(1)

ARPL 696(0) Course ID:001014
Thesis Continuation

Thesis Guidance is offered to students who were unable to complete their thesis within the prescribed semester and have received an "Incomplete" grade. This course allows thesis students to continue to meet with their faculty advocate, use studio space and work towards the completion of their thesis. The student has up to five consecutive semesters to complete their Thesis, but must register in Thesis Guidance each semester until finished. This course bills at the equivalent of one credit hour.

Components: Thesis Research
Enrollment Requirements: ARPL 696B, ARPL 696D, ARPL 696F, ARPL 702, or ARPL 704
Room Requirements: DEPARTMENT SPACE(1)

ARPL 696A(3) Course ID:015502
Thesis Studio I

Thesis I is the first required course of the Graduate Thesis Program, a two semester sequence which concludes with the completion of Thesis II (ARPL 696D). Thesis I will provide students with a critical, structural framework in the development of their thesis project. The focus of this course will be the framing a particular question, developing a strategy for research, articulating research for incorporation through design and developing a clear design methodology.

For M.Arch/ MSSD (MSNetZ) joint degree students Thesis Studio I is a demonstration of a student's ability to integrate sustainable design strategies and details into their design project.

Components: Studio
Enrollment Requirements: ARPL 601
Room Requirements: DEPARTMENT SPACE(1)

ARPL 696B(6) Course ID:015503
Thesis Studio 2

Thesis II is the culmination of the Graduate Thesis Program (a two-semester sequence consisting of Thesis I and Thesis II.) The Thesis II semester involves the further development of an architectural investigation initiated in Thesis I. Students will continue to push forward their research and analysis through the production of diagrams and multiple design exercises, culminating in a significant architectural project/proposal.

Students will take full responsibility in seeking direction from their advocate and committee member, convening meetings and pin ups. Students will manage their own time in consultation with their advocate. They may bring other faculty and consultants to work with them but the faculty of record will be their advocate.

Components: Studio
Enrollment Requirements: ARPL 601, ARPL 602 or ARPL 603
Room Requirements: DEPARTMENT SPACE(1)

ARPL 696C(3) Course ID:015504
Independent Thesis I

Thesis Studio I is the first required course of the Graduate Thesis Program, a two semester sequence which concludes with the completion of Thesis Studio II. Thesis Studio I will provide students with a critical, structural framework in the development of their thesis project.

Although there will not be a clear delineation between Thesis Studio I and Thesis Studio II, the focus of this course will be on framing a particular question, developing a strategy for research, articulating research for incorporation through design, and developing a clear design methodology.

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 696D(6) Course ID:015505

Independent Thesis II

Thesis II is the culmination of the Graduate Thesis Program (a two semester sequence consisting of Thesis I and Thesis II.) The Thesis II semester involves the further development of an architectural investigation initiated in Thesis I. Students will continue to push forward their research and analysis through the production of diagrams and multiple design exercises, culminating in a significant architectural project/proposal.

Components: Studio

Enrollment Requirements: ARPL 601, ARPL 602 or ARPL 603

Room Requirements: NO CLASSROOM NEEDED(1)

ARPL 701(6) Course ID:000978

Concentration Studio III

These courses explore advanced ideas in design as related to any of the several graduate concentrations operating within our program. These concentrations ask students to go beyond. Each concentration studio focuses on the design of a project related to that concentration, with the three studies within a given concentration varying by theme rather than by educational level. For more specific information, see the supplemental course description for a particular concentration.

Components: Studio

Topics: Urban Practice Studio III, Emerging Tech/Media Studio III, Real Estate Dev. Studio III, Cultural Sacred Studio III, Paris, France, Jerusalem, Finland, Summer Foreign Studies, Travel Studio, DSR Studio, NYC/Boston, Solar Decathlon, Barcelona, Spain, Rome, Italy, NADAAA Studio, LA, SEA, Istanbul, Turkey, Morphosis, Enrique Norten/Ten, DC-BCN:Articulations, Hybrid Place: Lessons from Japan, International, Classical Architecture, Sustainable Building Design, High-rise Timber

Enrollment Requirements: ARPL 402 or ARPL 602 or ARPL 603 (B- or better); Not open to students who've already taken ARPL 701

Room Requirements: DEPARTMENT SPACE(1)

ARPL 701A(0) Course ID:016155 Department Consent Required

Concentration Studio Abroad Trip

Graduate Studio in Rome.

Components: Abroad Trip

Topics: Ireland

Enrollment Requirements: Requires concurrent enrollment in ARPL 701

Room Requirements: ABROAD(1)

ARPL 702(6) Course ID:000993

Thesis Design

In this course, students undertake and complete the topic and scope of work that they proposed and explored during thesis preparation, and that was approved by the thesis faculty. Along the way to doing that, they receive input from a team of thesis instructors and from consultants in such areas as site planning/landscape; structures, materials, and building assembly; and environmental systems and sustainability.

Components: Studio

Enrollment Requirements: ARPL 702 or ARPL 721 or ARPL 761 (B- or better)

Room Requirements: DEPARTMENT SPACE(1)

ARPL 704(6) Course ID:000985

Thesis Written

Development in written form of a significant design topic related to the advancement of the profession and allied disciplines, including prototypical designs. Approval of faculty required for enrollment in this course.

Components: Thesis Research

Room Requirements: DEPARTMENT SPACE(1)

ARPL 721(6) Course ID:007764

Thesis Preparation

Selection of significant hypothesis involving challenging design issues, subject to faculty approval, followed by extensive research, site selection, and programming for a major architectural, conservation or urban design project. Completion of this course is prerequisite to enrollment in all Thesis Design and Written Thesis courses.

Components: Discussion, Lecture

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 722(3) Course ID:008101

Professional Practice

The course explores business management for architects. Where other courses focus on the services that architects provide to their clients (such as design), this one focuses on what architects need to know to remain in business while providing those services. It addresses effective management of architectural projects, practices and careers in terms of marketing, finance and accounting, staffing, law, organizational structure, professional development, risk management, and negotiation. In addition, it reviews the history and current state of the profession and the procedures mandated by the standard industry contracts used by owners, design professionals, and contractors in the design and construction of buildings.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 731(3) Course ID:007947

Environmental Design II

This course is intended to provide students a deeper understanding of the relationship between architectural design and active building systems. The topics include: building loads calculations, heating and cooling systems, lighting design, electrical systems, acoustical systems, building water supply, plumbing systems, and fire protection.

Components: Lecture

Enrollment Requirements: ARPL 232 or ARPL 532

Room Requirements: DEPARTMENT SPACE(1)

ARPL 733(3) Course ID:012645

Sustainable Design Strategies

This course examines the predicament of contemporary architectural endeavor as an ecologically sustainable activity; a survey of vernacular passive technologies; and an examination of current theoretical approaches to sustainability will define possible templates for practice. Case studies of state-of-the-art technologies and buildings will be used by instructor and students as teaching/learning vehicles.

Components: Lecture

Enrollment Requirements: ARPL 531 or 231

Room Requirements: DEPARTMENT SPACE(1)

ARPL 734(3) Course ID:012646

Systems and Simulation I

This course is intended to give students both a fundamental base and practical knowledge of the passive and active environmental control systems/strategies for sustainable buildings. The students will obtain sufficient background to make technological decisions to design sustainable residential and commercial buildings in terms of energy efficiency by understanding the major contributors to building energy use and loads calculations, including climates, thermal characteristics of building envelopes and fenestration, internal sources, as well as heating, ventilating and air conditioning (HVAC) systems.

Components: Lecture

Enrollment Requirements: ARPL 232 or 532

Room Requirements: DEPARTMENT SPACE(1)

ARPL 735(3) Course ID:012740 Department Consent Required

Materials and Assemblies

This course will examine the principal criteria that determine the nature of building materials and the degree to which they can be considered `sustainable`. The criteria considered will be: carbon dioxide emissions; primary energy consumption; global warming potential; weighted resource use; air and water pollution indices; life cycle analysis. It will also examine the assembly of building components using low impact materials and technologies.

Components: Lecture

Course Equivalents: ARPL 335

Enrollment Requirements: Open to students in the following academic plans: ARCH-MSD, MARCH2MSSD, MARCH3MSSD, and MCRP/MSSD

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 736(3) Course ID:012742

Systems and Simulation II

This course introduces students to building energy modeling and energy optimization techniques using the EnergyPlus whole-building energy simulation program. This course is intended to build on the knowledge and skills gained in Systems and Simulation I. Students will practice whole-building energy simulation, including the hourly simulation of dynamic thermal envelope loads and system simulations; and explore various energy efficiency measures to optimize the envelope and system performance of their projects.

Components: Lecture

Enrollment Requirements: ARPL 331, ARPL 731, or ARPL 734; Open only to students in the following academic plans: MSD or MARCH2MSSD or MARCH3MSSD

Room Requirements: DEPARTMENT SPACE(1)

ARPL 737(3) Course ID:013123 Department Consent Required

Building Performance Verification

This course introduces students to all aspects of building performance, including energy use, water use, and indoor environmental quality (IEQ) based on the ASHRAE/CIBSE/USGBC Performance Measurement Protocols for Commercial Buildings (PMP). Students will learn fundamental concepts of how to measure and benchmark a building's on-site performance by applying the PMP case study to real buildings (e.g., CUA campus buildings) using various measurement instruments and techniques. The hands-on lessons gained from this results-oriented approach will expand students' understanding of post-construction impacts of design projects on building operation and built environment, which are expected to improve their future designs. The case-study applications will build upon the existing curriculum resources such as Vital Signs Project at University of California, Berkeley and the Agents of Change Project at University of Oregon.

Components: Seminar

Enrollment Requirements: ARPL 734

Room Requirements: DEPARTMENT SPACE(1)

ARPL 742(3) Course ID:013965

Advanced Structures

This course explores the applications of concepts from Structures I and II in the design of structural elements in steel and reinforced concrete in accordance with code provisions.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 761(3) Course ID:013902

MCRP/MSSD Thesis Preparation

This course prepares students for thesis work which is required for graduation. A thesis is an original piece of research, grounded in knowledge of the theories and previous studies in the field, and presented in a manner consistent with research reporting in that field. It embodies a substantial amount of research on primary sources, or on scholarly and critical studies of such sources, or on both. In this context research can be defined as directly creating new knowledge, or locating and critically evaluating existing primary and secondary textual materials, or engaging in any other appropriate scholarly project, provided that the student's original contribution can be clearly identified. Students in this course will undertake the first part of a thesis that will be finished in a subsequent semester and by the end of their studies.

Components: Lecture

Enrollment Requirements: Only open to students in the following plans: ARCH-MSD, MARCH2MSSD, MARCH3MSSD, ARCH-MCRP, MARCH2MCRP, or MARCH3MCRP

Room Requirements: DEPARTMENT SPACE(1)

ARPL 771(6) Course ID:015612 Department Consent Required

Facilities Management Capstone

In FM capstone, students propose, research, and develop a response to a facilities management question or challenge under the mentoring of a faculty critic. It can be practice-based, involving development of a facilities master plan or similar document for a real or hypothetical case facility. It can also be research-based, involving development or critique of best practices, analysis of trends in the FM profession or facilities industry, or other approved topics. In all cases, students address strategic issues, conduct research and analysis, and generate strategic recommendations and conclusions.

Components: Studio

Enrollment Requirements: ARPL 571, ARPL 671, ARPL 672, ARPL 673, ARPL 674, ARPL 675, ARPL 676, ARPL 677 & ARPL 678

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 780(6) Course ID:012666 Department Consent Required
Planning Studio

This course is a comprehensive studio geared toward planning practice. Students will learn by doing, applying the knowledge gained about planning from courses previously taken to a hypothetical (or perhaps real) planning project. A set of studio problems will be assigned to acquaint the student with the techniques and processes of the professional planner. Traditional and contemporary graphic techniques, both manual and computer-aided, will be employed in the course.

Components: Lecture

Enrollment Requirements: ARPL 782, ARPL788, ARPL 789, and either ARPL 583 or ARPL 781

Room Requirements: DEPARTMENT SPACE(1)

ARPL 781(3) Course ID:012801

Planning Origins and Traditions

This course examines the history of city and regional planning in the United States through the contributions of specific individuals and events that helped shape the profession. It explores the major principles, events, outcomes, and design elements, among others, of development periods in planning history as well as the roles played by the planner, the elements of the planning process, and the political and cultural context of public planning activity. The rational action model is used as a point of departure but course content ranges widely to cover many points of interest. The course addresses the historical context for each period as well as significant outcomes and applications, and examines certain spatial, cultural, and political factors, issues, and conditions associated with the history of the city and regional planning profession in the United States, as well as principles of sustainability.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 782(3) Course ID:012662

Planning Principles

The course is designed to introduce students to the broad and interdisciplinary field of city and regional planning. It covers a wide variety of topics including a brief history of planning in the United States, selected planning theories, various planning tools, political and social issue of planning, and urban governance. In addition, students will be introduced to various sub-fields of planning which include housing, urban renewal, transportation planning, environmental planning, growth management, and economic development.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 783(3) Course ID:012665

Ethics and Stewardship

This course critically examines the responsibility of architects and planners as authors of the built environment. It exemplifies environmental ethics as the preservation of creation: a symbiotic relationship between human dignity, the environment, and society as applied to the built environment. Environmental ethics is explored as a symbiotic relationship between the conservancy of human dignity, the environment, and society through investigations into various scales of manmade structures from cities to buildings.

Components: Lecture

Course Equivalents: ARPL 383, CEE 383

Room Requirements: DEPARTMENT SPACE(1)

ARPL 787(3) Course ID:012664 Department Consent Required

Planning Techniques

This course will further the student's understanding of the various analytical tools of the planning profession. Topics will include urban economics, transportation principles and analysis; local and global factors; integrated practice; principles of responsive development; and LEED Neighborhood Development criteria.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

ARPL 788(3) Course ID:013901

Urban Economics

In planning, the practical application of urban economics is socio-economic development, which is defined as the long-term process of generating appropriate jobs and creating wealth in a community as well as advancing the dual agenda of healthy communities and healthy environments. This course introduces students to the practice of local socio-economic development. It considers all dimensions of the field, including the current context within which local economies exist, the various theories of development, key analytical (quantitative) methodologies, the strategic elements of socio-economic development in the urban environment, and plan implementation.

Components: Lecture

Architecture and Planning - Architecture and Planning
Subject: Architecture and Planning

ARPL 789(3)

Course ID:013685

Transportation and Land Use Planning

Transportation systems and land use planning are intricately tied to each other in a symbiotic relationship. Notwithstanding, transportation systems cause loss of habitat/biodiversity and is one of the major contributors to atmospheric degradation, including global warming and photochemical smog. Urban sprawl, auto-dependant suburban design, lifestyles dependant upon personally owned vehicles (POVs) and traffic congestion also negatively affects our economy and is a major contributor to the obesity public health-care crisis. This course will examine these issues as they relate to transportation and land use within the context of sustainability. Business-as-usual auto-centric planning will be compared with sustainable transportation planning, including multi-modal systems, land use planning based on transit-oriented development (TOD), and transportation demand management (TDM). This relationship will be re-examined in the light of "smart growth" land use planning. A global perspective will also be employed in this course;

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 101(3) Course ID:000145

Introduction to Anthropology: Cultural Competency in a Global Society

Basic concepts of sociocultural anthropology and study of cultural differences among peoples of the world. Poses questions about how lives are touched by media images and information, transnational markets, consumer desires, global ecology, conflicting aspirations, religious revivals, and rewritten histories.

Components: Lecture

ANTH 105(3) Course ID:000093

Human Evolution

An introduction to physical anthropology and the course of human evolution. Topics include cultural adaptation, natural history of the earth, the fossil hominid, human populations, and human ecology. Two hours of lecture and one hour of discussion per week.

Components: Lecture

ANTH 108(3) Course ID:000764

Introduction to Archaeology

History of human cultural development, from the stone tool and cave art of early modern Homo sapiens, through the growth of complex pre-industrial agricultural societies in the Near East, Europe, Africa, India and East Asia, and North and South America. Emphasis is on cultural forms as adaptations to the biocultural environment. Two hours of lecture and one hour of discussion per week

Components: Lecture

ANTH 110(3) Course ID:000797

Speech and Experience: Anthropology of Language

Examines speech as lived-in experience. Looks cross-culturally at communication embedded in particular cultures and imaginations; at code-switching, register, and other context-sensitive aspects of language use; at cultural categories and how they are employed in situations of uncertainty and in contests over meaning. Examines how speech shapes understanding of our humanity, our species' past, our relation to primates, and growth of our young.

Components: Lecture

ANTH 136(3) Course ID:000804

Magic, Witchcraft & Religion

Relationships between magic and religion, witchcraft, sorcery, and the occult; taboo, power and the powers, divination, and healing; shamans and divine kings; cargo cults and messianic movements; voodoo and secret societies. Two hours of lecture and one hour of discussion per week. Summer sessions only.

Components: Lecture

ANTH 200(3) Course ID:010670

Core Perspectives in Anthropology

Introduces core perspectives that distinguish anthropological approaches, their relation to other social and natural sciences, to philosophy and the humanities, and how they apply across different theories about meaning, structure, and agency in human social life and culture. Fall semesters.

Components: Lecture

ANTH 201(3) Course ID:010671

Ethnographic Research Design and Conduct

How anthropologists design and conduct research, form and test propositions about social life and culture, the methods used to gather and organize data, and issues in conducting research with human subjects. Spring semesters.

Components: Lecture

ANTH 202(3) Course ID:007024

Sex & Culture in Modern World

This course examines sex and gender issues in societies around the world that have been brought into the web of the modern world. It focuses on the creation, maintenance, and change of cultural differences in gender; the work of culture in sexuality; and equality and inequality between the sexes in different societies. It examines our own commonsense understanding and practices, and the various critical stances of "feminism."

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 203(3) **Course ID:019316**

Race and Ethnicity: Anthropological Perspectives

This course examines anthropological theories of race and ethnicity, starting with approaches developed in the late 19th century and tracing them through to the present-day. It approaches race and ethnicity as culturally-constructed phenomena that articulate with historical, political, and economic forces at local, national, and international scales. In addition to examining race and ethnicity in the United States, the course emphasizes scholars and case studies from around the world to broaden students' understanding of and assumptions about this complex domain of social life. The course strives to teach students practical skills to help build dialogue and community across racial and ethnic divides.

Components: Lecture(In Person)
Course Equivalents: SOC 203
Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 204(3) **Course ID:011829**

Forensic Anthropology

A survey of archaeological/biological anthropological methods employed by archaeologists and biological anthropologists to investigate and interpret human skeletal remains to uncover causes and circumstances surrounding human death in both archaeological and International Criminal Justice sites. In the Anthropology Department laboratory, students will learn how forensic scientists analyze the human skeleton (Human Osteology) and interpret clues from human remains. Hands-on, interactive projects will reinforce class concepts; readings will explore basics of forensic science, recent discoveries of human remains worldwide using forensic methods; forensic issues/analytical methods will be studied through various media resources. Students will conduct weekly Internet projects using the vast number of web-sites related to forensic research. Class information will be augmented by field trips to local forensic research facilities (i.e. Smithsonian)

Components: Lecture

ANTH 206(3) **Course ID:000737**

Methods in Archaeology: Field, Lab and Artifact Studies

Laboratory analysis and field investigation techniques applied in archaeological recovery and forensic investigations, this course covers survey, excavation, preservation and cataloging of artifacts and human remains from historic and prehistoric sites. Includes in-lab demonstrations, use of Internet resources, and a required Saturday field trip.

Components: Lecture

ANTH 208(3) **Course ID:018643**

Excavating Theory: Interpretation in Archaeology

This course examines the history of archaeology from the perspective of theory and interpretation. All human behavior leaves behind traces which can be analyzed from different perspectives and scales of analysis. Over the past century archaeologists have employed a variety of approaches, including chronologies of artifact types, scientific and positivist approaches, a focus on the subjectivity of interpretation, and an attention to the relationships between archaeological research and stakeholder communities. The course's overarching theme is how the social, political, and historical context of successive time periods impacts how archaeologists have investigated the past, and what archaeologists can offer society today and into the future.

Components: Lecture(In Person)
Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 213(3) **Course ID:017265**

Humanitarian Intervention and Development

What actors are most pivotally shaping development in the Middle East, Africa, and beyond, and how have their missions evolved over time? In natural disasters and man-made crises, how are humanitarian aid interventions from multilateral institutions, like UN agencies, comparing with NGOs and other groups. Through readings highlighting development projects and humanitarian crises in different regions of the world, this course will take a look at three main models of development. Among the topics of discussion, we will consider health care, gender equity, economic empowerment, and refugee movements.

This course is taught in English only. It can count as an anthropology course (Anthro 213) or as Arab 213. It can also fulfill humanities credits and Islamic World Studies credits.

Components: Lecture
Course Equivalents: ARAB 213

The Catholic Univ of America
Course Catalog

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 214(3) Course ID:007204

The Anthropology of Food

With almost 6 billion people to feed and unprecedented levels of human impact on the environment, many cultural, social, and environmental questions surround the supply of food. Are there ethical and non-ethical ways to produce food? How does food production relate to a healthy environment? What happens to food as it moves from the farmer to the dinner plate? How does food become an expression of our social selves? This course uses an anthropological perspective to assess these and related questions in the production, processing and consumption of food.

Components: Lecture

ANTH 215(3) Course ID:000810

Ruins, Relics and Restoration of the Biblical Past

Archaeology of the Eastern Mediterranean, Near East, and Egypt with a special geographic focus on the Holy Land; cultural and environmental settings of biblical history reconstructed from archaeological evidence from Palaeolithic through Roman times; placing events and customs described in biblical narrative in political, religious, and economic contexts of the larger region. Applies ethnohistory and archaeology to understand the Bible Lands.

Components: Lecture

ANTH 217(3) Course ID:008349

Migrants, Refugees and the Homeless

Voluntary and forced movements of peoples, whatever their motivation - ambition, fear, persecution - are examined through case studies of relationships between sending and receiving societies, displacement, and changing cultural identities, impact on families, societies and intercultural values examined. Lectures and community case studies.

Components: Lecture

ANTH 218(3) Course ID:007760

End of Nature? Environmental Degradation in a Globalizing Society

Environmental degradation in the form of the deforestation of tropical forests, the agricultural use of marginal lands, soil erosion, overfishing, overgrazing, and declines in the yields of American agriculture is an urgent and growing concern in this world of shrinking resources. This course will draw on current approaches in ecological, cognitive, and development anthropology. Case material will come from the tropical forests of Brazil, the midwest of the United States, the mountains of the Andes and the Himalayas, the Sahel region of West Africa and the seas of North America and South Asia.

Components: Lecture

ANTH 220(3) Course ID:008330

Technology & Society

How do technologies help define and change human societies? How are they organized as systems of practice and knowledge in a society? This course takes a comparative approach to understanding the social life of technology, scientific careers and work, how they influence and are influenced by cultural values, unconscious practices, and public policy.

Components: Lecture

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 226(3) Course ID:019284

Explaining the Unexplained: Using Ethnography and Science to Examine Life's Big Questions

Ethnography using the scientific method is a skill that is used in a multitude of professions, and therefore would be of interest and use to CUA undergraduates from a variety of backgrounds. These could include, but not limited to anthropology, psychology, social work, education, history, criminology, sociology, and politics. This course could also be redesigned to that it met the requirements as part of the social science track for the Honors program. In addition, the focus on using ethnography as the primary method of learning will enhance the students' experience of being in Rome as they are asked to observe more closely the world around them.

As individuals, we are often faced with questions about which we want to know more, yet do not have the tools or knowledge to adequately explore those questions. This course will teach students how to use the scientific method, with a focus on ethnography, as a way to learn how to systematically seek the answers to their

Sacred Cities of the World

From the Stonehenge to Mecca, the towers of ancient Sumer to sites of pilgrimage and royal cities, Machu Picchu to Cambodia's Angkor Wat, cosmic sites have been the pinnacle or nexus of many cultures and civilizations. This course examines and compares the sacred symbolism of built environments where sacred and mundane meet and intertwine in the world.

Components: Lecture

Course Equivalents: ANTH 630

ANTH 240(3) Course ID:017007

Politics of the Past: An Introduction to Cultural Heritage Studies

What makes the past meaningful to individuals, communities, nations, and the world? How is cultural heritage mobilized to build identity, social cohesion, develop tourist markets, encourage financial investment, and stake political claims? This course critically examines western relationships to the past tied to property and rooted in the colonial drive to plunder, collect, and catalogue, and how non-Western heritage frameworks both complement and challenge this conception. In addition to the tangible material remains of the past, the course also explores heritage's "intangible" dimensions, from folklore, music, dance and festivals to language, knowledge, and even landscapes. The focus is on how cultural heritage is embedded in everyday life and how the past is political, continuing to live on and be creatively reinterpreted in the present.

Components: Lecture

Course Equivalents: HIST 240

ANTH 250(3) Course ID:000814

New Political Anthropology

Examines the cultural construction of community, ethnic violence, transnational networks, cultural heritage politics and creolization characterizing our world today. Particular attention to organizations, forms, and settings that are problematic for established government and for classical approaches to freedom and order, domination and resistance, religious fundamentalism and the emergence of virtual communities associated with the communications revolution.

Components: Lecture

ANTH 254(3) Course ID:008289

Ancient Cultures of South America

Archeology study of the prehistoric societies, their environment, and cultures that gave rise to pre-Columbian cities and states.

Components: Lecture

ANTH 259(3) Course ID:008288

Ancient Art and Architecture

An in-depth analysis of prehistoric imagery through examination of portable art objects and monuments in their archaeological contexts. Emphasizes approaches to uses of style in archaeology, analysis of material culture, and interpretation of material remains of cultures ranging from the Paleolithic to the colonial era. Formerly ANTH 359.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 260(3) Course ID:008331

Anthropology of Religion

What do non-western religions tell about the social nature, context, and reference of cultural idioms of interpretation, symbolism, religious movements? This course also examines how religious belief and practice fare in situations of contact, modernization, and contemporary globalization.

Components: Lecture

ANTH 270(3) Course ID:000819

The Information Society

What is the reality of the "information age?" We will look at technological and information cultures constructed in science, media and politics, at attempts to generalize their features into concepts about personal, biological, psychosocial identities and at their relation to issues of "globalization" and transnational cultures that are thrown up by shrinking the contemporary world. Students may anticipate a multidisciplinary set of readings about information and communication as social process with distinctive profiles in our time.

Components: Lecture

ANTH 290(3) Course ID:017866

Legislating Heritage: Domestic Law and International Conventions

This course examines the legal obligations and global norms that have been established to manage cultural resources, including both tangible heritage (like archaeological and historical objects, sites, and landscapes), and intangible heritage (like language, food, music, and dance). We will explore management at various scales, from the individual, community, and national level to the international, transnational, and global domain.

Each week we will focus on a specific convention or piece of legislation, and then debate its power and efficacy with recourse to a recent case study in which it was invoked. Weekly topics will include laws and conventions like the 1906 American Antiquities Act, the 1990 Native American Graves Protection and Repatriation Act, the 1972 UNESCO Convention Concerning the Protection of the World's Cultural and Natural

Components: Lecture

Course Equivalents: POL 451

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 305(3) Course ID:019031

Anthropology of International Development

This course introduces undergraduates to the basic theory and practice of international development within an anthropological context. Students will explore an applied, interdisciplinary approach to some of the big questions in this field: What does development mean? Why are some countries persistently poorer than others? How have different stakeholders sought to address the challenges of development in the past, and how are they approaching these challenges now? What are the avenues through which students can develop their own careers in the development field? In addition, this course will cover the basic skills necessary to conduct development work in the 21st Century including designing and managing development projects, conducting development research and evaluating the success of projects.

Components: Lecture(In Person)

Course Equivalents: SSS 305, POL 305

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 310(3) Course ID:008317

Islam in the Modern World

Examines contemporary social settings of Islam in the Middle East, Africa, and South and Southeast Asia, through case studies of institutions of Muslim belief and practice at the local level. Considers the reception and role of Islam and its cultural significance for the analysis of authority and local communities.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 311(3) Course ID:016665

Heritage, Archaeology and the Contemporary Middle East

This course will explore the influence of the Ancient Near East on the Modern Middle East in terms of the religious, ethnic, social and national identities of indigenous and Diaspora communities and tourists. The goal is to understand today's issues and the current cultural character of the region in terms of its past. It will utilize anthropological and archaeological methodologies to show these connections through examination of people, places, artifacts and ideologies. Among the concepts to be explored in the course will be the significance of sacred sites, migrations, exodus myths, conquest ideologies, East/West conflicts, imperialism, nationalism, identities, dichotomies and archaeology as expressed through heritage sites and symbolism. As a study of archaeology and human heritage the curriculum focuses on modern peoples and their connections to the past rather than on the physical remains of past cultures, which is the central concern of traditional archaeology.

Components: Lecture

ANTH 312(3) Course ID:018496

Museums and Cultural Property

This course will introduce students to the roles objects play in people's lives, how anthropologists and other scholars analyze those relationships, and some of the controversies that can connect material culture to different sociocultural contexts using museum collections as one focus for its analysis and debates around cultural property as its second. The class will begin with a discussion of the development of museums and consider a number of concerns raised by current museum theory and best practices, including issues including repatriation, regulation of cultural knowledge, and community collaboration, as well as the equities involved in providing broader forms of access to cultural items.

The cultural property section of the course will look to protection in the context of law, traditional systems of cultural regulation, and social equities, looking to both tangible forms (objects in museum

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 313(3) Course ID:008318

Environment & Society

This course considers relations between environment and people. We will use examples from many different cultures, including Euro-American culture, to explore different ways of understanding, relating to, and living in the natural world. We will ask questions such as "What is 'the environment'?" "How do symbolic actions by humans affect the environment?" "What are the implications of this knowledge for biological, individual, social, and cultural sustainability?"

Components: Lecture

ANTH 315(3) Course ID:008320

Globalization and the Culture of Capitalism

This course addresses the key elements of the culture of capitalism, examines its historical emergence, and analyzes some of the social, economic, and environmental consequences of its expansion in our globalizing world.

Components: Lecture

ANTH 321(3) Course ID:018495

Historical Archaeology

This course addresses themes and methods in the archaeology of the modern world (1500 to the present). How did exploration influence the way that people and material objects traveled across the world? How did English, Dutch, French, and Spanish colonial settlements reshape new worlds? We will also explore cultural transformations among American Indian and African communities that resulted from colonialism and the slave trade, and how capitalism and industrialization transformed the way that people consume material culture. The course will involve hands-on training in the analysis of archival documents and archaeological artifacts.

Components: Lecture(In Person)

Course Equivalents: HIST 321

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 322(3) Course ID:008148

Lost Cities & Ancient Empires

Among the most dramatic archaeological relics are ruins of prehistoric cities in the Americas, Africa, Asia, and Europe. This course will introduce the archeological documentation of prehistoric states and empires, focusing on changes in settlement patterns, social organization, the establishment of political office, and the evolution of primitive economic and ideological systems that help define early civilization.

Components: Lecture

ANTH 324(3) Course ID:014514

Cultural Heritage of Native Americans

A course on the cultural heritage of Native Americans, their development, and contemporary issues such as preservation, presentation and who owns the past. The course also deals with impacts of European settlement and interactions with the Americas' "First Nations," cultural borrowings, revivals and their status today.

Components: Lecture(In Person)
Course Equivalents: ANTH 324, HIST 324
Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 324(3) Course ID:018920

Cultural Heritage of Native Americans

A course on the cultural heritage of Native Americans, their development, and contemporary issues such as preservation, presentation and who owns the past. The course also deals with impacts of European settlement and interactions with the Americas' "First Nations," cultural borrowings, revivals and their status today.

Components: Lecture(In Person)
Course Equivalents: ANTH 324, HIST 324
Room Requirements: DIGITAL PRESENTATION ROOM(1)

ANTH 334(3) Course ID:000824

The Inca Empire Before and After the Conquest

Study of the origins of the Incas and how they organized the largest prehistoric native American empire known, including: Inca social and religious life, politics, economy, architecture, the built environment, and the arts. Shows how to use archeology, ethnography, ethnoarcheology, and sources that have survived since the Conquest.

Components: Lecture
Course Equivalents: HIST 324B

ANTH 341(3) Course ID:000971

Health Society and Culture

Concepts of health and illness in a cross-cultural context. Medical practitioners and treatment of illness. Implications of technological change for health and scientific medicine. Methodological problems in transcultural health research, roles of social scientists in health settings. Review of current trends in research on illness, disease, and culture.

Components: Lecture
Course Equivalents: ANTH 741

ANTH 351(4) Course ID:001008 Department Consent Required

Archaeological Field Methods

In this course, students gain practical experience in archaeological field methods. Through hands-on experience at an archaeological site, students learn principles of archaeological survey, excavation, and documentation. This includes the use of survey equipment, photography and map-making, and the mechanics of scientific sample collection. Students will also learn skills for the public interpretation of ongoing archaeological projects. Be advised that this course involves physical labor; students should be able to lift up to 40 lbs.

Components: Field Studies(In Person)
Course Equivalents: ANTH 551
Room Requirements: NO CLASSROOM NEEDED(1)

ANTH 354(3) Course ID:000827

Archaeology of Settlements & Landscapes

The study of human settlements in their cultural and environmental contexts. Uses concepts in physical geography, geomorphology, and biodiversity to understand changes in the structure of communities and their arrangement on the landscape through time. Modern case studies are included with prehistoric examples drawn from Andean South America, Central America, the Near East and the United States.

Components: Lecture
Enrollment Requirements: Not Open to Freshmen

ANTH 355(3) Course ID:008884

Latinos and Latinas in the U.S.

A survey of peoples of Latin American heritage in the United States, particularly Mexican Americans, Puerto Ricans, Cuban Americans and new immigrants from Central and South America, with emphasis on ethnohistory, ethnography, current trends, and projects in the Washington community. Dr. Cohen.

Components: Lecture

The Catholic Univ of America

ANTH 366(3) Course ID:000829

Identity & Community in America

What does "American" mean for the lives of people in the US, what makes these meanings "American", and how do Americans use these meanings? The course examines how meanings are organized in myths, rituals, and public discourses; settings where meanings are used, contested, and negotiated in new social movements, Congress and courts, communities, ethnicity and race, families and kinship, violence and its aftermath, and the media.

Components: Lecture

ANTH 371(3) Course ID:000834

Anthropology of Contemporary Latin America; History, Ethnicity and Religion.

A survey of peoples and cultures of Middle America, South America and the Caribbean from an anthropological perspective. For those interested in preparing for travel, business, government service, journalism or volunteer work in Latin America, as well as for elementary or secondary school teaching. Anthropology students will benefit from the discussions of social organization and social structure, class and ethnicity, social identity and other topics. It adopts an historical approach to examine major trends in economy, urbanization and migration, class and ethnicity, religion and politics.

Components: Lecture

ANTH 390(3) Course ID:000837

Politics & Religion in the Middle East

An introduction to cultural patterns in the contemporary Middle East, focusing on relations of religion and politics in everyday life, contemporary Islamic movements, and notions of community and authority. Counts as a major elective in politics.

Components: Lecture

ANTH 452(3) Course ID:000844

Senior Capstone Workshop

Students utilize their knowledge of anthropology by developing a research design and conducting original research and data analysis. Students organize a research proposal in the first semester and complete the analysis and writing in the second semester. Faculty.

Components: Seminar

Enrollment Requirements: ANTH 200 & ANTH 201

ANTH 493(3) Course ID:000859

Student-Faculty Research

Opportunity for senior majors to work individually on projects with a faculty member. Prerequisites: ANTH 200, 201.

Components: Directed Study/Research

Enrollment Requirements: ANTH 200 & ANTH 201

ANTH 495(3) Course ID:010672 Department Consent Required

Practicum/Internship in Anthropology

For students to work and gain first-hand experience in research and applications of Anthropology in service organizations, laboratories, or projects at other Washington area institutions under faculty supervision. Requires permission of the department. Prerequisites: ANTH 200, 201.

Components: Internship

Enrollment Requirements: ANTH 200 & ANTH 201

ANTH 496(3) Course ID:010673 Department Consent Required

Senior Thesis in Anthropology

Open to qualified majors to develop a substantial research thesis in close consultation with a member of the faculty and which may be submitted for honors in anthropology. Spring semesters. Prerequisite: ANTH 200, 201, appropriate courses, and agreement of the instructor.

Components: Thesis Research

Enrollment Requirements: ANTH 200 & ANTH 201

ANTH 498(0) Course ID:015178

Undergraduate Comprehensive Examination

The Undergraduate Comprehensive Exam requires seniors to orally defend a proposal for their Senior Capstone Project. A faculty committee comprised of the student's Capstone Project readers must approve the proposal before they can begin researching and writing. Prerequisite: ANTH 200, 201 for Anthropology majors; ANTH 206, 208 for Archaeology majors.

Components: Comprehensive Exam

The Catholic Univ of America
Course Catalog

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 505(3) Course ID:000890

Applied Anthropology

Examination of practical uses of anthropology through review of a range of cases at home and abroad, emphasizing the translation of research into action in a number of different settings.

Components: Seminar

ANTH 508(3) Course ID:009417

Anthropology, Migration, and Transnationalism: Ethnography and Policy

This course focuses on the impact of globalization on the migration movements of Salvadorans and Hondurans to the Washington D.C. metropolitan area. Drawing on ethnographic work, policies, social networks and adaptations will be examined. Strategies used by these Central American immigrants to re-build personal and collective identities will address key factors including class, age, and gender. Theoretical and practical implications considered. Summer sessions only.

Components: Lecture

ANTH 509(3) Course ID:014697

Gender and Migration: Central American Women in Greater Washington

The number of Central American women immigrants in the Washington, D.C. metropolitan area has increased significantly in the last decades. In a global economy, macro structural factors explain their incorporation to this metropolitan region while leaving their families in their home societies. Based on ethnographic work on Salvadoran and Honduran women settled in Greater Washington, this course will focus on how structural, ethnic and gender factors affect this migratory movement led by women and the development of transnationalism as a pattern of adaptation.

Components: Lecture

ANTH 535(3) Course ID:008149

Floral and Faunal Analysis

An introduction to methods for recovering, identifying, and interpreting the "ecofacts" in plant and animal remains from archaeological sites. As much as the artifacts that people made and left behind, zooarchaeology and ethnobotany from urban sites to shipwrecks provide valuable additional information about past lifeways, environments, subsistence practices and diet. The course will include fieldtrips to local research facilities and specimen collections that archaeologists consult.

Components: Lecture

ANTH 551(4) Course ID:019338

Archaeological Field Methods

In this course, students gain practical experience in archaeological field methods. Through hands-on experience at an archaeological site, students learn principles of archaeological survey, excavation, and documentation. This includes the use of survey equipment, photography and map-making, and the mechanics of scientific sample collection. Students will also learn skills for the public interpretation of ongoing archaeological projects. Be advised that this course involves physical labor; students should be able to up to 40 lbs.

ANTH 608(3) Course ID:010326

Anthropology, Migration, and Transnationalism: Ethnography and Policy

This course focuses on the impact of globalization on the migration movements of Salvadorans and Hondurans to the Washington D.C. metropolitan area. Drawing on ethnographic work, policies, social networks and adaptations will be examined. Strategies used by these Central American immigrants to re-build personal and collective identities will address key factors including class, age, and gender. Theoretical and practical implications considered. Summer Session 2008 .

Components: Seminar

ANTH 613(3) Course ID:008341

Ecological Anthropology Seminar

Advanced reading in work by ecological anthropologists in the relationships between people, culture and the environment. Representations made of these relationships by anthropologists will be examined in terms of their ability to explain stable, expanding, intensifying, and degrading systems. New directions in ecological anthropology incorporating agency, political economy, mental representations and the applications of indigenous ecological knowledge will be discussed. Students attend lectures in ANTH 313.

Components: Seminar

ANTH 614(3) Course ID:007205

Political Ecology of Agriculture

Directed reading and research on the political ecology of the production, processing and consumption of food. Students attend lectures in ANTH 214 and participate in a biweekly laboratory/discussion section to be arranged.

Components: Seminar

ANTH 615(3) Course ID:008342

Economic Anthropology Seminar

Advanced reading in the social, cultural, political and environmental frameworks of economic activities. Topics will include decision analysis, institutional analysis, economic behavior among non-state peoples and peasants, reciprocal and redistributive exchange, the origin and diffusion of markets, the urban informal economy, globalization and consumption. Students attend lectures in ANTH 315.

Components: Seminar

ANTH 617(3) Course ID:008350

Seminar: Migrants and Refugees

A seminar of directed readings and case studies of voluntary and forced movements of peoples, laws, theories of relationships between sending and receiving societies, adaptive strategies, assimilation and the maintenance of ethnicity and ties with the motherland, and asylum seeking.

Components: Seminar

ANTH 618(3) Course ID:008343

Environmental Degradation Seminar

Advanced reading on current directions in the analysis of environmental degradation. Students attend lectures in ANTH 218.

Components: Seminar

ANTH 622(3) Course ID:008334

Seminar: Early States and Empires

Early forms of urbanism, the state and the first prehistoric empires. Ethnographic and ethnohistoric sources on ranked societies in the Americas, Africa, Asia, Europe and Oceania are examined. These sources are then expanded to include the archeological documentation of complex societies. The course focuses on changes in settlement patterns, social organization, the establishment of political office, and on the evolution of primitive economic and ideological systems that help define early development and the demise of chiefdoms of centralized bureaucratic states and empires.

Components: Seminar

ANTH 624(3) Course ID:001087

Archeology of Settlements and Landscapes

Analysis of intra- and inter-site structure and relationships to the surrounding landscape. Among the most important analytical issues raised in archeology are site function and an understanding of how space is used. Focus of the course is interdisciplinary.

Components: Seminar

Course Catalog

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 625(3) Course ID:014661

Seminar: Cultural Heritage of Native America

A course on the cultural heritage of Native Americans, their development, and contemporary issues such as preservation, presentation and who owns the past. The course also deals with impacts of European settlement and interactions with the Americas' "First Nations, cultural borrowings, revivals and their status today.

Components: Seminar

ANTH 630(3) Course ID:017768 Department Consent Required

Sacred Cities of the World

From the Stonehenge to Mecca, the towers of ancient Sumer to sites of pilgrimage and royal cities, Machu Picchu to Cambodia's Angkor Wat, cosmic sites have been the pinnacle or nexus of many cultures and civilizations. This course examines and compares the sacred symbolism of built environments where sacred and mundane meet and intertwine in the world.

Components: Seminar

Course Equivalents: ANTH 230

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

ANTH 639(3) Course ID:008335

Seminar: Anthropology of Gender

Anthropological approaches to problematizing gender, social/cultural construction, historical construction. Topics include explanations of gender inequalities within and across cultures (culture/nature, domestic/public sphere, prestige-structure hypotheses) and differences among genders within cultures (various impacts of the state or social/economic transformations upon gender definitions, relations, and ideologies).

Components: Seminar

ANTH 650(3) Course ID:005936

Political Anthropology Seminar

An advanced course on recent political anthropology, from "encapsulation" paradigms to the cultural construction of community and ethnicity in settings of violence and cultural heritage politics, transnational networks, globalization, and ambiguous zones such as the Balkans, the Middle East, South Asia, and the Caribbean.

Components: Seminar

ANTH 654(3) Course ID:006654

Seminar :South American Archaeology

An archeological study of the evolution of complex society in middle and south America. Environmental and cultural variables compared cross culturally to achieve an understanding of the particular circumstances that gave rise to pre-Columbian cities and states.

Components: Seminar

ANTH 655(3) Course ID:008885

Seminar: Latinos and Latinas in the United States

A seminar on studies of the peoples of Latin American heritage in the United States, particularly Mexican Americans, Puerto Ricans, Cuban Americans and new immigrants from Central and South America, emphasizing ethnohistory, ethnography, current trends, and projects in the Washington community. Students attend lectures in ANTH 355. Dr. Cohen.

Components: Seminar

ANTH 659(3) Course ID:008082

Prehistoric Art and Architecture

An in-depth analysis of prehistoric imagery, portable art objects and monuments in their archaeological contexts, approaches to uses of style in archaeology, in analysis of material culture, and interpretations of material remains of cultures ranging from the Paleolithic to the colonial era.

Components: Seminar

ANTH 660(3) Course ID:008333

Seminar:Anthropology of Religion

Critical examination of key works and recent trends in anthropological studies of religion, symbolism and ritual. Requires also attending lectures in ANTH 260.

Components: Seminar

The Catholic Univ of America
Course Catalog

Arts & Sciences - Anthropology - Subject: Anthropology

ANTH 664(3) Course ID:001092

Incas Seminar

Examines different perspectives on Inca social and religious life, politics, and economy, using sources of information that have survived since the Conquest. Reconstruction of Inca life through historical documents, archeology, ethnography, ethnoarcheology, landscape architecture, the arts, and contemporary film. Colonial documents, contemporary ethnographies, and literary sources written by Andean authors will be consulted to provide insights to traditional customs and community life.

Components: Seminar

ANTH 666(3) Course ID:008336

Seminar: Ethnography of the United States

Anthropological perspectives on social and symbolic life in the United States. Includes reassessing classic works such as Warner's on Yankee City and critically analyzing current trends in studies of such topics as American communities, families, occupations, religions, and subcultures.

Components: Seminar

ANTH 670(3) Course ID:001148

Seminar: Information Technology and Culture

Examines how information technologies are constructed in science, media, politics, lodged within contemporary processes of globalization, and refracted in thinking about psycho-social identities from cyborgs to knowledge workers to Facebook kids both in the US and internationally.

Components: Seminar

ANTH 671(3) Course ID:005937

Cultural Analysis Seminar: Religions Thought in Action

A working seminar on methods of cultural analysis. Examines the relation between the comparison of cultures and the translation of cultures with hermeneutic and structuralist methods. Stresses contextualization of cultural data. Methodological emphasis on naturally occurring rather than analytically induced similarities and differences in contexts. Seminar topics vary with the semester but include modules on culture and communication and cultural epistemologies.

Components: Seminar

ANTH 672(3) Course ID:005938

Cultural Analysis Seminar

A working seminar on methods of cultural analysis. Examines the relation between the comparison of cultures and the translation of cultures with hermeneutic and structuralist methods. Stresses contextualization of cultural data. Methodological emphasis on naturally occurring rather than analytically induced similarities and differences in contexts. Seminar topics vary with the semester but include modules on culture and communication and cultural epistemologies.

Components: Lecture

ANTH 680(3) Course ID:008337

Seminar: Social Anthropology of Latin America

Advanced readings in the social anthropology of Latin America. Topics will include religion, urbanization and migration, class and ethnicity, agrarian adaptation and movements, and political structures. Students attend lectures in ANTH 371.

Components: Seminar

ANTH 690(3) Course ID:000038

Middle East Seminar

Directed reading and research on the contemporary Middle East

Components: Seminar

ANTH 693(3) Course ID:001156

Student-Faculty Research

An opportunity for one or more advanced students to pursue, with a faculty member, research of mutual interest, with the aim of furthering the professional growth of students and faculty. Credit arranged as appropriate. For students taking this course for the first time: 793, 795, 797; for students taking it for the second time: 794, 796, 798.

BIOL 103(3) Course ID:000544

Human Biology: What makes us human

Is it nature or nurture that makes an elite athlete? How does the human brain differ from all other animals? What does the future of human reproduction look like? Explore human biology from the perspective of what makes us uniquely human.

Components: Lecture

BIOL 104(3) Course ID:000562

General Biology II

An introduction to environmental science and ecology with emphasis on the interrelationships of living and nonliving things in ecosystems and how disruptions of these relationships result in environmental problems. A portion of the course will be held outdoors. For non-concentrators only. Note: Biol 103 and 104 may be taken in any order.

Components: Lecture

BIOL 105(3) Course ID:000001

Mechanisms of Life I

Lecture and laboratory course addressed to general principles in modern biology. Emphasizes molecular and cell biology, evolution, and basic biological and chemical principles. Three hours of lecture and three hours of laboratory per week. For concentrators and premedical students only.

Components: Lecture

Enrollment Requirements: requires concurrent enrollment in BIOL 115

BIOL 106(3) Course ID:000607

Mechanisms of Life II

Lecture and laboratory course addressed to general principles and an introduction to animal and plant biology. 106 emphasizes cancer biology, biotechnology, cell signaling, immunology, and molecular genetics. Three hours of lecture and three hours of laboratory per week. For concentrators and premedical students only.

Components: Lecture

Enrollment Requirements: C- or better in BIOL 105; concurrent enrollment in BIOL 116

BIOL 109(3) Course ID:017242

Medicine and Society

The assigned book for this course is titled *Framing Disease: Illness, Society, and History*. We will explore various diseases from the point of view of both the profession of medicine and the culture within which the profession of medicine functions. The selected diseases are discussed from a historical perspective ranging from the 18th to the 20th century. In addition, each week, a Power Point lecture will bring the political, cultural, and scientific circumstances of each disease up to present day knowledge and understanding.

One goal of this course is to introduce students to the basic principles of medicine as both an art and a

Molecular Genetics & Protein Engineering

This laboratory course takes the students through a connected series of modern and advanced molecular biology concepts such as sequence and structural analysis of a model gene, introduction of a specific mutation in a key functional motif, and biochemical assays to determine how the mutation affects biological function. The drug resistance ABC transporter gene, *pdr5*, from *Saccharomyces cerevisiae*, a gene that has significant biomedical importance, will be used as the model gene. The course builds on concepts learned in Biol. 106 laboratory by incorporating several new approaches such as computational analysis, protein engineering, site-directed mutagenesis, and enzyme biochemistry. A major goal of this course is to provide the students with skills that are inherent in professional success, which include analytical skills, quantitative and statistical analyses, written and oral communication of basic concepts.

FOR BIOLOGY and MED TECH MAJORS ONLY.

y. An introduction to the study of microorganisms with emphasis on disease-causing bacteria. Topics include the nature of microorganisms, their relationships with humans, infectious diseases, and immunity.

Components: Laboratory, Lecture

BIOL 232(4) Course ID:000138

Human Anatomy & Physiology I

BIOL-232 is the first semester of a two-semester course in Human Anatomy and Physiology. Coverage includes homeostasis, the chemical foundations of life, anatomy and physiology of the cell, the integumentary system, skeletal system, muscular system, and nervous system. Presentations of clinical applications have particular relevance to students preparing for the health care professions. A total of 35 hours of lecture and 35 hours of lab occurs during the term of the semester. All instruction during the seven-week summer term (both lecture and lab) will take place online.

Components: Laboratory, Lecture

Enrollment Requirements: Open to Nursing students; open to others by permission of the Biology department

BIOL 233(4) Course ID:000624

Human Anatomy & Physiology II

BIOL-233 is the second semester of a two-semester course in Human Anatomy and Physiology. Systematic coverage continues with a focus on the endocrine, lymphatic, cardiovascular, respiratory, digestive, urinary and reproductive systems. Presentations of clinical applications have particular relevance to students preparing for the health care professions. A total of 35 hours of lecture and 35 hours of lab occurs during the term of the semester. All instruction during the seven-week summer term (both lecture and lab) will take place online.

BIOL 317(4) Course ID:014588

Investigations in Molecular Cell Biology

Biol 317: Investigations in Molecular Cell Biology

Course description

This laboratory course is designed to teach students to become independent scientists. The material and skills build upon the content of Biol 105,106, and 217 laboratories. The course will be an active learning environment that will include a mixture of lecture material, group work, problem-solving sessions, laboratory exercises, and individual team-based original laboratory projects that focus on molecular and cell biology. Emphasis will be placed on developing scientific writing and oral communication skills. In addition, students will begin learning how to read and interpret scholarly journal articles

Components: Lecture

Enrollment Requirements: BIOL 106

BIOL 341(3) Course ID:000639

Ecology

A study of the abiotic and biotic factors in ecosystems and how they interact. Field trips will examine the unique factors pertinent to specific ecosystems.

Components: Lecture

Enrollment Requirements: BIOL 105

BIOL 418(4) Course ID:000078

Physiology

Vertebrate/human function with emphasis on the cardiovascular system, and on the cellular functions involved with muscle contraction, nerve impulse propagation, renal function, respiration and digestion. Three hours of lecture and three hours of laboratory each week.

Components: Laboratory, Lecture

Enrollment Requirements: BIOL 105

BIOL 449(4) Course ID:000808

General Microbiology

Introduction to microorganisms and their importance to humanity, with special emphasis on bacteria and viruses. Prerequisite: 307.

Components: Laboratory, Lecture

Course Equivalents: BIOL 549

Enrollment Requirements: BIOL 307 (formerly 207)

BIOL 452(3) Course ID:000682

Coordinating Seminar

Selected topics of current biological interest. Required of seniors concentrating in biology.

Components: Seminar

BIOL 454(3) Course ID:000811

Biological Chemistry

An introduction to biomolecules and their interactions. Topics include the structure and function of amino acids, proteins, carbohydrates, nucleotides, lipids, membranes. Energetics and aspects of human metabolism will be discussed. Prerequisites: CHEM 203, 204.

Components: Lecture

Course Equivalents: BIOL 554

Enrollment Requirements: CHEM 203 & CHEM 204

The Catholic Univ of America
Course Catalog

Arts & Sciences - Biology - Subject: Biology

BIOL 473(3) Clinical Chemistry I Basic clinical laboratory procedures and theory relating to carbohydrate and protein metabolism, enzyme and isoenzyme function and analysis; nonprotein nitrogen compounds, body water, and electrolytes; acid-base balance and blood gases. Lecture and laboratory. Components: Clinical	Course ID:000690	Department Consent Required
--	-------------------------	------------------------------------

BIOL 474(3) Clinical Chemistry II Advanced clinical procedures and theory, including lipid metabolism, liver function, endocrinology, therapeutic drug monitoring, and special procedures; in-depth study of metabolic disorders and problem solving in clinical . Lecture only. Components: Clinical	Course ID:000692	Department Consent Required
---	-------------------------	------------------------------------

BIOL 475(4) Hematology I Basic clinical laboratory procedures and theory, including cell maturation; hemoglobin metabolism; methods including hemoglobins, hematocrits, sedimentation rates, cell counting, and prothrombin times. Lecture and laboratory. Components: Lecture	Course ID:000698	Department Consent Required
--	-------------------------	------------------------------------

BIOL 476(3) Hematology II Advanced hemotologic procedures and theory, including in-depth study of anemia, leukemia, hemoglobinopathies, coagulation disorders, quality control systems, and problem solving in hematology. Lecture only. Components: Lecture	Course ID:000701	Department Consent Required
--	-------------------------	------------------------------------

BIOL 477(4) Immunoematology I Basic clinical laboratory procedures and theory, including the ABO, Rh and other blood group systems, compatibility testing, donor screening, and preparation and storage of components. Lecture and laboratory. Components: Lecture	Course ID:000708	Department Consent Required
--	-------------------------	------------------------------------

BIOL 478(3) Immunoematology II Advanced blood banking theory and procedure, including antibody problems, clinical use of components, blood needs in emergency situations, post-transfusion problems, histocompatibility and quality control systems, problem solving in blood bank. Also includes principles of immunology and immunoserology with emphasis on the immune response, and immunoserologic techniques. Lecture and laboratory. Components: Lecture	Course ID:000714	Department Consent Required
---	-------------------------	------------------------------------

BIOL 479(4) Clinical Microbiology I Basic clinical laboratory procedures and theory, including quality control, specimen collection and processing, normal and abnormal flora, and identification and clinical significance of common bacterial pathogens in the clinical microbiology laboratory. Lecture and laboratory. Components: Clinical	Course ID:000718	Department Consent Required
---	-------------------------	------------------------------------

BIOL 480(3) Clinical Microbiology II Examination of the identification and clinical significance of less common bacterial pathogens and introduction to antimicrobial susceptibility testing. Also includes mycology, parasitology and virology. Lecture and laboratory. Components: Clinical	Course ID:000727	Department Consent Required
---	-------------------------	------------------------------------

BIOL 484(1) Lab Management & Education Principles of supervision and clinical laboratory management, including planning, organizing, directing, coordinating, and controlling. Introduction to learning system design and effective teaching techniques. Components: Lecture	Course ID:000729	Department Consent Required
--	-------------------------	------------------------------------

The Catholic Univ of America
Course Catalog

Arts & Sciences - Biology - Subject: Biology

BIOL 485(3) Clinical Chemistry Practicum	Course ID:000734	Department Consent Required
Practical experience during a rotation in the clinical laboratory, including routine and special laboratory testing to help the student develop speed, accuracy, self-confidence, and an awareness of the environment and responsibilities in an active clinical laboratory.		
Components:	Practicum	

BIOL 487(2) Hematology Practicum	Course ID:000741	Department Consent Required
Practical experience during a rotation in the clinical laboratory, including routine and special laboratory testing to help the student develop speed, accuracy, self-confidence, and an awareness of the environment and responsibilities in an active clinical laboratory.		
Components:	Practicum	

BIOL 488(2) Immunoematology Practicum	Course ID:000745	Department Consent Required
Practical experience during a rotation in the clinical laboratory, including routine and special laboratory testing to help the student develop speed, accuracy, self-confidence, and an awareness of the environment and responsibilities in an active clinical laboratory.		
Components:	Practicum	

BIOL 489(3) Clinical Microbiology Practicum	Course ID:000768	Department Consent Required
Practical experience during a rotation in the clinical laboratory, including routine and special laboratory testing to help the student develop speed, accuracy, self-confidence, and an awareness of the environment and responsibilities in an active clinical laboratory.		
Components:	Practicum	

BIOL 491(3) Clinical Lab Instrumentation	Course ID:000772	Department Consent Required
Basic principles of electronics and instrumentation, including spectrophotometry, emission flame photometry, atomic absorption spectrophotometry, potentiometric techniques, osmometry, fluorometry, electrophoresis and chromatography. Lecture and laboratory.		
Components:	Clinical	

BIOL 493(3) Research Problems in Biology	Course ID:000858	Department Consent Required
Basic research in a field of interest under faculty direction. Open to undergraduates only.		
Components:	Directed Study/Research	

BIOL 497(3) Urinalysis & Body Fluids	Course ID:000778	Department Consent Required
Basic clinical laboratory procedures and theory including physical, chemical, and microscopic analysis of urine and other body fluids, renal physiology, and renal disease.		
Components:	Lecture	

BIOL 498(0) Undergraduate Comprehensive Examination	Course ID:015182	
The Senior Comprehensive Assessment consists of extensive literature research and the writing of a scholarly paper investigating a question or topic posed by Biology Department faculty members		
Components:	Comprehensive Exam	

BIOL 515(1) Research Ethics	Course ID:016601	
This course will provide training in the responsible conduct of research. It will cover such topics as publication/authorship and peer review guidelines, data integrity, human/animal subjects and research misconduct, conflicts of interest and/or commitment and what constitutes research fraud.		
Components:	Seminar	

The Catholic Univ of America
Course Catalog

Arts & Sciences - Biology - Subject: Biology

BIOL 525(3) Course ID:017751

Leukemia

Leukemias represent a group of blood cancers arising from malignant transformation of hematopoietic stem cells, which have no standard treatment. This course is focused on understanding the biology behind different leukemia treatments that are currently used, in clinical trials, or actively under research. As Research on the development of new treatment modalities for this disease is experiencing rapid progress, the course has no assigned textbook and is mainly based on research articles and reviews.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

BIOL 530(4) Course ID:017171 Department Consent Required

Molecular Techniques

This course focuses on the basic principles of molecular biology and genetic engineering that revolutionized biology and biotechnology. These include: DNA as the genetic material, plasmid vectors, restriction enzymes, polymerase chain reaction, and bioinformatics. It consists of a series of connected experiments, each hypothesis driven and led to an important breakthrough. The experiments are well integrated with the lectures such that the students will have a chance to test the concept learned in the classroom.

Components: Laboratory

Room Requirements: NO CLASSROOM NEEDED(1)

BIOL 538(3) Course ID:000800

Gene Organ and Expression

A study of the functional as well as the structural aspects of prokaryotic and eukaryotic genes. Topics include structure of DNA, RNA, transcription and translation and their regulation, and gene families.

Components: Lecture

Enrollment Requirements: BIOL 307 (formerly 207)

BIOL 540(3) Course ID:009303

Mechanisms of Gene Mutation and Gene Transmission

Classical and molecular approaches to the study of the mechanisms of recombination, transposition and mutation. Prerequisite 538 or permission of instructor.

Components: Lecture

BIOL 544(3) Course ID:000805

Enzyme Catalysis, Regulation and Drug Targeting

Enzyme structure and function from the viewpoint of catalytic mechanisms, kinetic properties, regulatory mechanisms, and applications in the biomedical field. Offered alternate years. Prerequisite:Chem 203, Chem 204.

Enzyme Catalysis, Regulation and Drug Targeting

This course covers the chemical and biological aspect of catalysis, including fundamentals of reaction mechanisms, structural basis for catalysis, regulation of enzymes in their biological context, impacts of enzyme action and mutation in disease states. The course will emphasize the medical and technological aspects of enzymology, such as targeting of enzymes for the development of new therapeutics

Components: Lecture

Enrollment Requirements: CHEM 203 & CHEM 204

BIOL 549(3) Course ID:017173

General Microbiology (Lecture)

Introduction to microorganisms and their importance to humanity, with special emphasis on bacteria and viruses. Prerequisite: 307

Components: Lecture

Course Equivalents: BIOL 449

Room Requirements: NO CLASSROOM NEEDED(1)

BIOL 549A(1) Course ID:017180

General Microbiology (Lab)

Conventional bacteriology techniques include cultivation and use of different media, Gram staining, biochemical testing for identification, growth curve analysis, antibiotic sensitivity testing, water analysis, cheese making

Components: Laboratory

Enrollment Requirements: requires concurrent enrollment in BIOL 549

The Catholic Univ of America
Course Catalog

Arts & Sciences - Biology - Subject: Biology

BIOL 550(3) Course ID:014753 Department Consent Required

Infectious Disease

This course is aimed to provide students with a basic overview of major current infectious diseases that are of public interest. This includes an introduction to the disease transmission mechanism, the host response to the infection, the diagnostic tests used to diagnose the infection, the treatment of the infection, and recent research in the field.

Components: Lecture

Enrollment Requirements: BIOL 449 or BIOL 549

BIOL 554(3) Course ID:017172

Biological Chemistry

An introduction to biomolecules and their interactions. Topics include the structure and function of amino acids, proteins, carbohydrates, nucleotides, lipids, membranes. Energetics and aspects of human metabolism will be discussed. Prerequisites: CHEM 203, 204.

Components: Lecture

Course Equivalents: BIOL 454

Enrollment Requirements: CHEM 203 & CHEM 204

Room Requirements: NO CLASSROOM NEEDED(1)

BIOL 555(3) Course ID:014681

Rational Drug Design

RATIONAL DRUG DESIGN

This course is designed to explore the process of structure- and ligand-based drug design, as well as the traditional trial-and-error testing methods. Subject areas include design of enzyme inhibitors and drugs for particular cellular targets such as ion channels and receptors, and also explore specific classes of drug such as peptidomimetics, antiviral and anticancer agents. The use of gene technology in pharmaceutical and biotechnological research, computer modeling techniques and combinatorial approaches are also included. Original research publications will be used as case studies to illustrate the practical application of the rational drug discovery.

Components: Lecture

BIOL 559(3) Course ID:000047

Cell Structure and Function

Cellular structure and function, with emphasis on information obtained from electron microscopic, biochemical, immunocytochemical, and molecular methods. Includes demonstration of EM techniques, and discussions of relevant journal articles.

Components: Lecture

BIOL 563(3) Course ID:000848

Developmental Biology

Survey of development from fertilization of the egg through cellular determination and differentiation to the cellular interactions which ultimately give rise to the adult organism. Prerequisites: 105 or permission of Instructor.

Components: Lecture

Enrollment Requirements: BIOL 105

BIOL 565(3) Course ID:009011

Model Organisms and Human Disease

Discussion of the molecular and genetic approaches used in various model organisms to reveal causes, phenotypes, and possible treatments associated with human diseases. Topics will be explored through an examination of the primary scientific literature. Prerequisites: 105 or permission of Instructor.

Components: Lecture

Enrollment Requirements: BIOL 105

BIOL 566(3) Course ID:000851

Immunology

Basic principles of immunology including immunoglobulin structure and synthesis, theories of antibody formation, lymphocyte interaction, and immune regulation. Prerequisite: 549 or permission of instructor.

Components: Lecture

Enrollment Requirements: BIOL 449 or BIOL 549

The Catholic Univ of America
Course Catalog

Arts & Sciences - Biology - Subject: Biology

BIOL 571(3) Course ID:005956

Immunopathology

Discussion of involvement of inflammation, phagocytic cells, complement, immunoglobulin, and lymphoid cells in instigation of pathology. Reviews principles of hypersensitivity and unresponsiveness from standpoint of pathology. Theories of mechanisms included from current literature. Clinical examples serve to highlight immune mediated pathologic situations. Summer Sessions only.

Components: Lecture

BIOL 572(3) Course ID:016082 Department Consent Required

Genomics, Proteomics and Personalized Medicine

Genomics, Proteomics, and Personalized Medicine

The last decade has brought a surge of new high-throughput biotechnologies, enabling the examination of biological systems at an unprecedented level of detail and setting the stage for the development of personalized medicine. This class will introduce students to cutting edge omics based technologies such as genomics and proteomics and their application in dissecting the complexities within diseases, as well as in improving the precision of disease diagnostics and treatment

Components: Lecture

Enrollment Requirements: BIOL 307 (formerly 207)

BIOL 574(3) Course ID:000856

Viruses and Vaccines

Deals with the fundamental mechanisms of viral multiplication: strategies used by different viruses in controlling host functions, nucleic acid replication, nucleic acid packaging, protein assembly and capsid morphogenesis. Takes an analytical approach, and appropriate bacterial, animal, or plant viruses will be chosen to address various questions related to the above phenomena. Lecture only. Prerequisite BIOL 106, or permission of instructor.

Components: Lecture

Enrollment Requirements: BIOL 106

BIOL 578(3) Course ID:000862 Department Consent Required

Research Problems - Biology II

Basic research in a field of interest under faculty direction. Open to undergraduates only.

Components: Directed Study/Research

BIOL 579(3) Course ID:013678 Department Consent Required

Principles and Practice of Biotechnology

This course focuses on the application of genetic and molecular technologies to the development of products for medicine, agriculture, the environment, and industrial manufacture

Components: Lecture

BIOL 580(3) Course ID:014145 Department Consent Required

Entrepreneurial Biotechnology

The business of biotechnology is covered in its full development from laboratory discovery, patents, to company formation, business investment and product development. A special focus is on funding the regulatory process of a biotherapeutic's clinical trials and success on the market. The evolving new segments in the life science market are highlighted. Course given by a seasoned serial entrepreneur with guest lectures drawn from the vibrant local biotech industry.

Components: Lecture

BIOL 581(3) Course ID:014384

Essentials of Biotechnology Project Management

Students will learn to position themselves favorably to meet the challenges that are unique to the business of biotechnology. This course provides a combination of project management theoretical methodologies and real-life pragmatic examples (case studies). Topics include: projects planning, execution and control; managing uncertainty in drug development business; projects risk management and managing drug safety risk. The next wave of managing upcoming biotechnological projects will be discussed.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Biology - Subject: Biology

BIOL 583(3) Course ID:014684 Department Consent Required

Regulation of Domestic and Global Biotechnology Products

Learn the regulatory process for biologicals and biotechnology medicinal products ranging from Investigational New Drug Applications to post-marketing approval changes and expanded new clinical applications. Both domestic (FDA) and international (including developing country) regulatory processes will be discussed. Topics will include FDA regulations, international regulatory harmonization efforts, WHO recommendations, Good Practices, product and control information, preclinical studies and clinical trials to support regulatory filings, human subject protection regulations, and ethical review processes.

Components: Lecture

BIOL 584(3) Course ID:008176

Mechanisms of Bacterial Pathogenesis

A molecular study of the variety of virulence mechanisms of different bacteria, with emphasis on pathogens that are major public health concerns. Includes genetics of virulence factors and microbial drug-resistance, analysis of host response and evaluation of strategies for drug and vaccine development.

Prerequisite: BIOL 549 or permission of the Instructor.

Components: Lecture

Enrollment Requirements: BIOL 549

BIOL 586(3) Course ID:000867

Molecular Genetics and Recombinant DNA Methodology

In-depth discussion of experimental technologies used to investigate gene expression. Particular emphasis on approaches for cloning, identification, and analysis of genes. Offered alternate years. Prerequisite: Permission of instructor.

Components: Lecture

Enrollment Requirements: BIOL 307 (formerly 207)

BIOL 588(3) Course ID:005957

Advanced Immunology

Detailed examination of immune response, hypersensitivity reactions, immune complex reactions, and other topics.

Components: Lecture

BIOL 589(3) Course ID:014102

Introduction to Nanobiotechnology

The history and basic concepts of nanobiotechnology will be introduced with a special emphasis on potential applications to research, diagnostic and treatment of diseases. The tools and approaches of nanobiotechnology (bottom-up versus top-down) and some nanoparticles of medical interest will be surveyed. Both the applications of nanotechnology to biology and medicine and the use of molecular biology to build machines at the nanoscale will be discussed through review of the current literature. The potential risks of nanotechnology will also be discussed

Components: Lecture

BIOL 596(3) Course ID:009364 Department Consent Required

Computational Genomics

An introduction to bioinformatics. Topics include structure, function, and interrelationships of databases, information retrieval, database homology searching, pairwise alignment methods, gene prediction programs and submission of sequence, prediction of secondary and tertiary protein structure using web-based tools. Lecture and lab.

Components: Lecture

Room Requirements: COMPUTER LAB(1)

BIOL 597(3) Course ID:015032

Fundamentals of Statistics in Biology, Medicine and Biotechnology

Biol-597.

Fundamentals of Statistics in Biology, Medicine and Biotechnology

Mon-Wed. 5.10-6.25.

Rm 100, computer lab

This course will provide an in-depth and engaging introduction to biostatistics for undergraduate and graduate students and serve as a refresher for students who may be familiar with basic statistics. The major objective is to lead the students through the statistical methods, techniques and computations needed for success in academia, biotechnology and health sciences. Students will learn how to apply statistics to

Components: Lecture

Course Catalog

Arts & Sciences - Biology - Subject: Biology

BIOL 598(3) Course ID:010033

Membrane Trafficking and Disease

This course will explore the mechanisms regulating membrane dynamics in mammalian cells and how defects in these mechanisms contribute to human disease. Topics will be explored through lectures and primary scientific literature. Prerequisite: BIOL 210, 218.

Components: Lecture

Enrollment Requirements: BIOL 554

BIOL 599(3) Course ID:010580

Signal Transduction and Biomembranes

This course will explore the mechanisms regulating signal transduction in mammalian cells. Selected pathways will be highlighted and discussed in detail. Topics will be explored through lectures and primary scientific literature. Prerequisite: BIOL 554 or permission of instructor.

Components: Lecture

Enrollment Requirements: BIOL 554

BIOL 692(2) Course ID:000957 Department Consent Required

Research Topics in Biology - Master's

Supervised study of selected topics in biology. Prerequisite: Permission of instructor.

Components: Directed Reading

BIOL 693(3) Course ID:000968 Department Consent Required

Research Problems in Biology - Master's

Supervised research in selected areas in biology. Can be taken a maximum of two times. Prerequisite: Permission of instructor.

Components: Directed Study/Research

BIOL 693A(4) Course ID:014208 Department Consent Required

Clinical Research Problems - Master's

Hematopathology is involved in the study of disease and disorders involving the cellular elements of the blood, bone marrow, body fluids and lymphoid tissues. This course will focus on neoplastic and non-neoplastic hematologic disorders and the methods employed in their diagnosis.

Components: Directed Study/Research

Topics: Research Problems, Research Problems in Hematology, Research Problems in Microbiology, Research Problems in Molecular Biology

Enrollment Requirements: Open to Master's level Clinical Laboratory Sciences students only

BIOL 695(4) Course ID:014510 Department Consent Required

Biotechnology Internship

Designed to provide hands-on work experience in biotechnology; 695 must be taken once to give graduate students in the M.S. in Biotechnology program either a laboratory or non-laboratory research internship of their choice.

Components: Internship

Room Requirements: NO CLASSROOM NEEDED(1)

BIOL 696(0) Course ID:000991

Master's Thesis Research

This course bills at the equivalent of one credit hour.

Components: Thesis Research

BIOL 696CR(6) Course ID:019194 Department Consent Required

Master's Thesis Credit Conferral

A DEP grade for this course indicates the student has successfully deposited their master's thesis.

Components: Thesis Research(In Person)

Enrollment Requirements: requires two semesters of enrollment in BIOL 696

Room Requirements: NO CLASSROOM NEEDED(1)

BIOL 698A(0) Course ID:015206

Master's Comprehensive Examination (w/Classes)

Enrollment in this course bills at the equivalent of one credit hour.

Components: Comprehensive Exam

Course Equivalents: BIOL 698B

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

BIOL 721(2) Course ID:005959
Case Studies in Clinical Microbiology
Lecture and laboratory covering principles and practice of assays of soluble and particulate antigen/antibody reactions, complement assays, ligand immunoassays, immunohistochemical assays, lymphocyte and phagocyte assays, immune complex assays, immediate and delayed hypersensitivity, protein analysis and preparation, and an introduction to flow cytometry.
Components: Lecture

BIOL 725(1) Course ID:001104
Methods-Biological Research Lab
Laboratory portion of BIOL 727.
Components: Laboratory

BIOL 727(3) Course ID:000952
Methods-Biological Research
Introduction to the current techniques used in the study of biological systems at a molecular level. Lecture, laboratory, and demonstrations. Required of all incoming graduate students.
Components: Lecture

BIOL 744(3) Course ID:016932 Department Consent Required
Red Blood Cell Disorders
Sickle Cell Anemia and Thalassemias are known hemoglobinopathies that have no standard treatment. The course is focused in the understanding and learning of the different approaches for Sickle Cell Anemia and Thalassemias treatments that are used or under clinical trials or research. Due to the continuous changes in the research of new treatment approaches for these diseases, the course has no textbook assigned and the information is based mainly in research articles and reviews.

This course encourages the students to understand more than memorize to build a core of knowledge which will provide the students a critical-thinking core for their future careers. Also, as a part of the course, a journal club will be assigned weekly and the students will be required to present a short communication about different topics presented during the classes.
Components: Clinical

BIOL 747(3) Course ID:014282
Advanced Hematology
This course is designed to introduce students to the fundamental concepts and advances in human hematology. This includes a preview to the science of clinical laboratory hematology, updated coverage of quality assurance and method evaluation and validation, an in-depth analysis on blood cell production, structure and function, manual and automated clinical hematology procedures, and the mechanism of normal hemostasis.
Components: Lecture

CHEM 103(3) Course ID:000151

General Chemistry I

The first half of a two-semester modern introductory chemistry course designed to fulfill the chemistry requirements for science students and to lay the foundation for further course work in chemistry. Topics include atomic theory, periodic properties, stoichiometry, nomenclature, bonding, physical properties of states of matter, solutions, kinetics, equilibrium, acid-base reactions, metathesis reactions, redox reactions, thermodynamics, electrochemistry, and chemical properties of selected classes of compounds.

Corequisite: 113.

Components: Lecture

Course Equivalents: CHEM 1030, CHEM 103H

Enrollment Requirements: requires concurrent enrollment in CHEM 113

CHEM 103H(3) Course ID:017147 Department Consent Required

General Chemistry I (Honors)

Honors section. The first half of a two-semester modern introductory chemistry course designed to fulfill the chemistry requirements for science students and to lay the foundation for further course work in chemistry. Topics include atomic theory, periodic properties, stoichiometry, nomenclature, bonding, physical properties of states of matter, solutions, kinetics, equilibrium, acid-base reactions, metathesis reactions, redox reactions, thermodynamics, electrochemistry, and chemical properties of selected classes of compounds.

Corequisite: 113.

Components: Lecture

Course Equivalents: CHEM 103, CHEM 1030

Enrollment Requirements: open to students in University Honors Program; requires concurrent enrollment in CHEM 113

CHEM 1030(3) Course ID:015874

General Chemistry I

This online summer course is the first half of a two-semester modern introductory chemistry course designed to fulfill the chemistry requirements for science students and to lay the foundation for further course work in chemistry. Topics include atomic theory, periodic properties, stoichiometry, nomenclature, bonding, physical properties of states of matter, solutions, kinetics, equilibrium, acid-base reactions, metathesis reactions, redox reactions, thermodynamics, electrochemistry, and chemical properties of selected classes of compounds. . Chem 1030 does not fulfill the lab requirement for students needing a lab. The lab which is partnered with this course, Chem 113, must be taken during the regular academic year.

Components: Lecture(Online)

Course Equivalents: CHEM 103, CHEM 103H

Room Requirements: ONLINE(1)

CHEM 104(3) Course ID:000163

General Chemistry II

The continuation of 103.. Prerequisite: 103 or 107, 113. Corequisite: 114.

Components: Lecture

Course Equivalents: CHEM 104H

Enrollment Requirements: passing grade in CHEM 103 or CHEM 107; passing grade in CHEM 113; concurrent enrollment in CHEM 114

CHEM 104H(3) Course ID:017177

General Chemistry II (Honors)

Honors section. The continuation of 103. Prerequisite: 103 or 107, 113. Corequisite: 114.

Components: Lecture

Course Equivalents: CHEM 104

Enrollment Requirements: passing grade in CHEM 103 or CHEM 107; passing grade in CHEM 113; concurrent enrollment in CHEM 114; must be in University Honors Program

CHEM 107(3) Course ID:009592

General Chemistry I for Engineers

A modern introductory chemistry course designed to fulfill the chemistry requirements for engineering students and to lay the foundation for further course work in chemistry. Topics include atomic theory, periodic properties, stoichiometry, nomenclature, bonding, physical properties of states of matter, solutions, kinetics, equilibrium, acid-base reactions, metathesis reactions, redox reactions, thermodynamics, electrochemistry, and chemical properties of selected classes of compounds. Corequisite: Chem 117 or Chem 113.

Components: Lecture

Enrollment Requirements: requires concurrent enrollment in CHEM 113

CHEM 108(3) Course ID:000176

General Chemistry II

The second semester of general chemistry, designed for students in the School of Engineering. Open to engineering students or others by permission of instructor. Prerequisites: 103 or 107, 113.

Components: Lecture

Enrollment Requirements: CHEM 103 or CHEM 107

CHEM 109(3) Course ID:012669

General, Organic, and Biochemistry for the Health Sciences

3 credits

A one semester course primarily for nursing students which covers the basics of general, organic and biochemistry. The topics include balancing equations, acid-base, pH, structure and nomenclature of organic compounds including hydrocarbons and compounds containing functional groups, the relationship of the structure of these compounds to the reactions they undergo, carbohydrates, fats, proteins, metabolism and energy.

Components: Lecture

Course Equivalents: CHEM 1090

Enrollment Requirements: Requires concurrent enrollment in CHEM 119

CHEM 1090(3) Course ID:015873

General, Organic, and Biochemistry for the Health Sciences

An online summer course primarily for nursing students which covers the basics of general, organic and biochemistry. The topics include balancing equations, acid-base, pH, structure and nomenclature of organic compounds including hydrocarbons and compounds containing functional groups, the relationship of the structure of these compounds to the reactions they undergo, carbohydrates, fats, proteins, metabolism and energy. Chem 1090 does not fulfill the lab requirement for students needing a lab. The lab which is partnered with this course, Chem 119, must be taken during the regular academic year.

Components: Lecture(Online)

Course Equivalents: CHEM 109

Room Requirements: ONLINE(1)

CHEM 110(3) Course ID:016030

Introduction to Earth Science

This course is intended to give a general overview of earth science for students of all schools at all stages of their education. There are no pre-requisites. Topics include minerals and rocks, the roles of water, wind and ice in shaping landscapes, forces inside the Earth and their manifestation in the motion of continents, mountain building, earthquakes and volcanoes, the concept of geologic time and Earth's history, the global ocean, the atmosphere, and global climate change.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CHEM 113(2) Course ID:000174

General Chemistry Laboratory I

A laboratory course designed to accompany 103. Experiments give the student exposure to basic laboratory techniques and illustrate the principles of chemistry from experimental data. Corequisite: 103.

Components: Laboratory

Enrollment Requirements: requires concurrent enrollment in CHEM 103 or CHEM 107

CHEM 114(2) Course ID:000175

General Chemistry Laboratory II

A laboratory course designed to accompany 104. Experiments give the student exposure to basic laboratory techniques and illustrate the principles of chemistry from experimental data. Corequisite: 104.

Components: Laboratory

Enrollment Requirements: requires concurrent enrollment in CHEM 104

The Catholic Univ of America

Arts & Sciences - Chemistry - Subject: Chemistry

CHEM 119(1) Course ID:012670
General, Organic and Biochemistry for Health Sciences Laboratory
1 credit

A laboratory course to accompany Chem 109. Experiments will provide students with experience in basic laboratory techniques for acid-base, pH, organic modeling and reactions and biochemistry techniques. Lab Fee \$35

Components: Laboratory

CHEM 125(3) Course ID:000168
Chemistry in Our Lives

This course is designed for nonscience majors who are interested in understanding the underlying chemistry of real world problems. Chem 125 concentrates on environmental issues which affect us globally including the quality of the air we breathe and the water we drink, global warming, the ozone hole and issues related to energy. The chemistry concepts involved include the atomic/molecular interactions of chemicals, the formation and dissolution of chemical bonds, the effect of molecular geometry on chemical properties, the interaction of radiation and matter, conservation of mass and energy, and energy transformation. Lab fee \$10.

Components: Lecture

CHEM 126(3) Course ID:001687
Chemistry in Modern Times

This course is designed for nonscience majors who are interested in understanding the chemistry behind personal products and problems in the real world. Chem 126 includes topics which affect us personally including the chemistry of polymers including plastics, over the counter and prescription drugs, food and food additives and genetic engineering and forensics. The chemistry concepts involved include organic chemical structures and functional groups, balancing equations, the relationship between molecular structure and function, carbohydrates, fats and proteins, genetic structure and recombinant DNA. Lab fee \$10.

Components: Lecture

CHEM 127(3) Course ID:016131
Biochemistry in Science Fiction

Science fiction movies and literature present alternate worlds where elements of our scientific reality play key roles. The real science that inspires science fiction may be well established or in its infancy, and its stage of development often reflects the accuracy of its presentation. In Biochemistry of Science Fiction, we will use these alternate worlds to explore what chemistry teaches us about possible forms of alien life, the use of modern drug development to combat a zombie apocalypse, the challenges of cloning dinosaurs, and the evolution of humanity. This online course is intended for non-science majors interested in understanding the real science in sci-fi movies and novels.

Components: Online(Online)

Room Requirements: ONLINE(1)

CHEM 128(3) Course ID:016566
Food meets Science: The biochemistry of cooking

CHEM 128. Food meets Science: The biochemistry of cooking
Kitchens everywhere are biochemistry laboratories. Meats are prepared using heat or acid to elicit chemical changes. Yeast perform enzymatic reactions in doughs and during fermentations of alcohols. Ingredients can be thought of as chemicals and biological molecules, and cooking techniques as processes to change chemical structures. In this online course, lectures will describe the biochemistry of these molecules and processes, and video demonstrations will be used to exemplify these biochemical principals. Students will develop an awareness of the scientific basis of food preparation and the roles of ingredients in their food.

Components: Online(Online)

Course Equivalents: CHEM 128R

Room Requirements: ONLINE(1)

CHEM 128R(3) Course ID:019111
Science of Italian Food and Cooking

Cooking and sharing of food are uniquely human activities that play key, even central, roles in society, our families, and our spiritual lives, and in the evolution of humanity itself. We continually celebrate the importance of food preparation in our daily social and spiritual rituals, and nowhere more so than in Rome. In this course, intended for non-science majors, we will explore the science of food and its preparation with a focus on modern and historical Italian cuisine and techniques. We will explore the fermentation of wine and use of yeast for baking of bread, the reactions of baking powder or baking soda, and the chemical states of matter that are the defining properties of certain foods (e.g., chocolate as a crystal and gelato as an emulsion).

Components: Lecture(In Person)

Topics: Rome, Italy

Course Equivalents: CHEM 128

Room Requirements: ABROAD(1)

Arts & Sciences - Chemistry - Subject: Chemistry

CHEM 129(3) Course ID:016959

Pseudoscience - Fallacies, Absurdities and Scams

Modern society is heavily dependent on science for providing a worldview as well as for forming the basis for technologies permeating every aspect of everyday life. Unfortunately, legitimate science has always been vulnerable to misuse and abuse. Such phenomena range from erroneous application of the scientific method to bias, groupthink, superstition, and intentional distortions intended to confer professional, political or economic advantages. This course analyzes various manifestations and consequences of pseudoscience. The course makes extensive use of case studies and it emphasizes active learning involving student presentations and class discussions.

Components: Lecture

CHEM 130(3) Course ID:019110

The Science of History

Advancements in scientific analysis of ancient samples expand our understanding of ancient people and their societies. Chemical isotopes, analysis of ancient DNA, and other methods allow us to construct a biohistory of ancient people. What did a person eat? Where did he migrate from? What diseases did he have over his life? These techniques can help us answer these questions and many others. On a broader scale, analysis of DNA can reveal the dynamics and interactions of people from different geographical areas. In this course, intended for non-science majors, we will explore the scientific foundations for techniques used to study ancient people and their societies. We will also explore the science of pathogens that caused historical outbreaks and the modern approaches for the development of drugs to combat them. We will learn how reports by health practitioners of these times contributed to modern medicine's ability to identify the pathogens. For each case, we will discuss the biochemical mechanism of the disease and the development of its modern treatments.

Components: Lecture(In Person)

Topics: Rome, Italy

Room Requirements: ABROAD(1)

CHEM 202(3) Course ID:001709

Science Under Oath

For nonconcentrators. A survey of some of the scientific methods used in modern criminal investigations with emphasis on the scientific bases of the techniques. Organized as a casebook study of the application of the scientific method to the detection of crime. Topics include use of fingerprints, ballistics, tool marks, inorganic and organic analyses, DNA "fingerprinting."

Components: Lecture

Enrollment Requirements: Not open to Chemistry majors

CHEM 203(3) Course ID:000141

Organic Chemistry I

The first part of a two-semester course designed to introduce science majors to the study of organic compounds, their structure, bonding, stereochemistry, and reactivity with emphasis on reaction mechanisms. The first semester covers the study of alkanes and cycloalkanes, alkenes, alkynes, alkyl halides, and aromatics. Prerequisites: Chem 103, Chem 113, C- or better in Chem104, Chem114. Corequisite Chem 213.

Components: Lecture

Enrollment Requirements: Requires a C- or better in CHEM 104 or CHEM 108 and concurrent enrollment in CHEM 213

CHEM 204(3) Course ID:000142

Organic Chemistry II

The continuation of 203, extending the functional classes studied to aromatics, ethers, epoxides, alcohols, carbonyl compounds and amines. Prerequisite: 203. Corequisite: 214.

Components: Lecture

Enrollment Requirements: CHEM 203 & concurrent enrollment in CHEM 214

CHEM 213(2) Course ID:001713

Organic Chemistry I Lab

Laboratory to accompany 203. Corequisite: 203. Prerequisite: C- or better in Chem 104 or departmental consent

Components: Laboratory

Enrollment Requirements: CHEM 114 and concurrent enrollment in CHEM 203

CHEM 214(2) Course ID:000143

Organic Chemistry Laboratory II

Laboratory to accompany 204. Corequisite: 204.

Arts & Sciences - Chemistry - Subject: Chemistry

CHEM 308(3) Course ID:014003

Batteries, Fuel Cells, and Energy Storage

A lecture course covering the basic theory and methods of energy storage, with emphasis on electrochemical storage technology. Topics include electrochemistry, chemical principles of operation and design of batteries and fuel cells, individual battery types (lead-acid, nickel-cadmium, nickel-metal hydride, lithium ion), hydrogen and non-hydrogen fuel cells, operational issues of batteries and fuel cells, and selected non-chemical methods of energy storage.

Components: Lecture

Course Equivalents: ENGR 408

Enrollment Requirements: CHEM 113 and either CHEM 103 or CHEM 107

CHEM 311(5) Course ID:005627

Analytical Chemistry

A lecture and laboratory course applying the principles of chemical equilibrium to quantitative analysis, with emphasis on environmental chemistry. Prerequisites: 104,114

Components: Laboratory, Lecture

Enrollment Requirements: CHEM 114 and either CHEM 104 or CHEM 108

CHEM 318(1) Course ID:007212 Department Consent Required

Seminar in Environmental Science

Selected topics of current environmental interest. Examines the conflicting views on population growth, water pollution, air pollution, chemical pesticides, ozone depletion, and global warming in the light of currently available information.

Components: Lecture

CHEM 351(3) Course ID:001725

Physical Chemistry I

The first half of a two semester sequence designed to introduce students to the theoretical principles of chemistry. Prerequisites: 104, 114; PHYS 215, 216, or equivalent; MATH 112 or equivalent.

Components: Lecture

Enrollment Requirements: CHEM 104 or CHEM 108 and concurrent enrollment in PHYS 205 or PHYS 215

CHEM 352(3) Course ID:001729

Physical Chemistry II

A continuation of 351. Prerequisite: 351.

Components: Lecture

Enrollment Requirements: CHEM 351 and concurrent enrollment in PHYS 206 or PHYS 216

CHEM 353(2) Course ID:001735

Physical Chemistry I Lab

Laboratory course; to be taken concurrently with 351. Corequisite: 351.

Components: Laboratory

Enrollment Requirements: concurrent enrollment in CHEM 351

CHEM 401(3) Course ID:001758

Advanced Inorganic Chemistry

A discussion of topics in the field of inorganic chemistry, selected from the general areas of transition metal, main group and organometallic chemistry, and theories of structure and bonding. Prerequisite: 204, 351, 352, or permission of instructor.

Components: Lecture

Enrollment Requirements: CHEM 204 & CHEM 351

Room Requirements: NO CLASSROOM NEEDED(1)

CHEM 402(3) Course ID:005995 Department Consent Required

Bioinorganic Chemistry

A one-semester lecture course with primary focus on the role that transition metals play in biological processes. Discussion of structures of active sites of metalloenzymes and the mechanisms of the reactions they promote, in terms of existing experimental data on the native systems and model compounds. Systems included are oxygen binding and transport, heme and non-heme electron transfer, copper blue proteins, nitrogen fixation, and inorganic pharmaceuticals. Prerequisites: 501 or 571 or permission of instructor.

Components: Lecture

Enrollment Requirements: CHEM 401 or CHEM 471

Room Requirements: NO CLASSROOM NEEDED(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Chemistry - Subject: Chemistry

CHEM 405(3) Course ID:012619 Department Consent Required
Science Communication

We will explore forms of science communication for expert and non-scientist audiences. We will discuss and practice writing technical papers and compare these to popular science articles. We will discuss the process of writing and publishing, including plagiarism, the ethics of scientific communication, and peer review. The course will include practical exercises for written and oral communications. Students will build skills for reading and extracting information from scientific papers, writing and editing for both expert and general audiences, preparation of CVs appropriate for job hunters in scientific industries, and oral communications for formal and informal settings. We will use examples from the primary scientific literature, reviews for general science audiences, popular science writing for non-scientists, and material written by students.

Components: Lecture

CHEM 408(3) Course ID:001866
Instrumental Analysis & Chemical Spectroscopy

A lecture course in the use of instruments for chemical analysis, including spectrophotometry, chromatography, and electrochemical methods, and a comprehensive overview of spectroscopy and its analytical applications. Prerequisites: 204, 214, 311.

Components: Lecture

Enrollment Requirements: CHEM 204 or CHEM 311

CHEM 418(3) Course ID:001869
Chemical Instrumentation Lab

A laboratory course to accompany Chem 408 - Instrumental Analysis. Prerequisite: 311; co-requisite: 408.

Components: Laboratory

Enrollment Requirements: CHEM 408

CHEM 442(3) Course ID:002012 Department Consent Required
Environmental Chemistry Laboratory

Experience with common methods of environmental testing. Includes test of pH, alkalinity, hardness, dissolved oxygen, oxygen demand, etc. Prerequisite: general chemistry-Chem103/113 & Chem 104/114 or Chem 107/113

Components: Laboratory

Enrollment Requirements: CHEM 114 and either CHEM 104 or CHEM 108

CHEM 471(3) Course ID:002033
Biochemistry I

Lectures on the chemistry of biological systems, including discussion of important metabolic pathways. Prerequisites: 204, 214.

Components: Lecture

Enrollment Requirements: CHEM 204

CHEM 472(3) Course ID:002035
Biochemistry II

A continuation of Chem 471-Biochemistry I. Prerequisite: Chem 471.

Components: Lecture

Enrollment Requirements: CHEM 471

CHEM 493(3) Course ID:001743 Department Consent Required
Undergraduate Research

Guided participation in the research project of a consenting faculty member chosen by the student. Prerequisite: Permission of department chair.

Components: Directed Study/Research

Enrollment Requirements: CHEM 104

CHEM 494(3) Course ID:016961 Department Consent Required
Independent Study in Chemistry/Biochemistry

This course is a self-directed study of a specific issue in chemistry, biochemistry or environmental chemistry to be determined by the student with the guidance of a faculty member. Students are required to submit an Independent Study Application (available at <https://arts-sciences.catholic.edu/asu-independent-study-application1.pdf>)). A student must receive permission to enter into an independent study from the faculty member who will help guide the study prior to registering for the Independent Study.

Components: Independent Study

Room Requirements: NO CLASSROOM NEEDED(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Chemistry - Subject: Chemistry

CHEM 495(3) Course ID:015489 Department Consent Required

Internship in the Environment or Sustainability

For-credit internship open to majors and minors in Departments connected to environment or sustainability. The course is designed to allow students to apply their multi-disciplinary knowledge in biology, chemistry, ecology, economics, technology, policy, market analysis, etc. in order to develop information and recommendations for setting environmental criteria for products or services. 140 -150 hours in the internship is required, plus additional meetings with the internship coordinator.

Topics suggested by interns are encouraged, but must fit in with the current needs and interest at Green Seal. The scope and depth of the project are most suited for a senior course, but can be adapted for any level of expertise.

Components: Internship

Enrollment Requirements: CHEM 104

Room Requirements: NO CLASSROOM NEEDED(1)

CHEM 496(3) Course ID:002050

Biochemical Techniques

An accelerated laboratory course devoted to modern experimental procedures in biochemistry. Prerequisite: Chem 471 or equivalent. Co-requisite: Chem 472-Biochemistry II.

Components: Laboratory

Enrollment Requirements: concurrent enrollment in CHEM 472

CHEM 498(0) Course ID:015184

Undergraduate Comprehensive Examination

Required for graduation in the School of Arts & Sciences. Open to Chem/Biochem/Env Chem seniors only who are on track to graduate at the end of the same semester as the comprehensive exam.

Components: Comprehensive Exam

CHEM 527(3) Course ID:012889 Department Consent Required

Chemical Education Research: Theory

This course is designed to introduce the theoretical foundations of teaching and learning in chemistry and associated STEM disciplines. Students will engage with primary and secondary literature on learning theories, including constructivism, social constructivism, meaningful learning, expertise, conceptual change, multilevel thought, information processing, problem solving, and adult learning theory. Using these theoretical frameworks, current teaching practices and discipline based education research (DBER) in chemistry will be discussed.

Components: Lecture

CHEM 540(3) Course ID:001906

Chemistry of Materials

Covers the relationship between the chemical bonding, crystal structure, and microstructure of materials and their mechanical, electrical, and chemical properties. Includes discussions of metals and alloys, organic polymers, glasses, ceramics, and composites. Prerequisites: Chem 103 or Chem 107 and Chem 113.

Components: Lecture

CHEM 597(3) Course ID:002044

Readings in Chemical Education

This course is the first in a sequence of three graduate level chemical education courses (CHEM 593, CHEM 737, and CHEM 767) designed to introduce the graduate student to the field of chemical education research. This course will concentrate on the chemical education research literature. Classic studies in chemical education research along with current studies will be read and analyzed. Students will also learn how to review manuscripts for professional journals in chemical education. In addition, students will study how research data collected for a study are prepared for publication. Throughout the course, students will be required to complete a set of additional readings on a specific chemical education research topic.

Components: Lecture

CHEM 737(3) Course ID:002069

Chemical Education Research:Theory

An in-depth study of the theoretical basis of chemical education research; research design; use of measurement tools; data collection procedures; interpretation of results; applications to the teaching and learning of chemistry. Prerequisite: Permission of instructor.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Chemistry - Subject: Chemistry

CHEM 765(2) Course ID:002072
Research Topics in Chemistry
Supervised study and research in selected topics in chemistry. Prerequisite: Permission of instructor and department.
Components: Directed Study/Research

CHEM 766(3) Course ID:002087
Research Topics In Chemistry
Supervised study and research in selected topics in chemistry. Prerequisite: Permission of instructor and department.
Components: Directed Study/Research

CHEM 767(3) Course ID:002089
Research Problems in Chemistry
Research problems and participation in the research program of the department. Prerequisite: Permission of instructor and department.
Components: Directed Study/Research

CHEM 768(3) Course ID:002091
Research Problems in Chemistry
Research problems and participation in the research program of the department. Prerequisite: Permission of instructor and department.

HUM 101(3) Course ID:013132

Classics in Conversation I: The Dawning of the Western Tradition

This course focuses on the reading and discussion of classical works of western literature, for the sake of raising and addressing questions of fundamental significance to all human beings. These works are read both to help us clarify the human condition as well as to guide us in our attempt to make the most of it.

Readings include works from authors such as Homer, Sophocles, Virgil, Augustine, Dante, and others.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HUM 124(3) Course ID:014070

Classics in Conversation II: The Christian West

This course focuses on reading and discussing great works of literature in the the Western world after the middle ages, in a time period when Christianity came to be a significant factor among the forces that shaped the ways people see the world. As in Classics in Conversation I, these works will be read as efforts to grapple with reality, and as expressive of a fundamental part of the western world's self-understanding.

Readings may include works from authors such as Chaucer, Shakespeare, Milton, and others. Note: Students in HUM 124 will be attending the university's production of Macbeth this spring.

Components: Lecture

HUM 175(3) Course ID:016867

Classics in Conversation III: "Perennial Questions in the Present Era"

This course will consist of a careful reading of short stories and poems from the mid-18th century to the present and consideration of thematically relevant films. Works are chosen that reflect man's complex endeavors in the modern world. Special themes may be explored (such as the dominance of technology, the distortion of religious faith, or the loss of individual identity in industrial society), but works will be examined that shed light on what is timeless and human in literature and art. Through discussion of these works, we will identify the themes that characterize the confrontation of pre-modern with modern life. We will also attempt to identify the features of human nature and reality that persist through any such change. The objective of the course is to become more careful readers, develop a familiarity with some important pieces of modern literature, art, and film, and to address questions of deep importance to our lives.

Arts & Sciences - Early Christian Studies - Subject: Early Christian Studies

ECST 519(3) Course ID:015579

Introduction to Early Christian Art and Archeology

An exploration of art, architecture, and material culture from the mid-3rd century through the 8th century AD, a time when the Christian faith grew from one of many practiced throughout the Roman world to an empire-wide state religion. This course will investigate Christian iconography's origins in the pagan and Jewish art of late antiquity, and the innovative visual forms that arose to express Christianity's new spiritual concepts. The dynamic effects of competing "heresies", iconoclasm, and the increasingly defined doctrines, rituals, and structures of the Church will be examined in relation to the visual arts, within the context of the political fracturing of the Roman Empire, the persistence of Greco-Roman cultural heritage, and the rise of Islam in the 7th century. Examples drawn from western Europe and the eastern Mediterranean region will include church architecture, wall paintings, mosaics, icons, sculptures, manuscripts, and objects in ivory, ceramic, and glass. Visits to Dumbarton Oaks in Washington, D.C. and the Walters Art Museum in

Introduction to Early Christian Studies

Surveys the history, methods, and bibliography of the field of Early Christian Studies. Required for graduate students in the Early Christian Studies Program; graduate students from other units welcome..

Components: Lecture

ECST 610(3) Course ID:016980

The Material World of Early Christianity

This course studies the material culture of Early Christianity from the first through the seventh century AD. Subjects covered include Early Christian archaeology, art history, and architecture; the materiality of liturgy, ritual, and healing; sacred space and time; Christianity and the urban fabric; material expressions of Christian identity; economy, geography, and travel; and the lived experience of Christian faith in a diverse religious world. Reading and class discussion will be supplemented by illustrated lectures, student reports, and contact with archaeological, manuscript, and numismatic holdings at CUA. A final research paper is required.

Components: Lecture

ECST 650(3) Course ID:016768

History of Early Christian Thought

This course is designed to appeal to graduate students in any school or program who are interested in early Christianity. It focuses particularly on the intellectual traditions--both the manner and content of religious reflection--that Christian thinkers inherited and adapted from those who came before them. This applies most especially to the Jewish and specifically Hebrew/Aramaic traditions that Jesus and his early followers would have drawn upon and modified, but also to what is often referred to as the "classical tradition," for the most part (in those early times) transmitted in Greek. The interaction between the two was an essential force in Christian development. There were, nevertheless, other religious habits of mind (and practice), not all of them exclusively Jewish or Roman, and not all of them limited to the sphere of Roman hegemony: these also will be open to study. The course is compulsory for students in the Program of Early Christian Studies.

Components: Lecture

Introduction to Early Christian Studies

The course examines the way in which the early Christian period was interpreted by scholars between the early sixteenth and the early twentieth century. Topics include: the growing distinction between the 'ancient' and the 'modern'; changes of method in the editing and interpretation of texts, and in the handling of archaeological data; the development of a particular interest in patristics; more general changes in historical method; the development of biblical scholarship, particularly in relation to the New Testament and to religious documents contemporary with its emergence; the influence of the Enlightenment, the Romantic Movement, and revolution and nationalism; attitudes to the early church evident in developments in canon law and liturgy; and the impact of newer disciplines like sociology, anthropology, and psychology. The opportunity occurs for each student to undertake the study of a major figure in the period.

Components: Lecture

ECST 705(3) Course ID:016537

Lived Religion in Merovingian Gaul

Ruled by the Merovingians and other barbarian groups between AD 481 and 751, the formerly Roman provinces of Gaul and Germany, largely but not exclusively Christian, exhibited a high degree of cultural continuity in the midst of political and military disruption and change. Abundant sources, both textual and material, attest to the everyday religious practices of both urban and rural populations across a diverse sequence of geographic regions. This seminar will examine sermons, saints' lives, chronicles and histories, legal documents, liturgical texts, as well as evidence from art, architecture, and archaeology (particularly the evidence from burials) to try to recover as many aspects as possible of the lived experience of religion in the Merovingian age. What counts as 'religious' will be broadly defined to include sacred time and space, rituals of the life cycle, exorcism, healing, divination, magic, prayer, almsgiving, pilgrimage, ascetic practices, monasticism, church organization, and other topics.

Components: Seminar

ECST 715(3) Course ID:016979

Ascetics and Healing in Late Antiquity

The course will be divided into two major sections. The first section examines primary material of the period roughly 300-600 that describes the engagement of Christian ascetics in the care of the sick, as well as issues connected with nature, the body, the miraculous, and the providence of God. The second section focuses on the Pastoral Care of Pope Gregory the Great (590-604), examining it less as a handbook on rhetoric and the exercise of religious authority and more as a guide to varying levels of mental and spiritual 'health.' Students will read material from the period (in whatever languages they read), create their own secondary reading program, deliver a seminar, and write a research paper of their choice. The course is open to graduate students from any school, department, or program.

Components: Seminar

ECST 770(3) Course ID:007052

Seminar: Theodoret of Cyrillus

The course will focus on the way a rounded understanding of Theodoret's varied career and output helps us achieve a clearer sense of the 400-45 (roughly) 'shape' of the increasingly Christianized empire. We shall devote most textual attention to both the *Historia religiosa* and the *Cure for Hellenic Maladies* and to their apparent but misleading differences. They are both available in modern English translations. All graduate students are welcome to take the course: a knowledge of ancient languages (obligatory only for students in the Early Christian Studies and Greek and Latin M.A./Ph.D. programs) will be neither required nor essential to a full engagement with the material.

Components: Seminar

ECST 774(3) Course ID:009664

John Cassian I

The course studies the works of John Cassian, with particular emphasis on the *Institutes*, from an historical and contextual point of view; but, for those who wish, there is opportunity to study Cassian's other writings, for example the *Conferences*, together with associated works of the period, and to explore ideas as well as circumstances. The purpose of the course is to examine the development of monastic culture and institutions in Gaul during the period roughly 415-435.

A secure knowledge of Latin will obviously be an advantage; but it will not be demanded of students outside the Early Christian Studies program, unless their own curriculum prescribes it. Good translations are available in English and French.

The Catholic Univ of America
Course Catalog

Arts & Sciences - Early Christian Studies - Subject: Early Christian Studies

ECST 775(3) Course ID:009940

Theodoret the Historian

The course focuses on Theodoret's 'Historia ecclesiastica', paying chief attention to its particular 'slant' on the events of Theodoret's own day. The opportunity occurs, however, to examine Theodoret's sources, especially Eusebius of Caesarea, and contemporary components of the genre - Socrates, Sozomen, and Philostorgius. A secure knowledge of Greek will obviously be an advantage; but it will not be demanded of students outside the Early Christian Studies program, unless their own curriculum prescribes it. Translations in English and other modern languages are available.

Components: Seminar

ECST 777(3) Course ID:010157

Sidonius Apollinaris

While attending to Sidonius's fifth-century circumstances, literary production and career, the course focuses particularly on his correspondence, which has much to tell us about his final years as a churchman. In spite of his conservatism and his involvement in the government of the western empire in its closing decades, he was able to identify changes afoot in a Gaul increasingly dominated by barbarian settler kingdoms, and the necessary adaptation those changes implied; and he found an easy place in the early medieval account of the period and province in which he lived. ECS graduates will be expected to read the texts in the original Latin; but that should not inhibit other graduates from other programs with different expectations: English translations are available of all Sidonius's work.

Components: Seminar

ECST 778(3) Course ID:011843

The Development and Role of Monasticism in the Late Antique World

This graduate seminar course will examine the monastic practices in Late Antiquity as attested in documentary evidence, such as papyri, ostraka and inscriptions, although hagiographical and archaeological sources will also be considered. Some of the themes addressed in the seminar will be pilgrimage, variation of monastic practices, and similarities and differences across the countries bordering the Mediterranean Sea. Special attention will be paid to the role of women and to the development of asceticism itself. Furthermore, the role of monks as intercessors, peace-makers, and copyists of manuscripts will be explored. There is no language requirement for this seminar.

Components: Seminar

ECST 781(3) Course ID:014295

The Sixth Century: End or Beginning?

An older historiography of the fifth century, wedded to the model of 'decline and fall', suggested that imperial power and Roman values were severely compromised in the late antique/early medieval West, while traditional imperial forms endured in the Byzantine East. This course will explore a contrasting narrative: that critical developments in both parts of the empire during the fifth century (not least, religious) brought them, albeit in different ways, to the threshold of a new era. The implication will be that, while some continuity remained evident in the West, discontinuity characterized the East. Both sectors, in other words, explored new ways of being 'post-classical'.

ECON 100(3) Course ID:007781

Fundamentals of Economics

A one semester introduction to the principles of both micro- and macroeconomics. Microeconomics topics will include the basics of supply and demand, the behavior of consumers and businesses, and how markets operate. Macroeconomic topics will include the fundamental components of gross domestic product(GDP), the problems of inflation and unemployment, the impacts of government fiscal and monetary policies, and economic growth.

Components: Lecture

Enrollment Requirements: Not open to Economics majors, International Economics & Finance majors, or majors in the School of Business

ECON 101(3) Course ID:000039

Principles of Macroeconomics

An introduction to the study of open economy macroeconomic principles. It is concerned with the behavior of the economy as a whole. It studies the foundations of macroeconomic theory and their application to domestic and international macroeconomic policy. It is useful for students concentrating in other fields.

Components: Lecture

Course Equivalents: ECON 103

Enrollment Requirements: Score a 1 or 2 on Math Placement Test or earn a grade of C- or better in MATH 108 or MATH 110

ECON 102(3) Course ID:000044

Principles of Microeconomics

An introduction to microeconomic principles. Students will be introduced to the analytical tools of microeconomic analysis used to examine the behavior of consumers and producers, and how they interact in various types of market structures to determine prices and outputs. Students are also introduced to market failures and to alternative policies that may be implemented to deal with them.

Components: Lecture

Course Equivalents: ECON 104, SRES 101, MGMT 101

Enrollment Requirements: Score a 1 or 2 on Math Placement Test or earn a grade of C- or better in MATH 108 or MATH 110

ECON 103(3) Course ID:000035 Department Consent Required

Principles of Economics I (Honors)

An introduction to the study of open economy macroeconomic principles. It is concerned with the behavior of the economy as a whole. The course focuses on three major goals. First, to help students understand the nature of certain macroeconomic problems and institutions. Second, to help students master certain tools of macroeconomic analysis and third, to help students develop an ability to apply these tools to the macroeconomic problems that our society confronts. It is useful for students concentrating in other fields. This course is open only to students in the University Honors Program.

Components: Lecture

Course Equivalents: ECON 101

Enrollment Requirements: University Honors Program

ECON 104(3) Course ID:002957 Department Consent Required

Principles of Economics II (Honors)

An introduction to microeconomic principles. Students are introduced to the analytical tools of microeconomics used to examine the behavior of consumers and producers and how they interact in various types of market structures to determine prices and outputs. Students are also introduced to market failures and to alternative policies that may be implemented to deal with them. The analyses of some topics, however, are conducted at a more advanced level in this course due to its honors level status. This course is open only to students in the University Honors Program.

Components: Lecture

Course Equivalents: ECON 102, SRES 101, MGMT 101

Enrollment Requirements: open to Economics majors in the University Honors Program

ECON 498(0) Course ID:016341 Department Consent Required
Undergraduate Comprehensive Examination

The examination is intended to allow the student to demonstrate substantial knowledge of economics. Satisfactory performance on a written comprehensive examination is required for graduation.

Components: Comprehensive Exam

Enrollment Requirements: Open to students majoring in Economics or International Economics and Finance who've taken ECON 241, ECON 242, and ECON 363 (formerly 463)

ECON 540(3) Course ID:003234 Department Consent Required
Economics of Development and Institutions

Covers different theories and strategies for economic development with special emphasis on such issues as growth, income distribution and the role of population. Free markets versus centralized planning analyzed in light of recent experience. Special attention also to international trade and finance and the Third World debt crisis. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: IEDM 540, IEDP 540

Enrollment Requirements: Open to students with a cumulative GPA of 3.5 or higher

ECON 541(3) Course ID:003235
Family and Economic Growth

Addresses the relevance of the family for economics. Includes the study of the family's role in the economy, its connection with human, social and moral capital and how the different types of capital shape the path of economic growth. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: ECON 101 or ECON 103; ECON 102 or ECON 104 or HSSS 102; and ECON 223

ECON 542(3) Course ID:005969
Introduction to Economic Forecasting

Emphasizes the analytical and practical dimensions of learning how to work with large-scale forecasting models in predicting the behavior of major macroeconomic variables such as GDP, inflation, employment and interest rates. Analytical emphasis on time-series modeling; practical emphasis on hands-on applications using a large-scale econometric forecasting model of the United States economy and an introduction to the use of major private sector and governmental statistical series used in judgmental forecasting. Designed both for economics and management majors at graduate and advanced undergraduate levels and for those desiring a business-oriented approach to macroeconomics less theoretical in content than 241. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: ECON 363 (formerly 463) and either MATH 112 or MATH 122

ECON 543(3) Course ID:005987
Labor-Management Relations

Analyzes the economic and institutional aspects of collective bargaining and their impact on the economy. Focuses on attitudes and policies of unions and management, negotiation and grievance procedures in both unionized and non-unionized firms and public policies toward collective bargaining. Also see Enrollment Requirements. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: ECON 101 or ECON 103; and ECON 102 or ECON 104 or HSSS 102

ECON 544(3) Course ID:018570 Department Consent Required
Applied Econometrics II

This course builds from the topics taught in Econometrics I. The goal of the course is to provide students with a deeper understanding of the evaluation methods taught in Econometrics I as well as to introduce time series analysis. The course also aims to test the students understanding through the critique and review of articles as well as writing a paper.

Components: Lecture(In Person)

Course Equivalents: IEDP 544

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Economics

ECON 545(3) Course ID:014845 Department Consent Required

Experimental Economics

Experimental economics studies economic and social behavior in a controlled laboratory or field environment. The course covers the methodology of experimental economics and its application to testing and analyzing various economic and social institutions and environments and the incentives they create. The course content includes a comprehensive overview of the existing literature in experimental and behavioral economics. The students will both participate in experiments first-hand in order to gain an in-depth understanding of experiment design and will design their own experiments as part of their research and evaluation projects.

Components: Lecture

ECON 551(3) Course ID:003237

Economic Development of Latin America

An exploration of the economic conditions of Latin America since World War II with special emphasis on current programs and policies aiming at the acceleration of economic development. Major attention to such problems as trade, inflation, industrialization, income distribution and integration. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: ECON 101 or ECON 103; and ECON 102 or ECON 104 or HSSS 102

ECON 552(3) Course ID:003238 Department Consent Required

European Economic Environment and Integration (Leuven)

Characteristics of West European economics. Traditional theories of integration; free trade, customs union and common market. The main common policies; CAP, EMS, industrial policy, the budget, and cohesion. External economic relations of the EC.

Components: Lecture

ECON 561(3) Course ID:005972

Mathematical Economics

Topics include matrix algebra, Cramer's rule, Jacobean determinants, inverse functions, total differentials, the implicit function theorem, derivatives of general functions, relative extrema with several variables, quadratic forms, concave and convex functions, constrained maximization and bordered Hessian, quasi-concavity and quasi-convexity. Emphasis on mathematical modeling of intermediate level economic theory and comparative statics of such models. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: ECON 241, ECON 242 and either MATH 112 or MATH 122

ECON 563(3) Course ID:005973

Principles of Econometrics

Construction and testing of economic models: Regression theory, parameter estimation, and statistical techniques applicable to economic models.

Components: Lecture

Course Equivalents: ECON 363

Enrollment Requirements: ECON 223

ECON 564(3) Course ID:002819

Benefits & Compensation

Examines the integral parts of total compensation packages as they exist within the various economic sectors. Rationale for design and implementation of cost-effective compensation benefits programs. Explores specifics of wage and salary program structure and administration within the framework of existing business and economic climates. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: ECON 101 or ECON 103; and ECON 102 or ECON 104 or HSSS 102

ECON 570(3) Course ID:018506

Big Data

Big Data for Economics will provide analytical and technical skills to students that employers expect them to possess. The course will start by reviewing possible sources of Big Data with a particular focus to social and economic applications. The first part of the course will discuss real world examples of how companies and institutions are reorganizing internally to respond to the "big data revolution" and describe the steps involved in such process. The second part of the course will be devoted to the analysis of big data in the R software environment.

Components: Lecture(In Person)

Course Equivalents: ECON 370

Enrollment Requirements: ECON 363 or IEDM 543 or IEDP 543

Room Requirements: COMPUTER LAB(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Economics

ECON 580(3) Course ID:015416

International Trade

This advanced undergraduate course develops basic theories of international trade, migration, and capital movements, and uses them to address policy issues. By the end of the semester, you should be able to answer questions such as: Why is there trade among countries? What determines the pattern of trade? Do countries gain from trade? How much? Are there losers from trade? What are the effects of trade on employment and wages? What determines migration and FDI, and what are their effects on a country's welfare? What is the relationship between outsourcing, trade and FDI?

Components: Lecture

Course Equivalents: ECON 480

Enrollment Requirements: ECON 241, ECON 242, and either ECON 363 (formerly 463) or IEDM 543

ECON 581(3) Course ID:015415

International Finance

Topics include foreign exchange markets and balance of payments statistics, multinational banking and Eurocurrency markets, the monetary approach to balance of payments adjustments, internal and external balance through monetary and fiscal policy, the international monetary system, the need for a national monetary system and the need for a new international economic order. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: ECON 481

Enrollment Requirements: ECON 241, ECON 242, and either ECON 363 (formerly 463) or IEDM 543

ECON 582(3) Course ID:005974

Economic Integration Movements

Concerned with understanding the nature of the integration movement over the past ten years. Specifically, studies the major economic blocs, analyzing their structural development, similarities and differences, as well as the consequences for growth, monetary and fiscal policies and financial markets. Concludes with an evaluation of the impact these blocs have on the rest of the world. Also see Enrollment Requirements.

Components: Lecture

Same As Offering: ECON 482

Enrollment Requirements: ECON 241, ECON 242, and ECON 243

ECON 583(3) Course ID:003242

History of Economic Thought

ECON 583 History of Economic Thought (3) Lecture Concentrates on the development of economic thought primarily from the sixteenth century to present day. Reading and discussion of classical sources in political economy raise questions about roles of ideology, science, philosophy in the evolution of different schools of economic thought. Intended to provide opportunity for students to formulate, articulate, and justify a personal response to these questions.

Components: Lecture

Enrollment Requirements: ECON 101 or ECON 103; and ECON 102 or ECON 104 or HSSS 102

ECON 584(3) Course ID:003243

Economics and Finance in Emerging Markets

Analyzes the most salient features of emerging economies. These include prospects for economic growth, how to deal with volatility, exchange rates and currency crises, inequality and political stability and currency, country and political risk. Also see Enrollment Requirements.

Components: Lecture

Same As Offering: ECON 484

Enrollment Requirements: ECON 101 or ECON 103; ECON 102 or ECON 104 or HSSS 102; and ECON 223

ECON 593(3) Course ID:002836

Applied Research Project

For undergraduates who may wish to participate in an Applied Research Project at graduate level.

Components: Directed Study/Research

ECON 595(3) Course ID:003231 Department Consent Required

Internship

Student works as an intern (part-time, with or without pay) with a local firm or government agency gaining on--the-job experience in a field related to the student's academic pursuit of economics and business. Performance is evaluated on the basis of periodic reports from supervisor and submission of a term paper, the subject matter of which is approved by the academic adviser.

Components: Internship

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Mgt.

IEDM 501(3) Course ID:014319

Accounting Concepts and Applications

The course covers the use of accounting as a management tool. It includes the strengths and limitations of accounting as an information system, the role of accounting in management, planning and control, and the usefulness of accounting data for evaluating the results of operations and decision-making. Topics also include cost concepts, profit planning, budget decision techniques, planning pricing decisions, inventory control, quantitative decision techniques, as well as the introduction to development of accounting and budgeting information systems based on quantitative data processing. Provides a firm foundation in accounting - the language of business - which will help the student to (a) understand and use the results in managerial decision-making and (b) financially evaluate a wide range of programs to achieve and integrate economic development. When you work on the ground, you need a good set of indicators and a very robust set of tools to measure success.

Components: Lecture

Same As Offering: IEDP 501

Enrollment Requirements: IEDM Program or Department Consent

IEDM 502(1) Course ID:014360 Department Consent Required

Grant Research and Writing for International Development

This one-credit graduate course is designed to introduce students to the grant research and writing process, teach the components of a successful grant proposal, and improve students' writing and communication abilities, with particular attention to presentation skills. Lectures and assigned readings cover the principles of clear and persuasive writing as well as the process of moving a grant proposal from idea to submitted proposal to sustainable project. Students will review principles of effective writing, develop the ability to analyze a grant proposal, and learn how to present proposal information persuasively in a variety of formats, including verbal presentations and written grant proposals

Components: Lecture

Same As Offering: IEDP 502

Enrollment Requirements: IEDM Program or Department Consent

IEDM 503(0) Course ID:015488 Department Consent Required

Career Placement Readiness Workshop

This non-credit graduate course will prepare students to seek professional employment in the areas of Integral Economic Development. The course will emphasize on identifying one (or a set of) target professional positions and preparing for interviews with the organization targeted. This course will give practical instruction on preparing and discussing the contents of a CV, sources to identify professional position openings, ways to contact the institution to set up interviews, prepare for the interviews and follow up.

Components: Workshop

Same As Offering: IEDP 503

Enrollment Requirements: IEDM or IEDP students only

IEDM 505(3) Course ID:015396

Introductory Accounting

Designed for both users and producers of accounting data. Balanced coverage of procedures used to prepare financial statements, the measurement theories underlying the procedures, and the economic environment in which accounting operates. Analysis of financial statement information. Minimal focus on bookkeeping techniques, but includes adequate conceptual preparation in accounting processes for students intending to take additional courses. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: ACCT 205, MGMT 205

Enrollment Requirements: IEDM Program or Department Consent

IEDM 510(3) Course ID:014320

Foundations of an Ethical Integral Social and Economic Development

The course examines current and classical ethical issues in economic development and management. It studies the application of moral standards, theories of ethics, Catholic Social Teaching, and applies theories of economic justice to domestic and international economic and management issues in economic development implementation. It also discusses rights and obligations of workers, organizations, and consumers and reviews ethical foundations of contemporary capitalism, the moral status of the operations of corporations in developing environments, and the social responsibility of business, civil societies, and governments.

Components: Lecture

Same As Offering: IEDP 510

Enrollment Requirements: IEDM Program or Department Consent

Arts & Sciences - Economics - Subject: Integral Economic Dev. Mgt.

IEDM 520(3) Course ID:014321

The Politics of Development Policy

How do good ideas become public policy? For any interesting development question, a large number of solutions are often proposed. So what determines which ideas are finally implemented? Why do some reforms succeed in one country and fail in another? How do policymakers, international donor organizations and their partners in think tanks, civil society, advocacy groups, the media and others ensure that one policy gets implemented over another? Regardless of the intellectual merit of an idea or solution, often the most important part of the answer is related to politics and the competition among interest groups in different institutional settings.

This course will help future policymakers and those evaluating their impact to have greater understanding and awareness of political dynamics (including those within bureaucracies), a greater ability to communicate

Components: Lecture

Same As Offering: IEDP 520

Enrollment Requirements: IEDM Program or Department Consent

IEDM 521(3) Course ID:014435

Global Agriculture and Food Security

This course introduces different economic and managerial aspects of the relationships between health and economic development. It presents the technical aspects and measurements use to establish the relations between health, development and equity in different countries as well as major health issues such as tropical diseases, insufficient health coverage, access to safe water and sanitation, immunization, aging and AIDS. It will also address economic and managerial aspects of dietary nutrition assessment of individuals and populations. How these aspects of nutrition influence decisions on food distribution in developing countries and the role of governmental, multilateral agencies and not-for-profit programs. It also studies economic and managerial techniques to reduce or prevent malnutrition and diseases at community, national and international levels. Also see Enrollment Requirements.

Components: Lecture

Same As Offering: IEDP 521

Enrollment Requirements: IEDM Program or Department Consent

IEDM 522(3) Course ID:014516

Development Aspects of Energy and Environment

This course introduces different economic and managerial aspects of the relationships between energy, environment, and sustainable development. The course examines the interplay between environment, energy, and technology and its effects on policy at different levels. It also addresses current issues such as biodiversity, energy sources and alternatives, deforestation, climate change, economic growth, and ecological sustainability.

Components: Lecture

Same As Offering: IEDP 522

Enrollment Requirements: IEDM Program or Department Consent

IEDM 523(3) Course ID:014517

Global Education and Community Development Policies

This course addresses economic and managerial issues related to development practices at the civil society level. It explores economically efficient ways of fostering civic initiative and cooperation within different cultural contexts as well as pro-active and efficient problem solving within communities to generate local ideas for economic development and civil society building. The course emphasizes the importance of education to economic and social development, the challenges of delivering quality education in developing countries and practical approaches to improve educational outcomes and community development.

Components: Lecture

Same As Offering: IEDP 523

Enrollment Requirements: IEDM Program or Department Consent

IEDM 524(3) Course ID:016917 Department Consent Required

Global Health for Development

The purpose of this course is to introduce basic concepts and methods of epidemiology, the foundations of global health. Building off epidemiology, students will also be introduced to key concepts related to social epidemiology. Mechanisms through which factors influence health will be discussed, as well as ways in which these mechanisms can operate across the life course based on the readings.

Components: Lecture

Same As Offering: IEDP 524

Enrollment Requirements: IEDM or IEDP students only

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Mgt.

IEDM 525(3) Course ID:015864

Public Policy

This course applies the concepts and tools of economics to analyze the role of government intervention, its justification, and implications for efficiency and fairness, under different policy areas. It also explores the political and practical aspects of managing major policy change through the public policy process. It addresses the crucial skills of commissioning, interpreting, and communicating policy analysis.

Components: Lecture

Same As Offering: IEDP 525

Course Equivalents: ECON 360

IEDM 530(0) Course ID:014363

Development and Practice Seminar I

A non-credit series of lectures by experts in the field of economic development, it serves as a valuable asset for the students to gain knowledge on current issues in the field, as well as job and networking opportunities.

Components: Lecture

Same As Offering: IEDP 530

Enrollment Requirements: Open to students in the IEDM program who are concurrently enrolled in at least one course that generates a tuition charge.

IEDM 531(0) Course ID:015517 Department Consent Required

Development and Practice Seminar II

A non-credit series of lectures by experts in the field of economic development, it serves as a valuable asset for the students to gain knowledge on current issues in the field, as well as job and networking opportunities.

A student only registers for 531 after having completed a semester's enrollment in 530.

Components: Lecture

Same As Offering: IEDP 531

Enrollment Requirements: IEDM or IEDP students only

IEDM 540(3) Course ID:014318

Integral Economic Development

This course covers different theories and strategies for economic development, with special emphasis on such issues as growth, income distribution, and the role of population. Free markets versus centralized planning analyzed in the light of recent experience. Special attention is also paid to international trade and finance. It also includes the techniques developed in economics to incorporate an interdisciplinary approach to economic analysis, so to capture historical, sociological, political, and psychological aspects as well as the role of culture, and institutions in the social and economic development process. Among others, it studies statistical techniques to measure human, social, and moral capital, democratic transition and consolidation, civil society, and rule of law.

Components: Lecture

Same As Offering: IEDP 540

Course Equivalents: ECON 540

Enrollment Requirements: IEDM Program or Department Consent

IEDM 543(3) Course ID:014361

Applied Econometrics I

This course provides an introduction to basic econometric methods. Econometric analysis consists in the use of statistical methods for estimating and testing economic relationship. The first part of the course reviews basic mathematical tools and fundamentals of probability, mathematical statistics, and basic concepts of matrix algebra. The core of the course is focused on the linear regression model and the violation of its assumptions. A preview of time series methods as well as more advance topic such as models for limited dependent variables will also be part of the course.

Components: Lecture

Same As Offering: IEDP 543

Enrollment Requirements: IEDM Program or Department Consent

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Mgt.

IEDM 546(3) Course ID:014853

Neuroeconomics

This course provides an introduction to experiments and aspects of experimental economics as well as the econometrics of it. The first half of the course will discuss mechanistic experiments, experimental economics, behavioral economics, neuroeconomics, and integral economics. The second half of the course will go through the econometrics of experiments and some selected methods used for impact evaluation.

Components: Lecture

Same As Offering: IEDP 546

Course Equivalents: ECON 445

Enrollment Requirements: IEDM Program or Department Consent

IEDM 547(1) Course ID:016243

Integral Economics Lab

Students need more hand on practice and time to work on their applied econometric/computer skills. This is very important for carrying out successfully their future work. This class will cover that need.

Components: Laboratory

Same As Offering: IEDP 547

Enrollment Requirements: IEDM or IEDP students only

IEDM 550(3) Course ID:014523

Program Management

This course examines project management roles and environments, the project life cycle and various techniques of work planning, and control and evaluation to achieve project objectives with the perspective of the relevance of strengthening institutions and an ethical behavior. It addresses common challenges in the administration of government programs. The tools currently available to project managers are discussed systematically and comprehensively throughout this course. It covers the different facets of project design and development as well as the scope and limitations of current evaluation techniques, including economic, political, social, and administrative factors. It also studies methodological approaches for design, data collection, analysis, and dissemination of results, as well as normative criteria for assessing public projects and policy changes.

Components: Lecture

Enrollment Requirements: IEDM Program or Department Consent

IEDM 551(3) Course ID:014519

Public Financial Management

This course covers public budgeting and financial management of central and local governments and public organizations. The course covers how public resources are allocated and the role that government plays in the economy. Specific topics covered include: (i) budgeting, expenditure, revenue, and borrowing decisions; (ii) capital markets and debt management; (iii) fundamentals of financing, structuring, privatizing, and regulating public projects; (iv) intergovernmental relations and private-public partnerships; and (v) the economic base and needs of the community and the nexus of the economic system and development efforts.

The course pays particular attention to challenges and solutions in the financing of development initiatives, addressing: (i) how, whether, and when to increase private participation in the development, investment, and operation of public projects; (ii) how to regulate the pricing and the quality of public projects; and (iii)

Components: Lecture

Enrollment Requirements: IEDM Program or Department Consent

IEDM 552(3) Course ID:014522

International Organizations and Development

This course (known as "International Organizations") will examine the role of international organizations in development work. It will explore the promotion and protection of internationally recognized human rights norms and their consequences in programs related to international cooperation for development. In particular, the course will focus on the history and function of international organizations, including the protection of human rights, and their relationship to sustainable development and political concerns.

Components: Lecture

Same As Offering: IEDP 552

Enrollment Requirements: IEDM Program or Department Consent

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Mgt.

IEDM 555(3) Course ID:015859

Infrastructure Planning and Policy

The course addresses the provision or lack of water, sewerage, electricity, and information in developing countries. It explores the environmental and social impact of contemporary infrastructure planning from different perspectives. It discusses the driving forces behind infrastructure planning and delivery, and the causes for their uneven distribution, the roles of urban planners and other stakeholders in choosing the approach to meet infrastructure needs of urban residents. Some of these topics include the balance between centralized and decentralized approaches to infrastructure delivery, the privatization of basic social services, and the role of local and community-based approaches to infrastructure delivery.

Components: Lecture

IEDM 561(3) Course ID:014520

Managing Not-for-Profits

This course addresses the management skills and tools necessary for building and growing not-for-profit organizations, and management and leadership best practices. It includes mission and goal setting, fundraising, strategy formulation, governance, and organization design. It also explores the techniques and skills necessary to identify opportunities, motivate employees, and mobilize resources to exert influences and effective change in society. Special emphasis is given to the strengthening of institutions in a context of social and economic development.

Components: Lecture

Enrollment Requirements: IEDM Program or Department Consent

IEDM 562(3) Course ID:014521

Survey Design

This course provides an introduction to survey methodology and design. The course covers the full process that goes from designing, conducting, analyzing and evaluating sample surveys. After a brief introduction, we will learn how to design a survey, methods available for data collection, how to evaluate survey questions, how to proceed with the interviews, how to deal with post-collection of survey data. Taken together with Applied Econometrics and Integral Neuroeconomics, this course serves as one of the three pillars for the student to develop their individual applied research project.

Components: Lecture

Same As Offering: IEDP 562

Enrollment Requirements: IEDM Program or Department Consent

IEDM 571(3) Course ID:015343

Advanced Macroeconomics

The course analyzes the determinants of aggregate demand and supply and their interactions in an open economy. The course will examine, among others, theoretical and empirical aspects of consumption, investment, and government. Short-run and long-run income determination, monetary and fiscal policies to meet inflation and employment targets, growth theory, and their connection to the balance of payments and exchange rates as well as theory growth and institutions in a context of developing economies.

Components: Lecture

Same As Offering: IEDP 571

Enrollment Requirements: IEDM or IEDP students only

The Politics of Development Policy

How do good ideas become public policy? For any interesting development question, a large number of solutions are often proposed. So what determines which ideas are finally implemented? Why do some reforms succeed in one country and fail in another? How do policymakers, international donor organizations and their partners in think tanks, civil society, advocacy groups, the media and others ensure that one policy gets implemented over another? Regardless of the intellectual merit of an idea or solution, often the most important part of the answer is related to politics and the competition among interest groups in different institutional settings.

This course will help future policymakers and those evaluating their impact to have greater understanding and awareness of political dynamics (including those within bureaucracies), a greater ability to communicate

Enrollment Requirements: IEDM or IEDP students only

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Policy

IEDP 521(3) Course ID:014435

Global Agriculture and Food Security

This course introduces different economic and managerial aspects of the relationships between health and economic development. It presents the technical aspects and measurements use to establish the relations between health, development and equity in different countries as well as major health issues such as tropical diseases, insufficient health coverage, access to safe water and sanitation, immunization, aging and AIDS. It will also address economic and managerial aspects of dietary nutrition assessment of individuals and populations. How these aspects of nutrition influence decisions on food distribution in developing countries and the role of governmental, multilateral agencies and not-for-profit programs. It also studies economic and managerial techniques to reduce or prevent malnutrition and diseases at community, national and international levels. Also see Enrollment Requirements.

Components: Lecture

Same As Offering: IEDM 521

Enrollment Requirements: IEDP students only

IEDP 522(3) Course ID:014516

Development Aspects of Energy and Environment

This course introduces different economic and managerial aspects of the relationships between energy, environment, and sustainable development. The course examines the interplay between environment, energy, and technology and its effects on policy at different levels. It also addresses current issues such as biodiversity, energy sources and alternatives, deforestation, climate change, economic growth, and ecological sustainability.

Components: Lecture

Same As Offering: IEDM 522

Enrollment Requirements: IEDP students only

IEDP 523(3) Course ID:014517

Global Education and Community Development Policies

This course addresses economic and managerial issues related to development practices at the civil society level. It explores economically efficient ways of fostering civic initiative and cooperation within different cultural contexts as well as pro-active and efficient problem solving within communities to generate local ideas for economic development and civil society building. The course emphasizes the importance of education to economic and social development, the challenges of delivering quality education in developing countries and practical approaches to improve educational outcomes and community development.

Components: Lecture

Same As Offering: IEDM 523

Enrollment Requirements: IEDP students only

IEDP 524(3) Course ID:016917

Department Consent Required

Global Health for Development

The purpose of this course is to introduce basic concepts and methods of epidemiology, the foundations of global health. Building off epidemiology, students will also be introduced to key concepts related to social epidemiology. Mechanisms through which factors influence health will be discussed, as well as ways in which these mechanisms can operate across the life course based on the readings.

Components: Lecture

Same As Offering: IEDM 524

Enrollment Requirements: IEDM or IEDP students only

IEDP 525(3) Course ID:015864

Public Policy

This course applies the concepts and tools of economics to analyze the role of government intervention, its justification, and implications for efficiency and fairness, under different policy areas. It also explores the political and practical aspects of managing major policy change through the public policy process. It addresses the crucial skills of commissioning, interpreting, and communicating policy analysis.

Components: Lecture

Same As Offering: IEDM 525

Course Equivalents: ECON 360

Enrollment Requirements: IEDM or IEDP students only

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Policy

IEDP 527(3) Course ID:016018

Epidemiology and Public Policy

The purpose of this course is to familiarize and engage students in the dynamics of policy and economic development that addresses disease or the health status of the population. Effective policies include actions that enable policy goals to be achieved and therefore, should include a means of translating policy decisions into effective programs. Policies that have not been realized through program implementation represent failures and should stimulate interest in understanding why the policies remained barren.

In this course, the student will define the problem with respect to ¿who, what, when, where and why¿ to determine whether the problem requires a policy solution. If yes, the student will determine the best options using the integral approach, will determine stakeholders, supporters of the policy, the cost of implementing the policy and the expected impact of the policy. The course builds on the basic principles and concepts of epidemiology from IEDM 521 that relates to the design, analysis and interpretation of epidemiological

Components: Lecture

Enrollment Requirements: Open to graduate students in the IEDM and IEDP programs and undergraduates who have taken ECON 101, ECON 102, and ECON 223

IEDP 530(0) Course ID:014363

Development and Practice Seminar I

A non-credit series of lectures by experts in the field of economic development, it serves as a valuable asset for the students to gain knowledge on current issues in the field, as well as job and networking opportunities.

Components: Lecture

Same As Offering: IEDM 530

Enrollment Requirements: Open to students in the IEDP program who are concurrently enrolled in at least one course that generates a tuition charge.

IEDP 531(0) Course ID:015517 Department Consent Required

Development and Practice Seminar II

A non-credit series of lectures by experts in the field of economic development, it serves as a valuable asset for the students to gain knowledge on current issues in the field, as well as job and networking opportunities.

A student only registers for 531 after having completed a semester's enrollment in 530.

Components: Lecture

Same As Offering: IEDM 531

IEDP 540(3) Course ID:014318

Integral Economic Development

This course covers different theories and strategies for economic development, with special emphasis on such issues as growth, income distribution, and the role of population. Free markets versus centralized planning analyzed in the light of recent experience. Special attention is also paid to international trade and finance. It also includes the techniques developed in economics to incorporate an interdisciplinary approach to economic analysis, so to capture historical, sociological, political, and psychological aspects as well as the role of culture, and institutions in the social and economic development process. Among others, it studies statistical techniques to measure human, social, and moral capital, democratic transition and consolidation, civil society, and rule of law.

Components: Lecture

Same As Offering: IEDM 540

Course Equivalents: ECON 540

Enrollment Requirements: IEDM or IEDP students only

IEDP 543(3) Course ID:014361

Applied Econometrics I

This course provides an introduction to basic econometric methods. Econometric analysis consists in the use of statistical methods for estimating and testing economic relationship. The first part of the course reviews basic mathematical tools and fundamentals of probability, mathematical statistics, and basic concepts of matrix algebra. The core of the course is focused on the linear regression model and the violation of its assumptions. A preview of time series methods as well as more advance topic such as models for limited dependent variables will also be part of the course.

Components: Lecture

Same As Offering: IEDM 543

Enrollment Requirements: IEDM or IEDP students only

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Policy

IEDP 544(3) Course ID:015604

Applied Econometrics II

This course builds from the topics taught in Econometrics I. The goal of the course is to provide students with a deeper understanding of the evaluation methods taught in Econometrics I as well as to introduce time series analysis. The course also aims to test the students' understanding through the critique and review of articles as well as writing a paper.

Components: Lecture

Course Equivalents: ECON 544

Enrollment Requirements: IEDP students only

IEDP 546(3) Course ID:014853

Neuroeconomics

This course provides an introduction to experiments and aspects of experimental economics as well as the econometrics of it. The first half of the course will discuss mechanistic experiments, experimental economics, behavioral economics, neuroeconomics, and integral economics. The second half of the course will go through the econometrics of experiments and some selected methods used for impact evaluation.

Components: Lecture

Same As Offering: IEDM 546

Course Equivalents: ECON 445

Enrollment Requirements: IEDM or IEDP students only

IEDP 547(1) Course ID:016243

Integral Economics Lab

Students need more hand on practice and time to work on their applied econometric/computer skills. This is very important for carrying out successfully their future work. This class will cover that need.

Components: Laboratory

Same As Offering: IEDM 547

Enrollment Requirements: IEDM or IEDP students only

IEDP 552(3) Course ID:014522

International Organizations and Development

This course (known as "International Organizations") will examine the role of international organizations in development work. It will explore the promotion and protection of internationally recognized human rights norms and their consequences in programs related to international cooperation for development. In particular, the course will focus on the history and function of international organizations, including the protection of human rights, and their relationship to sustainable development and political concerns.

Components: Lecture

Same As Offering: IEDM 552

Enrollment Requirements: Open to graduate students in the IEDM and IEDP programs and undergraduates who have taken ECON 101, ECON 102, and ECON 223

IEDP 553(3) Course ID:015862

Public Finance

The course explores the financing and provision of public goods and the conditions under which market failures occur, with particular focus on the role of information asymmetries, uncertainty and externalities in developing countries. The course examines how differences in administrative capacity between developing countries and more advanced countries affect the nature and prevalence of these market failures and develops a framework for government policies, or other third parties such as non-governmental interventions, as responses to market failures in a developing country context. It also covers the basic concepts and techniques of public management: how to advance policy in a bureaucracy; how to structure organizations for optimum productivity; how to master budgetary and financial processes; how to communicate and be persuasive; how to develop and use effective management information systems; and how to manage human resources effectively.

Components: Lecture

Course Equivalents: ECON 359

IEDP 554(3) Course ID:016019

Infrastructure for Development

The course addresses the policy, strategy, and practical application of critical infrastructure protection given the current risk exposure. It discusses the challenges and opportunities associated with infrastructure-related, public-private partnerships; information-sharing; risk analysis and prioritization; risk mitigation; performance metrics; program management; incident management; and long-term stability.

Components: Lecture

Enrollment Requirements: Open to graduate students in the IEDM and IEDP programs and undergraduates who have taken ECON 101, ECON 102, and ECON 223

The Catholic Univ of America
Course Catalog

Arts & Sciences - Economics - Subject: Integral Economic Dev. Policy

IEDP 555(3) Course ID:015863

Infrastructure Planning and Policy

The course addresses the provision or lack of water, sewerage, electricity, and information in developing countries. It explores the environmental and social impact of contemporary infrastructure planning from different perspectives. It discusses the driving forces behind infrastructure planning and delivery, and the causes for their uneven distribution, the roles of urban planners and other stakeholders in choosing the approach to meet infrastructure needs of urban residents. Some of these topics include the balance between centralized and decentralized approaches to infrastructure delivery, the privatization of basic social services, and the role of local and community-based approaches to infrastructure delivery.

Components: Lecture

Enrollment Requirements: IEDM or IEDP students only

IEDP 556(3) Course ID:016020

Business Enterprise and Development

The course explores who are the entrepreneurs in developing countries; their sex, age, culture, education and economic and class background, social networks, and psychological traits among others. The course also addresses the conditions of entrepreneurship in the institutional environment in different regions and countries. Some of the topics include entrepreneurship and how can it be measured; characteristics of the successful entrepreneur; using Microfinance for entrepreneurs; the role of social networks, business networks and associations; entrepreneurship and employment creation for the youth; women entrepreneurs; particular challenges and opportunities; institutional environments conducive for entrepreneurship and how do they vary between different regions and countries.

Components: Lecture

Enrollment Requirements: Open to graduate students in the IEDM and IEDP programs and undergraduates who have taken ECON 101, ECON 102, and ECON 223

IEDP 562(3) Course ID:014521

Survey Design

This course provides an introduction to survey methodology and design. The course covers the full process that goes from designing, conducting, analyzing and evaluating sample surveys. After a brief introduction, we will learn how to design a survey, methods available for data collection, how to evaluate survey questions, how to proceed with the interviews, how to deal with post-collection of survey data. Taken together with Applied Econometrics and Integral Neuroeconomics, this course serves as one of the three pillars for the student to develop their individual applied research project.

Components: Lecture

Same As Offering: IEDM 562

Enrollment Requirements: IEDM or IEDP students only

IEDP 571(3) Course ID:015343

Advanced Macroeconomics

The course analyzes the determinants of aggregate demand and supply and their interactions in an open economy. The course will examine, among others, theoretical and empirical aspects of consumption, investment, and government. Short-run and long-run income determination, monetary and fiscal policies to meet inflation and employment targets, growth theory, and their connection to the balance of payments and exchange rates as well as theory growth and institutions in a context of developing economies.

Components: Lecture

Same As Offering: IEDM 571

Enrollment Requirements: IEDM or IEDP students only

IEDP 572(3) Course ID:015695 Department Consent Required

Advanced Microeconomics

This course provides an in-depth analysis of supply and demand, the theory of the consumer and theory of the firm, with particular emphasis on public policy in developing countries. The course focuses on the determinants of consumer and firm behavior as well as the market and its failures with an integral approach. Key concepts include efficiency, opportunity cost, the role of incentives and marginal analysis.

Components: Lecture

Arts & Sciences - Education - Subject: Education

EDUC 101(1) Course ID:000622

Introduction to Teaching

A one-credit course for any student interested in becoming an early childhood, elementary, or secondary school teacher, or interested in exploring courses available through the Education Studies program. Introduces students to the Catholic University Teacher Education Program's philosophy and requirements. Course content designed to help students clarify whether they have the disposition to be good teachers and want to consider teaching as a career goal.

Components: Lecture

EDUC 251(3) Course ID:000152 Department Consent Required

Foundations of Education

Introduces candidates to CUA's Conceptual Framework as well as to the aims, goals, and functions of schooling within the context of the philosophical, historical, and sociological bases of American education. Develops a relationship between theory and practice through interaction with the professional community and observation experiences in diverse local schools. Candidates become familiar with the multiple community agencies that impact PreK-12 student learning. Designed for Education majors: departmental consent required.

Components: Lecture

Enrollment Requirements: Not Open to Freshmen

EDUC 261(3) Course ID:000153

Human Growth and Development

Introduces candidates to major concepts, principles, theories, and research related to the development of a person from the prenatal period through adulthood. Experiences with observation and other formal and informal assessment methods to learn about children's characteristics and needs, and the multiple influences on development and learning. Encourages dispositions characteristic of professional educators including attention to ethical standards. Designed for Education majors: departmental consent required.

Components: Lecture

Enrollment Requirements: Not Open to Freshmen

EDUC 271(3) Course ID:000635

Psychology of Learning

Introduces principles of educational psychology. Compares application of knowledge of methods based on research in cognitive science with those based on principles of behaviorism. Topics include creating positive learning environments and supportive relationships for learning, increasing motivation, problem solving, assessment of student performance, and planning instruction to meet the needs of diverse learners. Candidates participate in a tutoring experience in a school as part of course requirements and use CUA's Conceptual Framework to reflect on their P-12 students performance. All majors tutor P-12 students in the age range for their major; e.g., early childhood majors provide tutoring for children between the ages of 3 years and 8 years (e.g., children in Pre-K through 3rd grade). Designed for Education majors: departmental consent required.

Components: Lecture

Enrollment Requirements: Not Open to Freshmen

EDUC 301(1) Course ID:000928

Practicum Early Childhood/Elementary Education

Taken concurrently with courses in classroom management, curriculum and instruction, and children's literature. Candidates try out their knowledge, skills, and dispositions for teaching under the guidance of an experienced teacher. They observe and work with diverse Pre-K through 3rd grade (for early childhood education majors) and 1st through 6th grade (for elementary education majors) students while collaborating with their cooperating teacher and other teacher education candidates. To provide a diversity of experiences, candidates are placed in a variety of grade levels in urban or suburban public, private, Catholic or charter schools or in diverse early childhood settings. Using CUA's Conceptual Framework, candidates analyze the school ethos, the curriculum, instruction, and organizational procedures.

Components: Practicum

EDUC 302(1) Course ID:000929

Practicum in Early Childhood/Elementary Education

Taken concurrently with methods courses in social studies, English language arts, mathematics, science, health, and physical education. Candidates observe, tutor, and teach lessons including planning, implementing, and evaluating an interdisciplinary, thematic unit and collaborate with their cooperating teacher and their peers. Using CUA's Conceptual Framework, early childhood candidates reflect on their diverse PreK-3rd grade students' performance whereas elementary education candidates reflect on their diverse 1st through 6th grade students' performance.

Components: Practicum, Seminar

The Catholic Univ of America
Course Catalog

Arts & Sciences - Education - Subject: Education

EDUC 303(3) Course ID:000766

Practicum in Early Childhood / Elementary Education

Gives candidates additional guided experience observing and working with diverse PreK-6th grade students and their classroom teacher. Candidates create meaningful learning experiences for children. Could be required as a precondition for student teaching. Prerequisite: Permission of instructor.

Components: Practicum

EDUC 311(3) Course ID:015681

Children's Literature in Curriculum

Introduces candidates to the field of children's literature. Candidates read and become familiar with major works in each of the genres, learn the characteristics that distinguish quality children's literature, and become familiar with reference materials that are useful for selecting literature for specific purposes. Helps candidates understand the way literature and children's librarians can support the school curriculum. Prerequisite: 251, 261, 271, or permission of instructor. Acceptance into the Teacher Education Program.

Components: Lecture

EDUC 312(3) Course ID:000941

Curriculum and Instruction in Early Childhood and Elementary School

Explores orientations to curriculum in the early childhood classroom (Pre-K) and in elementary school (1st through 3rd grade for early childhood candidates) and 1st through 6th grade for elementary education candidates) and examines theoretical and practical bases of approaches to instruction. Three domains of knowledge basic to the course are organizational, executive, and interactive functions of teaching and schools. Candidates present and continuously reexamine their beliefs about teaching while they plan and implement instruction to meet their diverse PreK-3rd grade (early childhood) and 1st-6th grade (elementary education) students' needs. As part of the teaching-learning process, candidates use assessment and reflect upon how they impact their PreK-3rd grade (for ECE majors) and 1st through 6 (for ELE majors) students' learning. Prerequisite: 251, 261, 271. Acceptance into the Teacher Education Program.

Components: Lecture

EDUC 313(3) Course ID:015678

Classroom Management for Regular and Special Needs Children

Candidates use understanding of individual and group motivation and behavior to create a learning environment that encourages positive social interaction, active engagement in learning, and self-motivation. Course emphasizes five principles: understanding students' psychological and learning needs; establishing positive interpersonal relations among the teacher, students, and parents; using organizational procedures which maximize on-task behavior; using instructional methods which encourage optimal learning; and using counseling and behavioral methods to examine and change behavior. Principles of formal and informal assessment are discussed. Prerequisite: 251, 261, 271. Acceptance into the Teacher Education Program.

Components: Lecture

EDUC 320(3) Course ID:015679

Teaching Early Childhood & Elementary Social Studies (PreK-6th grade)

Acquaints candidates with the theory and practice of teaching social studies to diverse PreK-3rd grade students (for early childhood education majors) and 1st-6th grade (for elementary education majors). Opportunities to develop a framework for integrated planning, implementing, and evaluating social studies with other subject matter areas, e.g. reading. Explores concept development, content background knowledge, pedagogical content knowledge, and democratic classrooms. Introduces the appropriate national and state standards for social studies education and gives candidates an opportunity to plan educational experiences for school settings that reflect knowledge of these standards. Emphasizes the use of community resources and technology. Prerequisite: 251, 261, 271, 312 or permission of instructor. Concurrent: 302. Acceptance into the Teacher Education Program.

Components: Lecture

EDUC 321(3) Course ID:000627

Teaching Early Childhood and Elementary Science, Health and Physical Education (PreK-6th Grade)

Introduces candidates to the theory and practice of teaching science, PE, and health in PreK-3rd grade (for early childhood education majors) and 1st through 6th grade (for elementary education majors) classrooms. Focuses on developing a framework for integrated planning, implementing, and evaluating science, PE, and health thematic units. Explores concept development, subject background knowledge, and teaching strategies. Introduces the appropriate national and state standards for science, health, and physical education and gives candidates an opportunity to develop educational experiences for school settings that reflect knowledge of these standards. Promotes learning activities and curricular sequences to develop positive attitudes towards science, health behaviors, safety practices, and physical fitness. Prerequisite: 251, 261, 271, 312 or permission of instructor. Acceptance into the Teacher Education Program.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Education - Subject: Education

EDUC 323(3) Course ID:015680

Methods & Materials in Modern Early Childhood and Elementary Mathematics

Introduces candidates to the theory and practice of teaching mathematics to diverse Pre-K-3rd grade students (for early childhood education majors) and 1st through 6th grade (for elementary education majors). Promotes content proficiency, concept development, pedagogy based on cognitive and developmental theories, and wise use of modern mathematics curriculum materials and manipulatives. Introduces the appropriate national and state standards for mathematics education and gives candidates an opportunity to plan educational experiences for early childhood and elementary school settings that reflect knowledge of these standards. For junior teacher education candidates only. Prerequisite: 251, 261, 271, 312, or permission of instructor. Acceptance into the Teacher Education Program.

Components: Lecture

Enrollment Requirements: EDUC 251, EDUC 261, and EDUC 271 (formerly 361)

EDUC 324(3) Course ID:015682

Reading and Language Arts in Early Childhood Settings and Elementary Schools

Introduces candidates to the theory and practice of teaching reading and language skills necessary in the early and elementary school years. Stresses the interrelationship between oral and written language skills and the role of literature in developing these skills. Promotes concept and skill development, and pedagogy based on cognitive and developmental theories. Gives candidates an opportunity to plan educational experiences for diverse early childhood (PreK-3rd grade) and elementary (1st-6th grade) students. For junior teacher education candidates only. Prerequisite: 251, 261, 271, 312 or permission of instructor. Acceptance into the Teacher Education Program.

Components: Lecture

EDUC 341(3) Course ID:000976

Curriculum and Strategies in Early Childhood Education

Candidates learn about content areas and instructional strategies in early childhood education including language arts, science, mathematics, community studies (e.g., social studies), art, and music. Candidates use this knowledge to design and evaluate an 1) integrated curriculum unit that promotes positive development as well as respectful relationships with families and 2) lessons that are aligned to NAEYC standards. Candidates develop a child portfolio to practice documenting and assessing behavior and using available resources to promote supportive interactions with children and their families aligned to NAEYC standards. Attention is given to learning a continuum of teaching strategies for developmentally effective approaches and to identifying oneself as an early childhood professional. Field-based placement in early childhood education settings, such as childcare centers or kindergarten, 1st, 2nd, or 3rd grade classrooms is required in this course.

Components: Lecture

Enrollment Requirements: EDUC 251, EDUC 261, and EDUC 271 (formerly 361)

EDUC 342(3) Course ID:000973

Models in Early Childhood Education

Candidates learn about the history of and current issues in early childhood education with emphasis on understanding young children's characteristics and needs as well as multiple interacting influences on development and learning. Candidates visit several different program models like Reggio Emilia, Head Start, Montessori, and use the CUA Conceptual Framework to reflect on and critically evaluate different curriculum options. Candidates learn about the goals and uses of assessment in each model and the role that parents and communities play in each approach. As part of an emphasis on becoming an early childhood professional, candidates develop and defend their own philosophy of teaching. Field-based placement required in conjunction with this course or permission of instructor. Prerequisites for undergraduates: 251, 261, 271, or equivalent.

Components: Lecture

Course Equivalents: EDUC 543

Enrollment Requirements: EDUC 251, EDUC 261, and EDUC 271 (formerly 361)

EDUC 381(3) Course ID:015684

Educating Diverse Learners

This interactive course provides an overview of the origins of special education, the laws governing special education, and current best practices in the education of diverse learners. Diverse learners include students with disabilities, gifted and talented as well as at-risk students, and students from diverse ethnic, linguistic, and racial backgrounds. Candidates learn state-of-the-art instructional practices grounded in research enabling them to include and successfully educate all students.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Education - Subject: Education

EDUC 382(3) Course ID:015685

Reading in the Content Areas: Learning to Learn from Text

Focuses on theory and research related to reader-text interactions and strategies for enhancing text comprehension. Candidates consider multiple literacies and processes of reading and writing that enable learners to construct meaning from print and non-print texts. Candidates develop a unit of instruction that is responsive to learner needs in a case study approach. Field experience (20 hours) is an integral part of this course.

Components: Lecture

EDUC 383(1) Course ID:016573 Department Consent Required

Reading in the Content Areas Practicum

EDUC 383: Twenty hours of field experience in secondary schools associated with EDUC 382. Students are placed in a public, charter, Catholic, or private school and visit the assigned schools throughout the semester with the purpose of observing instruction and, if feasible, supporting the work of the classroom teacher. Observations are linked to specific assignments and reflections discussed in the course associated with them. Placements are arranged to allow students to experience a variety of grade levels and a diversity of student bodies by the end of the program.

Components: Practicum

Enrollment Requirements: Requires concurrent enrollment in EDUC 382

Room Requirements: NO CLASSROOM NEEDED(1)

EDUC 386(3) Course ID:015687

Curriculum and Methods in Adolescent Education

Explores the nature of teaching and learning in secondary school settings. By focusing on the decisions and dilemmas teachers face concerning curriculum, students, and their institutional context, helps prospective teachers become competent and reflective in their professional roles. Emphasizes planning and classroom management for diverse populations. Field experience (20 hours) and microteaching are integral parts of this course. Prerequisites: 251, 271.

Components: Lecture

EDUC 387(1) Course ID:016561 Department Consent Required

Adolescent Education: Practicum

EDUC 387: Twenty hours of field experience in secondary schools associated with EDUC 386. Students are placed in a public, charter, Catholic, or private school and visit the assigned schools throughout the semester with the purpose of observing instruction and, if feasible, supporting the work of the classroom teacher. Observations are linked to specific assignments and reflections discussed in the course associated with them. Placements are arranged to allow students to experience a variety of grade levels and a diversity of student bodies by the end of the program

Components: Practicum

EDUC 400(2) Course ID:000995

Reflective Teaching Tutorial

A two-credit, pass/fail course for early childhood and elementary education majors to be taken in conjunction with student teaching. Credit for this course involves successful completion of an electronic portfolio and an action research project linked to student teaching. This capstone project is designed to help candidates address most of the standards of the NAEYC and ACEI specialized professional associations as they design, implement and evaluate their efforts to positively impact the learning of children in grades PreK through 6th grade.

Components: Directed Study/Research

Enrollment Requirements: Requires concurrent enrollment in EDUC 499 and one of the following groups: EDUC 401, EDUC 402, EDUC 403 or EDUC 411, EDUC 412, EDUC 413 or EDUC 461, EDUC 462, EDUC 463

EDUC 401(3) Course ID:000931

Student Teaching & Seminar: Early Childhood

EDUC 401, 402, and 403, taken concurrently, involve student teaching, conducting action research in the classroom, and completing an electronic portfolio. The student teaching experience (401 and 402) consists of a full-day, fourteen-week semester spent in an early childhood classroom (e.g., early learning center) or an elementary school setting (kindergarten or grades 1st through 3rd) through which the candidate gains teaching knowledge and experience. For 401, candidates observe and assume limited teaching responsibility for 10 weeks. For 402, candidates assume full responsibility for a minimum of four weeks of the semester. Student teaching seminar (403) involves attending a weekly seminar and completing an action research project as well as an electronic portfolio designed to meet professional and departmental standards. Only one other course may be taken with the student teaching experience. Prerequisites: Successful completion of program requirements; permission of Director of Teacher Education; senior or graduate status.

Components: Internship

Enrollment Requirements: Requires concurrent enrollment in EDUC 402, EDUC 403, and EDUC 499

Transformational Leadership and Reflective Thinking for Educational Professionals

Transformational Leadership and Reflective Thinking for Educational Professionals is a study of the current research in leadership theory and its application to non-school educational settings. Developments in communication, decision-making, conflict resolution, delegation, goal setting are included. This course will familiarize students with how reflection by a leader assists the change process and keeps an organization vital. Particular emphasis will be given to the contemplative principle as a reflective model of leadership practice unique to Catholic institutional contexts.

Components: Lecture

EDUC 421(3) Course ID:015677

Interpersonal Communication, Consultation & the Process of Change

A course covering intrapersonal and interpersonal issues in communication, the basics of group processes, the elements of change processes and consultation and collaboration in inclusive settings. Emphasizes the communication strategies employed by education, human resource, and therapeutic personnel. Structured experiences give candidates practice in responding in a manner that communicates respect and effects change.

Components: Lecture

EDUC 422(3) Course ID:015675

Race, Class, Gender and Disability in Education

Do schools create or perpetuate race, gender, and social class inequalities? Or do they accomplish their mandate to provide equal education for all? What is the role of schooling in relation to problems of racism, sexism, classism, and disability? Includes study of various theoretical perspectives, research, and everyday practice, with primary focus on contemporary American society. Examines methods for eliminating inequalities in schools and classrooms. Open to all upper-division undergraduates and graduate students interested in examining these issues.

Components: Lecture

EDUC 425(3) Course ID:015676

Psychology of Learning for Diverse Populations

This course focuses on behavioral and cognitive science theories of learning and how these theories apply to diverse populations. Once students have been introduced to the theories, they spend considerable time applying the theoretical constructs to problems of curriculum and instruction in school settings. These applications occur through the use of case studies of real school-age children representative of diverse populations, and students with special needs.

Components: Lecture

EDUC 431(3) Course ID:017495 Department Consent Required

Literacy and Language Instruction for Diverse Readers

EDUC 431 In this course we explore multiple sources that can contribute to literacy difficulties with all children, including children with linguistic and cultural diversities and additional issues when a child has a disability. The course stresses the importance of balanced instruction that places the functions of oral and written language to represent and communicate meaning at the forefront while providing teachers with the knowledge and skills they need to facilitate children's language and literacy growth. This course will support candidates; use of a wide range of instructional practices to support reading and writing instruction. Topics will include: (a) differentiation of literacy instruction, (b) evidence-based decision making for classroom organization and instructional groupings, (c) designing balanced instruction (i.e., including oral language, phonemic awareness, word identification, phonics, vocabulary development, fluency, comprehension, integrated reading/writing) to meet the needs of all students, (c) using and modeling

Parenting in Diverse Contexts

EDUC 443: Parenting in Diverse Contexts - This course will provide a window into the worlds of parenting across the lifespan and professionals who work with parents in diverse contexts. The overall goals of the course are to begin to understand the issues and trends regarding parenting and to gain a practical understanding of professionals; involvement with parents. We will explore the lives and values of parents from many diverse perspectives and cultural backgrounds as they raise their own children. We will also explore our own lives, experiences, and values and discuss how they influence our behavior and thinking not only as potential (or current) parents, but also as future professionals working with parents.

Components: Lecture

EDUC 445(3) Course ID:015160

Contemporary Issues in American Education

EDUC 445: Contemporary Issues in American Education is a seminar on the current issues in American education including the political, social, economic, and religious goals of education; controversies regarding control, financing and reform of American education; and other issues such as equal educational opportunity, school choice, educational evaluation, and the profession of teaching. Students will have an opportunity to suggest additional topics of interest.

Secondary Content Methods

EDUC 478: Thirty hours of field experience in secondary schools associated with the Methods courses in the specific content-area of licensure (i.e., EDUC 479, EDUC 480, or EDUC 485). Students are placed in a public, charter, Catholic, or private school and visit the assigned schools throughout the semester with the purpose of observing instruction and, if feasible, supporting the work of the classroom teacher. Observations are linked to specific assignments and reflections discussed in the course associated with them. Placements are arranged to allow students to experience a variety of grade levels and a diversity of student bodies by the end of the program.

Components: Practicum

Enrollment Requirements: requires concurrent enrollment in one of the following: EDUC 479, EDUC 480, or EDUC 485

Room Requirements: NO CLASSROOM NEEDED(1)

EDUC 479(3) Course ID:015753

Teaching Mathematics in Middle Schools and High Schools

Theory and practice of teaching mathematics to diverse middle school and high school students. Students develop skill in pedagogical approaches to teaching mathematics based on cognitive and developmental theories, as well as familiarity with modern curricular materials and aids. Introduces students to national and state standards for mathematics education and provides opportunities to develop lesson plans that reflect these standards. Field-based practicum (30 hrs) and micro-teaching required. Prerequisites: 251, 271 and 386.

Components: Lecture

EDUC 480(3) Course ID:015683

Teaching English in Secondary Schools

Acquaints students with issues and research in the curriculum and methods of English education. Focuses on development of strategies for guiding diverse learners in the writing process and in response to a variety of literary texts. Students develop personal philosophies of language arts instruction and link content and pedagogical knowledge in planning and implementation of lessons and in assessments of learning. Field-based practicum (30 hrs.) required. Prerequisites: 251, 271, and 386.

Components: Lecture

EDUC 485(3) Course ID:015686

Teaching Social Studies in Secondary Schools

Acquaints candidates with various approaches to social studies education and the major controversies in the field. Candidates develop a philosophy of social studies education, plan instruction, and critique curriculum materials. Field-based practicum (30 hrs.) required.

Components: Lecture

Enrollment Requirements: EDUC 251, EDUC 271 and EDUC 386 or Graduate Standing

Models in Early Childhood Education

Candidates learn about the history of and current issues in early childhood education with emphasis on understanding young children's characteristics and needs as well as multiple interacting influences on development and learning. Candidates visit several different program models like Reggio Emilia, Head Start, Montessori, and use the CUA Conceptual Framework to reflect on and critically evaluate different curriculum options. Candidates learn about the goals and uses of assessment in each model and the role that parents and communities play in each approach. As part of an emphasis on becoming an early childhood professional, candidates develop and defend their own philosophy of teaching. Field-based observation required in conjunction with this course or permission of instructor.

Family Support using a Strengths-Based Model

Viewing families of young children from a developmental relationship-based framework as well as an ecological framework that includes the social environment and communities, this course prepares candidates to provide individualized support to families with children including those at-risk or who have identified special education needs. Candidates will learn to listen to families' expressed needs and priorities for their child and recognize family strengths as a basis for response in school and home-based programs.

Components: Lecture

EDUC 575(3) Course ID:014156 Department Consent Required

Supervised Internship: Early Childhood

This course is the capstone early childhood professional practice experience in the field. It involves professional practice teaching, conducting action research in the classroom, and completing an electronic portfolio of one's work. The student teaching experience is the culmination of a full-day, fourteen-week professional experience spent in an early childhood setting through which the candidate gains teaching knowledge and experience. Prerequisites: Successful completion of program requirements; permission of Director of Teacher Education and/or Advisor.

Components: Practicum

EDUC 579(3) Course ID:015754

Teaching Mathematics in Middle Schools and High Schools

Theory and practice of teaching mathematics to diverse middle school and high school students. Students develop skill in pedagogical approaches to teaching mathematics based on cognitive and developmental theories, as well as familiarity with modern curricular materials and aids. Introduces students to national and state standards for mathematics education and provides opportunities to develop lesson plans that reflect these standards. Field-based practicum (30 hrs) and micro-teaching required. Prerequisites: 525 and 586.

Components: Lecture

EDUC 580(3) Course ID:000964

Teaching English in Secondary Schools

Acquaints students with issues and research in the curriculum and methods of English education. Focuses on development of strategies for guiding diverse learners in the writing process and in response to a variety of literary texts. Students develop personal philosophies of language arts instruction and link content and pedagogical knowledge in planning and implementation of lessons and in assessments of learning. Field-based practicum (30 hrs.) required. Prerequisites: 525 and 586.

Components: Lecture

EDUC 581(3) Course ID:000969

Educating Diverse Learners

This interactive course provides an overview of the origins of special education, the laws governing special education, and current best practices in the education of diverse learners. Diverse learners include students with disabilities, gifted and talented as well as at-risk students, and students from diverse ethnic, linguistic, and racial backgrounds. Candidates learn state-of-the-art instructional practices grounded in research enabling them to include and successfully educate all students.

EDUC 582(3) Course ID:001131

Reading in the Content Areas: Learning to Learn from Text

Focuses on theory and research related to reader-text interactions and strategies for enhancing text comprehension. Candidates consider multiple literacies and processes of reading and writing that enable learners to construct meaning from print and non-print texts. Candidates develop a unit of instruction that is responsive to learner needs in a case study approach. Field experience (20 hours) is an integral part of this course.

Components: Lecture

EDUC 585(3) Course ID:006022

Teaching Social Studies in Secondary Schools

Acquaints candidates with various approaches to social studies education and the major controversies in the field. Candidates develop a philosophy of social studies education, plan instruction, and critique curriculum materials. Field-based practicum (30 hrs.) required.

Components: Lecture

Enrollment Requirements: EDUC 251, EDUC 271 (formerly 361) and EDUC 586 or Graduate Standing

EDUC 586(3) Course ID:000980

Curriculum and Methods in Adolescent Education

Explores the nature of teaching and learning in secondary school settings. By focusing on the decisions and dilemmas teachers face concerning curriculum, students, and their institutional context, helps prospective teachers become competent and reflective in their professional roles. Emphasizes planning and classroom management for diverse populations. Field experience (20 hours) and microteaching are integral parts of this course. Prerequisites: 525.

Student Teaching: Seminar

Taken concurrently with EDUC 600, this course involves conducting action research in the classroom, and completing an electronic portfolio. The student teaching experience (600) consists of a full-day, fourteen-week semester spent in a secondary school through which the candidate gains teaching knowledge and experience. The student teaching seminar (413) involves attending a weekly seminar and completing an action research project as well as an electronic portfolio designed to meet professional and departmental standards. Only one other course may be taken with the student teaching experience. Prerequisites: Successful completion of program requirements; permission of Director of Teacher Education; graduate status.

Components: Seminar

Enrollment Requirements: Requires concurrent enrollment in EDUC 600 and EDUC 599

EDUC 635(3) Course ID:001055 Department Consent Required

Psychological Measurement

This course introduces formal and informal assessment techniques for analyzing learning and behavior in classroom contexts. Students examine basic principles of measurement, validity, reliability, and norms, and consider ethical issues in the assessment process. School aptitude and achievement tests, behavior rating scales and developmental inventories are critiqued. Applying models from educational psychology, informal procedures to analyze how students learn are introduced as are the principles and procedures to conduct functional analyses of behavior. Concurrent with EDUC 533. Department Consent required. Equivalent To: PSY 635.

Components: Lecture

EDUC 637(3) Course ID:001058

Curriculum and Program Evaluation

Lecture Introduction to evaluation models; designing and analyzing evaluation studies; overview of data gathering and assessment techniques; and discussion of problems associated with educational evaluation. Students will design a major evaluation project.

Components: Lecture

EDUC 639(3) Course ID:001061

Human Growth and Development

A consideration of the various aspects of growth and development across the life span. Special focus on development as it applies to education and schooling.

Components: Lecture

ENG 236(3) Course ID:000207

American Literature II

Survey of works by major authors from the late nineteenth to the twenty-first century. Fulfills English major and minor elective requirements.

Components: Discussion, Lecture

ENG 250(3) Course ID:013330

Medieval Pathways

This interdisciplinary course explores the complexity of the medieval world (ca. 300-1500) as a way of introducing students to Medieval Studies. The course introduces multiple different modes of inquiry, or pathways, to the Middle Ages. Team-taught by several instructors, the course focuses on a different unifying theme each year. Students examine both material and written sources, and participate in multiple field trips to receive a hands-on introduction to Medieval Studies and to the many resources on campus and in Washington, D.C. The longer class session is used for occasional off-campus visits. Otherwise, the class will meet twice a week for 75 minutes each. The course serves as a gateway to the Medieval & Byzantine Studies major and minor (as MDST) and may fulfill the Arts & Sciences humanities requirement (as HIST or MDST) or literature requirement (as ENG).

Components: Lecture

Course Equivalent: MDST 201, HIST 201

ENG 290(3) Course ID:015703

Contemporary Literature and War

A survey for non-majors of contemporary literary responses to 20th and 21st century war. The primary focus of the course is on novels, though texts may also include poetry, short stories, memoir, and film. The course will examine questions of how artists have represented and memorialized the First and Second World Wars, the Vietnam War, and the War on Terror.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

ENG 300(3) Course ID:019009

Intro to Creative Writing

In this course, we will read literary texts with an eye to learning about the forms in which we will write: the personal essay, the short story, and the poem. In addition to instructing us, the literature of others can also produce a generative friction that can fuel our own writing practice. When we sit down to write, we prove there is a difference between ourselves and other writers, and ourselves as we are now and ourselves as we were ten minutes ago. We remain attuned to the stream of consciousness, to that flux of constantly changing experience in which we are caught. In addition to reading and writing, a major part of this course will be workshopping each other's work.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ENG 301(3) Course ID:000206

Creative Writing: Fiction

A workshop for students with adequate writing skills, a chance to write fiction under critical supervision. Emphasis is on literary elements and craft.

Components: Lecture

ENG 302(3) Course ID:000513

Creative Writing: Poetry

A workshop for students with adequate writing skills, a chance to write poetry under critical supervision. Emphasis is on formal elements and craft.

Components: Lecture

Enrollment Requirements: Enrollment is restricted to English majors and non-majors who have the permission of the instructor.

From Shakespeare to Sheridan, the Irish in the Theatre:1600-1775

This course examines how plays staged in London and Dublin between 1600 and 1775 represented Ireland, its history, and inhabitants. Students will read the most important dramatic literature concerning Ireland written during this period, including works by William Shakespeare, George Farquhar, and Richard Brinsley Sheridan. In addition, students will tour Dublin and learn firsthand how the city served as a backdrop for a social drama. We'll visit many places, like Dublin Castle, Trinity College, and the building that housed John O'Neil's Smock Alley Theatre.

Components: Lecture
Topics: Dublin, Ireland
Course Equivalents: DR 576, HIST 328A, HIST 653A
Room Requirements: NO CLASSROOM NEEDED(1)

ENG 306(3) Course ID:016250

Dublin & the Invention of Ireland

From its origin as a Viking outpost to its emergence as "a big village and a dirty village where gossip reigns supreme," Dublin has been central to the development of Ireland, epitomizing the country's ability to continually invent and re-invent itself according to the demands of each new age. In this course we consider Dublin's linguistic, religious, and political complexities through the lens of the city's distinguished literary history. Topics include medieval Dublin and the Pale, the Georgian city and the Protestant Ascendancy, the Irish Literary Revival, the Abbey Theatre, the "exile" of James Joyce, the Easter Rising, World War I and the emergence of the Irish Republic.

Components: Lecture
Course Equivalents: IRSH 306

ENG 311(3) Course ID:008216

Greek and Roman Mythology

The myths of the Greeks and Romans convey ideas about the divine and the human and the interaction of the two. Investigates creation myths, the divinities and heroes, and such major myth cycles as the Trojan War within their historical and ritual contexts and in terms of their literary and artistic formulations and expressions.

Components: Discussion, Lecture

ENG 312(3) Course ID:012196

Norse Mythology

A survey of the myths and religious practices of Scandinavia in the pre-Viking and Viking periods based on textual sources (eddic and skaldic poetry, sagas) and material evidence (art and archeology). Topics include the creation myth, the structure of the world, eschatology, stories of the main gods and heroes, cults and rituals, and the influence of Christianity

Components: Lecture

ENG 317(3) Course ID:017617

The Vikings

The Vikings are a popular culture phenomenon today, but their fame is not new. This interdisciplinary class will investigate the Viking period in European history, from the eighth to the thirteenth centuries. We will examine the history, literature, and art associated with Viking culture in Scandinavia and the North Atlantic, in England, and on the Continent. Themes will include myths and legends in poetry and saga literature, the art and archaeology of the Viking period, and the gradual processes of conversion and conquest which reshaped both Viking and European culture.

Components: Lecture
Room Requirements: DIGITAL PRESENTATION ROOM(1)

ENG 324(3) Course ID:000520

Introduction to Linguistics

An introductory study of linguistics, with concepts and applications from the traditional areas of analysis (phonology, morphology, syntax, semantics) as well as from first- and second-language acquisition and development.

Components: Lecture

ENG 325(3) Course ID:000523

Contemporary English Grammar

An overview of English morphology, sentence syntax, and text grammar. Special attention to the needs of writers and English education majors.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - English - Subject: English

ENG 326(3) Course ID:000526

Workshop: Writing Improvement

A workshop for students who wish to improve their writing, provides practice in and study of invention, organization, and style. Limited enrollment insures individual attention and response by the instructor to the special concerns of both upper- and lower-division students.

Components: Lecture

ENG 327(3) Course ID:000529

Argumentative Writing

A workshop of techniques for writing convincing, logical arguments. Of special interest to economics, business, politics, education, and pre-law students.

Components: Lecture

ENG 328(3) Course ID:015452 Department Consent Required

Writing Center Theory & Practice

A seminar and practicum for students accepted into the Writing Center Undergraduate Tutor Program. Readings, writing assignments, and discussion will focus on writing center scholarship and pedagogy: literacy theory, composition theory, history of individualized writing instruction, development of reflective tutoring practices. Special emphasis will be placed on grammar instruction and the development of primary research projects.

Components: Seminar

ENG 330(3) Course ID:017353

Memoir

This course provides a study of memoir as a literary form. Readings include a brief survey of classic works in confessional and autobiographical modes, as well as a longer examination of contemporary works. The course is writing intensive and students will engage in literary analysis in order to gain a better understanding of memoir as a literary genre, as well as produce their own short-form memoir writing that will be shared and discussed during in-class workshops.

Components: Lecture

ENG 331(3) Course ID:000534

Intensive Readings: Lyric

Two courses from the Intensive Readings group (ENG 331, 332, 333) are required of English concentrators and are normally to be taken by them, one per semester in the junior year. Each involves concentrated readings in the genre at issue--e.g., ballad, sonnet, ode, elegy, dramatic monologue, villanelle, sestina--chosen to highlight major points in its development through British and American literary history. Regular essays on the readings. Open to English concentrators only. Prerequisites: 231, 232.

Components: Lecture

Enrollment Requirements: English Major

ENG 332(3) Course ID:000536

ENG 340(3) Course ID:005655

Old English Literature

A survey of the language and literature of the Anglo-Saxons (c. 600-1200), based mainly on texts in translation, with a glance at the neighboring and related literatures of Ireland and Scandinavia.

Components: Lecture

ENG 341(3) Course ID:011664

Beowulf and Friends

An interdisciplinary introduction (through texts and images) to early medieval England from the 5th century to Norman Conquest, with a brief survey of Anglo-Saxon history, Old English language and literature, insular art, archeology, religion, and manuscript studies.

Components: Lecture

ENG 342(3) Course ID:011714

History of the English Language

A linguistic and cultural survey of the development of the English language from its Indo-European origins to the 21st century, exploring the language (and reconstructed pronunciation) of the Anglo-Saxons, Chaucer, and Shakespeare, and discussing, among others, the origin and development of different writing systems, the reasons for the discrepancy of spelling and pronunciation in Modern English, differences between British and American English, and the historical origin of American dialects.

Components: Lecture

ENG 345(3) Course ID:000550

Epic Tradition from Homer to Walcott

After examining the roots of the epic in Homer's Iliad and Odyssey, and Virgil's response to them in his Aeneid, the course traces the continuation of this epic tradition through Dante's Divine Comedy, Milton's Paradise Lost, and Walcott's Omeros.

Components: Lecture

ENG 347(3) Course ID:014027

Christian Literary Traditions

This course will follow a few major threads of Christian literature from the first century A.D. up to the present day, with special attention to the interplay of cultural forms and literary form, the relationship between hermeneutics and literary criticism, and the fruitful tensions and intersections between theology and literature. Texts to be studied may include foundational texts from Greece and Rome, Jewish and Christian Scripture, St. Augustine, Other early Patristic writings, Hagiography, Medieval English Religious drama and poetry, Arthurian Legends, Dante, Petrarch, Sidney, Spenser, Shakespeare, de Vega, Milton, Metaphysical Poets, Bunyan, Swift, Hopkins, Chesterton, Lewis, Eliot, Joyce, Claudel, O'Connor, Faulkner, Waugh, Greene, Hurston, Levertov, Endo, Milosz, Heaney, Berry, Walcott, etc.

Components: Lecture

ENG 351(3) Course ID:000559

Chaucer and His Age I

First semester: a study of the major genres of medieval literature based on selections from the Canterbury Tales and other works; second semester, the major forms and tradition of Middle English literature, with special attention to Chaucer's minor poems, the Troilus, and/or selected religious plays and popular lyrics. Either course may be used by undergraduate English concentrators to fulfill their requirement for a semester of Chaucer.

Components: Lecture

ENG 355(3) Course ID:016847

Medieval Monsters

The world of medieval literature is inhabited by monsters of various kinds: from dragons and werewolves to dog-headed giants and threatening Saracens and Jews. The course offers an exploration of the concept and nature of the monstrous in medieval culture and the role of monsters in literary texts of different genres (heroic poetry, romances, travelogues, hagiography, etc.).

Components: Lecture

ENG 356(3) Course ID:000568

Arthurian Literature

Traces the development of tales of King Arthur and his knights, from their origins in Celtic myth and legend, to the medieval romances of England and France, to modern novels and films.

Components: Lecture

ENG 360(3) Course ID:015806

Modern Irish Literature, 1798 & 1998

This class provides a survey of Irish novels, drama, poetry and political tracts composed over the last two centuries, the time during which both the Republic of Ireland and the power-sharing government of the North emerged. Students examine the connection between nationhood, linguistic identity and style in modern Irish literature, beginning with the Rebellion of 1798 and ending with the Good Friday Agreement of 1998. Authors may include but are not limited to Maria Edgeworth, Wolfe Tone, James Clarence Mangan, W. B. Yeats, J. M. Synge, James Joyce, Flann O'Brien, Samuel Beckett and Paul Muldoon.

Components: Lecture

ENG 364(3) Course ID:012244

Milton's English Poetry

A study of Milton's poetry, with emphasis on Paradise Lost, Paradise Regained, and Samson Agonistes.

Components: Lecture

ENG 365(3) Course ID:012250

Contemporary American Poetry

Contemporary American Poetry. A study of important trends and authors in American poetry since 1960, including representative poets from these movements: "Confessional" Poetry, New Formalism, Language Poetry, Black Arts Movement, Beat Poetry, Deep Imagists, and Neo-Romantics.

Components: Lecture

ENG 368(3) Course ID:015545

Seamus Heaney, Irish Poet

This course offers a critical examination of the poetry, prose and historical place of Seamus Heaney (1939-2013), a writer once boldly described as the "most important Irish poet since Yeats." Students study Heaney's emergence in the so-called 'Belfast Group' of the 1960s and explore his nascent critical legacy, the broad impact his life and work has exerted on the contemporary reception of Irish poetry across the Anglophone world.

Components: Lecture

ENG 369(3) Course ID:010600

Renaissance Poetry

A study of sixteenth and seventeenth-century English poetry, including selections from Wyatt, Gascoigne, Sidney, Spenser, Marlowe, Raleigh, Greville, Shakespeare, Jonson, Donne, Herbert, Lovelace, and Marvell.

Components: Lecture

ENG 370(3) Course ID:016057

18th Century English Novel

In this course, we will study the eighteenth-century novels in which authors worked out the fundamental matter of what a novel even is. Eighteenth-century authors and readers were still figuring out the relation between history and fiction and what it meant to believe in a work of fiction. We will read with the goal of revivifying the eighteenth-century sense that engaging with a work of fiction is a mysterious-- and potentially dangerous-- practice. We will also consider the novel within the intellectual historical context of the Enlightenment, which overlaps with the age of satire, the age of sensibility, and the age of the gothic.

Italy in American and British Literature (Rome)

The course intends to bring students closer to the study of literature through the reading of some major works by American and British writers. The journey to Italy is at the center of the novels and poems which will be analyzed during the course. On the one hand we will concentrate on the discovery and transformation of the characters as narrated through their encounters with a different culture and social context. On the other, we will investigate changes in the attitudes and perspectives of the authors themselves due to their own journeys to Italy. We will begin with the reading of poetry from the 19th century, followed by the reading of three complete novels by three well known American and British writers: Henry James, Tennessee Williams and Edward Morgan Forster.

Due to its role as a methodological text that also unites the Italian and English-speaking cultures in a

Components: Lecture

Topics: Rome, Italy

ENG 379(3) Course ID:015015

Jane Austen

In this course, we will read the six major novels of Jane Austen, as well as engage with recent adaptations of her work. In addition to being much celebrated, Austen's writing can be ambiguous and has been repurposed in a number of ways throughout history. Questions we will consider include, why was Austen so influential? How do her marriage plots function within a larger literary and historical context? How should we understand her contribution to literary history? How do adaptations of Austen and her reputation in general influence how we engage with her work?

Components: Lecture

ENG 379(3) Course ID:019124

American Literature and Italian Film

This three week summer course focuses on major twentieth century writers and filmmakers deeply engaged with Italy, especially the city of Rome. The course considers the aesthetic shifts from realism to neorealism to postmodernism, and the impact of World Wars I and II and other historical phenomena upon these shifts.

Components: Lecture(In Person)

Topics: Rome, Italy

The Medieval Book: An Introduction to Manuscripts and Manuscript Culture

A practical survey of the production and decoration of English vernacular manuscripts; codicology, paleography, and editorial practices; the cultural relationships of scribes, patrons, and readers. Some knowledge of Latin or French desirable but not required; undergraduates must obtain instructor's permission.

Components: Lecture

ENG 516(3) Course ID:015809

Arthurian Literature from Geoffrey of Monmouth to Thomas Malory

This course examines the development of the Arthurian legend in the British Isles during the medieval period. It traces the legend's continuous reinvention, emphasizing its function as a focal point for reflecting on pivotal issues such as national identity, human virtue, Christian holiness, and gender relations. The readings provide an in-depth genre study of chivalric romance, tracing its formal development and its affiliations with related genres such as lai, chronicle, and hagiography.

Components: Lecture

ENG 526(3) Course ID:000706 Department Consent Required

Workshop: Writing Improvement

A workshop for students who wish to improve their writing. Provides an opportunity to experiment with different forms of academic, professional, or personal writing. Limited enrollment insures individual attention and response by the instructor to each student's special concerns.

Components: Lecture

ENG 560(3) Course ID:014304

20th Century Catholic Fiction

Several classes will be devoted to theoretical issues, followed by examination of prose works by Evelyn Waugh, Willa Cather, Walker Percy, GK Chesterton, and Rumer Godden.

Components: Seminar

ENG 565(3) Course ID:006038

Renaissance Drama

Readings in the dramatic literature of the Elizabethan and Jacobean periods. Selections from the following playwrights: Kyd, Dekker, Chapman, Marston, Heywood, Marlowe, Shakespeare, Jonson, Middleton, Beaumont, Fletcher, Webster, Ford, and Tourneur.

Components: Lecture

ENG 589(3) Course ID:000765

The American Tradition in Poetry

Readings selected from a broad span of American literary history, with special emphasis on major poets of the American Renaissance and the modernist period. Traces continuities in poetic theory, modes, and techniques that have resulted from a common cultural heritage and from interaction among poets.

Components: Lecture

ENG 590(3) Course ID:000769

Literature of American South

This course is a historical survey of southern literature from the Southern Renaissance to the present. Because this is a large body of material, we will focus on works that are representative of trends central to the South's literary development. The South has produced a remarkable amount of major works by writers of various backgrounds, so keep in mind that the syllabus only represents the tip of a very large iceberg. Students are expected to demonstrate their knowledge of these changes through class discussion and two major writing assignments.

Epic

A survey of literary epic from the Iliad to Paradise Lost.

Components: Lecture

ENG 636(3) Course ID:017711

Philip Roth

This seminar will examine the major novels of Philip Roth, a giant of modern American literature. It will also cover some of his critical and non-fiction writing, establishing the literary connections to Europe and to Israel that mattered to Roth's own literary ethos. Serious attention will be devoted to the scholarly and critical reception of Roth's work. Roth's literary career runs from the late 1950s into the first decade of the twenty-first century. Multiple controversies attend (and will always attend) his work and reputation: these controversies of Jewish identity, sexuality and gender are the stuff of Roth scholarship. In addition, Roth's fiction sought to represent many of the main currents in twentieth-century U.S. history, from World War II to the assimilation of Jews to the Vietnam War to the sexual revolution of the 1960s and beyond. Where possible, this seminar will apply a historical lens to literature and attempt to extract historical insight from literature. The kind of fiction Roth wrote lends itself to this approach. Hence, this seminar should

ENG 834(3) Course ID:011939

Seminar: Renaissance Epic

A study of Renaissance epic, including Orlando furioso, Jerusalem Delivered, The Faerie Queene and Paradise Lost. Attention will be paid to the interplay between epic past and historical present in each poem; secondary readings will survey recent critical approaches to the individual poems and to the epic tradition as such.

Components: Seminar

ENG 840(3) Course ID:017252

Romantic Poetry

A discussion of key texts by Wordsworth, Coleridge, Byron, Shelley, and Keats.

Components: Seminar

ENG 841(3) Course ID:006069

Seminar: Studies in Old English

Current topic: an examination of the elegies (established and doubtful) in the Exeter Book, and their Christian, Boethian, Germanic, and Celtic affiliations. Instruction in Old English paleography, textual criticism, and literary scholarship. Prerequisite: 642 or equivalent.

Components: Lecture

ENG 842(3) Course ID:012805

Seminar: Venerable Bede

The Venerable Bede ranks among the towering intellectuals of the Middle Ages. In this seminar, we will sample (in translation) a significant portion of his oeuvre, including representative works from all genres in which he worked (exegetical, scientific, didactic, historical). The readings will serve as a window on Bede's thought, the world in which he lived, and the program of monastic learning he sought to create.

Components: Seminar

ENG 843(3) Course ID:013303

Seminar: Beowulf

An advanced study of the heroic epic 'Beowulf' and closely related vernacular texts. Topics include date, structure, composition, and characters; parallels and analogues; the origins and significance of monsters; manuscript context and editorial problems; language and style; material culture; translations and modern adaptations (including recent films). Substantial sections of the text will be read in Old English (with glosses).

Components: Seminar

ENG 845(3) Course ID:019010

Seminar: Romanticism

In this course, we will read a wide range of authors who wrote in the Romantic period, from around 1790 to 1832 in Europe and Britain, and slightly later in America. This period placed enormous faith in the power of poetry to reveal the powers of the mind, disclose universal truths, and defend human nature against dehumanizing forces. As we engage with this literature, we will consider such questions as, how does Romanticism grow out of the Enlightenment? When does the Romantic appreciation of nature constitute ecological consciousness? Where does irony fit in? And finally, how compatible is Romanticism with the novel?

ENG 851(3) Course ID:000895

Seminar in Medieval Literature

Directed research for advanced students of medieval literature. Begins with intensive study of a single important manuscript (e.g., the Exeter Book, the Junius Manuscript, BL Cotton Nero A.X.), and focuses on questions of composition and dissemination, paleography, textual criticism, reception history, and literary scholarship. May be repeated for credit when a different topic is offered. Prerequisite: One course in Old or Middle English, or permission of instructor.

ENG 853(3) Course ID:014597

Seminar: Medieval Monsters

In medieval literature heroes are often distinguished by their encounters with monsters and exotic beings of various kinds. These monsters are frighteningly different yet strangely familiar at the same time, and as such define and construct the literary heroes themselves. In this seminar we explore the concept of the monster as other and its role in a variety of literary genres (myths, bestiaries, heroic tales, romances, travelogues, hagiography, etc.) in medieval English literature and select European vernaculars. The course concludes with a substantial research paper.

ENG 859(3) Course ID:017370

Verse Since 1912: Criticism and Practice

This seminar examines how verse has been interpreted, conceptualized, and created since the introduction of Imagism and the blues. The course pairs criticism and verse published at approximately the same time in order to explore how historical phenomenon (war, racial, gender, regional, and economic issues) influenced critics and versifiers. Readings will include Empson's 7 Types of Ambiguity (1930), Ransom's The World's Body (1938), Brooks' The Well Wrought Urn (1947), Abrams' The Mirror and the Lamp (1953), Bloom's The Anxiety of Influence (1973), Rosenblatt's The Reader, The Text, The Poem (1978), Voigt's The Art of Syntax (2009), and essays on blues poetry and poetic song verse.

Seminar: Ellison and Warren

We will read the literary and historical essays, short stories, journalism, novels, and poetry of Ralph Ellison and Robert Penn Warren. The seminar will revolve around the question: What can we learn about American literature and culture during the Cold War and after by reading Ellison and Warren side-by-side? In the 1930s Ellison embraced Marxism and Warren was affiliated with the Southern Agrarians, but in subsequent decades both men moved away from their respective positions and explored the relationship between literature, identity, and American democracy. We will consider their writings in tandem with mid-century historical and political developments, including segregation, McCarthyism, the civil rights movement, education, the Sixties, and the Cold War, and consider the implications of their thought for American culture in the present. The interaction of these two minds with literature will be given pride of place in this seminar, and this interaction will be used to chart the aesthetic, political, and historical themes that run through the

ENG 875(3) Course ID:008981

Seminar in Austen

In this course, we will read all of the literary writing of Jane Austen and engage with the wealth of literary critical and popular responses to it. We will consider the challenges and advantages of writing about an author whose work is so well-known that it frequently serves as a touchstone. We will also discuss the nuances of free indirect style, at which Austen excels. What did free indirect style look like before Austen, and how should it be understood with relation to the stream-of-consciousness narration that flourished later? How should we interpret the fluctuations of intimacy and irony this technique makes possible?

Components: Seminar

ENG 877(3) Course ID:000913

Seminar: American Renaissance

Key works by several writers in the American Renaissance, considered in light of recent literary theory and the writing of literary history.

Components: Seminar

ENG 880(3) Course ID:000920

Seminar: Evelyn Waugh and the Modern English Novel

Concentrates on Waugh's main novels and their place at the crossroads of traditional and new (post-World War II) fiction in England. Employs various critical methodologies, examines important studies of Waugh. By way of context, includes a survey of British fiction both preceding Waugh and subsequent to his death.

Components: Seminar

Celtic Revivals

This seminar provides an in-depth study of the intellectual history, key controversies and deep connection between the Irish Literary Revival of the 1890s, the Scottish Renaissance of the 1920s, and later, the emergence of modernism and anti-modernism in twentieth-century Wales, Cornwall and Northern Ireland. Central to the course is a comparative examination of Celtic nationalism and stylistic experiment in Ireland, Scotland and Wales. Students consider the complex relation between literary modernism and forms of language purism, analyzing the impact these forces had on attempts to create new national literary idioms for the 'Celtic nations'. Writers will include but are not limited to W. B. Yeats, Douglas Hyde, James Joyce, Hugh MacDiarmid, Edwin Muir, Saunders Lewis, David Jones, Caradoc Evans and Henry Jenner.

Components: Seminar

ENG 895(3) Course ID:016662

Seminar: Shires: History and Place in British and Irish Poetry 1945 - 1998

A comparative examination of the major poetry, critical writings and historical place of Seamus Heaney, Geoffrey Hill, Patrick Kavanagh, Ted Hughes, Philip Larkin, Christopher Okigbo, Basil Bunting, R. S. Thomas and other significant writers from this period.

Components: Seminar

ENG 896(3) Course ID:000922

Reading the Greeks

An undergraduate lecture and discussion course providing a themes-based approach to ancient Greek culture, literature, and society. The current theme is "happiness."

What is happiness? What kind of decisions do I have to make in order to lead a happy and fulfilling life in future? The good news is that you are not the first person to ask these questions. Starting from antiquity, people have pondered these issues. This course offers an introduction to ancient thoughts about happiness, and, indirectly, to ancient philosophical thinking. It addresses some of the crucial enduring questions of the Liberal Arts Curriculum, such as the nature and meaning of the good life, and the relationship between human beings and God(s). By looking at the concept of happiness in ancient Greece, we will investigate the relationship between philosophy and religion in the ancient world, thereby allowing students to better

Reading the Romans

An undergraduate lecture and discussion course providing a themes-based approach to ancient Roman culture, literature, and society. The current theme is "leadership." What is leadership? How does one become a leader? These questions, crucial in today's world, were also heavily debated in ancient Rome. Considering that the Romans created the widest and most long-lasting empire in European history, we are going to see whether or not we can learn anything from them. By looking at a selection of great Roman leaders, we are going to investigate the relationship between leadership and power, and the complex problems it raises.

History of Ancient Greece

A chronological survey of the political and social history of Greece from "Agamemnon to Alexander to Augustus." Covers the period from the late Bronze Age through the Hellenistic era, beginning with the Mycenaean kingdoms and concluding with the conquest of Cleopatra, the last ruler of the Ptolemaic dynasty in Egypt, by the future Roman emperor Augustus (31 BC). Focusing in particular upon the construction of Greek identity as shaped by such factors as geography, warfare, economy, and intercultural contact, the course will employ a textbook, primary sources read in English, and maps and other images to explore important issues in the evolution of Greek society. Subjects treated will include the rise of the Greek polis (city-state), the Greek colonization of the eastern and western Mediterranean, the development of diverse governmental and constitutional structures ranging from tyranny to democracy to monarchy, the blossoming of Greek artistic and intellectual life during the classical period and the conflicts between Greeks and Persians and between

CLAS 206(3) Course ID:001256

History of Ancient Rome

Surveys the history of Rome and its empire from the foundation of the city in the eighth century BC to its breakup into successor states in the fifth, sixth, and seventh centuries AD. Focuses on economic, cultural, and political themes, with special attention to geography, archaeology, and cultural exchange. Readings consist of primary and secondary sources, with emphasis on critical interpretation. This is a Liberal Arts curriculum course in History. It treats the Enduring Question: The Human Condition from the perspective of long term change in Roman history by examining the shift from res publica to empire, the integration of micro-regional economies into a global trading system, and the transformation of religion from the local to the universal.

Components: Discussion, Lecture

History of Ancient Rome

The basic foundation of this course will be a chronological survey of the political and social history of Rome, beginning with myths and stories that describe the Roman people before the traditional establishment of the Republic in the late sixth century BC and concluding with the reign of the emperor Constantine (d. AD 337). Focusing in particular upon the city of Rome itself, the course will employ a textbook, primary sources read in English, and visits to selected archaeological sites to explore important issues in the evolution of the Roman state and Roman society, including but not limited to the processes and consequences of Roman expansion, the impact of powerful individual leaders upon the political and physical landscape of the capital, the development of civic and provincial administration, and the 'meaning' of the office of the Roman emperor. Course assessments will include reports on individual sites and historical events, as well as short-response assignments, a midterm exam, and a final paper.

CLAS 208(3) Course ID:018926

Italy: Ancient Culture in Context

Explores the cultural presence and the cultural relations between the Greeks, Etruscans and Romans, in central and southern Italy. The course starts in the south of Italy, exploring Greek presence and influence (considering Paestum, Pompeii, Herculaneum, Oplontis, and the environs of the Bay of Naples). It then moves northward to discuss the Etruscans and early Rome, and then finally considers the Romans themselves, studying both their appropriation of aspects of these two other cultures, and the development of the Romans' own more local and indigenous traditions.

Components: Lecture(Online)

Room Requirements: ONLINE(1)

CLAS 209(3) Course ID:018472

Early Rome and the Etruscans

This class focuses on Etruscan culture in Italy in the 1st millennium BC, including its relationship with, and eventual incorporation into, Roman civilization. The Etruscans occupied an important crossroads of culture, as well as being a significant society in their own right, and saw important connections with Rome, other parts of Italy, and further afield in Greece. This course discusses various aspects of Etruscan life, including religion and myth, military, politics, death and funerary beliefs and practices, daily life, and cultural connections with Rome, all demonstrated through art, architecture, and the archaeological record.

Course Equivalents: ART 213

CLAS 219(3) Course ID:017228

Democracy and Politics in Classical Athens

This course will study Athenian democracy from a variety of different perspectives, ranging from the historical to the institutional to the theoretical. Beginning from the evolution of oligarchy and tyranny as the dominant forms of government in archaic Greece (in response to increasing socioeconomic stratification), it will consider the relationship between tyranny and populism before examining the 'Athenian Revolution,' when the Athenian citizenry collaborated to bring an end to tyrannical government and submitted themselves to the institution of democracy. Further topics to be treated include: the nature, structure, and evolution of the Athenian constitution, with an emphasis on its elaborate checks against individual power; the relationship between democracy and imperial aspirations in classical Athens; the commemoration and celebration of Athenian democracy through civic ritual and the arts; and the intense intellectual reflections upon the prospects for 'good' democratic decision-making in the fourth century BC.

Components: Lecture

Alexander 'the Great': From Myth to Man

This course will follow Alexander on his eastern expedition from Greece to India and back again, tracing his adventures from his boyhood (supposedly) under the tutelage of Aristotle to his death in Babylon. Focusing upon historical and archaeological resources for the study of Alexander and his world--texts, inscriptions, buildings and monuments, statuary, and coinage--it will examine the joint influences of the heroic tradition and of ancient Greek political culture upon the Alexander story. It will also explore the extent to which Alexander's own performative and commemorative choices may have affected his rapid transition 'from man to myth.'

Components: Lecture

Course Equivalents: HIST 301

CLAS 221(3) Course ID:017611

Pompeii

The ancient Roman city of Pompeii was buried in the eruption of Mt. Vesuvius in AD 79 and offers unparalleled evidence regarding Roman city life, domestic spaces, and material culture. This course will examine Pompeii topically by exploring the visual and material cultural remains. Such evidence includes: houses, shops, bath buildings, temples, roads, warehouses, burial monuments, and political buildings. Ancient written sources will also be considered that assist in understanding the evidence found in Pompeii. Our exploration of Pompeii will be complemented by an examination of the other sites around the Bay of Naples also covered by the Vesuvian eruption, such as Stabiae, Oplontis, and Herculaneum.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CLAS 225(3) Course ID:015889

Ancient Warfare and Martial Arts

This course explores the practical and social aspects of warfare and martial arts in the Greco-Roman world. How did soldiers train and fight? How did generals learn and employ tactics? How did engineers build machines and fortifications? How did women and civilians suffer under (and sometimes participate in) armed struggles? These questions will be answered through ancient sources and relevant secondary literature and students will have the chance to see and handle replicas of common weapons of the time to gain a fuller sense of warfare in the ancient world.

Course Catalog

Arts & Sciences - Greek and Latin - Subject: Classics

CLAS 226(3) Course ID:016874

From Olympians to Gladiators: Sport and Contest in the Ancient World

This course will explore various athletic activities of the ancient Greeks and Romans from Homer to late antiquity and consider the questions "What were they like? What were they for? Through ancient sources in translation, students will evaluate the role played by sports in maintaining health, serving the state, and, of course, honoring gods and entertaining crowds through contests. In addition to sampling ancient events, festivals, and personalities, students will also debate issues as contentious today as they were in antiquity: the place of athletics in education, the status of athletes in society, and the impact of professionalization.

Components: Lecture

CLAS 244(3) Course ID:019158

Greek Tragedy and its Modern Reception

Students will read selected plays by the three major Greek tragedians, Aeschylus, Sophocles, and Euripides, as well as some modern adaptations in film, poetry, and novels. Topics explored will include staging conventions, performance, gender, religion, politics, cultural identity, and the modern reception of Greek myth. This is a discussion- and discovery-based course that emphasizes active learning; in addition to frequent discussion, students will have the opportunity to provide reading context to each other, and showcase their own interpretations of texts, through short research projects and presentations.

Components: Seminar(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CLAS 251(3) Course ID:001259

Ancient World in Cinema

This course entails a serious and extensive viewing of a wide variety of films whose engagement with ancient culture, preponderantly Western and Christian, may be obvious from the title (Alexander [2004], Gladiator [2000], Spartacus [1960], Ben-Hur [1959]) or (as is much more frequently the case in the reception of myth) oblique, subtle, and multi-threaded. As regards the latter sort, to cite a few examples: (1) a closer examination of the creative transformation of key story elements and folkloristic motifs in Gone Girl (2014) reveals that film to be, in large part, a devious revisiting of the disastrous passion of Medea for an unfaithful Jason; (2) both Hitchcock's Vertigo (1958) and The Adjustment Bureau (2011) recast the myth of Orpheus and Eurydice, the former by transforming some key elements into a bleak, semi-autobiographical allegory of the director's own Pygmalion-like obsession with beautiful blonde actresses and the latter by superimposing a sketch of the fabled "love story" upon one of Philip Dick's numerous paranoid fantasies.

Components: Lecture

CLAS 261(3) Course ID:017259

Heroes of the Middle Ages

Who is your hero? What does it mean to be a hero? Throughout centuries peoples have answered these questions in different, though often related ways, by defining the qualities of their role models. In the Middle Ages, in particular, there is a particularly rich tradition of heroes, and what defined a hero differed widely across time and place(s).

This course will introduce students to some of the most fascinating medieval heroic tales, which both impacted later literary traditions and shaped our very image of the Middle Ages itself. By reading the adventures of warriors such as Waltharius and Digenis Akritas, kings such as Charlemagne (in the Paderborn Epic) or King Arthur, and saints such as Saint Brendan, students will immerse themselves in the legends and heroic deeds of that remote past.

Components: Lecture

CLAS 281(3) Course ID:016873

Pagans and Christians in the Roman Empire

Surveys the religious practices, structures, and beliefs of the culturally diverse populations under Roman imperial rule from the first to the fourth centuries AD. Particular focus on traditional (pagan) religion and early Christianity, with parallel treatment of Second Temple/rabbinic Judaism, Manichaeism, and other universal systems. Emphasis on lived religious experience, literature, ritual, and material representations of divine/human relations. Class time will be devoted to lectures (some illustrated), student presentations, and discussion of the primary sources.

CLAS 302(3) Course ID:001260

Greek and Roman Religion

A survey of Greek and Roman religious beliefs, customs, practices, and institutions from the Bronze Age to the conversion of Constantine. Students consider a wide variety of primary sources as well as selected secondary works on the sociology and anthropology of religion. Special attention to the Hellenistic and Roman background of Christianity.

Components: Lecture

CLAS 303(3) Course ID:018627

Religion in the Roman World

Studies the concept and practice of religion in the Roman world from the founding of the city to the conversion of Constantine. Emphasizes material, ritual, literary, philosophical, and theological dimensions. Seminar format. Meets one day per week.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CLAS 304(3) Course ID:016354

Constantine the Great

One of the three greatest Roman emperors, together with Augustus and Justinian, Constantine is best known for his conversion to Christianity and support for the Church. But he also reshaped the empire in other important ways: in administration and law, finance and the economy, and diplomacy and war. This course surveys his life and career, along with those of his family (especially his mother Helena), his supporters and rivals, and members of the Roman aristocracy, in the context of empire and imperial rule. Lectures (many illustrated) are accompanied by discussion of the abundant primary sources, both written and material. Coins from the University Archives provide students with hands on experience of changing imperial messages during the half century from the accession of Diocletian in 284 to the death of Constantine in 337.

Components: Discussion(In Person), Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1), DIGITAL PRESENTATION ROOM(1)

CLAS 306(3) Course ID:016469

Death, Art and the Afterlife

This course will explore Greek and Roman conceptions of death and afterlife, and their expression in funerary art and architecture from the early Archaic period through Late Antiquity. The course will examine rituals such as cremation, inhumation, funerary processions and other mourning and commemorative practices, as well as various types of burial markers and monuments, including stelai, urns, ossuaries, sarcophagi, catacomb paintings, and chamber tombs. Decorative imagery, inscriptions, and tomb structures will be studied from various perspectives as indicators of social status and cultural identity, gender and family structure, and beliefs about the afterlife. The dynamic effects of cross-cultural influence in Hellenistic Asia Minor and Roman Egypt will be investigated, as will the enduring impact of these ancient cosmologies and art forms on later cults and cultures, including Christianity in the later Roman period.

CLAS 314R(3) Course ID:016482

Vergil's Aeneid and Its World

Vergil's Aeneid has enjoyed almost continuous high esteem from the time of its composition. It has shaped epic poetry, generated opera, and inspired visual art; it has played a role in nearly every assessment of literary greatness since the Renaissance (and even before); and it has invited generations of readers to rediscover some element of themselves in its vivid depictions of characters and emotions.

And yet, how well do we really know the Aeneid of Vergil's own day? While few authors would deny aspiring to the kind of fame that Vergil ultimately achieved in the Western literary tradition, the Aeneid's original project was both much more culturally specific and uniquely ambitious. The epic sought to create a stirring foundation-myth for a society that lacked a strong story about itself; to link that myth to the complicated Roman inheritance of Greek culture; and to use that myth to engage with political life under Augustus, who

CLAS 317(3) Course ID:001266

Greek Art and Architecture

Surveys the art, architecture, and archeology of Greece from its Minoan and Mycenaean antecedents through the late Hellenistic era. Readings and slide lectures/discussions emphasize the relationship of the arts to their broader cultural context and introduce a variety of art-historical methods. Major themes include the political and historical functions of art, self-definition and the Other, and the role of style in the construction of meaning.

Components: Lecture
Course Equivalents: ART 317

CLAS 318(3) Course ID:001267

Roman Art and Architecture

Surveys the art of the Roman Empire from its Etruscan origins until the age of Constantine. Examines city planning, architecture, sculpture, painting, and the decorative arts in Rome and its provinces in the context of political and cultural developments. Special emphasis on Roman identities---individual, gendered, social, civic, and cultural---and their effects on and reflections in art.

Components: Lecture
Course Equivalents: CLAS 561, ART 318, ART 318R

CLAS 318R(3) Course ID:013782

Art and Architecture of Ancient Rome

This course surveys the art and archaeology of the Roman Empire with a particular focus on the city of Rome. It examines city planning, architecture, sculpture, wall painting, and the decorative arts in Rome in the context of political and cultural developments. Special emphasis on Roman identities - individual, gendered, social, civic, and cultural - and their effects on and reflections in art.

This course is taught at the Rome Campus.

CLAS 319(3) Course ID:015544

Introduction to Early Christian Art and Archaeology

An exploration of art, architecture, and material culture from the mid-3rd century through the 8th century AD, a time when the Christian faith grew from one of many practiced throughout the Roman world to an empire-wide state religion. This course will investigate Christian iconography's origins in the pagan and Jewish art of late antiquity, and the innovative visual forms that arose to express Christianity's new spiritual concepts. The dynamic effects of competing "heresies," iconoclasm, and the increasingly defined doctrines, rituals, and structures of the Church will be examined in relation to the visual arts, within the context of the political fracturing of the Roman Empire, the persistence of Greco-Roman cultural heritage, and the rise of Islam in the 7th century.

Components: Lecture

Numismatic Workshop

In this class, students will work on Greek, Roman, Byzantine, and other ancient coins in the University's numismatic collections. On average, about 1 hour per week will be spent in formal instruction and about 2 hours per week in hands-on research. Tasks will include the physical description and measurement of coins, consultation of reference tools, both paper and on-line, entry of data into an electronic database, and research into the historical context of selected coins. Final reports will consist of the full description of a defined group of coins, with accompanying electronic data, and an oral and written summary of the work accomplished. Projects will be assigned on the basis of student knowledge and interest. To obtain departmental consent, students must be taking or have taken one of the following courses: CLAS 205/HIST 305, CLAS 206/HIST 314, LAT 101, GR 101, LAT 509, GR 509, CLAS 318, or the equivalent.

Components: Workshop

Course Equivalents: CLAS 521

CLAS 325(3) Course ID:001269

Archeology of Ancient Life

Examines aspects of everyday life in ancient Greece and Rome by combining information from ancient texts in translation, representations, and archeological remains. Considers such topics as dress and personal adornment, the home, women's life, children, education and literacy, slavery, military service, athletics and recreation, medicine, life expectancy, and funerary practices.

Components: Lecture

CLAS 326(3) Course ID:016478

Greek and Roman Houses

The course examines the nature of domestic space in Greek and Roman contexts, including private homes, villas, and apartments. We will examine residences from ancient Greek and Roman contexts to explore questions about society and culture. Topics of discussion include: slaves, dining, gender, apartment living, rural life, decorative arts, and ancient gardens. Special emphasis is on the sites of Olynthos, Pompeii, and Ostia.

Components: Lecture

Topics: Pompeii

CLAS 425(1) Course ID:001329

Senior Tutorial

This one-credit course, taken in the first semester of senior year, will familiarize students with the resources available for research in Classics, Latin, and Classical Civilization. Students will develop the topic and bibliography of the senior research paper required for graduation.

Mediterranean World of Late Antiquity

Surveys the process by which the ancient world was transformed into the medieval world; covers roughly the period between the third and eighth centuries A.D. During this critical period, Christianity was successfully established throughout the Mediterranean world, Germanic invaders overthrew the Roman empire in the West, and Islam came to dominate North Africa and the Middle East. Particular attention to various issues of continuity and discontinuity in religion, politics, and culture. Readings include both primary and secondary sources.

Components: Lecture

CLAS 591(3) Course ID:016484

Byzantium & the West: Cultural and Artistic Exchange in Medieval Europe, C. 1000-1300

This course will examine Eastern and Western cultural interaction in the High and Late Middle Ages. It will focus on the reception of Byzantine art in medieval Italy and transalpine Europe, and will include the Christian encounter with Islamic art and precious objects. It will examine these cross-cultural exchanges and the methodological approaches that scholars have developed in tracing the reception of Byzantine and Islamic imagery and objects. Among the themes that will be addressed: the circulation and afterlife of objects, the reception mechanisms of influence, appropriation, assimilation, and hybridity, Christian devotion in Byzantium and the West, social processes such as gift-giving, diplomacy, and the establishment of political ideologies.

Introduction to Byzantine Greek Language and Literature

This course will introduce advanced-level students of classical Greek to Byzantine literature. By studying different texts each week, students will become familiar with a millennium of Byzantine history, and with a society that was profoundly interested in the relationship between faith and reason on both political and theological levels. Participants will be introduced to the main features of medieval Greek, with a particular stress on its differences from classical Greek; read a selection of texts (hagiography / religious literature, poems and/or profane literature, historiography and philosophy) representative of the variety of medieval Greek literature and of the many possibilities it offers; and receive an orientation in some of the principal areas of medieval Greek scholarship, including lexica, bibliographies, and leading collections and repertoires of sources.

Components: Lecture
Course Equivalents: GR 590

GR 492(3) Course ID:001592

GR 507(3) Course ID:016804
Intermediate Greek I

Careful readings of Attic or Atticizing prose to build on the basics of syntax and grammar acquired in 101, 102. In conjunction with the goal of increasing mechanical competency (recognition of forms, etc.), some attention to the ways in which prose persuades, informs, educates, and entertains through the careful choice and arrangement of words and thoughts.

Components: Lecture

GR 508(3) Course ID:016877
Intermediate Greek II

Careful readings of Homeric poetry to build on the basics of syntax and grammar acquired in 101, 102. In conjunction with the goal of increasing mechanical competency (recognition of forms, etc.), some attention to the ways in which poetry persuades, informs, educates, and entertains through the careful choice and arrangement of words and thoughts.

Components: Lecture
Enrollment Requirements: GR 103 or GR 507 or GR 516

The Catholic Univ of America
Course Catalog

Arts & Sciences - Greek and Latin - Subject: Greek

GR 509(6) Course ID:001579

Intensive Elementary Greek

A rapid but thorough treatment of the forms and grammatical principles of the Greek language, designed for those who wish to accelerate study of the language.

Components: Lecture

GR 511(3) Course ID:008465

Greek Prose Composition

An accelerated review of Greek grammar and syntax, and an introduction to the composition of Greek prose.

Components: Lecture

Same As Offering: GR 411

GR 512(3) Course ID:008466

Advanced Grammar and Prose Style

Advanced grammar and syntax with extensive practice in the composition of Attic Greek.

Components: Lecture

Same As Offering: GR 412

GR 515(3) Course ID:001582

Greek Historiography

Close reading and study of selections from the Greek historians, including Herodotus, Thucydides, and Xenophon.

Components: Lecture

Topics: Xenophon, Herodotus, Alexander Historians

Same As Offering: GR 415

GR 516(3) Course ID:012317

Intensive Intermediate Greek I

A sequel to GR 509. Provides experience in reading classical Greek prose and/or poetry at the intermediate level. Equivalent to GR 103. Summer session only.

Components: Lecture

GR 517(3) Course ID:012318

Intensive Intermediate Greek II

A sequel to GR 516. Provides further experience in reading classical Greek prose and/or poetry at the intermediate level. Prerequisite: GR 516 or the departmental placement exam in Greek. Equivalent to GR 104. Summer session only.

Components: Lecture

GR 518(3) Course ID:001583

Greek Tragedy

Close reading and study of the works of Euripides, Sophocles, or Aeschylus, or of a selection of plays by diverse tragedians. Students read at least two complete tragedies in Greek. Secondary readings help delineate the historical, civic, and festival milieu and the physical circumstances of performance.

Components: Lecture

Topics: Aeschylus, Sophocles, Euripides, Sophocles' Antigone

Same As Offering: GR 418

GR 523(3) Course ID:014240

Homer

Close reading and study of selections from Homer, principally the Iliad. Topics to be discussed in conjunction with the study of the text will include some or all of the following: the nature of oral composition (metrical and aesthetic aspects), the relationship of the Homeric poems to the wide-ranging (and largely lost) epic cycle, the scholiastic tradition, the emergence of the Christian Homeric cento in Late Antiquity. Requirement: two levels of college Greek.

Components: Lecture

Same As Offering: GR 423

GR 524(3) Course ID:016480

Homeric Hymns

Close reading and study of selected Homeric Hymns (graduate level)

Components: Lecture

Course Equivalents: GR 424

The Catholic Univ of America
Course Catalog

Arts & Sciences - Greek and Latin - Subject: Greek

GR 528(3) Course ID:001588

Greek Lyric

Close reading and study of selections from the fragmentary remains of the Aeolic (e.g., Sappho and Alcaeus) and Ionic (e.g., Archilocus, Mimnermus, Solon, Simonides, Anacreon) traditions of personal lyric. Comparative material may be drawn from Doric choral lyric or Hellenistic authors.

Components: Lecture

Same As Offering: GR 428

GR 529(3) Course ID:005682

Greek Choral Lyric

Examines the body of lyric composed for group, rather than solo, performance, with an emphasis on the epinician odes composed by Pindar and Bacchylides for victors in the pan-Hellenic games. The syllabus may also include dithyrambs and paeans sung in liturgical settings and odes performed between the scenes of tragic and comic dramas.

Components: Lecture

Same As Offering: GR 429

GR 530(3) Course ID:015897

Aspects of Performance in Classical Greek Literature

A broad selection of Greek lyric and choral poetry (to include examples from the Attic stage) as well as sympotic, political and philosophical poetry and prose will be read closely in Greek. A consistent effort will be made, through the use of a broad spectrum of tools, drawn from philology, rhetoric, literary criticism, etc., to highlight the manner in which much of what is now referred to as Greek literature was originally produced for (competitive) performance.

Components: Lecture

GR 532(3) Course ID:001589

Greek Comedy

Close reading and study of selected plays of Aristophanes and Old Attic comedy and/or of Menander and the New Comedy of the Hellenistic era. Secondary readings help delineate the historical, civic, and festival milieu and the physical circumstances of performance.

Components: Lecture

Topics: Menander

Same As Offering: GR 432

GR 533(3) Course ID:007233

Greek Paleography

Introduction to the study of Greek scripts, with practical exercises in reading and dating.

Components: Lecture(In Person)

Course Equivalents: GR 433

Room Requirements: DIGITAL PRESENTATION ROOM(1)

GR 534(3) Course ID:014023

Department Consent Required

Greek Historical Writing

Examines themes and key concepts in Greek historical writing from Herodotus (d. c. 425 BC) to Niketas Choniates (d. 1216). Explores the transformation and preservation of major themes, problems, and modes of expression from ancient into medieval Greek historiography. Authors include Homer, Herodotus, Thucydides, Xenophon, Polybius, Diodorus Siculus, Dionysius of Halicarnassus, Plutarch, Eusebius, Procopius, Theophanes, Leo the Deacon, Michael Psellos, Nikephoros Bryennios, Anna Komnene, and Niketas Choniates. Topics include religion and the divine; fortuna/tyche and fate vs. free will; heroism; gender; rhetoric; and 'truthiness' and historical factuality.

Components: Lecture

Same As Offering: GR 434

Enrollment Requirements: GR 104 or GR 411 or GR 511 or GR 519

GR 535(3) Course ID:001590

Greek Epic

Close reading and study of selections from Homer and the epic cycle.

Components: Lecture

Same As Offering: GR 435

The Catholic Univ of America
Course Catalog

Arts & Sciences - Greek and Latin - Subject: Greek

GR 536(3) Course ID:016751

Socrates

Considers, in the original and in translation, the major sources for our knowledge of the character, beliefs, and career of this important figure. An attempt to understand both the impressions he made on his contemporaries and his significance in the Greek philosophical tradition. Primary texts include Aristophanes' Clouds, Plato's Apology, and Xenophon's Memorabilia.

Components: Lecture

Course Equivalents: GR 335

GR 540(3) Course ID:015562 Department Consent Required

Herodotus

Close reading and study of selected portions of Herodotus' Histories (graduate level)

Components: Lecture

GR 541(3) Course ID:008943 Department Consent Required

Introduction to Later Greek Language and Literature

An introduction to late antique Greek language and literature. The course focuses on close reading of selected texts from different genres, with three goals: to acquaint students with the vocabulary, syntax, style, and pronunciation of later Greek; to introduce late antique literature, including basic philological and reference aids and current trends in modern scholarship; and to investigate the characteristics of later Greek literature, including such themes as interaction between classical and Christian literature and culture, development of new genres, centrality of the written word and interpretation, etc.

Components: Lecture

GR 548(3) Course ID:005683

Greek Pastoral

The Idylls of Theocritus form the nucleus of this course, which may also include works of the various genres in which pastoral themes play a significant role.

Components: Lecture

Same As Offering: GR 448

GR 549(3) Course ID:017846

Hellenistic Poetry

Close reading and study of selections of Hellenistic poetry (graduate level)

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

GR 550(3) Course ID:013578 Department Consent Required

Stars, Fate, and the Soul

Focusing on the Platonic corpus but including also selected texts from the Pre-Socratics up through the Cappadocian Fathers, this course will explore the development of the debate on the twin beliefs in (1) the putative influence of the stars on fate and (2) the astral destiny of the soul.

Components: Lecture

Same As Offering: GR 450

GR 553(3) Course ID:001591

Greek Oratory

Close reading and study of selected speeches by Demosthenes, Lysias, Gorgias, and other orators.

Components: Lecture

Same As Offering: GR 453

GR 576(3) Course ID:001595

Greek Philosophical Works

Close reading and study of selections from the works of the pre-Socratics, Plato, Aristotle, and other philosophers.

Components: Lecture

Topics: Arist, Nic and Eth, Plato

Same As Offering: GR 476

The Catholic Univ of America
Course Catalog

Arts & Sciences - Greek and Latin - Subject: Greek

GR 581(3) Course ID:001601

The Greek Novel

Close reading and study of selections from the romantic prose compositions of Achilles Statius, Chariton, Heliodorus, Longus, and Xenophon Ephesius.

Components: Lecture

Same As Offering: GR 481

GR 587(3) Course ID:005684

The Athenian Empire

An analysis of the "first" Athenian empire, from its origins after the Persian War to its downfall at the end of the Peloponnesian War. Students read and study primary sources in Greek and examine archeological, numismatic, and art historical evidence.

Components: Lecture

Same As Offering: GR 487

GR 590(3) Course ID:016876 Department Consent Required

Introduction to Byzantine Greek Language and Literature

This course will introduce advanced-level students of classical Greek to Byzantine literature. By studying different texts each week, students will become familiar with a millennium of Byzantine history, and with a society that was profoundly interested in the relationship between faith and reason on both political and theological levels. Participants will be introduced to the main features of medieval Greek, with a particular stress on its differences from classical Greek; read a selection of texts (hagiography / religious literature, poems and/or profane literature, historiography and philosophy) representative of the variety of medieval Greek literature and of the many possibilities it offers; and receive an orientation in some of the principal areas of medieval Greek scholarship, including lexica, bibliographies, and leading collections and repertories of sources.

Components: Lecture

Course Equivalents: GR 490

GR 592(3) Course ID:001594

Directed Reading

Graduate reading course on Greek text under the supervision of a faculty member.

Components: Directed Reading

Topics: Introduction to Papyrology, Homer

GR 603(3) Course ID:015401 Department Consent Required

Readings in New Testament Greek

Intermediate-level readings in the Greek New Testament and other koine texts with an emphasis upon the mastery of grammar and syntax. Prerequisite: One year of college-level Greek.

Components: Lecture

Course Equivalents: GR 201

Enrollment Requirements: requires one year of college-level Greek (achieved through completion of GR 102, GR 502, or both TRS 503A & TRS 503B)

GR 604(3) Course ID:015513 Department Consent Required

Advanced Biblical Greek

Philological study of New Testament texts chosen to suit needs of students, including textual criticism, analysis of linguistic patterns, and problems of translation and Semitic interference. Prerequisite: GR 603 or department permission.

Components: Lecture

Enrollment Requirements: GR 603

GR 611(3) Course ID:001604

Greek Epigraphy

Surveys Greek inscriptions, both classical and early Christian.

Components: Lecture

GR 613(3) Course ID:012743

Introduction to Greek Papyrology

This course studies the modern physical and intellectual *journey* of papyrus fragments from excavation through the processes of conservation, decipherment, transcription, identification, edition, and commentary, and introduces students to the skills involved in reading, editing, and conducting research with papyri. Weekly lectures, transcription projects, and research presentations.

Components: Lecture

Course Catalog

Arts & Sciences - Greek and Latin - Subject: Latin

LAT 448(3) Course ID:005687

Roman Pastoral

Explores the ways in which Latin poets adapted a traditionally escapist genre to serve as a vehicle for reflection on contemporary social and political problems. Students read representative bucolics based ultimately on the Theocritean model, with attention also to issues of Roman political and social history (e.g., the collapse of the republican oligarchy, the changing conception of the ideal prince, and the Christianization of the aristocracy).

Components: Lecture
Same As Offering: LAT 548

LAT 453(3) Course ID:005688

Roman Oratory

Close reading and study of selected speeches of Cicero.

Components: Lecture
Same As Offering: LAT 553

LAT 456(3) Course ID:018476

Quintilian

Close reading and study of Quintilian's treatise.

Components: Lecture(In Person)
Course Equivalents: LAT 556
Enrollment Requirements: LAT 104 or LAT 508 or LAT 517
Room Requirements: DIGITAL PRESENTATION ROOM(1)

LAT 458(3) Course ID:003865

Roman Satire

Close reading and study of representative works, with attention to one or more authors (Horace, Juvenal, Seneca, Persius) or to the development of this uniquely Roman literary genre from the polymetric satires of Lucilius (second century B.C.) to the prose diatribes of Jerome.

Components: Lecture
Same As Offering: LAT 558

LAT 459(3) Course ID:014241

Lucretius

The principal focus of this course is a close reading of the Latin of Lucretius' powerful and perennially controversial poem. While consistent attention will be paid to the poetic craft and nascent Alexandrianism of the *De rerum natura*, the poet's adaptation and transformation of Epicureanism will be kept in mind as well through regular reference both to the surviving fragments of Epicurus himself and what we know of the activities of his "garden"/school. Thus, Epicurean theories of perception, cosmology, even theology -- distant, blissfully disinterested gods residing in the spaces between universes -- as well as the considerable Nachleben of this keen, philosophical rival of Christianity in the Roman Empire and beyond, into the modern era, will be considered and discussed.

Components: Lecture
Same As Offering: LAT 559

LAT 461(3) Course ID:013185

Introduction to Medieval Latin Studies

This course is an introduction to the Latin language and literature of the late antique and medieval periods (ca. A.D. 200-1500). Designed to improve students' facility in dealing with Medieval Latin texts of all kinds and to move them toward independent work with such texts. LATIN 561 will (1) introduce participants to those aspects of Latin identified as the constitutive elements of the Latin of the Middle Ages (i.e., the Classical, popular, vernacular, and Christian elements); (2) emphasize the close reading and careful translation of a selection of representative texts and documents, with attention to vocabulary and word formation, orthography and pronunciation, morphology and syntax, and prose styles and metrics; (3) provide an orientation in some of the principal areas of Medieval Latin scholarship, including lexica, bibliographies, great collections and repertoires of sources, and reference works for the study of Latin works composed in the Middle Ages. Prerequisite: completion of four semesters of college Latin through LAT 104 or LAT 519 or

Course Catalog

Arts & Sciences - Greek and Latin - Subject: Latin

LAT 462(3) Course ID:013186

Topics in Medieval Latin Studies

Building upon the experience acquired in LATIN 561, this course will explore one or more Medieval Latin texts or genres, consider aspects of the development of medieval Latinity, or examine the Latin used in various fields of academic specialization. Prerequisite: LAT 541 or LAT 542 or LAT 561.

Components: Lecture

Topics: Ecclesiastical Administration, Royal Administration, Documents of Land and Power

Same As Offering: LAT 562

Enrollment Requirements: LAT 541, LAT 542, LAT 461, or LAT 561

LAT 465(3) Course ID:003799

Advanced Latin Seminar

Study of selected texts in Latin and English with attention to the development of genres and themes in Roman literature of the late Republic and early empire.

Components: Seminar

LAT 476(3) Course ID:003869

Roman Philosophical Works

Close reading and study of selections from the philosophical works of such authors as Lucretius, Cicero, and Seneca.

Components: Lecture

Topics: Cicero: De Divinatione, Cicero, Tusculan Disputations

Same As Offering: LAT 576

LAT 479(3) Course ID:003871

Roman Epistolography

Close reading and study of selected letters of such authors as Cicero, Horace, Pliny the Younger, Fronto, Symmachus, Ausonius, Jerome, and Augustine.

Components: Lecture

Same As Offering: LAT 579

LAT 481(3) Course ID:005690

The Roman Novel

Considers a single work (e.g., Petronius' Satyricon, Apuleius' Golden Ass) or the development of fictional narrative in Latin prose and poetry.

Components: Lecture

Same As Offering: LAT 581

LAT 485(3) Course ID:015895

Augustine's Confessions

A close reading of the text with full attention to its cultural, historical, and religious contexts.

Components: Lecture

LAT 487(3) Course ID:005691

The Roman Revolution

A survey of the events leading up to the fall of the Roman republic and an analysis of the "constitutional" revolution that followed. Students read a variety of sources in Latin and examine archaeological, numismatic, and art historical evidence.

Components: Lecture

Same As Offering: LAT 587

LAT 488(3) Course ID:005692

The Age of Nero

Frequently portrayed as an age of luxury, decadence, and excess, Nero's reign from A.D. 54-68 can be vividly recreated by a close reading of Petronius, Suetonius, Tacitus, and other writers, as well as by the study of inscriptions, coins, and artwork. Focuses on the social history of Rome in the first century A.D.

The Catholic Univ of America
Course Catalog

Arts & Sciences - Greek and Latin - Subject: Latin

LAT 559(3) Course ID:014241

Lucretius

The principal focus of this course is a close reading of the Latin of Lucretius' powerful and perennially controversial poem. While consistent attention will be paid to the poetic craft and nascent Alexandrianism of the De rerum natura, the poet's adaptation and transformation of Epicureanism will be kept in mind as well through regular reference both to the surviving fragments of Epicurus himself and what we know of the activities of his "garden"/school. Thus, Epicurean theories of perception, cosmology, even theology -- distant, blissfully disinterested gods residing in the spaces between universes -- as well as the considerable Nachleben of this keen, philosophical rival of Christianity in the Roman Empire and beyond, into the modern era, will be considered and discussed.

Components: Lecture

Same As Offering: LAT 459

LAT 561(3) Course ID:013185

Introduction to Medieval Latin Studies

This course is an introduction to the Latin language and literature of the late antique and medieval periods (ca. A.D. 200-1500). Designed to improve students' facility in dealing with Medieval Latin texts of all kinds and to move them toward independent work with such texts. LATIN 561 will (1) introduce participants to those aspects of Latin identified as the constitutive elements of the Latin of the Middle Ages (i.e., the Classical, popular, vernacular, and Christian elements); (2) emphasize the close reading and careful translation of a selection of representative texts and documents, with attention to vocabulary and word formation, orthography and pronunciation, morphology and syntax, and prose styles and metrics; (3) provide an orientation in some of the principal areas of Medieval Latin scholarship, including lexica, bibliographies, great collections and repertories of sources, and reference works for the study of Latin works composed in the Middle Ages. Prerequisite: completion of four semesters of college Latin through LAT 104 or LAT 519 or

Components: Lecture

Global History from the Paleolithic to the Present

This course tells the story of humankind across the globe, including the migrations, transformations, and conflicts that have shaped human existence, from the first agricultural revolution to our current age of uncertainty. A major emphasis will be on historical methods of analysis, in order to study disparate cultures within their particular political and social context. The course will also develop historical and cultural literacy, so that students can orient themselves in time and be fluent with some of the landmark events, cultures, and historical patterns of the past. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 111(3) Course ID:017389

Western Civilizations from Antiquity to the Renaissance

This course begins with the development of agriculture, writing, and cities in the ancient near east and then considers the cultures and civilizations that developed in antiquity, including the Mesopotamian, Hebrew, Egyptian, Greek, Roman, Celtic, and Germanic. The course will then disentangle the thousand years of history lumped under the term 'Middle Ages,' examining the events and the societies that developed from the fourth and fifth century fall of the Roman empire in the west to the 1453 fall of the Roman empire (Byzantium) in the east. The course will conclude with the Renaissance. A major emphasis of the course will be on historical and cultural literacy, so that students can orient themselves in time and be fluent with some of the landmark events and cultures of the past. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

Components: Lecture

HIST 112(3) Course ID:017562

Western Civilizations from the Renaissance to Today

This course begins with the Italian Renaissance and the voyages of discovery and then considers the transformative developments of early modern and modern Europe. Topics covered will include religious Reformations, Enlightenment and scientific revolution, colonialism, political revolutions (English, American, Haitian, French, and Russian), the rise of the nation-state, the age of global warfare, industrialism, and authoritarianism. A major emphasis will be on historical methods of analysis, in order to study these cultures within their particular political and social context. The course will also develop historical and cultural literacy, so that students can orient themselves in time and be fluent with some of the landmark events and cultures of the past. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

The Path to Brexit

Pundits debate endlessly the reasons Britain has decided to end its almost fifty-year membership in the European Union. Missing from most popular accounts, however, is the history of Britain's complicated relationship with Europe. This seminar takes the long view, going back a millennium to explore how the British Isles have interacted with Europe since the Norman invasion of 1066. Through reading and discussion, we will see how Britain over the past centuries has defined itself in opposition to the Continent, and has occasionally made peace with it. Putting Brexit in historical context will allow us to see what appears to be a short-term political crisis as part of the longer history of a nation.

HIST 138(3) Course ID:016640

London: From Imperial Metropolis to Global City

This course charts the development of London from the Victorian age into the early twenty-first century, when a city known as the 'heart of the empire' became a truly global city. We'll explore the city through primary sources, including journalism, memoirs, fiction, legislation, and film, and through the work of social and cultural historians. Topics covered include: the transformation of the Victorian city through gas, light, and water; the role of the metropolitan press in shaping the significance of London within the Empire; the emergence of London as a playground for the rich and a home for the working poor; the city as battleground -- of total war between 1939 and 1945 -- and of governance in the 1970s and 1980s; and the remaking of the city as a sanctuary for the wealth of global elites.

Travel and Tourism in Latin America

Many North Americans first experience Latin America through tourism and travel, whether during a boisterous spring break trip to Cancun, a forbidden visit to Havana, or an adventurous trek to the heights of Machu Picchu. This course will examine the long history of travel and tourism in Latin America, in order to understand the ways that the region has been shaped by encounters, interactions, and conflicts between travelers/"outsiders" and Latin Americans. Covering the period between the arrival of Columbus in 1492 and the present day, we will examine and analyze narrative accounts, maps, photographs, paintings, travel posters, and films in order to look at the ways that travelers experienced and described the racial, cultural, and political complexities of the region. We will also assess the costs and opportunities created by travel and tourism in the region, particularly in the latter half of the course, when we will discuss how modern Latin American governments created a tourist industry that continues to export an exotic and

HIST 141(3) Course ID:017219

Myth and Reality on the American Frontier: Violence, Race Democracy and the Forging of America

Are Americans a frontier people? For most of its existence the people of the United States have thought so. The frontier, they thought, was the crucible of American virtues; it was the laboratory of democracy, the breeding ground of rugged individualism and self-reliance, the place where European civilization met the "howling wilderness" and created something new, something American. More recently many Americans have tried to understand the darker side of that story, thinking through the painful consequences of defining American identity in ways that glorify conquest, colonialism, and bloodshed. The Native people of North America, who the old story cast in the role of villains, have also fought back against the consequences of frontier mythology. This seminar investigates the role of the frontier in the forging of American identity-forging in the sense of fusing and also in the sense of fabricating. By reading and discussing primary sources, we will use the tools of historical inquiry to try to understand the reality of the frontier, the making of its

The Mongol Empire: Fire and Blood, Silk and Love across Eurasia

Genghis Khan has a fearsome reputation as one of history's bloodiest world conquerors. But the hemisphere-spanning Mongol Empire that he and his descendants created in the 1200s was also a great paradox. Even as it was built through considerable violence, it also facilitated unprecedented exchange--of silk clothes, porcelain bowls, scientific knowledge, food, and even genes--across cultures. In this class, we'll explore the good, the bad, and the ugly of this major world empire, as well as its seminal figures, like Genghis Khan and Marco Polo, and the legacy it left to the modern world. Along the way, we'll consider the historical methods at our disposal to piece together the story of an empire that spanned the medieval world from Hungary to the Middle East to Korea. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

HIST 143(3) Course ID:017569

Migrations in the Americas

From the arrival of the first humans to the Americas some 13,000 years ago to the contemporary Central American refugee crisis, migration has continuously shaped and re-shaped human society in the Western hemisphere. This course offers a sweeping introduction to the history of migration in the Americas, covering pre-European migration and settlement in the Americas, the era of European conquest, the Atlantic slave trade, industrial migrations of the 19th century, and transnational migration after 1940. Coursework and readings will cover the demographic, political, economic, biological, and cultural impact of migrations in the Americas over this long period. Throughout the course, we will discuss how and why migration has always been such a deeply politically charged phenomenon, and why - despite the best efforts of kings, popes, and presidents - it has always been so difficult to control. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

HIST 145(3) Course ID:018466

The Founding Fathers

They are everywhere: on our money, on our bookshelves, in our politics: the Founders. Americans invoke them constantly to help us make sense of the world we live in today; we think of their wisdom as timeless, applicable in all times and places. But of course the Founders were actual people, living in an historical world very different from our own, that shaped them and their ideas. In this course we will learn about the Founders in their own words and in their own world, trying to understand them on their own terms and as products of their historical era. We will also learn about how Americans (and others) have thought about the Founders, and compare the popular understanding of the Founders to what we discover in the class. We will ask who the founders were--and who they are; whether it is good for us to focus on them as much as we do; and what to make of their shortcomings. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

HIST 146(3) Course ID:018622

Electing the President: George Washington to ...?

This course looks at how Americans have elected their presidents since George Washington became the nation's first chief executive more than 200 years ago. We examine the Electoral College and other constitutional and legal requirements and explore the role of parties, primaries, and the press. Using historians' accounts and a variety of primary sources--speeches, letters, and political cartoons, and in more recent years, TV and social media coverage--we look at key elections, including those of George Washington, Andrew Jackson, Abraham Lincoln, Richard Nixon, George W. Bush, and Barack Obama. We finish by reflecting on how the most recent presidential election does--and doesn't--fit into past patterns.

HIST 150(3) Course ID:001761

The Crusades

This course will present an overview of the crusading movement from its origins in the eleventh century to the fall of Constantinople to the Turks in 1453. We will examine the development of the ideology of holy war in both Europe and the Middle East, the conquest of Jerusalem and the establishment of the crusader states, the expansion of the crusades to encompass campaigns against heretics, northern European pagans, and even political opponents within Europe, and the ultimate decline of the crusading ideal in the later Middle Ages. We will also study the lasting impact of the crusades: their contributions to European art, architecture, and music, and their continued resonance in contemporary political debates concerning relations between the Islamic world and the West.

Medieval Pathways

This interdisciplinary course explores the complexity of the medieval world (ca. 300-1500) as a way of introducing students to Medieval Studies. The course introduces multiple different modes of inquiry, or pathways, to the Middle Ages. Team-taught by several instructors, the course focuses on a different unifying theme each year. Students examine both material and written sources, and participate in multiple field trips to receive a hands-on introduction to Medieval Studies and to the many resources on campus and in Washington, D.C. The longer class session is used for occasional off-campus visits. Otherwise, the class will meet twice a week for 75 minutes each. The course serves as a gateway to the Medieval & Byzantine Studies major and minor (as MDST) and may fulfill the Arts & Sciences humanities requirement (as HIST or MDST) or literature requirement (as ENG).

Food: A Global History

Humans share with all other living beings a fundamental need--nutrition in order to survive--but food has meaning that is uniquely part of the human experience. Societies have organized the production, distribution, and sharing of food and drink in many different ways and vested what and how they consume with a wide variety of meanings. Almost every major religious and philosophical tradition in the world has comprehended a particular understanding of food: prescriptive, moral, or scientific. Until very recently in history, most of human effort went toward simply feeding people, an almost incomprehensible gulf between the present day and the not so distant past. This course considers a range of historical societies from the Agricultural Revolution to the present, West and East; examines how biology, geography, climate, economics, and religion influence what people grow and eat, how food and eating have figured in global art and literature, and how encounters between different parts of the world have resulted in changes in the trade and

History of Ancient Greece

A chronological survey of the political and social history of Greece from "Agamemnon to Alexander to Augustus." Covers the period from the late Bronze Age through the Hellenistic era, beginning with the Mycenaean kingdoms and concluding with the conquest of Cleopatra, the last ruler of the Ptolemaic dynasty in Egypt, by the future Roman emperor Augustus (31 BC). Focusing in particular upon the construction of Greek identity as shaped by such factors as geography, warfare, economy, and intercultural contact, the course will employ a textbook, primary sources read in English, and maps and other images to explore important issues in the evolution of Greek society. Subjects treated will include the rise of the Greek polis (city-state), the Greek colonization of the eastern and western Mediterranean, the development of diverse governmental and constitutional structures ranging from tyranny to democracy to monarchy, the blossoming of Greek artistic and intellectual life during the classical period and the conflicts between Greeks and Persians and between

HIST 206(3) Course ID:012192

History of Ancient Rome

Surveys the history of Rome and its empire from the foundation of the city in the eighth century BC to its breakup into successor states in the fifth, sixth, and seventh centuries AD. Focuses on economic, cultural, and political themes, with special attention to geography, archaeology, and cultural exchange. Readings consist of primary and secondary sources, with emphasis on critical interpretation. This is a Liberal Arts curriculum course in History. It treats the Enduring Question: The Human Condition from the perspective of long term change in Roman history by examining the shift from res publica to empire, the integration of micro-regional economies into a global trading system, and the transformation of religion from the local to the universal.

Urban Space As A Stage For Memory

Considering Rome as an object of study, in this course we will focus on historical and cultural memories and explore how they intersect with individual memory. What is the role of urban space in the construction of memory? How do historical and cultural memories inspire our own memories? What relationship is there between them and what dialogue is there between us and History? An interdisciplinary approach will orient our study of urban space which is to be understood not only as the past that we study, but also as a present that is active and alive and able to stimulate students to think of art and history not as entities external to ourselves, but as worlds intimately connected to the construction of our own identity.

Through lectures, site visits, and hands-on projects we will study and experience the fundamental relationship between space and time, with particular attention to the its horizontality in Rome.

Specifically, the work involved in this course will focus on two main fields of study: 1) historical and

Archaeology of Daily Life in Ancient Rome: Work and Play

The life of the ancient Romans was guided by two important concepts, otium, or leisure time, and negotium, a more structured use of time that we may associate with work of varying kinds. A good Roman life could, and often did, include both. This course will explore Roman daily life and the many activities associated with both otium and negotium. The business of ancient Rome was largely conducted in the central and market areas of the city, and we will study the ancient Roman Forum, the ancient river port in Rome and its associated features (wharves, warehouses, and rubbish heaps), as well as the ancient port city of Ostia. The leisure time of the aristocracy was noticeably different than that of the poor. The rich often spent leisure time in a relaxing environment outside of the city, such as villas, where they could pursue all types of activities deemed beneficial to the mind and body. The poor, instead, tended to stay in Rome, and spend their unstructured time at state-sponsored events and venues such as the games held in the Flavian Amphitheater, or

Transformative Texts II: Citizenship and Communities

Transformative Texts 2: Citizenship and Communities, is the second of two gateway courses leading to a series of integrated pathways through our university's existing liberal arts curriculum. The gateway courses feature common readings; show the humanities as a source of meaning and purpose in life; and invite students to think about citizenship from various perspectives, with an emphasis on American democracy. These humanities-centered sequence of courses are based on readings from a wide array of times and cultures that explicitly and implicitly engage these topics, and that branch out to incorporate local and global realities and imperatives of citizenship. Transformative Texts 2 considers the foundations for citizenship in seminal documents that have shaped American identity, that engage strife within a pluralistic society, and that consider crucial issues that extend beyond national borders.

Pandemics: A Comparative History

This course will survey pandemics across time and place, looking for patterns and discontinuities. Their relationship to broader environmental and social changes will be examined, both in the setting up of conditions for a pandemic and then in the short- and long-term resolutions to them. Particular attention will be paid to the roles of nursing, governance, and religious culture during and after the crisis. Seven different periods of pandemic will be considered: the Antonine and Cyprian plagues in the second and third century AD, the plague of Justinian in the sixth century, the Black Death of the fourteenth century, the diseases spread by conquest in the sixteenth-century Americas, the Great Plague of London in 1665-6, the waves of cholera in the nineteenth century, and the 'Spanish' flu of 1918-20. The course will conclude by briefly looking at contemporary responses to pandemics, including HIV, Ebola, and influenza. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

HIST 215(3) Course ID:018928

Roman Law and its Legacy

Roman law made both the republic and the empire possible: as jurists developed a sophisticated jurisprudence of justice and equity, they enabled the creation of a web of social and economic relations across peoples and places. Roman jurisprudence introduced concepts of intention, analogy, justice, and equity to the legal traditions of Europe, and for centuries, the study of Roman law was part of the primary curriculum for those students who did not wish to be doctors or priests. It was considered essential to the development of skills of reasoning and to citizenship. This course, which grapples with the enduring question of what justice is, begins with a detailed study of Roman law itself and then considers its lasting legacies in medieval and modern law. As we will see, Roman law sets down enduring concepts in family law, the law of slavery, property law, and constitutional understandings of the power of the prince.

HIST 216(3) Course ID:011834

Beyond the 'Fall' of Rome, 400-800

During the course of the fifth century in the West, the Roman empire fell. Or did it? This course will take up the classic theme of the Fall of Rome, and introduce students to new ways of understanding this pivotal period of transformation. First, the class will consider the Roman empire at its height; what did the Pax Romana mean? We will look at how the empire actually worked in the period immediately leading up to and following the reigns of Constantine (d. 337) and his successors. Second, we will examine the traditional narrative of "decline and fall" that supposedly followed upon early "barbarian" intrusion in the late fourth century and the Sack of Rome in 410. Third, turning our attention chiefly (although not exclusively) to the West, we will present an alternative and rather less simplistic account of "post-Roman" developments, focusing on patterns of government within the new settler kingdoms, changes in economy and culture, the impact of Christianization, and the endurance of Roman values, down to the rise of the

HIST 216A(3) Course ID:012778

Medieval England

This lecture course will cover the history of Britain between the end of Roman rule in the early fifth century and the Battle of Bosworth Field in 1485 that brought the Tudor dynasty to power. During this period, Britain experienced three major waves of colonization and conquest (Anglo-Saxon, Viking, and Norman) that profoundly transformed the lives of the peoples who inhabited the island. We will examine the rise of a unified English kingship; the often troubled relationship between England and its neighbors across the Channel on the one hand and the peoples of the "Celtic Fringe" on the other; the role of the Church in England, both at the level of high ecclesiastical politics (the conflict between St. Thomas Becket and King Henry II) and at the level of the ordinary lay Christian; and the changes in English economic, social, and cultural life that occurred against a backdrop of dramatic events such as the crusades, the Black Death, and the Hundred Years War.

Components: Discussion, Lecture

HIST 217(3) Course ID:017568

The Vikings

The Vikings are a popular culture phenomenon today, but their fame is not new. This interdisciplinary class will investigate the Viking period in European history, from the eighth to the thirteenth centuries. We will examine the history, literature, and art associated with Viking culture in Scandinavia and the North Atlantic, in England, and on the Continent. Themes will include myths and legends in poetry and saga literature, the art and archaeology of the Viking period, and the gradual processes of conversion and conquest which reshaped both Viking and European culture.

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 225A(3) Course ID:013639

History of Ireland to 1607

Ireland has been invaded repeatedly throughout its history. Each wave of new arrivals has caused a renegotiation of what it means to be "Irish." This course will engage directly with that question by surveying Irish society and culture from pre-Christian times down to the end of the old Gaelic order in 1607.

We will glance at Irish prehistory and then examine "Celtic" society-- its social structure, laws and literature. Next, we will trace the impact of the Christianization of Ireland on this society. We will look at the effect on Ireland of invasions by the Vikings and the Normans, and the establishments of English rule in Ireland. We will then study the varying fortunes of the competing groups in Irish society (Gaelic Irish and Anglo-Irish), analyze the advent of the Reformation in Ireland, and examine the final conquest of Ireland in the reign of Elizabeth I and the passing of the old order.

Components: Discussion, Lecture

HIST 226(3) Course ID:014940

British Empire, 1750-1970

What was the impact of the British Empire on the development of the modern world? Proceeding chronologically and thematically, this course explores that question through a survey of the expansion and contraction of Britain's imperial presence around the world. Through lecture and discussion of primary and secondary texts, we will explore the following: the shift from informal to formal empire; the economics of empire; slavery and its abolition; humanitarianism and the civilizing mission as justification for empire; and the use of violence in the conquest and maintenance of empire. Throughout the course, we will consider the advantages and limitations of using the British Empire as a model for understanding the history of globalization.

Global Migrations to the New World, 1492-present

Since 1492, almost every society, economy, and environment in the western hemisphere has been continuously affected by mass global migrations from Europe, Africa, and Asia. In this class, we will examine four periods of mass global migration to the Americas: the era of exploration, discovery and conquest (1492-ca. 1600); the Atlantic slave trade (ca. 1500-1850s); the European and Asian migrations of the industrial age (ca. 1840-1930); and the contemporary period (ca. 1940-present). As we discuss each of these migrations, we will ask a series of questions: Who were these migrants? Where did they come from, and why did they leave? How did they change the preexisting society, economy, and environment in their area of settlement? Did they retain connections to their homelands, or to other groups of migrants? Most importantly, what can their lives tell us about the common history of the Americas?

Components: Discussion, Lecture

HIST 229A(3) Course ID:019243

Italians in the Americas, 1840-1960

This course will explore the history of Italian migration to the United States, Canada, and Latin America during the nineteenth and twentieth centuries. We will examine the factors: economics, politics, law, demographics, transportation, and communication technologies - that generated and facilitated the mass migration of Italians (particularly southern Italians), to the Americas. We will consider the ways that migrants transplanted their diverse and localized Italian cultures, social mores, and religious practices to the regions of the United States and Latin America where they settled (focusing especially on Italian communities in New York and Buenos Aires). We will examine the links between communities in Italy and America; the long-term impact of emigration on Italy's society, politics, and culture; and the way that this extraordinary migration continues to shape relations between Italy and the Americas today. We will pay special attention to Italian community life and popular religiosity, examining devotional practices in Italy

HIST 231A(3) Course ID:017002

Soccer: A World History

Soccer today is a global multi-billion dollar business. The sport has become part of a gigantic entertainment and betting industry stretching across the planet. The international soccer association FIFA has more members than the United Nations (208). However, for hundreds of millions of fans and players, soccer is mostly what they love as amateurs (from Latin amare). And, (modern) soccer has a history that goes back into 19th century England, from where engineers and businessmen brought the 'English disease' (soccer = 'Association football') to continental Europe, South America, and other places. In America, soccer had it more difficult to become a major national sport. What was the reason for that? This course offers insights into the fascinating social, economic, and cultural history of soccer, how the game spread over the globe, and why the tension between players, fans, and business is part of its success story. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

Components: Discussion, Lecture

HIST 235(3) Course ID:012444

Medieval World

This course offers a broad survey of medieval Europe (ca. 500-1500), a formative period in western society known for its soaring gothic cathedrals, the culture of chivalry, church and state power struggles, the crusades, the Black Death, Dante, and the emergence of the inquisition. We will examine western Christendom in the making by tracing the growth of its central institutions alongside its encounters with others--Pagans, Jews and Muslims--as it sought to expand its horizons and borders. Readings will emphasize primary sources in translation. No previous knowledge of the Middle Ages is assumed. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

HIST 240(3) Course ID:018921

Politics of the Past: An Introduction to Cultural Heritage Studies

What makes the past meaningful to individuals, communities, nations, and the world? How is cultural heritage mobilized to build identity, social cohesion, develop tourist markets, encourage financial investment, and stake political claims? This course critically examines western relationships to the past tied to property and rooted in the colonial drive to plunder, collect, and catalogue, and how non-Western heritage frameworks both complement and challenge this conception. In addition to the tangible material remains of the past, the course also explores heritage's "intangible" dimensions, from folklore, music, dance and festivals to language, knowledge, and even landscapes. The focus is on how cultural heritage is embedded in everyday life and how the past is political, continuing to live on and be creatively reinterpreted in the present.

The Making of America, 1607-1877

The United States we know today was forged through centuries of hard-fought struggles. This course provides an overview of American History in the first 270 years. It surveys early contests between indigenous peoples and European empires, colonists' rebellion in the American Revolution, and political conundrums in the early United States. It also explains divisive economic transformations and immigration patterns, conflicts during westward expansion, women's and African Americans' demands for inclusion, reform efforts to overcome social ills, new religious awakenings, and struggles over slavery and the country's economic future. The course concludes with the accelerating centrifugal forces that brought the Civil War, and how Americans began rebuilding the fractured nation into a new society. Two lectures and one discussion per week; textbook and original historical documents. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

Components: Discussion, Lecture

HIST 258(3) Course ID:000187

Emerging Superpower: The United States, from 1877-1991

This course is designed to provide an introduction to important aspects of the social, political, and economic history of the United States from Reconstruction through the Vietnam War. The course will explore the nature of American citizenship as it has been forged and re-forged since Reconstruction. Key topics will include the rise of industrial capitalism, the impacts of immigration and urbanization, the emergence of mass consumer culture, the transformation of federal governance, the relationship of the United States to the rest of the world, and the ways in which mass social movements reshaped the nation's political culture, its institutions, and individuals' experiences. This course is intended for first years and sophomores. This course counts as a foundational course in History or Political Theory within the liberal arts core requirements.

The United States in the 20th Century

This course is intended to introduce students to the general narrative of United States history in the twentieth century. Major themes will include: 1) The racial legacy of the Civil War/Reconstruction 2) Domestic and foreign implications of U.S. economic dominance 3) The rise of the U.S. as a military power and the "American project" 4) Evolution of modern American culture through the lens of mass media and religion 5) Political patterns dominated by liberal and conservative thought. We will use secondary and especially primary sources (original documents and audio and visual recordings) to investigate these issues during Friday discussion sections.

Components: Discussion, Lecture

HIST 281(3) Course ID:001716

Colonial Latin America

Part I: Before independence. European and Indian background; conquest; religious, political, economic, and social structures; eighteenth-century reforms; independence movements.

Components: Discussion, Lecture

HIST 282(3) Course ID:005695

Modern Latin America

Part II: Since independence. Nature of political, economic, and social problems, 1820-1965; histories of Mexico, Argentina, and Brazil.

Components: Discussion, Lecture

HIST 300(3) Course ID:001740 Department Consent Required

Age of Discovery: Iberian World

Examines the motives and conduct of Spanish, Portuguese, and English explorers, as well as key conquests in the New World and Asia during the sixteenth century. Key figures include Columbus, de Gama, Magellan, Sir Francis Drake, Hernan Cortes, Francisco Pizarro, and Alfonso De Albuquerque.

Components: Lecture

HIST 301(3) Course ID:016918

Alexander 'the Great': From Myth to Man

This course will follow Alexander on his eastern expedition from Greece to India and back again, tracing his adventures from his boyhood (supposedly) under the tutelage of Aristotle to his death in Babylon. Focusing upon historical and archaeological resources for the study of Alexander and his world--texts, inscriptions, buildings and monuments, statuary, and coinage--it will examine the joint influences of the heroic tradition and of ancient Greek political culture upon the Alexander story. It will also explore the extent to which Alexander's own performative and commemorative choices may have affected his rapid transition 'from man to myth.'

Components: Lecture

HIST 302B(3) Course ID:015995

The Post-Roman World, 410-750

At the beginning of this period, we have something that still resembled a Roman Empire, and increasingly confident about its unified Christian identity. At the end of the period, that Roman Empire had shrunk to Greece and Turkey; old western provinces (Britain, France, Spain, and Italy) had become independent settler kingdoms; and the Middle East, Egypt, North Africa, and much of Spain were under the control of a new Islamic Empire, centered on Damascus. The Christians in these territories were now deeply and lastingly divided. It was an astonishing transformation, achieved in little over 300 years. How did it happen? What kept it from collapsing into complete chaos? What were its immediate effects? The course invites you to find out.

HIST 303(3) Course ID:019082

African-American Race Relations in the U.S.: Reconstruction to Civil Rights Era

This course will survey race-relations between African-Americans, newly declared freed during the Reconstruction period and subsequently subjected to segregation, and the white majority in the United States. Although the end of the Civil War brought upon victory in abolishing the legal practice of slavery in the country and asserting the indivisibility of the United States as one nation, it also left behind centuries of wounds that needed fixing, disarrays that desperately needed restructuring. How successful was the transition process? What was the experience of African Americans through this period? How can we apply these lessons to the present day? Assignments will be based on reading excerpts and films that will be given weekly and will explore expectations & as opposed to realities & largely from the viewpoint of the oppressed. There will be a final reflection assigned that will incorporate all materials presented throughout the course. A course syllabus will be available in the week preceding the start date of class.

Components: Lecture(Online)

HIST 305A(3) Course ID:014752

Ancient Christian Roots

The course will identify features of the earlier medieval religious world that had endured since late antiquity, albeit adapted to new circumstances. After considering terrain and material culture, we shall examine social, institutional, and cultural developments under such key headings as &community,& &leadership,& &ceremony,& &formation,& &anthropology,& and &art.& The course will open and close with a survey of the city of Rome immediately after 590 and immediately before 1073.

Components: Lecture

HIST 306(3) Course ID:000109

Women, Sex, Gender in the Middle Ages, 1100-1500

This course examines the experience of women in Western Europe during the later Middle Ages (ca. 1100-1500) and the contributions that women made to that culture. At the same time, the course examines how medieval gender systems were historically constructed and the implications of that construction for society and the sexes. The discussion component of the course introduces a broad range of primary sources available in translation along with methods of historical analysis and interpretation. Topics include: women and the law; work; marriage and family; religious life and experience; heresy and crime; scientific and medical discourses about women; literary and cultural production.

Components: Lecture

HIST 307(3) Course ID:005696

Comparative Colonial Systems, 1500-1800

Compares colonial structures of England, Portugal, France, and Spain, with particular emphasis on the relations of colonial societies to indigenous cultures and the impact of colonies on the development of the mother country.

Components: Lecture

HIST 307A(3) Course ID:014722

The Catholic Missionary Church in the Americas and Asia, 1500-1800

This course explores the history of Catholic missions in the Americas and Asia during the early modern period. Topics will include relations between missionaries, indigenous peoples, colonists, and crown officials during the conquest and settlement of the European empires; relations between Christians, Jews, and Muslims; the development of pastoral ideals and practices; America and Asia in European religious thought; and the comparative history of the Spanish and Portuguese empires. We will focus on the writings of early modern missionaries, especially Jesuits. Among the writers we will study are José de Acosta, Jean de Brébeuf, Bartolomé de las Casas, Ignatius of Loyola, Alexandre de Rhodes, António Vieira, and Francisco de Vitoria.

HIST 308(3) Course ID:001756

History of Byzantium and the Creation of the Orthodox World

The medieval Byzantine Empire was heir to a myriad of great traditions in world history: the politics of Rome, the religion of ancient Christianity, and the philosophy of classical Greece. This course explores the politics, culture, and religion of Byzantium from Constantine's Christianization of the Roman Empire in the 4th century to the Ottoman conquest of Constantinople in the 15th. Along the way we will see the Byzantines do battle with Muslim armies, convert the Russians to Christianity, and cultivate a flourishing and distinctive artistic tradition. Students will become familiar with the internal workings of Byzantine society through both primary and secondary source readings.

Components: Lecture

HIST 308A(3) Course ID:014045

The Modern Middle East

From Napoleon's invasion of Egypt in the 18th century to the Arab Spring and the emergence of ISIS in the 21st, this course surveys the politics, societies, cultures, and religious transformations of the Middle East, North Africa, and the wider Islamic world in the modern era. Major topics include the Islamic Middle East's incorporation into global economies and politics; modernist Islamic reform movements; European and American imperial intrusions; World War I and the disintegration of the Ottoman Empire; modern ethnic nationalisms (Arab, Turkish, and Zionist); authoritarian states in the twentieth-century Middle East; and the rise of Islamism, the Arab Spring, and oppositional politics. Our abiding concern will be the transformation of Middle Eastern and Islamic traditions through their encounters and struggles with global economic and political structures.

Components: Lecture

HIST 308B(3) Course ID:019067

Modern Islam: Crisis, Defeat, and a Search for Order

Described as harboring "Muslim Rage" by a leading American magazine, Muslims have been portrayed as a reactionary force, out of place in the modern world, by Western culture and media in the post-Cold War era. From the terrorist attacks of 9/11 to the more recent ISIS brutality that appeared as the manifestations of this rage, Western scholars and societies have grappled with the "Islamic" or "Muslim Question". They sought to understand: why are Islam and modernity seemingly incompatible? And how do we conceive of and deal with the Muslims, who make up a quarter of the world's population and represent sizable minorities in European nation-states? Muslims also contended with their own version of the "Islamic Question" after their encounter with European early modernity left them in a deep sense of crisis and decline, soon to be followed by defeat, retreat, occupation, and colonization since the late sixteenth century. They have sought a place within the modern world and engaged in self-reckoning in the face of an (early) modern crisis.

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 309(3) Course ID:001757

The Rise of Islam

In a humble corner of Arabia in the 7th century, a new Abrahamic religion took shape that would soon transform the world around it: Islam. In History 309, students trace the development of Islamic religion, culture, and politics throughout the medieval world, from Muhammad's Arabia to the Alhambra and mosques of Spain in the west, to the Mughal emperors of India in the east. Along the way we encounter Sufi saints, European Crusaders, and even Genghis Khan. Students grapple throughout with enduring questions of liberal arts learning. How have Muslims historically understood their relationship to each other and to God, and how does that compare to our own understandings of our place in the cosmos, whatever our religion? How do we know what we think we know about the past? what sources and methods are available to us to reconstruct the human experiences of distant times and places?

Components: Lecture

HIST 309B(3) Course ID:014289

History of Ancient Israel

This course covers the history of ancient Israel from the mid-2nd millennium BC up through the major Jewish revolts against Rome in the 1st and 2nd centuries AD. During the course of the semester, students will learn how modern historians assess the Bible as a historical resource, and will consult other sources from the ancient world, both textual and archaeological.

HIST 309C(3) Course ID:015761

Muslims, Christians and Jews in the Medieval Mediterranean

The medieval Mediterranean was a highly diverse world in which people of different faiths lived in close proximity, sometimes in peace and sometimes in tension. This course introduces students to that multi-religious milieu, with special attention to the interactions of communities of the three Abrahamic faiths – Muslims, Christians, and Jews – in areas ranging from Spain to the Arabic-speaking Middle East to Iran. Through both primary and secondary readings, we will examine the dynamics of these communities; social interaction and intellectual exchange as we consider how people in past societies dealt with religious difference.

Components: Lecture

HIST 310(3) Course ID:001759

Religion and Society in Medieval Europe, 300 - 1500

This course examines the role of religion and its impact on western Europe from the fourth to the fifteenth centuries. Relying mainly on primary source materials, topics covered in the course include: Christianization of the Roman world, asceticism, monasticism, missionaries, Church and State struggles, the Crusades, heresy, the mendicant orders, and lay piety. We will also examine our theme through pivotal medieval figures such as Hildegard of Bingen, Abelard and Heloise, Francis of Assisi and Catherine of Siena.

Components: Lecture

HIST 311B(3) Course ID:015760

Gunpowder Empires of Islam: the Ottomans, Safavids and Mughals

In the early modern period, while Spanish explorers were crossing the Atlantic, the Islamic world was dominated by three highly complex, religiously distinct empires. The Ottomans of Europe and the Middle East, the Safavids of Iran, and the Mughals of India have left us some of the world's major cultural landmarks, from the Taj Mahal to Istanbul's Blue Mosque. This course explores the major role played by these three empires in the history of the early modern world. In particular, we will examine each empire's society and economy, their relations and rivalries with each other, and their evolving connections to European powers from the 14th to the 19th centuries. A variety of secondary and primary sources will facilitate an in-depth view of three empires whose legacies are still felt in the modern societies of Europe, the Middle East, and South Asia.

Components: Lecture

HIST 312(3) Course ID:001762

Medieval Japan

Many enduring aspects of Japanese culture and society evolved during the earliest centuries of the archipelago's written history. This course explores Japan from its origins, through the classic Nara and Heian eras (710-1185 C.E) and the development of shogunate and daimyo in the Kamakura and Muromachi periods (1185-1568), to the beginnings of Tokugawa rule (from 1600 C.E.). Historians have often compared Japan during this period to the middle ages of European history; the comparison is controversial, but worth exploring for what it reveals about ways of viewing historical time. Topics include Shinto and Buddhism, emperors and court culture, and the rise of militarism, samurai, and bushido. Students will analyze classic texts from the period, including The Tale of Genji, Sei Shonagon's Pillow Book, and The Tale of the Heike, as well as the archeological, artistic, and architectural legacies of early Japan.

Components: Lecture

HIST 312A(3) Course ID:012469

European Law from Antiquity to Napoleon

Law rules our lives, but there are few opportunities to study law as an undergraduate. This course will consider the major systems of law in European history--Roman law, feudal law, canon law, civil law, English common law--and will also pay attention to the changing understanding of natural law, the process of codification and the imposition of the Napoleonic Code on Europe, and the use of international law in the twentieth century. Law will be studied primarily through the lens of intellectual history, focusing on concepts, definitions, and principles, but the social and political implications of law will also be periodically addressed. Readings will include both excerpts from the great legal texts of the European past and scholarly overviews of legal history.

HIST 313A(3) Course ID:013313

Charlemagne and the Birth of Europe

On Christmas Day, 800, the Frankish king Charlemagne was crowned emperor in Rome. This revival of the imperial title for the first time in centuries is one sign of the emergence of a new Europe. This course will explore the history of Charlemagne and his dynasty, the Carolingians, and their impact on European society. We will consider issues including the Carolingian Renaissance, the cultural flourishing that saved much of what we know of the Latin classics for posterity, transformations in family structure and the idea of marriage, and the building of a European empire. One of his court poets called Charlemagne "the father of Europe." Drawing on the literature, art, and histories of the period, this class will investigate what that meant.

Components: Lecture

HIST 314(3) Course ID:019049

Kings, Emperors, and Nobles: Power in the Global Middle Ages

What is power? Power was not a universal concept in the Middle Ages, each place conceived of, and legitimized, power in different manners. In some cases a ruler justified their power through military prowess, while in others it was divine sanction. From Al-Andalus to Francia to Japan, power required legitimacy in order to be effective. This legitimacy was built in many ways, sometimes through ritual presentations, sometimes through written texts, but always depended on cultural norms about who should exercise power. This course looks at some of the ways in which power operated and its justification through several case studies. Spanning both centuries and continents, this course investigates how power is legitimized and used in different cultures.

HIST 315(3) Course ID:018487

The Fall of Rome

When the last Roman emperor in the West was deposed in 476, the centuries-long political dominance of Rome came to an end. This course explores the fall of Rome: what happened to the Roman Empire in the West? What caused political turmoil and economic collapse at the same time that religion and culture flourished? How did life change in the new circumstances of the post-Roman west? Using a range of written and material sources, this class will explore what scholars call the transformation of the Roman world: how the Roman Empire as a political entity ended, while Romanitas, the essence of being Roman, continued.

Components: Lecture(In Person)

HIST 316(3) Course ID:005698

England After the Black Death

English history circa 1300-1500 witnessed major upheavals and transformations. The course begins by considering the Black Death (and, more generally, the role of disease in history) and covers this period topically, emphasizing political, social and economic, and cultural change and analysis of primary sources.

Components: Lecture

HIST 317(3) Course ID:001764

Italy in the Age of Dante

This course examines the history of medieval Italy from the period of the barbarian invasions of the fifth century to the mid-Trecento. It is an age well known for the glittering Byzantine mosaics at Ravenna, the brilliant Norman court at Palermo, the gentle spirituality of Saint Francis, and the vernacular poetry of Dante, each topics considered in this course through primary sources in translation. Other topics include Guef/Ghibelline politics, the commune and the contado, long-distance trade and commerce, artistic patronage and heritage, the family, education, religious life and popular devotion.

Components: Lecture

HIST 317A(3) Course ID:016158

Modern Italy since 1860

How did Italy become what it is today? This course looks at the modern history of Italy by focusing on political, economic, social, and cultural developments since the time when Italian intellectuals began to discover Italy as a nation. Lectures and discussions will also study Italy's modern history in a European context in order to better understand what is specific of Italian history and what is part of broader European developments.

Renaissance Rome

Rome is a multi-layered city whose history is inscribed in its material fabric. This course will excavate the Early and High Renaissance layers of Rome through its many monuments, both material and written. Using the papal court as our lens, the course examines the Renaissance in Rome by looking at power and patronage in the city from the mid-fourteenth century to the decades after the Sack of Rome. Among the literary monuments we will read and discuss are those by Petrarch, Machiavelli, and Castiglione. In the built environment of the city, we will examine Roman churches, palaces, and piazzas, along with artistic commissions of tombs, altarpieces, and monumental fresco cycles, including the works of major architects and artists such as Bramante, Michelangelo and Raphael.

Components: Lecture(In Person)

Topics: Rome, Italy

HIST 318B(3) Course ID:017483 Department Consent Required

Rome in the Age of Dante

This course examines the history of Rome in the Middle Ages. It is an age that produced the glittering mosaics at S. Prassede, the powerful papal court of Innocent III, the appealing spirituality of Saints Francis and Clare, the Jubilee of 1300, to say nothing of the sublime vernacular poetry of Dante, each topic considered in turn. Through primary sources in translation, lectures, discussions, and on-site visits we will study how the Christian Middle Ages sanctified the pagan landscape of ancient Rome. We will also examine how political ideology, economic practice, and religious sentiment have been expressed in Roman topography, monuments, architecture, and artifacts. Twin themes pursued in this course are the development of Rome as Christian capital and Rome as it was memorialized in the medieval imagination throughout our period.

Components: Lecture(In Person)

Topics: Rome, Italy

HIST 319A(3) Course ID:014301

American Religious History

This course will examine religion in American life from the arrival of Europeans on the North American continent to the present. We will explore the impact religion has had on American society, culture, and politics, and how various faith traditions have been shaped, in turn, by their encounter with America. Course themes will include the development of religious pluralism, the relationship between religion in the U.S. and the larger world, the persistence of religion in American culture, and American religious identity.

Components: Lecture

HIST 320(3) Course ID:019046

Conquest and Resistance: The Normans, English, and Celts in Medieval Britain

The Middle Ages in Britain witnessed the increasing expansion of the power of the English crown over different regions in the British Isles. However, this aggressive assertion of English dominance helped to foster resistance to the conquerors; think of Mel Gibson as William Wallace in Braveheart. This class will explore the real history behind that story: the English drive for conquest in Medieval Britain, examining facets such as kingship, mythology, and clerical reform which helped propel this drive. It will also examine the cultural and political resistance of the peoples of Wales, Ireland, and Scotland, demonstrating how they defined their own existence separate from England and how they fought through war and diplomacy to preserve their respective independence in the face of this ruthless expansion. Along the way, students will encounter such famous names as 'Bad' King John, William Wallace, Owain Glyn Dwr, Princess Nest of Wales, and Diarmaid mac Murchadha, and be exposed to several topics which underscore the broader themes of

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 321(3) Course ID:018919

Historical Archaeology

This course addresses themes and methods in the archaeology of the modern world (1500 to the present). How did exploration influence the way that people and material objects traveled across the world? How did English, Dutch, French, and Spanish colonial settlements reshape "new" worlds? We will also explore cultural transformations among American Indian and African communities that resulted from colonialism and the slave trade, and how capitalism and industrialization transformed the way that people consume material culture. The course will involve hands-on training in the analysis of archival documents and archaeological artifacts.

Princes, Plot, and Piety: The Tudors and the English Reformations

When you hear 'The Tudors,' as a dynasty or individually as 'Henry VIII' or 'Elizabeth I,' those names can easily conjure up images of sumptuous royal living, high political drama, shadowy court intrigue, and transnational espionage. But beyond the Hollywoodized stereotypes, who were the Tudors? And what did the world they live in actually look like? Can that century-long dynasty, in which five very different monarchs ruled, official religion changed no less than three times, and the political and social climate fluctuated with and within each new reign, really be categorically lumped together into a single monolithic idea, 'the Tudors'?

Components: Lecture(In Person)

Britain and the Second World War

The Second World War proved a defining moment for Britain and its empire. This course explores the range of issues raised by Britain's involvement in that war -- military, political, economic, social, and cultural. Through examination of a range of primary sources, including novels, films, memoirs, and journalism, we will explore the experience and representation of the war on the home and battle fronts as well as the effects of the war on Britain and its empire.

Components: Lecture

HIST 326B(3) Course ID:014039

British Empire

This course explores the history of the British Empire.

Components: Lecture

HIST 326C(3) Course ID:016598

The British Empire and the First World War

This course will investigate the First World War as a transformative event for the British Empire. The empire reached its largest territorial expanse at the conclusion of the First World War, and yet, the war is often seen as an important turning point toward imperial decline. In the course, we will consider the extent to which the First World War was in fact the beginning of the end for the British Empire. Using a variety of primary and secondary sources, the course will examine the wartime experiences of settler and non-settler colonies, paying particular attention to themes of nationalism, resistance, and globalization.

Components: Lecture

HIST 327(3) Course ID:005700

Twentieth-Century Britain

An examination of Britain from the death of Victoria to the defeat of Margaret Thatcher in 1990. Charts the changing fortunes of Britain in the twentieth century, from imperial power to middle-rank European nation. Topics include the experience and impact of total war; experiments with social citizenship; and decolonization and the decline of imperial prestige.

Components: Lecture

HIST 328A(3) Course ID:015668

From Shakespeare to Sheridan: The Irish in the Theatre, 1600-1775

This course examines how plays staged in London and Dublin between 1600 and 1775 represented Ireland, its history, and inhabitants. The students will read the most important dramatic literature concerning Ireland written during this period, including the works of: William Shakespeare, Roger Boyle, Thomas Shadwell, William Congreve, George Farquhar, Oliver Goldsmith, and Richard Brinsley Sheridan. In addition to reading and discussing the plays, the students will tour the city and learn firsthand how Dublin's streets, walls, castles, churches, and greens served as a backdrop for a social drama in which the kingdom's subjects performed as different characters. We will visit Dublin Castle, Trinity College, Christchurch and St. Patrick's Cathedral, Archbishop Marsh's Library, the Old Parliament Building, the Royal Hospital, and the Georgian homes along Merrion and Fitzwilliam Squares. We will also tour the city's theatres and attend at least two performances. We will visit the building that housed John Ogilby's Smock Alley Theatre and examine

History Of British Cinema

An exploration of British cinema from its origins until the present day. Focuses on the production and distribution of British films, as well as provides an analysis of specific films important to a history of cinema as an art form and medium of mass communication.

Components: Lecture

HIST 329A(3) Course ID:012199

The History of the Family

This course will begin with a brief examination of family law in antiquity and the structure of the European medieval family before considering the transformation of the family in the early modern period, particularly in response to the Reformation and the rise of the nation state. Although the Renaissance is often described as the birthplace of modern individualism, the early modern period can just as easily be seen as dominated by families who employed cultural strategies to increase their collective reputation and power. The course will finish by examining the challenges to the modern European family in the nineteenth and twentieth centuries. A wide range of experiences will be covered, from the family life of royalty and aristocracy to the demographic and legal evidence of everyday life in the homes of artisans and peasants. The social and economic pressures that shaped the family will be discussed, as well as debates over the emotional life of the early modern family. Readings will include letters, journals, legal documents, instructional pamphlets,

Components: Lecture

HIST 329B(3) Course ID:017431

The Beatles in the US & UK

This course uses the British rock band The Beatles as a lens through which to explore the relationship between Britain and America following the Second World War. Themes of the course include the emergence of a global youth culture; the explosion and expansion of celebrity; and the mutual influence of Britain and the United States upon each other. The approach is interdisciplinary, so we will read primary texts, including memoirs, journalism, and music criticism; listen to Beatles' records; and watch Beatles' films. The course is discussion-based and will require active participation and regular writing.

Components: Lecture

HIST 330A(3) Course ID:016300

The Celtic World: People and Mythology

This course will examine the history, literature, art, and archeology of the people known as the Celts. We will look at the evidence for and against the concept of a ¿Celtic¿ civilization in classical times, and we will trace the distinctive history of the so-called ¿Celtic Fringe¿ in the British Isles: Ireland, Scotland, and Wales. We will also study the rediscovery (or invention) of the Celts in modern times, focusing on the Gaelic Revival in Ireland and recent nationalist movements in Scotland, Wales, Brittany, and Galicia. Throughout, we will analyze the fascinating relationship between the ¿facts¿ of the historical record and the cultural and political impact of the concept of the ¿Celt.¿

Components: Lecture

HIST 330B(3) Course ID:018675

The Crusades: Holy War and Jihad

This course will present an overview of the crusading movement from its origins in the eleventh century until the capture of Constantinople by the Turks in 1453. We will examine the development of the ideology of holy war in both Europe and the Middle East, the conquest of Jerusalem and the establishment of the crusader states, the expansion of the crusades to encompass campaigns against heretics, northern European pagans, and even political opponents within Europe, and the ultimate decline of the crusading ideal in the later Middle Ages. We will also study the lasting impact of the crusades: their contributions to European art, architecture, and music, and their continued resonance in contemporary political debates concerning relations between the Islamic world and the West. In exploring the intersection between Christian belief and warfare in the Middle Ages, the course seeks, in accordance with the aims of the Catholic University of America, ¿to cultivate and impart an understanding of the Christian faith within the context of all forms of human inquiry

HIST 331B(3) Course ID:016328

Fashion and Society Since 1500

Fashion is a text for society that communicates about the individual, even if fashion constantly creates a tension between uniformity and individuality. It is a social construction of what is regarded as appropriate. As with any aspect of human behavior so fundamental, there are many ways to examine the phenomenon of human dress. In this course we will focus on the discourse in which social, economic, political, cultural ideas are expressed through the medium of clothing. One of the main topics is the development of modern styles of fashion in Europe and what impact these had on the rest of the world, particularly in the context of colonialism and the rise of a global textile industry.

HIST 332(3) Course ID:005702

The French Revolution

This course will examine the French Revolution, a pivotal event that ushered in modernity while forever changing the political landscape of Europe. The revolution will be considered in its context, with a look at both the ancien régime that preceded it and the reverberations that followed it in the nineteenth century. The interaction between culture and politics will be highlighted throughout the course, with particular focus on public opinion, reason, anti-dogmatism, secularism, religion, and the creation of conservative resistance. A major theme will be the relationship between ideas and events.

HIST 332A(3) Course ID:016591

Medieval Paris

Paris became, in the thirteenth century, the cultural heart of Europe, home to the strongest monarchy of the period, the new university of Paris, and developments in art, literature, and music. This course will explore how this vibrant cultural capital came to be. We will consider the early history of Paris as a Roman settlement, and home to important saints, cults, as well as its growing strength under the French kings Philip Augustus and Louis IX, the famous saint-king. The core of the course will focus on the growing metropolis of the thirteenth century, with attention to its scholarship, its art, its rulers, and its population, from kings to the poor.

HIST 334A(3) Course ID:015996

Modern Germany, 1870 to the Present

This course provides an overview of the history of Modern Germany from the foundation of the nation state in the second half of the 19th century to its dissolution at the end of World War II. In addition, the years following its dissolution in 1945 are also discussed, as well as long-term developments regarding gender, sexuality, religion or militarism. Apart from dealing with the general political, economic and social history of Germany, special emphasis is laid on the study of the different cultures of the succeeding German states.

Components: Lecture

HIST 335(3) Course ID:019000

Political Humour

This class provides an introduction to modern politics through the lens of humor, looking at questions of political order, democracy, group affiliation, justice, injustice and leadership and ranging in material from literature to the graphic arts to cinema.

Historical Development of Money and Banking

This course provides the historical evolution of the money and banking system dating back to 2000 BC in Assyria, India, Sumeria and later in ancient Greece and Roman Empire. The crucial historical development of the banking system started during the medieval and Renaissance in Italy and in particular the affluent city of Florence and Genoa by the Bardi and Peruzzi families in 14 th century with the Medici Bank. This development spread from northern Italy throughout the Holy Roman Empire during 15 th and 16 th century followed by other developments in Amsterdam in the 17 th century and in London since the 18 th century. We will follow other developments in Europe and America to the present time including the financial crisis of

Russia Since 1900

This class will explore the history of the Soviet Union; it is intended for those who have never before studied Russian history. It has three parts: the creation of the Soviet Union, the Soviet Union after Stalin and the dissolution of the Soviet empire. Its first part begins with the situation of the Russian empire at the time of the First World War. It proceeds to the Bolshevik Revolution and the Russian civil war, focusing on the figure of Vladimir Lenin and his vision of Soviet communism in the 1920s. It will proceed to the era of Joseph Stalin, which began approximately in 1928 and ended with Stalin's death in 1953: Stalin's consolidation of power, his use of the five-year-plans, his prosecution of the "great terror" in the late 1930s, his leadership during the Second World War and his postwar political and foreign-policy aspirations. This course's second part traces the Soviet system administered by Khrushchev and Brezhnev, emphasizing not just politics and not just the Cold War but cultural and everyday life within the postwar Soviet Union. The

History of the Present: Introduction to Global History

This course will introduce students to global history. Its immediate theme is the Ukraine crisis. The course will include "live" journalism, which is to say events that are occurring while the class is being taught. The course will also involve a historical investigation into the causes and background of this crisis. Relevant actors will include Russia, Ukraine, the United States and the member states of the European Union: these multiple actors will shed light on what can be called global history. A major theme will be the legacy of the Cold War and break-up of the Soviet Union. More broadly, this class will focus on history's relationship to the crises of the present, offering students a way to peer beyond the headlines, on the one hand, and a way to apply historical insight to contemporary issues on the other.

Components: Lecture

HIST 338A(3) Course ID:015510

The Idea of Europe. European Integration since 1914

After WWII, and in the context of the Cold War, Europeans witnessed the transnational integration process that resulted in the foundation of the European Union (EU) in 1992. However, the road to the EU was long and cumbersome, and beset by conflicts and crises. The decision to limit national sovereignty for the sake of a union of European nations was contested from the beginning. For that reason European integration has remained a fragile enterprise. This course focuses on historical process by which European identity was built. The first part of the course provides an overview of the debates on European integration since 1914. The second half of the course focuses on more current issues related to EU institutions and the problem of creating an EU identity.

HIST 340(3) Course ID:001810
Modern European Intellectual History I
Examines the major trends and great individual works of modern European thought by situating them in their historical contexts, with an emphasis on the development of social and political thought. First semester: the Enlightenment to the mid-nineteenth century; explorations of works by Voltaire, Hume, Rousseau, Adam Smith, Edmund Burke, the Romantics, Hegel, Marx, Hobbes, Locke, Mill, and others.
Components: Lecture

HIST 340A(3) Course ID:016629
Mapping History
Making sense of spaces and places is essential for studying history. This course offers a grounding in understanding and constructing maps as tools for historical problems, and as one subset of the recent development of digital humanities. Topics include the global history of maps; how maps are made and how to decode them; and how historians have used maps to explore particular issues in history. As a final project, students will create electronic maps with data. The course is not limited to any particular time or region: it will include examples from ancient, medieval, and modern, and European, American, and other settings.

Oxford: City, University, Nation

This course examines the history of the city and university of Oxford, from Anglo-Saxon times to the twentieth century. It does so by concentrating upon a few selected points of that history, considering that history in relation to the history of the nation: how does Oxford's history mirror English history, and what role has Oxford played in English history? The course combines reading in primary sources, study of historical urban topography, and the insights of English-style local history, with excursions and site visits around the city as an integral part of the course experience. Units will include the historical evolution of the cityscape via digitized versions of old maps, and Oxford in twentieth-century literature from Tolkien and his circle to Inspector Morse.

Triumph and Catastrophe: The Habsburg Empire (1792-1920).

Until its sudden collapse in 1918, the Empire of the Habsburg dynasty dominated the central part of Europe. No less than 12 European states of today share this legacy. Some compare the governance of the multinational Habsburg Empire with its complex structure of imperial, national, regional, provincial, and local institutions and their complicated interplay with the current processes and challenges of European integration. But the history of the Habsburg Empire goes way beyond the simplistic tale of growing nationalist tensions which led to the outbreak of the Great War. Austria-Hungary was also a laboratory of modern experience and modern ideas and ideologies, from antisemitism to psychoanalysis - ideas which radically shaped the short and catastrophic 20th century.

America and the World

America and the world explores American diplomatic history from the First World War to the Iraq War. It puts particular emphasis on the promise and perils of democracy promotion as a mainstay of American foreign policy. This class also places key turning points in the fashioning of American foreign policy in a global context. It examines not just the evolution of American policies but the personalities, political dynamics and social forces that have driven this evolution. Though very much an inquiry into the past, this course will, when relevant, make use of contemporary developments for the sake of better analyzing and discussing the historical record.

HIST 348C(3) Course ID:016178

Vice in America

The definition of vice in this class will usually be the legal one (including gambling, prostitution, illegal sales of alcohol, the sale of narcotics, and pornography), but we will also deal with behavior considered to be immoral or wicked; the sort that inspired the blue laws of the 19th century. The fundamental question the course seeks to address is what do attitudes toward vice tell us about American culture and society? We will see that the United States has a long history of permitting vice, sometimes legally, sometimes tacitly. At the same time, societal tolerance and even acceptance of vice could change rapidly due to a confluence of cultural, political, societal, economic, and religious concerns, leading to social reform. Although the course will deal with American history from the colonial era to the present, it will not be comprehensive. Instead, we will use case studies found in secondary sources to ask how the nature of vice has changed, how could the definition of vice be used as a means of social control, and who wielded that

HIST 352(3) Course ID:018881

Original Sins: Race and Freedom in Early America

This seminar-style class explores the intersection of race and freedom in early America. In doing so, it addresses some of the most enduring questions in American life, questions that have become urgent and timely as Americans debate how to confront their past. The colonial and founding eras we will explore have been at the center of the debate: they are time periods in which some of the country's greatest achievements and failures took place. What is the relationship between the two? By reading and discussing the work of historians exploring those topics; and putting it in explicit conversation with modern pop culture and debate on the subject; we will try to answer that question, and, more broadly, try to understand what roles history can and cannot play in creating a more just present.

Components: Lecture(In Person)

Postwar America: 1945-2001, A Restless Superpower

This class will focus on the decades following the Second World War and address two main themes: America's transformation into a global superpower and the significant social changes that took place during this period. The class will examine topics such as: the Cold War, the rise of suburbia and the growing middle class, the Civil Rights Movement, the Vietnam War, the protest movements of the 1960s, the expanding role of women in American life, the rise of the Conservative Movement, Watergate, the conclusion of the Cold War, and America's role in a globalized world.

Components: Lecture

HIST 359(3) Course ID:019295

Medieval Christianities

This course, intended for advanced history undergraduates, examines the diverse and often fraught religious lives of medieval Christians, focusing on the later middle ages. As its name suggests, it emphasizes the plurality of religious expressions, from the liturgical variations between the pre-Tridentine rites to the flowering of new religious movements. Integrating a wide variety of primary sources, it also teaches the historiography associated with Herbert Grundmann, whose scholarship is at the heart of the course's concept of "Christianities." By the end, students will have been exposed to a range of thought-provoking topics which complicate the idea of a unified medieval Christendom and promote informed and responsible thinking about the vibrant religious practice of the middle ages.

Nazism

Examines the roots of Nazism in German political culture before and during the First World War, the failure of Germany's first liberal democratic republic, the rise of National Socialism and the consolidation of Hitler's totalitarian regime; the attempt to recast Europe in the mold of Nazi racial ideology during World War II and the systematic murder of European Jewry. Concludes with a look at the aftermath of National Socialism in Germany.

Components: Lecture

HIST 363(3) Course ID:017694

War and Genocide in Twentieth-Century Europe

This course focuses on the mass murder of civilians and hors de combat primarily by state but also non-state actors in Europe. These mass murders, often called genocidal, occurred predominantly in the territory east of the Elbe River between 1939 and 1945. What is it about this area, which Tim Snyder called the bloodlands, that made it the stage on which the continent's most devastating violence against civilians in mid-century played out? What ideas and ideologies drove particularly the three great blood-lettings during the years of world war? And what was the relationship between war and genocide in the fate of Europe's Jews, Soviet prisoners of war, and Polish civilians in the East? Wider context will include Europe's colonial experience and the late-century breakdown of the Soviet sphere of influence.

HIST 364(3) Course ID:019354

The Rise and Fall of American Primacy: U.S. Foreign Policy Since The Cold War

This course offers a contemporary history of U.S. foreign policy from 1989 to the present. It examines why, how, and to what effect the United States has pursued a grand strategy of military primacy, often tethered to the promotion of liberal values. Although a consensus in favor of primacy emerged soon after the Soviet Union collapsed, politicians and intellectuals also engaged in a search for a clear purpose to put behind American power. After the terrorist attacks of 9/11, the United States appeared to have acquired an unimpeachable mission; only for successive policy failures, coupled with international power shifts, to leave America's world role deeply unsettled and increasingly contested. The course will explore influential efforts to articulate and shape U.S. grand strategy at three distinct levels: those of high-level policymaking, public discourse, and scholarly analysis. Particular attention will be given to the subjects of NATO enlargement, military intervention, the post-9/11 wars, and the rise of China.

Women and Gender in Modern Europe

This course examines the experience of women and the meaning of gender in Britain, France, and Germany, from the onset of industrialization through the period following the Second World War. A major goal of this course is to understand women's experiences within and across national boundaries, that is, to come to an understanding of women in Europe by examining those experiences held in common by virtue of their sex, and those mediated through their disparate experiences of class, nationality, race, and religion. Another goal is to examine critically the methodologies and narrative strategies historians of women have employed in writing the history of women in Europe. This course is designed as a seminar, so weekly meetings will be devoted to discussion of reading as well as to student presentations.

HIST 367(3) Course ID:001848

Empires, Indians, and Colonists in America, 1492-1763

Old Worlds collided and a New World began when European explorers and Native Americans came face to face. This is the story of how colonists settled and missionaries swarmed, how some Indians welcomed them and others pushed back, and how fortunes grew and empires went to war. We also examine why pirates pillaged, witches were hanged, slaves revolted, and prophets began new religions. Using a variety of original records, this course traces the rise of the British, Dutch, and French empires and powerful Native American counterparts. Topics include: exploration and settlement; Native American cultures and trade; the Caribbean; slavery and immigration; commerce and piracy; everyday life and the material world; religion and politics.

Components: Lecture

HIST 369(3) Course ID:007236

US Civil Rights Movement, 1945-Present

After briefly surveying developments in U.S. race relations from Reconstruction through the Second World War, this course explores in depth the civil rights activism and politics of the 1950s and 1960s. The latter portion of the course examines the evolution of such "post-Movement" policies as busing and affirmative action and traces the course of American race relations since the 1970s.

Components: Lecture

HIST 370(3) Course ID:001850

Religion and Society in the Early Modern World

This course analyzes religion, politics, and society in Europe and the European empires (especially the British and Spanish empires), ca. 1450-ca. 1700. Readings will focus on primary sources. Among the topics to be studied are relations between Catholics, Protestants, Jews, and other non-Christian peoples; the lives and works of Erasmus, Thomas More, and Martin Luther; the Inquisition in Spain and Portugal; imperial rivalries in their political and religious contexts; the development of biblical criticism; and religious toleration.

Components: Lecture

HIST 371A(3) Course ID:013679

Colonial Latin America

The history of Colonial Latin America contains numerous dramatic and compelling narratives: exploration and new encounters; competing religious visions and missions; the formation of new social orders; and countless examples of hegemony, counter-hegemony, resistance, and survival. In this class we will explore all of these themes by studying the narrative history of Latin America from just before the arrival of Columbus in 1492 until the Independence period of the early 19th century. Topics will include pre-contact indigenous and European societies; initial encounters and the formation of a new Colonial order; the role of religion and the Catholic Church in Latin America; slavery and social relations in Colonial life; the Bourbon Reforms; Independence and the establishment of new nations.

Components: Lecture

HIST 371B(3) Course ID:014763

New Nations and Revolutions: Modern Latin America, 1800-present

This course examines the history of modern Latin America, a complex and dynamic region whose nations share a common colonial heritage, but have developed along very different trajectories. We will cover the period from Independence to the present, examining the following themes in depth: new nations, the age of the caudillo, export-led growth, immigration and urbanization, the Mexican Revolution, the Latin American Left, populism, the post-war period, the Cuban Revolution, Central American conflicts, and the contemporary period. We will pay particular attention to the political history of the region, and especially to the relationship between Latin America and the United States.

HIST 371D(3) Course ID:019353

Modern Central America

This course will explore the history of modern Central America (in particular El Salvador, Guatemala, Honduras, and Nicaragua), with particular attention to the historical factors that have created political and economic challenges during the twentieth century. We will cover topics including the indigenous population prior to 1492, the Spanish colonial past, independence and export-led growth, the role of the Catholic Church, liberal and conservative battles in the nineteenth century, revolutions of the early twentieth century, U.S. involvement and intervention, Civil Wars, and resulting mass migrations between the 1970s and the present day. We will focus in particular on the history of Central American communities in the Washington, DC area, with field trips to several relevant locations including the Shrine of the Sacred Heart on 16th St and the historic Salvadoran community in Mt. Pleasant.

American Religious History

This course will examine religion in American life from the arrival of Europeans on the North American continent to the present. We will explore the impact religion has had on American society, culture, and politics, and how various faith traditions have been shaped, in turn, by their encounter with America. Course themes will include the development of religious pluralism, the relationship between religion in the U.S. and the larger world, the persistence of religion in American culture, and American religious identity.

HIST 373C(3) Course ID:017220

Religion and Ethnicity in America, 1890- 1990

The US is at the same time both one of the most secular and one of the most religious countries in the Western world. A central characteristic of American religion is its diversity: hundreds of different denominations and religious communities co-exist, especially since the late 19th century when the former Protestant nation saw a wave of immigration from mainly Catholic countries, i.e. Ireland, Italy, Poland, and the German Catholic lands (Rhineland and Bavaria). Thus, this class follows the complex relationship between religion and ethnicity from the late 19th century into the 1980s. Topics for discussion include religion and politics, religion and identity, religion and (sub)-urban life, religion and the public sphere. The class will mainly deal with Catholicism and Protestant denominations, but will include at times other religious denominations and communities such as Afro-Pentecostalism and Polish Jews. The class consists of in-class discussion of required reading and primary sources.

HIST 374(3) Course ID:005709

The Rise of American Slavery and Its Defeat, 1492-1865

This course traces the dramatic rise and fall of slavery in America and explores connections to the Caribbean, Latin America, and Africa. Students use original sources to illuminate the everyday lives of enslaved people, including family, cultural life, religion, and rebellion. We grapple with important questions: Why did masters go all the way to Africa for slaves? How did Latin American slavery evolve differently and influence other regions? How did African Americans shape their lives under a system of exploitation? Why did abolition movements emerge, what was the role of Christianity, and how was slavery finally defeated? Students use sources such as interviews with liberated slaves, business ledgers, newspapers, letters, and archaeology to piece together a global story that is foundational to American history.

HIST 375(3) Course ID:007237

Revolutionary America and the Early Republic

The American Revolution is all around us: in the news, on the bookshelves of Barnes & Noble, in our discussions of what America (by which of course we typically, and revealingly, mean the United States) ought to be. For Americans it is our touchstone, our origin story and the measuring stick by which we judge ¿who we are¿ even some 200+ years after the event. But the Revolution was not only an event in American history: it is an event in British imperial history, because before they declared independence colonial Americans were part of a wider empire, and their Revolution was shaped by the fact. And the Revolution is also an event in world history, because colonial Americans needed to craft a state that could survive international competition and which, as a result, shaped the subsequent history of the world. In this course we will explore the imperial origins of the United States, the difficult process of creating a nation out of the debris of empire, and the subsequent influence of that state on the world (and vice versa) so as to answer

HIST 376A(3) Course ID:012781

The First World War, 1914 - 1918

This course examines the First World War in terms of its social political, economic, cultural, and military impacts, both on Western Europe as well as Africa, Asia, and North America. Drawing on a range of primary sources, including government documents, personal narratives, fictional accounts, and film, the course places the First World War in global perspective.

Components: Lecture

HIST 377(3) Course ID:001857

World War II

Major developments in American foreign policy from the American Revolution to the end of World War II. Special attention to the development and modification of ideas and principles in the evolution of American diplomacy in the nineteenth century and the impact of the various presidents and their secretaries of state.

Components: Lecture

HIST 377A(3) Course ID:017029

World War II in Europe

Drawing on military, political, social and cultural approaches, ¿this course offers a wide-ranging description and analysis of the European theater of war, 1939-1945. One major goal is to describe the ways ideology affected the balance of power, then influenced strategy, operations, and tactics. Further, the course will examine the ways that large-scale war acts as a revolutionary social and cultural force, and the ways that the Second World War created what we think of as the modern world, not only in political terms (the roots of the Cold War; the collapse of European imperialism) but also in radically changing the relationship of the individual to the State. The course will assess and challenge many of the myths surrounding the war, such as resistance and collaboration, and illuminate the moral compromises necessary to survive in occupied societies of Europe. Finally, we will challenge some of the received ideas about the war, such as the relative importance of campaigns in East and West and Asia. The construction of historical memory will

HIST 378A(3) Course ID:017251

Nationalism in Europe and Beyond

How a nation is to be defined and who belongs to it has proved to be among the most painful and transformative issues in modern history, in Europe and beyond. The central assumption of ethnic nationalism ¿ that each state ought to represent a single culture, or ethnos, each of which requires its own state; led to political reorganization, as multi-ethnic empires were replaced by nation states; to internal tensions; to mass expulsions, murder, and genocide; to the creation of masses of refugees; to the collapse or consolidation of democracy and of the welfare state; and to ongoing debates over ethnicity and immigration. Is nationalism a new, modern phenomenon, or is it the most recent form of a much older phenomenon of political ethnicity? Is national identity manufactured,

Components: Lecture

HIST 378B(3) Course ID:017272

Nationalism in Europe and Beyond

Nationalism is one of the major political phenomena analysed by political scientists, historians, scholars of literature studies, anthropologists and others in the last 50 years. This course tries to find a way through the masses of theories and explanations of nationalism by focusing on nationalist movements in Europe. One of the aims of the course is to determine the differences between nationalism as a ubiquitous cultural phenomenon and nationalisms as political movements, but this requires a thorough knowledge of nationalism in general. Participants will read and discuss a selection of the most important literature in the field of nationalism studies and analyze important historical primary sources.

HIST 380(3) Course ID:001861

The Irish in America

Addresses the history of the Irish in the United States as a case study in the history of American immigrants and ethnicity. Examines how Irish American definitions of identity, cultural practices and beliefs, and even group boundaries changed over time, and how Irish American experiences varied in different regions of the country. Traces the story from the seventeenth century to the 1960s and 1970s, but focuses most heavily on the period since the Famine migration in the 1840s and 1850s. Addresses such topics as Irish American Catholicism, nationalism, family and gender roles, and politics.

Components: Lecture

HIST 380A(3) Course ID:014047

Medieval Ireland to 1607

Ireland has been invaded repeatedly throughout its history. Each wave of new arrivals has caused a renegotiation of what it means to be ¿Irish.¿ This course will engage directly with that question by surveying Irish society and culture from pre-Christian times down to the end of the old Gaelic order in 1607.

We will glance at Irish prehistory and then examine ¿Celtic¿ society--its social structure, laws and literature. Next, we will trace the impact of the Christianization of Ireland on this society. We will look at the effect on Ireland of invasions by the Vikings and the Normans, and the establishment of English rule in Ireland. We will then study the varying fortunes of the competing groups in Irish society (Gaelic Irish and Anglo-Irish), analyze the advent of the Reformation in Ireland, and examine the final conquest of Ireland in the reign of Elizabeth I and the passing of the old order. The class emphasizes active learning. Along with traditional lectures, there will be both discussions and structured exercises, with a focus on analyzing

The Capetian Dynasty: A Survey of Medieval France in the High Middle Ages

In the year 987 AD, the kingdom of France experienced a dynastic shift from the long-standing royal family, the Carolingians, to the new Capetian dynasty that would reign for over three hundred years. During this formative period in French history, the kingdom and its inhabitants experienced a number of changes and challenges. This course will trace chronologically the history of medieval France in the High Middle Ages (950-1350) and introduce students to such broad themes as the centralization of royal authority; the feudal structure; the culture of chivalry; the rise of medieval towns; the appearance of medieval universities; the renaissance of the twelfth century; and the role of the Church in society, and themes unique to France, including the foreign conquests of England, Sicily, and the Crusades; the innovation of Gothic architecture; the Albigensian Crusade in southern France; and the Avignon Papacy. Readings will emphasize primary sources in translation. No previous knowledge of the Middle Ages is assumed.

Components: Lecture

HIST 380C(3) Course ID:016708

Modern Ireland: The British Centuries, 1600-1973

As Britain's oldest colonial appendage, Ireland's status was altogether particular, and this course will investigate the particularities, and indeed peculiarities, of this unique relationship over a period of four centuries, from the ambitious land plantations of the seventeenth century to the problematic and bloody settlements of the twentieth. The course will examine just how Britain shaped Irish politics, economics, society, religion, culture and, indeed, its patterns of global migration. However much nationalists might have insisted that Ireland was altogether 'Irish', this course will show that Ireland was also - to a greater or lesser extent - British. But it will also show how, as the centuries progressed, Ireland increasingly undertook to reshaping itself in response, and sometimes in violent reaction to this massive assertion of imperial dominion.

History and Public Life in the United States

This course is an introduction to the discipline of history as practiced in public contexts, both physical and virtual. We will begin by addressing questions such as which publics form audiences for history in the twenty-first century? How has the field of public history evolved in the United States and how would we define it today? How is public history practiced in the United States? How might what constitutes public history differ according to particular locales? Is there a virtual public history as distinguished from the traditional version presented through concrete culture, specifically in monument/memorial structures, museums, libraries and other public institutions? In addition to exploring varieties of digital public history as presented via the web, we will use urban Washington, D.C. as our public history lab, visiting a variety of practitioners of historical interpretation, including museum specialists, archivists, librarians, historic site designers, and other professionals. Course discussions and topics will explore the meanings of

Seminar: Persecution and Tolerance in the Medieval Mediterranean

This course introduces history majors to the craft of writing history, or explaining and interpreting the past. It has two main components. In the first half of the course, students are introduced to and grapple with the problem of historiographical debate by reading and writing responses to multiple works of scholarship that approach the same historical question from different perspectives and reach different conclusions. This semester, that question is "tolerance and persecution of religious minorities in the medieval Mediterranean." In the second component of the course, students use their experience dissecting a historiographical debate to write an original research paper related to the course's theme. Analyzing historiography and doing original research are the first step toward a successful senior thesis that this course facilitates. The course is open to junior and second-semester sophomore history majors. Other students require departmental approval.

Components: Seminar

HIST 412(3) Course ID:016642

Seminar: Martin Luther and the Reformation in Germany

This class is a research seminar that prepares students to write a senior thesis. We replicate the senior thesis experience in miniature, as each student will produce a paper that argues an original thesis, using primary sources as evidence and situating the work in the midst of historiographical debates. Our general topic will be Martin Luther and the German Reformation, a broad subject out of which each student will choose a small line of inquiry that he or she finds particularly compelling.

HIST 412A(3) Course ID:017391

Seminar: Napoleon and the Napoleonic Era

Napoleon: the third son of a minor Corsican family, the man of average height and extraordinary intelligence, the artillery officer willing to fire on Frenchmen, a strategist both brilliant and ruthless, a Jacobin emperor, a maker of laws, the paradigm of the self-made man, the destroyer of the Holy Roman Empire, a man without shame or self-doubt, the leader brought in to prevent terror at home and export it abroad. And his era: the weakening of the Spanish empire and the start of the Latin American independence movement, the triumph of enslaved peoples in Haiti, the fall of the old European order, the blossoming of romanticism, nationalism, and modernity. Students will each choose one research topic that relates to their particular interests in this transformative period and write a 15-20 page junior seminar research paper.

Components: Lecture
Enrollment Requirements: Open to History majors and minors only

HIST 413(3) Course ID:001763

Seminar: English Crime, 1200-1800

This seminar's aim is to help participants develop critical skills as part of their development as students of history, as well as to provide practice for senior thesis projects. In order to accomplish those goals, the seminar consists of an in-depth exercise in looking at approaches, methods, sources, and ways of understanding historical problems, worked out in the context of a specific topic or subject: in this case, the history of crime in England, circa 1200-1800. Studying crime lends itself to many approaches: legal, sociological, statistical, comparative (across times and places), and cultural/literary, to name only a few. Emphasis will be upon analyzing primary sources (especially court cases) alongside wide-ranging examples from recent writing about the history of crime.

HIST 416(3) Course ID:017223

Sem: American Lives in the 19th Century

This research seminar will help students develop the skills needed to write the senior thesis in History 496.

It focuses on the history of the United States during the long 19th century (1790-1920) and on biographical approaches to the study and writing of history. In the first part of the semester, we will read works that exemplify different approaches to a variety of biographical subjects. In the second part, students will work on a biographically focused project of their own choosing. A series of planning exercises and drafts--similar to those in Hist 496-- will culminate in a 15-20 page term paper at the end of the semester.

Components: Lecture

Enrollment Requirements: Open to History majors and minors only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 416A(3) Course ID:018467

Sem: An Example for All the Land--DC History as US History

'An example for all the land' is what Charles Sumner famously called Washington, DC, highlighting its symbolic importance to the country and the extent of federal influence here. For more than two centuries, the nation's capital has been a place where people work and worship, where they play and protest, in the shadow of the US government.

We begin the semester with common readings about how DC has provided a local stage for all the issues affecting Americans elsewhere: questions about slavery and race, about citizenship and democracy, about national identity and belonging. Students then research and write a 15-20 page paper on any issue and period of their choosing from Washington's past.

Components: Seminar(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 416B(3) Course ID:019187

Sem: Protest, Riot & Violence in US Political History

This research seminar helps students develop the research and writing skills needed to produce the senior thesis in History 496. We explore how Americans have expressed dissent and tried to influence government policy by collective public action, both non-violent and violent, over more than two centuries of our nation's history. In the first part of the semester, we read about episodes ranging from the Whiskey Rebellion of the 1790s to woman suffrage and civil rights demonstrations of the 20th century. We discuss the many differences between peaceful protest and political violence, as well as the tendency of some Americans to conflate the two. In the second part of the course, students conduct research on a demonstration, riot, or protest movement of their choosing. A series of planning exercises and drafts;similar to those in History 496;culminates in a 15-20 page term paper at the end of the semester.

HIST 418(3) Course ID:018633 Department Consent Required

Seminar: The Year 1000

The coming of the first millennium was a date noted with interest and apprehension by many people in the Middle Ages. Modern scholars too have often seen it as a period of transition, positing eleventh-century changes like a ¿feudal revolution¿ or the ¿birth of a persecuting society¿ in medieval Europe. This seminar, meant to prepare history majors to write a senior thesis, will use the case study of change in the years surrounding the millennium to introduce how historians work with primary sources, shape arguments, and develop sustained written analyses. We will begin by reading a range of interpretations about what change meant around the millennium, looking at some of the primary sources that historians have used to shape these arguments. The majority of the class will focus on students developing a research project of their own choice within the broad umbrella of millennial change (topics could include feudalism, apocalyptic, dispute settlement, knighthood, and so on), with ample attention devoted to peer review and the writing process.

Components: Seminar(In Person)

HIST 421(3) Course ID:018880

Major Topics in American Immigration History

This junior seminar walks you through major topics in American immigration history and helps you construct a research paper of your own choice. It is divided into two parts: in the first six weeks, we will go through classic and cutting-edge readings about topics such as citizenship, ethnicity, the construction of race, racial management, whiteness, chain migration, and borderland in the American experience. Along the way, you will be advised to develop a smaller, historically specific topic for your paper. The second part involves an organized writing process: we will meet to discuss the primary and secondary sources you use, and then build a research proposal and a detailed outline. By the end of March, you should have the first ten pages of the paper ready, which will be peer-reviewed by your classmates. This course offers a rare opportunity of intensive reading and research about immigrants in America, who, according to historian Oscar Handlin, were American history.

HIST 422(3) Course ID:019339

Napoleon to Hitler: War & Society in Modern Europe

This course looks at the history of three major wars that changed European societies since the French Revolution: the Revolutionary and Napoleonic Wars, the First World War, and the Second World War. We will study the major questions related to these wars.

How did these wars begin? How were they fought out? What roles did military technology, strategy, the media and propaganda play? When and how did they end? Who participated, who were the victims? What were the major political, economic, social, cultural changes that the wars brought? What were the main differences between these major wars?

Senior Thesis Seminar

Required for senior concentrators. The culminating requirement for every student seeking a B.A. degree in history is an undergraduate thesis, based on primary research in original sources. For concentrators in history, this thesis requirement substitutes for the comprehensive examination required for most other undergraduate subjects. Each fall semester, the several sections of HIST 401 are offered in different areas of history (Medieval Europe, Early United States, etc.); groups of students work on their individual projects but present each stage of their research to their fellow students in the tutorial group. Entry to tutorial sections is arranged during the previous semester (during HIST 388).

Components: Thesis Research

Enrollment Requirements: At least one of the following: HIST 387, HIST 387A, HIST 388, or any HIST course numbered 400-429.

HIST 496A(3) Course ID:017852

Thesis: Genocide and War in 20th-Century Europe

In the first half of the 20th century European history was marked by what Tony Judt called "orgies of violence", inside the continent, or in the colonies. How can we explain massive use of brutal force against mostly unarmed, innocent civilians, the murder of millions of men, women, and children? What short-term and what lasting impact did these acts of mass violence have on surviving victims, perpetrators, and whole societies? How did European societies try to punish perpetrators, reconcile victims, remember the violent acts? Why did they often rather forget or silence these events?

HIST 496B(3) Course ID:017853

Thesis: Latin America and the Southwestern U.S., 1492-2012

We will study the political, cultural, and religious history of Latin America and the U.S.-Mexico borderlands from the colonial period to ca. 2000. Thesis topics include Spanish exploration and settlement in colonial Latin America; the history of California, Texas and the U.S.-Mexico borderlands; relations between people of different racial, religious and cultural backgrounds; the history of the Catholic Church and other institutions; the careers of key figures in Latin American and U.S. history; social movements; and other themes that students may wish to explore. No prior study of the places, periods, or topics covered in the course is required.

In recent years, students have written theses on topics that fall outside the main topics of this section. I will be happy to meet during the spring with students who wish to explore this option.

Thesis: The US in the Long Nineteenth Century, 1790-1920

The "long" nineteenth century - the years from 1790 to 1920 - saw the United States grow from a fledgling seaboard nation to a continental republic and a quasi-empire. As the period dawned, Thomas Jefferson imagined a rural, agrarian future for the United States, and Abigail Adams unsuccessfully urged her husband John to "remember the ladies" in making laws. By the period's end, the US was the world's largest industrial economy, most of its people lived in cities and towns, and women's fight for political inclusion produced a 19th Amendment to the Constitution. In between, a Civil War begun in the name of destroying the Union and preserving slavery ended up doing the reverse. Struggles over the citizenship and rights of African Americans took place alongside debates about the nation's treatment of native Americans and of the millions of immigrants who swelled its population.

HIST 496D(3) Course ID:017875

Thesis: Conflict and Coexistence in the Islamic Middle East

War and conflict are foremost in many Americans' minds when they think of the Middle East, but those are far from the only experiences of the region's diverse historical societies. In this senior thesis section, students will explore topics related to the interactions of the many groups of people; Sunnis and Shiites, men and women, Muslims and non-Muslims, Arabs, Persians, and Turks, colonizers and subjects; that have defined the history of the Islamic Middle East. Our focus will be on the medieval period, roughly 600 to 1500, but more recent topics are also fair game. Potential subjects include the Crusades; theological debates between Middle Eastern Christians and Muslims; the Quran and the Bible; European travelers to the Middle East; the politics of gender and Islam; the Mongols in the Middle East; race and slavery; European powers and Muslim empires; and many others. No background in the subject is required.

HIST 496E(3) Course ID:019039

Thesis: Britain from Black Death to the Age of Elizabeth

Between 1350 and 1600, England (and its neighbors Scotland and Wales) changed dramatically in some ways, while displaying some remarkable continuity in other ways. A period of chronic political instability and civil war gave way to the rise of the Tudor state and a reinforced national identity. The English and Scottish Reformations transformed religion as it was practiced and the church as it was governed. Widespread popular rebellions threatened the government repeatedly; from the so-called "Peasants' Revolt" of 1381 to the rebellions against the Tudor regime in 1536, 1549, and 1569; but failed to materialize again after that. The population and economy fell and rose in cycles, while crime and poverty became more entrenched problems as the period went along.

Students in this section of Senior Thesis Seminar are welcome to explore any topic falling under these headings: politics, religion, law and disorder, geography and culture (including art and architecture), and

Thesis: Histories of Migrants and Migration

Since the arrival of the first humans to the Americas some 13,000 years ago, migration has continuously shaped and re-shaped human society in the Western hemisphere. In this senior thesis seminar, students will develop a historical research project on any aspect of the history of migrants and migration in the Americas. Historical periods of interest span from indigenous migration and settlement to the post-1492 era of European conquest, the Atlantic slave trade, industrial migrations of the 19th century, and transnational migration after 1940. While many students may choose to work on projects related to U.S. immigration history, they may develop thesis projects on any location and time period in the Americas. Students are invited; but not required; to investigate a historical migration that shaped their own family history, using family documents or genealogical records as well as primary and secondary sources available online, at the consortium libraries or the Library of Congress.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 496G(3) Course ID:019360

Politics and Culture in the U.S., 1880-2000

Our seminar will study the political and cultural history of the United States from the late-nineteenth to the twenty-first century. Among the topics that we will explore are the civil rights, environmental, and women's rights movements; military history, from the Spanish-American war to the war in Iraq; the lives and careers of notable Americans; and American culture, including literature, film, music, and sports. Recent theses have studied World War II and the wars in Vietnam and Iraq; the life and work of Lady Bird Johnson and Ruth Bader Ginsburg; the films and theme parks of the Walt Disney Company; the sanctuary movement and migration to the U.S. from Mexico and Central America; Richard Nixon's visit to China in 1972; and the history of baseball.

HIST 516(3) Course ID:017695

Digital Approaches to Medieval History

This is a lab-based course combining lecture and discussion with hands-on computer work using digital tools and methods to explore historical questions from the medieval period. Our class will examine a digital reproduction of a 13th-century chronicle of Pisa, Italy, now housed at the British Library. Currently, we have images of the entire chronicle, but the text is only partially transcribed. Our goal during the semester will be to make sense of the chronicle in its historical context, to manipulate the images with the digital tools at our disposal, to examine what the source can tell us textually and formally, to collaboratively construct an argument based on the digital resources at our disposal, and to communicate that argument in a digital class project. Some of the digital tools we will introduce include Scalar, Google Sheets, Recogito, FromThePage, Voyant, Palladio, JSTimeline, and OpenRefine.

HIST 527(3) Course ID:007593

Counter Reformation (1540-1615)

A study of the efforts of the Roman Catholic Church to deal with the Protestant Reformation and other changes in society with particular attention to diplomatic and theological responses, religious colloquies, Council of Trent, enforcement of its decrees, index and inquisition, liturgical reforms, religious art and music, clerical education, controversialist theology, religious orders and spirituality, popular piety, missionary and uniate efforts, and confessionalization. [also TRS 727E]

Components: Lecture

HIST 531(3) Course ID:001951

Renaissance

An examination of current scholarship on such topics as civic humanism (Florence and Venice), Florentine Platonism, humanistic theology, art, epideictic oratory, Roman Renaissance, conciliarism, education, Erasmian humanism, Italian confraternities, the family, the roles of women, and northern humanism.

Components: Lecture

HIST 531A(3) Course ID:014084

Renaissance Papacy

Renaissance Papacy (1327-1527): From the beginnings of the Renaissance in the Avignon of Petrarch and John XXIII to the Sack of Rome under the Medici pope Clement VII, the papacy has fostered the revival of classical learning by its patronage of writers and artists. It employed them as secretaries and advisors, and hired the leading architects, sculptors, and painter of the day to change Rome from a backward medieval town into the cultural capital of Western Christendom. Especially noteworthy for their patronage were popes Nicholas V, Pius II, Julius II, and Leo X. The course will study how the popes fostered Renaissance culture while facing the various challenges: conciliarism and an assertive college of cardinals, gaining control of and protecting the Papal States, dealing with the rising national monarchies, stemming the advancing Turks, fostering the missionary expansion of Christendom, reforming the Church, and confronting the outbreak of the Protestant Reformation.

Components: Lecture

HIST 531B(3) Course ID:015164

Fashion and Society

Fashion is a text for society that communicates about the individual, even if fashion constantly creates a tension between uniformity and individuality. It is a social construction of what is regarded as appropriate. As with any aspect of human behavior so fundamental, there are many ways to examine the phenomenon of human dress. In this course we will focus on the discourse in which social, economic, political, cultural ideas are expressed through the medium of clothing. One of the main topics is the development of modern styles of fashion in Europe and what impact these had on the rest of the world, particularly in the context of colonialism and the rise of a global textile industry.

The Idea of Europe

After WWII, and in the context of the Cold War, Europeans witnessed the transnational integration process that resulted in the foundation of the European Union (EU) in 1992. However, the road to the EU was long and cumbersome, and beset by conflicts and crises. The decision to limit national sovereignty for the sake of a union of European nations was contested from the beginning. For that reason European integration has remained a fragile enterprise. This course focuses on historical process by which European identity was built. The first part of the course provides an overview of the debates on European integration since 1914. The second half of the course focuses on more current issues related to EU institutions and the problem of creating an EU identity.

Famine Irish Immigrants and their Children: A Case Study in Immigration

This course will focus on the story of the Irish immigrants who fled their homeland's famine in the late 1840s and their children, who grew to maturity at the turn of the twentieth century, as a case study in American immigration and ethnic group history. Participants will read from all the major secondary sources on topics such as family history and family memory; the background of Famine Irish society; the Famine and its aftermath in Ireland, the processes of migration; the theory of ethnic group evolution in America; Irish participation in the American economy; Irish American neighborhoods; Irish American families; the civic, religious and leisure lives of Famine immigrants and their children; and Irish Americans and other immigrant groups. Participants will also learn how to use primary sources in Ireland and the United States to reconstruct histories of Irish and Irish American families and communities in the nineteenth century.

Components: Lecture

HIST 549(3) Course ID:014049

Humanism to Enlightenment

This is an introductory survey of early modern intellectual history. We will focus on defining Humanism and weighing its influence (or lack thereof) on the Reformation, Scientific Revolution, and the Enlightenment. How did each of these successive movements break away from Humanism, and why did Humanism remain a vital educational and cultural force despite these shifts? For each week we will read one major monograph and one primary source. Advanced undergraduates are welcome to enroll.

Components: Lecture

HIST 550(3) Course ID:009344

Reformation

Examines current scholarship on such topics as the state of religion on the eve of the Reformation, Luther, the Peasants' War, diffusion of Reformation ideas (printing, sermons, art, etc.), Reformation in German cities, origins of Anabaptism, Calvin, evangelism in Italy, role of civil government in the English Reformation, women, Jews, witch-craze, confessionalization, and the effects of the Reformation. [also TRS 621A]

Components: Lecture

HIST 560(3) Course ID:014436

Civil War & Reconstruction

This colloquium explores the causes, course, and consequences of the American Civil War. We will examine topics including: the politics of pro- and anti-slavery and the sectional crisis of the 1850s; military events and political affairs during the war; the experiences of Americans on the battlefield and the home front; the destruction of slavery; and the post-war reconstruction of the South and the nation.

Historical Teaching

The goal of this course is to introduce significant questions in the teaching of history at the undergraduate level. While in some cases it may have practical application (e.g., it may accompany a teaching assistant's experience in an undergraduate classroom), it is designed to stand alone as an introduction to some of the issues facing undergraduate history teachers.

Components: Colloquia

HIST 607(3) Course ID:001969

Women, Sex, and Gender in the Middle Ages, 1100-1500

This colloquium aims to introduce the literature of the inter-related topics of women, sex, and gender in the later medieval period. We will examine some classic topics, theory, and historiography of women's history in addition to the recent scholarship in the developing fields of the history of gender and sexuality. Topics can include: women and work; women and religion; women and patronage, gender and religion; gender and identity; gender and household; heresy and gender; and sexual identities. All readings are in English.

Components: Colloquia

HIST 609(3) Course ID:007665

Medieval Civilization I: Historiographical Problems

This course will serve to introduce students to some of the major themes and problems which currently define the field of early medieval history, circa 500-1200. We will read some classic works of history on the early Middle Ages, as well as new and innovative approaches. Topics will include archaeology, the Feudal Revolution, and ritual, among others. The class will be structured around some of the major debates which dominate the study of early medieval history.

Components: Colloquia

HIST 610(3) Course ID:001972

Medieval Civilization II: Historiographical Problems

This course is neither lecture nor survey; rather, it is designed as an introduction to some of the major historiographical themes and problems of the later medieval period. We shall examine historians' methods and approaches to these topics by way of a mixture of classic monographs interspersed with some of the newest and most stimulating contributions to the field of medieval history. Geographically speaking, topics range throughout the territory of Western Europe. Chronologically, we will move from the twelfth through early fifteenth centuries. Topics can include: economy, family, religious cultures, politics, public life, administration, violence, plague and literacy.

HIST 611A(3) Course ID:013661 Department Consent Required

Problems in Carolingian History

The Carolingian period saw the unification of the majority of Western Europe under one polity and concomitant changes in western politics, religion, and culture, ranging from the development of Caroline miniscule handwriting, to the formation of an alliance between the Frankish monarchy and the papacy, to a rediscovery of Roman ivory-working techniques. The course will introduce students to this transitional period of western history by exploring topics currently debated by scholars, such as the nature of changes in rulership or the contexts for economic growth. Students will be exposed to both classics in the field and to some new approaches. Readings will be in English, although those able to read in French or German will be encouraged to do so.

Components: Colloquia

HIST 612A(3) Course ID:013314

Archaeology for the Medieval Historian

Medieval archaeology, and in particular early medieval archaeology, is currently transforming our knowledge of the Middle Ages. New discoveries, new scientific techniques to interpret sites and new collaborations between historians and archaeologists are expanding our vision of the Middle Ages every day. This course seeks to prepare graduate students to understand and participate in this new research. We will read together several field reports, as well as studies by historians and archaeologists who seek to synthesize the new information revealed by recent excavations. Students will be introduced to the language and techniques of medieval archaeology, and will learn how to critique a field report, and how to integrate archaeological materials into historical research.

The Early Medieval Economy

The Belgian historian Henri Pirenne's vision of a Roman economy which persisted until the seventh century, a collapse predicated on the rise of Islam, Carolingian economic stagnation, and finally an economic resurgence in Northern Europe with the birth of the medieval town dominated the teaching of medieval economic history for decades. Recent work has demonstrated that this explanatory framework cannot account for the evidence revealed by new historical and archaeological research. Yet, the kinds of questions Pirenne asked still offer insight into how we can best understand the economic history of the early Middle Ages. This course will begin by studying Pirenne's classic economic works, before moving on to consider how scholars today (including Wickham, McCormick, and Hodges and Whitehouse) have built on and transformed Pirenne's views. We will read accounts of the economy by modern scholars, as well as archaeological reports on recent discoveries which have enriched our view of this period and primary sources which, when investigated carefully, can tell us

State & Society: Early Modern Europe

Statemaking and its social and cultural implications from 1450-1800. Issues examined include the military revolution, fiscal history, the rise of the court, revolt and revolution, and shifting political culture.

Components: Colloquia

HIST 631A(3) Course ID:013309

Church, State, and Law in Early Modern Europe

Topics covered will include the relationship between church, state, and law in the Renaissance and Reformation, the Spanish Inquisition, overseas expansion, early modern Rome and the papacy, the wars of religion, absolutism and constitutionalism, the Enlightenment, and the French Revolution. Particular attention will be given to definitions of natural law, the question of nationalism, the rise of the nation state and the growth of state power, religious toleration, codification, diplomacy, and sovereignty.

Components: Colloquia

HIST 632(3) Course ID:002002

Tudor British History

An introduction to the variety of topics and of approaches evident in recent historical research and writing concerning England during the Tudor and early Stuart periods (roughly 1500-1650). The course consists of topically-based units of reading, illustrating different typologies of work exemplified in the current secondary literature at large. Roughly equal emphasis upon political, social and economic, and religious history. Major topics include the problems of the medieval/early modern divide, the English reformation(s), the foundations of the early modern state, and economic and demographic change. In-class discussions and writing assignments focus upon approaches and historiography.

Components: Colloquia

HIST 633A(3) Course ID:012844

The Creation of the Middle Ages by the Early Modern World

The Renaissance self-consciously tried to distinguish itself from the 'dark ages' that had preceded it, introducing a new and influential understanding of the European past. But the early modern period could not easily divorce itself from the Middle Ages, even as it often defined itself in relationship to them. This course will consider periodization as applied to both the Middle Ages and the Renaissance, the contest between humanism and scholasticism, the concept of anachronism, transitions in art and architecture, diverging interpretations of Church history, and the practice of history, among other topics.

Components: Colloquia

HIST 634(3) Course ID:006582

Britain, 1300-1600

The intention of this course to give students an introduction to the variety of topics and of approaches in historical research and writing concerning the British Isles from the fourteenth to the sixteenth centuries that are current in recent historiography of the period. Major topics include the meaning of transitions from late medieval to early modern, comprehensive pan-British-Isles approaches to the period's history, and relationships among political, religious, social, and economic history. Discussion will emphasize historiography as well as substantive topics.

HIST 635(3) Course ID:002007

European Culture and Society, 1450-1800

This course will survey a range of themes and topics relating to the cultural evolution of Europe in the early modern period. The approach of the course is to look at the experiences, customs, and beliefs of Europeans of all classes and to place them within the context of the cultural development of society. This course will examine a series of "cultures," including print culture, learned culture, popular culture, religious culture, political culture, and consumer culture and the rise of the market culture.

HIST 635A(3) Course ID:014290

Reform & Society in the long sixteenth century

Assigned readings touch on four general themes: reform among the laity; Luther and the politics of reformation; urban and territorial; Calvinism and the Reformed tradition; and French humanism in an era of religious war.

The common readings will combine a few primary sources (from the Devotio moderna, Luther, Calvin, and Montaigne) with classics of Reformation historiography in these four areas (likely examples include Steven Ozment, *The Reformation in the Cities*; Natalie Zemon Davis, *Society and Culture in Early Modern France*; Bernd Moeller, *Imperial Cities and the Reformation*; William J. Bouwsma, *John Calvin*).

Students will write four short essays on assigned readings. A longer exercise on a negotiated topic suggested by the assigned reading, but adding more recent titles, will include a preliminary oral presentation on that topic, and an essay due at the end of the term.

HIST 638(3) Course ID:017564

Philip Roth

This seminar will examine the major novels of Philip Roth, a giant of modern American literature. It will also cover some of his critical and non-fiction writing, establishing the literary connections to Europe and to Israel that mattered to Roth's own literary ethos. Serious attention will be devoted to the scholarly and critical reception of Roth's work. Roth's literary career runs from the late 1950s into the first decade of the twenty-first century. Multiple controversies attend (and will always attend) his work and reputation: these controversies of Jewish identity, sexuality and gender are the stuff of Roth scholarship. In addition, Roth's fiction sought to represent many of the main currents in twentieth-century U.S. history, from World War II to the assimilation of Jews to the Vietnam War to the sexual revolution of the 1960s and beyond. Where possible, this seminar will apply a historical lens to literature and attempt to extract historical insight from literature. The kind of fiction Roth wrote lends itself to this approach. Hence, this seminar should

HIST 638A(3) Course ID:012797

History and Literature

This seminar will explore the historical dimension to several works of American literature, focusing on the ways in which writers of fiction try to capture the feel of the past, to seek the genesis of the present in the past and to explore the workings of memory (often in relation to a traumatic event in the past). It will begin with a discussion of Erich Auerbach's theoretical text, *Mimesis*. It will move on to Tolstoy's *War and Peace*, after which it will stay on American soil with: Hawthorne's *The Scarlet Letter*, Faulkner's *Absalom, Absalom!* Cather's *My Antonia*, Ellison's *Invisible Man*, Mailer's *Armies of the Night*, Krauss' *The History of Love* and Roth's *American Pastoral*. Of obvious interest to students of literature, this course should be no less relevant to students of history. With both types of student in mind, it will concentrate on matters of narrative, portraiture and historical argumentation as well on the historical research each of the writers in question did while devising their fictional creations.

Mapping History
Making sense of spaces and places is essential for studying history. This course offers a grounding in understanding and constructing maps as tools for historical problems, and as one subset of the recent development of digital humanities. Topics include the global history of maps; how maps are made and how to decode them; and how historians have used maps to explore particular issues in history. As a final project, students will create electronic maps with data. The course is not limited to any particular time or region: it will include examples from ancient, medieval, and modern, and European, American, and other settings.
Components: Colloquia
Course Equivalents: HIST 340A

HIST 640(3) Course ID:002011
Later Medieval England
Intended to give students an introduction to the variety of topics and of approaches in historical research and writing concerning later-medieval England (basically, the fourteenth and fifteenth centuries). The reading list has been put together, first, to construct topically-based units of reading, drawn from a variety of areas (political, religious, social, economic, etc.); and second, to illustrate different typologies of work exemplified in the current secondary literature at large. Emphasis in discussion not only upon substantive topics, but also upon historiography. Each student chooses one larger topic or problem arising out of the reading list for a more extended historiographical essay.

HIST 640A(3) Course ID:013640
Readings Med. England
This course provides an introduction to recent scholarship on medieval England, focusing on the period between about 1000 and 1500. We will examine the most important thematic areas and scholarly controversies in the field. In the political sphere, we will look at the impact of the Norman Conquest, the relationship between England and its neighbors within the British Isles, the development of the English legal system, and the rise of Parliament. We will also examine religious life (both within the institutional church and more broadly among the laity), economic change, aristocratic culture, gender relations, and urbanization.

HIST 641B(3) Course ID:014934

Social and Political History of European Catholicism

In the nineteenth century, many Europeans regarded Catholic ideas, organizations, and individuals as a dangerous threat to Western civilization and liberal progress. The so-called 'culture wars' in Germany, France, and other European countries during the last third of the 19th Century re-shaped entire societies and political landscapes. Less than a century later, Catholics were well integrated into European society and Catholic politicians dominated Western Europe.

This course investigates this fundamental change by analyzing the relationship between Catholicism and modern society in Europe, including Austria, Hungary, Poland, Italy, Germany and France from 1870 to 1970.

Components: Colloquia

HIST 641C(3) Course ID:016177

Globalization of Catholicism since 1900

This course deals with the history of Roman Catholicism in the twentieth century, and its transformation from a primarily European to a global faith. Topics include the complex relationship between Catholicism and liberal modernity, capitalism, and democracy in Europe and beyond; the Second Vatican Council; liberation theology; the effects of the downfall of Communism in Eastern Europe; and the impact of the shift of Catholicism to South America, Asia, and Africa.

The course will focus on the main developments of the changes of the relationship between Catholicism and the modern world since the 19th century. It will investigate how the globalization of the Catholic community affected European Catholicism and how the church began to adapt to these changes, most visibly during the II Vatican Council (1962-65). The course will also deal with the relationship between Catholicism and revolutionary movements in Europe, South America, and Asia by looking at the impacts Liberation Theology had

HIST 642(3) Course ID:002014

Modern European Intellectual History II

An introduction to major themes and methods in the study of modern European intellectual history. Emphasis on contextual approaches, on the history of social and political thought, and on the social and political roles of intellectuals. First semester covers the period from the mid-seventeenth through the mid-nineteenth centuries; explorations of works by Hobbes, Locke, Voltaire, Hume, Rousseau, Adam Smith, Edmund Burke, the Romantics, Hegel, Marx, Mill, and others. Second semester covers the period from the late nineteenth century to the present, beginning with the critique of liberalism and rationalism in the works of Nietzsche, Pareto, and Freud; examines Durkheim, Weber, and the rise of sociology; the intellectual reaction to the First World War, to communism, and to fascism; and the reformulation of liberal, conservative, and radical thought in the later twentieth century. Previously offered as 626 and 641.

HIST 646(3) Course ID:017563
The British Atlantic
This course explores the scholarship on the British Atlantic in the early modern period. In recent years the study of "Atlantic" dynamics has transformed early modern history, both of individual regions touching the Atlantic (North and South America, Europe, and Africa) and of the early modern world overall. The intense processes of movement and exchange--of people, goods, and ideas--that characterized the Atlantic world have been described as the roots of much of the modern world and the processes that made it: the consumer revolution, imperial competition and intensified state-building, slavery, increased contact between diverse peoples, and revolutionary politics. By paying attention to all of these issues, we will try to understand the uses of Atlantic history, what distinguishes it from other kinds of history, whether it constitutes a subject or a methodology, and how it can contribute to our own work. We will reflect more broadly, too, on the value of large-scale and comparative histories and how to practice (or resist) them effectively.

HIST 647(3) Course ID:008688
Religious Interpretation and Cultural Criticism in Modern Europe
This course examines the links between biblical criticism, challenging interpretations of Christianity, and political and cultural criticism. We examine why leading political analysts and cultural critics felt compelled to offer interpretations of the Bible and its significance, and why religious thinkers offered new interpretations of the meaning of Christianity (and its links to or distance from Judaism) in light of changing historical understandings. The focus is on the nineteenth century, but to put it in historical context, we will first look at how these issues were addressed by major thinkers from Hobbes through Kant. We then focus on comparing the analyses of Christianity and its relationship to modern culture in the work of John Henry Newman, Matthew Arnold and Friedrich Nietzsche.

HIST 648(3) Course ID:017437
Constructing the Past in the First Millennium: Comparisons East and West
The famous French medievalist Marc Bloch argued that all history is in a sense comparative history. This course seeks to fulfill Bloch's insistence on comparison by examining together the key changes that occurred in the mid-eighth century, both East and West. The class will analyze the consequential transition from Umayyad to Abbasid power in the East and the transition from Merovingian to Carolingian power in the West, placing special emphasis on how each 'winning' dynasty shaped the memory of their predecessors, advancing a new construction of the Frankish and Islamic pasts. If we take seriously Bloch's insight that comparative history is essential, then comparative historiography is too. This course, the first of its kind, is offered under the auspices of the First Millennium Network, an organization that seeks to bring the complex traditions of the first millennium of the common era into dialogue with each other. It will be jointly offered by CUA and UMD, alternating each week between campuses, and will be co-taught by a specialist in

The American Revolution

This class introduces graduate students to the complex historiography of the American Revolution. An iconic moment in American history, the Revolution has, unsurprisingly, also generated a tremendous amount of scholarship. We will study approaches both classic and new, paying attention to the way scholarly study of the Revolution has been shaped by the circumstances of American (and international) life in the centuries since it occurred. In particular, we will ask whether the field has moved from narrowly American questions ("who are we?") to questions about the Revolution as part of an enmeshed Atlantic or global world in an era of globalization ("where are we?").

Components: Seminar(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 663(3) Course ID:002065

Immigration and Ethnicity in America, 1840-1970

Focuses on immigrants who came to America in the nineteenth and early twentieth centuries and their American-born children and grandchildren. Concentrates mostly on immigrants from Europe and their descendants, but includes discussions of Latino Americans and Asian Americans. Readings address such issues as immigrant life in the old world, causes and processes of immigration, adjustments made in the new world, family life and gender roles, group identities and boundaries, religious beliefs and practices, and participation in labor movements and politics.

Components: Colloquia

HIST 663A(3) Course ID:014585

Migration, Ethnicity & Diaspora

Investigates the role of religion and diaspora among migrants in the Americas between 1870 and 1940. Using historical case studies of migrant groups (Irish, Mexicans, Eastern European Jews, Armenians, and Japanese), students will examine how religious belief and religious identity created and informed diasporic migrant communities. In doing so, we will test theories of ethnic assimilation, develop working definitions of ¿diaspora¿ and ¿ethnicity,¿ and analyze the enduring impact of religious belief on the migrant experience.

Components: Colloquia

HIST 665(3) Course ID:002019

Women and Gender in Modern Europe

This course examines the experience of women and the meaning of gender in Britain, France, and Germany, from the onset of industrialization through the period following the Second World War. A major goal of this course is to understand women¿s experiences within and across national boundaries, that is, to come to an understanding of women in Europe by examining those experiences held in common by virtue of their sex, and those mediated through their disparate experiences of class, nationality, race, and religion. Another goal is to examine critically the methodologies and narrative strategies historians of women have employed in writing the history of women in Europe. This course is designed as a seminar, so weekly meetings will be devoted to discussion of reading as well as to student presentations.

Components: Seminar(In Person)

Course Equivalents: HIST 365

Room Requirements: DIGITAL PRESENTATION ROOM(1)

HIST 670(3) Course ID:002075

Slavery in America & the Atlantic World to 1865

This course examines America¿s place in the Atlantic World (c. 1450-1877) through the institution of racial slavery and the lived experiences of forced migrants in the African Diaspora. While the geographic focus is North America and the Caribbean, we also give serious attention to Latin America and Africa. Our emphasis is on exploring the most important and innovative scholarship in these dynamic transnational fields while also engaging longstanding scholarly debates and frameworks. Subjects include: African kingdoms, the slave trade, intercultural encounters, cultural change during migration, religious experience, ethnicity/ethnogenesis, ideas of race and gender, everyday life and the family, the economics of slavery and labor, the politics of slavery, free blacks and their activism, abolition and emancipation movements (and religion¿s role), and the effects of slavery on American society.

Components: Colloquia

HIST 670A(3) Course ID:013662

Slavery and Freedom in 19th Century America

This course explores the development and destruction of slavery in the United States from the early republic through the late nineteenth century. Topics include: slavery in the age of revolutions; the "first emancipation" and the growth of anti-slavery movements; the territorial expansion of slavery and the creation of the cotton kingdom; the intertwined lives of masters and slaves; political economy and pro-slavery ideology; transnational perspectives on slavery and abolition; and post-emancipation struggles over the meaning and extent of freedom.

The Iberian World, 1500-1800

An analysis of central themes in the political, cultural, and religious history of Spain, Portugal, and their empires. Topics include the political and economic history of late-medieval Iberia; the Catholic church in the Iberian world; the establishment of the Inquisition and the expulsion of the Jews from Spain; the conquest and settlement of the Spanish and Portuguese empires in America and in Asia; slavery and the slave trade; the relationship between European, Indian and African cultures in America; and the comparative history of Brazil and Spanish America.

Components: Colloquia

HIST 685A(3) Course ID:015531

Church in Latin America

Focuses on the history of the Catholic Church in Latin America, from 1492 to the present. Readings will cover a variety of topics, including the Spanish missions, indigenous adoption and adaptation of Christianity, the Virgin of Guadalupe, syncretic African Catholicism in Brazil and Cuba, church/state conflicts after Independence, and Catholicism in twentieth-century Latin America. Although most readings focus on Latin America proper, the course will also cover Latin American migrants in the United States. As a result, the readings and discussions will give students a historical foundation for understanding Latin American and Latino Catholicism, Hispanic and Latino ministry, and the culture and traditions that produced notable Latin American Catholic leaders, particularly Pope Francis I.

US Latinos and the Catholic Church

This course examines the history of Latino immigrants in the United States, focusing specifically on the role of Catholicism and the Catholic Church in their communities. We will discuss a variety of topics, including: the history of the Catholic Church in Latin America; the history of Latin American migration to the U.S.; Mexican migration and the Catholic Church; Puerto Rican Catholics in Puerto Rico and New York; the Cuban diaspora; transnational connections between immigrants and the religious life of their homeland; and the rise of Evangelical Protestantism in the Latino community. Through an investigation of these topics, students will arrive at a fuller understanding of the fastest-growing demographic group in the U.S. Catholic Church. As such, this course will be of interest to students of U.S. immigration, Catholic history, Hispanic ministry, and Hispanic and Latino culture and religions.

History and Public Life in the United States

This course is an introduction to the discipline of history as practiced in public contexts, both physical and virtual. We will begin by addressing questions such as which publics form audiences for history in the twenty-first century? How has the field of public history evolved in the United States and how would we define it today? How is public history practiced in the United States? How might what constitutes public history differ according to particular locales? Is there a virtual public history as distinguished from the traditional version presented through concrete culture, specifically in monument/memorial structures, museums, libraries and other public institutions? In addition to exploring varieties of digital public history as presented via the web, we will use urban Washington, D.C. as our

Medieval Islam and Eastern Christianity

This course's subject is the shaping of Eastern Christianity and Islam as a result of their contacts with one another over the course of the medieval period. Focusing on Sunni Islam and Arabic and Syriac Christianity, the course surveys a series of key themes and textual traditions in religious and intellectual history: the Bible and the Quran, the Christian contexts of early Islam, the mutual influences of Islamic and Christian theology, Greco-Arabic philosophy and Islamic humanism, and others. Course readings include secondary scholarship on our traditions of focus, as well as significant primary sources in translation, both Christian and Islamic.

HIST 694B(3) Course ID:015146

Historiography of Medieval Islam

This course introduces graduate students to the major problems, scholarly debates, and methodological approaches to the study of the history of the pre-Ottoman Islamic Middle East. General areas covered include the historical origins and development of Islam and Islamic intellectual disciplines, the Islamic Middle East in its Late Antique and Mediterranean contexts, and basic theoretical orientations to the study of both non-western and pre-modern societies.

The course welcomes both specialists in Middle Eastern history and historians of other regions. As such, the themes studied throughout the course strike a balance between those focused on internal aspects of Islamic history and those that branch into other areas of world history, particularly connections between the Islamic Middle East, Byzantium, and the Latin West. Perspectives and insights from other historiographical areas that aid us in the study of Middle Eastern history are encouraged and welcome."

'Late Antiquity' East and West

The notion that there is a distinct historical period, "Late Antiquity," has become immensely popular in the past fifty years; and yet the notion has also been challenged by scholars in the field. Both enthusiasm and misgiving have been focused on both the "post-Roman" West and the early "Byzantine" empire (together with the new Islamic polity that grew up alongside it). After surveying the development of the concept, the course will examine recent debates and analyze the issues at stake--which include the supposed differences between western settler kingdoms and the apparently enduring "Roman" empire centered in Constantinople, disciplinary boundaries (which often reinforce positions adopted in the controversy), and the claims made for "transformation" over "fall" or "decline" in relation to ancient culture.

Components: Seminar

HIST 823A(3) Course ID:015765

History Writing in the Early Middle Ages

One of the most vibrant areas of research in early medieval history is the growth of historical writing and the careful cultivation of memory in the period from the sixth through eleventh centuries. The Carolingian dynasty in particular consciously patronized authors of historical texts, and encouraged the use of history writing as a vehicle for political polemic. At the same time, monasteries were centers of liturgical memory, a process often directed by aristocratic women both within and without the cloister. This course will explore the role of history writing and memory in the early Middle Ages. We will begin by reading together a Carolingian historical text, in combination with secondary literature on the field. Each student will then select their own historical work to study and the final section of the class will be devoted to class discussion of each student's independent research. While the common readings will emphasize early medieval sources, students can work on a history from any period of the Middle Ages. NB: reading knowledge of Latin is

HIST 824A(3) Course ID:016593

Christian Asceticism at the Dawn of the Middle Ages

There is still a common assumption that, by the end of the sixth century, ascetic (perhaps even "monastic") practices and institutions were poised to develop without challenge or adaptation for several hundred years. The course will explore the basis of the assumption and then deconstruct it, at least to the extent of questioning whether a single "monastic tradition" was already in place around 600 CE and destined to survive intact. The phrase "the Middle Ages" hints at a western, Latin emphasis, since the notion of the "medieval" is essentially a later western invention, reflecting attitudes increasingly prevalent after 1350 CE or so, deeply influenced by what we now think of as the "Renaissance" and "Reformation." Students will have the opportunity, however, to examine features of early ascetic culture characteristic of Greek, Coptic, and Syriac milieux. The course is offered for students not only in the "Early Christian Studies" program or the Department of History but also in theological, philosophical, classical, and Semitic sectors.

Focuses on a different topic each year it is offered. All topics considered in comparative perspective, within the context of Western Europe between the late Middle Ages and the French Revolution. Interdisciplinary approach informs the course material. Topics considered include comparative aristocracies, revolts, rebellions and revolutions; political culture in an early modern perspective; and state making.

Components: Seminar

HIST 840(3) Course ID:017525

National Memory in Tudor Britain

This course is a research seminar that explores the connected topics of national identity, the uses of history, and print culture in sixteenth-century Britain. It is about the history of history: the ways in which understandings of the then-past were created and understood, in political and cultural context. Emphasis is upon the printed products of that understanding, which includes {history} as usually understood but may extend into literature and even cartography/geography. The initial core reading for the first unit of the seminar ranges through the early-modern period in order to lend a broader context, but the emphasis of projects will be upon the sixteenth century. The principal aim of this course is to help students develop their ability to conduct a substantial piece of research based upon primary sources and deep immersion in historiography. The course begins with four weeks of common reading that is intended to introduce the current state of study concerning the course's topic. After that each student will present a selection of reading

Washington Past & Present: An Introductory Study

In this interdisciplinary course, students learn about the past and present of Washington, D.C. and how the city illustrates a variety of theories and principles from different academic disciplines. Focus is on Washington as a symbolic city (the design and meaning of its buildings, monuments, and museums); a living city (its neighborhoods, economy, and environment); and a political city (national and local policy-makers, staff, lobbyists, and diplomats). Themes include how cities evolve over time; how neighborhoods form, decline and revive; how the national intersects with the local in a capital city; and how national and local communities are defined and lived. Taught via discussions, lectures, and visits to various locations in Washington, the course draws on methods and insights from such fields of study as sociology, literature, social work, economics, art and architectural history, media studies, anthropology, political science, and history. The class emphasizes the importance of students learning how to ask probing questions about their

HSHU 204(3) Course ID:003046

Christian Culture/Secular Age

This course explores the conflict between Christian thought and the secular age, from 1750 to the present. Beginning with Pietism and the Enlightenment of the 18th century, it concludes with a living defender of the Enlightenment, Jürgen Habermas, in dialogue with Joseph Ratzinger, shortly before he became Benedict XVI. This course does not propose a linear reading of Western culture. Instead, it traces the tension between Christianity and Secularism through several distinct historical phases: the pre-history of the French Revolution and the Revolution; the early 19th century, with its abiding revolutionary energy, which engendered enthusiasm and antipathy; the late 19th century, as shaped by the anti-Christian Nietzsche, the proto-Christian Wagner and the Christian Dostoevsky; the early 20th century and its revolutions (Nazi, Bolshevik and Freudian); and the later half of the 20th century, traumatized by Holocaust and Gulag, though alive with cultural radicalism, spiritual striving and its own version of the struggle between secular and

University Honors Program Internship

This course allows students in the University Honors Program to earn course credit within the Honors Program for internships that fall outside their major. Students will work one on one with a designated faculty member to reflect on the relationship between what they are learning in their internship and their chosen program of study. This course can be counted toward the Liberal Studies track in the Honors Program.

Components: Internship

Enrollment Requirements: Open only to students in the University Honors Program

Room Requirements: NO CLASSROOM NEEDED(1)

The Catholic Univ of America

Honors Spring Break Trip

This 1-credit course accompanies the Honors Program's spring break trips. Students will complete assignments tailored to the destination of the trip that may include journal entries and individual and group presentations about specific sites.

Components: Abroad Trip

Topics: London, England

Enrollment Requirements: Open only to students in the University Honors Program

Room Requirements: ABROAD(1)

HSLs 201(3) Course ID:015594 Department Consent Required

The Virtues

This is an examination of some of the more important virtues, and the place they hold in Christian and other traditions. It is not primarily a philosophical or theological treatment. Rather, we will look at depictions of the virtues themselves (and some corresponding vices) in literature, essays, political debates, popular writing, and visual media (film, television, painting). Reserved for freshmen Honors Program students.

Components: Lecture

HSLs 202(3) Course ID:016021 Department Consent Required

Mary as Mother, Woman, Idea: An Interdisciplinary Seminar

This team-taught, interdisciplinary seminar for first- and second-year Honors students will examine the figure of the Virgin Mary in theology, liturgy, art, literature, music, and history. Sources will include sacred texts and works of art, literature, and music spanning two millennia. Students will conduct original research on Mary under the guidance of the course faculty, who are drawn from the School of Theology and Religious Studies, the School of Music, and the Departments of English and History.

Components: Lecture

HSLs 205(3) Course ID:016694

City of Athens from Antiquity

This course covers the history and culture of Athens from antiquity to the present. It will cover the rise of Athenian democracy, the flourishing of art, drama, and philosophy in the fifth century, and the transition to Roman and then Byzantine rule. It will also look at the struggle for Greek independence from Ottoman rule and the rise of the modern Greek state.

Components: Lecture

Enrollment Requirements: Open only to students in the University Honors Program

HSLs 328(3) Course ID:016466 Department Consent Required

Undergraduate Research Journal Production

A seminar-style course that examines the academic and professional practices that inform the publication of research journals. Over the course of the semester, students will receive training and experience in publication as they work to produce the annual issue of *Inventio: The Undergraduate Research Journal of The Catholic University of America*. Requires additional time for staff meetings in addition to class meetings. Open only to students selected for the *Inventio* Student Editorial Board. Prerequisites: ENGL101.

Components: Practicum

Course Equivalents: UGS 328

HSLs 350(3) Course ID:010196 Department Consent Required

Berlin in Literature and Film

For the last 150 years, the city of Berlin has been the political and cultural center of Germany and Europe. The course explores the turbulent history of the city through its architecture, literature, films, and the creative arts. Discussions will focus on Berlin as the capital city (Prussian monarchy, Weimar Republic, Third Reich, and contemporary Germany); the divided and reunited city; Berlin as a meeting point for diverse religions, ethnicities, and ideologies; and the city's multicultural history. An optional one-week trip to Berlin during spring break 2018 will be available for interested students. The course will be taught in English; counts as a literature, humanities, and European Studies elective.

A History of London

This course charts the development of London from its establishment by the Romans on the banks of the river Thames in 50 A.D. to its emergence as a global city in the 21st century. The course explores the city through primary sources, including archaeology, journalism, memoirs, fiction, legislation, and film, and through the work of social and cultural historians. Emphasis will be upon London since 1750, and topics covered include: the enormous growth of the city in the 1800s; the transformation of the Victorian city through gas, light, and water; the emergence of London as a playground for the rich and a home for the working poor; the city as battleground -- of total war between 1939 and 1945 -- and of governance in the 1970s; and the remaking of the city as a repository of wealth for global elites.

Components: Lecture

The Art and Culture of Paris

This course offers an introduction to the art and culture of Paris, an ancient city with proud Roman ruins; magnificent medieval churches; noble Renaissance palaces; superb beaux-art buildings; and one of the first modern urban plans, which gave the city its enduring moniker "the City of Lights."

Through primary and secondary texts, class discussions, field trips to the world-class French art collections at the National Gallery of Art in Washington, DC, and cooking classes, we will explore the tastes and pleasures, contradictions and accomplishments of French culture across time. In exploring a selection of the most historic and memorable sacred and secular sites of one of the world's most venerable and beautiful cities, and one of Europe's largest capitals, we will focus particular attention on art works, monuments, texts, and events that have helped to define French culture and style throughout the ages, including medieval

Arts & Sciences - Honors Program - Subject: Honors Sequence Math & Science

HSMS 230(3) Course ID:002008

Mathematical Topics in the Social Sciences I (Honors)

A rigorous mathematical treatment of the following topics:

1. Theory of social choice including a critical approach to different vote-aggregation procedures and a study of their vulnerability to manipulation; Condorcet paradox and the intransitivity of the pair-wise majority rule; other paradoxes of collective choice; May's theorem.
2. Yes-No voting: Banzhaf and Shapley-Shubik indices of political power, their paradoxes and the formal mathematical relation between them; swap and trade robustness; vector-weightedness and dimension of a yes-no voting system.

Components: Lecture

Enrollment Requirements: University Honors Program

HSMS 330(3) Course ID:008684 Department Consent Required

Mathematical Topics in the Social Sciences II (UH)

A rigorous mathematical treatment of the following topics:

1. Apportionment of the House of Representatives with focus on the mathematical theory and the paradoxes involved; history and development of apportionment procedures from the early contributions of Alexander Hamilton and Thomas Jefferson to the currently used Hill-Huntington procedure; the impossibility theory of Balinski and Young; different measures of inequity and the alternative approach to the apportionment problem through equity considerations.
2. Social Welfare theory including a thorough treatment of Arrow's impossibility theorem and Arrow's axioms of unrestricted domain, collective rationality, weak Pareto and independent of irrelevant alternatives; dictatorship, oligarchy and the weakening Arrow's axioms.

HSSS 101(3) Course ID:003088

The Concept of the Person in the Social Sciences

The first in the four course sequence of the honors social science track, HSSS 101 offers an intensive introduction to the basic principles and approaches to the social sciences. The course mixes readings from 19th century classics in social science literature along with more recent applications, case studies, and even novels. The course is organized around a consideration of the idea of the human person, a foundational concept for all the social sciences.

Components: Lecture

Enrollment Requirements: University Honors Program

HSSS 102(3) Course ID:003106 Department Consent Required

Economic Reasoning and Social Issues

This course is intended to introduce the student to the discipline of economics, the economic way of thinking, and the tools of economic analysis. It seeks to demonstrate that economic theory and how economists view the world have important, practical, and problem-solving uses in a world of scarcity and are not empty academic exercises. Using a combination of algebraic and graphical analyses, it will introduce the student to the basic economic theory and tools necessary to explore systematically a variety of real world social/policy issues and problems from the economist's perspective.

Components: Lecture

Enrollment Requirements: University Honors Program

HSSS 203(3) Course ID:003120

Social Data Analysis and the Study of Uncertainty

This course is an introduction to the analysis of data from the social sciences. A particular focus of the course examines the rules that govern uncertainty, the study of things whose truth or falsity is not known. In addition to being introduced to basic statistical concepts and computer applications, the student will study how uncertainty is measured and how it is used for everyday decision-making. Throughout the course, the emphasis is on critical interpretation of social science data and on effective writing on topics that deal with uncertain situations and quantitative information.

HSSS 204(3) Course ID:003126 Department Consent Required

Families, Markets, Cities: Social and Scientific Perspectives

Using perspectives from a variety of social sciences, this course examines two of the major institutions of modern society: the market and the family. Issues explored include the changing size, shape, and role of the family; the cultural prerequisites and cultural effects of the market; the uses and limits of economic forms of explanation; and the nature of debates in the social sciences.

Components: Lecture

Enrollment Requirements: University Honors Program

HSSS 204A(3) Course ID:019234 Department Consent Required

Science, Religion, and Society

This course will examine the relationship between science and religion. We will examine philosophical, historical, and sociological works, situating this relationship in the socio-historical context of a number of Western and Eastern societies, including the US, UK, Italy, and India. This section is for Honors students only and will involve additional assignments.

LSC 255(3) Course ID:017661

Introduction to Information Systems

This course introduces students to the evolving role of information systems. Students explore how technology facilitates interaction with information in various organizational and social settings. This course is designed to: Introduce students to applicable theory, principles, and standards; explore the capabilities and functions of several classes of information systems, including established technologies and evolving social and collaborative environments; introduce essential technology elements (hardware, software, networking, etc.); develop practical information technology skills, such as working with databases and creating and publishing web pages; and promote systems thinking, problem solving and collaborative abilities.

Components: Lecture

Room Requirements: COMPUTER LAB(1)

LSC 322(3) Course ID:016032

Digital Content Creation and Management

The course covers how individuals and organizations create, communicate, use, share and manage digital information content for learning, work, and play. Topics include digital scholarship, changes in scholarly communication, Digital Humanities, eScience, data literacy, research data analysis and management, online privacy, visual literacy, social media, web applications, and trends and impact of mobile technologies. Examples of individual and organizational practices will be drawn from various subject domains (politics, economics, art, history, science, etc.) and from for-profit and non-profit sectors. Students will learn the roles of information technology in digital content creation and management and develop strategies to use information technology effectively and responsibly to benefit individuals, organizations, and society. By examining the interaction between people, information, and technology, the course prepares students to be effective learners, responsible citizens, and efficient workers in the 21st century.

Components: Lecture

Course Equivalents: LSC 522

LSC 324(3) Course ID:017006

Actionable Intelligence

Thoughtful analysis of data and information is critical for decision making in many areas of society. This course provides students with the knowledge and skills to research diverse information sources, assess quality and authenticity of information, and apply intelligence analysis techniques to deliver actionable intelligence for targeted user communities. It is structured around intelligence community models and practice and emphasizes data and information from a broad range of both traditional resources and evolving digital resources. Topics covered include: the intelligence analysis process (Planning/Direction, Collection, Processing, Analysis and Production, Dissemination), the all-source collection concept, evaluating and maintaining information quality, synthesis and analysis of data and information, decision processes, techniques and methods for intelligence analysis, and skills for effective delivery and presentation of research results, including development of briefings. Readings and examples used in class and for assignments

Components: Lecture

Course Equivalents: LSC 524

LSC 325(3) Course ID:017662

User Interface Design and Evaluation

This course explains how to use design and evaluation techniques to develop successful user interfaces for information systems and other interactive technologies. Students will develop an understanding of the cognitive principles and social issues that affect human-computer interaction. Topics covered include: understanding users and interaction, design strategies, iterative prototyping, formative and summative evaluation, and usability testing. Through a team project, students will apply and refine their knowledge, prototyping and evaluating the design of a user interface for a real-world system.

Components: Lecture

Course Equivalents: LSC 525

Room Requirements: COMPUTER LAB(1)

LSC 327(3) Course ID:017308

Introduction to Data Science

This is an introduction course to provide foundations in the area of data science with discussion on methods, concepts and opportunities in Data Science. Students will learn foundational data analytics concepts and techniques through recent work and publications as well as projects. Topics of the course include types of datasets, data management and processing, methods for data analysis including machine learning and data mining, data visualization, and issues around data including ethics and policy. The course will combine theoretical foundations with implementation and evaluation of data analysis algorithms on real data.

LSC 350(3) Course ID:017663

Information Architecture and Web Design

This course is designed for students interested in becoming skilled searchers of Internet resources and creative designers of Web sites. It will cover Internet search tools, search engine architecture, search techniques and strategies, evaluation of information resources and applications of information architecture to web site design. Through exercises, discussions, lectures, projects and presentations students will learn the strengths and limitations of search tools and the principles of user-centered Web design. In addition, students will have hands-on practice with web site creation with HTML and Dynamic HTML. They will use HTML editors such as Netscape Composer and Dreamweaver and graphic tools such as GIF Construction Kit and Fireworks to create sites with interactivity. They will also learn the basics of placing databases on the Web.

Components: Lecture
Course Equivalents: LSC 650
Room Requirements: COMPUTER LAB(1)

LSC 354(3) Course ID:017673

Database Design and Management

Solid introduction to the terminology, concepts and practice of information storage and retrieval systems design. Special emphasis on user needs assessments, data integrity, data models and record structure, and data manipulation. Other topics include: current awareness of relational database model, query languages, data normalization techniques, client-server systems, database warehousing and data mining. Practice in developing a small database application.

Components: Lecture
Course Equivalents: LSC 654
Room Requirements: COMPUTER LAB(1)

LSC 433(3) Course ID:017218

Information Retrieval and Analysis

Covers the theory and practice of information storage and retrieval in the online environment. Includes the history of the online information industry, types and structures of online databases, basic search skills, and search strategy development. Illustrates search techniques using commercial databases, CD-ROMS, and Internet resources. Explores and accesses electronic reference services and discusses the management of online search services.

Components: Lecture

LSC 452(3) Course ID:017680

Design and Production of Multimedia

This course focuses on the practical application and instructional integration of digital tools, including audio/video software and Web 2.0, to produce multimedia projects. Course projects will be designed to teach information literacy and media literacy skills to library, and to provide professional development to information professionals. Each project will align with national and state technology standards. Multimedia-specific copyright laws will be discussed.

Components: Lecture
Room Requirements: COMPUTER LAB(1)

LSC 453(3) Course ID:017674

Programming for Web Applications

This course introduces the concepts and techniques for developing Web-based applications. Emphasis is placed on programming techniques and the basics of database technology required for designing Web-based application interface and managing data on the Web. Students will learn the basics of a computer programming language through hands-on exercises and projects that can be applied in digital libraries, metadata management, web technologies, data processing, and data science.

LSC 456(3) Course ID:017675

Systems Analysis and Evaluation

This course prepares students to participate in the analysis, design, acquisition, use and evaluation of information systems within libraries and other information centers. It also provides students with strategies, resources, and methodologies for evaluating, selecting, developing, and implementing information technologies and applications. It is designed for students who work or plan to work as systems analysts, systems librarians, and related professional roles; for managers who want to better apply information systems in their organizations; and for others who use information systems in their organizations and wish to understand them better. The course is organized around a Systems Development Life Cycle (SDLC) model. Students will gain practical experience applying the SDLC model and related techniques by undertaking a team project based on a real organizational need.

Components: Lecture

LSC 551(3) Course ID:000007

Organization of Information

This course introduces students to the theory, principles, standards, and methods of information organization with the goal of preparing students to manage information for access. The course covers principles of information organization and representation, metadata concepts and schemas, subject analysis, controlled vocabulary, natural language approach, classification, taxonomy, encoding standards, information retrieval systems and human information behavior. Applications of technologies in information organization are discussed throughout the course.

Components: Lecture

LSC 553(3) Course ID:000008

Information Sources and Services

A solid introduction to the fundamental terminology, concepts, and practices of library public services as well as the skills to deliver them effectively to a variety of information users and within a variety of settings. Special emphasis on the philosophy of reference service, appropriate communications skills for use in instructional settings and reference interviews, standard evaluative criteria for determining fitness of sources to meet information needs, proficient retrieval of information from print and electronic reference sources, policies and procedures for the provision of reference service, and the role of reference and information service departments within an organization.

Components: Lecture

LSC 555(3) Course ID:000010

Information Systems in Libraries and Information Centers

Introduces students to the evolving role of information systems in the storage and retrieval of information. Students explore how information technology in libraries, archives and information centers, and on the World Wide Web facilitates interaction with information. This course is designed to: Introduce students to applicable theory, principles, and standards; explore the capabilities and functions of several classes of information systems, including established technology like integrated library systems (ILS) and databases as well as evolving social and collaborative environments; introduce essential technology elements (hardware, software, networking, etc.); introduce practical information technology skills used by information professionals, such as working with databases and creating and publishing web pages; and promote critical thinking, problem solving and collaborative teamwork abilities for working with information technology.

Prerequisite: None

Components: Lecture

LSC 557(3) Course ID:000012

The Information Professions in Society

This course introduces the role of libraries, archives and museums in society. This course incorporates historical developments, current trends, and the outlook for the future. Emphasis will be placed on the values, principles, legal, and ethical responsibilities of the profession which provides a foundation for each student's ongoing professional development and leadership

Components: Lecture

LSC 563(3) Course ID:017664

Data Visualization

This course focuses on the ways that humans process and encode visual information, and how an understanding of these processes can be used to create effective visualizations. The course contains readings, hands-on labs, exercises, graded discussion forums, and a final project. A final project requires students to utilize concepts and tools learned in the weekly lectures, labs, exercises, and class discussions. Selected topics of the course include (1) visual perception, and cognition, (2) visual components of graphs, (3) critical and scientific thinking as applied to data visualization, (4) basic exploratory data analysis, and (5) representing qualitative and quantitative relationships using graphs. The course will combine theoretical foundations with the implementation and evaluation of data visualization uses in multiple disciplines.

LSC 565(3) Course ID:017465

Data on the Web

Information professionals encounter a variety of data in Extensible Markup Language (XML) and JavaScript Object Notation (JSON). From finding aids to APIs (Application Programming Interfaces), metadata, catalogs, and social media archives, these textual data formats have become commonplace. This course will teach students to manage, interpret, and display XML and JSON using JavaScript. Students will learn how to query and serve structured data on the web through in-class presentations, workshops, and student projects. The course will have an emphasis on practical uses of web-based data in information settings through demonstrations and examinations of case studies. Prerequisites: LSC 555, or with instructor's permission (Prior experience with HTML is required).

Components: Lecture

Enrollment Requirements: LSC 555 or CLSC 555

Room Requirements: COMPUTER LAB(1)

LSC 606(3) Course ID:000014

Cataloging and Classification

This course introduces students to the theory, principles, core concepts and best practices of cataloging and classification. Topics include characteristics of information objects, principles of information representation, subject analysis, cataloging and metadata standards (AACR, RDA, Dublin Core, Dewey, LCSH, LCC), encoding standards (MARC and BibFrame), linked data and Semantic Web. Prerequisite: 551.

Components: Lecture

Enrollment Requirements: LSC 551 or CLSC 551

LSC 612(3) Course ID:008970

Foundations of Digital Libraries

Formerly LSC 652.

The digital library is a blend of old and new, bringing new formats, technologies and techniques to the global dissemination of information, drawn on knowledge and experience in areas such as organization of information, digital preservation, information retrieval, interface design, and networking. This course will provide an overview of principles and practices in digital libraries. The course will address theoretical, technological, social, and practical issues regarding building, organizing, and providing access to digital libraries. Topics covered in the course include all phases of project management including collection development and assessment, formatting standards and practices, metadata and markup standards, technical infrastructure, and end-user experience. Prerequisites: 551

Components: Lecture

Enrollment Requirements: LSC 551 or CLSC 551

LSC 615(3) Course ID:007821

Metadata

This course provides an overview of current metadata standards used in the library, archives, and museum communities and discusses issues relating to metadata services, interoperability, quality control and evaluation, and project planning and management. The course applies principles of information organization to organize digital resources for access, and compares selected metadata standards and examines how libraries, archives, government agencies, and museums apply metadata schemas and manage projects to make digital resources available to users. Prerequisite: LSC 551.

Components: Lecture

Enrollment Requirements: LSC 551 or CLSC 551

LSC 616(3) Course ID:001578

Knowledge Organization Systems

The course introduces theory and practical aspects of knowledge organization systems for organizing, information and promoting knowledge management in libraries, archives, and museums. Knowledge organization systems used in organizations include classification systems, subject headings, thesauri, and taxonomies, and ontologies. Special emphasis of the course is on subject analysis and indexing theory, different types of indexes, construction of a controlled language-thesaurus, and current trends including linked data and associated standards of knowledge organization systems like SKOS.

Arts & Sciences - Library and Info Science - Subject: Library & Information Science

LSC 631(3) Course ID:000090

Storytelling

Exploration of several forms and genres of narrative or "story," such as tale, myth, and legend as media for creating, collecting, preserving, and providing access to cultural heritage information. Examines culturally diverse content within a variety of media, including books, graphic novels, comics, oral histories, still and moving images, performance representations, manuscripts, and juvenile literature. Addresses how information managers use stories in collection development, organization of knowledge in multi-format materials, library administration, public programming, and qualitative research, as well as identifying the role of personal story in professional development and discusses the ethical issues of storytelling. Includes in-class performance and out-of-class project work. Students demonstrate how stories are used in various information service environments including: libraries, archives, museums, school media centers, and other community organizations and cultural institutions

Components: Lecture

LSC 633(3) Course ID:000024

Information Retrieval and Analysis Strategies

Covers the theory and practice of information storage and retrieval in the online environment. Includes the history of the online information industry, types and structures of online databases, basic search skills, and search strategy development. Illustrates search techniques using commercial databases, CD-ROMS, and Internet resources. Explores and accesses electronic reference services and discusses the management of online search services. Prerequisites: 553

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 634(3) Course ID:001570

Humanities Information

Humanities information needs and information-seeking behavior of different user groups. Disciplines include literature, philosophy, religion, and the visual and performing arts (including theater and film). Emphasis on access to resources in all formats. Trends and problems in the humanities and in humanities information services. Prerequisites: 553 or 9 credits of graduate credit in a humanities discipline.

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 635(3) Course ID:001584

Human Information Behavior

This course focuses on understanding how different groups of people and communities seek, gather, retrieve, and use information in a variety of environments. It engages students with theories and research on human information behavior, drawing on research and insights from information science, psychology, and sociology. It explores the full cycle of information interaction, from information need through seeking, obtaining, evaluating, using, sharing, and retaining. The course also addresses the practical application of knowledge about information behavior to the management of libraries, archives, museums and other information services. Prerequisites: 553.

Components: Lecture

Course Equivalents: LSC 335

Enrollment Requirements: LSC 553 or CLSC 553

LSC 636(3) Course ID:001572

Social Science Information

Survey of information resources for the social sciences. Disciplines include anthropology, economics, education, ethnic and gender studies, geography, history, law, political science, and sociology. Emphasizes research techniques utilizing resources in all formats. Covers trends and problems in the social sciences and in social science information services. Prerequisite: 553 or 9 credits of graduate credit in a social science discipline.

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 637(3) Course ID:001619

Government Data and Information

This course explores the role of libraries in working with patrons to find, use, and understand government information. Students will build their reference expertise with government produced content and concurrently learn visualization, analysis, and map making skills that manipulate government collected data via geographic information systems (GIS). Coverage includes the output from Congress, federal agency materials, statistics, and administrative law. We'll also look at the repackaging and sale of government information access via commercial vendors and database providers. The course is a blend of lectures, reference assignments, and in class lab sessions. Prerequisite: 553

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

Course Catalog

Arts & Sciences - Library and Info Science - Subject: Library & Information Science

LSC 638(3) Course ID:001573

E-Science and Technology Information

Science and technology information needs and information-seeking behavior of different user groups. Disciplines include the physical and biological sciences, engineering, agriculture, and medicine. Emphasis on access to resources in all formats. Trends and problems in science and technology and in science and technology information services. Prerequisite: 553 or 9 credits of graduate credit in a science or technology discipline.

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 639(3) Course ID:001640

Business Information

Introduction to information sources used in business, finance, and economics, with special emphasis given to company and industry information and to the use and interpretation of statistical sources. Also examines labor, taxation, trade, and international sources. Printed data sources examined and contrasted with their database equivalents. Prior knowledge of on-line database systems helpful but not required. Prerequisite: 553 or nine credits of graduate credit in business.

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 641(3) Course ID:001563

Collection Development and Management

Focuses on the processes, concepts, and methodologies for building and managing collections in all types of libraries and all media. Covers Collection Development policies, selection, acquisition, processing, evaluation, and weeding of collections. Deals with the complexities of vendor relations and the licensing of digital content as well as the acquisition of print and multimedia, with associated hardware and software as appropriate. Relates the roles and functions of collection management to the overall library operations and missions, the utilization of collections, the increasing emphasis on library consortia, the roles of collections and the Internet in meeting information needs, and other emerging issues and trends.

Components: Lecture

LSC 643(3) Course ID:000091

Oral History

Introduction to oral history as a primary source for historical research and popular writing. Techniques, legal and ethical issues involved in the creation, collection, evaluation, and organization of oral history. Training extends to practical aspects of interviewing and maintaining collections, including computer applications.

Components: Lecture

LSC 644(3) Course ID:008205

Information Literacy Instruction

This course combines theory and practice to give students the foundation they need to design, manage and teach information literacy programs that will give citizens lifelong learning skills to find, evaluate and use information effectively to solve problems and make decisions. The course emphasizes the practical aspects of creating instructional content (including web tutorials), designing active learning environments to include assistive technologies, providing in-person and online instruction to a multicultural audience, and managing an information instruction programs in various settings. Prerequisite: 553.

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 645(3) Course ID:001561

History of the Book

Historical overview of the impact of print in Europe and North America through studies of authorship, distribution, and use of manuscript, print, and electronic books. Addresses both physical aspects and social and cultural context of the production and circulation of books. May focus on a particular theme, geographic area, or time period.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Library and Info Science - Subject: Library & Information Science

LSC 646(3) Course ID:001568

Archives Management

Intensive introduction to the field of archives through a survey of principles, practices and current debates in the field of archives administration. The course comprises five to six core modules: records, recordkeeping and archives; archival appraisal and acquisition; archival processing (accessioning, arrangement and description); archival collection/information management systems; archival reference, access and protection; and archival programs, institutions and communities. The course highlights theoretical thinking as well as hands-on archival skills and is a foundation course for students who plan to work in archives or are interested to learn how archives function and interact with other cultural heritage organizations.

Components: Lecture

Enrollment Requirements: LSC 551 or CLSC 551 or LSC 557 or CLSC 557

LSC 647(3) Course ID:001565

Preservation

Introduction to the preservation of traditional (paper and parchment) collections and related media in library and archival collections including bound volumes, documents, scrapbooks, photographic prints and negatives, newspapers, maps, works on art on paper, and more modern moving images, audio recordings, and digital media. Defines preservation management and identifies the components of preservation programs. Explores the historical and contemporary contexts of preservation activities, including the impact of new technologies. Provides a basic overview of preservation management strategies, including methods of assessment for materials including inherent risk, treatment and environment, selection and collection, program planning, disaster preparedness, and preventive maintenance. Utilizes state-of-the-art information resources, readings, physical and virtual exercises, and site visits.

Components: Lecture

LSC 648(3) Course ID:014656

Digital Curation

This course provides an overview of digital curation as a lifecycle management strategy to manage, preserve and support the long-term use and re-use of digital assets. The course introduces digital curation and preservation models, infrastructures, standards, initiatives, and technical tools; and covers the concepts and skills involved in building and managing a digital cultural heritage repository as a trusted body of digital information for current and future use.

Components: Lecture

LSC 650(3) Course ID:009941

Information Architecture and Web Design

This course is designed for students interested in developing skills for web site and web page design. It will cover search engine architecture, evaluation of information resources and applications of information architecture to web site design. Through exercises, discussions, lectures, projects and presentations students will learn the principles of information architecture and user-centered web design. In addition, students will have hands-on practices with web site and web page design with HTML and CSS. Prerequisite: LSC 555

Components: Lecture

Course Equivalents: LSC 350

Enrollment Requirements: LSC 555 or CLSC 555

LSC 654(3) Course ID:001585

Database Management

Solid introduction to the terminology, concepts and practice of information storage and retrieval systems design. Special emphasis on user needs assessments, data integrity, data models and record structure, and data manipulation. Other topics include: current awareness of relational database model, query languages, data normalization techniques, client-server systems, database warehousing and data mining. Practice in developing a small database application.

Components: Lecture

Course Equivalents: LSC 354

Enrollment Requirements: LSC 551 (or CLSC 551) and LSC 555 (or CLSC 555)

LSC 672(3) Course ID:001562

Management

Introduction to the management process and functions as applied to all types of libraries, archives, media, and information centers. Emphasizes the development of competencies in utilizing human, financial, and other resources, and working with and through others to achieve effective and efficient organizational performance. Prerequisite: 557

Components: Lecture

Enrollment Requirements: LSC 557 or CLSC 557

The Catholic Univ of America
Course Catalog

Arts & Sciences - Library and Info Science - Subject: Library & Information Science

LSC 675(3) Course ID:001593

Research Methods in Library and Information Science

Covers the analysis and evaluation of research studies in library and information science and the application of analytical and evaluative techniques. Surveys research processes, including problem definition, design, sampling, measurement, data collection and analysis, and the applications of research findings to solving practical problems of libraries and information centers. Includes research design and proposal writing. No previous statistical or research background required. Prerequisites: 551

Components: Lecture

Enrollment Requirements: LSC 551 or CLSC 551

LSC 677(3) Course ID:014655

History and Theory of Cultural Heritage Institutions

This course provides the 21st-century LIS-CHIM student with an overview of the history and theory of institutions whose mission is to collect, preserve, organize, interpret, and disseminate information about the cultural heritage, tangible and intangible, and by direct or virtual means. Students will gain a grasp of the purpose and mission of these institutions, from the cabinet of curiosities to the virtual collections that cross boundaries among libraries, museums, and archives, as well as cultural organizations that protect and interpret buildings and sites of cultural and historical significance or are dedicated to grass-roots efforts to promote the protection of heritage. The course will cover ethics, collection and curatorial practices, and the visitor/user experience, as well as the meaning of cultural heritage in the global environment.

Components: Lecture

LSC 694A(3) Course ID:000034

Department Consent Required

Independent Study

Opportunity for concentrated study in a subject or problem to meet a student's special need or interest, under the direction of a member of the full-time faculty. Before registration, the topic for study must be approved by the instructor involved. One to three credit hours, commensurate with the scope of the study. Permission may be granted to take two independent study courses in one semester. A maximum of seven hours of independent study may be taken as part of the M.S.L.I.S. program. Prerequisite: 8 hours of credit in Library Science courses.

Components: Independent Study

Enrollment Requirements: 8 Credits in Library Science

LSC 694B(2) Course ID:001696

Practicum

Supervised professional training in a library, archive, or other library/information service agency approved by the faculty of the School of Library and Information Science. Minimum of 120 hours per semester. Written goals and evaluation of practicum experience required. Requests for practicum should be made toward the end of the preceding semester to allow sufficient time to make arrangements. Graded Pass/Fail. Prerequisites: 551, 553, 555 and permission of Practicum Coordinator.

Components: Practicum

Enrollment Requirements: LSC 551 (or CLSC 551), LSC 553 (or CLSC 553), and LSC 555 (or CLSC 555)

School Library Media Practicum

The school library media practicum provides a unique opportunity for students interested in a career in K-12 librarianship to gain professional experience in a school library. Students may earn three graduate credits by working 120 hours under the supervision of professional librarians. Placements for the practicum will be arranged after consultation with the student, professional librarians, and practicum coordinator. Students must complete 120 hours in at least two library settings. No less than 40 hours must be completed at each of the two levels, K-6 and 7-12. Students should consult county and state requirements in order to ensure that the correct number of hours are obtained for their individual certification needs. The practicum is graded Pass/Fail. Prerequisites include LSC872: Administration of School Library Media Programs and permission of Practicum Coordinator.

Components: Practicum

Enrollment Requirements: LSC 835 or CLSC 835

LSC 698A(0) Course ID:015218 Department Consent Required

Master's Comprehensive Examination (w/Classes)

A candidate for the M.S.L.I.S. degree must pass a comprehensive examination that tests a common knowledge base in the field of Library and Information Science. The purpose of the examination is to verify that the candidate is able to perform at a professional level at the time of his/her first appointment.

Students are expected to demonstrate knowledge of the philosophy, history, current issues, social roles, and major problems of the profession in general, including such areas as applications of technology, organization of resources, provision of service, and management of libraries and other information agencies. They will be asked to demonstrate knowledge of the theories and principles on which current practices in the information professions are based. In addition, they will be expected to demonstrate their awareness of the research literature in library and information science and related fields. They are expected to demonstrate their

Description and Access for Non-Print and Digital Resources

This course prepares students to organize digital resources and manage information systems to maximize information access. Students learn to follow Resource Description and Access (RDA) to catalog monographs, video recordings, sound recordings, serials and online serials, Web resources, and electronic resources. The course also provides in-depth coverage of subject cataloging tools (such as Library of Congress Subject Headings and Library of Congress Classification Scheme) and best practices. The class explores next generation OPACs and analyze metadata and linked data implementations to consider how cataloging will be performed in the new environment to turn library data into linked data.

Components: Lecture

Enrollment Requirements: LSC 606 or CLSC 606

LSC 731(3) Course ID:001598

Media Integration in the Curriculum

Exploration on non-print and electronic media in school library media centers. Selection, acquisition, use, and assessment of library resources and equipment to meet PK-12 curriculum standards and instructional needs. Emphasis on building capabilities to develop technology plans; to design and implement lesson plans with technology and media services integrated; to support instructional strategies; to support collaborative efforts; and to address instructional differentiation, cultural, and learning diversity.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Library and Info Science - Subject: Library & Information Science

LSC 747(3) Course ID:001661

Special Collections

Introduction to the key issues in managing library-based special collections of various subjects, formats, and media, including: traditional book and paper formats, rare books, manuscripts, still and moving images, audio recordings, ephemeral materials, and new media. Explores a variety of curatorial techniques and approaches to identify, acquire, preserve, describe, make accessible, manage and administer these materials. Examines the unique characteristics as well as the commonalities across varieties of special collections. Discusses curatorial challenges due to new technologies and popular misperceptions about the role and value of collections, and the evolving nature of special collections' curatorship.

Components: Lecture

LSC 752(3) Course ID:001616

Design and Production of Multimedia

This course focuses on the practical application and instructional integration of digital tools, including audio/video software and Web 2.0, to produce multimedia projects. Course projects will be designed to teach information literacy and media literacy skills to library, and to provide professional development to information professionals. Each project will align with national and state technology standards. Multimedia-specific copyright laws will be discussed.

Components: Lecture

LSC 753(3) Course ID:009942

Programming for Web Applications

This course introduces the concepts and techniques for developing Web-based applications. Emphasis is placed on programming techniques and the basics of database technology required for designing Web-based application interface and managing data on the Web. Students will learn the basics of a computer programming language through hands-on exercises and projects that can be applied in digital libraries, metadata management, web technologies, data processing, and data science. Prerequisite: LSC555

Components: Lecture

Course Equivalents: LSC 453

Enrollment Requirements: LSC 555 or CLSC 555

LSC 756(3) Course ID:001587

Systems Analysis and Evaluation

This course prepares students to participate in the analysis, design, acquisition, use and evaluation of information systems within libraries and other information centers. It also provides students with strategies, resources, and methodologies for evaluating, selecting, developing, and implementing information technologies and applications. It is designed for students who work or plan to work as systems analysts, systems librarians, and related professional roles; for managers who want to better apply information systems in their organizations; and for others who use information systems in their organizations and wish to understand them better. The course is organized around a Systems Development Life Cycle (SDLC) model. Students will gain practical experience applying the SDLC model and related techniques by undertaking a team project based on a real organizational need. Prerequisite: 555

Components: Lecture

Course Equivalents: LSC 456

Enrollment Requirements: LSC 555 or CLSC 555

LSC 830(3) Course ID:001643

Legal Research

Introduction to major print and online sources of legal information, the bibliographic organization of legal materials, and techniques of legal research; use of primary and secondary sources and finding tools. Emphasis on integrating the use of print and digital resources for basic legal research.

Components: Lecture

LSC 832(3) Course ID:001659

Rare Books

Practical introduction to all facets of the physical book as it is encountered in rare book collections, with an emphasis on the hand-press period; to the scholarly and trade literature surrounding it; and to the terminology historically and currently employed by rare book professionals. A materials-centered course, combining dimensions of art history and industrial archaeology. Explores issues related to collection, conservation, preservation, and cataloging of rare books. Examines the subtle features of rare books and their manufacture, history, condition, and institutional collection management and administration. Includes an introduction to basic reference works and the major authors in the rare books field.

Components: Lecture

Enrollment Requirements: LSC 551 or CLSC 551

The Catholic Univ of America
Course Catalog

Arts & Sciences - Library and Info Science - Subject: Library & Information Science

LSC 833(3) Course ID:001654

Music Librarianship

Survey of management, organization, and services in music libraries, including those in public, academic, conservatory, and research settings. Includes acquisitions, cataloging, indexing, processing, and preservation of music materials, with special attention to the handling of music scores and sound recordings; also fiscal management, collection appraisal, and the evaluation of services.

Components: Lecture

LSC 834(3) Course ID:001662

Art and Museum Librarianship

During a week of field visits and classroom sessions, supplemented by individual research and writing projects, students will gain an overview of the rich variety of library collections that support, and operate in tandem with, cultural institutions in the Washington, D.C. metropolitan area. Students will learn about the programs and mission of large, nationally-known museums as well as small, community-based historical organizations. Students will be encouraged to consider changes in technology and informatics during the first decade of the 21st century, and the impact of those changes on art and museum library and archival services, collections, space allocations, staffing, and equipment

Components: Lecture

LSC 839(3) Course ID:001652

Advanced Legal Research

In-depth analysis of legal research techniques, tools, sources, and technology. Particular emphasis on the relationship between traditional legal research sources and tools and modern online research platforms. Surveys and explores the entire process of legal research initiating with primary sources and developing through secondary materials and the editorial and technological enhancements applied to each. Prerequisite: LSC 830 or LSC 553 and permission.

Components: Lecture

Enrollment Requirements: LSC 830 or CLSC 830 or LSC 826 or CLSC 826

LSC 843(3) Course ID:001691

Public Programs, Outreach and Digital Exhibits in Libraries, Archives, and Museums

While archivists, librarians, and museum staff are well aware of the treasures held within their institutions, key user groups who would benefit from knowledge and use of such materials, both virtual and physical, are often not. Additionally, existing patrons of such institutions may not be aware of new acquisitions and novel applications and contextualization of existing materials. Educating constituencies on collections special interest to them benefits both the institution in question and a potentially broadening range of patrons. This course focuses on three aspects of making archival, library, and museum resources known to various user groups: public programs, outreach, and exhibitions. Public programs entail the presentation of one's materials to a variety of publics. Outreach focuses on the identification of services to constituencies with needs relevant to the institution's mission, with special attention to underserved groups, and tailoring services to meet those needs. The exhibit, an organized display of materials centered

Components: Lecture

LSC 844(3) Course ID:001653

Music Bibliography

Introduction to the bibliographical and discographical information resources of music and dance. Comprehensive survey of the literature of Western music. Also treats ethnic and popular music, as well as the literature of classical, popular, and folk dance. Covers the use and evaluation of sources for reference and bibliographic control, including on-line databases, unpublished indexes and catalogs, and commercial catalogs. Prerequisite: LSC 553 or 9 credits in the performing arts.

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 845(3) Course ID:001695

Religious Archives Institute

Designed for keepers of religious records who must manage information and handle materials covering a wide time span and several languages in a nonprofit institution, and understand the complexities of modern communication and computer systems. Geared to neophyte archivists as well as seasoned practitioners and records administrators.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Library and Info Science - Subject: Library & Information Science

LSC 848(3) Course ID:001664

Media for Children

Evaluation, selection, and use of multimedia materials for children in terms of needs, interests, and abilities. Attention to matching students' needs, interests, and stages of cognitive development. Discussion of characteristics and representative titles of various genres of children's literature.

Components: Lecture

LSC 849(3) Course ID:001665

Media for Young Adults

Evaluation and selection of materials and techniques for providing reading guidance to young adults in school library media centers and public libraries. Emphasis on contemporary literature suited to the personal and recreational needs and interests of young people. Print and digital tools examined and utilized throughout the survey and evaluation of representational titles.

Components: Lecture

LSC 850(3) Course ID:016563

Digital Humanities

Digital Humanities is the practice of using information technology, digital and computational methods to answer humanities research questions. Digital Humanities combines the methodologies from the traditional humanities disciplines such as religion, philosophy, art, architecture, literature, linguistics, film and theater, music, history, and archaeology with tools from computer science such as data visualization, data mining, textual analysis, information retrieval, and digital publishing. Librarians are playing collaborative roles in such areas as data curation and preservation, digitization of critical editions, data analysis, project design, and project management. Topics include the evolution of humanities to digital humanities; the tools and techniques used by digital humanists; the scholarly communication issues impacted by the digital humanities; and the issues pertaining to funding, managing, and evaluating digital humanities projects.

Components: Lecture

LSC 870(3) Course ID:001667

Health Sciences Information

Survey of information resources and services in the health sciences. Includes information needs and communication patterns in the biomedical community. Emphasis on indexes and abstracts, important journals, and major dictionaries, encyclopedias, handbooks, directories, and textbooks. Includes on-line searching of MEDLINE and other biomedical databases. Prerequisite: 553.

Components: Lecture

Enrollment Requirements: LSC 553 or CLSC 553

LSC 871(3) Course ID:001668

Health Informatics

Management of library resources and services in the health sciences. Introduction to problems in the management of medical and hospital libraries, administrative goals and standards, materials selection, audiovisual materials, cataloging and classification procedures, types of reader services, user education, and opportunities for library cooperation within regional medical library programs.

Components: Lecture

LSC 872(3) Course ID:001631

Administration of School Library Media Programs

Formerly LSC/CLSC 835. Philosophy, objectives, staff, organization and management, collection, facilities, budgets, and services of school library media centers. Emphasis on the role of the media specialist and the function of school library media centers within the total school program. Provides a foundation for practicum experiences in school library media centers.

Visions of Italy: Culture in Twenty-First Century Rome and Florence

This course is an introduction to the management and operations of religious and other cultural archives, records, manuscripts, objects and collections. Serving as the political center of western civilization for centuries, Rome is home to a plethora of structures, artifacts, texts, and documents illuminative of the rich history of the city as well as the Italian peninsula from classical times to the present. Further north, Florence is home to materials reflective of the city's cultural centrality during the Renaissance. Through readings, site visits, and meetings with professionals, students will gain a basic knowledge of how Italian cultural professionals make museum, archival, and library resources known to various user groups. We will explore religious and other types of public programs, outreach strategies, and digital and physical exhibits, study the principles and practical elements involved in creating each, with site visits and instruction designed to reveal the ways the application of such principles occur in existing institutions and apply

Components: Lecture

Topics: Italy

Room Requirements: NO CLASSROOM NEEDED(1)

LSC 881(3) Course ID:001625

The College and University Library

The role and management of libraries in colleges and universities, including history, mission and objectives, standards, trends, organizational patterns, personnel, collections, services, facilities, and finances.

Components: Lecture

LSC 884(3) Course ID:012362

Copyright & Licensing Institute

This five-day intensive Institute surveys various U.S., and some global, copyright law and licensing issues in libraries. The emphasis will be on understanding copyright, licensing and electronic rights (e-rights) in modern culture and technology, and applying this understanding to the use of copyright and licensed content in a variety of library settings. Topics for this course include: 1) the basics of copyright, 2) digital copyright issues, 3) library copyright issues, 4) permissions and licensing, and, 5) managing copyright and licensing in libraries. This course will be taught on the CUA campus, the Library of Congress, and online through Blackboard. Guest speakers will address the class, where appropriate. Participants will have an opportunity to explore relevant and evolving copyright issues, gain confidence in their knowledge in this confusing area, and apply their knowledge through practical exercises and assignments.

Components: Lecture

LSC 886(3) Course ID:001642

Law Librarianship

Introduction to the various kinds of law libraries, their organizational structures, collections, and services.

Components: Lecture

LSC 887(3) Course ID:001694

Institute on Federal Library Resources

Examines the complex of federal library programs and operations in detail through lectures, panel discussions, and information clinics, featuring library leaders, information scientists, government officials, and others prominent in federal library activities. Field trips to major federal libraries, information centers, and data banks, where participants may use resources and see technology in operation.

Components: Lecture

LSC 888(3) Course ID:001636

The Special Library/Information Center

Survey of management, organization, and services within special libraries and information centers. Emphasizes ongoing changes within the profession and the organizational environment. Includes a customer service focus, knowledge management, and the move to virtual libraries/information centers.

Components: Lecture

LSC 889(3) Course ID:001628

The Public Library

Explores aspects of the public library within the context of demographic and technological changes and shifting economic and political forces. Emphasis on the interrelationship of the public library with these forces.

Components: Lecture

Arts & Sciences - Mathematics - Subject: Math

MATH 11(0) Course ID:017056

Precalculus Review for Math 111 (select section link below for enrollment instructions)

Online self-paced precalculus review to prepare for Math 111. Summer term only. Zero credits. Topics include: real numbers, linear and quadratic functions, exponential and logarithmic functions, linear systems and linear programming. Grading scale: Pass or No Grade. A Pass grade is sufficient to enroll in Math 111. A course fee is charged for enrollment.

Components: Online(Online)

Room Requirements: ONLINE(1)

MATH 21(0) Course ID:017057

Precalculus Review for Math 121 (select section link below for enrollment instructions)

Online self-paced precalculus review to prepare for Math 121. Summer term only. Zero credits. Topics include: real numbers, linear and quadratic functions, exponential and logarithmic functions, trigonometric functions. Grading scale: Pass or No Grade. A Pass grade is sufficient to enroll in Math 121. A course fee is charged for enrollment.

Components: Online(Online)

Room Requirements: ONLINE(1)

MATH 108(3) Course ID:000055

Elementary Functions

Real numbers, inequalities, functions; polynomial, exponential, logarithmic, trigonometric functions and their inverses; systems of equations; sequences. Prerequisite: Placement. Note that this course cannot be used to fulfill the Math/Natural sciences requirement in the School of Arts and Sciences.

Components: Lecture

Enrollment Requirements: Open to students with Math placement level 3; Not open to students who have earned credit for MATH 111, MATH 112, MATH 121, MATH 122, MATH 221, or MATH 222

MATH 110(3) Course ID:001994

Applied Mathematics for Business

This course introduces students to mathematics used in business and economics. The main topic areas are: (1) Functions, particularly linear and quadratic functions and models. (2) Linear systems and Gauss-Jordan elimination; graphical and simplex methods of linear programming. (3) Exponential and logarithmic functions; fundamentals of financial mathematics including compound interest, annuities, and amortization.

Components: Lecture

Enrollment Requirements: Open to majors in Business and ASU Economics only who have placed into Math level three. Not open to students who have taken MATH 111.

MATH 111(3) Course ID:000159

Calculus for Social-Life Sciences I

Functions and their graphs; linear functions; functional models; derivative, rate of change and marginal analysis; approximation by differentials; chain rule, implicit differentiation and higher-order derivatives; curve sketching; relative extrema, concavity; absolute extrema; exponential functions and natural logarithms and their derivatives; compound interest. Not open to students who have had 121. Prerequisite:

School of Business and Economics: Placement score of 1 or 2, or, Grade of P in Online Review Math 11, or, Grade of C- in Math 110

All others: Placement score of 1 or 2, or, Grade of P in Online Review Math 21, or, Grade of C- in Math 108

Components: Lecture

Enrollment Requirements: Not open to students who have taken MATH 121.

Bus & Econ students: Math placement score of 1 or 2 OR Grade of P in MATH 11 OR Grade of C- in MATH 110

All others: Math placement score of 1 or 2 OR Grade of P in MATH 21 OR Grade of C- in MATH 108

MATH 112(3) Course ID:001999

Calculus for Social-Life Sciences II

The concept of antiderivative; integration by substitution, by parts, and by use of tables; definite integral; area under a curve; applications to business and economics; definite integral as the limit of a sum; improper integrals; probability density; numerical integration; linear and separable differential equations; functions of several variables, partial derivatives, chain rule and total differential; relative extrema; Lagrange multiplier methods; the least square approximation. Not open to students who have had 122.

Prerequisite: a grade of C- or better in 111.

Components: Lecture

Enrollment Requirements: Open to students who've earned a C- or better in MATH 111 and who have not earned credit for MATH 121, MATH 122, MATH 221, or MATH 222

MATH 114(3) Course ID:000195

Probability and Statistics

Designed for students in the social sciences, to acquaint them with the techniques of elementary statistics. Emphasizes computation and interpretation of data. Topics include calculation and graphing methods, measures of central tendency, measures of variation, measures of association and correlation; sampling and hypothesis testing.

Components: Lecture

MATH 121(4) Course ID:000196

Analytic Geometry and Calculus I

Coordinate systems, functions, graphs, one-to-one and inverse functions; composition of functions; lines and slopes; limits, continuity, maximum and minimum, derivative of a function of one variable; differentiation of polynomials, chain rule; derivatives of trigonometric functions and their inverses; implicit differentiation; antiderivative and definite integral; fundamental theorem of calculus. Not open to students who have had 111.

Prerequisite: Placement score of 1 or 2, or, Grade of P in Online Review Math 21, or, Grade of C- in Math 108.

Components: Lecture

Enrollment Requirements: Open to students with Math placement level 1 or 2 or those who've earned a C- or better in MATH 108; Not open to students who have earned credit for MATH 111, MATH 112, MATH 122, MATH 221, or MATH 222

MATH 122(4) Course ID:000197

Analytic Geometry & Calculus II

Antiderivative and definite integral; integration by parts and by substitution; integration of rational functions, powers of trigonometric functions, and rational functions of sin and cos; logarithms and exponential functions and their derivatives; application to computing area, volume; center of gravity and work; polar coordinates, parametric equations; arc length and speed on a curve; area of a surface; curvature; sequences and series; convergence tests; Taylor's formula. Not open to students who have had 112.

Prerequisite: a grade of C- or better in 121.

Components: Lecture

Enrollment Requirements: Open to students who've earned a C- or better in MATH 121 and who have not earned credit for MATH 221 or MATH 222; Also open to students with advanced placement by permission

MATH 168(3) Course ID:000112

Mathematics in the Modern World

Intended for liberal arts students. Explores mathematical ideas and current applications of these ideas. Topics include mathematical applications in the management sciences and social sciences and applications of geometry to physics, astronomy, chemistry, and biology.

Components: Lecture

MATH 175(3) Course ID:014802

Mathematics in Politics

This course, intended for liberal arts students, explores the mathematics involved in political concepts and applications. Topics include social choice, voting procedures and their inherent paradoxes, contributions of Arrow and Codorcet; yes/no voting and the Banzhaf and Shapley-Shubik power indices; apportionment of the House of Representatives relating the procedures of Hamilton, Jefferson, Adams, Webster and Hill-Huntington and their inherent paradoxes; fair division, including cake-cutting and inheritance division procedures.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 187(3) Course ID:000114

Introduction to Mathematical Thought

Intended for liberal arts students. Topics chosen from among: basic logic, number theory, infinite sets and cardinal numbers, symmetry and finite groups, graph theory and polyhedra, Euclidean and non-Euclidean geometry, and others.

Components: Lecture

MATH 221(4) Course ID:002003

Analytic Geometry & Calculus III

Partial derivatives and differential; the chain rule; gradient and directional derivative; derivative of a vector function; tangent planes; critical points and local extrema; Lagrange multipliers; integration over regions in R^2 ; use of polar coordinates; integration over regions in R^3 ; use of cylindrical and spherical coordinates; line integrals; conservative vector fields; Green's theorem; surface integrals and divergence theorem; Stokes' theorem. Prerequisite: 122.

Components: Lecture

Enrollment Requirements: MATH 122 (C- or better) or department permission; Not open to students who've earned credit for MATH 321 or higher

MATH 222(4) Course ID:000059

Calculus IV Differential Eqns

Separable and linear differential equations with one unknown function, method of integrating factors; second order linear differential equations with variable coefficients; Wronski and Cauchy methods; systems of linear differential equations with variable and constant coefficients; Euler and Runge-Kutta methods; Laplace transform methods; series solutions of differential equations and special functions. Prerequisite: 221 or permission of instructor.

Components: Lecture

Enrollment Requirements: MATH 221 (C- or better)

MATH 248(3) Course ID:002356

Fundamentals of Advanced Mathematics

Prepares sophomore-level mathematics majors and minors for upper-level mathematics. Emphasis on problem-solving techniques and practice, covering topics and concepts common to all upper-level courses, including: sets, functions, relations, cardinality, first-order logic and proof-techniques, core material in elementary number theory, combinatorics, rational and irrational numbers, and the real number field. Additional topics selected by instructor, as time permits. Prerequisite: 122.

Components: Lecture

Enrollment Requirements: MATH 122 (C- or better) or department permission; Not open to students who've earned credit for MATH 321 or higher

MATH 301(3) Course ID:002360

Linear Algebra

Matrices and systems of equations; Gaussian elimination, matrix algebra; determinants; vector spaces; linear transformations; orthogonality, inner product spaces, normed spaces, least square technique; Gram-Schmidt orthogonalization; eigenvalues and eigenvectors, systems of linear differential equations, diagonalization method; numerical techniques. Prerequisite: 221 or 248.

Components: Lecture

Same As Offering: MATH 501

Enrollment Requirements: MATH 221 or MATH 248 (formerly MATH 305) or CSC 210

MATH 302(3) Course ID:019400

Matrix Methods in Data Analysis and Machine Learning

This course is designed to provide topics in linear algebra and related mathematics for students to gain a firm understanding of data science and machine learning through lecture, discussion, problem-solving and projects. Topics include matrix algebra concepts such as positive definite matrices, singular values and singular vectors in the singular value decomposition, and principal components; computation with large matrices with a focus on matrix factorization, iterative methods, low-rank and sparse approximation techniques; special matrices; optimization techniques; neural nets; and the learning function.

Components: Lecture(In Person)

Course Equivalents: MATH 502

Enrollment Requirements: MATH 301 or MATH 501 or department consent

MATH 309(3) Course ID:010730

Probability and Statistics for Engineers

Course intended for engineering students and students working towards obtaining a minor in mathematics. Introduction to probability, random variables and probability distributions, mathematical expectations, discrete and continuous probability distributions, sampling distributions, point and interval estimation, hypothesis testing. Time permitting - simple linear regression and correlation will also be covered.

Prerequisite: MATH 122 or Departmental Permission

Components: Lecture

Same As Offering: MATH 309

Enrollment Requirements: MATH 122 (C- or better)

MATH 309(3) Course ID:010730

Probability and Statistics for Engineers

Course intended for engineering students and students working towards obtaining a minor in mathematics. Introduction to probability, random variables and probability distributions, mathematical expectations, discrete and continuous probability distributions, sampling distributions, point and interval estimation, hypothesis testing. Time permitting - simple linear regression and correlation will also be covered.

Prerequisite: MATH 122 or Departmental Permission

Components: Lecture

Same As Offering: MATH 309

Enrollment Requirements: MATH 122 (C- or better)

MATH 314(3) Course ID:017529

Statistics II

This is a second course in statistics. The course will focus on Design of experiments and Analysis of Variance, Categorical data analysis, Regression analysis, Time series/forecasting, and Data visualization.

Components: Lecture

Course Equivalents: MATH 514, DA 314, DA 514

Enrollment Requirements: MATH 114 or MATH 309 or equivalent course with department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MATH 321(4) Course ID:002366

Abstract Algebra I

Groups, group homomorphisms and isomorphisms, isomorphism theorems, permutation groups, cosets and Lagrange's Theorem, normal subgroups and factor groups, Fundamental Theorem of finite Abelian groups. Introduction to rings, ideals, ring homomorphisms, and polynomial rings. Introduction to fields and field extensions.

Prerequisite: Math 248 or permission of department.

Components: Lecture

Same As Offering: MATH 505

Enrollment Requirements: MATH 248 (formerly MATH 305) or CSC 210

MATH 322(3) Course ID:002369

Abstract Algebra II

Continued study of rings, integral domains, and fields. Division and factorization in polynomial rings and Euclidean domains. Fields, field extensions, and finite fields. Introduction to Galois Theory. Additional topics may include: geometric constructions, Sylow theorems, finite simple groups, symmetry groups, or other special topics at the discretion of the instructor. Prerequisite: Math 321 or permission of department.

Components: Lecture

Same As Offering: MATH 506

Enrollment Requirements: MATH 321 or MATH 505

MATH 402(3) Course ID:018542

Mathematical Modeling in Business, Industry, and Government

The PIC Math course will prepare students for industrial careers by engaging them in student group research problems that come directly from industry. The centerpiece of this course is a semester-long data analysis project, where students in small teams (3-5) will work on a real data-driven problem from Business, Industry, or Government (BIG). Industry data and an industry-relevant problem will be provided to the students by a liaison from BIG. Students will use in-class meeting times to discuss the definition and parameters of the problem, strategy, mathematical techniques, and ideas for solutions. Some classroom time will be spent introducing and learning document preparation software (e.g., LaTeX), basic commands and statistical operations in programming languages such as R and Python, and practice in presentation skills. Groups will work together in and outside of class towards a data-analysis oriented solution of the problem, and will provide an end-of-semester 8-10 page written report and poster on the problem, techniques, methods, and

Components: Directed Study/Research(In Person)

Enrollment Requirements: MATH 114 or MATH 121

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 403(3) Course ID:002361
Euclidean & Noneuclidean Geometry
Study of various geometries from a modern viewpoint in which Euclidean and non-Euclidean geometries are treated synthetically and analytically. Prerequisite: 248.
Components: Lecture
Same As Offering: MATH 503
Enrollment Requirements: MATH 248 (formerly MATH 305) or CSC 210

MATH 407(3) Course ID:002371
Graph Theory
Directed and undirected graphs, trees, connectivity; cut edges, cut vertices, and blocks; Eulerian and Hamiltonian graphs; planarity coloring problems; graph-theoretic algorithms and applications. Prerequisite: Math 248 or CSC210.
Components: Lecture
Same As Offering: MATH 507
Enrollment Requirements: MATH 248 (formerly MATH 305) or CSC 210
Room Requirements: DIGITAL PRESENTATION ROOM(1)

MATH 408(3) Course ID:002373
Elementary Number Theory
Number theory plays a role in many areas of mathematics, and is essential to the understanding of cryptography, cryptocurrency, and cyber security. Some of the topics covered include properties of prime numbers, the Fundamental Theorem of Arithmetic, congruences, Fermat's and Euler's theorem, Diophantine equations, primitive roots, and quadratic reciprocity. The basics of public key cryptography, which forms much of the backbone of internet security systems, will also be covered. Such topics include the discrete logarithm problem, Diffie-Hellman key exchange, and RSA public key cryptosystem. Prerequisite: CSC 210 or Math 248.
Components: Lecture
Same As Offering: MATH 508
Enrollment Requirements: MATH 248 (formerly MATH 305) or CSC 210

MATH 409(3) Course ID:005712
Algebraic Number Theory
The study of number theory using algebraic techniques. Topics include extension fields of rational numbers, algebraic integers, non-uniqueness of factorization of algebraic integers, quadratic and cyclotomic number fields, primes and units in algebraic number fields, integral bases, uniqueness of factorization into prime ideals, class numbers and their relationship to Fermat's last theorem. Prerequisite: 508.
Components: Lecture
Same As Offering: MATH 509
Enrollment Requirements: MATH 408 or MATH 508

MATH 410(3) Course ID:016246
Introduction to Lie groups and Lie algebras
An introduction to the theory of Lie groups and Lie Algebras via matrix groups. We construct the prominent classical families of Lie groups by working with matrix algebras over the real numbers, complex numbers, and quaternions. We then define the Lie algebras as tangent spaces of these groups.
Prerequisites: Math 221, Math 248, Math 301
Components: Lecture

MATH 415(3) Course ID:002388
Combinatorics
Basic counting rules. Principle of inclusion and exclusion. Polya Enumeration Theorem. The Pigeonhole Principle and its generalizations. Generating functions; recurrence relations; elements of graph theory. Optimization for graphs and networks. Experimental design. Several applications given. Prerequisite: 248.
Components: Lecture
Same As Offering: MATH 515
Enrollment Requirements: MATH 248 (formerly MATH 305) or CSC 210

MATH 417(3) Course ID:019130
Advanced Graph Theory
This course will include advanced topics in graph theory including Domination in graphs, graph labeling, random networks and distance measures in graphs. Discussion of research papers in these areas will be part of the course.
Prerequisites: Math 248 or CSC 210, and Math 407.
Components: Lecture(In Person)
Course Equivalents: MATH 517
Room Requirements: DIGITAL PRESENTATION ROOM(1)

Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 420(3) Course ID:005715

Topology

Set theoretic background, in particular different forms of Axiom of Choice, basic concepts of point set topology, separation axioms, compact and locally compact spaces, compactifications, product spaces, Tychonoff theorem, metric and metrizable spaces. Baire category theorem. Prerequisites: 221 and either 321 or 421.

Components: Lecture

Same As Offering: MATH 520

Enrollment Requirements: MATH 221 and one of MATH 321, MATH 421, MATH 505 or MATH 521

MATH 421(4) Course ID:002389

Introductory Analysis I

Infinite sets and cardinality; the real number system; introduction to metric space topology including convergence of sequences, compactness, continuity and uniform continuity of functions on metric spaces; Bolzano-Weierstrass theorem; Heine-Borel theorem; differentiation and Taylor's theorem for a function of one real variable; Riemann integral of a function of one real variable; sequences and series of real numbers and functions; interchange of limit operations. Prerequisites: 221 and 248.

Components: Lecture

Same As Offering: MATH 521

Enrollment Requirements: MATH 221 & MATH 248 (formerly MATH 305)

MATH 422(3) Course ID:002392

Introductory Analysis II

Riemann-Stieltjes integral; equicontinuous families of functions and Arzela-Ascoli theorem; Tietze's extension theorem; Baire category theorem; differentiation and integration of a function of several variables; fixed point theorem; implicit function theorem; inverse function theorem; existence and uniqueness theorems for ordinary differential equations. Prerequisite: 421.

Components: Lecture

Same As Offering: MATH 522

Enrollment Requirements: MATH 421 or MATH 521

MATH 424(3) Course ID:002395

Complex Variables

Field of complex numbers. Elementary functions in complex variables: polynomials, rational, trigonometric and exponential functions. Limits and continuity. The complex derivative, Cauchy-Riemann equations. Analytic and harmonic functions. Complex integration, Cauchy's integral formula. Taylor and Laurent series. Residue theory. Uniform convergence. Analytic continuation. Conformal mapping. Prerequisite: 221.

Components: Lecture

Same As Offering: MATH 524

Enrollment Requirements: MATH 221

MATH 427(3) Course ID:002397

Chaotic Dynamics

Periodic points, fixed points, bifurcation, 1-dimensional chaos, Cantor sets, 2-dimensional chaos, dynamics of linear functions, nonlinear maps, fractals, capacity dimension, Lyapunov dimension, Julia sets and the Mandelbrot set, iterated function systems, systems of differential equations, the Lorenz system. Prerequisite: 222.

Components: Lecture

Same As Offering: MATH 527

Enrollment Requirements: MATH 222

MATH 431(3) Course ID:002402

Probability and Statistics with Applications I

An introduction to probability and statistics, with applications in the natural and social sciences. Axiomatic probability, independence and conditional probability. Random variables, their distributions, expectation, variance and moment-generating functions. Probability models and estimation of parameters. Prerequisite: 221.

Components: Lecture

Same As Offering: MATH 531

Enrollment Requirements: MATH 221

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 432(3) Course ID:002405

Probability and Statistics with Applications II

Methods of statistical inference. Hypothesis testing: one and two sample problems, goodness-of-fit tests. Confidence intervals, regression and correlation, and special topics which may include but not limited to Bayesian methods, Nonparametric statistics. Prerequisite: MATH 431

Components: Lecture

Same As Offering: MATH 532

Enrollment Requirements: MATH 431 or MATH 531

MATH 434(3) Course ID:016949

Introduction to Mathematical Finance

An introduction to elementary probability and finance, geometric Brownian motion, and martingales. Interest rate models, Modern portfolio theory, and Option pricing theory.

Components: Lecture

Topics: An introduction to elementary probability and fina

Course Equivalents: MATH 534

Enrollment Requirements: (MATH 112 or MATH 122) and (MATH 309 or MATH 431)

MATH 435(3) Course ID:018712

Computational Methods in Mathematics and Statistics

Computational, numerical, and visualization methods in Mathematics and Statistics will be the major theme of this course with emphasis on the usage of a programming language. Relevant topics may include: Fourier Transforms and Fast Fourier Transforms, Euler's Method and Method of Frobenius for ODEs, Finite Element Method and Spectral Method for PDEs; Exploratory data analysis, Simulation of random variables and Monte Carlo methods, Estimation, Bootstrap, and Bayesian methods.

Components: Lecture (In Person)

Course Equivalents: MATH 535

Enrollment Requirements: MATH 431 or MATH 531

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MATH 436(3) Course ID:012828

Introduction to Game Theory

Strategic games, Nash equilibrium, two-person zero-sum games, two-person general-sum games, extensive games with perfect information, cooperative games, non-cooperative games, coalitional games and applications.

Prerequisites: Math 301 and Math 431 or permission of the instructor

Components: Lecture

Same As Offering: MATH 536

Enrollment Requirements: MATH 301 or MATH 501 and MATH 431 or MATH 531

MATH 441(3) Course ID:009588

Introduction to Partial Differential Equations

Survey of linear equation types: dispersion, diffusion, wave, transport. Exposition of techniques to find solutions for initial value problems, including separation of variables, characteristics and transform method. Introduction to boundary value problems and the modern unified transform method. Prerequisites: MATH 221, 222 or permission of the instructor.

Components: Lecture

Same As Offering: MATH 541

MATH 442(3) Course ID:009589

Introduction to Difference Equations

First order difference equations, higher order difference equations, stability analysis, z-transforms and applications.

Prerequisites: Math 222, 301 or permission of the instructor.

Components: Lecture

Same As Offering: MATH 542

Enrollment Requirements: MATH 222 and either MATH 301 or MATH 501

MATH 450(3) Course ID:005718

Foundations of Mathematics

Sets, logic, and axiomatic and constructive treatment of real numbers. Prerequisite: 248.

Components: Lecture

Same As Offering: MATH 550

Enrollment Requirements: MATH 248 (formerly MATH 305)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 451(3) Course ID:005719

Introduction to Mathematical Logic

Classical propositional and first-order predicate logic; syntax, semantics, basic metamathematical theorems including the Goedel-Henkin completeness theorem and the Skolem-Lowenheim theorem. Other possible topics: first-order recursive arithmetic, Goedel's incompleteness theorems, intuitionistic systems, Church's theorem, Tarski's theorem. Prerequisites: 248 and 321.

Components: Lecture

Same As Offering: MATH 551

Enrollment Requirements: MATH 248 (formerly MATH 305) and either MATH 321 or MATH 505

MATH 461(3) Course ID:002417

Numerical Analysis I

Numerical integration: the rectangle, trapezoid, and spline quadrature. Linear systems of equations; matrix notation, properties of matrices, iterative determination of eigenvalues and eigenvectors, elimination methods. Solution of nonlinear equations; real and complex roots, zeroes of polynomials. Interpolation: polynomial, Hermite, and spline interpolations. Prerequisites: 222 and 301.

Components: Lecture

Same As Offering: MATH 561

Enrollment Requirements: MATH 222 and either MATH 332 or MATH 506

MATH 462(3) Course ID:005722

Numerical Analysis II

Approximation theory: introduction to approximation, orthogonal polynomials and least square approximation methods, numerical quadrature. Solution of ordinary differential equations: initial-value problems for ordinary differential equations, error propagation; higher-order Taylor, Runge-Kutta, multistep and extrapolation methods; control of stepsize; stiff equations; stability. Boundary-value problems for ordinary differential equations; shooting method for linear and nonlinear problems. Prerequisite: 461.

Components: Lecture

Same As Offering: MATH 562

Enrollment Requirements: MATH 461 or MATH 561

MATH 492(3) Course ID:002422

Directed Reading

Prerequisite: Permission of Undergraduate Committee.

Components: Directed Reading

Topics: Number Theory

MATH 494(3) Course ID:002518

Independent Study

Prerequisite: Permission of Undergraduate Committee.

Components: Independent Study

MATH 498(0) Course ID:015190

Undergraduate Comprehensive Examination

The Comprehensive Exam is taken in the fall semester of the student's senior year. It consists of a sequence of four take-home exams scheduled in September and October; a student has 10 -12 days for solving problems of each of the exams. The take-home exams reflect the material of the following courses: MATH 121 (Analytic Geometry and Calculus I), MATH 122 (Analytic Geometry and Calculus II), MATH 221 (Analytic Geometry and Calculus III), MATH 301 (Linear Algebra), MATH 321 (Abstract Algebra I), and a course of the student's choice (the fourth take home exam contains two problems from a course of the student's choice).

Each of the four take-home exams is scored on a scale of 0 - 10 points. The passing score is 21 points or higher. To be considered for possible honors, the student must get at least 31 points.

Components: Comprehensive Exam

MATH 501(3) Course ID:002360

Linear Algebra

Matrices and systems of equations; Gaussian elimination, matrix algebra; determinants; vector spaces; linear transformations; orthogonality, inner product spaces, normed spaces, least square technique; Gram-Schmidt orthogonalization; eigenvalues and eigenvectors, systems of linear differential equations, diagonalization method; numerical techniques. Prerequisite: 221 or 248.

Components: Lecture

MATH 513(3) **Course ID:005714**

Rings and Modules

Topics include rings, modules, ideal theory, Artinian rings, Noetherian rings, indecomposable modules, projective and injective modules, localizations. Prerequisite: 506.

Components: Lecture

Enrollment Requirements: MATH 506

MATH 514(3) **Course ID:017530**

Statistics II

This is a second course in statistics. The course will focus on Design of experiments and Analysis of Variance, Categorical data analysis, Regression analysis, Time series/forecasting, and Data visualization. Additional reading: Logistic regression, Survival analysis, and Data analysis using R.

This course can be taken ONLY by students in the Data Analytics Programs offered by the Engineering school. It cannot be counted as an upper level math elective for any other major or minor programs offered at CUA.

Components: Lecture

Course Equivalents: MATH 314, DA 314, DA 514

Enrollment Requirements: Open to student in the Data Analytics certificate plan who have taken MATH 114 or MATH 309

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MATH 515(3) **Course ID:002388**

Combinatorics

Basic counting rules. Principle of inclusion and exclusion. Polya Enumeration Theorem. The Pigeonhole Principle and its generalizations. Generating functions; recurrence relations; elements of graph theory. Optimization for graphs and networks. Experimental design. Several applications given. Prerequisite: 248.

Components: Lecture

Same As Offering: MATH 415

Enrollment Requirements: MATH 248 (formerly MATH 305) or CSC 210

MATH 516(3) **Course ID:009330**

Coding and Information Theory

Uniquely Decodable Codes, Instantaneous codes and their construction, Optimal Codes, Binary Huffman Codes, Average Word Length and Optimality of Binary Huffman codes, r-ary Huffman Codes, Information and Entropy, Average Word-Length, Shannon's First Theorem, Information Channels, Decision Rules, Hamming Distance, Comments on Shannon's Theorem, Error-Correcting Codes, Minimum Distance, Hadamard Matrices, Linear Codes. Prerequisites: Math 221, Math 531 or permission of the instructor.

Components: Lecture

Enrollment Requirements: MATH 221 & MATH 531

MATH 517(3) **Course ID:019131**

Advanced Graph Theory

This course will include advanced topics in graph theory including Domination in graphs, graph labeling, random networks and distance measures in graphs. Discussion of research papers in these areas will be part of the course. Students will be expected to make a presentation on an advanced topic.

Prerequisites: Math 248 or CSC 210, and Math 407.

Components: Lecture(In Person)

Course Equivalents: MATH 417

MATH 520(3) Course ID:005715

Topology

Set theoretic background, in particular different forms of Axiom of Choice, basic concepts of point set topology, separation axioms, compact and locally compact spaces, compactifications, product spaces, Tychonoff theorem, metric and metrizable spaces. Baire category theorem. Prerequisites: 221 and either 321 or 421.

Components: Lecture

Same As Offering: MATH 420

Enrollment Requirements: MATH 221 and one of MATH 321, MATH 421, MATH 505 or MATH 521

MATH 521(4) Course ID:002389

Introductory Analysis I

Infinite sets and cardinality; the real number system; introduction to metric space topology including convergence of sequences, compactness, continuity and uniform continuity of functions on metric spaces; Bolzano-Weierstrass theorem; Heine-Borel theorem; differentiation and Taylor's theorem for a function of one real variable; Riemann integral of a function of one real variable; sequences and series of real numbers and functions; interchange of limit operations. Prerequisites: 221 and 248.

Components: Lecture

Same As Offering: MATH 421

Enrollment Requirements: MATH 221 & MATH 248 (formerly MATH 305)

MATH 522(3) Course ID:002392

Introductory Analysis II

Riemann-Stieltjes integral; equicontinuous families of functions and Arzela-Ascoli theorem; Tietze's extension theorem; Baire category theorem; differentiation and integration of a function of several variables; fixed point theorem; implicit function theorem; inverse function theorem; existence and uniqueness theorems for ordinary differential equations. Prerequisite: 421.

Components: Lecture

Same As Offering: MATH 422

Enrollment Requirements: MATH 421 or MATH 521

MATH 524(3) Course ID:002395

Complex Variables

Field of complex numbers. Elementary functions in complex variables: polynomials, rational, trigonometric and exponential functions. Limits and continuity. The complex derivative, Cauchy-Riemann equations. Analytic and harmonic functions. Complex integration, Cauchy's integral formula. Taylor and Laurent series. Residue theory. Uniform convergence. Analytic continuation. Conformal mapping. Prerequisite: 221.

Components: Lecture

Same As Offering: MATH 424

Enrollment Requirements: MATH 221

MATH 527(3) Course ID:002397

Chaotic Dynamics

Periodic points, fixed points, bifurcation, 1-dimensional chaos, Cantor sets, 2-dimensional chaos, dynamics of linear functions, nonlinear maps, fractals, capacity dimension, Lyapunov dimension, Julia sets and the Mandelbrot set, iterated function systems, systems of differential equations, the Lorenz system. Prerequisite: 222.

Components: Lecture

Same As Offering: MATH 427

Enrollment Requirements: MATH 222

MATH 528(3) Course ID:002399

Fractal Geometry

Examples of fractals, the triadic Cantor set, Sierpinski Gasket, metric topology, separable and compact spaces, uniform convergence, Hausdorff metric, topological dimension, self-similarity, Lebesgue measure, Hausdorff measure, Hausdorff dimension, other fractal dimensions. Prerequisites: 520 and 521.

Components: Lecture

Enrollment Requirements: MATH 520 or MATH 521

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 531(3) Course ID:002402

Probability and Statistics with Applications I

An introduction to probability and statistics, with applications in the natural and social sciences. Axiomatic probability, independence and conditional probability. Random variables, their distributions, expectation, variance and moment-generating functions. Probability models and estimation of parameters. Prerequisite: 221.

Components: Lecture
Same As Offering: MATH 431
Enrollment Requirements: MATH 221

MATH 532(3) Course ID:002405

Probability and Statistics with Applications II

Methods of statistical inference. Hypothesis testing: one and two sample problems, goodness-of-fit tests. Confidence intervals, regression and correlation, and special topics which may include but not limited to Bayesian methods, Nonparametric statistics. Prerequisite: MATH 431

Components: Lecture
Same As Offering: MATH 432
Enrollment Requirements: MATH 431 or MATH 531

MATH 533(3) Course ID:005716

Stochastic Processes

Applied probabilistic modelling. Topics include Markov chains, continuous-time Markov processes, birth and death processes, Brownian motion, applications to economics, computer science, biology and physics. Prerequisite: 531.

Components: Lecture
Enrollment Requirements: MATH 431 or MATH 531

MATH 534(3) Course ID:018545

Introduction to Mathematical Finance

In-depth coverage of topics: An introduction to elementary probability and finance, geometric Brownian motion, and martingales. Interest rate models, Modern portfolio theory, and Option pricing theory. Graduate students are required to perform simulation in their assignments, read and present special topics selected from mathematical finance literature. Prerequisites: (MATH 112 or 122) and (Math 531 or (MATH 309 with permission of instructor) or (Math 431 with permission of instructor)).

Components: Lecture(In Person)
Course Equivalents: MATH 434
Room Requirements: DIGITAL PRESENTATION ROOM(1)

MATH 535(3) Course ID:018713

Computational Methods in Mathematics and Statistics

Computational, numerical, and visualization methods in Mathematics and Statistics will be the major theme of this course with emphasis on the usage of a programming language. Relevant topics may include: In-depth coverage of Fourier Transforms and Fast Fourier Transforms, Euler's Method and Method of Frobenius for ODEs, Finite Element Method and Spectral Method for PDEs; Exploratory data analysis, Simulation of random variables and Monte Carlo methods, Estimation, Bootstrap, and Bayesian methods. Graduate students will be assigned special topics for additional reading.

Components: Lecture(In Person)
Course Equivalents: MATH 435
Enrollment Requirements: MATH 431 or MATH 531
Room Requirements: DIGITAL PRESENTATION ROOM(1)

MATH 536(3) Course ID:012828

Introduction to Game Theory

Strategic games, Nash equilibrium, two-person zero-sum games, two-person general-sum games, extensive games with perfect information, cooperative games, non-cooperative games, coalitional games and applications.

Prerequisites: Math 301 and Math 431 or permission of the instructor

Components: Lecture
Same As Offering: MATH 436
Enrollment Requirements: MATH 301 or MATH 501 and MATH 431 or MATH 531

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 537(3) Course ID:002413

Introduction to Fuzzy Sets and Fuzzy Logic

Introduces the concept of fuzzy set: a mathematical object modeling the vagueness present in our natural language when we describe phenomena that do not have sharply defined boundaries. Covers basic concepts of fuzzy sets, fuzzy sets versus crisp sets, operations on fuzzy sets, fuzzy relations, fuzzy theory versus probability theory and applications. Prerequisites: 221 and 531.

Components: Lecture

Enrollment Requirements: MATH 221 & MATH 531

MATH 540(3) Course ID:005717

Ordinary Differential Equations

Existence and uniqueness of solutions; continuity and differentiability of solutions with respect to initial conditions and other parameters. Linear systems with constant and variable coefficients; resolvent matrix for a linear system; finite difference methods with error estimates; k-th order Euler's method and Runge-Kutta methods. Prerequisites: 222 and 501.

Components: Lecture

Enrollment Requirements: MATH 222 and either MATH 301 or MATH 501

MATH 541(3) Course ID:009588

Introduction to Partial Differential Equations

Survey of linear equation types: dispersion, diffusion, wave, transport. Exposition of techniques to find solutions for initial value problems, including separation of variables, characteristics and transform method. Introduction to boundary value problems and the modern unified transform method. Prerequisites: MATH 221, 222 or permission of the instructor.

Components: Lecture

Same As Offering: MATH 441

MATH 542(3) Course ID:009589

Introduction to Difference Equations

First order difference equations, higher order difference equations, stability analysis, z-transforms and applications.

Prerequisites: Math 222, 301 or permission of the instructor.

Components: Lecture

Same As Offering: MATH 442

Enrollment Requirements: MATH 222 and either MATH 301 or MATH 501

MATH 550(3) Course ID:005718

Foundations of Mathematics

Sets, logic, and axiomatic and constructive treatment of real numbers. Prerequisite: 248.

Components: Lecture

Same As Offering: MATH 450

Enrollment Requirements: MATH 248 (formerly MATH 305)

MATH 551(3) Course ID:005719

Introduction to Mathematical Logic

Classical propositional and first-order predicate logic; syntax, semantics, basic metamathematical theorems including the Goedel-Henkin completeness theorem and the Skolem-Lowenheim theorem. Other possible topics: first-order recursive arithmetic, Goedel's incompleteness theorems, intuitionistic systems, Church's theorem, Tarski's theorem. Prerequisites: 248 and 321.

Components: Lecture

Same As Offering: MATH 451

Enrollment Requirements: MATH 248 (formerly MATH 305) and either MATH 321 or MATH 505

MATH 552(3) Course ID:005720

Formal Languages and the Theory of Computation

Languages and their representation, finite automata and regular grammars, pushdown automata and context-free languages. Turing machines; the halting problem, linear bounded automata and context-sensitive languages; relations between formal languages and recursive sets, time and tape bounds on Turing machines, deterministic pushdown automata. Prerequisite: 551.

Components: Lecture

Enrollment Requirements: MATH 551

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 561(3) Course ID:002417

Numerical Analysis I

Numerical integration: the rectangle, trapezoid, and spline quadrature. Linear systems of equations; matrix notation, properties of matrices, iterative determination of eigenvalues and eigenvectors, elimination methods. Solution of nonlinear equations; real and complex roots, zeroes of polynomials. Interpolation: polynomial, Hermite, and spline interpolations. Prerequisites: 222 and 301.

Components: Lecture

Same As Offering: MATH 461

Enrollment Requirements: MATH 222 and either MATH 332 or MATH 506

MATH 562(3) Course ID:005722

Numerical Analysis II

Approximation theory: introduction to approximation, orthogonal polynomials and least square approximation methods, numerical quadrature. Solution of ordinary differential equations: initial-value problems for ordinary differential equations, error propagation; higher-order Taylor, Runge-Kutta, multistep and extrapolation methods; control of stepsize; stiff equations; stability. Boundary-value problems for ordinary differential equations; shooting method for linear and nonlinear problems. Prerequisite: 461.

Components: Lecture

Same As Offering: MATH 462

Enrollment Requirements: MATH 461 or MATH 561

MATH 570(3) Course ID:014568

Algebraic Topology

Homotopy theory: definition of the fundamental group, presentations and calculations of such groups. Brief introduction to category theory: categories and their functors, examples. Homology theory: chain complexes, homology groups of a simplicial complex. Degrees of maps between manifolds and applications.

Components: Lecture(Blended (in-person and online))

Enrollment Requirements: MATH 421 or MATH 521

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MATH 584(3) Course ID:006092

Numerical Linear Algebra

Numerical solution of linear systems by direct and iterative methods. Computation of eigenvalues and eigenvectors. Introduction to numerical methods for partial differential equations. Prerequisites: 222 and 501.

Components: Lecture

Enrollment Requirements: MATH 222 & CSC 110

MATH 600(3) Course ID:006093

Lattice Theory

Topics include partially ordered sets, lattices, complete lattices, ideals, modular and distributive lattices, Boolean algebras, geometric lattices, topological representation and applications. Prerequisite: 505.

Components: Lecture

Enrollment Requirements: MATH 321 or MATH 505

MATH 601(3) Course ID:006094

Algebraic Categories I

Topics include categories, functors, subcategories, equivalence of categories, dual equivalence, special objects, generator, cogenerator, projective and injective objects, projective generator, and injective cogenerator, products of categories, Hom functor, internal Hom functor, functor categories, natural transformations, limit and co-limits, completeness and co-completeness, adjoint functors, and related topics. Prerequisite: 506.

Components: Lecture

Enrollment Requirements: MATH 501

MATH 602(3) Course ID:006095

Algebraic Categories II

Emphasis on functors, adjoint functor theorem, reflective subcategories, additive categories, Abelian categories and their applications. Prerequisite: 601.

Components: Lecture

Enrollment Requirements: MATH 601

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

MATH 623(3) Course ID:006096

Analytic Functions

Review of the classical theory of analytic functions and introduction to Banach spaces and Banach algebras; weak and strong analyticity of Banach space-valued functions, generalizations of classical theorems about analytic functions (e.g., Cauchy, Liouville, etc.); analytic functions in Banach algebras; application to Gelfand theory and Jacobson's theory of radicals; related topics. Prerequisites: 522 and 524.

Components: Lecture

Enrollment Requirements: MATH 522 & MATH 524

MATH 624(3) Course ID:006097

Measure & Integration Theory

Basic measure theory, a development of the Lebesgue integral, the basic convergence theorems, Randon-Nikodym theorem, Fubini's theorem, L_p spaces. Prerequisite: 522.

Components: Lecture

Enrollment Requirements: MATH 522

MATH 625(3) Course ID:006098

Introduction to Functional Analysis

Banach and Hilbert spaces. Linear operators. Hahn-Banach theorem, open mapping and closed graph theorem, uniform boundedness theorem. Dual spaces and their representations. Prerequisite: 521.

Components: Lecture

Enrollment Requirements: MATH 421 or MATH 521

MATH 626(3) Course ID:006099

Nonlinear Functional Analysis

Banach fixed point theorem with applications. Green's functions with boundary value problems. Semigroups of nonlinear contraction, and existence theorem for an initial value problem associated with a maximal monotone set. Prerequisite: 625.

Components: Lecture

Enrollment Requirements: MATH 625

MATH 627(3) Course ID:006100

Differential Equations in Banach Spaces

Mean value theorem for Banach space-valued piecewise differentiable functions, differentiable and Lipschitzian operators, construction of epsilon-approximate solution to a differential equation, existence and uniqueness of local solutions, extensions to a maximal solution. Continuity and differentiability of a solution with respect to initial data and parameters. Linear differential equations in the class of continuous operators, existence and properties of resolvent. Relations with PDEs of first order. Application of the theory to ODEs in concrete Banach spaces. Prerequisites: 540 and 625.

Components: Lecture

MATH 630(3) Course ID:006101

Theory of Probability

Probability and expectation spaces. Real random variables, almost sure convergence, convergence in probability. Product spaces and independent random variables. Conditional expectation and martingales. Strong and pointwise ergodic theorems. Kolmogorov's strong law of large numbers. Prerequisite: 624.

Components: Lecture

Enrollment Requirements: MATH 624

MATH 631(3) Course ID:006102

Computer Simulation Random Processes

Review of probability theory. Ergodic theorem and ergodic transformations as random number generators. Pseudo-random number generators on digital computers and their characteristics. Simulation of Bernoulli, Poisson, and Gaussian random processes. Simulation of systems of independent random variables with arbitrary densities or distribution laws. Simulation of random variables on differentiable manifolds. A priori estimates of efficiency of stochastic methods for optimization of linear functions. Application to operations research and performance analysis of computer algorithms. Prerequisites: 531 and CSC 511.

Components: Lecture

Enrollment Requirements: MATH 531 & CSC 110

The Catholic Univ of America
Course Catalog

Arts & Sciences - Mathematics - Subject: Math

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

MATH 638(3) Course ID:006103
Introduction to Finite Element Methods
Topics examined: steps in the method, such as domain discretization, choice of element configuration, selection of approximation model, derivation of element equation via a stationary principle, assemblage of global matrix equation, imposition of boundary conditions and solving for primary and secondary variables. Presents applications in elasticity, heat transfer and fluid mechanics. Prerequisites: 522 and CSC 113.
Components: Lecture
Enrollment Requirements: MATH 522

MATH 640(3) Course ID:006104
Partial Differential Equations
Preliminaries from ordinary differential equations, calculus and Lebesgue Integration Theory. Methods of solution of partial differential equations of the first order. Classification of the second order linear partial differential operators. Examples of applied problems leading to hyperbolic, parabolic, and elliptic equations. Cauchy problem. Fredholm alternative in Banach and Hilbert spaces. Properties of potentials. Dirichlet and Neumann problems. Finite difference method. Green's function, separation of variables, and expansion of solutions into eigenfunctions. Prerequisites: 540 and 624.
Components: Lecture
Enrollment Requirements: MATH 540 & MATH 624

MATH 641(3) Course ID:006105
Optimal Control Theory
Examples of problems: electro-dynamical systems leading to time optimal control problems, spacecraft navigation leading to fuel optimal control problems. Proof of Pontryagin's maximum principle. Existence of optimal controls for linear systems with convex constraints on the control function. Derivation of Lagrange, Euler-Lagrange, and Hamilton equations of classical variational calculus from Pontryagin's principle. Method of first integrals and Hamilton-Jacobi generating function. Application to problems in celestial mechanics. Prerequisites: 540 and 624.
Components: Lecture
Enrollment Requirements: MATH 540 & MATH 624

MATH 646(3) Course ID:006106
Banach Algebra
Develops Gelfand's theory of commutative Banach algebras. Presents applications of the theory to the special theory of operators, Stone-ech compactification, theory of C*-algebras, H*-algebras, and group algebras. Prerequisite: 625
Components: Lecture
Enrollment Requirements: MATH 625

MATH 648(3) Course ID:006107
Harmonic Analysis on Locally Compact Groups
Topological groups. Theorems of Urysohn's type. Haar integral over a locally compact group, commutative group and its dual. Pontryagin's duality theorem, group algebra. Unitary representation of a group and corresponding representation of group algebra. Stone's theorem. Positive definite functions and Bochner's theorem. Applications of Gelfand's theory to the group algebra. Prerequisite: 646.
Components: Lecture
Enrollment Requirements: MATH 646

Arts & Sciences - Mathematics - Subject: Math

MATH 653(3) Course ID:006108

Topological Vector Spaces

Vector space topologies, metrizable, locally convex topological vector spaces, Hahn-Banach theorem, projective and inductive topologies, barreled and bornological spaces. Linear mappings, Banach's homomorphism theorem, uniform boundedness and the Banach-Steinhaus theorem, duality, dual systems and weak topologies; strong dual, bi-dual, and reflexive spaces; theorems of Grothendieck, weak compactness, open mappings, and closed graph theorems; linear manifolds and applications. Prerequisites: 620 and 625 .

Components: Lecture

Enrollment Requirements: MATH 602 & MATH 625

MATH 654(3) Course ID:006109

Generalized Functions and PDE

L. Schwartz spaces of infinitely differentiable functions, convolution operation, partition of unity. Dual spaces and differential operators on generalized functions. Fourier transforms on generalized functions, fundamental solution for a linear differential equation, existence of a general solution, application to Laplace equations. Approximation of generalized functions by infinitely differentiable functions. Kernel theorem and its applications. Prerequisite: 625 or 653.

Components: Lecture

Enrollment Requirements: MATH 625 or MATH 653

MATH 666(3) Course ID:006110

Mathematical Foundations of Quantum Mechanics

Banach and Hilbert spaces, contraction mapping theorem, Lorentzian time delays, motion of n-charges in their electromagnetic field. Hamiltonian mechanics and category of Hamiltonian flows. Randomness due to initial trajectory. Direct integral of Hilbert spaces and probability amplitude. Description of position and momenta by self-adjoint operators. Functor of classical analogy. Heisenberg's and Schroedinger's representations. C*-algebras and operational calculus of operators based on Baire functions. Existence of spectral representations. Prerequisites: 624, 625, and 646.

Components: Lecture

Enrollment Requirements: MATH 624 & MATH 625 & MATH 646

Arts & Sciences - Medieval and Byzantine Studies
Subject: Medieval and Byzantine Studies

MDST 201(3) Course ID:013215

Medieval Pathways

This interdisciplinary course explores the complexity of the medieval world (ca. 300-1500) as a way of introducing students to Medieval Studies. The course introduces multiple different modes of inquiry, or pathways, to the Middle Ages. Team-taught by several instructors, the course focuses on a different unifying theme each year. Students examine both material and written sources, and participate in multiple field trips to receive a hands-on introduction to Medieval Studies and to the many resources on campus and in Washington, D.C. The longer class session is used for occasional off-campus visits. Otherwise, the class will meet twice a week for 75 minutes each. The course serves as a gateway to the Medieval & Byzantine Studies major and minor (as MDST) and may fulfill the Arts & Sciences humanities requirement (as HIST or MDST) or literature requirement (as ENG).

Components: Lecture

Course Equivalents: ENG 250, HIST 201

MDST 496(3) Course ID:018665

Senior Seminar

MDST 496 serves as a thesis-writing seminar. Working with a selected faculty adviser, students will develop a thesis proposal, a detailed outline, and an annotated bibliography, conduct research, and write a senior thesis of about 25 pages (plus bibliography).

Components: Seminar (In Person)

Room Requirements: DEPARTMENT SPACE(1)

MDST 498(0) Course ID:015191

Undergraduate Comprehensive Examination

Registration for senior comprehensive examination.

Medieval Archaeology Field School & Study Trip

Learn how archaeologists explore the past with hands-on training on an excavation in the Maremma region of Tuscany, Italy. In addition to a brief theoretical introduction to medieval archaeology and the historical context of the excavation, this summer archaeology field school teaches students the basic techniques of stratigraphic excavation and introduces them to find processing and laboratory analysis. Study aboard course, with travel dates May 23-June 6, 2017.

Components: Field Studies

Room Requirements: NO CLASSROOM NEEDED(1)

MDST 556(1) Course ID:016444

Readings in Medieval Archaeology

This course offers a brief introduction to the themes and methodologies of medieval archaeology, typically in preparation for the summer archaeology field school.

Components: Lecture

MDST 557(2) Course ID:016599

Summer Archaeology Field School

This course provides students with theoretical and hands-on training in medieval archaeology at an ongoing excavation site. Students train in the methods of stratigraphic excavation, recording, and finds processing with professional archaeologists in a field school setting. Further expert-led field trips introduce students to key archaeological and historical sites in the area.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

MDST 592(3) Course ID:008631

Directed Readings in Medieval and Byzantine Studies - Masters

MA-level reading course on medieval and/or Byzantine topic under the supervision of a faculty member.

Components: Directed Reading

MDST 603(2) Course ID:002653

Research in Medieval Studies

Directed research in Medieval and Byzantine Studies in which students complete the interdisciplinary project begun in 601.

Arts & Sciences - Media & Communication Studies - Subject: Media & Communication Studies

MDIA 201(3) Course ID:005628

Intro to Media and Communication Studies

Students learn basic media literacy by developing conceptual tools to think critically about cinema, television, advertising, print journalism, the internet, etc. The course focuses on the process of reading media texts from distinct rhetorical perspectives--in terms of a text's form and in terms of its relationships to audiences, authors, and the real world--in order to explore how the mass media shape and convey meaning. Fulfills Fine Arts foundation course requirement.

Components: Discussion, Lecture
Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 202(3) Course ID:005629

Media and History

Introduces students to the history of media and to the stakes of historical inquiry. Explores media literacies in and across time. Considers the technological, social, economic, and perceptual conditions that make print, broadcast, and digital media meaningful. Students learn to think carefully about transitions and interactions among media and culture in the past in order better to understand the pace and character of change today. Fulfills History foundation course requirement.

Components: Discussion, Lecture
Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 210(3) Course ID:016226

Italian Women Artists

This course examines the evolution of female subjectivity in 20th and 21st century Italian culture, film, and literature from Unification and Fascism to modern Democracy through the works of major female writers and filmmakers. In the first module of the course, students study how Italian women writers Sibilla Aleramo, Anna Banti, Elsa Morante, Dacia Maraini and the 1926 Nobel prize winner for literature Grazia Deledda perceive societal changes in their novels. The second part examines such changes through the lens of female filmmakers, Francesca Comencini and Alina Marazzi amongst others. Discussing and analyzing the literary and cinematic narratives of the Self, identity, relationships and sisterhood, gender and maternity, politics and family will be the core of our work. Taught in English.

Satisfies literature and humanities requirements. Cross-listed with ITAL 210.

Components: Lecture, Screening
Course Equivalents: ITAL 210

MDIA 217(3) Course ID:018532

Social Issues in Postwar Italian Film, Photography, and Literature

The critical lens of this course focuses itself on the abiding connection that exists between aesthetics and ethics to highlight how this connection manifests itself in a wide range of Italian cultural texts produced by and disseminated via the techniques and technologies of film, print media, and the studio arts (among others). Participants in this course will specifically engage and actively evaluate how Italian artists and creatives demonstrate their keen awareness of the complex social contexts giving rise to their work while at the same time articulate a response to the most pressing social issues of their age. Course modules are organized around the Pier Paolo Pasolini's concept of the "vital crisis" or that creative impetus motivated by cultural or social turmoil that gives rise to new and invigorating cultural texts, movements, and forms. While the bulk of the course's critical attention will be paid to the 19th, 20th, and 21st centuries, participants will also explore the historical origins of the tendency of Italian artists to aesthetically

MDIA 225(3) Course ID:018531

Magic in German and Hispanic Literature and Film

This course explores Magical Realism, the merging of reality with magical elements, as it evolved in the art and literature in German and Spanish speaking countries. Through a variety of texts, students will develop an understanding of the concept and its different representations. Critical questions of translation, regionalism, and cultural identity will be discussed. Readings include works by such acclaimed authors as Gabriel García Márquez, Günter Grass, Mario Vargas Llosa, Ernst Jünger, Jorge Luis Borges, Alejo Carpentier, Marie Luise Kaschnitz, Laura Esquivel, and Patrick Süskind. Films include Un chien andalou (Luis Buñuel; Salvador Dalí, 1929), Aguirre. Der Zorn Gottes (Werner Herzog, 1972), Como agua para chocolate (Alfonso Arau, 1992). In English. Fulfills the humanities and literature requirement (proposed for the NEW Gen Ed lit requirement)

Components: Lecture(In Person)

MDIA 231(3) Course ID:017847

New Italian Cinema

Cinema is perhaps one of the most important elements that connote and make Italian culture so famous around the world. From La Dolce Vita to La Vita e Bella, Italian films speak to different crowds in different ways. The overall image is one of a country whose citizens are fraught by problems and existential issues that bears always that life must be lived at its fullest, no matter the historical period. At the core of this course lies the study of the techniques and the themes contemporary Italian directors employ in their distinctive engagement to treat and depict the mishaps of an expansive lack of (Italian) identity, massive immigration, unemployment, precarious work, and expanded or dysfunctional families. Taught in English. Satisfies requirements for humanities.

Components: Lecture

Course Equivalents: ITAL 231

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 300(3) Course ID:019083

Disney Media

This course approaches Disney both as a corporation (Walt Disney Company) and as a cultural phenomenon, focusing on its mediated aspects. Potential topics/frameworks include: analyzing the political economy of Disney in terms of films, the Disney Channel, branded products, and amusement parks; visual culture/ textual analysis of Disney films as `cultural texts; that reify cultural norms; and, analysis of reception and uses of Disney media forms, including through subcultures and fan communities.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 301(3) Course ID:005630

Media and Rhetoric

Considers mass media in light of traditional rhetorical principles. Introduces students to classical persuasion theory: rhetoric vs. sophistry in Plato and Aristotle; the invention of character, emotion, and persuasive reason, with attention to dialectical reasoning (syllogism, enthymeme, formal and informal fallacies); the functions of arrangement and style with emphasis on Roman theories of rhetorical tropes and schemes. Applies these concepts to written analysis of contemporary media texts such as televised speeches, advertising, propaganda, and socially mediated news, paired comparatively with modern rhetorical analysis, including dramatism, ideological critique, and media semiotics.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 302(4) Course ID:002204

Intro. to Video Production: Media Rhetoric and Aesthetics

Students build upon knowledge from previous courses in the Department of Media Studies by exploring how images and meaning are constructed. Emphasis is on visual literacy and production techniques. This course uses a combination of lecture, hands-on exercises and discussion to introduce students to the aesthetic principles involved in media production. Students will investigate lighting, composition, camera movement, sound and editing, with the aim of further developing critical awareness of audio/visual texts. The course will also provide a technical foundation for beginning media producers. Prerequisite: MDIA 201 or permission from Instructor

Components: Lecture

Enrollment Requirements: MDIA 202

Room Requirements: NO CLASSROOM NEEDED(1)

MDIA 305(3) Course ID:014969

The Myth of Childhood in Italian Cinema

The goal of this course is to familiarize students with the important theme of childhood in Italian Cinema. In fact, this topic is very frequented by Italian film makers, as the child's point of view is present in many trends and periods of Italian cinema which often utilizes literary texts as its point of departure to develop new perspectives on childhood and Italian society in its transformations. In this course, students will be offered a unique chance of analyzing the theme of childhood in mainly two periods of Italian cinema. One, the famous period dubbed as Neo-realism, will make up the first part of the semester. We will analyze films by Vittorio De Sica, Luchino Visconti, and Roberto Rossellini. Films from postmodern cinema will constitute the second and final part of the semester. In this part of the course, we will screen films by Gianni Amelio, Oscar winner Gabriele Salvatores, and Cristina Comencini. The idea behind this division is to compare and contrast these two very different cinematic expressions which originate from different periods of

MDIA 306(3) Course ID:009570

The Italian-American Experience: A Survey

In this course students will analyze Italian migration in the United States from a cultural and literary point of view. The formation of a new identity arises from the bridging of the former culture and the new one to master. This process of formation, along with the issues raising from the condition of immigrants and the energy drawn from a new economic situation of mobility, have led Italian American artists to express themselves successfully in fiction and poetry, in film and the visual arts. These are some of the aspects that students, after a historical introduction to the phenomenon, will observe and study during the semester. Lectures are supplemented by film excerpts and guest lecturers. Same as ITAL 206

MDIA 307(3) Course ID:014401

The Splendor of Rome in Literature & Film

Famous twins Romulus and Remus were merely the first two artists who shaped Rome, one of the most beautiful, complex, and recounted cities in the world! The Eternal City, as it is often referred to, is the physical embodiment of a complex identity as it the point of reference for many artists and travelers who have journeyed and relentlessly tried to construct images for its beauty. During this virtual walk through Rome's (particularly modern) history, students will encounter works revealing the singular allure of the space of the city that is twice a capital. From the work of world-renown directors Federico Fellini and Vittorio De Sica to that of writers Alberto Moravia and Amara Lakhous, students will enjoy the dolce vita (sweet life) and the cultural import of Rome in poetry, in music, in the visual arts, and cinema. Taught in English. Same as MDIA 307. Satisfies requirements for HUM and LIT.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1), BLACKOUT CURTAINS(1)

MDIA 308(3) Course ID:014637

Mafia, Politics and Society in Italian Cinema

Italian directors and scriptwriters have consistently shown a strong awareness of their country's socio-political complexities. From the Mafia to political corruption, Italian artists fearlessly engage with their society's scandals, corruption cases, and untimely and unjust deaths of their fellow citizens. Students will see and analyze films from the postwar period to the current day. Through films like Divorce Italian-Style or Gomorrah, students gain an understanding of how movies centered on social issues can be simultaneously entertaining and thought-provoking. Taught in English. Satisfies requirements for Italian Studies Minor and humanities.

Same as ITAL 230.

Components: Lecture, Screening

Topics: Rome, Italy

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 309(3) Course ID:017260

Latin American Cinema: A History

This course offers an advanced introduction to the history of Latin American cinema and film culture. With a comparative approach, we will study cinema's capacity to motivate political reflection, build modern identities, and shape public discourse, in a region rife with social inequality. Travelling across regions and epoques, we will cover six cinematic periods: contemporary cinema, the New Latin American Cinema, Art Cinema, Neorealism, Studio Cinema, and Silent Cinema. We will pay attention to the historical and sociopolitical contexts films spring from and reflect upon. We will also develop the critical tools and learn basic theoretical tenets for the study of moving images. Therefore, we will pay attention to film style (camera movement, mise-en-scene, lighting, editing, sound, genre) and consider the film culture surrounding specific films.

Components: Lecture, Screening

MDIA 310(3) Course ID:017692

Espionage in Film

The narrative of the spy thriller is one of the most enduring themes in the history of cinema. From "The Third Man" to "The Americans" and the many adaptations of John Le Carre's novels ("Tinker, Tailor, Soldier Spy"; "Our Man in Panama", "A Man Most Wanted"), this course will survey a range of spy films from the post-WWII era to the present. We will explore each through a critical-analytical framework that employs the methodologies of film criticism and the universal precepts of the craft of intelligence. In so doing, we will move our lens beyond the hyper-technological hijinks and explosions that define so much of the contemporary genre back to intricacies of the singular character of the spy. From our focus on this all-important human dimension of espionage, we will explore what makes a good spy film and why.

Arts & Sciences - Media & Communication Studies - Subject: Media & Communication Studies

MDIA 311(3) Course ID:005632

Critical Approaches to Media

This course takes up advanced questions of meaning, interpretation, and critical method. Building on the exploration of text, author, and audience in Introduction to Media Studies, this course examines issues and methods in media studies and explores key critical debates in areas such as film and television theory, semiotics, discourse analysis, performance studies, sound studies, and audience and reception studies. Topics will be drawn from a variety of stylistic traditions, genres, themes and geographic locations. Required for majors in the critical studies track. Prerequisite: MDIA 201 or Departmental permission.

Components: Lecture

Enrollment Requirements: MDIA 201 or department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 312(3) Course ID:002207

Intermediate Video Production: Media Composition

Students continue to apply critical principles learned in MDIA 401 and other core courses as they develop advanced skills in sound and video composition and produce their own sound and moving image sequences using Final Cut Pro. Later, students do a collaborative project in an atmosphere that simulates professional field and studio production. Required for majors in the production track. Prerequisite: MDIA 201 & MDIA 302 or permission from the instructor.

Components: Lecture

Enrollment Requirements: Open to Media Studies majors/minors/certificate students who've taken MDIA 201 & MDIA 302

Room Requirements: NO CLASSROOM NEEDED(1)

MDIA 315(3) Course ID:018537

Audio Podcasting

This course covers the creative and technical aspects of planning and producing audio podcasts. Students learn to record and edit audio using industry standard software. The course also teaches students about the specifics of what it means to write and tell stories in aural formats.

Components: Studio(In Person)

Room Requirements: DEPARTMENT SPACE(1)

MDIA 316(3) Course ID:009536

Food and Media

This course examines how media have shaped the ways we think about food and how food itself can serve as a medium for cultural communication. In addition to studying American cookbooks, magazines, television (the TV dinner? The Food Network?), and other historical materials, students will analyze and practice forms of contemporary food writing. Attendance at several evening film screenings and one field trip will be mandatory.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 317(3) Course ID:015522

Media and Social Change

This course considers the relationship between media and social change. Using case studies drawn from a range of periods and locations, it examines how various forms of media have played a role in raising social awareness, agitating for justice, producing and disseminating propaganda, and/or interpreting historical and current events.

Components: Lecture

Enrollment Requirements: MDIA 201

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 318(3) Course ID:014229

Media, Satire & Citizenship

The first decade of the twenty-first century has seen the growing prominence and influence of satirical media outlets such as The Daily Show, The Colbert Report, The Onion, and Politically Incorrect. Comic political videos have become commonplace, parodies such as those on Saturday Night Live have gone memetic, and politicians obligingly take to the air on entertainment TV programs. MDIA318 examines this phenomenon in the broader historical contexts of political satire and the rhetoric of humor, addressing questions about its contemporary functions, its relation to the dominance of traditional news media and practices of partisan news and talk outlets, and controversy over whether "fake news" and infotainment serve or harm democratic civic culture.

Arts & Sciences - Media & Communication Studies - Subject: Media & Communication Studies

MDIA 320(3) Course ID:016443

Civic Media: Policy and Design

Students engage the concepts, genres, and policies of public, state, and community media approaches. In addition, the class visits prominent noncommercial media industry sites to meet curators and practitioners, including: NPR, Smithsonian, BBC, Library of Congress, and National Archives.

Components: Lecture

Enrollment Requirements: MDIA 201

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 321(3) Course ID:002177

Mass Media Law and Ethics

Provides a foundational understanding of U.S. media law, policy, and ethics in the 21st century. In particular, this course will explore First Amendment issues concerning the media, such as defamation, privacy, and prior restraint. This course also will examine the Federal Communications Commission's regulation of broadcasting and cable; ongoing policy debates about regulating the Internet; and intellectual property issues related to traditional and digital media, such as copyright and fair use. Finally, this course will consider different perspectives about media ethics and apply those perspectives to current events.

Components: Lecture

Course Equivalents: POL 321

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 322(3) Course ID:016022

Media and Crime

Course focuses on media depictions of crime and criminality, studying the role of media in constructing, explaining, glorifying, and/or condemning crime. Traverses a range of media forms and genres, including case studies from news media, Court TV and other reality formats, narrative fiction films, television series, and documentaries. Considers how digital technologies have shaped the ways that representations of crime are generated and transmitted.

Components: Lecture

Silent Film Music

Students build upon knowledge from previous courses in Media Studies by exploring how images and meaning are constructed. Emphasis is on visual literacy and production techniques. Course uses a combination of lecture, discussion and hands-on exercises to introduce aesthetic principles involved in media production. Topics include lighting, photography, videography, sound recording and editing, with the goal of further developing critical awareness of mediated texts and providing a technical foundation for beginning media producers.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

MDIA 325(3) Course ID:016023

Media Advocacy and Activism

MDIA 325 examines how political and cultural groups have utilized, responded to, and organized around media institutions and mediated representations in the 20th century. Students evaluate successful and unsuccessful strategies, and engage both liberal and conservative approaches. The class is premised upon a basic distinction between "advocacy" and "activism": 1) media advocacy - institutional and political system building focused on public and private media institutions, and 2) media activism - emergent responses to social, representational, and institutional messages prominently received through media circulation.

Students read from a selection of conceptual, historical, and contemporary analyses, listen to presentations from guest researchers, and meet representatives from, as well as visit media advocacy and activism institutions in Washington D.C.

MDIA 329(3) Course ID:016861

Contemporary Global Cinema

This course is a survey of contemporary films that engage issues of globalization. While films have historically been produced and exhibited as emblems of national culture, in recent years international film festivals, multinational production companies and new worldwide distribution systems have encouraged movie producers to make work that focuses on global issues and aims to reach global audiences. In this course, we will examine the structural issues that shape both the form and content of contemporary global cinema.

Components: Lecture, Screening

MDIA 330(3) Course ID:008482

Introduction to Journalism

Introduces students to research and writing techniques used by professional journalists. Explores the history of journalism and examines its impact on communities and its role within a democracy.

Components: Lecture

Enrollment Requirements: MDIA 201 or department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 331(3) Course ID:019014

Multimedia for Strategic Communication

Contemporary journalism, public relations and strategic communications jobs are asking producers, both new and veteran, to "do more with less" while still demanding that they reach audiences on an ever-growing selection of platforms and storytelling formats. This course will explore how journalists and other media professionals can meet and exceed those expectations through the basics of audio production, video production and social engagement.

Students will create short-subject content on topics important to them and learn how a single storyline can yield multiple products and ways to engage, inform and motivate their audience.

Components: Lecture(Online)

Room Requirements: ONLINE(1)

MDIA 333(3) Course ID:009009

Advanced Journalism

Developing principles and skills learned in Introduction to Journalism, students learn how to report the news, follow a beat, and develop feature writing skills, in laboratory and real-world settings. Prerequisite: MDIA 330 or equivalent experience.

Components: Lecture

Enrollment Requirements: MDIA 201 & MDIA 330

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 334(3) Course ID:008483

Media Ethics

The course focuses on issues of news media credibility, ethical judgments of journalists, and news decision making in light of overall declines in news media ratings and credibility. The course also examines coverage of current news stories, news practices and standards. Case studies and recent examples of news stories are used to explore tough issues, such as confidential sources, privacy, hidden cameras, hostage situations, and race relations.

Components: Lecture

Enrollment Requirements: MDIA 201 or department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 342(3) Course ID:018484

The Horror Film

This course considers the Horror Genre, examining its history, conventions, and reception. Also, the course investigates the unique contributions of Horror to the language of cinema and the ways that the genre has served as a commentary on society and the human condition.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 343(3) Course ID:018668

The Blockbuster Film

This course examines the phenomenon of the Blockbuster film. From the earliest instances when the term was applied to contemporary examples, the course seeks to understand the cultural, industry, and social forces that shape and are in turn shaped by the blockbuster film. In so doing, it asks a number of questions such as: how are different experiences and embodiments depicted in Hollywood films? How does Hollywood narrativize the U.S. in global politics? How do Blockbusters address political and social problems while managing to entertain? Screenings will include a range of Blockbuster films such as Die Hard, Harry Potter, Fast and the Furious, Back to the Future, Mad Max, Dark Knight, Toy Story, and six additional screenings to be determined by class vote.

Components: Lecture(In Person), Screening(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1), DIGITAL PRESENTATION ROOM(1)

MDIA 347(3) Course ID:018908

Olympics on Film

The modern Olympics and the film industry were born at approximately the same time in the late nineteenth century - this course will explore the shared history of the two movements by looking at how the games have been portrayed on film. From screwball comedies (Walk, Don't Run 1966, Cool Runnings 1993) to period dramas (Chariots of Fire 1981, Miracle 2004) and political propaganda films (Olympia 1938) to documentaries (16 Days of Glory, 1984) - we will explore and discuss how these portrayals of the Olympic Games spoke to audiences about the movement itself, the time periods when they are set, the goals of the games, challenges, ideals, successes and failures.

Arts & Sciences - Media & Communication Studies - Subject: Media & Communication Studies

MDIA 349(3) Course ID:018927

Reporting Methods for Informed Civic Participation

This course will teach fundamental methods of investigative reporting to equip students with lifelong skills that will help them to be independent, informed participants in civic life. Upon completion they will be capable of understanding complex issues and institutions based on full sets of facts that will hopefully diminish current partisan intolerance preventing the respectful compromise needed for a functioning democracy.

Components: Lecture(Online)

Room Requirements: ONLINE(1)

MDIA 352(3) Course ID:009266

Museum Studies

This course focuses on museum display as a form of multi-dimensional, interactive media. Readings and field trips will address the interaction of museum visitors, collections, and public space, and the class will draw upon the wealth of museum resources in the Washington area.

Components: Seminar

Course Equivalents: ART 351

Enrollment Requirements: MDIA 201 or department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 353(3) Course ID:010102

Television and American Culture

This course introduces students to a variety of issues and methods in radio and television studies, including questions of form, content, and style (narrative, editing, sound, story arcs, genre, e.g.), as well as history and theory. Readings and discussions will address such issues as gender and domestic reception, flow and segmentation, liveness, and articulations of local and global media cultures.

Components: Lecture, Screening

Enrollment Requirements: MDIA 201 or department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 354(3) Course ID:015318

Media Industries

The development of digital media over the past decade has upended many traditional models of culture industries. This course examines three industries: television, film, and music that have been the locus of these developments. It explores political economy, regulation, and cultures of production. It addresses the history of media industries and theories by which we might critically examine their operation and influence on representational texts. Some issues to be considered: How do individuals ¿create¿ within complex organizational structures? What are the relationships between industry, government, text, and audience? What are the economic models by which culture industries operate, and how are they successfully and unsuccessfully challenged? How do the perspectives of culture industries influence the representational texts that we consume on a daily basis? How might one be an ethnical media consumer and producer?

Components: Lecture

Enrollment Requirements: All Students

MDIA 356(3) Course ID:018897

Film and Emotion

This course will explore the ways we engage emotionally with cinema, how movies invite us to feel empathic connections with characters, and how our affective experience shapes the ways we interpret information. Topics will include the rhetoric of disgust, the paradox of horror, the structure of empathy, and the representation of emotions on screen. Films will include Get Out, Inside Out, The Fault in Our Stars, Interstellar, and The Hurt Locker.

Components: Lecture(Online)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

Scripting the Presidency

This course looks at the depiction of the American presidency in film and television. Students will also workshop a TV pilot script themed around US politics.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 359(3) Course ID:017271

Virtual Reality: Storytelling and Spaces

Filmmaker Chris Milk claims Virtual Reality is the ultimate empathy machine. Other film/video content producers have averred it is the future of digital storytelling. Is it? In this course, Media and Communication Studies students partner with Architecture students to explore how this technology is used to tell the story of a space/location, and whether it can be an effective and enduring mode of storytelling. Students will learn from each other's creative practice, and build upon their digital skill sets. Equips students with introductory knowledge of a state-of-the-art technology, focusing on 360 degree filmmaking, allowing them to better compete in the job market.

Components: Lecture

MDIA 360(3) Course ID:010529

Popular Culture

This course will explore the relationships between popular culture forms and the social contexts in which they originate. Readings and discussions will address the establishment of cultural hierarchies; the industrialization of cultural production; changing patterns of work, leisure, and consumption; the role of race, gender, and class within popular culture; as well as the rise of mass and niche markets.

Components: Lecture

Enrollment Requirements: MDIA 201 or department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 361(3) Course ID:016663

History of Popular Music

This course examines the histories of American popular music, specifically, the economic, technological, and social dynamics of this cultural form. It will examine music's role in debates over "the popular," its status as an emergent cultural industry, its relationship to technologies of its production, reproduction, and distribution. Finally, particular attention will be paid to the cultural uses of music by different communities at distinct historical moments.

Components: Lecture

MDIA 362(3) Course ID:019177

Friendship in Film and Media

This course explores the recent rise of depictions of friendships in film and media, reflecting a shift away from much early- and mid-twentieth-century film and TV, where romantic relationships were often central and naturalized.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 366(3) Course ID:015525

American Humor

Interdisciplinary study of American humor through history, in various media. Diverse examples are analyzed with attention to literary models, rhetorical and aesthetic techniques, regional and ethnic traditions, and humor as a reflection of culture. Same as ENG 366.

Components: Lecture

MDIA 381(3) Course ID:002199

Photography in the Digital Age

This course introduces students to the transition from photo-chemical to digital photography. Students will study the development of photography in the 19th and 20th centuries as an instrument of communication, persuasion, and aesthetic expression. Topics for discussion will include the work of prominent photographers, the uses of photography, and the questions posed by digitization.

Components: Lecture

Enrollment Requirements: MDIA 201 or department consent

Arts & Sciences - Media & Communication Studies - Subject: Media & Communication Studies

MDIA 384(3) Course ID:008747

Video Art

An introduction to creation of video for the world wide web, focusing on conceptualization and aesthetics. Adobe Premiere software is the primary tool. Same as ART 384.

Components: Lecture

Enrollment Requirements: MDIA 201 & MDIA 302

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 385(3) Course ID:016118

Digital Video Editing

This course introduces students to non-linear editing with Adobe Premiere Pro while exploring visual storytelling and audio-visual editing principles. Students learn about professional post-production practices by studying editing, sound mixing, basic special effects, professional workflows and media management. Students apply these techniques to several provided audio-visual projects. There is an emphasis on storytelling techniques through examining story and sequence structure in fiction and non-fiction films.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

MDIA 392(3) Course ID:013127 Department Consent Required

Digital Media Cultures

This course explores historical cases and contemporary developments in new media practices, technologies, and theories. Students will be introduced to the key concepts and critical tools for understanding and critically engaging new media. Students actively participate in producing and examining blogs, wikis, various social networking applications, and other forms of emerging media. Whether you just want to understand more about the cultural meaning(s) of the application through which you live your Facebook life, or whether perhaps you've been following events in Iran lately and are fascinated by the roles new media have played in the election and aftermath, this course may be for you. Non-majors may enroll with department consent.

Components: Lecture

Enrollment Requirements: Media Studies majors only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 393(3) Course ID:013345

Special Topics in New Media

Course focuses on a specific topic in new media studies (e.g., new media and transnational politics, new media epistemology, the mobile screen) as determined by instructor.

Components: Lecture

Enrollment Requirements: MDIA 201 or department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 395(3) Course ID:012831

Lincoln in Literature and Film

Originally developed as part of the 2009 bicentennial "Lincoln semester" in the School of Arts & Sciences, "Lincoln in Literature & Film" focuses imaginative engagements with Lincoln's life and image by poets, novelists, playwrights, orators, essayists, visual artists, sculptors, composers, documentarians, and filmmakers. Selected works in various media are analyzed in relation to Lincoln's biography, the history of his time, and American culture as it has evolved over the past 150 years. Students should develop critical and analytical abilities and an understanding of the imaginative uses of history.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1), BLACKOUT CURTAINS(1)

MDIA 399(3) Course ID:005631

Junior Seminar in Media Studies

A research and writing seminar in the critical study of culture and media. Drawing on the conceptual foundations established in MDIA 201 and MDIA 202, students design research projects using primary and secondary sources. For junior majors only.

Components: Seminar

Enrollment Requirements: MDIA 201 & MDIA 202; Open to Junior MDIA concentrators only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America

Arts & Sciences - Media & Communication Studies - Subject: Media & Communication Studies

MDIA 403(3) Course ID:005634

Advanced Video Production

Allows qualified students to work as a team, under close supervision of the instructor, to produce a high-quality short video. Prerequisite: MDIA 402.

Components: Lecture

Enrollment Requirements: MDIA 312 and MDIA Concentrators Only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 412(3) Course ID:008847

Special Projects in Media Production

In this course students with some experience in media video production have the opportunity to undertake their own advanced video projects under faculty supervision. The course may focus, for example, on the production of short, social-issue documentaries, or it may ask students to address social issues by consulting for or educating off-campus "clients." Prerequisite: MDIA 402 or equivalent experience.

Components: Lecture

Enrollment Requirements: Media Studies majors only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 417(3) Course ID:015526

Researching Media History: Discovering Cultural History at the Library of Congress

"Students focus on learning historical research methods, utilizing primary documents, sound materials, and digital humanities tools at the Library of Congress, toward the development of an original publication-length paper on broadcasting, film, or communications policy history. With the aid of the instructor and designated archival staff members, students craft proposals and writing samples useful for applications to film and media, communications, or cultural history graduate programs, as well as think tanks, research agencies, and content development fields."

Components: Lecture

Course Equivalents: HIST 348B, HIST 517

MDIA 419(3) Course ID:012794

Lincoln's Eloquence

This course surveys Lincoln's accomplishment as a writer and public speaker, examining his rhetorical methods and practices from youthful attempts at poetry, to his career as a political lecturer, debater, and letter-writer, to his justly famous Presidential addresses. Students read sources that influenced Lincoln's style, undertake close readings of his speeches in their historical context, and examine the legacy of Lincoln's eloquence in American political rhetoric.

Components: Lecture

Enrollment Requirements: MDIA 201 or MDIA 301 or Departmental Consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 420(3) Course ID:009008

American Political Rhetoric

A study of speeches that have made history in America, examining them from the standpoint of rhetorical theory and attending to their historical context. Same as ENG 520.

Components: Lecture

Enrollment Requirements: MDIA 201 or MDIA 301 or Departmental Consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 424(3) Course ID:008742

The Rhetoric of Advertising

Examines evolving strategies of persuasion in advertising, in the context of its social history and from a variety of critical perspectives. Same as ENG 524.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MDIA 430(3) Course ID:008520

The Rhetoric of Propaganda

Examines propaganda as a concept and practice distinct from other forms of political, religious, and cultural persuasion. Drawing on theoretical approaches from classical arts of rhetoric to 20th-century theories of mass communication, students seek grounds for the critical understanding of propaganda and its political and cultural functions. Same as ENG 530.

MDIA 459(3) Course ID:005642

Non-Fiction Film & Media

When John Grierson defined the documentary as the "creative treatment of actuality," in 1926, he was thinking only of film. But the documentary mode has long been utilized across media, from the late 19th century advocacy journalism of Jacob Riis to Craig Gilbert's 1973 reality television series An American Family to the selfies that circulate on social media. In this class, we will consider the persistence and pervasiveness of the documentary mode in the past century and a half. By surveying key developments in documentary film, and its historical, theoretical, and ethical implications, we will lay the groundwork for thinking critically about non-fiction media in its current and past forms.

Components: Lecture, Screening

Arts & Sciences - Modern Languages - Subject: Arabic

ARAB 101(4) Course ID:014285

Introduction to Modern Standard Arabic

This introduction course to Modern Standard Arabic (MSA) uses video-based course materials and focuses on developing proficiency in the standard written Arabic language, as well as formal spoken Arabic understood by educated speakers across the Arab world. The course begins with learning the script and the sound system using Alf-Baa as a core text. The book simultaneously introduces vocabulary so that students can begin performing dialogues and other activities from the first week. After the alphabet is covered, students complete the first chapters of Al-Kitaab Part 1 in which more grammar and vocabulary are introduced at a faster rate to build the foundation for general communicative competence and greater cultural awareness. The course will meet five days a week.

Undergraduate Language courses 101-113 are subject to an Instructional Fee at the time of registration. For

ARAB 102(4) Course ID:014512

Elementary Modern Standard Arabic II

The second semester of the first-year Modern Standard Arabic requires successful completion of ARAB 101, or the equivalent exposure to Modern Standard Arabic. The course continues to use videos and texts centered around topics in Al-Kitaab Part 1. Students strive to develop a stronger foundation in all four skills: speaking, listening, reading, and writing. The class will also include some exposure to the Damascene/Levantine colloquial to better understand how Arabic is used in daily life. In addition to traditional textbook exercises in Al-Kitaab Part 1, students will perform skits, write short essays and letters, participate in role plays, and undertake other interactive activities throughout the semester. The course will meet five days a week.

ARAB 103(4) Course ID:014513

Intermediate Modern Standard Arabic I

Second-year Arabic is open to students who have successfully completed one full year (two semesters of Elementary Arabic) or who have had an equivalent exposure to Modern Standard Arabic. Students will acquire more vocabulary and usage for everyday interactions, as well as skills that will allow them to read and analyze a wider range of texts in Arabic, including course schedules and travel itineraries. In addition to completing Al-Kitaab Part 1 and traditional textbook exercises, students will write short essays, deliver presentations, and participate in role plays, dialogues, and other interactive activities throughout the semester. Through songs, videos, and films, students will become more familiar with the Damascene/Levantine colloquial, enhancing their ability to communicate with educated native speakers. ARAB 103/104 requires participation in three cultural activities per semester. The course will meet four days a week.

Enrollment Requirements: ARAB 102 (C- or better) or Level 3 Placement

ARAB 104(4) Course ID:014511

Intermediate Modern Standard Arabic II

The second semester of the second-year Modern Standard Arabic course is open to students who have successfully completed ARAB 103 (three semesters of Arabic or the equivalent exposure). Students will begin Al-Kitaab Part 2 to continue acquiring vocabulary and usage for everyday interactions. They will also learn more skills enabling them to read and analyze a wider range of texts, including news articles and longer narrations in the past, present and future tenses. In addition to the traditional textbook exercises in Al-Kitaab Part 2, students will write short essays, deliver presentations, and participate in role plays, dialogues, and other interactive activities throughout the semester. Through more songs, videos, and films, students will become more familiar with the Damascene/Levantine colloquial, enhancing their ability to communicate with educated native speakers. Language and Culture Immersion in Arabic

This one-credit course is designed to help students reinforce and expand their language skills while studying cultural and social issues in the Arabic speaking world. By refreshing students' skills, it enables them to move on to a desired language course.

Components: Practicum

ARAB 203(3) Course ID:015566

Advanced Composition and Conversation I

Third-year Arabic is open to students who have successfully completed two full years of Arabic study (four semesters of Elementary Arabic and Intermediate Arabic) or who have had an equivalent exposure to Modern Standard Arabic. It concentrates on developing advanced proficiency in all four basic skills: speaking, listening, reading, and writing, in addition to cultural competency. The course will also include more extensive exposure to dialectical variation in the Arabic language, while focusing particularly on the Levantine/Damascene dialect. Students will be challenged to acquire the vocabulary and grammatical structures necessary to conduct more complex interactions with native speakers. They also develop stronger reading skills to approach and analyze a wider range of texts, including political, social, and religious texts, as well as excerpts of literary works. Each chapter has a thematic focus, such as migration phenomena, popular holidays and celebrations, bargaining in the market place, and marriage practices. The course will

Media Arabic

Do you want to learn how to comfortably discuss current events and comment on the news in Arabic? The course Media Arabic provides students with the vocabulary and discourse structures necessary to critically analyze and speak about topics in today's Arabic media coverage. In addition to completing exercises in an Arabic media textbook, students will listen to real news programs and radio broadcasts, explore blogs, and examine articles from Arabic magazines and newspapers. Al-Jazeera, Al-Arabiyya, BBC Arabic, Al-Ahram, Al-Quds, and Al-Arab are just a few of the sources from which authentic mass media materials will be analyzed and discussed. While the course will be taught in Modern Standard Arabic, Arabic dialects will also be incorporated into many of the multimedia exercises. This course will be co-taught with Nabiha Al-Khatib, CUA's Fulbright Language Teaching Assistant. It fulfills Islamic World Studies certificate and minor requirements.

Development and Humanitarian Interventions in the Middle East, Africa, and Beyond

What actors are most pivotally shaping development in the Middle East, Africa, and beyond, and how have their missions evolved over time? In natural disasters and man-made crises, how are humanitarian aid interventions from multilateral institutions, like UN agencies, comparing with NGOs and other groups. Through readings highlighting development projects and humanitarian crises in different regions of the world, this course will take a look at three main models of development. Among the topics of discussion, we will consider health care, gender equity, economic empowerment, and refugee movements. This course is taught in English only. It can count as an anthropology course (Anthro 213). It can also fulfill humanities credits and Islamic World Studies credits.

European Politics

European Politics is designed to help students develop a better understanding of political institutions, actors and processes in Europe, both within selected nation states as well as in the context of European Union integration. In addition, the course will focus on prominent issues of contention and areas of cooperation, also as they relate to Europe's role in global affairs.

Components: Lecture

Course Equivalents: POL 202

EURO 203(3) Course ID:014830

European History

The course discusses the most important developments and key events in European History since the French Revolution, focusing on politics, society and culture. We will look at the reasons, the history, and the consequences of 1789, the era of conservative restoration, liberalism, nationalism, the conflicts which lead to WWI, the interwar period, and the reconstruction of Europe after 1945, and finally, the process of European integration since the 1950s. Students will also learn about the major theories of and debates on modern European history. The course consists of lectures, in-class discussions of required readings and primary sources.

Components: Discussion, Lecture

EURO 210(3) Course ID:015841

French-German Couple and the Fabric of Europe

This course is about the crucial role of France and Germany in the founding and development of the European Union. Students will study how after three disastrous wars in less than a century, the friendly cooperation between the two nations in different domains (culture, economy, politics) has managed to secure peace and harmony in a continent previously shattered by conflicts. Taught in English. No prerequisites. Meets Humanities requirement.

Components: Lecture

EURO 222(3) Course ID:016015

Modern Europe From 1789 until today

This course provides an introduction into European History since the French Revolution. It focuses on the main events, and developments in politics, society and culture. The course consists of lectures, in-class discussions of required readings and primary sources. Enrollment restricted to freshmen and sophomores.

Components: Discussion, Lecture

EURO 310(3) Course ID:015512

The Idea of Europe. European Integration Since 1914

After WWII, and in the context of the Cold War, Europeans witnessed the transnational integration process that resulted in the foundation of the European Union (EU) in 1992. However, the road to the EU was long and cumbersome, and beset by conflicts and perpetual crises. This course takes a historical approach by putting the process of European identity building at the center of its attention. The first part of the course provides an overview of the history of European integration since 1914. This part is followed by a second that focuses on more current issues related to the problem of creating an EU identity.

Arts & Sciences - Modern Languages - Subject: French

FREN 101(4) Course ID:000213

Elementary French I

Designed for students with little or no prior experience with French. Introduction to the basic principles of language necessary for written and oral communication. Students use fundamental vocabulary and grammar structures to talk about daily life and gain insights into aspects of Francophone culture through simple readings and Internet activities. Students who took the language in high school for more than one year MUST take the language placement test before registering for this or any other language course in order to receive proper credit.

Undergraduate Language courses 101-113 are subject to an Instructional Fee at the time of registration. For current Tuition and Fees visit <http://enrollmentservices.cua.edu/Student-Financial-Information/Costs.cfm>.

Components: Lecture

FREN 102(4) Course ID:000214

Elementary French II

Continuation of French 101. Students talk and write about the present, past and future and continue to explore Francophone culture through readings and Internet activities. Prerequisite: C- or better in French 101, appropriate placement score or equivalent.

During the summer this class meets five times a week.

Undergraduate Language courses 101-113 are subject to an Instructional Fee at the time of registration. For current Tuition and Fees visit <http://enrollmentservices.cua.edu/Student-Financial-Information/Costs.cfm>.

Components: Lecture

Enrollment Requirements: FREN 101 (C- or better) or Level 2 Placement

FREN 103(3) Course ID:000183

Intermediate French I

Students build their communication skills by discussing and writing about topics drawn from readings and films focused on Francophone culture. Prerequisite: C- or better in French 102 or 112, or equivalent.

During the summer class meets five days per week.

Undergraduate Language courses 101-113 are subject to an Instructional Fee at the time of registration. For current Tuition and Fees visit <http://enrollmentservices.cua.edu/Student-Financial-Information/Costs.cfm>.

Components: Lecture

Enrollment Requirements: FREN 102 or FREN 112 (C- or better) or Level 3 Placement

FREN 104(3) Course ID:000186

Intermediate French II

Students develop the skills necessary to understand literary and cultural texts and films in French as they consider contemporary questions involving the evolution of identity in the Francophone world. Includes vocabulary expansion and integration and refinement of grammar. Prerequisite: C- or above in 103 or equivalent.

During the summer class meets five days per week.

Undergraduate Language courses 101-113 are subject to an Instructional Fee at the time of registration. For current Tuition and Fees visit <http://enrollmentservices.cua.edu/Student-Financial-Information/Costs.cfm>.

Components: Lecture

Topics: Conversation and Culture, Adventures in Reading

Enrollment Requirements: FREN 103 (C- or better) or Level 4 Placement

FREN 112(4) Course ID:000223

Review of Elementary French

Designed for students who have two or more years of high school French and for those whose study of French has been interrupted for a period of time. Intensive review course that combines the objectives of French 101 and 102 in one semester. Prerequisite: Appropriate score on the SAT II or the CUA placement test.

Undergraduate Language courses 101-113 are subject to an Instructional Fee at the time of registration. For current Tuition and Fees visit <http://enrollmentservices.cua.edu/Student-Financial-Information/Costs.cfm>.

FREN 203(3) Course ID:000180

Perspectives on French Literature and Culture

French 203 provides a transition between the language requirement (101-104) and advanced courses (300+). We will focus on consolidating previously learned language skills through discussions of texts, films, and contemporary events, debates, writing workshops, and grammar review.

Components: Lecture

Enrollment Requirements: FREN 104 or Placement Level 5

FREN 204(3) Course ID:000182

Advanced French II: Introduction to French Cinema

French 204 is the continuation of French 203. In this semester, we will focus more narrowly on cinema and the introduction of advanced grammatical concepts.

Components: Lecture

Enrollment Requirements: prior enrollment in FREN 104 or FREN 203 or placement in French level 4 or 5

FREN 205(3) Course ID:014610

French Conversation

This course is designed to develop conversation skills with an emphasis on accurate pronunciation, new and varied vocabulary, and proper expression. Various media will be used, such as film clips, newspaper articles and modern Francophone music. The ultimate goal is to enable students to improve their language skills significantly through a better understanding of France and the Francophone world. Course conducted entirely in French. Prerequisite: French 104.

Components: Lecture

Enrollment Requirements: FREN 104 or Level 5 Placement

FREN 206(3) Course ID:017407

Advanced French Professional Focus

French 206 provides a transition between the language requirement (101-104) and advanced courses (300+). We will consolidate knowledge of French language and culture, extending this into a professional and international service context, while focusing on projects directly related to the students' field of study. Equivalent to French 203.

Components: Lecture

FREN 210(3) Course ID:015842

France and Germany and the Construction of the European Community

The course is about the crucial role of France and Germany at the end of WWII, leading to the development of the European Community. Students will study the international context at the time of the cold war from and within which the European Union was born. They will explore how after three wars in less than a century, the french-German cooperation in culture, economy, politics, has managed to secure peace and harmony in a continent previously shattered by conflicts.

Taught in English. Based on lectures, class discussions and video material.

Components: Lecture

FREN 212(3) Course ID:019182

Global Perspectives on the Family in Contemporary Theater

This course introduces students to portrayals of family life in contemporary theater from around the world. We will examine the ways in which the study of the family through this medium informs us about ourselves and our roles within society. Particular attention will be paid to the works of women playwrights as well as playwrights from France, Oceania, Ireland, Morocco and South Africa.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

FREN 213(3) Course ID:014352

Topics in French-American Relationship

This course will compare the French and American electoral systems. It will address different aspects such as: the number and structure of the political parties, the financing and the ruling of the campaigns, the electoral process and the role and use of the media - TV ads, advertising, debates - in the two countries. In the last part of the course, students will reflect about the notion of sovereignty of the people in the two oldest democracies of the Western world.

Food Culture in France (French Discussion Section)

This is a French-language discussion section for French 316, "Food Culture in France." Activities will include discussions (of French language excerpts, topics from class, etc.), debates, role-plays, etc. Can only be taken in conjunction with French 316.

Components: Discussion

Enrollment Requirements: FREN 300 or FREN 301

FREN 217(3) Course ID:008972

Versailles: The Architecture of Power

An examination of the relationship between cultural forms (architecture, art, music, opera, ballet, literature, etc.) and power at the court of Louis XIV. In addition to studying primary texts and cultural artifacts, we will read the work of modern historians and watch recent films that depict life during this fascinating period of French history. Discussion and readings in English.

Components: Lecture

FREN 218(3) Course ID:018882

Out of Africa: Diversity, Inclusion, and Exclusion in Francophone Literature and Film

What can French-speaking Africa tell us about racism, xenophobia, injustice, and respect during the colonial and post-colonial periods? What kind of connections can we make to African American culture in the United States? FREN 218 focuses on a selection of texts and films (in English translation) from former French colonies in Northwest and West Africa that describe experiences of discrimination based on language, race, ethnicity, and gender. Particular attention will be paid to the socio-political, cultural, and historical contexts in which each piece was created to challenge ideas about freedom and justice, as well as knowledge and wisdom. Fulfills Explorations in Literature requirement, pending approval.

Components: Lecture(Online)

Room Requirements: ONLINE(1)

FREN 220(3) Course ID:016685

Pirates of the Caribbean in Atlantic Literature

Whether as freebooters, buccaneers, corsairs, privateers, marauders, swashbucklers or sea rovers, pirates have long captured the Atlantic imagination. But why? This course interrogates the concept of piracy from its earliest manifestations to our present day. We will focus primarily on the "golden age" of Atlantic piracy in the 17th and 18th centuries and its artistic re-imagining in the 19th and 20th centuries. Taught in English. Fulfills humanities and literature requirements. Meets Explorations in Literature requirement.

Components: Lecture

FREN 240(3) Course ID:014307

Colonization & Immigration

This course examines the difficulties encountered by the French governments in dealing with the African immigrant populations coming from the former colonies after the Independence.

Main topics: 1. The French notion of laïcité. 2. The French Muslim community and the secular state. 3. Comparison between French and American policies regarding immigration and minorities. 4. Social integration and multiculturalism.

Course methodology: introductory lecture, class discussions, movies reviewing and analysis, students' oral presentations.

Taught in English.

Components: Lecture

FREN 242(3) Course ID:016774

From Earth to the Moon: Rockets, Space Travel and Imagination in Fren. and Francophone Lit. and Film

What has compelled scientists and poets alike to look up into the sky and dream of walking on the Moon? In our search for an answer, we will travel back to the 17th century to witness the dawn of science-fiction, then traced the history of space travel through novels, films, treatises, news articles, presidential speeches and graphic novels of French and Francophone origin. We will discuss the ethics of space travel, the role of space travel in literature and in the popular imagination, and what the lure of the unknown teaches us about human nature. This class, taught in English, fulfills humanities and literature requirements. Meets Explorations in Literature requirement.

Politics & Culture in France & United States

This course is intended to introduce students to the great sweep of political history and culture in two self-styled exceptionalist countries that share so many political values yet are so fundamentally different. Prior introductory courses in Politics and French are helpful but not required; no prior knowledge is assumed. The course will also provide background for an anticipated future summer short-course in Paris.

Components: Lecture

FREN 275(3) Course ID:015005

The French "Exception" from Clovis to Hollande

The purpose of this course is to show that France has always considered itself a privileged country, apart from all others in the West, and endowed with a universal destiny. Following an interdisciplinary approach, the theme of Exceptionality will be developed along French history through examples in popular culture, literature and arts, politics and society. The course will be taught in English. No prerequisites. Counts for humanities credit.

Components: Lecture

FREN 279(3) Course ID:016456

Borders, Exiles, and War in the Middle East

Considering current unprecedented influxes of refugees across borders in the Middle East, this course examines the concepts of borders, exile, and war in this politically scarred region. Through a variety of Francophone texts and films in translation, students explore the culture and history of this region and examine the following themes: identities in conflict, the representation of History and memory, and the implications of reconciliation. Taught in English. Fulfills humanities and literature requirements.

Components: Lecture

FREN 300(3) Course ID:009546

Thinking Critically: Literature, Film, and Media in the French-Speaking World

French 300 focuses on the acquisition of analytical skills through close reading and textual analysis. Here "text" is used in its broadest sense; students will become familiar with and able to analyze a host of literary genres and types of texts, from novels and plays to political tracts, propaganda, paintings and film. In addition to honing students' analytical skills, this course is designed to introduce students to some of the key texts in French and Francophone literature and culture. Taught in French.

Components: Lecture
Enrollment Requirements: FREN 203 & FREN 204 or level 5 placement

FREN 301(3) Course ID:000224

Society and Culture in the French-Speaking World

This course provides students with the necessary historical background and social and cultural context to analyze contemporary issues in the French-speaking world. Students will study the appropriate historical and contextual framework in order to critically analyze contemporary issues. By completing a series of modules students will become familiar with both the key historical events and the contemporary debates in the French-speaking world. Required for majors and recommended for any students who will enroll in 300-level and higher courses. Fulfills humanities and literature requirement. Prerequisite: 203-204, 211.

French for the Professions

This course meets the needs of students aiming to work or volunteer in a French-speaking country or to use their knowledge of French in a professional capacity. It will provide students with the cultural competence and vocabulary to communicate and successfully integrate in a professional setting. It will offer a foundation in multiple fields, such as business, international service and diplomacy. Students will also learn practical job seeking skills: How to search for jobs or internships, write resumes, and apply and interview in French.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

FREN 306(3) Course ID:001431

Contemporary France

A study of and a reflection on the main social and cultural issues in contemporary France, from the sixties to the present. Material will come from different sources that reflect ways of life and mentalities in French society: newspapers, fashion, movies, advertising, music, etc. Students' assignments will include an oral presentation, an active contribution to course discussion, and a term paper.

Components: Lecture

Enrollment Requirements: FREN 300 or FREN 301

FREN 328(3) Course ID:011942

Virtuous Minds from the Sun King to the Enlightenment

This course offers an introduction to the art, literature, history, and culture of pre-revolutionary France with a focus on the representation of virtue and the role that literature plays in teaching, policing, and rebelling against, the mores of Early Modern French society. Particular attention will be paid to writers who define the French canon, such as Molière, Racine, Corneille, Rousseau and many others.

Components: Lecture

FREN 330(3) Course ID:005726

Practical Phonetics

An overview of French pronunciation, phonetics, and oral reading. By means of oral practice and written exercises, students enhance their awareness of the sound system of French and, as a result, improve their own pronunciation, making it more authentic and eliminating serious errors typically made by non-native speakers. Recommended for subconcentrators and Modern Languages/Secondary Education concentrators.

Components: Lecture

Enrollment Requirements: FREN 300 or FREN 301

Special Topics Seminar

This seminar is an intensive research seminar that focuses on a topic related to French literature[s] and culture[s]. The seminar will help students develop strong research skills (identifying a problem, defining a thesis, establishing a coherent methodological approach, selecting relevant primary and secondary sources, mastering MLA style). Students will also practice to prepare and deliver scholarly oral presentation and prepare a 10-pages seminar paper. The specific course content varies. Required for all graduating seniors. Prerequisite: Graduating senior or instructor's permission. May be repeated with different content for credit.

Components: Seminar

Enrollment Requirements: FREN 300 and FREN 301

FREN 489(3) Course ID:015002

Research Seminar

Students will write a senior thesis in French, at least 20 pages in length, excluding title page and bibliography. This seminar will continue to strengthen students's research skills learned in FREN 488, and further develop argumentation strategies, use of textual support, application of critical and theoretical literature, editing techniques, and oral presentation style. After completing the senior comprehensive examinations, students will continue to refine their thesis and prepare for a formal public oral presentation in French of their research project at the end of the semester. The evaluation will be based on classwork, weekly assignments, the final version of the senior thesis, and the formal oral presentation. Required for senior concentrators in French. Open to senior concentrators only.

Components: Seminar

Enrollment Requirements: FREN 488

FREN 495(3) Course ID:014999

French Internship

FREN 495 is a for-credit internship open to French studies majors. The course is designed to allow students to apply their knowledge of the French language and their cultural knowledge in the workplace while further developing their competence. French for Business is strongly recommended. Students must get approval from the French academic advisor in the semester prior to taking the course in order to begin plans for the internship. A minimum of 100 hours in the internship are required plus weekly meetings with the internship coordinator.

Components: Internship

Enrollment Requirements: FREN 300 and FREN 301

Berlin in Literature and Film

For the last 150 years, the city of Berlin has been the political and cultural center of Germany and Europe. The course explores the turbulent history of the city through its architecture, literature, films, and the creative arts. Discussions will focus on Berlin as the capital city (Prussian monarchy, Weimar Republic, Third Reich, and contemporary Germany); the divided and reunited city; Berlin as a meeting point for diverse religions, ethnicities, and ideologies; and the city's multicultural history. An optional one-week trip to Berlin during spring break 2018 will be available for interested students. The course will be taught in English; counts as a literature, humanities, and European Studies elective.

GER 255(3) Course ID:018663

Mysteries, Murders, and Thrillers: German Crime Fiction in the Modern Context

The course, which is taught in English, examines the crime fiction genre in the German context. Students explore how the German-speaking world established many of the standards used in crime fiction narration and how German history and politics continue to shape the genre. Crime fiction reveals how society approaches notions of justice, socioeconomic class, conflicts between nation-states, gender, politics, and redemption. All readings and class discussion are in English. No prerequisites.

Exile, Trauma, and Displacement in German Literature

This course explores notions of exile, refugee status, and the crossing of political and cultural boundaries to and from the German-speaking countries in the 20th and 21st centuries. Course readings focus on personal narratives and literary works that were written at a time and place when Germany, Austria, and Switzerland both displaced and welcomed those seeking to escape persecution and violence. The course will explore migration in a historical, cultural, and literary perspective. Taught in English. Satisfies requirements for humanities and literature.

Components: Lecture

GER 300(3) Course ID:015848

Literature, Film, and Media in the German-Speaking World

German 300 focuses on the acquisition of analytical skills through close reading and textual analysis. Here ξ text ξ is used in its broadest sense; students will become familiar with and able to analyze a host of literary genres and types of texts, from novels and plays to political tracts, propaganda, paintings, and film. In addition to honing students' analytical skills, this course is designed to introduce students to some of the key texts in German-language literature and culture. This course is required for majors and recommended for any student who will enroll in 300-level and higher courses in German.

Components: Lecture
Enrollment Requirements: GER 203 and GER 204 or level 5 placement

GER 301(3) Course ID:001512

Society and Culture in the German-Speaking World

This course provides students with the necessary historical background and social and cultural context to analyze contemporary issues in the German-speaking world. Students will study the appropriate historical and contextual framework in order to critically analyze contemporary issues. By completing a series of modules students will become familiar with both the key historical events and the contemporary debates in the German-speaking world. Required for majors and recommended for any students who will enroll in 300-level and higher courses. Fulfills humanities and literature requirement. Prerequisite: 203 or 204.

Components: Lecture
Enrollment Requirements: GER 203 and GER 204 or level 5 placement

GER 303(3) Course ID:018468

German for the Professions

This course builds skills for students aiming to work where German is needed in a professional capacity in the United States or abroad. It will provide students with the cultural competence and vocabulary to communicate and successfully integrate in a professional setting. German for the Professions will offer a foundation in multiple international careers, such as business, science, the humanities, and foreign service. Students will also learn practical skills for the daily office environment, develop presentational skills especially for the interview setting, and draft internship and job applications.

Components: Lecture(In Person)

Special Topics Seminar

This seminar is an intensive research seminar that focuses on a topic related to German literature[s] and culture[s]. The seminar will help students develop strong research skills (identifying a problem, defining a thesis, establishing a coherent methodological approach, selecting relevant primary and secondary sources, mastering MLA style). Students will also practice to prepare and deliver scholarly oral presentation and prepare a 10-pages seminar paper. The specific course content varies. Required for all graduating seniors. Prerequisite: Graduating senior or instructor's permission. May be repeated with different content for credit.

Components: Seminar

Topics: Identity in Context: Literature and Art

Enrollment Requirements: GER 300 and GER 301

GER 489(3) Course ID:015524

Senior Research Seminar

Students will write a senior thesis in German, at least 20 pages in length, excluding title page and bibliography. This seminar will continue to strengthen student's research skills learned in GER 488, and further develop argumentation strategies, use of textual support, application of critical and theoretical literature, editing techniques, and oral presentation style. After completing the senior comprehensive examinations, students will continue to refine their thesis and prepare for a formal public oral presentation in German of their research project at the end of the semester. The evaluation will be based on classwork, weekly assignments, the final version of the senior thesis, and the formal oral presentation. Required for senior concentrators in German. Open to senior concentrators only.

IRSH 101(4) Course ID:015844

Irish Language and Culture I

Irish 101 is a foundational course for the certificate in Irish Studies at CUA. This course provides students with a general introduction to both the Irish language and to aspects of traditional and contemporary Irish culture. Students learn the fundamentals of the Irish language, primarily covering topics which enable them to talk about themselves; where they come from and live, their family and friends, and their hobbies and interests. Students are introduced to basic grammatical structures and focus on oral communication in the present tense.

Components: Lecture

IRSH 102(4) Course ID:016050

Beginners Irish Language & Culture II

Students build upon the fundamentals of the Irish language acquired in the first semester and cover a range of themes related to everyday life. Students learn to use more complex grammatical and syntactic structures, developing their command of Irish in four essential areas of language learning: oral, aural, reading and writing. Topics of both a traditional and contemporary nature are explored through a variety of media including simple poetry and rhyme, music and song, as well as storytelling and film. Prerequisite: C- or better in 101

Components: Lecture

Enrollment Requirements: IRSH 102 or placement level 2

IRSH 103(3) Course ID:015845

Irish Language and Culture III

This course aims to build the necessary confidence and language skills to communicate in Irish in everyday situations. The emphasis is on developing speaking and listening skills, while also providing students with the opportunity to read and write the language. At the conclusion of the course, students will be able to talk about everyday life in the past, present and future tense. They will have a greater understanding of the dialects of the Irish language, as well as various aspects of grammar. Students will improve their accuracy and fluency, as well as building upon existing vocabulary. Students will also add to their reading and writing skills.

Components: Lecture

Enrollment Requirements: IRSH 102 or placement level 3

IRSH 104(3) Course ID:016051

Lower Intermediate Irish Language & Culture

Students further develop their communication abilities by discussing and writing about various topics drawn from a variety of sources including literature and film. Includes vocabulary expansion and integration and refinement of grammar. Prerequisite: C- or better in 103.

Irish 104 fulfills one of the electives in the Certificate in Irish Studies

Components: Lecture

IRSH 110(3) Course ID:016308

Irish Language and Culture

IRSH 110 is a 3 credit summer program which will take place over the course of two and a half weeks in Ireland at two locations: Cork and Kerry. There are two main components to the course. The first is a one-week immersion course in the Irish language in the Irish-speaking region of Ballyferriter in County Kerry. The second component of the course will take place in Cork city and its surrounds where students will participate in group work and field trips to sites of historical and cultural significance in the region. No previous experience with the Irish language is required. Fulfills Humanities requirement.

Being Irish-Ser Irlandés: Irish Identity in Caribbean and Latin American Literature

In this class, we examine representations of the diasporic Irish within the varied literary imaginaries of the Caribbean and Latin America and critically explore how these representations create a literary paradigm surrounding concepts of "Irishness." The course begins with a racialized historical overview of the Irish commencing with the English conquest of Ireland and following up to modern day. We then relate observations elucidated by this overview to current notions of Irish identity while specifying and analyzing many of the diaspora spaces to which the transatlantic Irish arrived. Students will read a selected corpus of literary works by Erna Brodber, Rodolfo Walsh, Carl Krueger, Zoé Valdés, among others, (in English translation for texts written in Spanish) that will be put into theoretical dialogue with scholars in the field of liminal studies such as Victor Turner and Sandor Klapcsik. The course is taught in English and satisfies the requirements for HUM and LIT in the current curriculum.

IRSH 306(3) Course ID:016293

Dublin & the Invention of Ireland

From its origin as a Viking outpost to its emergence as "a big village and a dirty village where gossip reigns supreme," Dublin has been central to the development of Ireland, epitomizing the country's ability to continually invent and re-invent itself according to the demands of each new age. In this course we consider Dublin's linguistic, religious, and political complexities through the lens of the city's distinguished literary history. Topics include medieval Dublin and the Pale, the Georgian city and the Protestant Ascendancy, the Irish Literary Revival, the Abbey Theatre, the "exile" of James Joyce, the Easter Rising, World War I and the emergence of the Irish Republic.

ITAL 130(3) Course ID:015205
Introduction to Italian Culture and Language

Italy is famous for its many contributions to the world we know today. Its art, architecture, fashion, music, literature, and film are a few of the most widely recognized. This class will overview Italian culture and history by exploring 5 key cities: Rome, Florence, Venice, Milan and Naples. Along the way, students will also get an introduction to basic Italian language in such contexts as greetings, ordering in a café and restaurant, and shopping. Primarily taught in English with basic language instruction in Italian. Fills CUA Humanities requirement.

Components: Lecture
Room Requirements: NO CLASSROOM NEEDED(1)

ITAL 203(3) Course ID:003578
Advanced Italian I: Talking About Culture

This course emphasizes the development of conversational skills, vocabulary expansion, while deepening students' knowledge of current Italian literary, social, and cultural events through the study of Marco Tullio Giordana's 2002 film The Best of Youth. It also develops effective written skills in various contexts and prepares them for written assignments in upper division Italian courses. From a cultural standpoint, students will concentrate on pivotal Italian historic events occurred in the last thirty years which they will follow as the screening of Giordana's movie progresses. Newspapers and magazines will also be part of the material. [Prerequisite: C- or better in Italian 104, appropriate placement score or equivalent.] Students will read/see these narratives with a pertinent critical approach, focusing on techniques and strategies, such as narration and summary of a story.

Components: Lecture
Topics: Rome, Italy
Enrollment Requirements: ITAL 104 or Level 5 Placement

ITAL 204(3) Course ID:008964
Advanced Italian II: Talking About Culture

An ideal follow-up of Italian 203 (but the sequence can be inverted), Italian 204 is designed to further develop language skills through discussions of texts, films (The Best of Youth but not exclusively), and contemporary events, debates, writing workshops, and grammar review, while introducing a more complex syntax, both in conversation and writing.

ITAL 210(3) Course ID:010189
Italian Women Artists

This course examines the evolution of female subjectivity in 20th and 21st century Italian culture, film, and literature from Unification and Fascism to modern Democracy through the works of major female writers and filmmakers. In the first module of the course, students study how Italian women writers Sibilla Aleramo, Anna Banti, Elsa Morante, Dacia Maraini and the Nobel prize winner for literature Grazia Deledda perceive societal changes in their novels. The second part examines such changes through the lens of female filmmakers, Cristina Comencini and Francesca Archibugi amongst others. Discussing and analyzing the literary and cinematic narratives of the Self, identity, relationships and sisterhood, gender and maternity, politics and family will be the core of our work. Taught in English. Satisfies literature and humanities requirements. Cross-listed with Media Studies MDIA 210.

Setting the World Ablaze: Italian Women's Writing from Saint Catherine to Elena Ferrante

This course surveys the evolution of female subjectivity, authorship, and cultural criticism in Italy from the Middle Ages until the present day. Through the close analysis of the work of St. Catherine of Siena, Vittoria Colonna, Elsa Morante, Igiaba Scego, and Elena Ferrante (among others), learners will explore how Italian women writers have used writing to establish their autonomy as self-saying subjects, assert their agency in the world, and advocate for more just and inclusive societies. In other words, students will assess how women utilized writing to establish and amplify their collective voice, deconstruct traditional, patriarchal discourse, and create new categories for understanding and representing the experiences of Italian women. Though specifically focused on the cultural production of women, participants will explore issues at the heart of the human condition from the perspective of gender going on to interrogate the place of both women and men in the cosmos and society. The issue of good and evil will also be pertinent to this

Social Issues in Postwar Italian Film, Photography, and Literature

This course analyzes the aesthetic explorations of the ethical issues triggered by the intensification of Italian political, social, economic, and cultural modernity in the wake of the Second World War. Participants will execute the close and active analysis of select literary, cinematic, and visual texts produced between 1940 and 1980 with a three-fold goal. First, they will assess Italian artists' engagement of the complex social contexts giving rise to their work. Secondly, they will evaluate the extent to which artists reflect in their work the monsters of their age so as to like a modern-day Perseus neutralize their adverse, crystallizing effects on both the individual and collective conscious. Learners will also be encouraged to explore a number of issues related to an artists' representation of and response to the social issues they see as plaguing the Italian society of the period. These issues include the extent to which: 1) questions at the heart of the human condition animate artists engagement of the social contexts in which they

Archaeology of Daily Life in Ancient Rome: Work and Play

This course is taught in Rome, Italy, for three weeks. The life of the ancient Romans was guided by two important concepts of Ancient Rome: otium, or leisure time, and negotium, a more structured use of time that we may associate with work of varying kinds. A good Roman life could, and often did, include both. This course will explore Roman daily life and the many activities associated with both otium and negotium. The business of ancient Rome was largely conducted in the central and market areas of the city, and we will study the ancient Roman Forum, the ancient river port in Rome and its associated features (wharves, warehouses, and rubbish heaps), as well as the ancient port city of Ostia. The leisure time of the aristocracy was noticeably different than that of the poor. The rich often spent leisure time in a relaxing environment outside of the city, such as villas, where they could pursue all types of activities deemed beneficial to the mind and body. The poor, instead, tended to stay in Rome, and spend their unstructured time at state-sponsored events and

Fascism, Racism, and War in Italian Literature

This course offers an analysis of the complex legacy of Risorgimento in the 20th century Italian nation. Immediate prospects of prosperity for the young country had to face, in fact, the reality of fascism, the rise of the figure of dictator Benito Mussolini to a public myth, racism, two wars and the period called Resistenza. By braiding the reality of historical facts and the reality of artistic artifacts, namely history and literature, students learn and examine representations of some of the most complex events leading up to the republic of 1946 and a new Constitution. Mussolini's political speeches will be analyzed and measured against the background of a young country still in dire need of a political compass, not entirely devoid, however, of the intellectual ability to reject totalitarianism as philosopher Benedetto Croce did throughout his career. Racism and resistance to the regime as evidenced by the novels by Italo Calvino and Beppe Fenoglio will constitute some of the enlightening readings of the semester along with Primo Levi's

The Myth of Childhood in Italian Cinema

The goal of this course is to familiarize students with the important theme of childhood in Italian Cinema. In fact, this topic is very frequented by Italian film makers, as the child's point of view is present in many trends and periods of Italian cinema which often utilizes literary texts as its point of departure to develop new perspectives on childhood and Italian society in its transformations. In this course, students will be offered a unique chance of analyzing the theme of childhood in mainly two periods of Italian cinema. One, the famous period dubbed as Neo-realism, will make up the first part of the semester. We will analyze films by Vittorio De Sica, Luchino Visconti, and Roberto Rossellini. Films from postmodern cinema will constitute the second and final part of the semester. In this part of the course, we will screen films by Gianni Amelio, Oscar winner Gabriele Salvatores, and Cristina Comencini. The idea behind this division is to compare and contrast these two very different cinematic expressions which originate from different periods of

ITAL 240(3) Course ID:012837

Italy and the Renaissance

In this course, students will explore a range of cultural texts representative of the period of intellectual and artistic flourishing in Italy, referred to as the Renaissance. In the aftermath of the plague and under the patronage of secular and sacred forms of power, scholars and artists in Italy began to explore the liberty and beauty of the human spirit with the goal of perfecting all aspects of the human condition. Participants in the course will read and critically analyze a selection of the work of these artists and scholars to fully appreciate the cultural legacy of the Italian Renaissance and to discern the period's profound impact on the rest of the world. These readings include those by humanists (Petrarch, Boccaccio, Pico della Mirandola, Lorenzo Valla, and Moderata Fonte), architects (Leon Battista Alberti), scientist/artists (Leonardo da Vinci), political theorists (Niccolò Machiavelli and Tommaso Campanella), artists/historians (Giorgio Vasari), and poets (Veronica Franco). Students will be encouraged to pursue their

ITAL 241(3) Course ID:017580

Motherhood in Italian Literature and Culture

This course offers an analysis of different representations of motherhood in Italian society and culture, with a specific focus on literature. The course is composed of four segments dealing respectively with the importance of the Virgin Mary as an archetypical and idealized figure of mother in art and popular culture; feminism and its struggles; the refusal of motherhood as a tool for empowering women; and the contemporary debates on fertility. The broad scope is to show how the maternal figure has been interpreted in different and sometimes conflicting ways in the Italian society of the past centuries. By braiding facts and fiction, history, literature, film and new media, students will learn to examine different representations of motherhood in the Italian society and culture. Students will visit the National Gallery of Art, engage with literary texts, films, and excerpts from new media. Taught in English. Satisfies requirements for Italian Studies, for Humanities and Literature.

The Italian American Experience; A Survey

In a country of immigrants such as the United States of America, each ethnic component reveals distinct features that construct their identity. Italian migration in the United States is studied from a historical, cultural, and literary standpoint that underscores the importance of the Italian contribution to the making of the country. The process of identity building, the condition of immigrants and the energy drawn from a new economic situation of mobility, have led Italian American artists like Pietro DiDonato and Martin Scorsese to wonderful works of fiction and poetry, film and visual arts. After a historical introduction, Italian American culture will be analyzed in films, TV series, and literature. It fulfills literature and humanities requirements. Cross-listed with MDIA. Taught in English.

Dangerous Beauty: Venice and its Treasures

If Marco Polo constitutes the symbol of Venetians, renowned interest for traveling and commerce, many foreign artists felt intrigued and bewitched by the mysterious beauty of his hometown, Venice. As it stands, Venice is not merely an Italian city, but a masterpiece that gave inspiration to many. In this course, we will enter the mesmerizing world of the city called La Serenissima (most serene), the most ancient Italian Republic and take delight in the treasures of its dangerous beauty, while listening to Antonio Vivaldi's Four Seasons and admiring Andrea Palladio's magnificent architecture. Venice is also home to one of the most acclaimed film and arts festivals in the world -the Biennale of the Arts- and we will devote attention also to this aspect of the city. There will be six movie screenings for Fall:

Urban Space As A Stage For Memory

Considering Rome as an object of study, in this course we will focus on historical and cultural memories and explore how they intersect with individual memory. What is the role of urban space in the construction of memory? How do historical and cultural memories inspire our own memories? What relationship is there between them and what dialogue is there between us and History? An interdisciplinary approach will orient our study of urban space which is to be understood not only as the past that we study, but also as a present that is active and alive and able to stimulate students to think of art and history not as entities external to ourselves, but as worlds intimately connected to the construction of our own identity.

Through lectures, site visits, and hands-on projects we will study and experience the fundamental relationship between space and time, with particular attention to the its horizontality in Rome.

Specifically, the work involved in this course will focus on two main fields of study: 1) historical and

Society and Culture in the Italian-Speaking World

This course provides students with the necessary historical background and sociocultural context to analyze contemporary socio-cultural issues in the Italian-speaking world. Through a series of intentionally sequenced modules, students will engage in a nuanced examination of select critical historical events and key contemporary debates to construct the appropriate cultural and theoretical frameworks necessary to critically analyze and properly contextualize the multifaceted experiences of the Italian-speaking world. Course themes include, and are not limited to: national identity, aesthetics, language, literature, gender, fascism, migration, modernity, political culture, historicism, European cooperation, and industry/innovation. Taught in Italian. Prerequisite: 203 or 204. Satisfies requirements for Humanities.

Enrollment Requirements: ITAL 203 or ITAL 204

ITAL 303(3) Course ID:014676

Italy and Musical Tradition

Many of the most important musical genres originated in Italy: the sonata da chiesa and sonata da camera, which gave birth to chamber music; the concerto grosso, progenitor of the modern concerto; the cantata, and the oratorio. Opera began in Italy (Florence) around 1600, and Italian preeminence in the operatic field persists to the present day, both in the richness of its repertory and the quality of its performers.

The course will consider such topics as the influence of the Counter-Reformation on Mass settings, the nature of the concerto grosso, the stylistic distinctions between sacred and secular music, the importance of melody and drama in Italian stage music, and other topics. Also, the course will introduce students to important, standard musical terminology. Chronologically organized, course topics will be anchored by focusing on a specific composer or work: the development of musical trends and genres is an important aspect of study.

ML 561(3) Course ID:016451
Witnessing Trauma: Representations of War in European Cinema

War constitutes the all-encompassing political, social, and psychological trope to construct esthetic products that challenge the ethics of art making. This course examines the esthetic production of war and trauma in European film across the twentieth century by applying trauma and memory theory. If war events represent an indisputable reality, their fictional re-visitation responds, instead, to the demands of constantly renewable forms of understanding and narrativization of past contingencies. The value of fictional representations in cinema beyond their adherence to the historical fact or theories of representation lies in the ethical response of filmmakers to, as Jacques Lacan claims, a need for reordering history. Filmmakers Roberto Rossellini, Alain Resnais, and Ken Loach (among others) respond with their engagement to the demands of representation of history and elicit a response from spectators. The course will be conducted in English.

Carnival and Samba in Brazilian Literature and Film

In Brazilian society, Carnival and Samba are unique cultural phenomena and have become symbols of national identity. They have not, however, been without controversy. Samba, once an outlawed musical form, rose meteorically to national prominence in the 1930s through unprecedented circumstances and the union of uncommon bedfellows. This musical form provides the background for the yearly Carnival celebration. Many scholars, however, have criticized Carnival as a mechanism of social control: one week of jubilation and a temporary inversion of the traditional social order justify a year's worth of poverty and misery. Likewise the treatment of Carnival as a metaphor in literature throughout the 20th century has gone from subtle to overt criticism as Brazil experienced two dictatorships and increased disillusionment over the direction of the nation. This course will be taught in English.

Spain Through Art, Music and Literature

This innovative and interdisciplinary course takes the student to a cultural and literary journey through Spain by examining the historic, geographic and generational diversity of various Spanish artistic forms from the Middle Ages to modern times. Lectures and class discussion will complement a wide spectrum of audio-visual material that will show the major characteristics of early Iberian iconography, the Renaissance works of Luis de Morales, the mannerism style of El Greco, the baroque portrait artistry of Diego Velázquez, the revolutionary and visionary Rococo expressions of Francisco Goya, the Impressionism and Post-Impressionism of Sorolla, and the major works of the 20th century by Picasso and Dalí. The course will furthermore offer a discussion of the origins of Spanish music and present various samples of the vibrant and long history of music in Spain from the Gregorian chant and the xarchas to flamenco and regional folk music to contemporary pop music. Completing the course will be a reading and textual analysis of key parts of major

Narrating the US-Latino/a Experience: Migration, Identity, and Community

In this class, we will discuss the US Latino migration experience through literary texts and films that trace the history, highlight cultural issues and explore stories of migration. In the first part of the course we will discuss what it means to be a Latino/a in the US and what makes the Latino experience unique. We will then study distinctive migration groups (Cuban, Mexican, Dominican, Central American) within the growing Latino community in the US and the historical dynamics behind them (economic migration, political displacement, refugee movements, etc.). Through the narrative of Latino/a authors, we will explore what it means to live between two worlds, and not always know to which you belong. The process of identity building, the problematization of memory and cultural heritage, the immigrant experience and condition, and the role played by factors such as race, gender and socio-economic status will be at the center of the discussion. The class will focus on films, music and readings by US Latino writers such Gloria Anzaldúa, Pérez Sallant,

Introduction to Catalan Language and Society

Catalan is a Romance language with more than 10 million speakers around the world, spoken in Catalonia, Valencian country, the Balearic Islands and Andorra. In this course we will learn Catalan by using other Romance languages as reference points. By the end of this course, you will have obtained advanced beginner proficiency in Catalan (A2 on the Common European Framework). At this level, the speaker can understand and produce common phrases and expressions on topics relevant to his or her immediate environment (exchange basic information about oneself, describe locations and family, speak about past experiences, etc.). In this course we will take an interdisciplinary approach to explore significant events in the Catalan speaking-countries, such as festivities, traditions, political situations, and art. If you want to learn another Romance language and discover Catalan society, join this course; it counts as an elective for the Certificate in European Studies.

Muralism and Resistance in (Latin) American Art

Taking Mexican muralism as a point of departure, this course explores the aesthetics, ideological aims, and reciprocal influences of muralist movements in the Americas. In the aftermath of the Revolution (1910-1920), Mexican muralism emerged as the platform to promote ideals of social cohesion in a ravaged nation. In the throes of building a new national consciousness, Mexican artists deployed an avant-garde aesthetic that would influence muralist movements, and the forms of social critique associated to them, across the continent. With a historical perspective, the course studies how muralism;an intervention of public space;supports struggles for representation through time. Paying special attention to Mexican, Chicano, and American artists;and to a lesser extent, Southern Cone and Caribbean artists;we will study how muralism combats multiple forms of oppression while addressing timely sociopolitical concerns. The course covers works from the early twentieth century to the present.

Being Irish-Ser Irlandés: Irish Identity in Caribbean and Latin American Literature

In this class, we examine representations of the diasporic Irish within the varied literary imaginaries of the Caribbean and Latin America and critically explore how these representations create a literary paradigm surrounding concepts of "Irishness." The course begins with a racialized historical overview of the Irish commencing with the English conquest of Ireland and following up to modern day. We then relate observations elucidated by this overview to current notions of Irish identity while specifying and analyzing many of the diaspora spaces to which the transatlantic Irish arrived. Students will read a selected corpus of literary works by Erna Brodber, Rodolfo Walsh, Carl Krueger, Zoé Valdés, among others, (in English translation for texts written in Spanish) that will be put into theoretical dialogue with scholars in the field of liminal studies such as Victor Turner and Sandor Klapcsik. The course is taught in English and satisfies the requirements for HUM and LIT in the current curriculum.

Reading Madrid: from Royal Court to Global City

Taught in English, the course introduces students to the cultural and artistic history of Madrid. Once the capital of an empire that extended from the Mediterranean to the Philippines, Madrid today is an example of a contemporary postmetropolis. The course is structured around how literature helps us understand the changing nature of the city through characterization and narrative development, novelistic sagas, the poem's visual sonority, or theater's embodied nature, and the ways in which the urban experience shapes how we write and read literature. In addition to literary works, Madrid's broader artistic heritage (Velazquez, Goya, El Escorial, Royal Palace, la movida) will illuminate its modern literary culture of bohemian tertulias and writers' cafes. Course readings include both Spanish authors (Cervantes, Larra, Pérez Galdós, Valle-Inclán, Marías) and international writers (Hemingway, dos Passos, Neruda). Pending approval, the course is proposed as part of the "Explorations in Literature."

SPAN 267(3) Course ID:014607

Spanish as a Minority Language

The main goal of this course is to provide students with a principled way of understanding the issues surrounding the status of Spanish as a minority language in the US and how this affects its communities and individuals.

The course includes an introduction to general theories of and approaches to language contact, minority languages and group identity, but it focuses on the particular situation of the Spanish language in the US. It covers issues of language policies, language maintenance/loss, heritage language acquisition, and the notion of ¿standard¿ vs. ¿sub-standard¿ language.

This course is especially recommended for students who wish to enrich their knowledge and comprehension of the Spanish speaking communities in the US and wish to comprehend in more depth the issues involved in situation of languages in contact. No previous knowledge of linguistics is necessary.

Taking Laughter Seriously: Humor in Latin American Cultures and Literatures

How do Latin American artists use humor in their artwork? How does humor affect readers' perceptions of reality? How does humor become at once an aesthetic experience and a tool of resistance and political criticism? This interdisciplinary course will explore expressions of humor in Latin America with special focus on the Southern Cone's cultures and literatures. By analyzing the use of laughter as a pliable tool of subversion and conservatism, we will study different functions and scopes that have shaped humor in culture and literature during the 20th century. This course strives to enhance students' understanding of the Southern cone cultures through analysis of short stories, essays, poetry, comic strips, and films. Readings will include texts by Pablo Neruda, Macedonio Fernandez, Felisberto Hernandez, Alejandra Pizarnik, Julio Cortazar, Juan Carlos Onetti, and Cesar Aira. A Final research paper is required. Fulfills Humanities and literature requirements.

Latin(a) American Women Writers: The Struggle for Representation

This course offers an advanced introduction to the literary work of Latina and Latin American women, spanning from the nineteenth century to the present. Looking at the work of renowned and less-known authors, the course focuses on pressing questions of gender difference, equality, and identity. We will ask, among other questions: What social and historical forces have affected women's lives and their writing in different époques? How power relations affect women's writing across time and borders? How does gender complicate the political stakes of writing? Is writing a form of struggle? How women explore through writing the enduring questions of freedom and justice, knowledge and wisdom?

To answer these questions, we will read texts of different kinds - poetry, fiction, essay, testimonial - written by women from across the Americas: South American, Central American, Mexican, as well as US/Mexican, Nuyorican, and Cuban-American works. To better our understanding of women's struggle for visibility in

SPAN 376(3) Course ID:015846

20th Century Latin American Literature and Identity

This course introduces students to debates on Latin American identity in seminal works published between 1889 and 1995. We will mainly look at literary texts and, to a lesser extent, films in order to explore identity issues across the region, by focusing on four main axes: race and ethnicity identity; space and time identity; the ontology of identity; and political identity. We will consider historical, cultural, and social factors shaping the texts under study. We will also hone our reading and interpretative skills, as well as our skills in oral and written communication. We will read works by José Martí, Isabel Allende, Sergio Vodanovic, Judith Ortiz Cofer, and Manuel Puig, among others. The course is taught entirely in Spanish.

Components: Lecture

Enrollment Requirements: SPAN 300 or SPAN 301 or SPAN 302

SPAN 380(3) Course ID:009289

Film, Culture and History

In this class, the student will examine the influence of history and culture on popular expression, particularly on film. Seminal events in the Spanish-speaking world across a variety of time periods will be explored, including the Cuban Revolution, la Guerra Sucia of Argentina, and the Spanish Civil War. Above all, the student will come to see the indelible imprint historical phenomena leaves on cultural expression. Fulfills Humanities requirement.

Components: Lecture, Screening

Melodrama! or the Mode of Excess in the Span-Speaking World

Melodrama is commonly criticized as a clichéd, excessive form of storytelling, ripe with virtuous victims and leering villains. But what if it is much more, as recent scholarship suggests? This seminar develops a historical and theoretical framework for studying melodrama as a pervasive narrative mode in Latin America. We will start from its origins in nineteenth century literary traditions and trace its conventions to the present, as they vary in different national cultures and media across the Spanish-speaking world. Our focus will be on developing a set of theoretical principles that we can then test historically and in diverse cultural contexts. We will ask ourselves, among other questions: in what ways does melodrama appear in literature, periodicals, and films? What aesthetic and cultural roles does it play? What are its formulae? Is melodrama indeed excessive? in opposition to what norm? What melodramatic themes cross national borders, time, media? What relations can we establish between melodrama and multiple socio-historical contexts? Does

Encounters: Exploration and Conquest of Latin America

The arrival of Christopher Columbus in 1492 to the Americas marked the beginning of the age of exploration and conquest of the continent. We will examine the cultural encounters between the ancient Latin American civilizations and the Europeans. Rather than a historical survey, this course will focus on the cultural artifacts: poetry, songs, pictorial representations, and chronicles; that both Spaniards and indigenous people of the Americas produced to record these events. Conflicting views and diverse artistic expressions blend to represent the cultural tension inherent in what we will call the aesthetics of the encounter.

Components: Lecture

Enrollment Requirements: Must have taken two of the following courses: SPAN 300, SPAN 301, or SPAN 302

SPAN 415(3) Course ID:016047

Latin American Short Fiction

This course examines a wide selection of narrative texts written in the Iberian Peninsula and Latin America in their literary, artistic, and historical contexts. While our primary focus is devoted to the analysis of 20th century short fiction by Latin American canonical writers, including Jorge Luis Borges, Elena Poniatowska, Julio Cortázar, and Luisa Valenzuela, in order to fully understand the rich and complex origins of said production, our inquiry begins with a close examination of 16th century chronicles of the New World—a curious collection of historiography, essays, letter writing, epic poetry and travel books that problematize the relationship between history and literature. Together, we use these texts to shed further light on what Roland Barthes in his essay "Introduction to Structural Analysis of Narrative," has described as the "international, transhistorical and transcultural" manifestations of narrative.

Hispanic and Latino/a Perspectives on Dignity, Poverty, and Religion

This course analyzes the historical, literary, and theoretical foundations of the current American and Hispanic debates on dignity, poverty, and justice. Crucial research and discussion questions include: Why does poverty exist in our world? What are its social, religious, and political implications? In what way do poverty and conflict shape the fields of Hispanic and U.S. Latino/a studies? What is the role of charity, solidarity, and service? What can we learn from the American and Hispanic worlds? Finally, what is the future of property, poverty, and justice?

Religion in Modern and Contemporary Spanish Fiction

This course adopts religion and some of its related core concepts (the sacred, the religious experience, the secular) as a framework to explore modern and contemporary narrative fiction in Spain. Cultural production in Spain since the 19th century offer a rich and complex window into the enduring tensions between the role of secularization and anti-clericalism in the traditional account of modernity. The materials in this course are intended to provide specific insight into this polemic, including the relationship between religion and national identity, the experience of the sublime and the numinous, and spirituality and mysticism in women's writing. We will read texts by Gustavo Adolfo Bécquer, Emilia Pardo Bazán, Benito Pérez Galdós, Ramón del Valle-Inclán, Ramón J. Sender, María Zambrano, Carmen Laforet, Donato Ndongo, and Manuel Rivas, among others. The course will be conducted in Spanish.

War on Modernity, Modernities at War: Culture and The Spanish Civil War

War on Modernity, Modernities at War: Culture and The Spanish Civil War explores cultural representations of the Spanish Civil War (1936-1939) and its aftermath from the viewpoint of conflicting ideas of modernity that coexisted in 20th century Europe and took a very specific form in Spain: a Republican cause that defended the values of social diversity and democratic pluralism; a Nationalist cause that based modernity on a centralized apparatus controlling political dissent and social mobility. The course focuses on the analysis of the contradictions inherent in a plural society that was forced to imagine (and demise) a monolithic "other" and take arms against them. Special attention will be paid towards the distinction between the cultural productions that emerged during the war, under Franco, and from exile, as well as issues related to memory, commemoration, and reconciliation throughout the analysis of literary and cinematic texts dating from the 1930s to the present day. Texts by Helen Graham, Santos Julia, Paul Preston, Camilo Jose Cela, Miguel

Representations of the Urban Space in 20th-21st-century Spanish Culture

This course explores cultural productions 20th and 21st-century Spain from the perspective of urban studies. Through a series of primary and secondary readings as well as visual works, the course studies how Spanish cities have been transformed since the arrival of modernization and industrialization up to the present day, and how cultural productions have represented these transformations. The course will pay particular attention at how successive historical, political, and intellectual periods in Spain have fostered discussions about modern narratives of progress, secularization, and cosmopolitanism using the city and the urban experience as pivotal concepts. Readings and discussions will also look at the creation of a dynamics of opposition, reproduction, and interdependence between the city and supposedly antagonistic spatial categories (rural, country, nature).

Components: Lecture

SPAN 540(3) Course ID:013391 Department Consent Required

Literature of Post-Civil War Spain

In this course we will discuss the reaction to the Spanish Civil War as seen in the poetry, short story, theater and novel of the 1940s through 1960s principally. The shadow of violence affected many of Spain's authors whose artistic and intellectual formation occurred during or immediately after the Civil War. We will study the poetry of the "social poets" of the 1940s, such as Blas de Otero and Gabriel Celaya; some veterans of the Generation of 1927 who continued writing; Miguel de Henedez, who died in prison in 1942, and others. Among the authors of prose or theater to be read are Camilo José Cela, Mercé Rodoreda, Carmen Laforet, Juan Goytisolo, Ana María Matute, Luis Martín Santos, Carmen Martín Gaité, José Ruibal, Miguel Delibes, Alfonso Sastre, and others. We will also consider literary movements of the 1940s through 1960s in Europe and elsewhere which may have affected these writers.

Melodrama! or the Mode of Excess in the Span-Speaking World

Melodrama is commonly criticized as a clichéd, excessive form of storytelling, ripe with virtuous victims and leering villains. But what if it is much more, as recent scholarship suggests? This seminar develops a historical and theoretical framework for studying melodrama as a pervasive narrative mode in Latin America. We will start from its origins in nineteenth century literary traditions and trace its conventions to the present, as they vary in different national cultures and media across the Spanish-speaking world. Our focus will be on developing a set of theoretical principles that we can then test historically and in diverse cultural contexts. We will ask ourselves, among other questions: in what ways does melodrama appear in literature, periodicals, and films? What aesthetic and cultural roles does it play? What are its formulae? Is melodrama indeed excessive? in opposition to what norm? What melodramatic themes cross national borders, time, media? What relations can we establish between melodrama and multiple socio-historical contexts? Does

The Literature of Injustice: Literary Form and Economic Inequality

Why do we write and read? Is there a responsibility to the creative act? How is it reconciled (or not) with the formal and aesthetic dimensions of literature and the arts? This course analyzes the role of Hispanic literature in the theorization, perpetuation, and challenging of the economic injustice at the heart of modern inequality.

This course provides a longue durée genealogy of economic unevenness - and its critics - in the Hispanic world. By analyzing how the literature before and after Industrial Revolution reflects and shapes our concepts of justice and injustice, the students will gain the ability to understand, explain, and transform the inequalities

Hispanic and Latino/a Perspectives on Dignity, Poverty, and Religion

This course analyzes the historical, literary, and theoretical foundations of the current American and Hispanic debates on dignity, poverty, and justice. Crucial research and discussion questions include: Why does poverty exist in our world? What are its social, religious, and political implications? In what way do poverty and conflict shape the fields of Hispanic and U.S. Latino/a studies? What is the role of charity, solidarity, and service? What can we learn from the American and Hispanic worlds? Finally, what is the future of property, poverty, and justice?

Religion in Modern and Contemporary Spanish Fiction

The course explores the most salient features of narrative fiction from the arrival of modernity in Spain to the present. The materials and discussions in this course are intended to provide general background knowledge on the cultural debates that took place in Spain around the dichotomy tradition vs. modernity, and also a more specific insight on the question of how religion participates and shapes those polemics through cultural production. This seminar delves into the importance of concepts such as the sacred and the secular, alternative forms of religion and belief, and national identities and spirituality.

The New Latin American Historical Novel

The revisitation of Latin American history has become a concern of many Latin American writers. However, their way of fictionalizing history is different from the traditional historical novel in which authors did not deviate from the official or even alternative accounts of history. Characters and historical events are recast in a manner that distorts history by using disturbing and unexpected omissions, deletions and anachronisms, and obliterates the borders between facts and fiction. They are essentially parodic discourses intending to subvert hegemonic versions of history, and recreate playfully as well as seriously important historical figures, such as Christopher Columbus, Alvar Núñez Cabeza de Vaca, Simón Bolívar, and Fray Cervando de Mier. Some of the novels that will be included in this course are El general en su laberinto by Gabriel García Márquez, Los perros del paraíso by Abel Posse, La campaña by Carlos Fuentes, and La fiesta del Chivo by Mario Vargas Llosa.

Components: Lecture

SPAN 658(3) Course ID:012842

The Mexican Conquest: European and Indigenous Accounts

In-depth study of the Mexican Conquest from both European and Indigenous accounts. This course will examine the narrative discourse of primary texts, the contradictions within and among the diverse texts, the myths surrounding the Latin American conquest in general and Mexican in particular, and historiographical issues about the documents under study. Main authors/texts will include Hernan Cortes, Francisco López de Gómara, Bernal Díaz del Castillo, Bartolomé de Las Casas, Alva Ixtlilxóchitl, Bernadino de Sahagún, Fray Toribio de Motolinía, Diego Muñoz Camargo, Diego Durán, Hernando Alvarado Tezozomoc, Florentine Codex, Cantares mexicanos, and the Lienzo of Tlaxcala.

SPAN 659(3) Course ID:019121

Representation of Marginal Spaces in Hispanic Cinema

This course explores how Latin American cinema represents and reacts to marginalization in its multiple forms: economic, gender, ethnic, sexual, etc. We will analyze films from 1950 through 2000 during the first half of the semester in order to understand the foundations of what is known as Nuevo Cine Latinoamericano. The second part of the semester will be devoted to cinema of the 21st century. Some of the major filmmakers we will study are: Luis Buñuel, Tomás Gutiérrez Alea, Alejandro González Iñárritu, Pedro Larraín, Jayro Bustamante, and Claudia Llosa, among others. There is a strong research and writing component in the course.

Physics of Non-Crystalline Materials

The course introduces students to the physics governing the properties of non-crystalline materials. Non-crystalline structures are examined along with the kinetics necessary to produce such structures. The influence of these structures on the mechanical, electrical, dielectric, magnetic, thermal and optical properties of amorphous materials is examined. Fundamental theories on the physics of non-crystalline materials will be covered by invoking the early principles of electronic localization caused by random potential fields enunciated by Philip Anderson. Further contribution to our understanding of the conduction and optical phenomena in non-crystalline or amorphous materials enunciated by Sir Neville Mott will also be covered.

Course Equivalents: ASWR 404

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ASWR 628(3) Course ID:017723

Space Plasma Physics

The course is intended to provide students with the necessary background for carrying out research in space physics and space weather. We will introduce the basic concepts in kinetic, fluid and magnetohydrodynamic (MHD) plasmas and the properties of the waves that can propagate in these media. We will cover the basics of discontinuities such as shocks, transport and acceleration of charged particles, MHD instabilities and fundamental principles of magnetic reconnection. Although mathematical treatment will be given for the selected topics, the emphasis will be on an intuitive understanding of the major aspects of space plasma physics. Applications will be made to solar, heliospheric and magnetospheric physics.

Components: Lecture

Course Equivalents: PHYS 628

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ASWR 692(3) Course ID:017730

Advanced Readings in Space Sciences

The objective of the ASWR 492 / 692 course is to familiarize the ASWR students with modern research literature on the space weather phenomena, their observation and forecasting. The students will learn how to find relevant articles and books on a variety of space weather topics, work with literature sources, draw scientifically valid conclusions, and acquired knowledge in a review-style report. In addition, section 692 can include guidance at an initial phase of an individual research project.

Components: Directed Reading

Room Requirements: DEPARTMENT SPACE(1)

ASWR 694(3) Course ID:017729

Independent Study

The goal of this course is to provide guidance for ASWR students involved in short-term individual research projects. It covers main components of the research work, such as working with literature sources, formulating scientific objectives, obtaining and analyzing relevant data sets, tracking errors and uncertainties, drawing conclusions, describing and presenting the results.

Components: Independent Study

Room Requirements: DEPARTMENT SPACE(1)

ASWR 696(0) Course ID:018345

Master's Thesis Research

Students engage in research activity in the field of space weather for one semester.

Components: Thesis Research

Room Requirements: NO CLASSROOM NEEDED(1)

ASWR 696CR(6) Course ID:019193 Department Consent Required

Master's Thesis Credit Conferral

A DEP grade for this course indicates the student has successfully deposited their master's thesis.

Components: Thesis Research(In Person)

Enrollment Requirements: requires two semesters of enrollment in APN 696

Room Requirements: NO CLASSROOM NEEDED(1)

ASWR 698A(0) Course ID:017724

Master's Comprehensive Examination (w/Classes)

This course is designed to test students' understanding of applied space weather research after they complete the space weather core courses for the ASWR MS program. The Oral exam covers the conceptual, practical, computational, and theoretical background of the topics covered in all ASWR core courses.

Components: Comprehensive Exam

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Physics - Subject: Physics

PHYS 101(3) Course ID:002484

20th Century Physics I

A presentation using relatively little mathematics of basic physics as understood at the beginning of the 20th Century. Major advances in physical thought since 1900 are emphasized. Intended for non-concentrators.

Components: Lecture

PHYS 103(3) Course ID:002487

Astronomy

A descriptive course in astronomy and scientific cosmology intended for nonconcentrators. Observing nights and field trips are an integral part of the course.

Components: Lecture

PHYS 104(3) Course ID:002492

Search of Extraterrestrial Life

Recent discoveries of planets around nearby stars and possible fossil evidence from Mars has changed science's perspective on extraterrestrial life. Course is aimed at nonscience majors; addresses topics such as the connection between life and the evolution of stars, the origin of the solar system, origins of life on earth, possibilities of life on neighboring planets and evidence for other solar systems, interstellar travel, UFOs.

Components: Lecture

PHYS 122(3) Course ID:002498

Sound and Light in Nature, Arts and Technology

Designed for nonscience concentrators interested in music, high fidelity, vision, color, and the physical aspects of the arts.

Components: Lecture

PHYS 177(3) Course ID:007829

Freshmen Seminar: The Atomic Age

Examines the scientific discoveries, the social and political developments, and the ethical problems during the fifty-year period leading up to the dropping of the first atomic bomb on Hiroshima in 1945.

Components: Seminar

Topics: The Atomic Age

PHYS 191(3) Course ID:005743

The Newtonian Revolution

For honors students; examines the changes that took place in mathematics, physics and astronomy from 1500 to 1700. Copernicus, Kepler, Galileo, and Newton in the context of their departure from Greek and Medieval science. Social and philosophical consequences considered.

Components: Lecture

PHYS 192(3) Course ID:002501

The Einstein/Bohr Revolution

For honors students; examines the development of quantum mechanics and relativity. Studies the evolution of key concepts which arose out of the failures of classical physics. Planck, Einstein, Bohr, and their contemporaries discussed as scientific figures and as philosophical innovators.

Components: Lecture

PHYS 194(3) Course ID:005744

Space, Time, and Einstein's Theory of Relativity

Using only a bit of algebra and geometry, presents an elementary but thorough exposition of Einstein's theory. Introduces just enough elements of classical physics to focus on the startling implications of the theory regarding the nature of space and time. For honors students only.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Physics - Subject: Physics

PHYS 197(3) Course ID:007808

The Universe: The First 15 Billion Years

Examines how new ideas and results from particle physics, astronomy, geophysics, and biology point to a Universe that was unthinkable a decade ago. How has the physical Universe changed over the 15 billion years since the big bang? What are the conditions necessary for Life in the Universe? What factors lead to advanced life and intelligence? For honors students and physics majors with instructor's permission.

Components: Lecture

Enrollment Requirements: University Honors Program

PHYS 199(3) Course ID:002502

Newton to Einstein & Beyond

For honors students and physics majors with instructor's permission. Discusses the evolution of our understanding of the universe from the classical Newtonian view to the quantum revolution inspired 100 years ago by Einstein and Bohr to the current "standard model". Prerequisite: Modest math-science sophistication.

Components: Lecture

Enrollment Requirements: University Honors Program

PHYS 205(4) Course ID:000198

College Physics I

Mechanics, heat, and sound. Topics of interest to biology concentrators, premedical and computer science students.

Components: Discussion, Lecture

PHYS 206(4) Course ID:000199

College Physics II

Electricity, magnetism, and light. Topics of interest to biology concentrators, pre-medical and computer science students. Prerequisite: 205 or equivalent.

Components: Discussion, Lecture

Enrollment Requirements: PHYS 205

PHYS 215(4) Course ID:000200

University Physics I

An intensive calculus-based course in mechanics, heat and sound. Although intended primarily for mathematics, science, and engineering students, open to all qualified students. Prerequisite or concurrent: MATH 122.

Components: Discussion, Lecture

Course Equivalents: PHYS 215H

Enrollment Requirements: Open to students who've previously taken or are concurrently enrolled in MATH 122

PHYS 215H(4) Course ID:017163

University Physics I (Honors)

Honors section. An intensive calculus-based course in mechanics, heat and sound. Although intended primarily for mathematics, science, and engineering students, open to all qualified students. Prerequisite or concurrent: MATH 122.

Components: Discussion, Lecture

Course Equivalents: PHYS 215

Enrollment Requirements: Open to honors program students who've previously taken or are concurrently enrolled in MATH 122

PHYS 216(4) Course ID:000201

University Physics II

An intensive calculus-based course in electricity, magnetism, and light. Intended for mathematics, science, and engineering students but open to all qualified students. Prerequisites: PHYS 215 & MATH 122

Components: Discussion, Lecture

Course Equivalents: PHYS 216H

Enrollment Requirements: PHYS 215 & MATH 122

PHYS 216H(4) Course ID:017148

Department Consent Required

University Physics II (Honors)

Honors section. An intensive calculus-based course in electricity, magnetism, and light. Intended for mathematics, science, and engineering students but open to all qualified students. Prerequisites: PHYS 215 & MATH 122

Components: Discussion, Lecture

Course Equivalents: PHYS 216

Enrollment Requirements: Open to students in the University Honors Program who've taken PHYS 125 and MATH 122

The Catholic Univ of America
Course Catalog

Arts & Sciences - Physics - Subject: Physics

PHYS 225(1) Course ID:000202

Introductory Mechanics Laboratory

A laboratory course stressing concepts and measurement techniques for velocity, acceleration, friction, and momentum and energy conservation. Prerequisite or concurrent: 205 or 215.

Components: Laboratory

Enrollment Requirements: PHYS 205 (or Co-req) or PHYS 215 (or Co-req)

PHYS 226(1) Course ID:000203

Introductory Electricity Laboratory

Measurement techniques for DC and AC currents and voltages. Prerequisite or concurrent: 206 or 216.

Components: Laboratory

Enrollment Requirements: PHYS 206 (or Co-req) or PHYS 216 (or Co-req)

PHYS 240(3) Course ID:009525

Sun and Earth: Concepts & Connections

Life on Earth relies upon the warming rays and influence of the sun. Exploring this idea is the linchpin for the study of basic principles of physical science. Hands-on experiments, computer simulations, analysis of sun-earth data available on the internet, and seminar discussions are integrated into an inquiry-driven curriculum to illustrate modern effective methods for teaching elementary science. Intended for early childhood and elementary education majors.

Components: Lecture

Course Equivalents: ASWR 240

PHYS 406(3) Course ID:016214

Introduction to Modern Physics

Presents the basic ideas of quantum theory, atomic and molecular spectra, special relativity, solid state, and nuclear physics. Prerequisite: PHYS 216 or equivalent.

Components: Lecture

Course Equivalents: PHYS 506

Enrollment Requirements: PHYS 216 (C or better)

PHYS 411(3) Course ID:002665

Mathematical Physics I

A selection of topics in applied mathematics of interest to scientists and engineers. Topics include vectors, matrices, complex numbers, variables and functions, Fourier series. Same as MATH 511. Prerequisite: MATH 222 or equivalent.

Components: Lecture

Course Equivalents: PHYS 611

Enrollment Requirements: MATH 222

PHYS 412(3) Course ID:002669

Mathematical Physics II

A selection of topics in applied mathematics of interest to scientists and engineers. Topics include ordinary and partial differential equations, Fourier and Laplace transforms, and special functions. Same as MATH 512. Prerequisite: MATH 222 or equivalent.

Components: Lecture

Course Equivalents: PHYS 612

Enrollment Requirements: MATH 222

PHYS 425(3) Course ID:016215

Thermodynamics & Statistical Physics

General principles of classical thermodynamics. Equilibrium conditions. Formal structure. Maxwell relations. Stability of thermodynamic systems. Classical thermodynamics and phenomenological description of first-order transitions and critical phenomena. Introduction to statistical physics principles, microcanonical and canonical distributions. Kinetic theory.

Components: Lecture

Course Equivalents: PHYS 525, APN 525

Enrollment Requirements: MATH 222 and either PHYS 406 or PHYS 506 and graduate standing

The Catholic Univ of America
Course Catalog

Arts & Sciences - Physics - Subject: Physics

PHYS 428(3) Course ID:002686

Optics
The electromagnetic wave nature of light is examined. Those aspects of physical optics pertinent to recent developments are treated.

Components: Lecture

Course Equivalents: APN 428, PHYS 528

Enrollment Requirements: PHYS 216

PHYS 431(3) Course ID:016216

Quantum Theory I
Origin of quantum theory, Schroedinger theory of wave mechanics in one dimension, time-independent perturbation theory, application to one electron atom. Prerequisites: PHYS 506; MATH 222.

Components: Lecture

Course Equivalents: PHYS 531

Enrollment Requirements: MATH 222 and either PHYS 406 or PHYS 506 and graduate standing

PHYS 432(3) Course ID:016217

Quantum Theory II
Application of Schroedinger wave mechanics to single and multi-electron atoms. Angular momentum and spin; identical particles; time-dependent perturbation theory. Prerequisite: PHYS 531.

Components: Lecture

Course Equivalents: PHYS 532

Enrollment Requirements: PHYS 431 or PHYS 531 or graduate standing

PHYS 435(3) Course ID:016218

Analytical Mechanics
An intermediate course in particle dynamics. Prerequisites: PHYS 216; MATH 222.

Components: Lecture

Course Equivalents: PHYS 535

Enrollment Requirements: PHYS 216 & MATH 222

PHYS 436(3) Course ID:016219

Electricity and Magnetism
An intermediate course in electromagnetic theory with stress on physical concepts.
Prerequisites: PHYS 216; MATH 222

Components: Lecture

Course Equivalents: PHYS 536

Enrollment Requirements: PHYS 216 & MATH 222

PHYS 437(3) Course ID:002698

Intermediate Nuclear Physics
Interaction of nuclear radiation with materials; nuclear detection techniques; measurements of nuclear properties; conserved quantities in strong and weak nuclear interactions; nuclear models; alpha, beta, and gamma decay; nuclear reactions. Prerequisite or concurrent: PHYS 532.

Components: Lecture

Enrollment Requirements: prior or concurrent enrollment in PHYS 432 or PHYS 532

PHYS 440(3) Course ID:016220 Department Consent Required

Materials Science: Structure and Properties of Solids
An immediate course in materials science for advanced undergraduates and beginning graduate students in physics, chemistry and engineering. Topics include bonding, phase equilibria and properties of metals, ceramics and polymers.

Components: Lecture

Course Equivalents: PHYS 540, APN 540

Enrollment Requirements: PHYS 216 & MATH 221

PHYS 441(3) Course ID:016221

Introduction to Nanotechnology and Device Characterization
This is a lecture/experimental course designed to provide an introduction to nanotechnology, nanoscale device fabrication and associated characterization techniques. This should be suitable for first-year graduate students and advanced undergraduates.

Components: Lecture

Course Equivalents: PHYS 541

Enrollment Requirements: PHYS 205 and PHYS 206

The Catholic Univ of America
Course Catalog

Arts & Sciences - Physics - Subject: Physics

PHYS 443(3) Course ID:002700

Introduction to Astrophysics

An introduction to observational astrophysics, radiative transfer, and the universe. Emphasizes reduction of observational data, simple modelling of stars, the interstellar medium and extragalactic sources.

Prerequisite: PHYS 506 or equivalent.

Components: Lecture

Enrollment Requirements: PHYS 406 or PHYS 506 or graduate standing

PHYS 451(0) Course ID:002504

Senior Seminar

Required of and open only to senior physics concentrators. This class is billed at the equivalent of one credit hour.

Components: Seminar

PHYS 452(0) Course ID:002505

Senior Seminar II

Required of and open only to senior physics concentrators. This class is billed at the equivalent of one credit hour.

Components: Seminar

PHYS 462(1) Course ID:016965

Space Weather Seminar

This course will provide students with necessary background for carrying out research in space physics leading to space weather applications. We will cover the central physics concepts associated with space weather and introduce state-of-the-art models used to simulate the dynamic behavior of solar, heliospheric and magnetospheric space plasma environments. The course will include student participation to operational space weather forecasting activities in collaboration with scientists at NASA Goddard Space Flight Center.

Components: Seminar

Course Equivalents: PHYS 562

PHYS 465(3) Course ID:016222

Intermediate Solid State Physics

Crystalline structure, thermal, electric, and magnetic properties of solids. Electron theory of metals and semiconductors; band theory, low temperature phenomena.

Components: Lecture

Course Equivalents: PHYS 565, APN 565

Enrollment Requirements: graduate standing or prior or concurrent enrollment in PHYS 431 or PHYS 531

PHYS 468(3) Course ID:016223 Department Consent Required

Introduction to Condensed Matter Physics

The course covers concepts of condensed matter physics like electronic states in crystals, liquid crystals, phase transitions, defects, dynamic modes and ordering kinetics. The course is suitable for first-year graduate students and advanced undergraduates. Pre-requisites: permission of instructor.

Components: Lecture

Course Equivalents: PHYS 568, APN 568

PHYS 469(3) Course ID:013031 Department Consent Required

Introduction to Biophysics

The course covers concepts and techniques from experimental and theoretical physics useful in analyzing biological problems at the molecular, cellular, whole organism, and eco-system levels. The course is suitable for first-year graduate students and advanced undergraduates. Pre-requisites: permission of instructor.

Components: Lecture

Course Equivalents: PHYS 669

PHYS 475(3) Course ID:014630

Experimental Techniques and Modern Detectors

This is an experimental course designed to provide an introduction to experimental techniques, detector design, and evaluation of detector components of medical, nuclear, particle, and high energy physics. This course is suitable for first-year graduate and advanced undergraduate students

PHYS 563(3) Course ID:008189

Space Weather II:Earth/Sun Interactions

The sun is the primary source of magnetic fields and plasma in the heliosphere. The supersonic solar wind drags the solar magnetic field into the interplanetary medium. This course deals with the physics of the this interplanetary medium and its coupling to the sun's inner corona. Theory, observations and measurement techniques are discussed.

Components: Lecture

PHYS 564(3) Course ID:008456

Space Weather III :Magnetospheric Physics

During periods of solar and solar wind activity, geomagnetic storms and substorms inject plasma into the Earth's radiation belts that can cause spacecraft missions to fail, enhance auroral precipitation on the edges of the polar cap, and drive intense ionospheric currents that can disrupt electric transmission and cause power blackouts. The course will provide an understanding for the physics underlying these phenomena. Although PHYS 562 and PHYS 563 (Space Weather I and II) are highly recommended, they are not prerequisites.

Components: Lecture

PHYS 565(3) Course ID:005745

Solid State Physics I

Crystalline structure, thermal, electric, and magnetic properties of solids. Electron theory of metals and semiconductors; band theory, low temperature phenomena.

Components: Lecture

Course Equivalents: PHYS 465, APN 565

Solar Data Analysis

This course is intended to provide an overview of data formats and data analysis useful for solar and space physics students. Particular emphasis will be placed on the structure and analysis of data from imaging instruments. The topics covered in this course will be illustrated by the analysis of data obtained by instruments flown on various spacecraft.

Components: Seminar

PHYS 611(3) Course ID:002701

Mathematical Methods of Theoretical Physics I

Linear vector spaces and matrix algebra. Vector and tensor analysis and curvilinear coordinates. Functions of complex variables, power series, calculus of residues. Linear second-order ordinary differential equations and their power series solutions at isolated singularities. Special functions (gamma, hypergeometric, Legendre, Bessel, elliptic).

Components: Lecture

Course Equivalents: PHYS 411

PHYS 612(3) Course ID:002703

Mathematical Methods of Theoretical Physics II

Fourier series. Fourier, Laplace and other integral transforms. Partial differential equations (PDE) and boundary-value problems. First-order PDE in two independent variable, linear second-order PDE in two and three independent variables. Generalized functions and distributions. Integral representations and Green's functions. Applications to Laplace, Poisson, diffusion and wave equations.

Components: Lecture

Course Equivalents: PHYS 412

PHYS 613(3) Course ID:013032

Department Consent Required

Geometrical Methods of Mathematical Physics

Differentiable manifolds and tensors. Lie derivatives and groups. Differential forms. Exterior differential and integral calculus. Connections for Riemannian manifolds and gauge theories. Physical applications.

Components: Lecture

Particle Physics Seminar

Particle Physics Seminar: Explores topics in high energy physics that emphasize recent advances in the context of LHC physics. Standard Model themes will be reviewed in preparation for discussions of physics beyond the standard model. Content varies.

Components: Seminar(In Person)

Room Requirements: DEPARTMENT SPACE(1)

PHYS 618(3) Course ID:002706

Nonlinear & Chaotic Dynamics

Dynamical systems, chaotic behavior, attractors. Maps and Poincaré sections. Strange attractors and fractal dimensions. Lyapunov exponents, entropies. Measures of chaos, algorithmic complexity. Bifurcations, universality. Quasiperiodicity. Chaos in Hamiltonian systems. Introduction to quantum chaos.

Components: Lecture

Enrollment Requirements: PHYS 615

PHYS 621(4) Course ID:002707

Statistical Mechanics I

Statistical basis of thermodynamics. Ensemble theory. Liouville and Poincaré Theorems. Microcanonical, Canonical and Grand-Canonical ensembles. Gibbs paradox and particle indistinguishability. Ideal gases treated with Classical and Quantum statistics and ensembles. Simple gases of atoms and molecules in the classical limit. Kinetic theory. Analysis of the H-Theorem, irreversibility and recurrence.

Components: Lecture

Enrollment Requirements: PHYS 425 or PHYS 525 or graduate standing

PHYS 622(4) Course ID:002708

Thermodynamics & Statistical Mechanics II

Ideal Bose systems and condensates. Black-body radiation. Field of sound waves, liquid helium II. Ideal Fermi systems. Electron gas. Pauli paramagnetism, Landau diamagnetism. Thermionic and photoelectric emissions. White dwarfs and neutron stars. Thomas-Fermi model. Interacting systems and Ising model. Phase transitions and critical phenomena. Fluctuations.

Components: Lecture

PHYS 623(4) Course ID:002709

Advanced Electromagnetic Theory I

Electrostatics and boundary value problems. Green's functions and potential theory. Legendre and Bessel functions. Multipole expansions and dielectric media. Magnetostatics. Faraday's law of induction. Maxwell's equations, electrodynamic potentials, and conservation laws (Poynting's theorem).

Components: Lecture

PHYS 624(4) Course ID:002712

Advanced Electromagnetic Theory II

Electromagnetic waves and their propagation, reflection and refraction properties. Waveguides. Electromagnetic radiation and radiating systems. Special theory of relativity. Lorentz transformations of electromagnetic 4-currents, 4-potentials and fields. Covariant forms of Maxwell equations. Relativistic dynamics of particles and electromagnetic fields. Radiation by moving charges. Lienard-Wiechert potentials.

Components: Lecture

Enrollment Requirements: PHYS 623

The Catholic Univ of America

PHYS 635(3) Course ID:002715

Nuclear Physics

Interaction of nuclear radiation with materials; nuclear detection techniques; measurements of nuclear properties; conserved quantities in strong and weak nuclear interactions; nuclear models; alpha, beta, and gamma decay; nuclear reactions. Pre- or co-requisite: 532.

Components: Lecture

Enrollment Requirements: prior or concurrent enrollment in PHYS 432 or PHYS 532

PHYS 636(3) Course ID:006160

Introduction to High-and Medium-Energy Physics

Pion-nucleon scattering, multipole expansion, K-mesons and CP invariance, electron-nucleus scattering, helicity formalism, form factors, parton distributions, quarks.

Components: Lecture

PHYS 641(3) Course ID:013034 Department Consent Required

Nanotechnology

Introduction to Nanoscale fabrication. photo- and Ebeam lithography. Scanning and transmission electron microscopy, Atomic force microscopy. Synthesis of nanoparticles and nanowires. Nanofluidics and advanced sensors. Micro- and nano-electromechanical systems. The course includes lecture and experimental sessions.

Components: Lecture

Course Equivalents: APN 641

PHYS 644(4) Course ID:002717

Computational Physics

Introduces students to the process of approaching physics from a computational viewpoint, complementary to the traditional experimental and theoretical approaches to physics: the physics must be understood and described in mathematical terms which can be manipulated so that computational techniques can be applied to obtain a numerical solution, which must then be given a physical interpretation. Examines Monte Carlo simulations and a variety of numerical methods of general utility in physics. Assumes a working knowledge of FORTRAN and/or C/C++.

Components: Lecture

PHYS 645(3) Course ID:002719

Topics in Astrophysics I

A course that explores current research areas in astrophysics and physical cosmology.

Components: Lecture

Course Catalog

Arts & Sciences - Physics - Subject: Physics

PHYS 646(3) Course ID:002720

Radiative Processes in Astrophysics

A course that explores current research areas in astrophysics and physical cosmology.

Components: Lecture

PHYS 649(3) Course ID:014810 Department Consent Required

Introduction to General Relativity

General Relativity is a theory of a class of physical phenomena encompassed by the term gravity. The purpose of this course is to acquaint graduate students with the concepts and the mathematical apparatus underlying the theory, at a level where they would be capable of carrying out calculations to solve problems ranging from very simple to moderately difficult. However, this is emphatically not a mathematical physics course, and thus its focus will be constantly maintained on the physical interpretation of the intervening equations and their solutions, as well on the phenomenology to be described by the theory.

Components: Lecture

PHYS 651(3) Course ID:013033 Department Consent Required

Elements of Statistics and Probability

Laws of probability, random variables. Probability distributions, moments, generating functions. Binomial, Poisson, normal and other fundamental distributions. Sampling distributions (chi-squared, student-t, Fisher-F). Tests of significance, confidence intervals. Statistical inference. Bayesian methods. Decision theory. Point estimation, maximum likelihood. Correlation and regression (simple and multiple).

Components: Lecture

PHYS 652(3) Course ID:002722

Analysis of Experimental Error

Systematic and statistical uncertainties. Correlation, combination and propagation of errors. Minimum covariance determinant estimation. Least squares and maximum likelihood fitting. Conditioning of fitting parameters. Tests of significance and reliability. Computing of confidence levels. Fitting of Monte Carlo fractions to data histograms. Error interpretation of minimization algorithms. The course includes analyses of sample data using computational techniques. A working knowledge of FORTRAN and/or C/C++ is assumed.

Components: Lecture

PHYS 659(4) Course ID:002723

Advanced Quantum Theory I

Theoretical and mathematical formulation of Quantum Mechanics. Transformations of states and observables, equations of motion, symmetries and conservation laws. Coordinate and momentum representations. Basic applications of wave-mechanics, Schroedinger equation and uncertainty principle. Harmonic oscillator. Theory of angular momentum and rotation group. Formation of bound states. Hydrogen atom.

Components: Lecture

PHYS 660(4) Course ID:002781

Advanced Quantum Theory II

Approximate methods: perturbation theory, variational method, time-dependent phenomena. Classical limit. Charged particle in a magnetic field. Scattering. Discrete symmetries. Identical particles. State preparation and determination. Measurement and interpretation of states. Bell's theorem. Basics of relativistic quantum mechanics: Dirac and Klein-Gordon Equations.

Components: Lecture

Enrollment Requirements: PHYS 659

PHYS 662(3) Course ID:002782

Quantum Theory: Many Particle Systems

Nonrelativistic second quantization, Green's functions and field theory. Feynman and Goldstone diagrams. Linear response and collective modes. Fermi and Bose systems. Field theory and systems at finite temperature. Applications to superconductivity, superfluidity, and nuclear matter.

Components: Lecture

PHYS 666(3) Course ID:002785

Solid State Physics II

Defects and impurities. Excitons, polarons, magnons and polaritons. Magnetic materials, interactions and ordering. Homogeneous and inhomogeneous semiconductors, junctions and devices. Superconductivity. Giant and colossal magnetoresistance. Electronic and thermal processes in nanostructures. Surface effects.

Components: Lecture

Arts & Sciences - Physics - Subject: Physics

PHYS 667(3) Course ID:014638

Physics of Nanoscale Devices

This is a lecture course designed to provide an in-depth understanding of nanoscale devices especially devices based on graphene, nanophotonics, and the new generation of batteries. This course should be suitable for first/second-year graduate students and advanced undergraduates.

Components: Lecture

Course Equivalents: APN 667

PHYS 668(3) Course ID:007419

Physics of Materials

A study of many-particle systems. Topics include review of statistical mechanics, electronic states in crystals, conformational statistics of polymers and membranes, liquid crystals, superconductivity, phase transitions, defects, glasses and other frustrated systems, Brownian motion, dynamic modes, and ordering kinetics. Pre-requisites: permission of instructor.

Components: Lecture

PHYS 669(3) Course ID:013035 Department Consent Required

Biophysics

This course covers concepts and techniques from experimental and theoretical physics useful in analyzing biological problems at the molecular, cellular, whole organism, and eco-system levels. Topics include statistical mechanics of polymers, membranes, and other flexible objects, basics of low-Reynolds number fluid dynamics, physics of complex fluids - equilibrium and dynamics, single molecule fluorescence and micromechanical techniques - theory and experiments, elastic response of cells to mechanical perturbations, mechanics of bird and insect flight, and evolutionary dynamics. Pre-requisites: permission of instructor.

Components: Lecture

Course Equivalents: PHYS 469

PHYS 675(3) Course ID:014563 Department Consent Required

Experimental Techniques and Modern Detector Characterization

This is an experimental course designed to provide an introduction to experimental techniques, detector design, and evaluation of detector components of medical, nuclear, particle, and high energy physics. This course is suitable for first-year graduate and advanced undergraduate students.

Components: Lecture

Course Equivalents: PHYS 475

PHYS 685(3) Course ID:018904

Processing of Materials

The purpose of the course is to equip advanced undergraduate and graduate students of Physics, Chemistry and Engineering disciplines with the basic understanding of the processing of metals, ceramics, glasses and semiconductors. This course will serve as the prerequisite for advanced Materials Science and Solid State (condensed matter) courses and equip students for industry and academia. At the conclusion of the course, the student will be able to adequately comprehend the fundamental processes involved in processing of advanced materials including semiconductors, optical fibers and technical ceramics and have the theoretical and conceptual basis for understanding materials processing requirements in the semiconductor/nanotechnology/microelectronics industries.

Components: Lecture(In Person)

Course Equivalents: APN 685

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHYS 691(3) Course ID:018831

Physics of Non-Crystalline Materials

The course introduces students to the physics governing the properties of non-crystalline materials. Non-crystalline structures are examined along with the kinetics necessary to produce such structures. The influence of these structures on the mechanical, electrical, dielectric, magnetic, thermal and optical properties of amorphous materials is examined. Fundamental theories on the physics of non-crystalline materials will be covered by invoking the early principles of electronic localization caused by random potential fields enunciated by Philip Anderson. Further contribution to our understanding of the conduction and optical phenomena in non-crystalline or amorphous materials enunciated by Sir Neville Mott will also be covered.

Components: Lecture(Online)

CPOL 500(3) Course ID:000315

Introduction to International Affairs

Required of all new students. Designed to acquaint the student with the recent history of International Affairs, principal subfields in the discipline, major theoretical and methodological debates in the study of world politics, and the importance of proposing parsimonious hypotheses in testing the theories.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 501(3) Course ID:007000

Globalization

This course considers the heated debates over Globalization. What is it? Is it desirable or devastating? Is economics overshadowing politics, or is globalization just an updated form of imperialism? Is globalization inevitable? What impact does globalization have on politics and the state, on economics, the environment, human rights, labor, culture, borders, security, and policy? How do local government and politics fit into a global age, and where do political accountability and authority lie? Is the state withering away? What will the future institutions of governance look like? Is foreign policy dead, because it is no longer "foreign?"

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 503(3) Course ID:010560

American Political Ideologies

What do the labels mean - conservative, liberal, fascist, communist? Designed for Congressional Studies students, this course surveys American political ideologies from the American Revolution to the present. In the early years of the republic, special attention is paid to classical liberalism, capitalism, and nationalism. In the 19th century, the focus embraces pro- and anti- slavery movements, nativism, social Darwinism, utopian movement, socialism, anarchism, and religious movements. In the 20th century, attention is given to populism, progressivism, New Deal liberalism, communism, fascism, conservatism, environmentalism, religious fundamentalism, secularism, feminism, the gay rights movement, libertarianism, and neo-conservatism.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 505(3) Course ID:014743

Congress & Foreign Policy

An examination of the legislative role in the conduct of United States foreign policy, focusing on Congress's powers, including consideration of treaties, nominations, appropriations, and oversight. Course includes focused discussions of war powers, use of intelligence and politicization of foreign policy. Topic is developed in part through case studies and historical examples. American Government / World Politics

Components: Lecture

CPOL 518(3) Course ID:000388

Politics Peoples Republic of China

This course examines political institutions and policies of the PRC, with particular attention to the political tensions that continue to define the regime as it pursues economic liberalization with authoritarian government. Among the topics covered are the historic background of the Chinese revolution, the coming of the Chinese Communist Party to power, and major political institutions such as the Communist Party, party government, and the People's Liberation Army. Policy issues include foreign policy, especially Sino-American relationships, economic policy, and defense issues.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 519(3) Course ID:011236

Politics of East Asia

This course provides a comprehensive survey of critical emerging economic, security and political developments in East and Southeast Asia. It examines, in detail, the context and current security implications of key Pacific Rim challenges and focuses on the Korean Peninsula developments, challenges posed by an empowered China, the role of Japan, Russia and the United States in Asian security and diplomacy and key actors including Singapore, Australia, Thailand, Malaysia, and the Philippines.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 520(3) Course ID:000391

US Political Leadership

Historical, biographical, theoretical, and psychological perspectives on political leadership in Congress, the Supreme Court, the Presidency, and the diplomatic arena.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 523(3) Course ID:016471

Cyber Warfare Strategy and Policy

This course addresses the emerging international relations, policy, doctrine, strategy and operational issues associated with Computer Network Attack (CAN) and Computer Network Exploitation (CNE) ; collectively known as cyber warfare. Students will gain an understanding of the evolution of cyber warfare and the basic characteristics and methods of CAN and CNE; the current national policies and strategies relative to cyber warfare; and the potential impact of cyber warfare on future conflicts.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 524(3) Course ID:008699

The War on Terrorism

In response to the terrorist attacks on the World Trade Center and the Pentagon on September 11, 2001, the President and Congress have declared a war on terrorism. This class will examine this "new kind of war." The course will address the rising power of non state actors and trans sovereign threats in a period of globalization; the political, economic, and military policy options available to combat terrorism, and the effectiveness of these options; "smart security" models from other countries and the private sector for increasing security without sacrificing civil liberties; and the institutional challenges posed by the underside of globalization.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Politics - Subject: Politics: Off-Campus

CPOL 525(3) Course ID:000398

The Just War

Examines attempts to construct a moral code governing the use of force in international politics, including discussion of the theory of aggression (jus ad bellum), the war convention (jus in bello), and the particular dilemma of nuclear deterrence.

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 527(3) Course ID:011750

Religion and International Politics

This course provides a survey of the interplay of religion on a variety of worldwide political issues, including terrorism, war and peace, the economy, globalization, national identity, and the environment. The role of Catholicism and other religious bodies will be examined, with consideration of religion's role for good or bad in conflict situations, such as in the Middle East, as well as its influence on US foreign policy.

This is primarily a lecture course, but students also participate in course discussions.

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 529(3) Course ID:000420

Liberalism and Its Critics

Explores the problems of modern liberalism through the writings of its critics and defenders. Special attention to the central dilemma of contemporary liberal pluralism: the tendency to undermine the moral and philosophical foundations on which respect for individual rights is based.

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 530(3) Course ID:014672

Perspectives on North Korea

This course will facilitate an in-depth exploration of the debates and security concerns relating to North Korea. The course will discuss North Korea's past, present, and future by applying insights from various theories of international relations and comparative politics. By the end of the course, the student will be able to understand the theoretical origins and/or implications of contemporary debates over the challenge that North Korea poses to the United States and the international community. Three themes in particular are emphasized: perceptions and identity; traditional security challenges; and human security.

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 531(3) Course ID:000427

Congressional Budget

The procedure and politics of the budgetary and appropriations processes in the Congress. Relationship to public policy and electoral politics. Roles of congressional committees, leadership, and staff.

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 532(3) Course ID:000430

Congressional Committees

History of the congressional committee system. Functions of congressional committees, including policy development, administrative oversight, investigation, public information, and legislative powersharing. Committee staffing as a political process.

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 535(3) Course ID:010202

Law of War

International Law of Armed Conflict investigates the principles of international law regulating the use of force in international society. The course is designed to examine the permissibility of using force and the law governing the conduct of hostilities. The course looks in detail at the right of self-defense and anticipatory self-defense, the role of the UN, humanitarian intervention, self-determination, reprisals and intervention in civil war. Discussions will also include the right to participate in hostilities, the law of weaponry including weapons of mass destruction, the protection of civilians, rules for occupation, classification of those captured on the battlefield, and rules of engagement. Significant attention will be given to developments arising from the Global War on Terrorism and from coalition activities in Afghanistan and Iraq.

Components: Lecture

CPOL 537(3) Course ID:000437

Political Economics and International Politics

A survey of major theoretical efforts to relate economic and political behavior. Outstanding policy issues in world political economy. Considers Atlantic relations and North-South issues. Weighs the utility of theoretical contributions in light of historical evidence and contemporary policy trends.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 538(3) Course ID:000445

Contemporary Middle East I

Assesses factors influencing the domestic and foreign policy issues of contemporary Middle Eastern states. On the domestic level, students will be introduced to major themes and institutions--history, religion, ideology, social setup, the military and security apparatuses, and economic resources- which have shaped the ruling styles and regimes in the region. We will pay particular attention to the pervasiveness of authoritarianism, potential for political reform, and internal security challenges. Case-study emphasis will be given to the states of North Africa (Egypt, Algeria), the Levant (Lebanon, Syria), and the Gulf (Iraq, Iran, Saudi Arabia). On the international level, we will explore regional trends in interstate conflict, peacemaking and diplomacy, and implications for U.S. policy. Emphasis will be given to the Cold War, Arab-Israeli conflict, as well as more contemporary issues such as non-state actors, and arms control.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 539(3) Course ID:000448

Contemporary Middle East II

An examination of patterns of violence and competition in the Middle East which focuses on internal, regional and global conflicts and the relationships among them.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 540(3) Course ID:006203

International Organization and Law

International organizations have become one of the principal means by which states engage one another in dealing with disputes, common problems, and international order. This course will look at the development of international organizations, especially the United Nations, and explore their potential for generating order within the anarchic relationships of states. One of the principal means available for the establishment of order is international law, either in the form of treaties, international agreements and conventions, and charter documents for international organizations. This course will examine the central role played by organizations and law within the international arena. Particular reference will be made to the problems that require a global solution as well as the universality of human rights.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 542(3) Course ID:015464

Security Politics of the Korean Peninsula

What factors influence the foreign policies of North and South Korea? Why do they remain divided, and why does the United States maintain a military alliance with South Korea? How do politics on the Korean Peninsula affect the East Asian security environment and vice versa? This course undertakes an examination of these questions and others as a way of understanding North and South Korean security behavior and how it impacts regional and U.S. security. The course will review the domestic political circumstances of North and South Korea, their respective security concerns, and the factors most likely to determine if the Korean Peninsula will remain at peace or erupt into war once again.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 543(3) Course ID:000457

National Security Law

Survey and analysis of the legislative basis of United States national security policy making, with special emphasis on the legal authority and responsibility of individuals involved in the policy process. Topics include separation of powers, security assistance an covert action, collection and dissemination of national security information, international arrangements, and current issues such as nonproliferation, terrorism and counter narcotic and economic intelligence.

Components: Lecture

CPOL 547(3) Course ID:010728

Nationbuilding

Nation-building, according to James Dobbins, is "the use of armed force in the aftermath of a conflict to underpin an enduring transition to democracy" and "the inescapable responsibility of the world's only superpower." This course introduces the wide range of theoretical and practical issues in nation-building. It considers historical and current cases, informed by scholarly analysis and first-person accounts.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 548(3) Course ID:000469

The International Politics of East Asia: Korea, Japan and China

Provides a broad overview of developments in East Asia, with particular emphasis on China, Japan, Korea and selected Southeast Asian nations. Examines domestic and foreign policies of these countries and assesses implications of United States and Russian policies in the region.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

CPOL 549(3) Course ID:000496

Politics of Latin America

Latin America is increasingly an area of focus for U.S. political and economic relationships. This course provides an overview of the region with particular attention to the challenges and contributions of American foreign policy. Topics covered include the relationship between political and economic development and the political stability and instability of democratic institutions; international politics of the states of the region; and the role of institutions of "civil society" in the political life of the region. Assessment of the role of the military, the Church, labor movements, and guerrilla groups are of particular interest.

Components: Lecture

CPOL 553(3) Course ID:016081

Violent Non-State Actors

Though violent non-state actors (VNSAs) have only recently become the subject of sustained scholarly interest, they are increasingly important international actors. This course is designed to provide students with a theoretical, contextual, and practical understanding of this phenomenon. Though the terrorist attacks of September 11, 2001, dramatically asserted VNSAs as actors capable of challenging the world's most powerful states on a strategic level, the U.S.'s initial understanding of the threat it confronted—and hence, its reaction—had important limitations. This course examines the U.S.'s confrontation with al-Qaeda, but it will neither exclusively nor primarily focus on al-Qaeda and other jihadist organizations. By exploring a range of VNSAs, the course identifies commonalities and differences among them in terms of ideologies, recruitment processes, organizational structure, strategies, tactics, strengths, vulnerabilities, and what kind of toolkit can be used in confronting VNSAs in the future.

Arms Control, Disarmament and Non-Proliferation

Countering the threat of weapons of mass destruction from hostile state and non-state actors is a preeminent national security priority and a key element of President Obama's national security strategy. This course explores the complex dangers of nuclear, chemical, and biological weapons and the array of nonproliferation and arms control tools for addressing them. The future of nuclear weapons policies of the United States, Russia, and other nuclear weapons states, and their role in international security affairs, will be examined. The nuclear arms control experience will also be studied, comparing theory and practice, and assessing current arms control agreements and new initiatives from the Obama administration will also be explored. The course will also address core questions such as: What incentives drive WMD proliferation and what global and United States strategies are in place to reduce these incentives? How has the WMD threat changed our thinking about deterrence and can terrorist groups such as al Qaeda be deterred? What are the challenges in

CPOL 579(3) Course ID:009944

Iran, Iraq and the Gulf

Since the beginning of the twentieth century, Iran, Iraq, and the other Gulf states have been key players in the Middle East. Their influence stretches well beyond the region and their complexity has frustrated and often entangled a range of outside players. They are countries with complicated and intertwined histories, some of which stretch back thousands of years. This course will initially focus on the post-WWII roots of these states as a foundation for understanding and exploring the social, political, and religious factors that have shaped these countries. Following that, we will explore the key transitions these countries have experienced such as independence, the transition from monarchy to theocracy, and the shift from authoritarian to a proto-democratic federated state, and the Arab Spring. Finally, the course will turn to contemporary developments such as the rise and fall of ISIS into Iraq, the reemergence of the rivalry between Riyadh and Doha, the war in Yemen, and succession in Saudi Arabia.

CPOL 580(3) Course ID:013286

Germany & The EU

Germany and the EU: What's Next?

The future of Europe and the European Union (EU) continues to challenge, as recent difficulties with immigration and membership, such as British withdrawal, reveal. At the same time, the relationship between Europe and the United States is no longer what it has been. The key member here is a unified Germany, particularly in view of its economic and financial strength. This course includes special focus on Germany, notably its government and its important role in the international scene. Attention is given to developments in Germany's political and security policies. The overall outlook for the EU, including its foreign and security role in conjunction with NATO, likewise is examined.

Complex Operations: Planning and Management

Weak states, failing states, countries in conflict and in post-conflict situations, states devastated by catastrophic events, and ones with transitioning economies present challenges and opportunities for those seeking to promote stability, accountability and predictability in the globalized world of the 21st century. States such as Afghanistan, Somalia, Iraq, and Yemen pose unique and individual challenges as they struggle with internal division, economic development and terrorism. This course will explore the relationship between states, localities and the international community in conflict and post-conflict reconstruction. Among the topics explored will be how to organize, prioritize, plan and execute complex operations and the role of leadership, creative operations planning, special operations, and joint civil-military operations in promoting rule of law, stabilization, and reconstruction.

CPOL 618(3) Course ID:000983

The Problem of Sovereignty

Since the Peace of Westphalia, sovereign states have been the fundamental units of the international system. Yet many argue today that sovereignty is being undermined both from above and below. Globalizing forces of open markets, open societies, and open technologies undermine sovereignty from above. Simultaneously, many sovereign states are under siege or collapsing due to the pressure of ethnic, nationalist, and/or demographic forces from below. Is sovereignty dead, dying, or changing? International law is based upon the concept of sovereignty, yet it was also created to overcome the problems associated with sovereignty. Is sovereignty without limits or responsibilities? The humanitarian crises since the end of the Cold War have caused many voices across the ideological spectrum to argue that sovereignty must be kept in its place. What does that mean? This course will consider these debates concerning sovereignty: its history, definitions, prospects and limitations, and future evolution. World Politics.

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 623(3) Course ID:007779

Congress, the President and Foreign Policy

The course examines congressional activism and acquiescence in U.S. foreign policy. Constitutional concepts will be explored through recent cases (Helms-Burton, NAFTA, War Powers and Lebanon, debate over the 1997 ABM Treaty-related agreements, and U.S. funding for the United Nations). Issues such as the influence of interest groups and bipartisan collaboration and conflict in foreign policy will be debated.

Components: Lecture

CPOL 635(3) Course ID:012418

American Foreign Policy: Institutions and Issues

This course is an overview of the American foreign policy process. The first portion of the course investigates the actors and processes involved in the making of foreign policy. In this section of the course, we will ask and answer questions such as how is the president influenced by public opinion? How do different entities within the intelligence community work together? When are interest groups able to influence foreign policy? The second portion examines how foreign policy actors address select topics ranging from environmental policy to terrorism to global health issues in foreign policy. The goal of the course is to reach a better understanding of the pitfalls of making foreign policy. How do institutional arrangements complicate the policy process and, similarly, how do particular issue areas challenge decision makers?

Components: Lecture
Room Requirements: OFF CAMPUS(1)

CPOL 644(3) Course ID:012315

National Security Decision-Making

This course will examine the roles of the President, the Cabinet departments, and Executive Office Agencies, (with special emphasis on the National Security Council and CIA), in the formulation and implementation of foreign and national security policy. Special attention will be focused on the impact of White House organization and policy-making processes in shaping decisions. The course will begin with an historical overview of the role of the President and Congress in the realm of foreign and national security policy. Case studies will include the Korean War under Truman, the Bay of Pigs and early Vietnam decisions of the Kennedy years as well as the Cuban Missile Crisis, the major decisions on intervention and non-intervention in Vietnam of the Eisenhower and Johnson years, Operation Desert Storm under George Bush, the intelligence failures leading up to Pearl Harbor and 9/11, and the pre-war intelligence and Bush administration decisionmaking regarding the intervention in Iraq in 2003.

POL 305(3) Course ID:019351

The Anthropology of Development

This course introduces undergraduates to the basic theory and practice of international development within an anthropological context. Students will explore an applied, interdisciplinary approach to some of the "big questions" in this field: What does development mean? Why are some countries persistently poorer than others? How have different stakeholders sought to address the challenges of development in the past, and how are they approaching these challenges now? What are the avenues through which students can develop their own careers in the development field? In addition, this course will cover the basic skills necessary to conduct development work in the 21st Century including designing and managing development projects, conducting development research and evaluating the success of projects.

Components: Lecture(In Person)

Course Equivalents: ANTH 305, SSS 305

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 307(3) Course ID:002857

Global Issues

Major issues in the global community (environmental, human rights, arms control, drug trafficking problems, etc.), and the different perspectives by which they are viewed. World Politics.

Components: Lecture

POL 307A(3) Course ID:017085

Refugees and Political Crises

We examine issues surrounding refugees in historical context and with attention to recent and current crises. We consider questions from international, national, legal, humanitarian, and first-person perspectives.

Components: Online(Online)

Room Requirements: ONLINE(1)

POL 309(3) Course ID:017059

Politics in the Age of Trump

This class explores the nature of Donald Trump's presidential candidacy, the 2016 election, and the Trump presidency in its historical and theoretical context.

Components: Lecture

POL 310(3) Course ID:002858

The US Presidency

A study of this uniquely American institution with attention given to the intentions of the Framers and the importance of the Presidency in articulating national values and shaping American priorities. Emphasis on historical, constitutional, and institutional evolution of the office. American Government.

Components: Lecture

Enrollment Requirements: POL 111

POL 312(3) Course ID:002860 Department Consent Required

The Civil Rights Movement

A course in the Peace Studies Program, which examines the origins, strategies, tactics, and effects of the U.S. civil rights movement, its global impact on other transnational advocacy networks, human rights, nonstate actors, and the intersection of religion and politics. World Politics. American Politics.

Components: Lecture

POL 313(3) Course ID:002861

Urban Government & Politics

Analysis of urban governance in contemporary America. Examines urban institutions and economic, cultural, and political contexts as well as processes for resolving conflict and distributing resources. Macro and micro phenomena and approaches to urban life also covered. American Government.

POL 332(3) Course ID:017861

Republic or Empire: Ideas and Practice in American Foreign Policy

The debate continues today in arguments over American involvement in the Middle East, the proper posture toward international alliances, and whether humanitarian concerns may justify war. The course will be taught by a team of Fellows at CUA's Center for the Study of Statesmanship as well as guest lecturers and visitors from the academic, political, and policy worlds, and will explore the development and trajectory of American foreign policy from the perspective of the history of ideas, connecting issues of human nature and the moral life to practical questions of international affairs, constitutionalism, and the paradoxes of American exceptionalism. Readings will be drawn from history, philosophy, and case studies in American and international politics. It will include at least one excursion to a foreign policy-related event in Washington, D.C. Counts for American, World, and Theory concentrations in Politics. Enrollment may be selective based on academic standing and interest.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 333(3) Course ID:012908

Democracy and Democratization

Explores competing meanings of "democracy"; examines the evolution and expansion of democracies and democratization since the 1970s, and the recent and emerging challenges to democracies today. [Counts toward World and American concentrations]

Components: Lecture

The Catholic Univ of America

Arts & Sciences - Politics - Subject: Politics

POL 337(3) Course ID:017248

Security Studies

This course will analyze the changing approaches and challenges to security in the 21st century. Topics include cyber security challenges, the perspectives of state security, national and international security, human security, economic and environmental security, nuclear security, and changing definitions of security and threats to security. World Politics.

Components: Lecture

POL 337A(3) Course ID:017795

Cybersecurity

This class will examine the policy debates over cybersecurity, cyberwarfare, drones, critical infrastructure protection, cyber crime and cyberterrorism, and the national, public-private, and international responses to meet these growing security threats. Cyberthreats move fast, often outpacing organizational responses. How are policies and organizations responding to rapidly changing cybersecurity threats? What authorities and capacities do the public and private sectors bring to the new security environment of a global, IT-connected world? How do the EU, UN, and US approaches to cyber security compare? The course will use case studies; no prior or technical knowledge is needed.

Components: Online(Online)

Course Equivalents: POL 665A

POL 338(3) Course ID:014021

The Art of the Interview

The course proceeds from the premise that anyone who asks questions is an interviewer. Specifically targeted to media studies, politics, and business students, the course demonstrates through observation, discussion, and practice that there is a philosophy and set of skills which can be learned, and which together raise ordinary conversation to the level of professional interviewing.

Components: Lecture

POL 339(3) Course ID:017860

Contending Views on US Intelligence From Truman to Reagan

Since at least the 1970s, there has been a distinct polarization of views on US intelligence in American political culture. Positive attitudes about the country's "first line of defense" are opposed by more malevolent perspectives that allege a powerful "Deep State." This course will explore these contrasting views in American scholarship, public discourse, journalism, and popular culture. We will use them to assess the missions, accomplishments, failures, personnel, and leadership of US intelligence, especially in its relationship with the President, to enhance understanding of this vital function of national government. This course requires a term paper and student presentations.

Components: Lecture

Course Equivalents: HIST 342A

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 340(3) Course ID:018657

Introduction to Intelligence Analysis & Estimation

This is an introductory course that examines the key elements, methods, problems, cognitive, and bureaucratic issues of intelligence analysis and estimation. This course is designed to augment the curriculum of the intelligence program. We will use secondary books and articles by professional intelligence officers, declassified U.S. Intelligence Community documents and case studies to study the issues affecting the accuracy, timeliness, accuracy and relevance of intelligence analysis to national security strategy and decision-making, military planning and operations, and weapons acquisition.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 340A(3) Course ID:018699

Global Pandemics and World Politics

Why and how do some countries respond to global pandemics more effectively than others? How do pandemics reflect, reinforce, or undermine processes of globalization and/or the sovereign state system? What impact do pandemics have on the global economy and international politics? What is an ethical response to a pandemic outbreak and how might the Church address the current global crisis? Tracking COVID-19 in real time, this course examines the relationship between global pandemics and world politics. In addition to researching and analyzing international responses to COVID-19, the course allows students to process the global magnitude of the current crisis. Students will be asked to reflect on how COVID-19 has altered their own life and local community and to place such disruptions in a broader international context. The course will be delivered online using both synchronous and asynchronous learning methods. Students will be guided by weekly reflection questions and readings as well as short written assignments.

POL 347(3) Course ID:019392
Justice, Education, and Leadership in Plato's Republic
Working from their two foundational philosophy courses, students deepen their philosophical studies through a careful reading of Plato's Republic. More than any other text the Republic explores diverse philosophical topics, from metaphysics, logic, epistemology, and psychology to moral philosophy, political philosophy, and aesthetics. These larger philosophical questions are raised in the context of a sustained reflection on the nature of justice, the right education, and virtuous leadership. While principally studying this important and foundational dialogue, students also explore these themes: justice, education, and leadership; by engaging with the literary, historical, and political heritage of Ancient Greece. Enduring Questions addressed: (1) What does it mean to be an individual, and how do we live as members of society? (2) What is justice? Can it be achieved in this world, and if so, how? (3) What makes a life good? How can we live a good life or best pursue it? What is opposed to it? (4) What is wisdom? How can we attain it? Philosophy minors

American Politics in Film

In this course, we will study how films have portrayed, opposed, and even shaped American political institutions and culture. We will examine how films can capture political beliefs or criticize existing policies. Such films as Mr. Smith Goes to Washington, High Noon, The Exorcist, I Robot, and various others from a broad spectrum of genres will be used to explore how politics is reflected in or condemned by popular media. The course will touch on various political topics, including campaigns and elections, political machines, conspiracy, political institutions and offices, and idealistic approaches to politics. Grading for the course will include discussion, several short writing assignments, and a final exam.

Components: Lecture

POL 363(3) Course ID:002876

Politics of the 60's

Examines the major events and personalities of this turbulent decade which continues to affect American politics and institutions to this day. Particular attention to the civil rights movement, the rise of the New Left and the New Right, the deaths of President Kennedy and Martin Luther King, and the Vietnam War. American Politics.

Components: Lecture

POL 366(3) Course ID:016687

Democracy in Elections in France & US

This course will compare the French and American electoral systems. It will address different aspects such as: the number and structure of the political parties, the financing and the ruling of the campaigns, the electoral process and the role and use of the media - TV ads, advertising, debates - in the two countries. In the last part of the course, students will reflect about the notion of "sovereignty of the people" in the two oldest democracies of the Western world.

Components: Lecture

POL 367(3) Course ID:016878

France, Germany, and the EU

A study of the European Union and its relationship with France and Germany.

Components: Lecture

POL 410(3) Course ID:000137

American Political Thought I

This course examines a number of important historical figures, ideas, governing documents, and events from the American colonial period through to the end of the 1850s. The readings and lectures reveal rich and conflicting traditions of American political thought prior to the American Civil War. Among other things, different views on the relationship between religion and politics in America, the Declaration of Independence, the 1787 U.S. Constitution, the relationship between the national government and the States, and the issue of slavery are studied. The course concludes with readings from Tocqueville's Democracy in America. The course also imparts a deeper awareness of what can be called America's unwritten constitution, i.e., the underlying ideas about human nature and politics that drive American political thought.

Components: Lecture

Course Equivalents: POL 647

POL 410A(3) Course ID:017325

Modern Christian Political Thought

A survey of the way in which Christianity sustains modern political thought and becomes a target of its critique. The rise of Christian social teaching is included in this larger relationship.

Components: Lecture

Course Equivalents: POL 644

POL 411(3) Course ID:005752

American Political Thought II

Survey of American political thought from the Civil War to the present. The course pays particular attention to constitutional theories and disputes during the Civil War, the Progressive Era, and the present. Attention is also given to the emergence of Liberalism and Conservatism as ideological movements in American politics. Authors and figures to be covered include Lincoln, Brownson, Bellamy, Croly, Wilson, Roosevelt, and Reagan.

Components: Lecture

Course Equivalents: POL 648

POL 412A(3) Course ID:012478

Homeland Security

Homeland security occupies a unique place at the interface of national and international security, as well as domestic and foreign policy decision-making. It has many dimensions, ranging in diversity from efforts to secure air travel, sea containers and critical infrastructures to vaccine development, border fence building, and intelligence collection. Homeland security responsibilities and jurisdictions are divided among federal, state, and local governments, in addition to the private sector. The purpose of the course is to help students develop a better understanding of the complex set of actors, institutions, processes, and issues that constitutes the realm of homeland security.

POL 418(3) Course ID:018492

German Idealism and Its Aftermath

German Idealism defined a shift in modern philosophical and political thought that is still being absorbed. The continuity between Hegel and Marx has exemplified the connection with the modern ideological movements. John Rawls's identification of Kantian morality has confirmed the descent into liberal political thought. Now we have the postmodern recognition of the idealists as the source of their own "metaphysics beyond the metaphysics of presence." No one of these avenues is sufficient to comprehend the rich philosophical profusion that constituted German idealism, an outburst that can well be regarded as the core of the self-understanding of the modern world. This seminar will initiate such a reconsideration through the reading of Kant, Hegel, Schelling, Kierkegaard, and Nietzsche.

Components: Lecture(In Person)
Course Equivalents: POL 701
Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 419(3) Course ID:002896

Interest Groups & American Politics

Investigates the origins, maintenance, and behavior of interest groups operating in the American political system; includes the political theory of interest groups, the determinants of group influence (membership, financial capability, and leadership and electoral resources), the tactics of influence, and the effects of interest groups on national governance. Particular focus on the dilemmas for a democracy posed by interest groups. American Government.

Components: Lecture

20th-Century French Political Thought

This course explores the writings of French thinkers searching for meaning and understanding in a time of great triumphs and tragedies. It begins with a theoretical and historical overview from the late 19th Century to today, then surveys leading schools of French thought, such as existentialism, personalism, structuralism, and postmodernity, and considers their relevance to Western political crises of neoliberalism, populism, the welfare state, and identity.

Britain and Europe in a Global Perspective

This module provides students with an overview of the major intellectual concepts and approaches to the study of key challenges facing contemporary Britain and Europe. The program is made up of three themes: the first will provide historical background and focus on the frayed relationship between the UK and Europe which has culminated in the recent EU referendum and subsequently Brexit; the second unit will investigate the pressing and divisive issues facing the UK and EU, including extremism, populism and nationalism; and the third will introduce students to significant foreign policy and security issues that the UK and Europe face, as well as transatlantic relations.

Components: Seminar
Topics: London, UK
Room Requirements: ABROAD(1)

POL 442(3) Course ID:016457

French Liberal Thought and Politics

In a land famous for monarchs and radical republicans, French political ideas and institutions are surprisingly liberal. We will seek to understand modern France and its influence as the "other" exceptionalist Western nation by considering the insights and impact of early French liberals such as Tocqueville and Constant, the tumultuous decades of the Second Empire and the Third Republic, and the 20th-Century quest for personal dignity, individual freedom, and political stability through the traumas of war, colonialism, and recovery.

Arts & Sciences - Politics - Subject: Politics

POL 456(3) Course ID:014544

Congress and Foreign Policy

This course examines Congressional activism and acquiescence in relation to the President in formulating and executing U.S. foreign policy. Constitutional concepts will be explored through recent cases; issues such as party politics and control of the Houses of Congress and the Presidency, the influence of interest groups and bipartisan collaboration and conflict will be discussed.

Components: Lecture

POL 457(3) Course ID:015303

War in the Modern World

This course provides an introduction to war as a political and social phenomenon and as a force in the international system. Major themes include: the development of leading ideas about war; the mutual interactions of politics, society, and warfare; the impact of military doctrine on war fighting; allocation of resources and coordination of effort among land, sea, and air forces; national strategic cultures, and their implications for strategic practice.

Components: Lecture

POL 458(3) Course ID:016698

The Media and Foreign Policy

Globalization's trends of open societies, open economies, and open technologies mean that the media are now global, immediate, and decentralized. This class examines the impact of media and social media on foreign policy from historic cases, such as satellite television coverage impacting the U.S. hostages taken in Iraq, to the media strategies of terrorist organizations today. World or American Politics.

Components: Lecture

POL 459(3) Course ID:016459

Human Rights Politics in Asia

Drawing on case examples from Asia, this course examines the debate between universal rights and cultural values and the relationship between human rights, democratization, and security.

Components: Lecture

POL 459A(3) Course ID:017932 Department Consent Required

Israel and International Human Rights

This course will focus on a comprehensive overview of the principal challenges that the protection of human rights poses to the international community today and will examine Israel as a case study. We will discuss the evolution of the idea of human rights from its inception, its religious sources (with a focus on Judaism), and its secular sources. The salient milestones in the development of the international regime of human rights will be analyzed, including the establishment of a special tribunals for war crimes and the International Criminal Court, the spread of universal jurisdiction, and the beginning of international humanitarian intervention. The course will address the rights of special groups, the problem of cultural relativism, and the activities and effectiveness of human rights organizations. Special emphasis will be given to the protection of human rights in Israel and the West Bank, including the dilemma of protecting human rights while fighting terrorism, the lack of a constitution, and the role of Israel's supreme court in

POL 462(3) Course ID:018895

Moral Foundations of Intelligence

This course explores the moral and ethical principles regulating the practice of intelligence (collection, analysis, counterintelligence, and covert action) as practiced in democratic societies. In contrast to authoritarian societies, within democracies a preference for conducting public affairs with some measure of openness and within legal boundaries has been present for several centuries. At the same time those societies, including the emergent United States, have recognized the need for state secrets (or arcana rei publicae). The tension between openness and secrecy in American government has long been apparent and seems never to result in a permanent equilibrium. The course will address this tension, and its legal, political, and philosophical implications. Students can expect to engage with issues of loyalty versus transparency, the relevance of ethics in other professions, whether a professional ethical ethos exists in intelligence, privacy, and the role of technology.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 462A(3) Course ID:019029

Comparative Foreign Intelligence Services

This course studies the differences between foreign intelligence services and considers why they exist. Countries studied include the United Kingdom, Russia, China, Israel, and South Africa.

American Political Culture

Consideration of the cultural dimension of American political thought and action. Examines changes in and expressions of political ideology and commitments in American political history from the revolutionary period to the twentieth century. American Government.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 466(3) Course ID:018530

The Cold War and the Populist Aftermath

The Cold War established long-standing foreign policy alliances (e.g. Nato) and re-shaped US domestic Politics. From 1952-1988, there were 10 presidential elections and the Republicans won 7 of them. The end of the Cold War coincided with changing demographics within the US electorate that resulted in the election of Barack Obama. However, a strong populist strain developed and elected Donald Trump. This new normal has spread throughout Europe and has disrupted politics as we know it.

Arts & Sciences - Politics - Subject: Politics

POL 470(3) Course ID:017402

Korea in World Politics

Foreign policy experts argue that Korea, a country the size of the state of Indiana but now the 11th largest economy in the world, punches above its weight on the international stage. Although this statement refers to South Korea, the same might be argued about North Korea, but for entirely different reasons (think nuclear weapons). This course is intended to provide students a better political, historical, and cultural understanding of the two Koreas and their relationship to Northeast Asia and the world. Using both Koreas as case studies, the course reinforces important themes rooted in world politics. Such conceptual themes include dictatorship and democracy, economic development, nationalism, civil society and social movements, regional rivalries, alliance politics, nuclear deterrence, and the balance of power. By the end of the course, students should be able to place contemporary Korean issues in their proper historical and political context, and hopefully take a deeper interest in Korea and the politics of Northeast Asia.

Components: Lecture

Course Equivalents: POL 670

POL 471(3) Course ID:016683

Issues in Contemporary U.S. Intelligence

The conduct of intelligence by the United States is intended to enhance national security but also creates contentious issues for our democracy. This course will allow students to learn from current and former intelligence officials how intelligence is actually collected, analyzed, and used, and how intelligence activities conducted by a free society create challenges and even dilemmas for policymakers and intelligence professionals alike. Examining many of the antecedents behind these contemporary issues, this course will emphasize both continuity and change in intelligence activities. This course is highly recommended for students considering or intending to apply for positions in the US Intelligence Community. This course formally requires POL 260 (Introduction to American Intelligence) as a prerequisite, but exceptions can be granted by the professor.

Components: Lecture

Course Equivalents: POL 663

Enrollment Requirements: POL 260; Open to students with sophomore or higher standing

POL 471A(3) Course ID:019183

Leaders and Their Spies

Modern leaders require good intelligence, but little is said about how leaders and their spies relate to one another. This course considers the nature of this necessary relationship by examining how leaders have used and abused intelligence to secure their goals, how this relationship has changed over time, and whether or not the type of leader/government has an impact on these relationships.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 472(3) Course ID:013288

National Security Processes

This course will examine the roles of the President, the National Security Council, the Congress, and the Intelligence Community in the formulation and implementation of national security policy. Special attention will be given to the impact of presidential organization of advisory and decision-making processes in shaping national security policy. Case studies will include the 9/11 terrorist attacks, the Iraq Wars of 1991 and 2003, the problems in intelligence gathering and interpretation in the pre-Pearl Harbor (1941), pre-9/11 (2001) and pre-Iraq intervention (2003) cases. Other case studies will include the battle of Midway, the Bay of Pigs, the major decisions on intervention and escalation in Vietnam during Lyndon Johnson's presidency, and the Cuban Missile Crisis of 1962.

Components: Lecture

POL 473(3) Course ID:016211

International Political Economy

A survey of major theoretical efforts to relate economic and political behavior. In addresses outstanding policy issues in world political economy, including international finance, globalization, development, and the US-China relationship. Using primary texts including Smith, Marx, Hayek, Schumpeter, and more, it addresses the utility of theoretical contributions in the light of historical evidence and contemporary policy trends.

Tocqueville's Political Thought: Hope, Religion, and Democracy

Following a presentation of Alexis de Tocqueville's life and work, this course aims to generate a reflection on the political, social, and morale characteristics of modern democracy in the West.

The course will unfold in four parts: a description of the basic principles of a democracy as a political and civil society; the role of faith and religion in a democratic society; a comparative approach of the advent and development of modern democracy in France and in the U.S.; a critical assessment regarding the loyalty of our society to the original democratic principles and values defined by Tocqueville.

This course is of particular relevance at the beginning of a new presidency that, for many reasons, also represents a new chapter in the history of American democracy.

Components: Lecture

POL 503B(3) Course ID:014022

Crucial Cultural & Political Differences between France & America two centuries after Tocqueville

This class analyzes the core cultural and political differences between the French and the American democracies as they have been shaped through the historical process from their foundation to the present. Based on Alexis de Tocqueville's two main works, Democracy in America and the Old Regime and the Revolution, it will focus on specific notions such as: the relationship between religion and politics, the work ethics and the market economy, the role of the civil associations in the fabric of the social bond, the power of the central state.

After a series of introductory lectures, the class will rely strongly on students' participation and initiatives.

Components: Lecture

POL 504A(3) Course ID:012787

Regional Economic Growth

Well-planned and executed growth can result in long-term, sustainable economies and an enhanced quality of life.

This course will use a case study to approach and assess the theoretical and practical aspects, as well as the success and failures, of fostering economic growth at the local and regional levels.

Components: Lecture

Course Catalog

Arts & Sciences - Politics - Subject: Politics

POL 505(3) Course ID:015127

Parties and Leaders in the U.S. Congress

Using a theoretical, historical, and case-study approach, this course explores the politics of congressional parties and party leaders.

Components: Lecture

Enrollment Requirements: Graduate Students Only

POL 505A(3) Course ID:012795 Department Consent Required

Constitutional Democracy in Theory and Practice

What is distinctive about the polity in which we live? What are the most important elements that created and sustain it? Can it be exported? Why should we care? We will consider these questions in historical and theoretical perspective, focusing on key influences and observers, such as early liberal and republican thinkers, the American framers, Tocqueville, the Progressives, and modern social science, ideology and law.

Components: Lecture

Course Equivalents: POL 405A

Enrollment Requirements: Graduate Students Only

POL 505B(3) Course ID:012810 Department Consent Required

Constitutional Democracy in Theory and Practice (UH)

An in-depth study of constitutional democracy in both theory and in practice. Honors.

POL 507(3) Course ID:006163

The Supreme Court

This course will cover the composition, structure and practices of the Supreme Court, with an emphasis on the selection of justices and the impact of leading justices past and present on constitutional law, politics and public policy. Intended for graduate students and undergraduates who are completing the prelaw sequence.

Components: Lecture

Course Equivalents: POL 407A

Enrollment Requirements: Junior or higher class standing

POL 508A(3) Course ID:015882

Civil-Military Relations

This course examines the basic concepts and issues in civil-military relations. It offers a historical and comparative analysis of different patterns of military participation in politics, defense policy making and national development. The course also introduces alternative models for structuring civil-military relations and critically examines the models adopted by the United States and other nations.

Components: Lecture

POL 519B(3) Course ID:013912

Environmental Politics and Policy

This course will introduce students to some of the major problems and issues in environmental politics and policy, and to the different perspectives by which these issues are viewed. Environmental problems often cross the borders of states, but governance largely stops at the border, thus environmental politics and policy move beyond sovereignty in both the nature of problems and solutions. How can environmental issues be tackled in a system that is based on sovereignty? How do globalization and non-state actors facilitate both environmental problems and attempts to manage them? We will begin with a brief examination of various approaches to environmental problems and the history of the environmental movement, and proceed to an examination of approaches to manage environmental issues, as well as critiques of these laws and institutions. Environmental issues are difficult because they involve debates about the costs, benefits, and distribution of costs and benefits of environmental protection, as well as debates over appropriate political

Components: Lecture

POL 520A(3) Course ID:012630

Lincoln and Political Leadership

This course will focus on Abraham Lincoln's development as an individual and as a political leader. We will look at his brief stint in the Blackhawk War, his days as a self-taught lawyer in Illinois, his service as a legislator in Springfield, the influence of Henry Clay on his early political development, and his term in Congress. We will then look at Lincoln's campaigns for the U.S. Senate and Presidency. Detailed attention will be given to Lincoln's tenure as President of the United States, including his use of the Cabinet as a forum for advice and decision-making, his extraordinary use of executive power during the Civil War, and his detailed management of military and political affairs as President.

Enrollment Requirements: Junior or higher class standing

POL 532A(3) Course ID:012785

Russian Foreign Policy, 1968 - 2008

The purpose of this course is to stimulate students' thinking about Russian perspectives on what the Cold War was about and why it ended the way it did and to offer Russian perspectives on the world order since the breakup of the Soviet Union in 1991. With regard to the Gorbachev reforms that contributed to the end of the Soviet regime, the emphasis will likewise be on the internal dynamics that undermined the communist order.

Components: Lecture

POL 537(3) Course ID:009976

Political Economy & Int'l Pol

An overview and analysis of the basics of political economy in the international sphere.

Components: Lecture

POL 539A(3) Course ID:012772

Comparative Politics of the Middle East

Comparative Politics of the Middle East looks at the modern development of various political trends in the Middle East region through a focus on analysis of relevant themes and various case studies. Some of the major concepts that will be explored in this course include the introduction of the modern nation-state system into the region, Arab and state nationalism movements, the political economy of natural resources, growth in political Islam, theories of global religious terrorism, and influence of US foreign policy in the region. The class will also look at various cases of state development including Saudi Arabia, Egypt, Israel and Palestine, Lebanon, and Algeria. Student requirements will include short papers, presentations on reading materials and class topics, and a final paper coordinated in conjunction with the instructor.

Components: Lecture

POL 545A(3) Course ID:003165

Enrollment Requirements: Junior or higher class standing

POL 555(3) Course ID:005764

Conservatism

Examines varieties of modern conservative thought from Edmund Burke to the present, with particular emphasis on American thinkers. Relates the ideas of conservatism to the classical and Christian tradition and modern historicism, and distinguishes them from competing currents of thought. Formerly 556.

Components: Lecture

Enrollment Requirements: Junior or higher class standing

POL 556(3) Course ID:003019

The Moral Problem of Politics

The meaning of morality in politics. Idealism versus realism. Machiavelli's challenge to the classical and Christian traditions. The things of Caesar. The ethics of power. Constitutionalism. Democracy. A historicist conception of morality.

Components: Lecture

Enrollment Requirements: Junior or higher class standing

POL 557A(3) Course ID:014791

Transnational Security Challenges

What sorts of transnational security challenges do states face in the information age, and how do they manage these threats? Global threats such as nuclear proliferation, climate change, environmental degradation, refugee streams, or infectious diseases do not stop at national borders. Terrorist and criminal networks not only transcend international borders, but also go beyond traditional state jurisdictions and stove-piped hierarchies. This course will analyze the nature of the challenges and look at the policy, legal, and institutional mechanisms the United States and other countries have found/must find to manage and counter these threats.

Components: Lecture

POL 557B(3) Course ID:017255

Security Studies

This course will analyze the changing approaches and challenges to security in the 21st century. Topics include cyber security challenges, the perspectives of state security, national and international security, human security, economic and environmental security, nuclear security, and changing definitions of security and threats to security. World Politics.

Components: Lecture

POL 558(3) Course ID:005766

Just Peace

When wars end, how do polities resolve issues of justice related to the conflict while building post-war peace? Examines war crimes tribunals, truth commissions, amnesty, and other ways polities balance issues of justice with other needs in ending conflicts. Considers both internal and international wars.

Components: Lecture

Enrollment Requirements: Junior or higher class standing

Arts & Sciences - Politics - Subject: Politics

POL 559(3) Course ID:003022

The Media and Foreign Policy

The "CNN effect" had become a cliché, but is often assumed and rarely systematically studied. To what extent does the media influence foreign policy, and to what extent are governments able to manipulate media coverage of foreign policy? How can the media affect foreign policy, over what types of issues are they more likely to exert an influence, and with what effect on the outcome of foreign policy? How do governments deal with the media coverage of foreign policy, and how effective are various media strategies? Freedom of speech and of the press are important components of democracies, yet secrecy may often be necessary for the successful conduct of foreign policy. How can these seemingly opposed concerns be reconciled? This course will use case studies to examine these issues, with a focus on US foreign policy (although not exclusively).

Components: Lecture

Enrollment Requirements: Junior or higher class standing

POL 559A(3) Course ID:017933

M.A. in Human Rights Capstone Course

This course will focus on analyzing the main issues in the field of human rights in international relations and the challenges that the protection of human rights poses to the international community. We will discuss the evolution of the idea of human rights and the salient milestones in the development of the international regime of human rights.

Components: Lecture

POL 604(3) Course ID:003189

Topics in Legal and Social Theory

Topics may include theories of distributive justice, the tension between rules and discretion in judicial decision making and policy implementation, the art and science of legal reasoning, and other normative and institutional issues.

Components: Lecture

POL 605(3) Course ID:003195

Political Science & the American Polity

A consideration of the foundations, development, and challenges to liberal democracy, and the role of political and social science in a liberal polity. Examination of major schools and disputes in political science, with applications to eras and institutions of American politics.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Politics - Subject: Politics

POL 606(3) Course ID:003199

Intro to International Relations

An introduction to International Relations theory, including major theories and research on the causes of war, the bases for international cooperation, and the character of the post-Cold War world.

Components: Lecture

POL 607(3) Course ID:003205

Graduate Introduction to Comparative Politics

Theories and research on comparative political institutions, political culture, political development, and political violence.

Components: Lecture

POL 608(3) Course ID:003208

Rethinking United States Foreign Policy Institutions

The structures of United States foreign policy institutions developed to deal with issues of the past. How can this machinery be recreated or retooled to better address the issues of the future? Historical evolution of U.S. foreign policy institutions, changing requirements of international problems, obstacles to and incentives for institutional change.

Components: Lecture

POL 609(3) Course ID:006177

Contemporary Problems in American Military Strategy

Surveys major issues in American military strategy; for students with some background in world politics, United States foreign policy, or related fields. Topics include the relationship of national strategy, military power, and the use of force; evolution of military doctrine and technology; future requirements for military forces and the division of resources; nuclear strategy, arms control and strategic defense; the notion of a distinctly American "way of war." World Politics. Staff.

Components: Lecture

POL 610(3) Course ID:003210

Graduate Introduction to Security Studies

The impact of nuclear weapons on military strategy and policy; strategic and extended deterrence; coercion and compliance; proliferation and strategic defense.

Components: Seminar

POL 611(3) Course ID:006178

Economic Issues and National Security

A review of major economic trends which have significant impact on the security of major Western and non-Western powers. Topics include raw material supplies, productivity, economic warfare, and informal penetration.

Components: Lecture

POL 612(3) Course ID:003213

Post Cold War Intervention

In the Post Cold War era, there are increased opportunities for intervention as states collapse into internal violence; there is decreased consensus over when, if ever, to use tools of military or humanitarian, unilateral, multilateral, or United Nations intervention. Course surveys problems of state failure, theories of sovereignty, and the rise of non-sovereign actors playing increasing roles in interventions. Examines international ramifications of state collapse and internal conflict; considers various means of international interventions.

Components: Lecture

POL 613(3) Course ID:006179

Tradition and Modernity: The Urban Experience

Examines the ancient city and the historical notions of city that developed in Europe. Also examines the American urban scene and assesses the contemporary urban policies of other nations, as well as the various ideological approaches to urban change and civic order in the Third World.

Components: Lecture

POL 614(3) Course ID:006180

Seminar: American Ethnic Politics

An inquiry into the origins and current practices related to the participation of American ethnic groups in social, political, economic, and cultural institutions of the United States.

Components: Seminar

POL 617A(3) Course ID:017865

U.S. Political Leadership Since 1912

Examines U.S. political leadership from Theodore Roosevelt to Ronald Reagan. Biographical and historical in approach.

Components: Lecture

Course Equivalents: POL 427

Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 618(3) Course ID:003216

The Problem of Sovereignty

Since the Peace of Westphalia, sovereign states have been the fundamental units of the international system. Yet many argue today that sovereignty is being undermined both from above and below. Globalizing forces of open markets, open societies, and open technologies undermine sovereignty from above. Simultaneously, many sovereign states are under siege or collapsing due to the pressure of ethnic, nationalist, and/or demographic forces from below. Is sovereignty dead, dying, or changing? International law is based upon the concept of sovereignty, yet it was also created to overcome the problems associated with sovereignty. Is sovereignty without limits or responsibilities? The humanitarian crises since the end of the Cold War have caused many voices across the ideological spectrum to argue that sovereignty must be kept in its place. What does that mean? This course will consider these debates concerning sovereignty: its history, definitions, prospects and limitations, and future evolution.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Politics - Subject: Politics

POL 619(3) Course ID:017642

The Arab-Israeli Conflict

An in-depth study of political and military conflicts between Israel and its Arab neighbors.

Components: Lecture
Course Equivalents: POL 414

POL 619A(3) Course ID:017257

Civil Society

This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments, both within and outside of the United States

Components: Seminar

POL 620(3) Course ID:006182

Constitutionalism: Ideas and Institutions

Considers the nature and function of constitutionalism, and the structuring of political and social relations to compensate for human nature, constrain choice, and institutionalize knowledge, values and practice, with particular reference to the American experience. Topics include political culture, the public-private distinction, political and administrative discretion, federalism and decentralization, and the limits of rationality.

Components: Lecture

POL 621(3) Course ID:017869

Modern French Political Thought

This course explores the writings of French thinkers searching for meaning and understanding in a time of great triumphs and tragedies. The French preoccupation with the human condition, how persons perceive, experience, and seek meaning in the world, confounds the left-right political spectrum and distinguishes it from Anglo-American philosophical dispositions and even within the Continental tradition. The course begins with a theoretical and historical overview from the late 19th Century to today, then surveys leading schools of French thought, such as existentialism, personalism, structuralism, and postmodernity, and considers their relevance to Western political crises of neoliberalism, populism, the welfare state, and identity.

Components: Lecture
Course Equivalents: POL 422
Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 622(3) Course ID:006183

Hegel to Nietzsche

A review of the political theories of nineteenth-century European political thought with a special emphasis on the continental tradition. Utilizes selected texts from various authors, including Hegel, Proudhon, Marx, Stirner, Bergson, Dilthey, Weber, and Nietzsche. Particular attention to questions of right and the political order. Prerequisite: 652.

Components: Lecture

POL 624(3) Course ID:010304

Graduate Seminar on Congress

An in depth look at the major political science literature and research trends on the modern Congress.

Components: Seminar
Course Equivalents: POL 463

POL 625(3) Course ID:003223

Department Consent Required

Graduate: Introduction to American Politics

Studies the principal approaches in political science to the organization of American government, with particular emphasis on the Presidency, Congress, political parties, and the Supreme Court.

Components: Lecture

POL 626(3) Course ID:003224

Graduate Constitutional Law

An intensive overview of the development of leading constitutional doctrines by the Supreme Court, including federalism and separation of powers, property and privacy rights, the First Amendment and the Equal Protection Clause.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Politics - Subject: Politics

POL 627(3) Course ID:007105

Seminar: The American Presidency

An intensive review of the major literature on the U.S. presidency including Skowronek on political development, Tulis on the rhetorical presidency, Barber on presidential character, Jones on separation of powers, McDonald on historical development, and Burke on institutionalization of the executive.

Components: Seminar

POL 628(3) Course ID:006184

United States Military Interventions

An examination of United States military interventions, deployments, and humanitarian interventions. When is the use of force effective, necessary, justifiable?

Components: Lecture

POL 629(3) Course ID:009560 Department Consent Required

Separation of Powers

The focus of this seminar is on constitutional conflicts among the branches of the national government. Topics to be examined are: presidential war powers and foreign policy, covert operations, executive orders, presidential signing statements, executive privilege, budgetary control, independent regulatory commissions, among others.

Components: Seminar

POL 630(3) Course ID:011608

Seminar: American Political Development

The course examines advanced theories of political change and institutional development in the United States. Particular focus is given to political institutions and the importance of ideas in shaping institutional change. Topics include the influence of political culture and beliefs; theories of realignment, junctures, and regimes; the role of time and sequence in institutional development; coalitions and sectional interests shaping institutional structure; and the relative contribution of entrepreneurs and organized groups.

Components: Seminar

POL 631(3) Course ID:017403

Classics of International Relations

This seminar examines several classic texts of international relations theory, such as St. Augustine, Kant, Waltz, Morgenthau, Jervis, Wight, and others. The focus is on the policy relevance of these texts as well as on the development of theoretical knowledge of international relations.

Components: Lecture

POL 632(3) Course ID:003226

Foreign Policy Decision Making

Conceptions of decision making, bargaining theory, incrementalism, organizational theory, bureaucratic politics, crisis management, and cognitive processing.

Components: Lecture

POL 634(3) Course ID:003227

Research Design: Strategies and Skills

A basic course in research design for theoretical political analysis. Explores a variety of methodological approaches. Formerly titled "Theory Construction and Research Design."

Components: Lecture

POL 635(3) Course ID:011186

Statistical Methods

A graduate-level introduction to basic statistical methods and research design. The course is designed for those planning to use quantitative methods in their research, or who wish to better evaluate statistical studies in political science. Topics include sampling, probability theory, hypothesis testing, confidence intervals, and bivariate and multivariate statistics.

Components: Lecture

POL 636(3) Course ID:012249

History of the Presidency

An intensive review of the major literature on the U.S. presidency including Skowronek on political development, Tulis on the rhetorical presidency, Barber on presidential character, Jones on separation of powers, McDonald on historical development, and Burke on institutionalization of the executive.

POL 637(3) Course ID:013990

Social Movements in World Politics

This course examines the role of social and transnational movements in world politics. The course explores a variety of approaches to contentious politics, but gives particular attention to social movement theories and their application in the field of international relations. We will also study the impact of social/transnational movements on foreign policy and global issues such as human rights.

Components: Lecture

POL 638(3) Course ID:012423

Asian Security

What are the ordering principles underlying international relations in Asia? Do existing theories of international relations help us understand the sources of conflict and cooperation in this region? This seminar analyzes various strands of international relations theory in the context of Asia. Although emphasis will be placed on East Asia, the course also raises important security issues pertinent to Southeast and South Asia.

Components: Lecture

Course Equivalents: POL 438

POL 639(3) Course ID:014315

Qualitative Research Methods

This course provides an overview of qualitative methods adopted in political science research. Topics covered include social scientific inquiry, case study methods, research design, archival research, field work, and interviews

Components: Lecture

POL 641(3) Course ID:006185

Contemporary Theories and Research in Comparative Politics

An advanced survey of the major topics and important research traditions in comparative politics, with emphasis on theory and research design.

Components: Lecture

POL 642(3) Course ID:016458

French Liberal Thought and Politics

In a land famous for monarchs and radical republicans, French political ideas and institutions are surprisingly liberal. We will seek to understand modern France and its influence as the "other" exceptionalist Western nation by considering the insights and impact of early French liberals such as Tocqueville and Constant, the tumultuous decades of the Second Empire and the Third Republic, and the 20th-Century quest for personal dignity, individual freedom, and political stability through the traumas of war, colonialism, and recovery.

Components: Lecture

Course Equivalents: POL 442

POL 643(3) Course ID:008392

Foundations of Christian Political Thought (Bible to Middle Ages)

The advent of Christ was not primarily a political event but it changed the context for politics in ways that are irreversible. Some of those changes are so pervasive that we have often ceased to notice them. Yet the tradition of theoretical reflection that derives from Greek philosophy does not readily furnish categories within which the new theological relationship can be understood. This course will address these issues through the perspective of the communities, Jewish and Christian, that sought to grapple with the consequences for political and historical existence when the transcendent God reveals himself to human beings. A particular focus will fall on the enlargement of reason, and the rational analysis of politics, that follow from the event of revelation.

POL 644(3) Course ID:008698

Modern Christian Political Thought

Christian civilization is the source of the modern world and subsequently finds itself separated from that to which it has given birth. This course examines the complex relationship between Christianity and modernity suggested by this observation. Can the modern world flourish on its own, without reference to the framing theological horizon from which it has been derived? That is the question at the core of the modern experiment. Increasingly the answer has been negative, thereby suggesting that there is not only a place for Christian political thought but that at the most fundamental level no other theoretical reflection is possible. Political thought in the contemporary setting, if it reaches to the limits of rationality, discovers itself as Christian political thought.

Components: Lecture
Course Equivalents: POL 410A

POL 645(3) Course ID:008890

Classical Political Thought

Examines one or more basic texts of ancient political thought, such as Plato's Republic, Aristotle's Politics, or Aristotle's Ethics. Explores ancient alternative to modern political theory.

Components: Lecture
Course Equivalents: POL 417

POL 646(3) Course ID:016883

Research Methods in Political Science

This seminar provides an introduction for graduate-level students in basic quantitative and qualitative methods in political science. Satisfies the basic methodology requirement for the graduate degree.

Components: Lecture

POL 647(3) Course ID:018885

American Political Thought 1

This course examines a number of important historical figures, ideas, governing documents, and events from the American colonial period through to the end of the 1850s. The readings and lectures reveal rich and conflicting traditions of American political thought prior to the American Civil War. Among other things, different views on the relationship between religion and politics in America, the Declaration of Independence, the 1787 U.S. Constitution, the relationship between the national government and the States, and the issue of slavery are studied. The course concludes with readings from Tocqueville's Democracy in America. The course also imparts a deeper awareness of what can be called America's unwritten constitution, i.e., the underlying ideas about human nature and politics that drive American political thought.

Components: Lecture
Course Equivalents: POL 410
Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 648(3) Course ID:018494

American Political Thought II

Survey of American political thought from the Civil War to the present. The course pays particular attention to constitutional theories and disputes during the Civil War, the Progressive Era, and the present. Attention is also given to the emergence of Liberalism and Conservatism as ideological movements in American politics. Authors and figures to be covered include Lincoln, Brownson, Bellamy, Croly, Wilson, Roosevelt, and Reagan.

Components: Lecture(In Person)
Course Equivalents: POL 411
Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 651(3) Course ID:003228

Political Theory I

Examines fundamental issues of politics with special reference to seminal thinkers from Plato to modern times. Part I gives particular attention to Plato, Aristotle, Cicero, Augustine, Aquinas, and Machiavelli.

Components: Lecture

POL 652(3) Course ID:003229

Political Theory II

Examines fundamental issues of politics with special reference to seminal thinkers from Plato to modern times. Part II emphasizes such figures as Hobbes, Locke, Rousseau, Burke, and Marx. These courses can be taken separately but are structured to be taken in sequence. Particularly students without background in political theory are advised against taking them out of sequence. Required for students in the Ph. D program.

POL 665(3) Course ID:017087

Security in the Information Age

This class examines the debates over information warfare and operations, cybersecurity, cyberterrorism, cybercrime, national infrastructure protection, media and foreign policy, organizations, and information technology. These issues will be considered from both international relations and norm/rules/international law-based perspectives.

Components: Online(Online)
Course Equivalents: POL 415
Room Requirements: ONLINE(1)

POL 665A(3) Course ID:017796

Cybersecurity

This class will examine the policy debates over cybersecurity, cyberwarfare, drones, critical infrastructure protection, cyber crime and cyberterrorism, and the national, public-private, and international responses to meet these growing security threats. Cyberthreats move fast, often outpacing organizational responses. How are policies and organizations responding to rapidly changing cybersecurity threats? What authorities and capacities do the public and private sectors bring to the new security environment of a global, IT-connected world? How do the EU, UN, and US approaches to cyber security compare? The course will use case studies; no prior or technical knowledge is needed.

Components: Online(Online)
Course Equivalents: POL 337A
Room Requirements: ONLINE(1)

POL 666(3) Course ID:009562 Department Consent Required

Environment and Development in the Americas

Considers how economic development, and the policies that support it, affects the environment, both in the United States and Latin America. The course surveys a variety of environmental issues, with special attention to citizen action to address them. Topics may include recent efforts to combat the degradation of the Chesapeake Bay and other restoration projects, the politics of energy and the impact of alternative energy and transportation choices on the environment, grassroots responses to hazardous waste issues, community managed resource exploitation, and urban planning.

Components: Lecture

POL 670(3) Course ID:019030

Korea and World Politics

This course provides students a political, historical, and cultural understanding of the two Koreas and their relationship to Northeast Asia and the world.

Components: Lecture(In Person)
Course Equivalents: POL 470
Room Requirements: DIGITAL PRESENTATION ROOM(1)

POL 672(3) Course ID:014760

Politics and Culture in France and the United States

This course is intended to introduce students to the great sweep of political history and culture in two self-styled exceptionalist countries that share so many political values yet are so fundamentally different. Prior introductory courses in Politics and French are helpful but not required; no prior knowledge is assumed.

Components: Lecture

After the Fall: The Politics of Reconstruction and Reparation in Post-Conflict Societies

This course looks at the politics of reconstruction, reparation and reconciliation in the wake of political disaster. Topics include the sorts of political settlements that emerge from such national catastrophes; the roles of international actors in shaping, enforcing and financing those settlements; the vexed questions of retaliation, reconciliation and reparation for the crimes of the past; the distribution of pain and rewards in post-conflict reconstruction; and the roles of state and "civil society" in recovery. Cases for research may include: Afghanistan today; Angola after the defeat of UNITA; Argentina after the generals; Bosnia under the Dayton Accords; Cambodia after the UN-brokered peace accords; Chile after Pinochet; East Timor at Independence; El Salvador since 1992; Guatemala today; Indonesia after the fall of Soeharto; occupied Iraq; Mozambique after the peace accords; Rwanda after the genocide; Serbia and the breakup of Yugoslavia; and South Africa after apartheid. Students will develop and report on their own research projects centered on

German Idealism and Its Aftermath

German Idealism defined a shift in modern philosophical and political thought that is still being absorbed. The continuity between Hegel and Marx has exemplified the connection with the modern ideological movements. John Rawls's identification of Kantian morality has confirmed the descent into liberal political thought. Now we have the postmodern recognition of the idealists as the source of their own "metaphysics beyond the metaphysics of presence." No one of these avenues is sufficient to comprehend the rich philosophical profusion that constituted German idealism, an outburst that can well be regarded as the core of the self-understanding of the modern world. This seminar will initiate such a reconsideration through the reading of Kant, Hegel, Schelling, Kierkegaard, and Nietzsche.

Components: Lecture

Course Catalog

Arts & Sciences - Politics - Subject: Politics

POL 736(3) Course ID:003305

Seminar: International Politics

Primarily concerned with the security dilemma, its impact on national policies, and efforts to escape from the constraints that it imposes. Special attention to preventive and pre-emptive war, methods of fostering cooperation, and the impact of institutions on international relations. Formerly titled "National Security and International Security."

Components: Seminar

POL 737(3) Course ID:014000

Seminar: Historicity and Ethics of Politics

Does the emphasis on the historical nature of human existence, as in Burke, Hegel, Croce, and later historicists, undermine the notion of moral universality? If there are universal "values" or "principles," do we need to heed history and tradition? The seminar reconsiders the meaning of "universality" and "transcendence," exploring the possibility of synthesis as well as tension between universality and particularity.

The implications for political morality are examined with particular reference to Platonic "idealism," Machiavellian "realism," and the distinction between the things of God and the things of Caesar.

Components: Seminar

POL 740(3) Course ID:010758

Varieties of Capitalism

The Varieties of Capitalism thesis contends that capitalism varies across countries in ways similar to democracy or federalism. Capitalism rests on legal and cultural foundations that vary according to a country's political, social, and economic history. Some proponents of this thesis contend that economic globalization is eroding these varieties of capitalism and leading toward the convergence around the neo-liberalism. This course examines the argument and explores its validity.

Components: Lecture

POL 753(3) Course ID:003308

Seminar: Heidegger

An in-depth examination of a major thinker, trend, or concept in the development of political thought. Political Theory.

Components: Seminar

POL 756(3) Course ID:003309

First Year Seminar

Freshmen are required to complete this 1-credit lab which includes an orientation into the major and the field of psychology.

Components: Seminar(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 201(3) Course ID:000125

General Psychology

A study of the field of psychology, its nature and scope. Topics include growth and development, motivation and emotion, cognition and learning, sensation and perception, abnormal psychology and psychotherapy, mental abilities, personality and social psychology.

Components: Directed Study/Research, Lecture

PSY 204(3) Course ID:017226

Introduction to Biological Psychology

How do 3 pounds of tissue in our skulls make us who we are? How do we coordinate all the muscles needed to walk to class without thinking about it? How do we turn light hitting our eyes into the complex visual world that we experience? How do we make memories and why do we remember certain things better than others? This course will provide an introduction to the brain and how it creates behavior. We will explore how we see, hear, taste, feel, move, and remember. Students will be exposed to just how amazing the brain truly is.

Fills Math and Natural Science area distribution requirement. Intended for non-concentrators. Psychology BS and Neuro minor students should not take this course. Not open to students who have taken PSY 304.

Components: Lecture

PSY 207(3) Course ID:014799

Early Childhood Development

This course closely examines the development of children during the first five years of life --from in utero through the infant, toddler, and preschool years. Students will learn about typical and atypical functioning and growth across cognitive, socioemotional, behavioral, and physical abilities. A particular focus of the class will be on deepening students' understanding of contributing factors to young children's development, including genetics, families, preventions/interventions, and public policies.

Components: Lecture

PSY 216(3) Course ID:016693

Psychology of Religion

Religion is one of the most powerful forces driving individual experience and the larger society and world. This course will explore the psychology underpinning this force. Beginning with introductions to classic writings by William James, Sigmund Freud, Carl Jung and Abraham Maslow, the course will explore why people become committed to religious beliefs and the ways in which religious institutions interact with individuals and groups. The course will examine religious fanaticism and terrorism through empirical, phenomenological and sociological approaches.

Components: Lecture

PSY 224(3) Course ID:000126

Psychology of Women and Men

Have you ever wondered how being male or female may impact how people think and behave? This course focuses on what theories and research in psychology have to say about sex and gender. It explores such topics as gender-role development, the nature and effects of gender stereotypes, differences (and similarities) between men and women, and the impact of gender on relationships, careers, and physical and mental health. Students also gain increased awareness of gender issues in their own lives and the world around them.

Components: Lecture

PSY 226(3) Course ID:005776

Close Interpersonal Relationships

In this course, students will examine how we come together and get along in adult intimate relationships. Topics such as attraction, friendships and intimacy, love, relationship stresses and strains, communication, conflict, loneliness, divorce, and maintaining and repairing relationships will be explored.

Components: Lecture

The Catholic Univ of America
Course Catalog

PSY 228(3) Course ID:005777

Modern Look at Freudian Psychology

Examines the work of Sigmund Freud (founder of psychoanalysis) and those who have followed in this tradition. Thoroughly explores the historical development of psychoanalysis and examines the far-reaching impact of Freud and psychoanalysis on contemporary psychology (psychotherapy), philosophy, culture, art, and literature.

Components: Lecture

PSY 232(3) Course ID:003339

Psychology of Stress & Coping

Covers physiological, developmental, and social psychological causes of stress, as well as strategies for coping with stress. Topics include the interrelationship of physical and psychological causes of stress, learned helplessness, the role of lack of predictability and control, and the role of life crises and transitions. Taught as a seminar, combining in-class and online student-teacher interaction. Summer sessions only.

Components: Lecture

PSY 240(3) Course ID:009284

The Aging Mind

This is a survey of the many ways in which mental function changes in healthy aging. Topics include perspectives on lifespan development; the aging brain; changes in perception, learning, memory, language and problem solving; the role of lifestyle factors (exercise, diet), genetics, and the environment; dementia and age-related memory loss as well as compensation for loss. The primary focus is on reviewing our scientific understanding of these issues, but the practical implications of this knowledge for life in an increasingly aging world are also considered.

Components: Lecture

PSY 243(3) Course ID:009514

Sport Psychology

An introduction to the psychological principles that relate to sport involvement and performance. Foci include performance maximization, anxiety in performance, and motivation, all in a variety of competitive and recreational circumstances.

Components: Lecture

PSY 245(3) Course ID:014221

Vocational Psychology

A study of the evolution of career counseling and vocational psychology theories. Students will learn the major theories of why people work, and will understand how people form identities and find fulfillment in their work. There will be out-of-class, applied learning involving assessment of the student's own career goals.

Components: Lecture

PSY 251(3) Course ID:013648

Psychology of Terrorism

This course reviews the psychological (clinical, forensic, political, social) underpinnings of terrorism, and the practical implications for living in a post 9/11 world. Topics include psychological approaches as applied to terrorist motivations, characteristics of terrorist organizations, preparing for terrorist attacks, counter-terrorism strategies, and emerging threats such as weapons of mass destruction and cyberterrorism.

Components: Lecture

PSY 252(3) Course ID:018497

Psychology of Peace and Conflict

An introduction to the study of peace, conflict, and violence. Psychological theories related to direct violence, structural violence, peacemaking, and peacebuilding. Analysis of current conflicts and relevant research.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 253(3) Course ID:018899

Political Psychology

Political psychology is the intersection of psychology and political science. The course will explore both foundational theory and contemporary research on how individuals and groups enact political behaviors in varying social contexts. The course will explore work on political ideology, partisanship, authoritarianism, political opinion, prejudice, and political enactment through terrorism and revolution.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 261(3) Course ID:013980

Psychology and the Media

Are Instagram and Snapchat ruining social relationships? Is multitasking changing brain functioning? Do violent video games make children into killers? How badly do TV and movies inaccurately portray mental illness? This course explores the ever-changing relationship between the field of psychology and mass media. The course will explore how media images, and technological advances in general, have impacted our culture, the field of psychology, and the development of mental illness. In addition, the course examines how the media portrays specific mental disorders, the roles of psychologists, and psychotherapy.

Components: Lecture

PSY 272(3) Course ID:003335

Psychology and Technology

If you could create a piece of interactive technology that would change your day to day life forever ; what would it be? What design principles would you have to follow to create this technology? This course explores exactly how far we've come in advancing technology to augment human behavior, performance and expectations of our own reality. We'll be exploring the fundamental questions of human-machine interaction that have shifted organizations such as Google, NASA, SpaceX, Facebook, Instagram, TikTok, and many more, to the forefront of ever changing advancements that bridge technology and human behavior.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 302(3) Course ID:009894

Forensic Psychology

An introduction to forensic psychology, the application of psychology to the legal system. The course describes evaluations of criminal defendants and others involved in the legal system, and expert testimony regarding issues such as competency to stand trial, criminal responsibility, and violence risk assessment. The course also discusses the psychology of criminal behavior, and the roles of psychologists in police departments, prisons, and as trial consultants. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 303(3) Course ID:012808

Industrial Organizational Psychology

Industrial/Organizational Psychology will explore the relationship between people and work. In particular, we will examine the balance between work and life, the roles individuals have in organizations over the course of a lifetime, and the ways in which performance can be managed, measured, and characterized. Additionally, the organization as an entity will be discussed in the context of responsibilities, ethics, and its role in the lives of individuals and within societies. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 304(3) Course ID:009090

Brain and Behavior

Introduction to major theoretical concepts and research techniques in physiological psychology and neuropsychology. Topics include sensory, perceptual, cognitive, motivational, and affective processes in human and animal behavior, complemented by readings in established and important emerging areas of research on the brain and behavior.

Components: Lecture

PSY 305(3) Course ID:000127

Social Psychology

An introduction to the study of the individual interacting in a social context. Theories of attitude development and change, social perception, and small group behavior. Analysis of current research and methodology. Applications of social psychology. During the summer only, course is taught as a seminar, combining in-class and online student-teacher interaction. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 307(3) Course ID:000140

Child Development

Provides an introduction to basic theories, research methods, and research findings in child development. Addresses development in areas such as perception, cognition, language, personality, and social relationships. Examines development from conception through adolescence. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201; Not open to students with concurrent or prior enrollment in PSY 308

PSY 308(3) Course ID:010204

Social Development

In this course students explore the important theories, methods, and findings in the field of social psychological development, with emphasis on development from infancy through adolescence. Topics include development of aggression and prosocial behaviors, emotion, self, and temperament, and the influence of parenting/family, peers, television, and schools. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201; Not open to those with concurrent or prior enrollment in PSY 307

PSY 309(3) Course ID:003391

Psychology of Adolescence

Reviews theories and research on the psychological and biological changes of adolescence; changing relationships with parents; developing friendships and intimacy; changes in cognitive development, etc. Review of clinical disorders common in adolescence (depression, eating disorders, delinquency, substance abuse). Stresses societal-cultural influences on pubertal and adolescent development.

Components: Lecture

PSY 310(3) Course ID:014578

Cognitive Development

This course examines theories, methods, research findings, and controversies in cognitive development from infancy through adolescence. Topics include perception, attention, learning, memory, information processing, theory of mind, language and problem solving. The roles of biology and environment as contributors to these developmental processes are considered. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 313(3) Course ID:017408

Leadership in Organizations

Leadership in Organizations examines what makes an effective leader, balancing theory and practice as it surveys major theories and research on leadership and managerial effectiveness in formal organizations. Using real-world examples, we will explore leadership traits, skills, and behavior, the role of leadership in groups and teams, and the ethical use of power and influence. Additionally, we will examine how effective leaders improve the practice of management, change and innovation, and strategic leadership.

Components: Lecture

PSY 322(4) Course ID:000079

Introductory Statistics

An introductory course in descriptive and inferential statistics as applied to social and behavioral sciences. Logic of quantification. Concepts of variability, probability, significance. Understanding and application of commonly used statistical procedures. Lab to be arranged.

Components: Laboratory, Lecture

Course Equivalents: HSSS 203

PSY 350(4) Course ID:000080

General Research Methods in Psychology

Introduction to the design, methodology, presentation, and ethics of psychological research. Topics include the measurement of behavior, hypothesis development and testing, the logic of different types of experimental and nonexperimental research designs, and evaluation of psychological research. Lab to be arranged.

Prerequisite: 201.

Components: Laboratory, Lecture

Enrollment Requirements: PSY 201

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 371(3) Course ID:003371

Sensation & Perception

Investigation of research and theory of how we experience the objects and events in our environment through our senses. Topics include psychophysics, vision, audition, speech perception, and the chemical senses.

Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 373(3) Course ID:000084

Cognitive & Behavior Therapy

Behavioral and cognitive therapies have a large evidence base treating a wide range of psychological disorders. This course provides an introduction to the theories, principles, and empirical support for three "generations" of behavior therapy: traditional approaches emphasizing contingency management and exposure therapy, cognitive behavioral therapies to modify dysfunctional beliefs and thoughts, and more recent mindfulness- and acceptance-based approaches. Clinical applications are emphasized, and participation exercises allow for hands-on experience.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 374(3) Course ID:003372

Personality Psychology

Reviews historical and current theories in the study of personality, examining theoretical conceptualizations from an empirical, scientific approach. Students are encouraged to critically analyze issues related to personality theory, assessment, research, and real world applications. Not open to students who have taken PSY 301. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 375(3) Course ID:003385

Psychology of Memory

Experimental course addresses how we remember things and why we forget. Topics include amnesia, eyewitness memory, memory tricks, and aging, as well as some of the fundamental models of human memory. Approach is cognitive and neuropsychological.

Components: Lecture

PSY 376(3) Course ID:003373

Cognitive Psychology

Explores the psychological mechanisms underlying human memory, language and thought. Lectures and readings focus on theoretical and experimental issues in learning, memory, attentional processes, psycholinguistics, and problem solving.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 377(3) Course ID:019304

Psychology of Space Exploration

What is a space psychologist? Astronauts (and future space settlers) often experience a series of stressors (e.g., conflict, isolation) that might have an impact on how individuals think, perceive and perform while in space. This motivates psychologists to learn about human mental processes in space related activities, and understand how living in space, as an example, influences astronauts' mood, well-being and their psychophysical capacity to perform. Furthermore, psychologists explore how space crews are capable of maintaining successful collaborations with mission control personnel and their teams over time.

This course covers how psychologists are involved in a variety of tasks that are space related, from conducting psychological examinations on space personnel, to the development and implementation of training programs aimed at improving astronauts' teamwork competencies (e.g., leadership, communication, conflict

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 379(3) Course ID:003380

Life Span Development

This course examines psychological development from conception to late adulthood. Multiple theoretical perspectives will be discussed, as well as various components of human development (cognitive, psychosocial, physical, etc.). In addition, to learning the key developmental sequences that occur across the lifespan, students will learn about the mechanisms by which these changes occur and how psychologists study them. Additional emphasis will be placed on examining human development within and across contexts and cultures in order for students to come to a better understanding about biological, psychological, social, and cultural contributors to development. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201; not open to students who have taken EDUC 261

PSY 380(3) Course ID:000139

Abnormal Psychology

A survey of different perspectives on behavior disorders; emphasis on (a) different models of abnormal behavior, (b) adult mental disorders, and (c) current research issues in psychopathology. Prerequisites: 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 381(3) Course ID:003382

Clinical Psychology

Designed as an introduction to the field of clinical psychology. Examines the history and development of the field, theories of normal and abnormal human behavior, research methods of clinical psychology, and clinical assessment and treatments provided by clinical psychologists. Specific assessment and treatment techniques will be discussed in depth. Also explores various professional issues (e.g., training, credentials, and ethics), controversies, and future developments. Prerequisites: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 382(3) Course ID:003389

Abnormal Child Psychology

This course reviews psychological disorders in children and adolescents (e.g. autism, schizophrenia, depression, anxiety, behavior problems, ADHD, eating disorders). Emphasis is on exploring the symptoms that best characterize these disorders, their causes, how one assesses and diagnoses these in youth, and effective treatments. Prerequisites: PSY 201

Components: Lecture

Enrollment Requirements: PSY 201

PSY 383(3) Course ID:011382

Health Psychology

An in-depth study of the role that biological, psychological, and sociocultural factors play in our physical and mental health. Includes analyses of the interaction between physical health and psychological well-being. Health issues are discussed within the context of multi-culturalism and demographics. Prerequisites: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 384(3) Course ID:011660

Cultural Psychology

This class will examine cultural and social factors that impact behavior and cognition. Students will be introduced to the concept of cross-cultural psychology and how it relates to constructs including culture, race, ethnicity, social class, and identity (among others). The course will highlight aspects of human behavior that are universal and those that are culture specific, to help foster an understanding of the basic dimensions of cultural variation and cultural influences on psychological processes.

Components: Lecture

PSY 385(3) Course ID:009895

Psychology of Brain Injury

How do disorders of the brain affect our thinking and behavior? Different brain disorders can affect our ability to sense and move, to learn and remember, to speak and understand language, and many other abilities central to who we are. This class will provide an introduction to neuropsychology, the study of the relationship between behavior and the brain, focusing particularly on damaged brain systems. Topics include the causes of neurological disorders, their effects on thinking and behavior, and methods for assessing cognitive difficulties. The course will also explore how well people recover from brain injuries and the degree to which cognitive rehabilitation can help.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 386(3) Course ID:015598

Developmental Disabilities

Prerequisites: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 387(3) Course ID:014981

Community Interventions in Mental Health

How do neighborhoods, cities, states, and nations influence psychological development? What is the role of organizations (such as mental health agencies, hospitals, community centers, schools, and places of worship) in promoting positive mental health? Conversely, what features in the community lead to mental health difficulties? Further, what are scientifically-validated or promising approaches among community interventions in mental health? These questions and more will be addressed in this course. An emphasis will be placed on the interplay between practice, policy, and research. Prerequisites: PSY 201.

Components: Lecture

Enrollment Requirements: Not open to students with prior enrollment in PSY 384

PSY 407(3) Course ID:015824

Psychology of Parenting

In this active learning course, students will investigate the psychological dynamics involved in parent-child relationships across the lifespan. Contemporary family issues will be explored, such as daycare, fertility, domestic violence and child abuse, parenting in a world of social media, single parenting, divorce, gay parenting, working/stay home parenting, adoption and foster parenting, parenting children with special needs, helicopter parents and boomerang children, and caring for aging parents, among others.

Components: Lecture

Enrollment Requirements: any one of the following: PSY 207, 307, PSY 308, PSY 309, PSY 310, PSY 379, PSY 382, EDUC 261

PSY 411(1) Course ID:016727

Mindfulness and Meditation I

This course relates the psychological study of mindfulness to the religious traditions of meditation. It explores how the underlying concepts and activities may serve as a special context for inter-religious dialogue. The course will use a seminar format to provide ongoing exploration that extends and amplifies the initiatives of the Way of Peace Fellowship, although prior fellowship participation is not required. A 2-credit second semester companion course (Mindfulness and Meditation II) will be available for those wishing to continue in order to have a 3-credit course. Fall semester only; 1 credit; no prerequisites.

Components: Lecture

Course Equivalents: PSY 611

PSY 412(2) Course ID:016830

Mindfulness and Meditation II

This 2-credit course focuses on the psychological study of mindfulness, including current research and theory. It is a continuation of Mindfulness and Meditation I, in which students gained an understanding of mindfulness/meditation in its original religious context and alternate religious/spiritual contexts, as well as its evolution to more secular practices. In addition to class assignments and readings from the psychological literature, the course has a continued emphasis on students maintaining a mindfulness practice outside of class. Completion of this course and Mindfulness and Meditation I will together constitute a 3-credit course. Spring semester only; prerequisites - Mindfulness and Meditation I (PSY 411, 611).

Components: Lecture

Course Equivalents: PSY 612

Enrollment Requirements: PSY 411

PSY 421(3) Course ID:009285

Positive Psychology

What have psychologists learned about how to cultivate happiness, well-being, creativity, and connectedness? This course examines the growing scientific field of positive psychology, including topics such as happiness, contemplative sciences and meditation, optimism, positive emotions, "flow," resilience to stress, altruism, and compassion. An emphasis is placed on the scientific basis of positive psychology constructs, including emerging brain science research, and how the field can contribute to bettering people's lives. Students will have the opportunity to engage in experiential evidence-based skill-building exercises for enhancing physical and mental health and well-being. Prerequisite: PSY 201.

Components: Lecture

Enrollment Requirements: PSY 201

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 430(3) Course ID:017288

Military Psychology

An examination of Military Psychology, applying clinical and health psychology, training and human factors, manpower and personnel, social and organizational systems, and testing and measurement to the Military. Explores the roles of military psychologists as 1) scientists who use psychological principles to study the military and national security, 2) practitioners applying psychological principles to solving problems for the military and defense, and 3) teachers who train individuals in psychology as applied to the military.

Components: Lecture

Course Equivalents: PSY 530

PSY 444(3) Course ID:018894

Developmental Neuroscience

This course examines the biological and external processes that form the human brain and shape a person's experiences. Using a cognitive neuroscience perspective, the course explores the normal development of the person from before birth through adolescence with regards to perception, attention, language, learning, memory, executive function, emotion, and social cognition. Brain structures and functions that support these processes, such as neurogenesis, neuroplasticity, and critical periods are considered, as are the implications of culture and the social context.

Components: Lecture(In Person)

Enrollment Requirements: PSY 201 and PSY 304

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 445(3) Course ID:012215

Clinical Neuroscience

This course integrates brain impairment and clinical implications of schizophrenia, depression, stress disorders, Parkinson's disease, and other disorders that impose a huge cost to society in terms of individual and family distress and clinical needs. Students will gain insight into recent advances in neuroscience that are relevant to neurological and psychiatric diseases. Key areas of study include behavior, cognition, development and motor functions of normal and abnormal brain function. Prerequisite: PSY 304 or BE 421/521

Components: Lecture

Enrollment Requirements: PSY 304 or BE 421 or BE 521 or department consent

PSY 446(3) Course ID:014225

Cognitive Disabilities

This course will explore selected cognitive deficits from the point of view of behavior and brain function. Cognitive areas examined will include attention, space perception, social cognitive, learning and memory, executive function, and language. Related deficits include developmental disorders such as autism, ADHD, and dyslexia, changes due to typical and pathological aging, such as memory loss and dementia, and psychological disorders such as schizophrenia.

Components: Lecture

Enrollment Requirements: PSY 201

PSY 447(3) Course ID:015017

Applied Cognitive Psychology

This course provides an overview of the ways in which design and use of technology, broadly conceived, are assessed from a human perspective. Basic human capacities and limitations are addressed, with a particular emphasis on the perceptual and cognitive. Theories of human performance are linked to real-world experience. The goals of this course are to examine the theories, methods, and research foundation for the broad field of human factors, and to provide a context for student engagement in the discussion of these issues.

Components: Lecture

PSY 451(4) Course ID:003399

Senior Seminar

This is a required seminar for CUA Psychology Majors only. It is taken in the final fall semester as a senior undergraduate student. The goal of this course is to provide an opportunity to reflect on the major in Psychology and consider next steps beyond college. The course will have three primary areas of emphasis: an examination of the relationship between academic psychology and concrete problems, a review of the broad areas of psychology in preparation for the comprehensive exam, and career preparation. Students will research, write, and present on a topic in Psychology as their Capstone project.

Components: Seminar

Enrollment Requirements: PSY 201, PSY 350 & either PSY 322 or HSSS 203

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 471(1) Course ID:003401

Laboratory in Sensation and Perception

Optional laboratory in sensation and perception to accompany 371. For psychology majors only. Prerequisites: 322 and 350; concurrent registration in 371.

Components: Laboratory

Enrollment Requirements: PSY 201, PSY 350, either PSY 322 or HSSS 203, and concurrent enrollment in PSY 371

PSY 473(1) Course ID:000086

Laboratory in Cognitive and Behavior Therapy

Optional laboratory in cognitive and behavior therapy to accompany 373. For psychology majors only. Prerequisites: 322 and 350; concurrent registration in 373.

Components: Laboratory

Enrollment Requirements: PSY 201, PSY 350, either PSY 322 or HSSS 203, and concurrent enrollment in PSY 373

PSY 474(1) Course ID:003403

Laboratory in Personality

Optional laboratory in personality to accompany 374. For psychology majors only. Prerequisites: 322 and 350; concurrent registration in 374.

Components: Laboratory

Enrollment Requirements: PSY 201, PSY 350, either PSY 322 or HSSS 203, and concurrent enrollment in PSY 374

PSY 475(1) Course ID:014978

Lab in Psychology of Memory

Optional laboratory in psychology of memory to accompany PSY 375. For psychology majors only. Prerequisites: PSY 322 (or HSSS 203) and PSY 350; concurrent registration in PSY 375.

Components: Laboratory

Enrollment Requirements: PSY 201, PSY 322 (or HSSS203) and PSY 350; Requires concurrent enrollment in PSY 375

PSY 476(1) Course ID:003404

Laboratory in Cognitive Psychology

Optional laboratory in cognitive psychology to accompany 376. For psychology majors only. Prerequisites: 322 and 350; concurrent registration in 376.

Components: Laboratory

Enrollment Requirements: PSY 201, PSY 350, either PSY 322 or HSSS 203, and concurrent enrollment in PSY 376

PSY 479(1) Course ID:005778

Laboratory in Life Span Development

Optional laboratory in developmental studies to accompany 379. For psychology majors only. Prerequisites: 322 and 350; concurrent registration in 379.

Components: Laboratory

Enrollment Requirements: PSY 201, PSY 350, either PSY 322 or HSSS 203, and concurrent enrollment in PSY 379

PSY 482(1) Course ID:018891

Applied Psychology Research Methods

The primary goal of this course is to familiarize you with the research topics, designs, and methodologies commonly used in the applied research, with an emphasis on educational research. You will be encouraged to think critically about the strengths and limitations of these designs and methodologies. You will have the opportunity to interact directly with applied research methodologies and develop research questions. This lab will challenge students to integrate advanced concepts associated with applied research into their existing knowledge base of research methods in psychology. In addition, the course examines applied psychology research in the real world.

Components: Lecture

Enrollment Requirements: PSY 350

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 483(1) Course ID:017409

Clinical Psychology Research Methods

Readings, written reflections, class discussions, lectures, videos, experiential class exercises, interactive clinical demonstrations, and class presentations will be used to facilitate the exploration and application of the topics, theories, and techniques of major approaches relevant to clinical psychology. After successful completion of this lab, students should have a basic knowledge of psychiatric diagnoses, evidence-based practices, and the theories and techniques of major psychotherapy approaches. Students will also further develop critical thinking skills and a growing awareness of one's self, goals, career aspirations, and one's own therapeutic philosophy.

Components: Laboratory

Enrollment Requirements: PSY 350 and one of the following PSY courses: 228, 245, 302, 345, 373, 380, 381, 382, 383, 387, or 445

PSY 484(1) Course ID:018720

Survey Research Methods

Measurement and assessment are vital to the field of psychology. Standardized measures are employed throughout all subfields of research within the science. From diagnostics to job fitness, the range of application for tests and measures is almost boundless. However, it is important to understand and critically evaluate each tool individually based on their psychometric properties. This course will examine the theory and principles of testing and measurement within a variety of subfields in psychology. We will discuss and assess the underlying theory, interpretation, construction, use, evaluation, and implementation of tests including, but not limited to, intelligence, achievement, ability, psychological fitness, and aptitude.

Components: Laboratory(In Person)

Enrollment Requirements: PSY 322 and PSY 350

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 486(1) Course ID:017412

Experimental Psychology Research Methods

The Experimental Research Lab provides students with an applied understanding of conducting research in areas of human cognition, perception and behavior. It introduces common methodological perspectives used to study the following topics in applied-experimental psychology: attention, memory, learning, perception, decision making cognitive performance and assessment. These topics are then integrated with common methodology practices used in cognitive science experiments, which are further discussed in terms of real world applications used to measure cognitive and behavioral phenomena.

Components: Laboratory

Enrollment Requirements: PSY 350 and one of the following PSY courses: PSY 204, PSY 220, PSY 221, PSY 222, PSY 240, PSY 304, PSY 341, PSY 344, PSY 345, PSY 371, PSY 375, PSY 376, PSY 385, PSY 444, PSY 445, or PSY 446

PSY 488(1) Course ID:017411

Physiological Research Methods

Biological Psychology approaches the study of psychological phenomena with the assumption that human behavior is derived from biological origins. This lab focuses on the physical mechanisms relevant to key issues in psychology with applied psychophysiological measurements. Students will acquire the fundamental skills to conduct proper techniques with the following equipment: Heart Rate Variability (HRV), Electrodermal Activity (EDA), Event Related Potentials (ERPs), Electroencephalography (EEG), and Facial Electromyography (EMG).

Components: Laboratory

Enrollment Requirements: PSY 350 and one of the following courses: PSY 204, PSY 304, PSY 345, PSY 444, PSY 445, BIOL 103, BIOL 105, BIOL 106, BIOL 232, or BIOL 233

PSY 489(1) Course ID:017413

Developmental Psychology Research Methods

The primary goal of this course is to familiarize you with the research topics, designs, and methodologies commonly used in the study of development across the lifespan. You will be encouraged to think critically about the strengths and limitations of these designs and methodologies. You will have the opportunity to directly experience specific research methodologies and to read about and discuss innovative research taking place in the field of developmental psychology.

Components: Laboratory

Enrollment Requirements: PSY 322 and PSY 350 and one of the following courses: PSY 207, PSY 307, PSY 308, PSY 309, PSY 310, PSY 379, PSY 407 or EDUC 261

The Catholic Univ of America

Arts & Sciences - Psychology - Subject: Psychology

PSY 491(1) Course ID:017760

Professional Development in Research, Publications and Presentations

This lab introduces essential concepts in research development and design, conference presentations and publication guidelines for journal and academic proceedings. Students will learn the process of submitting to the Institutional Review Board, which includes drafting a consent form and IRB protocol of a proposed study. Students learn how to write an abstract to an academic conference and design a poster and presentation. In this process, students will learn how to address specific guidelines for journal publications, proceedings vs. publications, selection of a journal to submit an article, and the peer review process.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 492(3) Course ID:018706 Department Consent Required

Readings in Psychology

Individualized study with a Department of Psychology faculty member, with focus, readings, and written assignments decided in collaboration.

Components: Directed Reading(In Person)

Room Requirements: NO CLASSROOM NEEDED(1)

PSY 493(1) Course ID:003406 Department Consent Required

Research Apprenticeship for UG

Work as a volunteer assistant under the supervision of a faculty member in psychology on his or her ongoing research. (Offered each semester - student can take up to four research apprenticeships.)

Components: Directed Study/Research

Enrollment Requirements: PSY 201

Room Requirements: NO CLASSROOM NEEDED(1)

PSY 493B(2) Course ID:017287 Department Consent Required

Research Apprenticeship for UG

Work as a volunteer assistant under the supervision of a faculty member in psychology on his or her ongoing research. (Offered each semester - student can take up to four research apprenticeships.)

Components: Directed Study/Research

Enrollment Requirements: PSY 201

Room Requirements: NO CLASSROOM NEEDED(1)

PSY 495(3) Course ID:015957 Department Consent Required

Psychology Internship

The Psychology Internship is a supervised career-related professional experience that allows students to integrate information from academic psychology coursework with practice in the workplace. Requirements will include writing assignments that demonstrate this integration of knowledge. Open to juniors and seniors only. Permission of Psychology Undergraduate Director and Departmental Authorization required.

Components: Internship

Course Equivalents: PSY 595

Enrollment Requirements: Open to Junior and Senior Psychology majors only

PSY 496(3) Course ID:012994 Department Consent Required

Senior Thesis

Intensive year-long independent research project for seniors, carried out in close supervision and collaboration with a faculty mentor and resulting in a final written thesis. Prerequisites: Prior research experience with mentor. Department Consent required.

Components: Thesis Research

Enrollment Requirements: Open to Seniors only

PSY 498(0) Course ID:015199

Undergraduate Comprehensive Examination

A testing fee will appear on your CUA bill to cover the cost of the comprehensive exam.

Components: Comprehensive Exam

Enrollment Requirements: requires prior or concurrent enrollment in PSY 451

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 505(3) Course ID:013069

Social Psychology for Graduate Business Students

An introduction to the study of the individual interacting in a social context. Theories of attitude development and change, social perception, and small group behavior. Analysis of current research and methodology. Applications of social psychology, with assignments relevant to business. Prerequisite: General Psychology or equivalent. Not open to students who have previously taken Social Psychology.

Components: Lecture

Enrollment Requirements: Open only to MSBA students who have taken PSY 201 and have not taken PSY 305.

PSY 513(3) Course ID:019052 Department Consent Required

Psychopathology

An investigation of the various types of disordered behavior, with emphasis on classification systems, theoretical and research approaches to the understanding of abnormal behaviors and their etiologies, and applied problems of clinical practice. Major focus is on the DSM-5 classification system. Prerequisite: Permission of instructor.

Components: Lecture(In Person)

Course Equivalents: PSY 813

Enrollment Requirements: Psychology Graduate Students Only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 530(3) Course ID:017289

Military Psychology

An examination of Military Psychology, applying clinical and health psychology, training and human factors, manpower and personnel, social and organizational systems, and testing and measurement to the Military. Explores the roles of military psychologists as 1) scientists who use psychological principles to study the military and national security, 2) practitioners applying psychological principles to solving problems for the military and defense, and 3) teachers who train individuals in psychology as applied to the military.

Components: Lecture

Course Equivalents: PSY 430

PSY 592(3) Course ID:003439 Department Consent Required

Readings in Psychology

Individualized study with a Department of Psychology faculty member, with focus, readings, and written assignments decided in collaboration.

Components: Directed Reading

Room Requirements: NO CLASSROOM NEEDED(1)

PSY 592A(2) Course ID:003441 Department Consent Required

Readings in Psychology

Individualized study with a Department of Psychology faculty member, with focus, readings, and written assignments decided in collaboration.

PSY 594(3) Course ID:003444 Department Consent Required

Independent Study

Independent research under the guidance of a faculty member. Student expected to complete a theory or research paper in an area of special interest.

Components: Independent Study

PSY 595(3) Course ID:003442 Department Consent Required

Psychology Internship

The Psychology Internship is a supervised career-related professional experience that allows students to integrate information from academic psychology coursework with practice in the workplace. Requirements will include writing assignments that demonstrate this integration of knowledge. Open to juniors and seniors only. Permission of Psychology Undergraduate Director and Departmental Authorization required.

Components: Internship

Course Equivalents: PSY 495

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 611(1) Course ID:016728

Mindfulness and Meditation I

This course relates the psychological study of mindfulness to the religious traditions of meditation. It explores how the underlying concepts and activities may serve as a special context for inter-religious dialogue. The course will use a seminar format to provide ongoing exploration that extends and amplifies the initiatives of the Way of Peace Fellowship, although prior fellowship participation is not required.

Components: Lecture

Course Equivalents: PSY 411

PSY 612(2) Course ID:016831

Mindfulness and Meditation II

This 2-credit course focuses on the psychological study of mindfulness, including current research and theory. It is a continuation of Mindfulness and Meditation I, in which students gained an understanding of mindfulness/meditation in its original religious context and alternate religious/spiritual contexts, as well as its evolution to more secular practices. In addition to class assignments and readings from the psychological literature, the course has a continued emphasis on students maintaining a mindfulness practice outside of class. Completion of this course and Mindfulness and Meditation I will together constitute a 3-credit course. Spring semester only; prerequisites - Mindfulness and Meditation I (PSY 411, 611).

Components: Lecture

Course Equivalents: PSY 412

Enrollment Requirements: PSY 611

PSY 615(3) Course ID:003411

Forensic Psychology

An overview of the interaction of psychology and the law. General discussion of similarities and differences between the two fields, followed by an in-depth discussion of psychopathology focusing on particular diagnoses commonly seen in forensic settings. Many other issues discussed, including assessment techniques, assessment of competency, the insanity defense, psychological profiling, treatment issues, abuse and neglect evaluations, custody evaluation, and expert testimony. Taught in a lecture/discussion format. Prerequisite: Senior standing or Permission of Instructor.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 617(3) Course ID:003461

Seminar on Suicide

This graduate seminar will examine the topic of suicide in depth. We will consider theoretical and empirical perspectives from sociology, psychology, and genetics/neuroscience as well as philosophical and ethical issues

related to suicide. There will be particular emphasis on clinical practice with suicidal patients; cultural, political, public health, and policy issues related to suicide will also be explored.

Components: Seminar

Enrollment Requirements: Psychology Graduate Students Only

PSY 618(3) Course ID:003534

Family Therapy: Theory and Practice

An overview of the major approaches to family therapy (e.g., cognitive behavioral, structural, strategic, systemic, Bowen, narrative, etc.). Focuses on clinical techniques, theoretical underpinnings, and research support for the various models. Formerly 911. Prerequisite: Psychology graduate students; others by permission of instructor.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 619(3) Course ID:012222

Health Psychology

An in-depth study of the roles that biological, psychological, and sociocultural factors play in health and illness. The course emphasizes psychosocial approaches for increasing health promoting behaviors and reducing health-compromising behaviors; associations between mental and physical health; and the management of chronic illness. Health issues are discussed within the context of cultural and demographic factors.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 620(3) Course ID:003465

Psychology, Biology and Technology

The meaning of "psyche," as a defining concept of psychological study, has changed a number of times. In recent years, its meaning has come under particular scrutiny with advances in the biological and computational sciences. This course examines how ongoing research influences the way in which we think of ourselves, our abilities, and our limitations, thereby helping to define what it is that psychology studies and how it contributes to our understanding of the human situation. It examines how these issues in psychology relate to our concepts of the normal and the therapeutic, the natural and the mechanical, and puts them into a larger social context.

Components: Seminar

PSY 621(3) Course ID:010197

Cognitive Rehabilitation

The goal of cognitive rehabilitation is to improve and compensate for cognitive impairments that have arisen due to injury or illness. This course examines the basic theories, methods, and applications of cognitive rehabilitation. The course will also focus on the important issue of assessing whether or not cognitive rehabilitation methods are effective.

Components: Seminar

Enrollment Requirements: Psychology Graduate Students Only

PSY 622(3) Course ID:014353

Cognitive Development

This course examines theories, methods, research findings, and controversies in cognitive development from infancy through adolescence. Topics include perception, attention, learning, memory, understanding of the physical and social world, theory of mind, language and problem solving. The role of emotion and affect will be considered.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 623(1) Course ID:016736

Applied Experimental Seminar

A graduate seminar for discussion of theoretical and methodological issues related to research in applied experimental psychology and human factors.

Components: Seminar

Room Requirements: NO CLASSROOM NEEDED(1)

PSY 624(3) Course ID:003586

Seminar: Cognitive Science

A survey of research in cognitive science with an in-depth treatment of selected topics in cognitive psychology, cognitive neuroscience and computational modeling.

Components: Seminar

Enrollment Requirements: Psychology Graduate Students Only

PSY 625(3) Course ID:003468

Psychological Perspectives on Aging

Examines the patterns of decline, stability, and growth which accompany normal aging from both empirical and theoretical perspectives. Review of the nature and causes of cognitive change in normal aging; consideration of the ways in which individuals compensate for losses which occur with aging. Biological, social, cultural, and demographic factors of aging are also considered.

Components: Seminar

PSY 627(3) Course ID:008776

Couples and Family Interaction

This seminar covers theory and research of normal couple and family processes, and families with psychopathology. Representative topics include normative and non-normative family transitions, parenting and parent-child communication, couples satisfaction and distress, and effects of parental psychopathology. Family research methods, and multicultural perspectives on families, are discussed.

Components: Seminar

Enrollment Requirements: Psychology Graduate Students Only

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 628(3) Course ID:011472

Psychology of Memory

This course explores a broad range of topics relating to cognitive and neuropsychological aspects of human memory. For example, what do we know about people who are experts at remembering things? Why do elderly people seem better at remembering things that happened 40 years ago than things that happened 5 years ago? Why do you never forget how to ride a bike? Are there tricks for improving memory? Another major topic in the class is amnesia: what types of memory are affected by amnesia, what types are spared, and is there any effective treatment? The course includes models of memory and relates those models to the questions above. In-depth attention is given to the research of several contemporary memory researchers.

Components: Seminar

Enrollment Requirements: Psychology Graduate Students Only

PSY 631(3) Course ID:003472

Sensation and Perception

An advanced survey of research and theory in sensation and perception. Special focus on integration of current findings at several levels of analysis. Work in neuroscience, psychophysics, and computational theory, with emphasis on visual and auditory systems.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 633(3) Course ID:016990

Techniques in Electroencephalography/Event-Related Potentials

This is an introductory course on experimental techniques in Electroencephalography/Event-Related Potentials (EEG/ERP). The course will follow a lecture/practicum style, where students will be required to demonstrate skills acquired during formal lectures and during laboratory sessions held during class hours. The focus of the course is to teach students the fundamentals of collecting, processing, and analyzing EEG/ERP data with the goal of fostering independence as an investigator. Each class will cover basic-to-complex concepts related to study setup and design, signal-processing, data reduction, analysis, and interpretation.

Components: Seminar

PSY 636(3) Course ID:007257

Human Computer Interaction

A survey of psychological research aimed at making computers easier to use. Topics include interface design, training systems, applications of artificial intelligence, etc. Focuses on general cognitive principles underlying design.

Components: Lecture

PSY 640(3) Course ID:014552

Human Development: Affective, Biological, Cognitive, & Social Domains

A survey of the principles, theories, methods of inquiry, and research relevant to human psychological change across the lifespan in biological, neurological, cognitive, social, and emotional domains.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 645(3) Course ID:003502 Department Consent Required

Social Development

Current research and theory in social development will be reviewed. Some of the topics covered include: attachment, temperament, sex-typing, and development of aggression and friendships across the life span.

Components: Seminar

Enrollment Requirements: Psychology Graduate Students Only

PSY 652(3) Course ID:003474

Cultural Psychology

Examines the ways an individual's psychological and social development takes place in a cultural context. Readings include qualitative and quantitative studies of different parts of the lifespan in diverse cultures. Readings are drawn from both psychology and anthropology.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 663(3) Course ID:008767

Social Psychology and Clinical Practice

A review of how social theory is applied to clinical practice: including diagnosis, psychological dysfunction, individual and group psychotherapy, and therapy outcome. Emphasizes both person-based processes (theories on self-esteem, self-efficacy, coping with threats to self, depression, and hope) and environmental-based processes (theories on relationships, interpersonal factors in depression, social comparison, and clinical decision-making).

Components: Lecture

PSY 670(3) Course ID:003432

Visualization and Virtual Reality

Research in human cognition provides a framework for computer design responsive to user needs. Discussion of theory and research supporting that framework, together with assessment of how theory supports development of design guidelines. Special attention to design issues of emerging technologies, including visualization techniques, the World Wide Web, and virtual reality.

Components: Lecture

PSY 671(3) Course ID:013337 Department Consent Required

Human Factors

An overview of the ways in which design and use of technology, broadly conceived, are assessed from a human perspective. Basic human capacities and limitations - physical, perceptual, and cognitive - are addressed. Theories of human performance are linked to real-world experience.

Components: Lecture

PSY 693(3) Course ID:003518 Department Consent Required

Research Apprenticeship MA

MA Research Apprenticeship associated with research lab, or external research position. Students may enroll for one, two, or three credits per semester.

PSY 697(0) Course ID:011778 Department Consent Required

Master's Topic Paper Guidance

Only for MA topic paper guidance. Involves writing an informative, in-depth analysis of a particular content area, either theoretical or empirical, and/or conducting research under supervision of faculty. General requirements are in the Department MA Handbook. Specific expectations and goals for individual students are determined together with the faculty advisor. Requires concurrent registration in the Department. This course bills at the equivalent of one credit hour.

Components: Directed Study/Research
Enrollment Requirements: Psychology Graduate Students Only
Room Requirements: NO CLASSROOM NEEDED(1)

PSY 698A(0) Course ID:015227

Master's Comprehensive Examination (w/Classes)

For MA Comps, or HD/AE Thesis defense, enrollment in this course requires simultaneous enrollment in another PSY course.

Components: Comprehensive Exam
Course Equivalents: PSY 698B
Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

PSY 698B(0) Course ID:015257

Master's Comprehensive Examination (w/o Classes)

Enrollment in this course bills at the equivalent of one credit hour.

Components: Comprehensive Exam
Course Equivalents: PSY 698A

PSY 705(4) Course ID:003486

Statistical Methods I

A graduate-level introduction to the theory and application of statistics in the analysis of psychological data. Descriptive statistics, t-tests, ANOVA, factorial ANOVA, regression, multiple regression. Computer laboratory (using SPSS) included. Prerequisite: One semester of undergraduate statistics.

Components: Discussion, Laboratory, Lecture
Enrollment Requirements: Psychology Graduate Students Only

PSY 706(4) Course ID:003488

Statistical Methods II

Repeated measures and mixed design ANOVA, ANCOVA, multiple regression with interactions, path models and structural equation models. Computer laboratory included. Prerequisite: One semester of statistics at graduate level.

Components: Laboratory, Lecture
Enrollment Requirements: Psychology Graduate Students Only

PSY 707(3) Course ID:010733

Heirarchical Linear Modeling

This course examines the use of multilevel modeling (i.e., hierarchical linear modeling, or HLM) to study individual growth and individual differences in change, and nested data structures. Students learn to use multilevel modeling software, with emphasis placed on developing an understanding of the various types of questions that can be addressed using this methodology.

Components: Lecture

PSY 709(3) Course ID:012462

Biological and Cognitive Aspects of Behavior

This course provides an introduction to major concepts of cognitive and biological psychology. The objective of the course is to provide a general orientation and appreciation of the issues, research methods, and approaches adopted in these areas. Topics will include sensory, motor, cognitive, and emotional processes as studied from both psychological and neuroscience perspectives.

Components: Lecture
Enrollment Requirements: Psychology Graduate Students Only

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 710(3) Course ID:010734

Social and Affective Aspects of Behavior

This course is organized into two modules, the social aspects of behavior and the affective aspects of behavior. The first module includes major social variables such as attitudes, attributions, group processes and persuasion, discrimination, and application of social psychology, all within the context of research methodologies. Topics in the second module include affect, mood, and emotion from non-clinical perspectives. Empirical articles at the graduate level are included as readings.

Components: Directed Study/Research(Online)

Enrollment Requirements: Psychology Graduate Students Only

Room Requirements: ONLINE(1)

PSY 711(0) Course ID:019129

History & Systems of Psychology

This is an independent study on the History and Systems of Psychology and is divided into seven sections. Topics in the series include the study of psychology's past in the context of the history of science and the emergence of contemporary systems and models of psychological inquiry.

Components: Directed Study/Research(Online)

Enrollment Requirements: Psychology Graduate Students Only

Room Requirements: ONLINE(1)

PSY 712(3) Course ID:009896

Seminar in Cognitive Disabilities

This course examines deficits in cognition across the lifespan from both a behavioral and neurological perspective. Readings and discussion focus on understanding the nature and underlying brain basis of illness-related cognitive change. Topics include healthy and pathological aging, developmental disorders such as autism, ADHD, and dyslexia, and psychological disorders such as schizophrenia. The course is conducted in a seminar format. Readings and discussion will cover historical views as well as the recent cognitive and cognitive neuroscience literatures on each topic.

Components: Seminar

PSY 714(3) Course ID:003490

Introduction to Neuropsychology

An introduction to the major theoretical concepts and clinical methods that concern the understanding of brain-behavior relationships. Included: an overview of brain functioning with a focus on brain structures and mechanisms of neurotransmission. Reviews major assessment instruments in specifying brain dysfunction, including clinical applications of the Halstead-Reitan and Luria-Nebraska Neuropsychological Test Batteries in the evaluation of children, adolescents, and adults. Formerly 616.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 715(3) Course ID:003492

Neuropsychological Assessment

This course will review specialized neuropsychological tests and procedures that are commonly used to assess cognition and emotional behavior in individuals with brain disorders. The three most common approaches to neuropsychological evaluation [Halstead-Reitan-Russell, Luria-Nebraska, and Boston Process approach] will be reviewed with an emphasis on the latter. The neuropsychological tests will focus on speech and language functions, memory and learning processes, attention, executive abilities, concept formation, perception and visuomotor skills; issues related to malingering will be discussed. The course will also address interviewing techniques, how to read and extract information from medical charts, understand basic neurological procedures, including neuroimaging [PET, MRI, fMRI], EEG and brain stimulation.

Components: Lecture

PSY 726(3) Course ID:003501

Personality

Broadly examines personality, from both theoretical and empirical perspectives. Emphasizes the application of theory and research to professional activity (e.g., psychotherapy, nursing, and education).

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 728(3) Course ID:003503

Cognitive and Neuropsychological Approaches to Human Memory

This course explores a broad range of topics relating to cognitive and neuropsychological aspects of human memory. For example, what do we know about people who are experts at remembering things? Why do elderly people seem better at remembering things that happened 40 years ago than things that happened 5 years ago? Why do you never forget how to ride a bike? Are there tricks for improving memory? (Students will complete a project to improve their own memory as part of the course.) Another major topic in the class is amnesia, both in terms of types of memory that are affected by amnesia and types that are spared. The course covers models of memory including the distinctions between episodic/semantic, implicit/explicit, and procedural/declarative aspects of memory and relates those models to the questions above.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 733(3) Course ID:003508

Contemporary Psychodynamic Therapy and Practice

A broad examination of theoretical and clinical aspects of contemporary theories which have evolved from the original psychoanalytic theory of Freud. Considers - and makes clinically relevant - various concepts related to attachment theory, object-relations theory, and self-psychology. Prerequisite: Permission of instructor.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 735(3) Course ID:003509

Developmental Psychopathology

Psychopathology in childhood and adolescence from a developmental perspective, including normal and abnormal processes, risk and protective factors, and developmental trajectories of psychopathology. Considers biological, psychological, and contextual (family, community, cultural) factors. Prerequisite: Psychology graduate students; others by Permission of Instructor.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 745(3) Course ID:003510

Cognitive and Behavior Therapy

The practice of evidence-based psychotherapy is essential for clinical psychologists. This course provides a thorough exploration of the history, theory, empirical support, and applications of interventions from three "generations" of behavior therapy to a wide range of psychological disorders. Traditional behavioral approaches emphasizing contingency management and exposure therapy, cognitive behavioral therapies to change dysfunctional beliefs and thoughts, and more recent mindfulness- and acceptance-based approaches are addressed. Critical issues in research and clinical practice are emphasized.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 754(3) Course ID:019189

Social Neuroscience

This course will focus on how social behaviors and processes are instantiated in the brain and biology. The meetings will have a lecture component with in-depth examples, as well as class activities to inform students about the state of research in social neuroscience, methods for assessing the neurobiological underpinnings of social behaviors and processes (e.g., social learning, empathy, cooperation, social exclusion, stereotyping), and the operationalization of key constructs.

It will be taught by Alva Tang, who is at the Univ of Maryland.

Components: Seminar(In Person)

Enrollment Requirements: Psychology Graduate Students Only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PSY 755(3) Course ID:015597

Affective & Cognitive Neuroscience

This seminar will examine the neural systems mediating emotional and cognitive processes, and how these processes interact with and affect each other. Students will consider how emotion influences perception, memory, attention, and judgment, and how cognitive processes can have emotional consequences. The course will consist of reading primary articles that employ neuroscience techniques such as lesion and neuroimaging studies. The relationship between emotion and cognition will also be discussed in the context of psychological disorders such as anxiety, depression, and bipolar disorder.

Components: Seminar

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 759(3) Course ID:003512
Cognitive Neuroscience
A survey of current research on the neural systems mediating cognitive processes of attention, memory, language, and imagery. Emphasizes interrelationships between computational, psychological, and neural models of cognition.
Components: Lecture
Enrollment Requirements: Psychology Graduate Students Only

PSY 777(3) Course ID:003516
Psychology of Emotions
Discussion of major psychological approaches to emotion, with emphasis on experimental and social theories. Students are expected to outline and defend their own definitions and theories of emotion. Readings and discussion of current research in the psychology of emotion including the relationship of physiological activity and emotion, recognition of verbal and nonverbal expressions of emotion, memory and emotion, and neuropsychological approaches to emotion.
Components: Lecture
Enrollment Requirements: Psychology Graduate Students Only

PSY 780(3) Course ID:003517
Applied Memory Research
Examines the applications of memory research in a variety of areas, such as the law (e.g., eyewitness memory), survey research (e.g., memory factors in answering interview questions), and medicine (e.g., remembering to take prescriptions). Students expected to write a comprehensive research paper on applications of memory research in a particular area.

Clinical Psychopharmacology

Major classes of psychotropic agents and their application in the treatment of psychopathology. Considers special treatment populations, including pediatric and geriatric. Examines therapeutic, toxic, and side effects and their management. Prerequisite: PSY 710

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 830(3) Course ID:009785

Cultural Issues in Clinical Psychology

Examines influences of culture and diversity on the understanding and practice of clinical psychology. These include acculturation and understanding of cultural differences, testing and diagnostic assessment of culturally diverse clients, and psychotherapy issues in multicultural psychology. Students should have completed at least one other course in Clinical Psychology

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 831(3) Course ID:016991

Cultural Issues in Developmental Psychology

Examines two main areas in which cultural characteristics influence the understanding and practice of developmental psychology: 1) Acculturation and understanding of cultural differences, and 2) Research with culturally diverse participants.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

PSY 840(3) Course ID:003545

Ethics and Professional Issues

Ethical and professional issues in clinical psychology: ethical standards; rights and responsibilities of clients and psychologists; privacy and confidentiality; issues in assessment, psychotherapy, and consultation; clinical psychology and the law; interprofessional relations; the social responsibility of the psychologist. Formerly 940.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 852(3) Course ID:003583

Principles of Development

A review of classic theories of development. Analysis of major positions of psychological development. Critique of contemporary uses and abuses of the concept.

Components: Lecture

Enrollment Requirements: Psychology Graduate Students Only

PSY 879(3) Course ID:003587

Human Performance Systems

Analysis of a number of different aspects of human performance (attention, memory, decision making) in modern human/machine systems. An overview of the basic principles of human factors, complemented by an examination of current research on human performance in computerized, semi-automated, and intelligent systems.

Components: Seminar

PSY 883(3) Course ID:006231

Applied Cognitive Psychology

Examines the interrelations between current theories in cognitive psychology and selected applications, such as problem solving, skill learning, computer use, and instructional design. Emphasizes different content areas each year.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 895(1) Course ID:003652

Externship

For clinical psychology doctoral students who are serving a one-year required externship.

Components: Independent Study

Enrollment Requirements: Clinical Psychology students only

PSY 901(3) Course ID:003593

Assessment I

Provides an initial introduction to various aspects of becoming an effective clinician, helper, and healer. Primary focus is on principles of clinical assessment using the clinical interview. Through readings, lectures, modeling, class discussion, and experiential exercises, provides training and supervision in the development of basic listening skills, structured interview techniques (e.g., mental status exams), psychiatric diagnostic assessment, and assessment report writing. Also examines relevant professional and ethical issues. Prerequisite: Clinical Students only; others by Permission of Instructor.

Components: Lecture

Enrollment Requirements: Clinical Psychology Students Only

PSY 902(3) Course ID:003627

Assessment II

Introduction to individual testing, with an emphasis on tests of intelligence (Wechsler Scales and Woodcock-Johnson). Includes demonstration, administration, scoring, and report writing, with individual supervision. Prerequisite: Clinical Doctoral Students only.

Components: Lecture

Enrollment Requirements: Clinical Psychology Students Only

PSY 903(1) Course ID:003628

Laboratory in Clinical Assessment II

Lab to accompany 902. Prerequisite: Concurrent registration in 902.

Components: Laboratory

Enrollment Requirements: PSY 902 (Co-req)

PSY 906(3) Course ID:003630

Personality Assessment: Projective Methods

Involves the clinical assessment of personality using projective techniques. Exner scoring of the Rorschach and other projective methods, with emphasis on administration, scoring, interpretation, and report writing. For clinical doctoral students only.

Components: Lecture

Enrollment Requirements: Clinical Psychology students only

PSY 907(3) Course ID:003631

Practicum in Individual Psychotherapy

Supervised experience in psychotherapy for second-year clinical psychology doctoral students only.

Components: Practicum

Enrollment Requirements: Clinical Psychology students only

PSY 908(3) Course ID:003632

Practicum in Individual Psychotherapy

Supervised experience in psychotherapy for second-year clinical psychology doctoral students only.

Components: Practicum

Enrollment Requirements: Clinical Psychology students only

PSY 912(3) Course ID:006232

Personality Assessment: Self-Report Methods

Presentation of the most frequently used self-report measures of personality and psychopathology. Special emphasis on the Minnesota Multiphasic Personality Inventory 2nd Edition (MMPI-2). Other inventories include the Personality Assessment Inventory and Millon Clinical Multiaxial Inventory. Also considers diagnostic uses of these instruments and communication of results to clients.

Components: Seminar

Enrollment Requirements: Clinical Psychology Students Only

Course Catalog

Arts & Sciences - Psychology - Subject: Psychology

PSY 914(1) Course ID:003641 Department Consent Required

Practicum in Assessment

Advanced training in assessment batteries to address a variety of psychological questions. Supervision in test administration, scoring, interpretation, integration of test results and report writing. For clinical psychology doctoral students only. Prerequisites: At least third-year status, and 901, 902, 903, and either 906 or 912.

Components: Practicum

Enrollment Requirements: PSY 901 & PSY 902

PSY 921(3) Course ID:003650

Psychotherapy: Research and Methods

An introduction to the practice and investigation of psychotherapy. Covers four major topics: discussion of principles of psychotherapeutic change; an overview of the major schools of psychotherapy; examination of methods, issues, and findings in research on psychotherapy; and an introduction to the practice of psychotherapy, including training in conducting a first session. For first-year doctoral students in clinical psychology only.

Components: Lecture

Enrollment Requirements: Clinical Psychology Students Only

PSY 927(1) Course ID:003667

Observation of Family Therapy

Participate as an observing member of the family therapy team. Does not involve direct clinical contact. Intended to provide initial family therapy experience for clinical students who have not yet completed prerequisites for 928. Prerequisite: Clinical students only.

Components: Practicum

Enrollment Requirements: Clinical Psychology Students Only

PSY 928(3) Course ID:003671

Practicum in Family Therapy I

Students participate in a family therapy team serving as therapist and as a member of the consulting team. Utilizes a one-way mirror with live supervision. Those who have not taken 812 (formerly 911) will complete a series of readings. Prerequisites: Clinical students only, second year or more advanced.

Components: Practicum

Enrollment Requirements: Clinical Psychology Students Only

PSY 929(1) Course ID:003672

Practicum in Family Therapy II

Students participate in a family therapy team serving as therapist and as a member of the consulting team. Utilizes a one-way mirror with live supervision. Those who have not taken PSY 812 (formerly PSY 911) will complete a series of readings. PSY 929 is a continuation of PSY 928. Prerequisites: PSY 928.

Components: Practicum

Enrollment Requirements: Clinical Psychology students only; requires previous or concurrent enrollment in PSY 928

PSY 930(3) Course ID:007259

Intensive Practicum in Family Therapy II

Similar to 929, with the addition of an intensive scholarly component including one or more of the following (a) intensive readings in family therapy practice and research, (b) participation in assessment and research topics, and (c) co-development of a family therapy manual. Prerequisite: 928.

Components: Practicum

PSY 970(0) Course ID:003676

Advanced Clinical Training

Involves training in clinical psychology that has been approved by the clinical program, and is separate from courses, practica, externship, and internship. The training can be in any area of clinical psychology, such as assessment, intervention, or research. For clinical psychology doctoral students only. Prerequisites: Requires concurrent registration in a credit course. Permission of Director of Clinical Training.

Components: Directed Study/Research

Enrollment Requirements: Clinical Psychology students only

Arts & Sciences - Semitics - Subject: Semitics

SEM 503(3) Course ID:004040

History of the Christian Near East

Survey of the origins and development of Christianity in Syro-Palestine, Egypt, Ethiopia, and Persia down to the Council of Chalcedon (451 CE). Special attention to church-state relations both before and after Constantine, to the development of monasticism, and to evidence drawn from the indigenous literatures, especially Coptic and Syriac.

Components: Lecture

SEM 505(3) Course ID:006238

History of Christians in the Islamic Near East

A survey of the history and literature of the Christian communities in the world of Islam, beginning with the Christians in the world in which Islam was born, to the irruption of the military forces of the Latin west into the area in the eleventh century. Highlights the authors and their works who responded to the religious challenge of Islam in Syriac and Arabic. Islam has been in dialogue with Christianity from its inception; the lectures and readings follow this dialogue, on both sides, from the beginning in the seventh century to the experience of the Crusades.

Components: Lecture

SEM 507(3) Course ID:004042 Department Consent Required

Near Eastern Archeology I

This survey of major aspects of Near Eastern archeology is offered at the Johns Hopkins University.

Components: Lecture

SEM 508(3) Course ID:013316

Dead Sea Scrolls

Deals with the Dead Sea Scrolls and related discoveries, including their contents and their historical, religious, and archeological context. Analyzes their relevance to interpretation of the Old and New Testaments, the story of their discovery, and ongoing controversies about their significance and meaning. The sources will be read in translation.

Components: Lecture

SEM 509(3) Course ID:016430

Near Eastern Archaeology II

This survey of major aspects of Near Eastern archeology is offered at the Johns Hopkins University.

Components: Seminar

Enrollment Requirements: SEM 507

Room Requirements: NO CLASSROOM NEEDED(1)

SEM 511(3) Course ID:004043

Introduction to Biblical Hebrew

Fundamentals of phonology, morphology, and syntax of Classical Biblical Hebrew, followed by simple readings in Biblical Hebrew prose.

Components: Lecture

Readings in Garshuni

This course is the study of Arabic texts (mostly Christian Arabic) that are written in the Syriac script. Garshuni literature includes original Arabic texts or a translation from Syriac, Neo-Aramaic, Greek, and Armenian. In this course the student will examine and study all aspects of "Garshuni Literature," through a textual reading of the various available genres, such as theology, history, poetry, and commentaries. In addition, the student will examine and research the interplay between Arabic and Syriac grammar, as seen in the use of Syriac script to write an Arabic text. Prerequisites: Two years of Classical Arabic, one year of Syriac grammar and literature, and prior permission of the instructor.

Components: Lecture
Room Requirements: NO CLASSROOM NEEDED(1)

SEM 744(3) Course ID:018612

Seminar in Christian Arabic Texts and Grammar

This course introduces the various topics of Christian Arabic through the reading of original texts. These topics include theology, philosophy, Christian-Muslim Apologetics, history, and the history of intra-Christian debates. In addition, the course will emphasize the study of all aspects of Christian Arabic grammar.

Components: Seminar(In Person)

SOC 101(3) Course ID:000094

Introduction to Sociology

Analysis of the social forces, past, present, and future, that govern behavior and determine social life. Study of major social institutions (family, religion, government, education) and processes (social change, gender, race, class socialization) Faculty.

Components: Lecture

SOC 102(3) Course ID:000095

Global Social Problems and Social Justice

Sociological analysis of selected social problems. Discussion of the causes of social problems, the processes by which they are brought to public attention, and evaluation of attempts to solve them. Faculty.

Components: Lecture

SOC 107(3) Course ID:017940

Introduction to Criminal Justice

This course will provide the student with an introduction to formal institutions of social control--the criminal justice system--and will closely examine the three major components of the criminal justice process: policing, the courts system, and corrections. (This course will prepare students wishing to take advanced courses that more extensively address each individual component of the criminal justice system, though it is not a prerequisite.) The primary goal of this course is to develop a general understanding of the criminal justice system, as well as its response to crime in U.S. society. This introductory course will also examine special criminal justice issues such as juvenile justice, drugs and crime, and multi-national criminal justice systems, in addition to discussing the future of criminal justice in the U.S. It is important to note that the general theme of the course addresses the establishment of, and the adaptation to, the ever-changing balance between the expectations of the community, in terms of safety, and the rights of the individual, in

SOC 109(3) Course ID:017784

Health and Society

Health and health-care related issues are at the forefront of economic, social, and political discussions in the United States and around the world today. In this course, we will study health/illness and medical practice through a sociological perspective. Rather than understanding health and illness simply as biological phenomena or individual medical problems, a sociological perspective addresses how health/illness are shaped and defined by social, economic, cultural, political and socio-historical forces. Topics will include: social epidemiology, the social construction of health/illness, the role of patients and health care providers, the experience of illness, and how social factors such as gender, race, and social class shape both health/illness and health care.

Components: Lecture

Course Equivalents: BIOL 109

Course Equivalents: AFRI 101

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 177(3) Course ID:008489

Freshman Seminar

This course will take a sociological perspective in examining and understanding the wide range of groups, subcultures, and social patterns experienced by students at U.S. colleges and universities. All aspects of student life will be examined. Some topics for consideration will include: Fraternity and sport subcultures; gender issues on campuses; what it takes to get ahead; race and class differences in college experiences; variations across types of colleges (e.g. public vs. private, single sex vs. co-ed); degrees as credentials; the relation between college majors and eventual occupations; and political correctness in campus life. The topics will be explored through lectures, discussions, small group projects, and first-hand observations of campus life.

Components: Seminar

Topics: Sociology of Campus Life

The Catholic Univ of America

Arts & Sciences - Sociology - Subject: Sociology

SOC 201(3) Course ID:001854

The Human Condition: Culture, Society, and Personality

Introduction to the social sciences. Exposes students to the notion of culture, its key concepts and propositions. Discusses various aspects of societal institutions, social interaction, and social life, and examines major theories of personality formation and development. Provides an overall view of the interrelations between culture, society, personality, and organism. Faculty.

Components: Lecture

SOC 202(3) Course ID:000096

Research Methods

Introduction to the logic and strategy of the scientific method in the social sciences. Students follow the research process from the formation of hypotheses, through study design, data collection and analysis, to report writing, and gain sufficient familiarity with observation and experimental techniques, field surveys, and documentary evidence to conduct research or evaluate that of others.

Components: Lecture

SOC 203(3) Course ID:019415

Perspectives on Race and Ethnicity

This course examines anthropological theories of race and ethnicity, starting with approaches developed in the late 19th century and tracing them through to the present-day. It approaches race and ethnicity as culturally-constructed phenomena that articulate with historical, political, and economic forces at local, national, and international scales. In addition to examining race and ethnicity in the United States, the course emphasizes scholars and case studies from around the world to broaden students' understanding of and assumptions about this complex domain of social life. The course strives to teach students practical skills to help build dialogue and community across racial and ethnic divides.

SOC 204(3) Course ID:009574

Transnational Crime

While most criminal justice academics, professionals, and researchers focus on problems related to domestic criminality, another type of serious criminality occurs at the international level. "International crimes" are violations of international criminal law, while "transnational crimes" refer to violations of the laws of more than one country. This course covers both types of law violations, and seeks to familiarize the student with the distinct types of causation, victimization, and control problems the global community faces as nation states become increasingly interdependent. Nine specific crimes will be explored: aggression, arms trafficking, art theft and theft of cultural property, drug trafficking, environmental crime, genocide, money laundering, slavery, and terrorism. Causes, social organization, and policy implications will be examined for each.

Components: Lecture

SOC 205(3) Course ID:000115

Sociology of Crime and Justice

Analysis of causes and consequences of criminal behavior. Exploration of the racial, socioeconomic, and other factors influencing the definition, treatment, and amelioration of criminal behavior.

Components: Lecture

SOC 206(3) Course ID:000117

Families and Society

The structure and functions of families in contemporary America and in other settings. Selecting partners, rearing children; old people, nuclear families, extended families, alternative forms, one-parent families, and childless families.

Components: Lecture

SOC 225(3) Course ID:001862

Sociology of Culture

Surveys the way sociologists have studied the homo sapiens' capacity to create language, beliefs, values, norms, practices, and material objects, all of which become symbolic tools. Analyzes the different concepts of human culture with discussion of the relationship between culture and social structure. Studies include focusing on the "fine" arts, popular culture, political culture, media culture, and religious culture. Faculty.

Components: Lecture

SOC 226(3) Course ID:005792

Peace Studies & Conflict Resolution

The sociological perspective on the interdisciplinary field of peace studies and conflict resolution, which has emerged in the last twenty years. The study of contemporary global and regional wars, local conflicts and violence, and the most recent theories pertaining to these phenomena. The study of nonviolent social movements and their strategies. A required introductory course in the Peace and World Order Studies concentration.

Components: Lecture

SOC 227(3) Course ID:019279

Crime and Culture

What do we really know about why people commit crimes? Much of our perceptions come from the media, including pop culture TV shows. Yet how much of that is based in reality? Why do people commit crimes? How do different societies intervene? How do different social policies ultimately impact how we respond to crimes in our society? This course will explore these questions and compare and contrast the how the US vs. Italian and European systems differ in both our understanding of the origins of crimes and how we ultimately intervene to prevent future ones. As part of the course, students will be asked to write a position brief comparing an issue related to crime between the US and Italy. As part of this process, they will describe how this issue impacts certain stakeholders, critically examine what each country is doing to address the issue, and provide recommendations regarding how the response could be improved.

Understanding criminal behavior is a topic that crosses multiple fields, including but not limited to, social

Families and Incarceration

Given the dramatic rise in mass incarceration over the last 40 years, understanding the "spillover" effects on American families has become increasingly important. This course provides a broad overview of the ripple effects of mass imprisonment on family life and how it shapes opportunities and disadvantage for communities, families, and especially children. With the concentration of imprisonment often falling among poor, minority families, much of the readings in this course will focus on family life in urban communities, however, we will spend a little time exploring broader accounts, including those of rural communities and encourage students to consider impacts for families exposed to incarceration due to white-collar crimes.

Course Equivalents: SOC 542
Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 270(3) Course ID:015520

Human Rights in a Global Society

This course aims to provide students with a multidisciplinary introduction to human rights theory and practice. It starts with the theoretical foundations of human rights, especially the historical, philosophical and political-legal roots of the tradition, then proceeds to the development of universal human rights in the 19th and 20th centuries leading to the Universal Declaration of Human Rights in 1948. Secondly, it discusses the main controversies surrounding current interpretations of human rights, such as: Are human rights standards universal or are they negotiable by certain cultures and societies? Can groups choose to apply only some rights and not others, depending on the circumstances? Must human rights give way to concerns for national security and the needs of the nation-state? We then discuss at more depth women's rights and economic rights, together with cases dealing with health and human rights. The course ends with the role of NGOs and other civil society organizations in human rights advocacy.

Components: Lecture

SOC 281(3) Course ID:018727

Population, Environment and Society

This course emphasizes the impact of population processes on human societies. We will interrogate the complex relationship between economic development and population growth, with particular attention to age structure. The aging of both affluent and developing societies will be considered in the context of natural resources, markets, and migration.

Components: Lecture(In Person)

SOC 317(3) Course ID:012217

Criminological Theory

Analysis of theoretical explanations of why people commit crime and the development of laws to control criminal behavior and deviant practices. Criminal justice detection methods and early prevention strategies will be covered in depth.

Components: Lecture

Course Equivalents: SOC 617

SOC 319(3) Course ID:017926

Modern Islamic Terrorism

In this course, students will be introduced to the key historical, political, social, and cultural driving forces behind modern day Islamic terrorism. Particular attention will be focused on al-Qaeda, Islamic State, Hizballah, and the most recent group to be designated by the U.S. as a terrorist organization, Iran's Islamic Revolutionary Guard Corps (IRGC). Students will gain a foundational understanding of these four groups, compare and contrast their aims and objectives, and use quantitative and qualitative data to measure the level of threat they pose to U.S. national security. This course is recommended for students interested in pursuing a career with a U.S. government agency such as FBI, DHS, or CIA, or to anyone interested in gaining a better understanding of this particular strand of terrorism.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 320(3) Course ID:012179

Terrorism and Counter Terrorism

This course introduces students to the historical and current terrorist threats at both national and international levels. Terrorists organizations, their motivations, strategies, tactics and targets will be discussed. The various national and international counter terrorism measures past and present will also be presented in the course.

Components: Lecture

SOC 321(3) Course ID:015136

Religion & International Development

This course examines the positive and negative relationships between religion and socio-political-economic development. It first engages the student in constructing a working sociological definition of religion; examining the sources of religion; and analyzing the social organization of religion. This includes viewing religion as a group phenomenon, differentiating the church-sect continuum of religious organization, describing the process of socialization ("becoming religious") and measuring degrees of religiosity. Through a series of case studies, students discuss internal as external religious conflict; the relationship of religion and politics; religious fundamentalism; religion and economy; religion and the class system; religion and social change; women and religion; religion and human rights; secularization; ecumenism; and relations with nonbelievers.

Components: Lecture

Same As Offering: SOC 521

SOC 322(3) Course ID:012421

Military and Society

A sociological approach to the study of the military as a total institution that is often in tension with the larger society within which it is embedded. The course will examine race, gender, and sexual orientation within the military; strains on military families; changes in authority systems and organizational behavior in war and peacetime; re-integration of service members into civilian society; and the care of veterans. The course will draw on insights from classical sociological theorists such as Max Weber and Emile Durkheim, as well as empirical research by 20th and 21st century social scientists.

Students will review case studies of U.S. military performance in combat conditions during World War II, Korea, Vietnam, the Gulf War, Afghanistan, and Iraq. Topics include change within the military; recruitment, socialization and promotion; handling of dissent and discontent; relations with mass media; authority systems, moral codes, and established values; and the function of religion.

Components: Lecture

SOC 323(3) Course ID:012183

Race Relations in Multicultural Societies

This course will introduce students to various ways of thinking about race relations in contemporary society.

The course will pay special attention to the context in which race relations evolve; namely, how transnational economic relations reshape the socialization of multiple groups and the group tensions that arise out the competition for resources and cultural identity.

Components: Lecture

Arts & Sciences - Sociology - Subject: Sociology

SOC 324(3) Course ID:001877

Race and Ethnic Relations

Analysis of the social forces;past, present, and future;that govern race relations and determine disparate life outcomes by race and ethnicity. This course will introduce students to various ways of thinking about race relations in contemporary society. Focus will be on the context in which racialized social structures and race relations evolve, including changes in migration patterns; economics; law and policy; demographics; and globalization. The class will introduce and focus on the sociological perspective that race and ethnicity are socially constructed."

Components: Lecture

SOC 325(3) Course ID:018641

Public Policy and Health

This course is designed to introduce you to public policy at the US and international level with a focus on the health sector. The first half of the course will address what is public policy, why governments pursue public policy, and the social forces shaping these policies. A key aspect of this part of the course is to develop a framework for analyzing public policy and the policy making process. The second half applies these concepts to explore key health-related policy areas, including health insurance, Medicare, disability, long-term care, income support, and health behaviors.

Components: Lecture(In Person)

Course Equivalents: SOC 525

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 326(3) Course ID:018914

Diversity in a Multicultural Society

Examines social problems and the sociocultural conditions which influence the way people interact. Considers both developmental and situational stresses and problems, the "isms" and cultural diversity within a social justice context.

Components: Lecture(In Person)

Course Equivalents: SSS 326

Enrollment Requirements: SOC 101 or SOC 102 or department consent

Room Requirements: ONLINE(1)

SOC 328(3) Course ID:008490

Death and Dying

Examines death and dying from the point of view of the dying person and in the context of medical, legal, family, and religious institutions. Examines attitudes about death and how these vary historically, cross-culturally, and across race, gender, age, and social class groups. A special focus will be on the role of technology in affecting the dying experience.

Components: Lecture

SOC 329(3) Course ID:018701

White Collar Crime

This course will explore the ways in which computer technology now organizes and presents opportunities for crime in modern society. In addition to Internet crime, students will explore crimes considered to be white collar.

Components: Online(Online)

Room Requirements: ONLINE(1)

SOC 330(3) Course ID:017373

Work in the 21st Century: Career and Identity in the New Economy

This course examines how the nature of work and employment has transformed over the past few decades, and continues to evolve into the 21st century. We will sociologically examine work and workplace cultures in capitalist economies, identifying some of the key causes and consequences of our transition from an industrial to a post-industrial society. We will also examine the relationship between work and our sense of identity. Finally, this course will also examine what it takes to successfully find meaningful work in the new economy, and why the common advice to ;follow your passion; may be a recipe for disaster.

Economy and Society in Contemporary China

This course in economic sociology focuses on the social, cultural and political aspects of economic life in contemporary China. Utilizing cross-cultural and sociological perspectives, we will explore the social embeddedness of a range of economic issues, including economic structure and reform in post-Mao China, state capitalism, business ethics and negotiation in China, and the effect of various state policies on economy and society.

Components: Lecture

Course Equivalents: SRES 333

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 334(3) Course ID:009023

Economic Sociology: Capitalism, Globalization and Development

This course presents students with a systematic analysis of the origins, emergence and transformations of modern capitalism. It examines the role of the money, open markets, mass consumption, and the logics of globalization. It introduces most recent critiques of global capitalism. Students will learn about the interfaces and discontinuities between the economy and society, and in particular about economic market integration and its impact on states and societies. Material includes works of Gilpin, Greenfeld, Lindblom, de Soto, Soros, and Weber.

Components: Lecture

SOC 335(3) Course ID:012413

Surveillance

This is a course in which students will study the many ways in which people are subjected to surveillance and the effect that such surveillance has on society and on the individual. The course is divided into four parts. Part I is an introduction in which students examine what constitutes surveillance, the purposes of surveillance, and a short history of surveillance. Part II is a short analysis of the applicable laws (5 Supreme Court opinions will be read and briefed), mores, societal privacy expectations, and the way those things have changed over time. In Part III, students will examine a variety of types of surveillance, including, but not limited to, video, aerial, vehicle, communication, financial, bodily, and internet surveillance, as well as surveillance in the workplace, school, welfare state, and corrections system. After an analysis of each of these types of surveillance, students will be led in a discussion of its real and potential effects (on human behavior), as well as an analysis of the interplay between surveillances

Components: Lecture

SOC 336(3) Course ID:012419

Public Policy Around the World

This course is designed to introduce you to public policy at the US and international level. The course will address what is public policy, why governments pursue public policy, social forces shaping these policies, and the impact of these actions. The first half of the course presents analytic approaches to public policy, tools of policy analysis, the role of various actors in shaping policy outcomes, including political and non-political actors, and the institutional arrangements and social forces (e.g. historical, cultural, government) for making public policy. The second half applies these concepts to specific policy issues such as the economy, health care, welfare and social security, and education.

Components: Lecture

Arts & Sciences - Sociology - Subject: Sociology

SOC 337(3) Course ID:018511

Crime and Corruption in Chinese Society

The course offers students sociological approaches to study the phenomenon of corruption and crime in China and the global Chinese diaspora. Drawing on cross-cultural and comparative perspectives, this course will challenge students to critically reflect on the social and cultural forces that shape ¿corruption¿ and ¿crimes¿ in the East Asian context. We will explore key concepts such as the rule of law, reciprocity and bribing, social construction of ¿morality¿, business ethics, religion and corruption, and the transnational impact of corruption and crime in the global Chinese diaspora.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 338(3) Course ID:014169

The Urban Metropolis

This course will provide an overview of contemporary issues in urban sociology, beginning with theoretical models and methodological approaches that sociologists use to examine the city in the American, domestic context, and then focusing on contemporary domestic issues in urban sociology such as: residential and neighborhood preferences, segregation, discrimination, mobility, and integration, gentrification, and home-ownership patterns. While we focus on urban social problems in the U.S. in this course, we will also examine the city in a global and comparative context.

Components: Lecture

SOC 339(3) Course ID:019125

Punishment

This course will consider the ethics of punishment alongside sociological (empirically informed) accounts of why people offend and how crime is best addressed. It provides an overview of philosophical arguments for and against the socio-political practice of punishment, linking these arguments to developments in criminological theory. Students will learn to assess whether the reality of social disadvantage suffered by most offenders can be reconciled with the value of moral agency.

Components: Lecture(In Person)

Course Equivalents: SOC 639

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 340(3) Course ID:012416

Catholic Social Doctrine and Social Justice

This course provides an introduction and examination of global applications of Catholic social thought (CST), featuring 1) an introduction to the main principles of CST through a reading of the major CST documents; 2) an exegesis of the most recent and prominent focuses, on global development and a civilization of love; and 3) application to specific social concerns such as hunger, inequality, water rights, gender, AIDS, immigration, over/under population, or other pertinent topics.

Components: Lecture

SOC 341(3) Course ID:018807

Border Security

Students focus on a comprehensive, up-to-date overview of border security from an all-hazards perspective. Border security is viewed as a fundamental component of homeland Security, and as such students examine a wide variety of threats to the homeland. This course incorporates the concepts of critical infrastructure, gathering and analysis of strategic intelligence, and develops the student's technical writing skills.

Components: Online

Course Equivalents: SOC 365

Sociology of Sports

Sports as a social institution, including professionalization, labor relations, the Olympics, and other issues from a sociological perspective. Interactions with other institutions such as the economy, politics, and religion. Socialization, gender, race, and deviance within sports. The historical significance of sports as an American and international institution. Faculty.

Components: Lecture

SOC 350(3) Course ID:001891

Computer Applications for Policy Research

This course instructs students how to employ different computer applications to support your research and evaluate different policies and programs. At the end of the course, students will be familiarized with how to search data online, how to assess the validity of online data sources, and how to build a database and analyze data utilizing standard software in social science research. The course offers practical skills for students interested in data analysis relevant to public policy issues and it complements other methodology courses in the social sciences.

Components: Lecture

SOC 351(3) Course ID:001896

Inequality: The Intersection of Race, Class, and Gender

This course introduces the sociological study of inequality and stratification. A range of issues will be explored that advances understanding of the extent, causes, and consequences of social and economic inequality, with a focus on the U.S. context. We will cover some of the prominent academic debates on inequality and examine the structural forces that influence the standing of individuals and contribute to unequal opportunities. Particular attention will be paid to the role of social class, gender, and race/ethnicity. The course covers various domains of stratification, including social status, income/wealth, social mobility, education, poverty, and health. Political aspects of inequality, and possible policy responses also will be discussed.

Components: Lecture

SOC 352(3) Course ID:001898

Sociological Theory

Deals with the social world in a systematic and semantic way. Students will learn how major sociological theories deal with issues of human nature, social change, and the limits to social knowledge. Examines classical concepts of power, class, and culture. Critical evaluation of modern and post-modern theories.

Components: Lecture

Social Inequalities in Health

To what extent are social conditions related to health and illness? Who gets sick and who stays healthy? This course introduces students to the study of social inequalities in health, illness, and health care of individuals and populations. We will examine trends in health disparities and explore the social causes of these patterns. Students will consider key social determinants of health outcomes including: socioeconomic status, race/ethnicity, social relationships, gender, and health care. We will also explore potential policy solutions to reduce health inequalities. The course will focus on contributions from sociology and social demography, but also draw from research streams that include public health, social epidemiology, public policy, and economics.

SOC 371(3) Course ID:009937

Deviance and Control

This course is an examination of theories and causes of crime, deviance, and social control. Within the context of theories of crime and deviance, and the perspective of Catholic thought, we will examine types of deviant behavior, the nature and organization of societal reactions, and the processes of personal attribution and the social redefinition of deviance and/or institutional change, through classic cases such as colonial witch hunts and contemporary cases such as homosexual marriage and religious terrorism.

Components: Lecture

SOC 373(3) Course ID:008493

Cross Cultural Gender Studies

This course undertakes a survey of gender systems across societies. An examination of gender in the United States, Latin America, Africa, Eastern and Western Europe, Asia, and other countries reveals the extent to which gender is a result of social shaping. Diversity across countries in the way that gender is structured into economic, religious, family, and political institutions is a major focus.

Components: Lecture

SOC 383(3) Course ID:010868

Disability Policies

This course will cover issues related to the evolution of awareness and the recognition of human rights for people with disabilities. It will examine how this awareness affects social policy, economic policy, and the legal environment.

Components: Lecture

SOC 401(3) Course ID:009938

Institutions and Organizations

This course introduces the student to a sociological approach to studying organizations. Organization studies include business firms, government agencies, health providers, trade unions, political parties, religious bodies, and voluntary associations. Organizations are social structures invented to accomplish complex tasks in modern society. They are designed, goal-oriented systems with structures and routines but also are engaged in dynamic processes of organizing and re-organizing. Structure and process of organizing will be analyzed in the context of cultural-institutional environment of a society.

Components: Lecture

SOC 405(3) Course ID:017927

Constitutional Law and Criminal Procedure

This course will provide students with a general understanding of the major issues in constitutional law. Portions of the Constitution most relevant to criminology students are those sections of the Bill of Rights which deal with criminal procedure and litigation. Therefore, this course will especially focus on the rights of a criminal defendant. The areas to be highlighted on will include: the Fourth Amendment's protection against unreasonable searches and seizures by the police; the Fifth and Fourteenth Amendments' guarantees of due process for an alleged criminal; the Sixth Amendment's guarantee of the right to counsel along with the landmark case of *Miranda v. Arizona*; and the Eighth Amendment's prohibition of cruel and unusual punishment.

Coverage will also be given to the separation of powers between the executive, legislative, and judicial branches of the federal government; federalism and states' rights, the concept of interstate commerce;

Pillaging, Murder and Mayham: A Survey of Violent Crime

In this course, students will learn about various types of violent crimes in both North American context and on a comparative basis with European violent crime rates. The course will expose students to theoretical approaches to understanding the use of violence in crime and to a variety of forms of violent crimes including occult crimes, serial killers, gang violence and crimes, and domestic terrorism among others. Students will gain an understanding of the root causes of these crimes and of the various control approaches that have been tried including gun control.

Components: Lecture

SOC 408(3) Course ID:013038

Religion and Terrorism

Religion and Terrorism is an undergraduate course that will explore the relationship between religious movements and terrorism. After a brief examination of various definitions of terrorism, the course will analyze whether violence motivated by religion always fits within these definitions. Included in the class will be a detailed examination of religious terrorism, and the tactics and strategies employed by terrorists who are motivated by religion. Finally, the class will conclude with an in depth analysis of religiously motivated terrorism in the modern world.

Components: Lecture

SOC 409(3) Course ID:013047

Class and Inequality in American Society

Exploration of society's hierarchical groupings of people on the basis of biological or social differences: economic/class, race/ethnic, sex/gender to accord them status according to these groupings. Analysis of how these groupings become embedded in social structure to form the bases of inequality in society.

Components: Lecture

SOC 413(3) Course ID:001902

Gender and Society

This course will examine the different roles prescribed to individuals on the basis of their gender and the gender structures that constrain us. Socialization experiences at various stages in the individual's life cycle (e.g., during childhood, adolescence, middle age, and old age) will be discussed. In addition, we will consider the consequences of gender structure for men's and women's home and family life, education, work roles and achievement and mental and physical health.

Components: Lecture

SOC 415(3) Course ID:017241

Criminal Behavior in America

This course approaches the understanding of delinquent and criminal behavior from a developmental, cognitive-behavioral, and psychological perspective. Viewing the juvenile and adult offender as being embedded and continually influenced by multiple systems, the course critically examines the psychological factors in criminal behavior. The behavioral, emotional, and cognitive aspects of crime are analyzed, focusing primarily on the offender but occasionally on the victim as well. Particular emphasis will be placed on origins of criminal behavior, aggression, psychopathy, crime and mental disorders, homicide, and sexual assault. Applied empirical research on issues important to the legal system will be discussed as well. The final portion of the course will focus on prediction, intervention, and treatment of delinquency and criminal behavior.

Components: Lecture

SOC 421(3) Course ID:017466

Social Innovation Startups

This course will provide students with a framework for identification of socially relevant problems, and for the creation of sustainable and scalable solutions to those problems. This is an intensive, project-based course with small, multi-disciplinary teams. Teams will conceive, develop and test creative technological solutions to real-world problems. The course will introduce students to Human Centered Design, customer development and agile development. Teams will be given a toolkit for innovation and exposed to a wide range of frameworks for managing and driving innovation.

Selected Topics in Sociology

From time to time special topics of interest to faculty and students are offered. Consult the department or course schedule to determine offerings in a given semester. Faculty.

Components: Lecture

SOC 501(3) Course ID:001914

Research Design and Methods

Development and testing of sociological hypotheses. Classroom and field study of research designs, data gathering, measurement, and analysis.

Components: Lecture

SOC 503(3) Course ID:001916

Social Statistics

In this course the student will learn how to read, analyze, and interpret social statistics. The course will familiarize the student with basic statistical concepts and techniques including correlations, elaboration analysis, ANOVA, and regression. We will analyze data from a variety of sources with an emphasis on the social sciences. Students will apply the statistics learned here to a research project in their area of expertise.

Arts & Sciences - Sociology - Subject: Sociology

SOC 504(3) Course ID:009573

International Crime and its Control

While most criminal justice academics, professionals, and researchers focus on problems related to domestic criminality, another type of serious criminality occurs at the international level. "International crimes" are violations of international criminal law, while "transnational crimes" refer to violations of the laws of more than one country. This course covers both types of law violations and seeks to familiarize the student with the distinct types of causation, victimization, and control problems the global community faces as nation states become increasingly interdependent. The course will involve students' development of independent research in these areas. Current social, economic, political and technological developments bring about a change in the meaning and function of national borders. Because the construction of policies against international and transnational crime requires a wide vision and scope, this course brings together analyses from several disciplines, such as criminology, history, and political science. Nine specific crimes

Components: Lecture

SOC 505(3) Course ID:007261

Sociology of Crime

Analysis of causes and consequences of deviant behavior. Exploration of the racial, socioeconomic, and other factors influencing the definition, treatment and amelioration of deviant behavior.

Components: Lecture

SOC 506(3) Course ID:010729 Department Consent Required

Sociology of the Family

The structure and functions of families in contemporary America and in other settings. Selecting partners, rearing children; old people, nuclear families, extended families, alternative forms, one-parent families, and childless families.

Components: Lecture

SOC 509(3) Course ID:011845

Law and Society

The course is divided in two sections. In the first, the conceptual development of the field of sociology of law starting with Weber will be studied. This section will also pay particular attention to the relation between law, norms and interest between the regulation schools and other contemporary perspectives. In the second part of the course, students will have an opportunity to apply these conceptual debates to the issue-areas of human rights and market regulations.

Components: Lecture

SOC 510(3) Course ID:012182

Policing and its Control

Historical and contemporary issues relating to the role of police and society. Students will study community policing from a global perspective (U.S., Canada, UK and Asia) and the evolving role of the police will also be examined. Students will be introduced to major theoretical concepts and research methodologies as they apply to the function of police in society

Components: Lecture

SOC 511(3) Course ID:012886

Sociology of Culture

This course serves as an introduction to the major topics and themes in the sociology of culture, focusing on the topic of religion. The purposes of the course are to increase student knowledge of the main topics in the sociology of religion in culture; to facilitate an appreciation for alternative religious practices; and to foster student awareness of the social determinants and consequences of religious belief and behavior.

Components: Lecture

SOC 512(3) Course ID:001917

Social Theory

An examination of major, current theoretical developments: symbolic interaction, exchange theory, structural-functionalism, conflict theory, ethnomethodology, and radical sociology, with special emphasis on points of convergence and divergence.

Components: Lecture

SOC 513(3) Course ID:001918

Data Handling in Social Science

Training in computer hardware and software used by social scientists in creating and manipulating data sets. Includes exposure to SPSS, SAS, data entry and standard word processing packages.

Components: Lecture

The Catholic Univ of America
Course Catalog

Arts & Sciences - Sociology - Subject: Sociology

SOC 514(3) Course ID:001919

Sex and Society

Analysis and theoretical understanding of gender stratification and inequalities. Examination of why gender inequalities develop, why they are greater in some societies than in others, and how they are perpetuated across generations. Special focus on the occupational and family spheres.

Components: Lecture

SOC 515(3) Course ID:011847

Crimes in Urban Society

This course examines contemporary perspectives and data related to crime in urban America. In particular the course will investigate the relationship between new social deprivation, social disorder and social isolation in the United States and the disparity in the spatial concentration of crime. One of the major goals of the course is to sensitize students to the structural causes of crime among different ethnic and racial groups.

Components: Lecture

SOC 517(3) Course ID:012218

Crime and Its Control: a Survey of Crime and Delinquency

Analysis of the theoretical explanations of deviant practices and why people commit crimes. Students will perform indepth studies of the criminal justice detection methods and the strategies used for early prevention and how laws are developed.

Components: Lecture

SOC 518(3) Course ID:016761

Current Issues in Juvenile Delinquency

The course will examine some of the formal and informal institutions designed to control youth offenders in the modern era. It explores how theorists and scientists have explained and studied juvenile offenses. It examines juvenile delinquency from gender, race/ethnicity, and class perspectives. It also surveys methods of prevention.

Components: Lecture

SOC 519(3) Course ID:010554

State and Society in China and East Asia

This course will look at the pivotal role of state in social change: economic development, social and political transformation, in the 20th-century context of international environment. Comparative case materials will be derived from industrializing experiences of East Asian countries (regions) of Singapore, South Korea, Taiwan and Hong Kong as well as the socialist reform of Mainland China.

Components: Lecture

SOC 520(3) Course ID:012180

Analysis of Terrorism Here and Abroad

This course introduces students to the historical and current terrorist threats at both national and international levels. Terrorist organizations, their motivations, strategies, tactics and targets will be discussed. Various national and international counterterrorism measures past and present will also be presented in the course.

Components: Lecture

SOC 521(3) Course ID:015136

Religion & International Development

This course examines the positive and negative relationships between religion and socio-political-economic development. It first engages the student in constructing a working sociological definition of religion; examining the sources of religion; and analyzing the social organization of religion. This includes viewing religion as a group phenomenon, differentiating the church-sect continuum of religious organization, describing the process of socialization ("becoming religious") and measuring degrees of religiosity. Through a series of case studies, students discuss internal as external religious conflict; the relationship of religion and politics; religious fundamentalism; religion and economy; religion and the class system; religion and social change; women and religion; religion and human rights; secularization; ecumenism; and relations with nonbelievers.

Components: Lecture

Same As Offering: SOC 321

The Catholic Univ of America
Course Catalog

Arts & Sciences - Sociology - Subject: Sociology

SOC 522(3) Course ID:012422

Military Sociology

A sociological approach to the study of the military as a {total institution} that is often in tension with the larger society within which it is embedded. The course will examine race, gender, and sexual orientation within the military; strains on military families; changes in authority systems and organizational behavior in war and peacetime; re-integration of service members into civilian society; and the care of veterans. The course will draw on insights from classical sociological theorists such as Max Weber and Emile Durkheim, as well as empirical research by 20th and 21st century social scientists.

Students will review case studies of U.S. military performance in combat conditions during World War II, Korea, Vietnam, the Gulf War, Afghanistan, and Iraq. Topics include change within the military; recruitment, socialization and promotion; handling of dissent and discontent; relations with mass media; authority systems, moral codes, and established values; and the function of religion.

Components: Lecture

SOC 524(3) Course ID:001921

Minority Relations

Introduction to minority-majority relations, especially in North America. The nature of prejudice, discrimination, and out-group relations. Social change in race relations. Emphasis on the historical development of white ethnic groups, African-Americans, Latinos, and religious groups.

Components: Lecture

SOC 525(3) Course ID:018642

Public Policy and Healthcare

This course is designed to introduce you to public policy at the US and international level with a focus on the health sector. The first half of the course will address what is public policy, why governments pursue public policy, and the social forces shaping these policies. A key aspect of this part of the course is to develop a framework for analyzing public policy and the policy making process. The second half applies these concepts to explore key health-related policy areas, including health insurance, Medicare, disability, long-term care, income support, and health behaviors.

Components: Lecture(In Person)

Course Equivalents: SOC 325

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 528(3) Course ID:001923

Social Stratification and Mobility in America

An examination of social stratification in twentieth-century America. Concepts and problems, criteria for stratification placement, interstrata differences in attitudes and behavior. A survey of major monographic studies of stratification in American communities, stability, and change.

Components: Lecture

SOC 530(3) Course ID:019025

Families, Incarceration, and Inequality

Given the dramatic rise in mass incarceration over the last 40 years, understanding the "spillover" effects on American families has become increasingly important. This course provides a broad overview of the ripple effects of mass imprisonment on family life and how it shapes opportunities and disadvantage for communities, families, and especially children. With the concentration of imprisonment often falling among poor, minority families, much of the readings in this course will focus on family life in urban communities, however, we will spend a little time exploring broader accounts, including those of rural communities and encourage students to consider impacts for families exposed to incarceration due to white-collar crimes.

Components: Lecture(In Person)

Course Equivalents: SOC 230

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 532(3) Course ID:016696

Popular Culture and Crime in American Society

This web-based course surveys the connections between popular culture, crime, and criminal justice in the United States. It will explore how the criminal justice system, criminals, and crime are portrayed in both news and entertainment outlets, as well as the impact that these portrayals have on society at large and the criminal justice system. [Prerequisites: none]

Components: Lecture

Arts & Sciences - Sociology - Subject: Sociology

SOC 534(3) Course ID:009024

Economic Sociology

This course presents students with a systematic analysis of the origins, emergence and transformations of modern capitalism. It examines the role of the money, open markets, mass consumption, and the logics of globalization. It introduces most recent critiques of global capitalism. Students will learn about the interfaces and discontinuities between the economy and society, and in particular about economic market integration and its impact on states and societies. Material includes works of Gilpin, Greenfeld, Lindblom, de Soto, Soros, and Weber.

Components: Lecture

SOC 535(3) Course ID:012414

Crime Prevention: Implementation and Evaluation

Surveillance is a course in which students will study the many ways in which people are subjected to surveillance and the effect that such surveillance has on society and on the individual.

Components: Lecture

SOC 536(3) Course ID:012420

Global Public Policy

This course offers a sociological perspective to the policy-making process and to policy analysis and evaluation. Particular attention will be paid to how social forces, shape public policies.

Components: Lecture

SOC 538(3) Course ID:014171

Metropolitan Regions

This course provides an overview of the theoretical models espoused by Louis Wirth and Georg Simmel, and explores the methodological approaches that sociologists use to examine the city in the American, domestic context. We define the metropolitan region, study the origins of urban life, and examine suburbanization, globalization, metropolitan planning issues and social policy. We will focus much of our analyses on metropolitan social problems such as: residential and neighborhood preferences, segregation, discrimination, mobility, and integration, gentrification, and home-ownership patterns, and graduate students will embark on qualitative fieldwork and write a term paper on their findings.

Components: Lecture

SOC 540(3) Course ID:012417

Catholic Social Justice Doctrines

Introduction and examination of social applications of Catholic social thought (CST), featuring 1) a thematic study of the Compendium of Catholic Social Doctrine and reading of the major CST documents; 2) an exegesis of the Benedictine social encyclicals, with their "ethical turn" to global development and a civilization of love; and 3) application to specific contemporary social concerns such as hunger, inequality, water rights, gender, AIDS, immigration, over/under population, or other pertinent topics.

Components: Lecture

SOC 541(3) Course ID:006257

Religion and Society

Survey of religious systems and their interrelations with society and its institutions, with emphasis on the social consequences and determinants of religious behavior.

Components: Lecture

SOC 542(3) Course ID:017753

Israel: Society and History

Graduate version of SOC 242.01. The objective of this course is to impart a basic understanding of the development of Israeli society and politics. The course will focus on Jewish political experience before the Zionist movement, pre-state Jewish society and politics, and on the evolution of Israeli society to the present. It will cover the historical traditions and ideological influences that have shaped Israeli society, with emphasis on internal ethnic, communal, and religious divisions. The system's performance will be measured against democratic theory with special focus on the tension between democratic values and security pressures.

SOC 543(3) Course ID:018764

Religion and Mental Health in Global Context

This course examines the intersection between religion and mental health in global perspective. Drawing on perspectives from multiple disciplines (sociology, psychology, social work, theology, and religious studies), we will explore how religious traditions in diverse socio-historical contexts understand and respond to mental illness.

What role does religion play in shaping mental health? Some have excoriated religion as an illusion and religiosity an indicator of psychological immaturity, while others insist it is a universal human need. In this course, we are concerned primarily with religion as a social structure with causal powers that can shape our well-being in different ways. We will examine religious teachings from a number of faith traditions, as well as empirical research from religious communities in different countries, and the ways in which they

Components: Lecture(In Person)

Course Equivalents: SOC 343, SOC 343H

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 545(3) Course ID:011282

Sports and Society

This course will examine the roles, ramifications, and functions of sports in the global society of affluent and developing countries. It will explore the relationship between sports and the major institutions that influence our lives: education, mass media, health, economics, politics, family, religion, etc.

Components: Lecture

SOC 550(3) Course ID:001925

Applied Policy Research

How modern culture and institutions have been changed by access to the Internet; new forms of communications; the World Wide Web; effects of instant access, anonymity, and new concepts of gender, race, and class, on human thinking, learning, and norms. Taught in computer-equipped classroom.

Components: Lecture

SOC 551(3) Course ID:001926

Social Inequalities

This course introduces the sociological study of inequality and stratification. A range of issues will be explored that advances understanding of the extent, causes, and consequences of social and economic inequality, with a focus on the U.S. context. We will cover some of the prominent academic debates on inequality and examine the structural forces that influence the standing of individuals and contribute to unequal opportunities. Particular attention will be paid to the role of social class, gender, and race/ethnicity. The course covers various domains of stratification, including social status, income/wealth, social mobility, education, poverty, and health. Political aspects of inequality, and possible policy responses also will be discussed.

Components: Lecture

SOC 553(3) Course ID:018480

Social Inequalities in Health

To what extent are social conditions related to health and illness? Who gets sick and who stays healthy? This course introduces students to the study of social inequalities in health, illness, and health care of individuals and populations. We will examine trends in health disparities and explore the social causes of these patterns. Students will consider key social determinants of health outcomes including: socioeconomic status, race/ethnicity, social relationships, gender, and health care. We will also explore potential policy solutions to reduce health inequalities. The course will focus on contributions from sociology and social demography, but also draw from research streams that include public health, social epidemiology, public policy, and economics.

Components: Lecture(In Person)

Course Equivalents: SOC 353

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

SOC 560(3) Course ID:001927

Political Sociology

An examination of how sociologists study dynamics of power to understand social relations. A focus on modern American social movements (20th century - present) to help explain the principles of political sociology. Particular attention will focus on civil and human rights, labor and economic justice and the role of women. Students will also have the opportunity to research and examine a social movement of interest and develop a model "campaign."

Components: Lecture

SOC 561(3) Course ID:008734

Migration & Development in the Americas

Course will explore issues surrounding migration and immigration in Latin America and the United States, with a particular focus on the impact of migration on development in Latin America and the consequences of immigration for Latin Americans in the United States. The course will review recent theories of migration, assimilation or adaptation, and transnationalism. It will also look more concretely at some of the settings which produce migrant flows, particularly in rural areas, the impact of migration on local development in those settings, and the sorts of experiences of immigrants as they seek homes and work in this country. The course is intended as an advanced introduction for seniors and graduate students and may include the option of a term paper or senior thesis. Fulfills the elective requirement for Latin American and Latino Studies.

Components: Lecture

SOC 563(3) Course ID:001930

Modern Social Movements

Dynamics of collective behavior and development of social movements in modern society. Institutional and social consequences. Factors affecting evolution and impact of movements.

Components: Lecture

SOC 565(3) Course ID:012415

Keeping America's Borders Safe

Keeping America's Borders Safe is a graduate level course that will explore the myriad issues surrounding the topic of border control. Graduate students will study competing theories of border control as well as the many national security, legal, economic, social and moral issues involved. The course will also include an examination of the policies adopted by the government, the practicalities of implementing those policies, as well as the consequences, intended or not, of those policies. Students will also study the government agencies responsible for border security, with an emphasis on the Directorate of Border and Transportation Security within the Department of Homeland Security.

Components: Lecture

SOC 570(3) Course ID:015521

Comparative Human Rights Policies

This course aims to provide students with a multi-disciplinary introduction to human rights theory and practice. It starts with the theoretical foundations of human rights, especially the historical, philosophical and political-legal roots of the tradition, then proceeds to the development of universal human rights in the 19th and 20th centuries leading to the Universal Declaration of Human Rights in 1948.. Secondly, it discusses the main controversies surrounding current interpretations of human rights, such as: Are human rights standards universal or are they negotiable by certain cultures and societies? Can groups choose to apply only some rights and not others, depending on the circumstances? Must human rights give way to concerns for national security and the needs of the nation-state? We then discuss at more depth women's rights and economic rights, together with cases dealing with health and human rights. The course ends with the role of NGO's and other civil society organizations in human rights advocacy.

Components: Lecture

SOC 571(3) Course ID:006259

Social Deviance

An examination of types of deviant and criminal behavior, the nature and organization of societal reactions, and the processes of personal attribution and the social redefinition of deviance and/or institutional change, within the context of theories of crime and deviance and the perspective of Catholic thought.

Components: Lecture

SOC 573(3) Course ID:001932

Gender, Globalization and Inequality

Looking at the diversity of gender patterns across societies is an excellent way to understand the nature of social shaping and gender structures in an age of globalization. In our examination of gender in the U.S., Latin America, Africa, Eastern and Western Europe, Asia and other countries we will see that gender is master status that is connected with attitudes and behaviors of men and women in all areas of social life -- family, school, work, community, law, medicine, politics, religion. Gender differences often involve unequal statuses. In this course we will use recent research and theory to try and understand the way in which gender structures are involved with globalization processes at individual, community and national levels.

SOC 601(3) Course ID:001936

Social Organizations and Institutions

Organization viewed as the basic property of social life at all levels, micro to macro. Empirically informed, middle-range readings in basic social processes: roles, reference groups, institutions, associations, bureaucracies, community. Major perspectives such as demographic, ecological, cultural, and social-psychological. Social organization as an integrating perspective in sociological work.

Components: Lecture

SOC 604(3) Course ID:001938

Intermediate Social Statistics

Multivariate analysis, including regression, multiple and partial correlations, analysis of variance, analysis of covariance, and structural equation models. These include factor analysis, recursive and nonrecursive path model analysis. Begins with a comprehensive review of basic statistical concepts and rules of inference. Prerequisite: 503 or Permission of Instructor.

Components: Lecture

SOC 606(3) Course ID:013173

Theory and Research on Men in Society

In this course the student is introduced to a sociological analysis of masculinity. Historical and cross-cultural comparisons of masculinity will illuminate the diversity and changing nature of masculinity. The course provides tools for an ongoing process of observation, understanding, and analysis of gender relationships in societies, organizations and small groups with a focus on men. Some of the topics that will be covered include masculinity across cultures, boyhood, men in family and work; men in relationships, male sexualities, masculinity in the media and popular culture, violence and masculinity, men, masculinity and sport. Students will be exposed to a variety of conceptual frameworks on the topic of gender and masculinity. Tools for doing empirical work on a special topic of interest to the student will also be provided.

Components: Lecture

SOC 607(3) Course ID:012233

Survey of Violent Crime

The course will expose students to theoretical approaches to understanding the use of violence in crime and to a variety of forms of violent crimes including occult crimes, serial killers, gang violence and crimes, and domestic terrorism among others. Students will gain an understanding of the root causes of these crimes and of the various control approaches that have been tried including gun control.

Components: Lecture

SOC 608(3) Course ID:013039

Terrorism and Religion

Terrorism and Religion is a graduate level course that will examine the relationship between religion and terrorism. Students will study and learn about historical cases of religiously motivated violence. They will analyze whether that violence constitutes terrorism. Additionally, graduate students will examine whether societal conditions lead to an increase in religiously based terrorism. Finally, students will explore what, if anything, can be done to minimize or prevent religious terrorism

Components: Lecture

SOC 609(3) Course ID:013048

Privilege and Power in Modern Society

A theoretical analysis of the structure of modern society and the inherent mechanisms of influence and inequality. Examination of how these mechanisms combine with ideology to perpetuate dominant & subordinate systems of privilege and power and how they affect individual life chances in modern society.

Components: Lecture

SOC 610(3) Course ID:019359

Police, Law, and Society

Historical and contemporary issues relating to the role of police and society. Students will learn about police-minority relations and programs and strategies designed to address poor police-community relations.

Components: Online(Online)

Arts & Sciences - Sociology - Subject: Sociology

SOC 615(3) Course ID:017244

Criminal Behaviors

This course approaches the understanding of delinquent and criminal behavior from a developmental, cognitive behavioral, and psychological perspective. Viewing the juvenile and adult offender as being embedded and continually influenced by multiple systems, the course critically examines the psychological factors in criminal behavior. The behavioral, emotional, and cognitive aspects of crime are analyzed, focusing primarily on the offender but occasionally on the victim as well. Particular emphasis will be placed on origins of criminal behavior, aggression, psychopathy, crime and mental disorders, homicide and sexual assault. Applied empirical research on issues important to the legal system will be discussed as well. The final portion of the course will focus on prediction, intervention, and treatment of delinquency and criminal behavior.

Components: Lecture

SOC 617(3) Course ID:019358

Criminological Theory

Analysis of theoretical explanations of why people commit crime and the development of laws to control criminal behavior and deviant practices. Criminal justice detection methods and early prevention strategies will be covered in depth.

Components: Lecture(In Person)

Course Equivalents: SOC 317

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 620(3) Course ID:019240

Social Interaction

Surveys the way sociologists have studied the homo sapiens' capacity to create language, beliefs, values, norms, practices, and material objects, all of which become symbolic tools. Analyzes the different concepts of human culture with discussion of the relationship between culture and social structure. Studies include focusing on the "fine" arts, popular culture, political culture, media culture, and religious culture.

Components: Lecture(In Person)

Course Equivalents: SOC 220

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 623(3) Course ID:012673

Social Change and Comparative Development

The concept of social change and development is discussed throughout this course. We shall look into how various components of society are rearranged, reorganized, and reconfigured in a variety of cultures, including -- among others -- those of the U.S., China, Brazil, India, the former U.S.S.R., Germany, South Africa, Nigeria, Afghanistan, and Iran. Topics include breakdown of rural life and growth of cities, impact of technology and the transformation of work, the undermining of authority systems, moral codes, and established values; the stimulation of discontent, cultivation of new tastes and aspirations; formation of new standards of living; changes in family structure, class structure, religion, education, and industry.

Components: Lecture

SOC 624(3) Course ID:010867

Conflict Resolution

The course in Peace and Conflict Resolution introduces students to the field of conflict transformation. It is designed to provide students with the academic and practical tools needed to understand issues related to peace and justice. Specifically, the course: Introduces theoretical tools for the analysis of conflict; offers training in the methods of conflict resolution; imparts ethical, moral, and philosophical insights into the process of creating peaceful social change; and provides opportunities for experiential learning through internships. The material covers the following issues:

theories of war, conflict, social change and revolution; theory and practice of conflict resolution; nonviolent social change; and research project in community organizing and social movements

Components: Lecture

SOC 629(3) Course ID:008491

Research on Death and Dying

Not long ago, people had to make a special effort to learn about dying, death, grief, suicide, assisted death, and similar topics. The Death Awareness movement has exposed us to these issues and research on the topic has proliferated. Course will examine death and dying from the point of view of the dying person and in the context of medical, legal, family, and religious institutions. Examines attitudes about death and how these vary historically, cross-culturally, and across race, gender, age, and social class groups. A special focus on the role of technology in affecting the dying experience.

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SOC 650(3) Course ID:011283

Race in Films

This course focuses on the "nadir of American race relations" - that period in the history of the Southern United States from the end of Reconstruction in 1877 through the early 20th century, when racism in the country was worse than in any other period after the American Civil War. We will assess movies that treat slavery, the Civil War, Reconstruction, the "Nadir of American Race Relations" (1890-1920) of American Race, and the Civil Rights Movement and the reaction against it. Recent trends in cinematic presentation of race relations will be discussed.

Components: Lecture

SOC 673(3) Course ID:008494

Researching Gender Across Societies

Gender structures across societies will be examined. A variety of micro and macro gender theories will be used in an attempt to explain the cross-cultural variation in gender systems. Students will develop a research question that will be examined through lectures, discussions, readings, and an analysis of relevant data. A research paper which poses the research question in a theoretical context, reviews the literature, and empirically tests the hypotheses will be the end product of the course.

Components: Directed Study/Research

Business - Business - Subject: Accounting

ACCT 205(3) Course ID:000017

Introductory Accounting

Formerly ACCT 305. Designed for both users and producers of accounting data. Balanced coverage of procedures used to prepare financial statements, the measurement theories underlying the procedures, and the economic environment in which accounting operates. Analysis of financial statement information. Minimal focus on bookkeeping techniques, but includes adequate conceptual preparation in accounting processes for students intending to take additional courses. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: IEDM 505, MGMT 205

Enrollment Requirements: Open to students with sophomore or higher class standing who are either students in the Busch School or Department of Economics or are pursuing a business minor.

ACCT 206(3) Course ID:009902

Managerial Accounting

Formerly ACCT 306. Use of accounting data by financial managers in the planning and control of organizational activities. Provides a framework to develop the methodology of managerial accounting as an integral tool of managerial decision making in a contemporary business environment. Topics include cost concepts, profit planning, budget decision techniques, planning pricing decisions, inventory control, and quantitative decision techniques. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: MGMT 206

Enrollment Requirements: ACCT 205

ACCT 310(3) Course ID:000019

Intermediate Accounting I

Formerly ACCT 410. After reviewing the accounting cycle, concentrates on the valuation and accounting of tangible and intangible assets like receivables, inventories, fixed assets, and goodwill patents. The concepts of present value and discounting are introduced and used in valuation of assets. Also see Enrollment Requirements. Fall Semester only

Components: Lecture

Enrollment Requirements: ACCT 205

ACCT 311(3) Course ID:000022

Intermediate Accounting II

Formerly ACCT 411. A complementary course to ACCT 410. Considers in-depth accounting of current and long-term liabilities, leases, pensions and post-retirement benefits, deferred taxes, stockholders equity and earnings-per-share calculations. Extensive use of present value and discounting concepts. Also see Enrollment Requirements. Spring Semester only.

Components: Lecture

Enrollment Requirements: ACCT 205

ACCT 312(3) Course ID:000296

Cost Accounting

Formerly ACCT 409. Cost accounting systems and cost allocation problems, analysis of differential costs for decision making, use of standard cost and flexible budgets for performance evaluation. Also addressed: long-term decisions and capital budgeting methods. Also see Enrollment Requirements. Spring Semester only.

Components: Lecture

Enrollment Requirements: ACCT 310 (B or better)

ACCT 412(3) Course ID:000297

Auditing

History of auditing, description of professional certified public accounting (C.P.A.) approach to auditing the modern corporate enterprise. The auditing methods taught are those established to concur with the generally accepted auditing standards promulgated by the American Institute of Certified Public Accountants. Student learns how to give professional opinions concerning the financial condition and the operations of commercial enterprises. Also see Enrollment Requirements. Spring Semester only.

Components: Lecture

Enrollment Requirements: ACCT 311 (B or better)

The Catholic Univ of America
Course Catalog

Business - Business - Subject: Accounting

ACCT 417(3) Course ID:014662

Government and Non-Profit Accounting

Fall Semester Only. This course analyzes accounting procedures peculiar to non-profit organizations and municipalities. It illustrates statements commonly prepared for each type of organization, fund, and account group. The course also encompasses GAAP standards and reporting requirements that pertain to non-profit organizations and GASB standards and reporting requirements that relate to government accounting.

Components: Lecture

Enrollment Requirements: ACCT 311 (B or better)

ACCT 418(3) Course ID:005981

Advanced Accounting

Spring Semester Only. Primary emphasis is on accounting for corporate acquisitions and consolidations, with substantial discussion of accounting for partnerships and an overview of accounting for governmental and not-for-profit organizations. Also covered: interim financial reporting and segmental reporting. Blends theory and practice. Discusses the theory behind procedures and identifies the GAAP in current use. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: ACCT 311 (formerly ACCT 411)

ACCT 419(3) Course ID:000317

Taxation I

A study and analysis of federal income taxation of individuals. Topics involve gross income, deductions and losses, special tax computation methods and tax credits and property transactions with emphasis on nature of gain or loss, basis, capital gains and losses and recapture provisions. Stresses tax planning; a comprehensive tax return problem provides exposure to tax preparation requirements. Also see Enrollment Requirements. Fall Semester only.

Components: Lecture

Enrollment Requirements: ACCT 310 (B or better)

ACCT 422(3) Course ID:016289

Advanced Auditing

Targets tasks and procedures performed by an experienced auditor on a client engagement. Learn to effectively perform audit procedures such as analytical procedures and fraud procedures. Additional topics include: updating internal control documentation, performing "walk-throughs", price testing of inventory, valuation testing for accounts receivable, and analysis of lease transactions. Also, provides skill training on select key foundational skills necessary for success in the public accounting profession. Fall Semester only

Components: Lecture

Enrollment Requirements: ACCT 412

ACCT 430(3) Course ID:014090

Forensic Accounting

An introduction to the type of work and skills required to perform forensic and investigative accounting. The class will cover who commits fraud and why as well as the types of fraud, including financial statement fraud, income tax fraud, identity theft and employee fraud. Instruction will include guest presentations from an FBI agent, Criminal Tax Investigator and Bankruptcy attorney. Students will learn various techniques to prevent fraud, and if not prevented how to detect fraud. Topics will also include fundamental investigative techniques with an emphasis on computer analysis of financial transactions.

Components: Lecture

Enrollment Requirements: ACCT 310 (B or better)

ACCT 442(3) Course ID:016737

Accounting Ethics

Foundations of ethics in commercial activity, with special and extended attention to the specific demands of professional ethics for accountants, covering the AICPA and IFAC codes, the role of state boards of accountancy, and ethical issues related to the financial crisis, with extensive reference to case studies drawn from everyday practice, as well as high-profile scandals involving external auditors of public companies. Fall Semester only

Components: Lecture

Enrollment Requirements: ACCT 311 (formerly ACCT 411)

The Catholic Univ of America
Course Catalog

Business - Business - Subject: Accounting

ACCT 480(3) Course ID:015572

Legal Aspects of Accounting, Auditing and Finance

Introduces accounting and other business students to the most important business/legal issues. Covers various legally-intensive topics in which Generally Accepted Accounting Principles (GAAP) and Generally Accepted Auditing Standards (GAAS) come into play, frequently involving federal and state law requirements. The ongoing convergence of GAAP and the International Financial Reporting Standards (IFRS) is also be discussed. Other major subject areas examined include state laws and general contract laws impacting companies' financial structure and transactions, such as companies' securing debt financing, issuing shares of stock and declaring dividends. Fall Semester only

Components: Lecture

Enrollment Requirements: ACCT 311 (formerly ACCT 411)

BUS 199(1) Course ID:014440

Exploration: Career Discernment I

BUS 199 Exploration: Career Discernment I is the first course in a four-part sequence for all Busch School undergraduate students. The 199 course provides practical tools for career exploration such as resume and cover letter writing, networking, interviewing, internship and job searching, and more. The 199 course also emphasizes self-reflection and self-awareness, using strengths discovery tools, psychology, and the Busch School character framework. All these resources contribute to the creation of a student's Personal Development Plan (PDP), which will evolve through each x99 course. BUS 199 is only offered in the Fall and is in-person only.

Components: Seminar

Enrollment Requirements: Open to incoming students in the Busch School of Business.

BUS 299A(1) Course ID:014495

Application: Career Discernment II

BUS 299 Application: Career Discernment II is the second course in a four-part sequence for all Busch School undergraduate students. The 299 course builds on the practical tools introduced in BUS 199 such as resume and cover letter writing, networking, interviewing, internship searching, and job searching. Students will learn to apply these tools, especially interviewing, from doing mock interviews, to informational interviews, to internship and job interviews. Students will contribute to their Personal Development Plan (PDP) from 199, supported by self-reflection and self-discovery tools. BUS 299 is offered in the Fall and the Spring, with in-person or asynchronous/online options (with restrictions).

Components: Seminar

Enrollment Requirements: Sophomore Business & Economics majors only; requires concurrent enrollment in at least one other course

BUS 399A(1) Course ID:014497

Networking: Career Discernment III

BUS 399 Networking: Career Discernment III is the third course in a four-part sequence for all Busch School undergraduate students. The emphasis of BUS 399 is experiential learning, exposing students to our employer and alumni network, and offering opportunities to obtain internships and practice the skills learned in both BUS 199 and BUS 299. Juniors will have the opportunity to earn credit for this course by participating in a variety of Career Development programs, from CEO lectures to networking nights, to internships and/or Case Competitions. The syllabus provided at the start of each semester will include a breakdown of points per activity so students can pick which offerings best fit their career goals and choose based on their schedules. BUS 399 students will revisit their Personal Development Plan (PDP) from 199 and 299 to implement changes based on self-reflection and assessment provided via Blackboard. BUS 399 is offered in the Fall and Spring, and is managed asynchronous/online only with fulfillment opportunities being both in-person and

Decision-Making: Career Discernment IV
BUS 499A Career Discernment IV: Action, Evaluation, Reflection: is the fourth course in a four-part career development sequence for all Busch School undergraduate students offered both Fall and Spring semesters. Students evaluate and reflect on their professional experiences over the past four years and apply learnings and habits to their continuous improvement plans in the ultimate pursuit of service through work. Students, based on their progress in their Personal Development Plans over the past four years, choose their path of applying previous learnings. Students will choose from two pathway options during the first class- Pathway 1: is for students who do not have full time employment confirmed and/or feel they need extra support in their job search strategy and even career/ vocation discovery. Students revisit job search strategies in group career coaching, revisit their Personal Development Plans and work the plan. Students participate in recruiting-focused sessions, networking opportunities, and mock interviews to meet with alumni and employers.

BUS 501(3) Course ID:013699

Managing the Enterprise

Examines the "high order thinking skills" successful Chief Executive's exhibit in managing their enterprises. Whether it is a large public corporation, a small-to-medium private firm, the enterprise is a complex collection of risks and opportunities that must be managed intelligently. In order to understand various techniques for managing such complexity, we will examine the thinking and behaviors of some of the modern era's best Chief Executives in a wide variety of challenging real-world contexts. Through such examination, students will learn the powerful advantages of managing an enterprise simplistically through straightforward strategies, uncomplicated communications, and meticulous attention to operating details.

Components: Lecture

Enrollment Requirements: Master of Science in Business students only

BUS 502(3) Course ID:013707

Accounting and Financial Analysis

Provides a firm foundation in accounting - the language of business - to help understand and use the results in financial reporting and managerial decision-making. The accounting process entails the: recording of financially measurable events in the life of a business, reporting of those events to outside stakeholders (investors, creditors, regulators, employees), and analyzing accounting information for individual proposals (e.g. make to buy, profit planning, etc.) Emphasis is placed on interpreting financial data and learning financial statement analysis through real business world situations.

Components: Lecture

Enrollment Requirements: Master of Science in Business students only

BUS 503(3) Course ID:013706

Quantitative Methods for Decision Making

Introduces statistical analysis, applied specifically to business decision making (including probability theory, sampling estimation, inference, and hypothesis testing) and provides tools and practice in communicating the results of such analysis clearly and effectively in a business context.

Components: Laboratory

Enrollment Requirements: Master of Science in Business students only

BUS 504(3) Course ID:013700

Integrated Marketing

Explores managerial policies, strategies, and decisions regarding products/services, pricing, promotions, and distribution. The course examines major variables, both internal and external to the firm, which mutually interact and influence marketing decisions, and their impact on the human person and society. Other topics include market analysis, new product development, implementation of marketing programs, and marketing ethics.

Components: Lecture

Enrollment Requirements: Master of Science in Business students only

BUS 505(3) Course ID:013701

The Spirit of Enterprise

Develops a comprehensive view of the contributions of business and not-for-profit enterprises, from a historical perspective. Examines to what extent the principles of solidarity, subsidiarity, and human dignity have been observed in the practice of commerce across the centuries. Draws implications for their application today through discussion of specific, complex and multi-faceted ethical and social issues in business.

BUS 507(2) Course ID:019411

Professional Sales & Negotiations

Sales is a lucrative vocation that focuses on solving a customer's problems. Students will learn how to successfully match the selling process with a decision maker's buying process. Many different types of sales to be explored including Tech Sales, Financial, Business Development and more. No matter your chosen career or industry, negotiation is a key skill for any leader. Using case studies, facilitated discussions, and role-play, you'll learn a better way to negotiate. Based on Harvard's renowned Program on Negotiation, you will learn a proven method for reaching mutually beneficial agreements - not only with customers, vendors and colleagues, but in your personal life, as well.

Components: Lecture(In Person)

Enrollment Requirements: Master of Science in Business students only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

BUS 510(1) Course ID:016787

Professional Sales Management

Understand the different types of sales functions. How to plan, organize, and lead a sales team. The role and function of the sales manager will be examined including sales force size and organization, hiring, training, compensating and evaluating salespeople.

Components: Lecture

Enrollment Requirements: Master of Science in Business students only

BUS 511(3) Course ID:013894

Applied Financial Management

Provides a practical understanding of financial theory underpinning managerial decision making and enterprise valuation. Building upon MSBA 502 (Accounting and Financial Analysis), the course will first focus on revenue and expense forecasting (taking into account market structure, regulation, pricing and demand dynamics), operational and capital budgeting. The second half of the course will concentrate on valuing and financing an enterprise, addressing topics such as capital markets, time value of money, discounted cash flow and financial ratio analysis. A heavy emphasis will be placed upon hands-on P/L, B/S and CF modeling in excel.

Components: Lecture

Enrollment Requirements: Master of Science in Business students only

BUS 512(1) Course ID:013895

Leadership as Service

Successful business executives will conduct periodic interactive seminars relating their personal experiences in observing and practicing leadership traits. Each speaker will address one of the virtues that successful business people must embrace. This one credit hour series will allow the student access to people otherwise not available to them.

Components: Lecture

Enrollment Requirements: Master of Science in Business students only

BUS 513(1) Course ID:013896

Business Research Method

This course prepares students for their Field Team Study capstone project in the spring. Provides an understanding of the methods and technologies used in designing and conducting market studies, including data mining, competitive analysis and proprietary market/consumer research. Guidelines for ethical research conduct are integrated throughout the course.

Components: Lecture

Enrollment Requirements: Master of Science in Business students only

BUS 514(1) Course ID:017557

Business as a Profession

A diverse group of experienced business people will present interactive seminars relating their personal knowledge and experience in a range of activities that contribute to a well-lived life as a business professional. Topics will vary from leadership and ethics to entrepreneurship to health and wellness, personal finance, wine selection, etc. Attendance is mandatory and participation is expected. Building on the lessons from the speakers, this one credit hour course will culminate with a paper describing the student's personal mission statement for their future life as a business professional.

The Vocation of Business

This course is designed for students who are undecided or haven't discovered their passion yet. It is for those interested in discerning in what direction to take their life. You will learn how to find what you want out of life, what your strengths and weaknesses are, and how you can apply them to your career. What do I have to offer to the world? How do I find my professional vocation? How do I decide what major to choose? How do I decide on a career? How is business a force for good? How do I start a business? How do I use a computer for business? We will explore these and many other questions through lectures, lab classes, and various projects.

Components: Lecture

Course Equivalents: MGT 118, MGMT 118

Enrollment Requirements: Open to students in the Busch School or students minoring or double-majoring in business.

ENT 350(3) Course ID:018517

The Church, Entrepreneurship and Value Creation

The Church is a spiritual enterprise that teaches and evangelizes the world as the Holy See, but it is also a human organization, with material needs and even its own state as the Vatican. What is the proper relationship between spiritual pursuits and material business practices for individuals as well as for the Church at large? Join Prof. Andreas Widmer for a series of discussions, site visits, and meetings with Vatican officials to learn about how the Church has tried to render to God what is God's and to Caesar what is Caesar's through the centuries. Navigate the challenges of financing an independent state, providing service to the poor, and explore the development of hospitals, guilds, how indulgences developed, and how Vatican City operates today.

Components: Lecture(In Person)

Topics: Rome, Italy

ENT 351(3) Course ID:019233

Managing the Family Enterprise

As the fundamental unit of society, families provide a unique mixture of values, trust and passion that has kindled entrepreneurship in societies around the world for centuries. In the United States, family-owned businesses generate over half of the nation's GDP, employ almost two-thirds of the workforce, and are responsible for over three quarters of all new job creation. This course uses a case-based approach to address the unique challenges and opportunities faced by family entrepreneurs as they build the family enterprise. Topics to be covered include mission/vision/values, building and maintaining the business's culture; family business governance; succession planning; financial management and wealth planning; and conflict resolution.

Components: Lecture(In Person)

ENT 360(3) Course ID:018917

Approaches to the Human Person - Business and Entrepreneurial Perspectives

A study centered on the splendor, truth, and reality of being a human person, with special emphasis on the implications in the drama of business and entrepreneurial life. The course draws on the rich Judeo-Christian intellectual tradition, which provides a comprehensive perspective for realizing how business theory and practice can actually be person-centric. Sources include Plato, Aristotle, Augustine, and Aquinas, as well as contemporary figures such as Viktor Frankl, Martin Luther King, Jr., Michael Novak, and John Paul II.

ENT 422(3) Course ID:017396
Ecology of the Human Spirit

Entrepreneurship seeks to supply and support the conditions of human flourishing, and so an understanding of these conditions is essential to any entrepreneur's success. This course will develop a broader view of what it means to live well by investigating what may be called the ecology of the human spirit. This interdisciplinary study will explore themes such as work, economy, civil society, family, and faith. The course will consist of lectures, student presentations, and student-led discussions, and will draw largely on the thought of Catholic public intellectual Michael Novak. Assessment will be based on student presentations, class discussion, and a take-home final exam.

Components: Lecture

ENT 451(3) Course ID:019230
Family Business Strategy

This course is designed as the capstone to the family business co-specialization. Students will develop a capstone research project in the field by constructively analyzing an actual family business. Topics to be covered include scaling/growth; leadership within family business (internal and external to the family); additional governance and succession challenges that come with scale.

The Spirit of Entrepreneurial Capitalism

This course looks at one of the most important issues to understand the reality of the social world: why and how entrepreneurship has been the driving force behind the rise of civilization. It is a course on the political economy of entrepreneurial capitalism. The economic history of the West can be interpreted as a history of the spirit of entrepreneurial capitalism. That history is one of: (a) public and private institutions that enabled production and trade, (b) entrepreneurs and business organizations, and (c) an ecology which includes Christianity and its culture of dignity, virtues, and excellence, as well as other mechanisms enabling reciprocity and the respect of promises made. This course analyzes the history of entrepreneurial capitalism emphasizing these three intertwined aspects.

Historical Evolution of Money, Banking & Financial Institutions with Emphasize on Italy

This course provides the historical evolution of the money and banking system dating back to 2000 BC in Assyria, India, Sumeria and later in ancient Greece and Roman Empire. The crucial historical development of the banking system started during the medieval and Renaissance in Italy and in particular the affluent city of Florence and Genoa by the Bardi and Peruzzi families in 14 th century with the Medici Bank. This development spread from northern Italy throughout the Holy Roman Empire during 15 th and 16 th century followed by other developments in Amsterdam in the 17 th century and in London since the 18 th century. We will follow other developments in Europe and America to the present time including the financial crisis of

The Vocation of Business

This course guides students in discerning their passion through a business lens. It is designed for both students who are not 100% sure about their major, or want to make more solid plans to pursue their passion. It is for those interested in discerning in what direction to take their life. You will learn how to find what you want out of life, what your strengths and weaknesses are, and how you can apply them to your career. What do I have to offer to the world? How do I find not just any job, but my professional vocation? How do I decide what major to choose? How do I decide on a career? How is business a force for good? How do I start a business? We will explore these and many other questions through lectures, discussions and various projects. As a part of this course, students start a marketing affiliate blog business - a simple online business that nonetheless incorporates all the key aspects of running a business: invention, creation, demand generation and running of the business.

MGT 330(3) Course ID:002798

Management of Human Resources

Provides an overview of Human Resource Management from the perspective of the non-human resources manager. Surveys the strategies, policies, methods, and realities of Human Resource Management with lectures, case studies, and discussion. Relates these factors to the role, purpose, direction, and administration of the human resources function.

Components: Lecture

Enrollment Requirements: Open to students who have completed MGT 123A or MGT 123B.

MGT 331(3) Course ID:009021

Database Management

An intermediate level course for business, economics and information systems students who need an understanding of database design and management in preparation for company data analysis. The objective of this course is to introduce students to the key principles and activities associated with the design, use and administration of business databases. The course will discuss important database design principles, sophisticated data retrieval and mining techniques and implementation of database management systems in corporate and organization information systems. These principles and techniques will be demonstrated using various computerized database tools. The course will cover critical issues related to database development and administration in the context of consumer-oriented, electronic commerce (Internet and World Wide Web) environments. Students will demonstrate their mastery of database concepts through hands-on experience with database management packages. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: Open to students who have completed MGT 123A or MGT 123B.

MGT 333(3) Course ID:016740

Association Management

Through a combination of lectures and case studies, students will gain a sound understanding of the structures, purposes, and influences of not-for-profit associations in American commerce, culture, and politics. Students will study the governance structures, how decisions are reached within a not-for-profit association, and how association decision-making differs from most for-profit corporations.

Components: Lecture

Enrollment Requirements: Open to students who have junior class standing or higher AND who have completed MGT 123A or 123B.

MGT 335(3) Course ID:016997

Energy: Lifeblood of the American Economy

The purpose of this course is to provide business students with a sound and fundamental understanding of energy in America today. Upon introducing the basics of energy and its evolution in the U.S., the course will impart knowledge about energy sources, supply, demand, reliability and other factors that influence price and consumer choice. Through a combination of lectures and case studies, the energy literacy of the student is raised to a level where the student understands (1) where energy comes from and how it is used; (2) energy flows and systems; (3) how to assess the credibility of information about energy; and, (4) how our energy industry is the foundation that underlies all other industries and America's standard of living.

Components: Lecture

Enrollment Requirements: Junior or higher standing; MGT 118, MGT 223, MGT 240 and MGT 310

MGT 340(3) Course ID:014603 Department Consent Required

The Spirit of Enterprise: Commerce, Culture and Catholicism Through the Ages

The course provides a historical perspective on the evolution of commerce and its impact on society, and the parallel development of relevant Catholic social teaching. It explores the changing understanding and significance of several core ideas (including in particular solidarity, subsidiarity, and human dignity, and also private property, capital, markets, regulation of commerce, usury, and consumerism) and discusses implications for their application today.

Components: Lecture

Same As Offering: MGT 340B

Course Equivalent: BUS 505, MSM 525, HIST 430

MGT 347(3) Course ID:008720

Technology, Innovation & Product Management

This course examines the innovation process from idea generation to commercialization and future iteration. Strategies, techniques and practices used in new product development are discussed and applied within a technological context. Key concepts include product-market fit, user-centered design, UI/UX, roadmapping, prototyping, and Agile vs Waterfall Development.

Components: Lecture

Enrollment Requirements: Open to juniors and seniors who have completed MGT 240 or MGT 331

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MGT 351(3) Course ID:017052 Department Consent Required

Introduction to Business Intelligence

This course defines and describes the corporate need for intelligence information which enables business decisions, long-term strategy and planning, and facilitates ongoing analysis of the efficacy, efficiency, and productivity of a business organization. The student is introduced to the practices, approaches, and technology that facilitates collecting, organizing, and analyzing business data and defines key factors to business success made possible through well-thought and well-executed business decisions.

Components: Lecture

Enrollment Requirements: Junior or higher class standing

MGT 361(3) Course ID:017461

Data Analytics and Visualization for Business

Data Analytics and Visualization for Business is a fast-paced intermediate level course designed to give students technical mastery of key business tools for data manipulation, visualization, and interpretation. Approximately 60% of the course is devoted to Excel, while the remaining 40% is devoted to Tableau. The course topics are structured around the content required to pass professional certifications in these technologies.

The course is designed with two major goals for student learning:

1) Course assignments are designed to build students' skill and efficiency in Excel and Tableau. A wide range of functions will be practiced within each technology. Students will develop deep technical proficiency in utilizing both tools for business needs.

2) Course assignments are built around business case studies. Students will learn how to present complex data

Components: Laboratory

Enrollment Requirements: MGT 123A or MGT 123B

Room Requirements: COMPUTER LAB(1)

MGT 365(3) Course ID:002824

Quantitative Methods in Decision Making

An intermediate level course for students who need to become familiar with the tools used in business decision making with an emphasis on systems modeling and systems thinking. Students are introduced to computer-based decision-making aids and simulations. Issues in effective implementation of decision support systems. Review and analysis of various expert systems including tools and generators, classification vs. diagnostic type systems and building modules. Design of decision support and expert systems. Use of a decision support systems tool to investigate a managerial decision-making scenario. Methods of dealing with unstructured and under-specified problems from management and organizational perspectives. Case studies and/or in-class computer lab exercises. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: MGMT 365

Enrollment Requirements: Open to students who have completed MGT 123A or MGT 123B (formerly 223) and ECON 223 (or an equivalent statistics course).

Business - Business - Subject: Management (MGT)

MGT 371(3) Course ID:005988

The Legal and Policy Aspects of Government Regulation of Business

Formerly MGT 371. This course examines the major forms of government regulation from a legal and policy perspective, including: the protection of consumers (the manufacture, advertising and sale of products, together with credit card protections), the protection of investors, (the issuance and trading of corporate securities), the protection of competition (the antitrust laws), the protection of our environment (water and air quality), the protection of employees (equal employment opportunity, labor law and worker safety), the protection of intellectual property rights (copyrights, trademarks, patents and trade secrets), the enforcement of white-collar crime, and compliance with laws governing international business transactions.

Components: Lecture

Enrollment Requirements: Open to majors and minors in the Busch School who have junior class standing or higher.

MGT 375(3) Course ID:008719

The Business of Music

Art and commerce meet in this course that examines music industry fundamentals of business and law. Students interested in theatre, broadcast, TV, film, news media, recording and performance music will explore intellectual property protections such as copyright, trademark, privacy, publicity and royalty rights. Contracts, licensing, agency and management agreements for recording artists, composers, lyricists and songwriters with their representatives, producers, music publishers and distributors will be examined. ASCAP and BMI best practices will be reviewed. Pros and cons of business structures such as sole proprietorship, limited partnerships, corporations, limited liability companies and the related aspects of finance, accounting, economics, marketing, taxation, insurance and management will also be introduced for a comprehensive overview of the music business. Also see Enrollment Requirements.

Components: Lecture

MGT 380(3) Course ID:017044

International Business & Marketing in Asia

This course is intended to provide students with an introduction to business environments in the Asia-Pacific region, with particular focus on China. Students will learn the characteristics that make Chinese and other Asian markets unique, the challenges of operating a business in these markets, and cultural and historical knowledge necessary for building lasting relationships with Asian consumers. The aim of this course is to allow students to gain expertise in one of the fastest growing markets in the world today. Upon completion of this course, students should be able to identify the basic opportunities and risks businesses face in the Asia-Pacific region.

Components: Lecture

Course Equivalents: MKT 380, CHN 380

MGT 381(3) Course ID:014854

The Business Environment in the European Union

The course provides an overview of historical steps which lead to the establishment of the European Union and related institutions, a brief introduction to current EU enlargement policies, and an in-depth understanding of the EU business environment. Specifically, the course utilizes case studies to afford participants with a hands-on familiarity with business practices and effective strategies for conducting business in the EU from the perspective of European managers as well as non-European multinational corporations in a wide variety of industries. The course is taught through lectures, seminars, and the extensive use of case studies.

Components: Lecture

MGT 383(3) Course ID:016796

The Meaning of Human Ecology

Human ecology is a term barely thirty years old, but it has already become one of the most architectonic terms in social thought. Through lectures, discussion, and the reading of key texts, this course aims to explore its roots and power, and how it impacts many aspects of life: family, work, economy, civil society, and faith.

Components: Lecture

Enrollment Requirements: Junior or higher class standing

MGT 389(3) Course ID:019296

International Financial Management

Today's financial environment is heavily influenced by globalization, information technology, and geopolitics. Relatively recent international financial developments - credit and debt crises, the rise of protectionist trade policies, and experimentation with unconventional monetary policies - have all had serious business implications world-wide. It is therefore imperative that all business majors have a fundamental understanding of international financial management issues.

This course provides a detailed overview of global financial markets through topics including international financial instruments, foreign exchange, interest rate risk, and the financing of global operations. The emphasis is practical and conceptual, ordered towards students interested in analyzing the key financial decisions underpinning global business.

Components: Lecture(In Person)

Enrollment Requirements: Junior or higher standing, FIN 226, and MGT 123A or MGT 123B

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MGT 390(3) Course ID:005990

International Business

Focuses on the principal modes of business involvement of a nation-state trade and foreign investment, the relative incentives for the two modes of international business and the usual impact of this business on the nation's output, employment, profits and other variables of economic development. The core of the discussion evolves around the concept of competitiveness in international business, determinants of a nation's competitiveness and management of these determinants by business enterprises and government agencies. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: MGMT 390

Enrollment Requirements: Open to business majors or minors who: 1) are sophomores with a 3.5 or higher GPA or are juniors or seniors; 2) have completed MGT 123A or MGT 123B; and 3) have taken SRES 101 and SRES 102 or equivalent

MGT 399B(0) Course ID:014498

Business Leadership Training

This course is designed to teach students how to find internships during their academic career, which are critical to finding a job upon graduation. The professor will teach career self-assessment skills, resume and cover letter writing skills, interviewing skills, how to build a professional network, how to develop and execute an internship search strategy that includes creating potential employer target lists, and utilizing networking and online internship search resources. The course is part of the curriculum each year for business and economics students, including graduate students, and it is non-credit. Classes will be structured to include lecture and Q&A time.

Components: Seminar

Enrollment Requirements: Junior Business & Economics majors only; requires concurrent enrollment in at least one course

The Catholic Univ of America
Course Catalog

Business - Business - Subject: Management (MGT)

MGT 410(3) Course ID:017500

Conflict Resolution

This course teaches the foundational negotiation concepts: the ability to structure and execute complex negotiations strategically; experience, but an ongoing desire to learn and grow; expertise in set up and design, agility and flexibility; empathy, sensitivity, and creativity; multidimensional thinking and planning; crisis leadership skills; system 2 thinking; and constant mindful practice. This highly interactive course delves into the strategic system 2 thinking and planning that drive success in multiple arenas including multiparty negotiations, international coalitions, and multiphase situations. We explore impossible situations, deadlocked conflicts, and interpersonal, organizational, and international disputes and learn the skills required to address these scenarios. You develop more sophisticated negotiating skills, learn how to avoid the most serious pitfalls, and emerge prepared to conduct a wider range of complex negotiations and resolve conflicts with confidence.

Components: Lecture

Enrollment Requirements: MGT 330 & Junior or higher standing

MGT 432(3) Course ID:016236

Technology and Operations Management

The purpose of this course is to provide students with a broad understanding of several operations management concepts and the technologies associated with them. The course integrates the three pillars of business operations: people, processes, and systems into a cohesive framework for managing the modern enterprise. Students will study actual business operational issues and explore the various methods managers employ to address them. Emphasis will be placed on the discipline of operational planning, the skill of anticipating the unforeseen, and the art of preparing contingent alternatives to critical paths.

Components: Lecture

Enrollment Requirements: MGT 365 and junior or higher class standing

MGT 440(3) Course ID:017503

Enterprise Architecture

This course teaches students to integrate business systems and technologies to support organizational strategy and execution. The course takes an experiential approach, challenging students to implement a business/technology project that demonstrates how an enterprise-wide architectural framework provides critical business solutions. Topics include the Zachman Framework; Web 2.0; Enterprise 2.0; data networks; software as service; content management; cloud computing; and other various methodologies, tools and techniques used in the design and implementation of the enterprise architecture.

Components: Lecture

Enrollment Requirements: MGT 347 and junior or higher class standing

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MGT 472(3) Course ID:017277 Department Consent Required

Principled Entrepreneurship

Learn how to create good profit through principled entrepreneurship. We will explore entrepreneurship theories like Market Based Management (MBM), Long-Term Sustainable Value Creation (LTSVC), The Business Model Canvas and The Lean Startup. The class is based on the case method and will involve several class projects but no exams or other tests. During the course of the semester, students will meet successful entrepreneurs and have a chance to interact with them to learn about what they found useful during their careers.

Components: Laboratory, Lecture

Course Equivalents: ENT 472

Enrollment Requirements: ENT 372 or MGT 372 and Senior status; open to Juniors with department consent

MGT 475(3) Course ID:009292

Business Strategy

This course introduces students to decisions and actions taken by an organization that result in the design and implementation of strategies to achieve its objectives. It provides an analysis of methods and techniques of strategic planning, medium-range programs and short-run operation plans of an enterprise; an evaluation of control management which involves establishing standards and the process of effective and efficient implementation of the business plan; an illustration of application of methods and techniques of planning and control by case studies. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: MGMT 475

Enrollment Requirements: Open to students who meet all of the following conditions: 1) senior standing, 2) completion of ACCT 206, MGT 123A or MGT B (or MGT 223), FIN 226, & MKT 345, and 3a) accounting majors, or 3b) BSBA students who enroll in BUS 498 at the same time.

Course Catalog

Business - Business - Subject: Management (MGT)

MGT 485(3) Course ID:017501

Strategy Consulting

This course explores key concepts that have shaped the field of strategic management and strategy consulting over the past several decades. Uses lectures, readings, case studies, and videos to review the evolution of strategy teaching, research, and practice; the role of randomness in strategic outcomes; the difference between strategic thinking versus planning; and enduring principles related to competitive advantage. Key themes include the role of platform strategies and services, as well as capabilities, pull mechanisms, economies of scope, and flexibility, with examples from a variety of industries. Develops an understanding of what has made some firms successful in the past as well as what managers can do to compete in an uncertain future.

Components: Lecture

Enrollment Requirements: MGT 475 & Senior standing

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MGT 490(3) Course ID:016739

International Business - Developing Countries

In a world where the consensus around interdependence and globalization is fraying, managers must be able to expand their expertise to deal with the challenges of working in emerging and developing countries, where institutions are often informal, in transition, or non-existent. This course is designed to complement the student's traditional business coursework, enabling them to successfully contend with the developing country institutional environment. Through the case-study method, the student will examine how historical legacies shape the business environments within countries, explore how weak institutions create particular challenges, and the ways firms and managers can cope with these issues.

Components: Lecture

Enrollment Requirements: MGT 390 & Senior status; Juniors may enroll with department permission

MGT 491(3) Course ID:015450 Department Consent Required

Special Topics in Business

This course will expose students to the latest digital technologies that are being used to transform entire industries and provide instruction on how to incorporate these technologies into existing businesses. Some of the digital technologies to be explored will include: artificial intelligence (AI), blockchain/crypto/NFTs, augmented and virtual reality (AR/VR), 3D printing, data analytics, and the Internet of Things (IoT). The focus will be to understand the potential of these technologies and to examine how they are being used currently to transform not only a company's product and service offerings but also as their fulfillment and back-office processes as well.

Components: Lecture

Topics: Digital Transformation

Course Equivalents: ENT 455

MGT 491F(3) Course ID:017502

Advanced Topics in Strategy

This course will be valuable to future general managers who are accountable for the performance of a business function, a business unit, or a non-profit organization. The course will also be useful to entrepreneurs and consultants who seek to design new structures and systems to support strategy execution; to managers of multi-site businesses who wish to adapt their operations to the demands of global markets; and to investors and board members responsible for monitoring strategy execution by company management. This course will teach you how to execute strategy and deliver results. Using readings, case studies, and exercises, you will learn to master the tools needed to formulate business goals and monitor their successful achievement.

Components: Lecture

MKT 325(3) Course ID:013390 Department Consent Required
Sports Marketing

Formerly MGT 325. This course is designed to provide a framework for an understanding of how marketing strategies are formulated, implemented and evaluated in a sports context. Sports have become a significant employer of business-trained individuals and offers growing career opportunities. The course encompasses two themes: sports as a product and sports as a medium. The first theme focuses on the applications of marketing concepts and principles to promote sports and sport-related products. The second theme considers sports as a promotions vehicle and covers how non-sport businesses can benefit from utilizing sports as an integral part of their marketing communications strategy. The course has three objectives: to understand the unique characteristics of the sport industry and sports marketing, to understand how the key concepts of marketing can be applied and managed in a sports context and to understand the role and potential of sports as a marketing communication strategy for non-sport related business. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: Junior or higher class standing and MKT 345

MKT 345(3) Course ID:002809
Marketing Management

Formerly MGT 345. A study of managerial policies, strategies and decisions with respect to products and/or services offered by a firm. Major variables, both internal and external to the firm, which mutually interact and influence decisions, pricing, promotions and distribution. Additional topics include market analysis, new product development and implementation of marketing programs. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: MGMT 345

Enrollment Requirements: Open to students with junior class standing or higher who have completed ACCT 205 and SRES 101 or SRES102 (or equivalent economics course). Minors may substitute ECON 100 for the equivalent honors course.

MKT 346(3) Course ID:002811
Market Research

Formerly MGT 346. The market research process involves designing, conducting, and using marketing research studies. This course provides extensive coverage of the market research process, qualitative research, survey and data analysis. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: Open to students who have completed MKT 345 and ECON 223 (or an equivalent statistics course).

MKT 348(3) Course ID:002816
Consumer Behavior

Formerly MGT 348. The quest for human happiness serves as a framework for the analysis of how and why products and services are purchased and used. How are marketing strategies of organizations affected by consumer decisions? Particular emphasis on marketing applications, case studies, and student-centered research. Also see Enrollment Requirements.

Components: Lecture

Enrollment Requirements: Junior or higher class standing and MKT 345

MKT 349(3) Course ID:014988
Personal Selling

Formerly MGT 349. This course studies the art and science of professional selling, with an emphasis on teaching trust-based sales process & strategy, sales and marketing messaging, buyer behavior, and customer-centric sales techniques. The purpose of this course is to introduce students to professional selling on an individual level, while also exposing the student to the evolution of sales over time, and the many different sales orientations, career paths, roles and responsibilities of today's sales professional. Another component of this course focuses on selling "you" and understanding how to prepare for and secure a career in sales or any field. Junior or higher class standing. No exceptions.

Principles of Sales Management

This course covers the main elements of selling and sales management. The course is divided into three parts. In the first part, the main techniques of personal selling are covered including understanding customers, prospecting, planning and making sales calls, overcoming objections and closing the sale. The second part covers the broader set of skills required for a successful career in sales including time and territory management and larger account management. In the third part of the course, students learn the elements of managing a sales force, including hiring, training, motivating, evaluating and compensating sales professionals. Also see Enrollment Requirements.

Internship

This course is offered in collaboration with Career Development of the Busch School of Business. An application process to enroll in this course is required. Please contact Career Development for details.

Student works as an intern (part-time, with or without pay) with a local firm or government agency gaining on-the-job experience in a field related to the student's academic pursuit of business. Performance is evaluated on the basis of periodic reports from the supervisor, assigned reflections, and submission of a term paper, the subject matter of which is pre-approved by the instructor.

Components: Internship

Enrollment Requirements: open to students in the Busch School of Business with sophomore or higher class standing

The Catholic Univ of America
Course Catalog

Business - Business - Subject: Management (MSM)

MSM 501(3) Course ID:012614

Communicating Effectively as a Manager

Helps develop knowledge of, and skills in, effective communication by exposing students to a combination of communication theory and applications. The course emphasizes the development of advanced written and oral communication skills through its focus on preparing and delivering oral presentations, writing business reports and communiqués, and managing interpersonal communications.

Components: Lecture

Same As Offering: MBU 501

Enrollment Requirements: Open to Master of Science in Management students in the School of Business & Economics; other students must secure department permission to enroll

MSM 505(3) Course ID:012905

Project Management

Introduces students to the principles underlying effective project management, providing the knowledge, skills, and framework necessary to manage a real project in the workplace. Topics covered include the project life cycle, stakeholder identification, resource allocation, cost management, scheduling techniques, and human resource aspects of project management. Reviews MS Project as a useful tool to effectively and efficiently manage a project.

Components: Lecture

Same As Offering: MBU 505

Enrollment Requirements: Open to Master of Science in Management students in the School of Business & Economics; other students must secure department permission to enroll

MSM 507(3) Course ID:015585

Project Scheduling and Cost Control

Teaches the attributes and methods of both project scheduling and project cost control. The critical elements of project planning, management, and control functions will be studied and applied in an integrated approach. An emphasis will be placed on the deconstruction of the project elements and development of the project Work Breakdown Structure (WBS). This includes the role of the WBS in project cost estimating, cost control and project scheduling.

Components: Lecture

Same As Offering: MBU 507

Enrollment Requirements: Open to Master of Science in Management students in the School of Business & Economics; other students must secure department permission to enroll

MSM 508(3) Course ID:015586

Risk Management

A risk is any event that may or may not have an adverse impact on a project. It is the inherent uncertainty that comes with risks that make them so dangerous. The importance of risk management lies in the fact that if done improperly, or not done at all, it can add unplanned costs or greatly delay a project. As a result, all project managers should know how to identify, respond to, monitor and control project risks. And with proper risk management, the value of a project can actually be increased because the impact that adverse events could have on the project are minimized. As a result, in well managed projects risk management is iterative and conducted throughout the entire project life cycle. Prerequisite: MBU 505 (Project Management) or equivalent.

Components: Lecture

Same As Offering: MBU 508

Enrollment Requirements: Open to Master of Science in Management students in the School of Business & Economics; other students must secure department permission to enroll

MSM 514(3) Course ID:012906

Leadership Foundations

Surveys, compares, and contrasts contemporary theories of leadership, providing students the opportunity to assess their own leadership competencies and how they fit in with models of leadership. Students also discuss current literature, media coverage, and case studies on leadership issues.

Components: Lecture

MSM 560(3) Course ID:016797

Business Law

This course is an overview of basic legal concepts and principles underlying business. The core assets of a business rise from the acquisition and use of land, labor, and capital. We will begin by examining the legal environment of business and online commerce. Then, we will define the concepts of Torts, Crimes, and Intellectual Property as these set many of the boundaries for the competitive space of business activity. Having gained a common understanding of legal venues, forums and boundaries, we will then examine contracts, e-commerce and the protections offered by warranties. Next will be a discussion of money and how negotiable instruments and electronic financial transactions serve as tools for wealth creation or loss when banks and consumers transact business. From there we will discuss labor. Businesses rely on humans. Agency and employment law have developed to reward the owners of capital and other risk-takers while protecting those who contribute time and effort to an enterprise. We will also study the legal aspects of forming, operating,

Business - Business - Subject: Management (MSM)

MSM 562(3) Course ID:016798

Operations Management

This course focuses on the design, management, and improvement of the processes that transform the input resources into finished outputs of goods or services. Operations is one of the primary functions of the enterprise and consumes a significant amount of time and effort by the general manager. As Marketing induces demand, and Finance raises capital, Operations produces the product, which may be goods or services. This course provides a foundation for understanding the operations of a business. The objective of the course is to provide you with the basic skills necessary to critically analyze the operating practices and performance of a business.

MSM 580(3) Course ID:016777

Foundations of Professional Sales

In business, nothing happens until somebody sells something. This course studies the art, craft, and practice of professional selling. We will emphasize learning how to persuade in trust-based selling. We will also review process & strategy, messaging, buyer behavior, and customer-centric sales techniques. The purpose of this course is to introduce students to professional selling and the many different sales orientations, career paths, roles, and responsibilities. This course will focus on providing service to customers, handling difficult customers, and the role of ethical behavior in the relationship-building process. Finally, we will focus on how to prepare for and secure a career in sales or in any field.

Components: Lecture

Enrollment Requirements: Open to Master of Science in Management students in the School of Business & Economics; other students must secure department permission to enroll

MSM 590(3) Course ID:016779

Advanced Topics in Project Management

The demand for project management knowledge and skills continues to rise as projects become larger and more complex, but still must be completed on time and within budget. As a result of today's dynamic and challenging project environments, the best project managers not only possess in-depth knowledge of the latest techniques and methodologies, but are also able to astutely assess their current project environment and adapt accordingly using the state of the art technologies. In this course, students will do original research on changing technologies that can impact the way projects are managed. The emphasis will be on research, thinking and problem solving rather than on repeating known facts.

SRES 101(3) Course ID:017821

Markets & Prosperity I

This course introduces students to the economic way of thinking. The course begins with a survey of big ideas in economics, and then moves into a fast-paced sequence on comparative advantage, supply and demand, the price system, taxes and subsidies, and international trade. The course then moves to cover principles of firms and labor markets, especially profit maximization, competition, monopoly, oligopoly, price discrimination, labor supply and wages. Before concluding, the course introduces students to externalities and social costs, problems of asymmetric information, and classic public goods dilemmas.

Components: Lecture

Course Equivalents: ECON 102, ECON 104, MGMT 101

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SRES 102(3) Course ID:017822

Markets & Prosperity II

The second course in the FET sequence, Foundations of Economic Thought II introduces students to the macro effects of the micro behaviors studied in the Foundations of Economic Thought I. The course will teach the foundations of the following aspects of a modern complex economy: money (its origin and its production), the distribution of income, the performance of economic systems, international trade, interest and debt securities (yield curve), and public choice analysis.

Components: Lecture

Course Equivalents: MGMT 102

Enrollment Requirements: SRES 101 or ECON 102

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SRES 201(3) Course ID:017823

Advanced Topics in Economics I

This course covers advanced topics, themes, and conceptual frameworks in economic thought: consumer theory, theory of the firm, perfect competition and market structure, externalities and public goods, information economics, and game theory and strategic behavior. Readings will be drawn wherever possible from primary source material (e.g. academic papers) with special attention given to the 'great ideas' in economic thought. Selections from monographs and textbooks may also be used.

Components: Lecture

SRES 202(3) Course ID:017824

Advanced Topics in Economics II

This is the second course in the ATE sequence, covering advanced topics, themes and conceptual frameworks in economic thought: decision making under uncertainty, output, employment and unemployment, consumption, savings, capital, investment, fiscal and monetary policy, debates about economic planning, and long-term trends in wealth and prosperity of nations. Readings will be drawn wherever possible from primary source material (e.g. academic papers) with special attention given to the 'great ideas' in economic thought. Selections from monographs and textbooks may also be used.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SRES 260(3) Course ID:017582

Game Theory and Strategic Thinking

This course develops students' abilities to understand and anticipate strategic interaction by focusing on the lessons and methods of game theory. Game theory has become an important tool for business managers and policy makers for analyzing and implementing tactical and strategic actions. Topics will focus on conflict situations, managerial, labor and industrial organization. Students will be actively encouraged to model strategic interaction from real-life circumstances, examples from history, and even fiction. Students will learn the terminology, theories, and arguments of game theory. Using various equilibrium concepts, students will be able to explain and predict the outcome of games, which can be applied to economic, political, and social contexts. Game theory is focused on mathematical models, and this course will develop students' abstract reasoning skills and their ability to argue effectively.

Marriage, Family, and Social Order

This course is a broad introduction to contemporary social research for non-majors, with a focus on marriage, family, childbearing and related social trends in America today. Topics to be addressed include: marriage and well-being; family and family formation; cohabitation and emerging adulthood; non-marital childbearing; divorce and well-being; reproductive technologies; demographic trends; and the economic and cultural divisions that correlate with trends in marriage and family. Special topics in each semester may include current family issues in American society from a social science perspective.

Throughout the course, students will be introduced to the theory and methods, benefits and limitations of social research, with an emphasis on questions of statistical inference, causality, selection, and the use of survey data. Attention will also be given to the relationship between social science findings and ethical considerations, especially those situated within the Catholic intellectual tradition. Readings are drawn from

Education and Religion in Social Research

This course is devoted to the understanding of schools, educational Outcomes, churches and religious practice using the tools and methods of contemporary social science and economic inquiry. The course will survey the most important theoretical ideas in the economics of education through the exploration of research papers and critical monographs. The course will also look at the key social determinants and covariates of religious practice, becoming familiar with the primary data sources, metrics and methods for the analytical study of religion, religious practice, and religious institutions. Topics to be addressed include: returns to education; educational equity and school finance; the black white achievement gap; early education; peer effects; class size; school expenditures (does money matter?); vouchers and charter schools; teacher quality; merit pay; religious schools; churches; religiosity; and faith-based institutions. Students should complete this course with a strong grasp of the major debates and puzzles in the social analysis of education and

Evolution of Business, Human Rights & ESG

In pursuit of human security and justice, many policymakers, academics, political leaders, and activists insist that transnational corporations and other business enterprises should be legally bound to respect and fulfill human rights. This has given rise to a global matrix of human rights governance networks and the transformation of businesses from organizations focused primarily on increasing shareholder value to ones addressing the interests of multiple stakeholders. This course examines the evolution of business and human rights, focusing on the historical development, legal and regulatory framework, assessment and reporting methods, efficacy, and future of the corporate social responsibility (¿CSR¿), environmental, social, and governance (¿ESG¿), and business and human rights (¿BHR¿) movements. The course provides business leaders with a working knowledge of these movements as a complex adaptive system for social transformation that will continue to challenge past and present ideas about the proper mission and responsibilities of businesses and

Labor Economics and Labor Relations

This course analyzes the economic decisions of households and individuals how much to work, whether to work at all, to save, to have children, to marry, to pursue education, to migrate, to retire - as these decisions are affected by and affect the markets for labor. It also examines the demand for labor, the relations between workers and employers as they are regulated by markets and unions, and the effects of discrimination on labor market outcomes.

Justice, Social Justice, and Natural Law

A study of classical conceptions of justice from Plato, Aristotle, and Cicero, including the synthesis in St. Thomas Aquinas, as leading to and contrasted with social contract conceptions influential in modern thought. Questions of common good, individualism, sovereignty, and justice towards God and creation will be considered. The contrast between classical and modern conceptions of social justice will be examined, including the role of social justice in Catholic social thought. Likewise, the classical conception of natural law will be introduced, and modern conceptions, including the new natural law, will be critically examined. Case studies involving current controversies will be used throughout.

The Spirit of Entrepreneurial Capitalism

This course looks at one of the most important issues to understand the reality of the social world: why and how entrepreneurship has been the driving force behind the rise of civilization. It is a course on the political economy of entrepreneurial capitalism. The economic history of the West can be interpreted as a history of the spirit of entrepreneurial capitalism. That history is one of: (a) public and private institutions that enabled production and trade, (b) entrepreneurs and business organizations, and (c) an ecology which includes Christianity and its culture of dignity, virtues, and excellence, as well as other mechanisms enabling reciprocity and the respect of promises made. This course analyzes the history of entrepreneurial capitalism emphasizing these three intertwined aspects.

American Law for Canonists

Following courses on the juridical structure of the Church, norms of Church governance, marriage and religious freedom, this course provides students with an overview of the American legal system. Basic principles of American constitutional law and governance are touched on, with an emphasis on aspects of American law that are especially relevant to canon law today. As such, the course endeavors to assist students in seeing more clearly the relationship of canon law to civil law, and to become aware of the most significant areas where canon law and civil law are likely to interact.

The course presupposes a basic grasp of the Church's theological and juridic self-understanding. The course lays groundwork for understanding the most important issues concerning the relationship between the civil law and canon law in the United States today, with a view toward facilitating communication between canonists and

CL 721(3) Course ID:000510

Structures of the Particular Church

Theological-canonical reflections on the various structures whereby the particular church is organized for mission. 1983 code in light of Vatican Council II and post-conciliar legal developments, some comparative analysis of the 1917 code. The nature of the particular church, the office of diocesan bishop, the diocesan synod, the diocesan curia, consultative bodies such as the presbyteral council, the finance council and the college of consultors, the office of pastor, and the structure of the parish. Canons 368-430, 460-555.

Components: Lecture

CL 722(3) Course ID:000515

Administration in the Diocesan Curia

Contemporary theories of management and communication applied to the diocesan curia as described in the Code of Canon Law and actual practice from a representative sampling of United States dioceses. Specific concerns such as planning, organizational structure, record keeping, confidentiality, budgeting, and relating to agencies outside the diocese. Offered alternate years.

Components: Lecture

CL 724(3) Course ID:000519

Law for Consecrated Life

This course examines the history, nature, spirit, and purpose of life consecrated by the evangelical counsels. It presents an overall history of the beginnings and evolution of this gift of the Holy Spirit to the Church. Further, it demonstrates how the Church treasures and preserves this divine gift through stable forms of living, while encouraging these forms to grow and flourish in accord with the spirit of the founders and their sound traditions (canon 576).

Components: Lecture

CL 725(2) Course ID:000525

Selected Issues in Consecrated Life

Research and case-study seminar on practical current issues in consecrated life: constitutions, incorporation and separation procedures, government, apostolate, administration of goods, rights and obligations, recourse. Prerequisite: 724.

Components: Lecture

Enrollment Requirements: CL 724

CL 726(2) Course ID:007607

Special Issues in Lay Ministry

The course considers various aspects of lay ministry; definition, interpretation and implementation of pertinent canons on office and power of governance, parish staffing (c. 517.2), employment practices and preparation for ministry. Also, cc. 208-231 on obligations and rights of the Christian faithful and lay Christian faithful, as well as cc. 298-329 on Associations of the Faithful.

Components: Lecture

CL 727(3) Course ID:010601

Philosophy and Theology of Law

A study of select philosophers and theologians whose views on the role of law in society and in the Church have shaped the canonical system of law and continue to provide keys for its interpretation and development.

Components: Lecture

CL 728(2) Course ID:000527

Supra-Diocesan Structures of the Church

Theological-canonical issues pertinent to Latin church governance at the universal and intermediary levels. Reflections on petrine ministry and college of bishops/ecumenical council, synod of bishops, college of cardinals, Roman Curia, and pontifical legates. Observations on provinces and regions, metropolitans, particular councils with particular attention directed to episcopal conferences. Canons 330-367; 431-459.

Components: Lecture

CL 728N(3) Course ID:014368

Medieval Papacy

This seminar will concentrate on the history and development of the papacy from the Age of Reform in the eleventh century to the Age of Conciliarism in the fifteenth century. The pontificates of Popes Gregory VII, Alexander III, Innocent III, Innocent IV, Boniface VIII, John XXII, Martin V will receive special emphasis. The course will focus on the development of papal monarchy during this period and its effect on the structure and institutions of the Church. A final research paper will be required. There is no language requirement.

Components: Seminar

The Catholic Univ of America

Canon Law - Canon Law - Subject: Canon Law

CL 729(2) Course ID:000530

Liturgical Law

The nature of liturgical legislation. The discipline of the Constitution on the Liturgy, implementing documents, and the praenotanda of the Roman liturgical books. The authority of diocesan bishops and conferences of bishops. Particular liturgical books and norms. Relation of liturgical legislation to the Code of Canon Law, especially canons 2, 834-839.

Components: Lecture

CL 730(2) Course ID:006429

Liturgical Law: Selected Issues

Building on the foundation of CL 729, this seminar will devote time to an in-depth examination of selected issues in liturgical law of interest to the instructor and the students. Possible issues include the development of specific liturgical books or ritual elements, authorities competent to regulate the liturgy, vernacular translations, liturgical inculturation, music, and art. Prerequisite: CL 729 Liturgical Law.

Components: Lecture

CL 731(3) Course ID:000537

Sacramental Law: Selected Issues in Discipline of Church's Sanctifying Office

Theological-canonical reflections on selected questions in the canons of Book IV, other than the sacraments of orders and marriage, in light of the teaching of the Second Vatican Council, postconciliar legislation, and the process of revising the Code of Canon Law. Particular emphasis on issues in the sacramental law of Christian initiation, penance, and anointing of the sick. Selected questions in Part II (other acts of worship) and Part III (sacred places and times) of Book IV.

Components: Lecture

CL 732(2) Course ID:012650

The Sanctifying Office: Parts II and III

This course will explore Parts II and III of Book IV on the sanctifying office. Attention will be given to the universal law and applicable particular law on acts of divine worship (outside of the seven sacraments) and to sacred places and times in light of the teaching and discipline of the Second Vatican Council and post-conciliar legislation. Prerequisite: CL 731 Sacramental Law.

Components: Lecture

CL 734(3) Course ID:000541

Juridical Structure: Sacrament of Matrimony

A study of the principal canons on matrimony in their historical and doctrinal context. The canonical definition of marriage and its ends and properties, canonical preparation for marriage, impediments, mixed marriage, dissolution of the bond, separation, convalidation, sanation. Canons 1055-1094, 1124-1165.

Components: Lecture

CL 735(2) Course ID:000549

Selected Issues in Marriage

Canons 1142-1150 sketch the circumstances in which the Church will dissolve valid marriages. This course examines the theory behind these exceptions to the principle of marital indissolubility, the conditions which must be met for dissolutions to be granted, and the procedure to be followed when processing these cases.

Components: Lecture

Enrollment Requirements: CL 734

CL 736(2) Course ID:016366

Theology of Marriage: Foundations in Theological Anthropology

The primary focus of this course is to explore the unity of the systematic and moral theology of marriage when viewed from its profound anthropological foundations. As such, this course examines the teaching of the Catholic Church on four specific areas in relation to Christian marriage: 1) the human person's creation imago Dei; 2) the effect of sin and concupiscence on the human person; 3) redemption in Christ; and 4) the life of grace and virtue. These four themes coalesce as the theological background from which the student may further integrate and internalize pastoral practice in the teaching of the Church on the Sacrament of Marriage.

Components: Lecture

The Catholic Univ of America
Course Catalog

Canon Law - Canon Law - Subject: Canon Law

CL 739(3) Course ID:000552

Matrimonial Jurisprudence

An examination of the nature of jurisprudence and of selected capita nullitatis of particular relevance to practitioners in church courts; so-called traditional capita but also various psychological bases for nullity. Writing and critique of briefs and sentences. Canons 1057, 1095-1103, 1107. Prerequisite: 734.

Components: Lecture

Enrollment Requirements: CL 734

CL 740(2) Course ID:000553

Selected Issues in Matrimonial Jurisprudence

A more detailed examination of selected grounds for marital nullity in light of the jurisprudence of the Rota and American courts. Prerequisite: 739.

Components: Lecture

Enrollment Requirements: CL 739

CL 741(4) Course ID:000555

Procedural Law

A general overview of key issues in the law on the formal process in the 1983 code with reference to the marriage nullity process in particular; competence, tribunal organization, procedural capacity, the opening of the formal process, the rules of evidence, the decision, and ways of impugning the decision. Canons 1400-1691.

Components: Lecture

CL 742(3) Course ID:009325

Selected Tribunal Issues

An in-depth study of various judicial and administrative issues related to professional services in an ecclesiastical tribunal.

Components: Lecture

CL 744(3) Course ID:000557

Temporal Goods

This course considers the ownership, administration and alienation of ecclesiastical goods, normally after students have acquired some background in the history of canon law, general norms, sacramental law and particular Church structures. The canon law of temporal goods can only be understood properly in relation to the Church's theological self-understanding and the role that temporalities have played in the history of the Church. It is especially important that students understand the canon law of temporal goods in relation to the doctrine of the Incarnation and its implications for the Church's ownership and use of material things.

The Church asserts a fundamental right and responsibility to own and use material things. How the Church's structure is understood theologically and given concrete expression juridically affects the exercise of this fundamental right and fulfillment of the responsibilities it gives rise to. This concern should likewise

Components: Lecture

CL 746(3) Course ID:000558

Protection of Rights in Administrative Life of the Church

Contemporary concern for rights within the Church, causes and implications; canonical tradition and the protection of rights; categories of rights and their respective bases; selected human, ecclesial, and ecclesiastical rights; necessity of juridical protection of rights within the Church; nature of juridical protection; juridical protection in the new Code of Canon Law; administrative justice; ecclesiastical due process; administrative courts. Canons 208-231, 1713-1716, 1732-1739.

Components: Lecture

CL 747(2) Course ID:000563

Selected Issues in the Law on Clergy

Some controverted questions concerning the rights and obligations of diocesan clerics; e.g., responding to complaints of sexual misconduct, issues regarding reassignment to ministry, voluntary petitions for return to the lay state, structuring policies and practices on leaves of absence, nonpenal disciplinary actions. Topics adjusted to needs and interests of participants. Prerequisite: 720.

Components: Lecture

Enrollment Requirements: CL 720

Course Catalog

Canon Law - Canon Law - Subject: Canon Law

CL 748(2) Course ID:012970

Confidentiality and the Law

Survey of issues relating to confidentiality in civil and canon law: the seal of confession and the priest-penitent privilege; other evidentiary privileges in civil law; principles of moral theology with respect to confidentiality; mandatory reporting laws; secret archives; etc. The course will consider areas of potential conflict between the two legal systems and the bases for claiming protection in civil law for confidential communications and other information considered confidential.

Components: Lecture

CL 750(2) Course ID:000565

Teaching Office of the Church

Canonical aspects of the Church's teaching office or magisterium. Canons 747-833 examined in the light of the documents of the Second Vatican Council from both doctrinal and disciplinary aspects. The ministry of the word, including preaching and catechetical formation; missionary activity, including the catechumenate; Catholic schools and higher education; communications media.

Components: Lecture

CL 751(3) Course ID:000567

Sanctions

Some background reflections on the post-conciliar revision of penal law. Systematic examination of key substantive penal law institutes in the 1983 code; notion of delict, penal authority, imputability, types of penalties, application and remission of penalties, etc.; administrative and judicial penal procedure; penalties for specific delicts. Canons 1311-1399, 1717-1731, and related canons, especially April 2001 motu proprio 'Sacramentorum sanctitatis tutela' and USCCB 'Essential Norms.'

Components: Lecture

CL 757(2) Course ID:000573

Selected Issues in Chancery Practice

Some practical issues involving canon law faced by those who work in diocesan curiae: e.g., personnel management, dealing with extern clergy, investigation of complaints of sexual misconduct, developing policies, administering temporal goods, disputed issues in liturgical law, dealing with recourses to the Holy See.

Components: Lecture

CL 758(2) Course ID:009709

Special Procedures: More Grave Delicts

The Congregation for the Doctrine of the Faith is solely competent in penal matters related to the most serious delicts [graviora delicta] committed by clerics and members of the lay faithful. The course will examine the substantial and procedural norms of universal law governing the graviora delicta as well as the applicable particular ecclesiastical law for the United States. It will also provide practical guidance in the implementation and application of these norms.

Components: Lecture

Readings in Canonical Latin

Close reading and study of selections from the 1983 Code of Canon Law, rotal decisions, and apostolic constitutions. Restricted to students in Canon Law.

Components: Seminar(In Person)

Course Equivalents: LAT 505A

Enrollment Requirements: Canon Law Students Only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CL 800(3) Course ID:000587

Seminar in Canonical Studies

Introduction to doctoral study of canon law, research and writing at the doctoral level. Discussion of selected topics in canon law, experience in research and moderating group examination of questions of special interest.

Components: Lecture

CL 800A(3) Course ID:017887

Sources in Canon Law

The purpose of the course is to provide an advanced introduction into the sources of canon law prior to the Codex iuris canonici of 1917. Special emphasis will be placed on Gratian's Decretum, the Decretales, and the major glosses and commentaries of the Middle Ages. Emphasis will also be placed on the Corpus iuris civilis and its glossators and commentators. The goal of the course is to provide familiarity with these sources and with the tools used in understanding them.

Components: Directed Study/Research

The Mortal and Divine in Art: Catholic Inspiration Across the Ages

This course examines more than a millennium of art in service to the Church and in celebration of the human spirit in Rome, the Eternal City. Taking a thematic rather than chronological approach, we will explore the intersection of faith and the arts through the concepts of birth, love, death, and rebirth. You will study masterworks in the visual arts that relate to these themes; in so doing, you will gain the ability to assess and analyze art in a variety of media. To enable you to examine and experience artworks firsthand in a variety of settings, this course will extend beyond the classroom into the sacred spaces, historic sites, museums and art galleries, and of Rome; hence some scheduled field trips outside of regular class time will be mandatory.

The themes that will be sounded in this course are the most essential experiences in mortal and divine life. They are timeless in their significance, yet their manifestation in the arts over the ages has been

Mexico City: A Stage for Multicultural Encounters

Long before it was nicknamed the "City of Palaces" in the 18th century, Mexico City was first known as Tenochtitlan, the capital of the Mexica-Aztec Empire, which was founded in 1325. With the arrival of the Spaniards led by Hernan Cortes in 1519, the city underwent a historical transformation from its pre-Hispanic splendor to become one of the largest, richest, and ethnically diverse urban centers in the Americas. This interdisciplinary course provides an introduction to the history and culture of Mexico City, in general, and an in-depth study of literary texts written about the city, in particular. We will analyze texts such as the pre-Hispanic poems known as Cantares Mexicanos, the chronicles that recorded the conquest of Mexico, the Nican Mopohua (first Nahuatl account of the apparition of Our Lady of Guadalupe), the poetry and prose of baroque poet Sor Juana Inés de la Cruz, and works by modern authors such as Carlos Fuentes, Elena Poniatowska, Rosario Castellanos, and Nobel Laureate Octavio Paz. Can substitute for one course in the Honors

Constitutional Law I

Con. Law I introduces students to the study of the powers of the three branches of the federal government, as well as the balance of power between the federal government and states. The course addresses the basis for, various aspects of, and limits on the federal judicial power with respect to judicial review, justiciability doctrines, and sovereign immunity, including the Eleventh Amendment. Federal legislative powers studied include the commerce power, the taxing and spending power, and congressional enforcement powers under the Civil Rights Amendments. The study of federal executive power explores express and inherent presidential powers and limits on these, including the appointment and removal powers, executive privilege and immunity, foreign policy, war powers, and controversies over the scope of executive powers. The study of federalism encompasses the relation of federal and state governments in a federal system including intergovernmental immunities, the negative implications of the Commerce Clause, the Supremacy Clause, the Article IV Privileges

Introduction to American Law and Legal Methods

This course, which is designed exclusively for M.L.S. students, provides an overview of the United States legal system and teaches the process of legal analysis. Coverage will include the structure of the United States government; sources of law; judicial and court processes; legal reasoning; the role of the lawyer; and foundational legal issues related to first-year courses, such as Civil Procedure, Constitutional Law, Contracts, Criminal Law, Torts, and Property. Students will develop analytical and research skills through various oral and written exercises. Specifically, students will learn how to identify and extract rules from cases and how to apply those rules to other factual scenarios. Students will also be introduced to the techniques of statutory analysis and interpretation.

Components: Lecture

LAW 201(3) Course ID:000259

LAW 203(3) Course ID:015626

Administrative & Regulatory Law

This course provides an integrated approach to both administrative and regulatory law and policy. In practice these two areas of law complement each other: administrative law provides the procedural framework within which regulation occurs and the regulatory state, which provides the gist of contemporary public law, functions within that framework. In the words of the authors of the assigned text, the goal of the book is to study administrative law in a way that is informed by, and integrated with, an understanding of the issues of regulatory policy that lie beneath, and sometimes at the surface of, every doctrinal problem, however technical or abstract it may seem.

Components: Lecture

Federal Rulemaking Clinic

Federal agencies generally issue new regulations by proposing new rules, taking public comment on the proposals, then issuing final rules in ways that incorporate or respond to those comments. This course will briefly outline the doctrinal foundations and process of agency rulemaking, then dedicate students to one or more rulemaking projects (such as regulatory comments or petitions for rulemaking) for submission to a federal agency. Students will also hear from federal rulemaking staff to better understand how federal rulemaking submissions are received by agencies. Administrative Law strongly recommended, but not a strict prerequisite. Students in the Law and Public Policy certificate program may use this course toward their externship requirement.

Components: Clinical

LAW 223(4) Course ID:000065

Evidence

This course covers basic rules governing presentation of evidence at trial including procedural matters (objections, offers of proof), relevancy, character evidence, examination and impeachment of witnesses, opinion evidence, hearsay, authentication, and the "original documents" rule. The course examines the comparative roles of counsel, judge and jury. It may also include coverage of judicial notice, burdens of proof, and presumptions. It also explores the tactical decisions and ethical dilemmas a trial attorney is likely to confront.

Criminal Procedure: The Investigative Process

All sections of the course focus primarily on issues of constitutional criminal procedure relating to the Fourth Amendment (search and seizure), Fifth Amendment (custodial interrogations), and Sixth Amendment (interrogation and identification), and also include an examination of the defense of entrapment.

Professor Fishman's section also covers the grand jury, the rules governing subpoenas for testimony, exemplars and documents, and the obligations and responsibilities a defense attorney has when he or she discovers evidence tending to incriminate the defendant.

Professor Clark's section also covers aspects of the right to counsel and issues relating to effective assistance of counsel, bail, constitutional controls on discovery, plea bargaining, and double jeopardy.

Constitutional Law I

Con. Law I introduces students to the study of the powers of the three branches of the federal government, as well as the balance of power between the federal government and states. The course addresses the basis for, various aspects of, and limits on the federal judicial power with respect to judicial review, justiciability doctrines, and sovereign immunity, including the Eleventh Amendment. Federal legislative powers studied include the commerce power, the taxing and spending power, and congressional enforcement powers under the Civil Rights Amendments. The study of federal executive power explores express and inherent presidential powers and limits on these, including the appointment and removal powers, executive privilege and immunity, foreign policy, war powers, and controversies over the scope of executive powers. The study of federalism encompasses the relation of federal and state governments in a federal system including intergovernmental immunities, the negative implications of the Commerce Clause, the Supremacy Clause, the Article IV Privileges

Components: Lecture

LAW 272(3) Course ID:000283

Constitutional Law II

Con. Law II focuses on the study of individual liberties and civil rights guaranteed by the Constitution. The course considers the Bill of Rights, the Civil Rights Amendments, other textual provisions safeguarding individual rights, and unenumerated rights protected by the Constitution. Students will study the incorporation of the Bill of Rights with respect to the states and consider the extent to which the rights protected by the Constitution apply to private actions deemed to constitute government conduct under the state action doctrine. Individual rights studied include freedom of speech, press and religion under the First Amendment; rights guaranteed by various clauses of the Fifth and Fourteenth Amendments, including due process (both procedural and substantive), equal protection, and the Fourteenth Amendment Privileges or Immunities clause; as well as rights protected by the Contracts and Takings Clauses.

Components: Lecture

LAW 275(3) Course ID:000284

Criminal Law

The course covers the elements of criminal conduct in general, the crime of rape, the various forms of homicide and theft offenses, anticipatory offenses, group criminality and common law, and statutory defenses including insanity, provocation, and duress.

Legal Methods Workshop

Through this course, students will develop and improve legal analysis and exam-taking skills. Specifically, the course will provide students with strategies and practice with critical reading, writing analytically, and essay organization, including the IRAC method. The course will reinforce general subject matter content of the doctrinal courses and develop exam-taking skills. This course will teach students to monitor and evaluate their skills so that they can continue to progress independently in first-year and upper-division courses and on the bar examination. Finally, this course will help students improve time-management and productivity skills such as case briefing, case synthesizing, and properly using study aids.

Components: Lecture

LAW 293(2) Course ID:017441

Business Torts & Unfair Competition

Try as they might, businesses cannot contract to eliminate every risk of doing business with others. Through intentional or delinquent conduct, businesses regularly expose themselves and others to substantial losses. Depending on the nature of the conduct and the scale of resulting injuries, these losses can greatly exceed typical contractual liability. This course will explore the underlying principles of business tort recovery, the economic loss rule, as well as a range of specific causes of action, including fraud, misrepresentation, tortious interference, misappropriation, breach of fiduciary duty, and deceptive trade practices. The focus of each class will be legal and practical strategies for prosecuting and defending such claims.

Components: Lecture

LAW 302(2) Course ID:010269

Agency Law

This course is a basic survey of agency law doctrine and policy. Agency law addresses the general circumstances by which one natural or legal person (the agent) may take action on behalf of, and with significant legal consequences for, another (the principle), and the regulation of the relationship between the principle and the agent. Specific topics to be covered include the definition of agency, and the creation of the agency relationship; capacity of persons and the nondelegable acts; ambiguous agencies; vicarious knowledge and notice (the imputed knowledge rule); vicarious tort liability (the doctrine of respondeat superior); vicarious contractual liability (actual and apparent authority); undisclosed and partially disclosed principals; ratification; rights and liabilities between the principal and the agent; rights and liabilities between the agent and third parties; and termination of the agency relationship. Agency law is tested on the Maryland, Virginia, District of Columbia and many other state bar examinations.

LAW 303(3) Course ID:010265

Advanced Tort Law

This course is designed as a supplement to the required first-year four-credit-hour course in Torts. It picks up coverage where at least one offering of that course concludes. As such, it examines traditional strict liability, vicarious liability, the problem of multiple tortfeasors (joint and several liability), immunities, products liability, nuisance, defamation, damages, invasion of privacy, misrepresentation and intentional interference with business relations. The two courses together offer a thorough examination of all tort law topics tested on the bar examination of any jurisdiction. The course also exposes students to a large number of actual previous bar examination questions, offering an opportunity for students to practice the questions and to participate in close analysis of them.

Components: Lecture

LAW 304(2) Course ID:010266

International Civil Litigation

This course covers the main principles of international civil litigation. Examined topics include jurisdiction over foreign states and their citizens, the extraterritorial application of substantive law, and the recognition and enforcement of judgments rendered by foreign states. Particular attention will be paid to such topics as foreign sovereign immunity, anti-suit injunctions, the prospective waiver doctrine, foreign state compulsion, the revenue rule, and blocking statutes. The course focuses principally on United States law but draws some comparisons with other nations' laws, including the European Union's Brussels I Regulation. The course also addresses a number of treaties, including the United Nations Convention on Jurisdictional Immunities of States and their Property, the Hague Convention on Service of Process, the Hague Convention on the Taking of Evidence, and the Hague Choice of Court Convention. This is an exam course.

Components: Seminar

LAW 305(4) Course ID:000051

Commercial Transactions

In a transactional approach, the course treats the creation and effect of financing arrangements and other secured transactions in personal property; the rights of third parties claiming interests in the collateral; and the use of checks, notes, and electronic payment techniques. The course combines materials traditionally taught in separate courses on negotiable instruments and secured transactions. Principal emphasis is the Uniform Commercial Code as the prevailing commercial legislation, but the impact of the common law, the Bankruptcy Act, and other pertinent authority also is considered throughout.

LAW 307(2) Course ID:010257

Agency Law

Every attorney acts as an agent and as a fiduciary. Many lawyers join, form, or represent partnerships. This course stresses the concept of responsibility as it relates to an organization's accountability for the actions of persons whom they employ. Topics include the nature, creation, and termination of an agency/employment relation, employer's contract and tort liability for employees' activities relating to third parties (including the increasing problem of employee fraud and misconduct), and the fiduciary rights and duties between principals and agents.

Components: Lecture

LAW 308(1) Course ID:010256

Law of War

This course is designed for students with an interest in international and national security law, with a focus on the use, or threatened use, of armed force. Students are called upon to discuss and offer advice on legal issues ranging from pre-deployment preparation through post-conflict stability operations to war crime investigations.

Advanced Topics in Patent Law

This seminar explores advanced topics in patent law including, but not limited to, the history of patent law, the intersection between patent and antitrust law, various issues regarding pharmaceutical patent law, patent reform, specialized patent courts, and current developments in patent law. The purpose of this seminar is to introduce students to patent law topics that are not usually covered in other intellectual property courses offered at the law school. Each student will be required to write a qualifying course paper on a patent law topic of choice. Because advanced patent law topics will be discussed in this course, students are required to have taken Introduction to Intellectual Property, Patent Law, or Patent Enforcement.

Components: Lecture

LAW 311(3) Course ID:013718

Art Law

This is a survey course that introduces students to major legal issues relating to visual art. Topics will include artist's rights (such as copyright and moral rights); cultural property disputes over visual art and antiquities (such as the dispute over whether the Elgin Marbles should be returned); plundering and destruction of artworks during times of war (such as Nazi looting of artworks); forgeries and problems of authenticity in the art market; the major players in the art market, including dealers and collectors; the inner workings of art auctions and the legal rights and duties of art auctioneers and art dealers; the legal structure of art museums, including some issues of internal management and governance, and some tax issues relating to gifts to museums; some tax and IP issues relating to the commercialization of museum collections (e.g. merchandizing, corporate sponsorship; use of facilities); and some First Amendment issues relating to visual art.

Art, Cultural Property and Human Rights

This course is a survey course that explores art and cultural heritage from the perspective of human rights. We will examine the extent of human rights protection in international treaties and national laws (focusing in particular on American, European, and Italian law) for cultural heritage, artistic productions, and participation in cultural life. We will learn about the complex, multilayered regime of public and private regulation of art and cultural heritage, as well as the tensions between the interests of the many public and private stakeholders, including nation states, museums, art dealers, artists, and the general public. Some of the issues that we will study include artist's rights in visual art, including copyright, moral rights and droit de suite; international movement of art and antiquities and the illicit international trade in art; ownership of native cultural objects, including indigenous rights and group rights in cultural resources; repatriation of cultural objects; plundering and destruction of works of art in times of war and military

Components: Lecture

LAW 311B(3) Course ID:018688

Music Law

This course takes a practice-oriented, real-world approach to learning about legal issues related to the multi-billion dollar music business from a dealmaking perspective. It focuses on players and institutions in the music business including songwriters, recording artists, performers, groups and bands, music publishers, distribution companies, record companies, artist management, promoters, producers, licensing collectives, legal counsel and unions. Legal issues covered will include sampling and covers, legal protection for band names and artwork, sale and licensing of music, recording agreements, digital music delivery (including streaming and downloads), touring and merchandising. You will be required to prepare an applied legal writing portfolio of practice documents.

Components: Lecture

LAW 312(2) Course ID:013721

Energy Law & Policy

This course will provide a general overview of energy resources and the policy considerations that drive the need for energy production, distribution, and use. The course also will provide in-depth coverage of one major energy-producing activity – the production and use of electric power – with attention to parallel themes in other areas, such as energy security and fuel efficiency. The emphasis will be on exploring general legal and policy issues in these focused areas – e.g., the role and regulation of markets, the tension between economic and environmental regulation, the degree of national versus decentralized regulation, and the roles law might play in impacting not only supply but also consumer behavior. By developing an understanding and appreciation for the legal, political, and economic considerations impacting the electricity sector, students can expect to develop the skills necessary to identify, assess, and utilize approaches and methods for resolving the many challenges facing the generation, transmission, and

Advanced Issues in 1st Amendment Litigation

This course will teach students how to develop and litigate First Amendment and other constitutional issues from initial fact-investigation and complaint through a petition for certiorari in the Supreme Court. Course materials will include materials from the record in pending trial and appellate cases, relevant federal rules of procedure, and case law. Students will draft pleadings, deposition questions, and briefs. They will also be offered opportunities to work on pending cases. Written assignments for this course will meet the portfolio requirement of Academic Rule 10.2.b. Grades will be based on the portfolio.

Components: Seminar

LAW 318(1) Course ID:014899

European Contract Law: A Case Study

This two-week one-credit intensive course focuses on the "Europeanization" of the private law of individual nations. Contract law will be used as an example, but the course also will consider the differing legal traditions in Europe and the difficulties in harmonization of legal principles among them as well addressing these differences in the European Union's legal process. The course will review the patchwork of EU directives on contract law and consumer protection and recent efforts to draft common principles in European law and a common frame of reference.

Law of the European Union is not a prerequisite, but students who have taken Law of the European Union will see an application of that material in a specific subject area. The course will address the European Union law-making and harmonization process for those new to the subject. This familiarity with the European Union

LAW 319(2) Course ID:014710

Patent Prosecution

This course provides students the opportunity to develop knowledge and skills related to the preparation and prosecution of patent applications before the U.S. Patent & Trademark Office. Students will develop efficient patent and claim drafting techniques, and will learn effective prosecution strategies, such as analyzing and responding to office actions and avoiding prosecution history estoppel. This course will require the completion of an advanced legal writing portfolio. Prerequisite: Patent Law or permission of the instructors for those students with patent experience.

Components: Lecture

LAW 320(2) Course ID:010590

Patent Enforcement

This course is designed to teach advanced students about the intricacies of litigating a patent infringement suit from inception to trial. The course will go beyond the basic understanding of substantive patent law issues and give students a theoretical and practical understanding for resolving those issues in the context of a patent case. The class will be divided into two groups, plaintiff and defendant, who will litigate a hypothetical patent case throughout the semester, including the drafting and serving of various litigation related documents. Team members will have a chance to draft Complaints, Answers, Expert Reports, Claim Construction Briefs, and Motions for Summary Judgment among other items.
