Insurance is involved in most aspects of the law from the biggest corporate merger or bet-the-company case through individual life decisions and estate planning. This course looks at the nature of risk and how businesses and individuals transfer it to insurers, and how insurance responds when that risk becomes a loss.

Students will become familiar with the basic insurance contracts and insurance principles that they will likely encounter in their careers in other areas of the law, and will gain an understanding of how those principles can impact the clients they represent. Practical in-class exercises and case study will address how insurance affects decision making and outcomes in litigation, banking and finance, and other substantive areas of the law. Additionally, the structure, regulation and nature of the multi-trillion dollar insurance industry will be covered.

LAW 355(4) Course ID:000333

Trusts & Estates

A study of the inter vivos and testamentary means of gratuitously disposing of property among family and friends. Consideration is given to the rules of intestate succession; the execution, revocation, and contest of wills; the creation and operation of private and charitable trusts; some applications of the remedy of constructive trust; the use of will substitutes; the use of powers of appointment; and construction problems commonly encountered when provision is made for the enjoyment of property by beneficiaries over an extended period of time. Consideration is also given to problems of probate reform. Registration in day-division sections is limited to second-year day-division students, and in evening-division sections to third- and fourth-year evening-division students; others may enroll on a space-available basis during the add/drop period.

International Commercial Arbitration

International Commercial Arbitration addresses two basic and interrelated elements of modern international commerce: the transnational contract law that governs transnational commercial agreements and international arbitration, which provides the common means for resolving disputes between parties to such agreements. All elements of international arbitration will be covered in the course. This includes: the art of drafting the arbitration agreements that establish arbitral jurisdiction; The New York Convention, which requires signatory countries to enforce international arbitration agreements and resulting arbitral awards; Title II of the U.S. Federal Arbitration Act, which implements the obligations the New York Convention imposes on signatory nations; the Model Law on International Commercial Arbitration of the United Nations Commission on International Trade Law (UNCITRAL), which has been adopted in many countries; the differences between institutional and ad hoc arbitration; the qualifications, appointment and ethical obligations of arbitrators;

Negotiations: Theory and Practice

This course introduces students to a range of interdisciplinary techniques (drawing on, among others, economics, psychology, and moral theory) and legal doctrines that inform and regulate negotiation of agreements across a range of settings. The course is primarily implemented, however, through a series of simulations in which students will participate by playing various negotiating roles. Special, private instructions will be provided to students in which they will be required to play these roles. The class will meet twice weekly, once for one hour to discuss the conceptual materials and then again for two hours to conduct the simulations. No final exam will be required, although there will be multiple written assignments, both to prepare for, and evaluate, negotiating sessions, as well as drafting of agreements in connection with the negotiating sessions. Grades will be based on student participation in both types of class meetings and the drafting of assignments. Students will be evaluated on the degree to which their

Adv Issues in Corp Law

Both domestically and in the international arena business corporations play critical roles with respect to human rights, the environment and social issues. Corporate social responsibility (often referred to more broadly as corporate responsibility or sustainability) is one of the most important issues facing businesses and those who regulate them in the United States and around the world today. This seminar will explore legal issues pertaining to the involvement of businesses in controversies ranging from religious liberty to child labor and working conditions, access to clean water, and environmental issues. Students will consider key issues pertaining to regulation of businesses, including domestic regulations, multinational agreements, international initiatives such as the United Nations Ten Principles, and self-regulation such as corporate code of conduct and certification processes (e.g., fair trade labeling).

Components: Lecture

LAW 405A(2) Course ID:014111

Advanced Issues in Corporate Governance

This course will focus on selected advanced corporate law issues and the role of corporate counsel in addressing these issues. Topics will include business ethics; corporate social responsibility and philanthropy; corporate political activity; investigation of allegations of corporate wrongdoing; corporate compliance programs in areas such as finance and securities, environmental, employment, and fraud and abuse law; the emerging law of crisis management; and related professional ethics issues, such as responsibilities of corporate counsel, opinions of counsel for complex financial transactions and the operation of the attorney-client privilege in corporate settings.

Rule of Law Reform

This course examines how foreign policy professionals should approach rule of law reform in the developing world. The creation and preservation of democratic institutions will remain one of the most important, and difficult, missions in the developing world, and it is incumbent on future policy makers to understand the complexity inherent in creating systems governed by law. The course is divided into three sections. First, the course discusses the existential nature of the rule of law, charting the development of the field and how practitioners have traditionally focused on reforming the judicial branches of government. Second, the course analyzes the traditional focal points of rule of law programs, including constitutional revision, judicial reform, former regime impunity, and fighting corruption. Third, the course applies these tools to modern situations.

Representing Religious Institutions and Nonprofits

Religious institutions present a unique challenge for the modern State: how do we protect fundamental principles of religious autonomy while at the same time facilitating the complex ways that churches and other religious institutions participate in society. This course will examine the constitutional principles as well as the practical implications for attorneys representing or advising churches or other religious nonprofits in a wide range of areas, including employment discrimination, labor law, government grants and contracts, free speech, tax, copyright, litigation issues such as priest-penitent privilege, and property issues involving religious institutions, among others. Students can opt to write one long paper, which meets the upper-level writing requirement as a qualifying paper, or complete a take-home exam after the conclusion of the semester. During the semester, all students will complete two short papers on the course material.

Components: Seminar

LAW 413(2) Course ID:011438

Arbitration and the Constitution

This seminar would consider the intersection of two areas of the law often considered independently from each other. We normally think of the Constitution as largely regulating public conduct; the horizontal distribution of power among the branches of the federal government, the vertical distribution between the federal government and the states, and the civil liberties that constrain state action against the individual. By contrast, arbitration is typically understood as a purely private undertaking between private individuals; outside the ambit of the judicial process and, consequently, outside any constitutional strictures. This seminar explores how these two areas of the law increasingly overlap. It considers the intersection from a variety of angles; Article III, Due Process, State Action, the Jury Right and federalism, just to name a few. Students wishing to take this course should have a good grounding in constitutional law. A prior class in arbitration is not a prerequisite for the course, but it may be

LAW 428A(3) Course ID:013717

Comparative Law: Political Violence

This course focuses on the legal systems of Common Law countries and their response to the challenge posed by political violence. All share the tradition of Magna Carta and the Bill of Rights of 1689 and all exalt law as a fundamental basis of unity in society. Yet, their anti-terrorist laws and their courts' interpretations of those laws differ significantly. Students will be assigned (or select) a topic such as membership in proscribed organizations, extradition, surveillance, or detention without trial; will lead a seminar discussion; and submit a paper on the topic. The course is intended to give students the opportunity to examine the concept of "the rule of law" when its institutions and procedures are subjected to extreme stress. Examples will also be drawn from experiences of other countries in the common law tradition: Israel, South Africa, India, and Pakistan.

Components: Lecture

LAW 430(2) Course ID:011886

Comparative Remedies (Cracow)

This course is designed to acquaint students with a broad overview of the application of remedies principles in the European Union and the United States. Students are invited to consider judicial decisions concerning such remedies as injunctions, specific performance, declaratory judgments, annulment, declarations, contract damages, and restitution. Students are encouraged to compare EU cases dealing with such matters as the nature, availability, and prerequisites of these remedies with counterpart U.S. cases. The course will emphasize, where practicable, decisions of the U.S. Supreme Court and courts of the European Communities (particularly the European Court of Justice) or of EC Member States involving international trade and commercial issues.

Introduction to Intellectual Property

This is an overview course covering the core areas of intellectual property law: copyrights, patents, trade secrets, and trademarks. This course is designed primarily for students who are seeking a basic grasp of the fundamentals of intellectual property law. In an age of rapidly developing technology, it is becoming increasingly important for all lawyers to have some understanding of this area of the law. Students who are interested in pursuing a career specializing in intellectual property law should probably take the separately offered courses in Patent Law, Copyright Law, and Trademark Law. Students should consult with the instructor prior to registration to determine which intellectual property course offering(s) would be most appropriate for them.

Most of the course focuses on the four most significant types of intellectual property rights (patent,

Comparative International Tax

This course builds on what students have learned in Federal Income Tax and introduces a conceptual approach to the different tax systems in use around the world. Viewing the way in which countries raise revenue as an important part of their overall internal and external economic affairs, the course discusses important tax policy goals - fairness, efficiency, and simplicity. It places these goals in the context of such frequently used tax bases as wealth, income, and property. It also looks at systems of social security taxation, value-added taxes, and the international aspects of individual income taxation. It focuses, as well, on procedural topics such as the tax legislative process and statutory drafting.

Advanced Tort Law

This course is designed as a supplement to the required first-year four-credit-hour course in Torts. It picks up coverage where at least one offering of that course concludes. As such, it examines traditional strict liability, vicarious liability, the problem of multiple tortfeasors (joint and several liability), immunities, products liability, nuisance, defamation, damages, invasion of privacy, misrepresentation and intentional interference with business relations. The two courses together offer a thorough examination of all tort law topics tested on the bar examination of any jurisdiction. The course also exposes students to a large number of actual previous bar examination questions, offering an opportunity for students to practice the questions and to participate in close analysis of them.

Components: Lecture

LAW 439(2) Course ID:005314

Advance Legal Research

This course will develop students' research skills in both traditional book-based and computer-assisted legal research. The course will provide an in-depth approach integrating book-based and computerized research in statutes, legislative history and tracking, administrative and executive publications, case finding and verification, secondary sources and indexes, current awareness and topical reporters, government documents, international law, and nonlegal research. The course will provide extensive hands-on experience with computer-assisted research in LEXIS, WESTLAW, CD-Rom sources, and the Internet. Efficient research strategies will be developed through the preparation of several research memoranda. Specialized topical research will be addressed by the preparation of a research guide by each student in a subject area of interest to that particular student. Students who are taking or have already taken Advanced Legal Writing and Research or a course on legal literature taught at the School of Library and Information Science may not take this course.

Federal Criminal Litigation

The goal of this course is to familiarize the students with the theoretical and practical concerns of federal criminal litigation from both prosecution and defense perspectives. The course deals with the law, theory, ethical considerations, and tactical concerns that relate to criminal practice in federal court from the pre-indictment phase through plea negotiations or trial and appeal. Lectures, class discussions, and reading materials focus on the general analytical framework for prosecuting and defending a federal criminal case. This is not a trial techniques course. It is concerned with the law, ethics, and strategy behind the techniques.

e-Discovery

This course presents an overview of e-discovery law, as well as an examination of its practical implications for modern commercial litigation and other contemporary practices areas. E-Discovery has assumed a prominent role in contemporary practice because of its breadth, scope, cost, and overall importance to the conduct of civil litigation. Aspects of E-Discovery -- and data collection generally -- permeate virtually all aspects of today's legal practice and relate to core areas such as evidence, civil procedure, ethics, and trial practice to cite but a few. Upon completion, students will have an understanding of the substantive rules, statutes and case law that govern e-discovery, as well as the issues that practitioners face on a daily basis. In addition, the practical component of the course teaches students about the technical aspects of e-discovery (e.g., data collection) and practice-based skills (e.g., discovery related motion practice).

Components: Lecture

American Business Organizations Part I:Unincorporated Business Organizations (Cracow)

This course examines the nature, purpose, and types of unincorporated business organizations: general partnerships, limited partnerships, limited liability partnerships, and limited liability companies. Within the context of studying the formation, financing, management, operation (including the respective powers, rights, and duties of the owners), and termination of these organizations, this course compares and contrasts the corporate form of doing business. An additional important element of this course covers substantially all of the traditional Agency Law areas, such as fiduciary rights and duties and the potential contractual and tort liability (i.e., vicarious liability) of businesses to third parties for the actions or inactions of their agents. Some time is spent on reviewing the main business agreements (e.g., a partnership agreement and the operating agreement), as well as important transactional documents. This course is intended for American Law Program students in Krakow, Poland.

Law in Conflict Affected Societies Practicum

This is a practical course that explores law in conflict affected societies through class instruction, group discussion (both in class and on-line) and fieldwork. The curriculum is designed to promote a familiarity with the basic debates and practices in the field and to promote critical thinking about the connections and barriers among rule of law, conflict and development. This course examines components of rule of law and the doctrines that define international standards, as well as the debates surrounding them. It also explores the principles of equality and human rights, access to justice, corruption and the role of the international community in promoting rule of law in conflict affected environments. To give these standards and rights context, each student will become a 'country expert' for all topical discussions throughout the semester. The fieldwork component of the course includes at least 30 hours on non-paid legal work with a government entity, international organization or non-governmental organization that works in post-conflict rule of law.

Components: Lecture

LAW 459(2) **Course ID:014109**

Campaign Finance Law

The purpose of this course is to provide a basic understanding of how the financing of elections is regulated at the federal and state levels. This will be accomplished through analysis of the Federal Election Campaign Act as amended (FECA), along with the case law surrounding these statutes and their related regulations within the context of the First Amendment. The course will emphasize a practical preparation for the practice of law in this area through the examination of these sources of the law, along with an introduction to the institutions that regulate campaign finance, and how these affect various types of political entities. Students will be encouraged to monitor developments during the course and should expect broad discussions regarding the philosophical and practical issues relating to campaign finance regulation. The major topics covered include: Political Committee Status; Defining Contributions and Expenditures; Federal Election Activity; Coordination and Independent Expenditures; Solicitation; Public Funding; How the Federal Election

Civil Rights/Legal History Seminar: Brown vs. Board of Education

This seminar will examine the revolutionary changes that took place in civil rights law pertaining to race discrimination in the mid-twentieth century. The course will focus on landmark judicial decisions including Shelley v. Kramer, Brown v. Board of Education, Heart of Alabama Motel v. United States, and Loving v. Virginia. The course will begin with an examination of Plessy v. Ferguson and other decisions of the early post-Civil War period and then consider the developments and advocacy strategies that led to the radical changes of the post-World War II era and, later, to the Civil Rights Act of 1964 and beyond. Class discussions will focus on the importance of legal advocacy and the role of the judiciary in developing the law on race discrimination. The course will conclude with a review of modern corollary developments in other areas of civil rights law. In lieu of a final examination, this course requires a qualifying paper that fulfills one-half of the upper-level writing requirement.

First Amendment Practicum

The First Amendment Practicum course offers CUA Law students the chance to work on cutting edge free speech and religious liberty cases, in trial courts, appellate courts, and the Supreme Court. Under the direction of Professor Mark Rienzi, the students will form a litigation team to work on a variety of First Amendment matters. Students will meet regularly to work on the cases, plan strategy, and discuss ongoing tasks. While the precise tasks will vary depending on the cases, past students have: drafted briefs for motions to dismiss, motions for summary judgment, discovery disputes, and appeals; drafted questions and devised strategy for depositions of opposing witnesses; attended court hearings; conducted legal research; conducted moot courts; and participated in strategy discussions with co-counsel.

Students commit to work an average of 10 hours per week (2 credits) or 15 hours per week (3 credits) during

Contemporary Criminal Justice Seminar

More than 2 million adults and children are incarcerated in the United States. With only 5% of the world's population and 25% of the world's inmates, America has become the world's largest jailer. Politicians and activists across the political spectrum are in agreement that the political justice system is deeply flawed and in dire need of reform. This seminar is designed to explore several key questions: how did the current crisis in criminal justice come about? And what reforms are available and politically feasible? The seminar will expose students to an array of substantive topics such as: mass incarceration; access to counsel; plea bargaining and sentencing; race and class-based discrimination in the system; the realities of incarceration in the 21st century, including over-crowding and solitary confinement; the collateral consequences of a criminal conviction; and re-entry challenges. Topics may vary from year to year based on their relative urgency. The course will require students to engage with cutting-edge scholarship, court opinions, policy

LAW 483(4)

Course ID:000352

Evidence

This course covers basic rules governing presentation of evidence at trial including procedural matters (objections, offers of proof), relevancy, character evidence, examination and impeachment of witnesses, opinion evidence, hearsay, authentication, the "original documents" rule. The course examines the comparative roles of counsel, judge, and jury. It also explores the tactical decisions and ethical dilemmas that a trial attorney is likely to confront. Registration in day-division sections limited to second-year day-division students and in evening-division sections to second-year evening-division students; others may enroll on a space-available basis during the add/drop period.

LAW 484(2) Course ID:000595

Civil Rights Legislative Practice

Civil Rights Legislative Practice is a writing and research seminar, graded numerically. The course focuses on the practices and procedures of public policy formulation in the substantive areas of civil rights and its related areas (education, economic development, etc.) Substantive law and policy will be taught from background materials and from new developments covered in the Congressional Monitor, Congressional Quarterly, Congressional Quarterly on-line services, the government locator website "Thomas," and faxes and correspondence from civil rights organizations working in the Capital. The grade will be based on a research paper which may satisfy the writing requirement. Students who register to take Civil Rights Legislative Practice also may register to take Civil Rights Legislative Practice/Supervised Fieldwork.

Components: Internship

LAW 485(2) Course ID:000601

Health Managed Care: Structure & Legal Problems

This course will investigate the structure and some of the more pressing legal problems surrounding the growth of so-called "managed care" organizations which are rapidly becoming the major vehicles of health care coverage for the country. Included will be a study of the various types of Health Maintenance Organizations, Independent Practice Organizations, Preferred Practice Organizations, and Hospital Based Managed Care Plans. Emphasis will be placed on the antitrust aspects of managed care, the rights and duties of individual physicians vis-a-vis MCOs, the rights of patients vis-a-vis MCOs, and consideration of the future of managed care as the backbone of health care in the years to come.

Components: Lecture

LAW 486(2) Course ID:008656

Veterans Law

The law governing veterans seeking benefits is in a transitional period, and in this seminar, students examine how veterans law is developing in the administrative, judicial, and legislative arenas. Reading assignments center on actual case studies, court decisions, statutes and rules, so students can see the application of general legal principles at work, especially in the area of administrative law. Because attorney practice before the Department of Veterans Affairs recently has expanded, the course also explores the role of attorneys, and the attorney-client relationship, in a nonadversarial agency setting.

Components: Lecture

LAW 487(2) Course ID:000602

Military Justice

This course examines military law, both criminal and noncriminal, from a perspective that emphasizes comparisons of military law with state and federal domestic law, and comparisons of United States military law with the military law of other countries. Topics include the sources of military law; the law of war and martial law; the role of Congress and the President in overseeing the military; the application of the First, Fourth, Fifth, and Sixth Amendments of the U.S. Constitution to service members and to activities on military installations; the need for a separate military criminal justice system; subject matter and in personam jurisdiction of military tribunals; command control and influence; and comparison with the Federal Rules of Evidence and Federal Rules of Criminal Procedure. Fraternalization, sexual offenses, and other systemic policy issues concerning the military are also covered.

Components: Lecture

LAW 488(3) Course ID:008140

Introduction to Arbitration and Mediation

This course will focus on the evolving law of alternate dispute resolution (ADR) in particular the law related to mediation and arbitration. It should be considered an introduction to ADR and a basic building block of the ADR curriculum. While there will be some skills training, this course focuses on the ADR statutes and case law including the Federal Arbitration Act, the 'New York' Convention, the Administrative Dispute Resolution Act of 1990 and the UN Convention on Arbitration (UNCITRAL). Ethical issues of mediation and arbitration will be highlighted as well. Cutting edge questions including the limits of mandatory arbitration, a-national arbitration, confidentiality in mediation and the growing law of mediation and the status of neutrals will be considered. ADR in the Federal sector will be discussed.

LAW 489(2) Course ID:008227

Islamic Law

This course is a basic introduction to Islamic law (Figh) and Islamic legal theory (Ussul al-Fiqh). It assists the student in understanding how Islamic law was instituted and has developed over time, particularly after the demise of the Holy Prophet (Pbuh), with reference to five different schools of thought (Mahaheb). Students also study, in detail, the sources of Islamic law, i.e., The Holy Book (Quaran), Tradition (Sunna), Consensus (Ijma), Reason (Aql), and Analogy (Qiyas). The course also covers practical issues such as the law of personal status and the position of women (marriage and divorce), criminal law (Hudud, Qisas, Tazir), and economics (taxes: Khoms, Zakat).

Components: Lecture

LAW 490(4) Course ID:000608

Federal Income Taxation

An analysis of the federal income tax law as it applies to the individual taxpayer. The course will focus on the Internal Revenue Code of 1986, as amended to date, as well as considerations of tax policy. Taxation of business associations will not be treated in this course. Registration in day-division sections limited to second-year day-division students and in evening-division sections to second-year evening-division students; others may enroll on a space-available basis during the add/drop period.

LAW 495(2) Course ID:000611

Role of the Federal Prosecutor

This course will explore the powers and responsibilities of the federal prosecutor. Class segments will focus on how decisions are made by federal prosecutors throughout different stages of the criminal justice system, in light of legal, policy, practical and ethical considerations. Using actual cases as well as federal statutes, guidelines, and other materials, the course will discuss the factors that influence the decisions and discretion of the federal prosecutor. The course will also examine the interaction between and among federal, state and foreign jurisdictions, in particular the interests of competing sovereigns in the investigation and prosecution of criminal activity.

Prerequisites: Students must have taken a criminal law and criminal procedure class. Evidence should also have been previously taken or is being taken concurrently.

Components: Lecture

Elder Law

With the aging of the American population and the increasing complexity of the issues that face older Americans, this seminar will cover a range of legal issues of interest to the elderly, and afford students the opportunity to engage in original research in this growing field. The course will cover, among other things, the professional responsibility questions that arise when representing the elderly, age discrimination in employment, the social security system, Medicare, quality of and financing of long term or nursing home care, housing options for the elderly, protection of the person and property of the elderly, health care decision-making, elder abuse, grandparent visitation issues, reverse mortgages, and the particular issues facing the elderly who are involved in the criminal justice system. The course in Trusts & Estates is a mandatory pre- or co-requisite.

Components: Lecture

LAW 501(3) Course ID:005349

Consumer Law Seminar

This is a limited-enrollment seminar that partially satisfies the school's writing requirement. Students may not take Consumer Transactions in addition to this course. A prior course in Commercial Transactions is not required. This course looks selectively at aspects of common law and federal and state statutory and regulatory materials affecting consumers as buyers, borrowers, and lessees. Representative areas of coverage include advertising, transactional disclosure, unfair and deceptive acts and practices, product warranties, rate regulation, credit and collection abuses, credit reporting, and enforcement mechanisms. Statutes involved include the Federal Trade Commission Act, the federal Consumer Credit Protection Act (Truth in Lending, Fair Credit Billing, Consumer Leasing, Fair Credit Reporting, Equal Credit Opportunity, Fair Debt Collection Practices, et al.), the Uniform Consumer Credit Code, and state "little FTC" acts. Each student will research, write, and present a paper that will constitute a major portion of the final grade. This

This course examines legal texts, including Church orders, Oriental collections, Dionysiana, Hispana, Pseudo-Isidorian forgeries, Decretum of Burchard, collections of Ivo of Chartres, the formation of the Corpus Iuris Canonici and developments after the Council of Trent. The course also views Church structures: the episcopate, presbyterate, patriarchate, papacy, councils, and the like.

Components: Lecture

LAW 508(3) Course ID:008655

Comparative Foundations of Modern European Law

This course looks back to a time when Europe had a common law that transcended national and legal boundaries. This system of law reigned from the twelfth to the seventeenth centuries. The term "common law" sounds strange to most English-speaking historians when applied to continental legal systems. We speak of common law as being the legal system that evolved in England from the eleventh century to the present. But, as Europe struggles to create a new common law, the history of the old may provide a model for thinking about how legal systems develop, how law might not necessarily be limited by national boundaries, and how legal norms might be seen as transcending the positive law of the nation state.

Three themes in the evolution of European legal systems over two millennia will be studied in depth: codification of law, development of procedural norms, role of the jurist in the legal system and in society.

Components: Lecture

LAW 508(2) Course ID:011420

Seminar on Regulation of Derivatives

Current issues affecting the regulation of financial market derivatives and oversight of derivative transactions under U.S. securities and commodities laws. Topics include the jurisdiction of the Commodity Futures Trading Commission and the Securities and Exchange Commission, interaction of securities and commodities statutes and regulations, registration and regulation of commodity market participants, administrative and injunctive enforcement powers involving violations of the Commodity Exchange Act, developments in self-regulation, and private rights of action.

Strategic Standardization

Strategic Standardization will examine the creation of both governmental and private sector standards that establish certain manufacturing and other requirements in the areas of product health and safety, environmental controls, telecommunications and other areas of business and commerce. The course will first examine the creation and implementation of standards within the United States by such private organizations as Underwriters Laboratories and the American National Standards Institute. It will look at the use of standards by governmental bodies such as the National Institute of Standards and Technology, the Consumer Product Safety Commission, and the Environmental Protection Agency.

The course will then move to an examination of standards at the international level. This inquiry will include a look at the work of the International Standards Organization (ISO) including, for example, the ISO's implementation of a crucial environmental standard, ISO 14000. The course will also examine the work

Trial Advocacy I

A year-long study, through student performance, of the role of the advocate in the trial process. Class members form "law firms" for civil cases, and prosecution and defense teams for criminal cases, and undertake representation of the parties in all aspects of litigation. Each team is expected to develop a case from the initial client interview through actual litigation before a presiding judge. The course deals with all phases of pretrial and trial work, including fact-gathering, use of pleadings and pretrial motions, preparation of witnesses, discovery techniques, negotiation and settlement efforts, voir dire of jury panel, opening and closing statements, direct and cross-examination of witnesses, and presentation of evidence. The course includes tactical and ethical problems which confront trial lawyers. All exercises are videotaped and reviewed individually. Enrollment is limited and preference is given to third-year students. Prerequisite: Evidence.

Legal Ethics and the Government Sector

This course covers the legal ethics regulations applicable to all government officials, the law governing lawyer conduct and other rules specific to government lawyers and conflicts. We will consider the ethics obligations of administration attorneys, former government attorneys and lawyers working for Congress. We will consider disciplinary rules of federal courts and the ethical regime of administrative agencies such as the SEC, USPTO, NLRB, Department of Agriculture, etc. Attention will be paid to former client issues when the former client is the federal government. Particular attention will be paid to the ethical responsibilities of government prosecutors and the ethics of tax lawyers.

While the focus of the course will be on attorneys involved with the federal government, issues of attorneys working for states, counties and cities will also be addressed.

Labor Relations in the Public Sector

This course will cover the basic law and procedures of public sector labor law, state agencies and the Federal Labor Relations Authority (FLRA). The FLRA is the agency charged with enforcing the labor law provisions of the Civil Service Reform Act and its jurisdiction extends to most of the civilian agencies in the Federal government. In addition to examining unfair labor practice and representation case law, the course will cover procedures for resolving collective bargaining disputes in government agencies. Guest lecturers from agencies, as well as practitioners, will participate in the class. This course will be particularly valuable for students who plan careers in public service.

Components: Lecture

Agency-Partnership

The first part of this course examines agency law, which plays a most significant role in our organizational society. Just as organizations greatly benefit from and rely on agency law--facilitating transactions with third parties and engaging in a multitude of other activities--organizations are also subjected to consequential risks and obligations. The major agency-law areas that are covered include the nature and creation of such relationship, the rights and duties of the principal and agent, the principal's potential contractual and vicarious liability for its agent's dealings with third parties and the termination of the relationship.

The second part of this course covers the main types of so-called unincorporated business organizations, first examining general and limited partnerships, then covering limited liability partnerships (LLPs) and

Securities Transactional Work in Securitization of Assets

The securitization of assets is a process that has vastly expanded the ability of leaders and business in general to expand operations beyond equity and borrowed capital owned by such firms. The implementation of securitized transaction requires the drafting of complex documents, the gathering and direction of a variety of skilled attorneys, financial experts, and investors, negotiating the often competing interests of these parties, conducting required due diligence investigations and understanding the financial mechanics underlying the transaction. These skills and others are honed through the course allowing the students to develop a portfolio of writing documents that satisfy a writing requirement. Corporations is prerequisite of contemporaneous selection for the course. Securities Issuance or Securities Trading is recommended but not required.

Agency/Partnership

Every attorney acts as an agent and as a fiduciary. Many lawyers join, form, or represent partnerships. This course stresses the concept of responsibility as it relates to an organization's accountability for the actions of persons whom they employ. Topics include the nature, creation, and termination of an agency/employment relation, employer's contract and tort liability for employees' activities relating to third parties (including the increasing problem of employee fraud and misconduct), and the fiduciary rights and duties between principals and agents. The course also addresses the nature, formation, operation, and termination of partnerships, including partners' property interests and the rights of creditors. Uniform laws, statutory influences, and practice implications are also considered.

LAW 535(3) Course ID:005411

Legal Drafting Seminar

This course offers students an introduction to legal drafting, with an emphasis on such essential skills as writing with clarity and precision, conforming with statutes and ordinances, using form books appropriately, achieving the goals of clients, identifying and eliminating ambiguity, editing and proofreading a written product, and simplifying complex thoughts and ideas. The first half of this course will provide students with a thorough introduction to the principles of general drafting through the use of written exercises, peer critique, and in-class workshops. These may be general office documents or documents in a particular doctrinal area. Through the course of the semester, students will draft a minimum of three major legal documents in addition to rewrites and shorter written exercises. Successful completion of this course will satisfy one of the two upper-level legal writing requirements.

Components: Seminar

LAW 535A(3) Course ID:013376

Legal Drafting Seminar - Writing for Criminal Practitioners

This course covers the practical and artful elements of form, style and persuasion of a written product in criminal practice. Based on a provided closed-universe of fact patterns, rules of evidence, and other pertinent law, students will be expected to write on both sides of evidentiary, fourth amendment, and sentencing issues. This includes drafting motions in limine, motions to suppress and memoranda in aid of sentencing. Criminal Procedure and Evidence are strongly encouraged prerequisites. Successful completion of this course will satisfy one of the two upper-level legal writing requirements.

LAW 535C(3) Course ID:014674

Legal Drafting Seminar - Dispositive Motion Litigation

Among the most basic litigation documents lawyers draft are motions to dismiss, motions for summary judgment, and answers to complaints. This course prepares students to become practice-ready to craft these documents with technical proficiency and persuasive impact. Motions to dismiss and motions for summary judgment are called dispositive motions because they seek to compel dismissal of law suits to spare the client from the high cost of trial or worse, from exposure to an adverse jury determination. A well-crafted answer not only protects the client, but also preserves and strategically educates the court as to defenses. This course is built upon a hypothetical employment discrimination law suit, and includes an in-class mock-deposition and meetings with the instructor. Students are taught the underlying substantive law and the skills in drafting dispositive motions and answers. Course objectives are to achieve proficiency in drafting these documents based upon fusion of the substantive and procedural law, analysis, strategy, and clear and persuasive

Legal Aspects of Social Media

Facebook, Twitter, YouTube, Instagram, TikTok, Snapchat, Pinterest, etc...The rise of social media use and the continuing development of new social media platforms have fueled many changes in social behavior and business practices. This course examines how the law currently regulates, and should regulate, social media. Topics studied will include the First Amendment, school and university student speech, social media in the workplace, privacy, defamation, intellectual property, user-generated content, consumer protection, and social media in litigation, including evidence and e-discovery and governance of social media platforms.

Components: Seminar

LAW 540(2) Course ID:000669

Securities Regulation: Enforcement Procedures & Issues

This Securities Program offering will introduce the serious Securities Law students to the operation of and the principles behind the practices of the SEC's Enforcement Program, particularly as they relate to the Securities Act of 1933 and the Securities Exchange Act of 1934. During the term, students will be introduced to: the investigation process; the settlement process; the Commission hearing; potential remedies; appealability of the Commission's decision; impact of the Commission's actions upon collateral actions by state securities regulators, private shareholders, and federal and state criminal authorities. The course will respond to, through readings and discussion, those issues which currently are under focus in the Enforcement division.

Students taking this course are required to contemporaneously take or previously have taken Corporations. It is suggested that students also contemporaneously or previously take a basic securities course.

Components: Lecture

LAW 541(3) Course ID:000670

Canon Law for American Attorneys

An introduction to the legal system of the Roman Catholic Church with particular emphasis on laws, structures, and procedures of relevance to American attorneys representing Catholic dioceses, religious communities, educational and health care institutions, bishops, priests, religious, and associations of the laity. Particular attention will be given to canon laws governing church property, marriage, and the relationship of priests and religious to their dioceses and communities. Comparison of relevant canonical and American legal concepts.

LAW 547(2) Course ID:011687

Financial Institutions Regulation

This course examines regulation that is intended to prevent systemic risk. Systemic risk is defined in a very general sense as the risk of a collapse of the entire financial system or an entire market. Regulation that addresses systemic risk is called prudential regulation. This course examines the traditional prudential regulation of commercial banks (often called micro-prudential regulation) and more recent forms of macro-prudential regulation of systemically important financial institutions. Specific topics include: licensing and corporate governance; restrictions on ownership and affiliation; capital regulation; limits on risk taking; insolvency and resolution; and institutional structures of regulation. The course focuses on federal law and includes consideration of international standards developed by the Basel Committee on Banking Supervision and other international organizations.

Death Penalty Seminar

This course examines the substance and procedural law dealing with capital punishment in the judicial process. The focus of the course is on how the death penalty is being administered today--some twenty years after the 1976 Supreme Court cases which rejected constitutional challenges to the death penalty statutes that were enacted after *Furman v. Georgia* 408 U.S. 238 (1972). A number of particularly pressing legal problems will be examined, e.g., constitutional challenges to the death penalty; race and gender of defendants given the death penalty; constitutional limitations on death eligibility; the role of aggravating and mitigating circumstances; the sentencing phase of capital cases; the use of expert witnesses; and state and federal habeas corpus review in capital cases. This course offers unique opportunities to examine the law and our legal system from a variety of historical, religious, political, ideological, philosophical, economic, sociological, and other perspectives. Enrollment limited to sixteen students. Prerequisite:

Consumer Transactions

This course treats the spectrum of legal problems which arise uniquely in cash and credit sales, loans, and similar transactions involving consumers. Representative areas of coverage include rate regulation, credit disclosure, unfair and deceptive sales practices, warranties, particular credit and collection abuses, credit reporting, and enforcement mechanisms. Attention is given to issues arising under the Federal Trade Commission Act, the Federal Consumer Credit Protection Act (Truth in Lending, Fair Credit Reporting, Equal Opportunity, Fair Debt Collection, et al.), Uniform Consumer Credit Code, state "unfair or deceptive acts or practices" statutes, and other federal, state, and local consumer protection laws. A prior course in Commercial Transactions is not required. Students may not take Consumer Law Seminar in addition to this course.

Lobbying and the Law

From President Grant's coining of the term in the "Lobby" of the Willard hotel to President Obama's Executive Order restricting registered lobbyists from serving in his Administration, lobbying has always elicited conflicting reactions while undeniably playing an essential role in the shaping of our nation's laws. This course will consider how the exercising of our First Amendment right to petition the government has evolved, the importance of professional advocacy in the development of sound public policy, the tools available to influence that policy, and the ethics laws regulating lobbying and lobbyists. A seminar format will be utilized for the course to include case studies and guest speakers from professional lobbyists and trade association representatives to former Legislative and Executive branch officials who will share their perspective on, and the value of, "what works" with respect to lobbying. Grading will be determined based on class participation, supplemental readings, and an agreed-upon significant writing assignment on the

Components: Lecture

LAW 566A(2) Course ID:017498

Law of the Sea

The "Law of the Sea" formed the foundation of modern public international law. It also represents the world's first efforts to define and regulate a "global commons" and to grapple with the notion of territory or resources managed by the international community as the "common heritage of mankind". Beginning with its roots in the customary law of nations of early modern Europe, the course will trace the evolution of twenty-first century law of the sea through its partial codification in an assortment of multilateral agreements - including the United Nations' Convention on Law of the Sea ("LOS Convention" or "UNCLOS"). Topics explored include freedom of navigation on the high seas, the limits on port-state jurisdiction over foreign vessels, the obligations of flag-states in maintaining their registries of vessels, and the scope of coastal nations' power to regulate activities in their respective territorial waters, "contiguous zones", and "exclusive economic zones". The course also examines through case-studies how the UNCLOS regime

Public Policy Practicum

This course engages students in intensive research and writing on issues of public policy and in reflective study of professional and policy issues in their accompanying fieldwork or clinical work. It is required for third-year day students in the Law and Public Policy Program. Evening students in LPP may take this course during the third or fourth year. The course is open to other students if space is available.

Throughout the semester, students research and write several papers in different formats on a public policy issue of their choice. Papers identify a problem in current law and policy and develop a proposal for change.

As the semester unfolds, students focus on implementation of the proposal developed earlier in the semester. Students learn how to market and advocate for their proposals, through oral presentations, elevator speeches, and simulated meetings. Student projects run the gamut of tackling federal policy issues relating

Legislation: The Making of a Federal Statute

This course offers students an introduction to legal drafting, with an emphasis on such essential skills as writing with clarity and precision, conforming with statutes and ordinances, using form books appropriately, achieving the goals of clients, identifying and eliminating ambiguity, editing and proofreading a written product, and simplifying complex thoughts and ideas. The first half of this course will provide students with a thorough introduction to the principles of general drafting through the use of written exercises, peer critique, and in-class workshops. These may be general office documents or documents in a particular doctrinal area. Through the course of the semester, students will draft a minimum of three major legal documents in addition to rewrites and shorter written exercises. Successful completion of this course will satisfy one of the two upper-level legal writing requirements. Enrollment will be limited to sixteen students per section. Faculty.

Congressional Investigations
This seminar explores the range of issues involved in congressional investigations, with special attention paid to the differing perspectives of the major players, both inside and outside of Congress, in a congressional investigation. Congressional investigations involve a unique interplay of legal and political issues. Legal issues -- involving such matters as the rights of private institutions and private citizens who may be implicated in a congressional investigation, the legal and political ability of the Executive Branch to resist congressional probes, the authority of the Judicial Branch to interfere with or limit the conduct of congressional investigations, and the relationship of congressional investigations to related criminal and civil inquiries conducted by other governmental entities -- must be factored into the political calculus of the contending political forces involved in a congressional investigation.
Political determinations -- which underpin such issues as the scope and
Components: Seminar

LAW 587(3) Course ID:009035
Legis: Making of a Federal Statute
This seminar studies federal legislation, how it is made (pre-enactment) and how it is interpreted by courts (post-enactment). The pre-enactment portion of the course looks at the fundamentals of federal lawmaking: How does an idea become law? What are the key stages of the Congressional process, including the budget process and reconciliation? The course uses current events as background, and for assignments (e.g., past courses have coincided with health care reform, and the bank bailout, ¿TARP¿). The post-enactment portion of the course is concerned with judicial construction of the meaning of the words Congress uses, and how theories of interpretation, such as purposivism or textualism, reflect or support theories of the separation of powers. Do judges make law? Should they? How do the realities of the legislative process affect the task of statutory interpretation? The course also provides an overview of interpretive techniques, including the canons of statutory construction, and the use (or abuse) of legislative history as an authoritative source of legal

Statutory Interpretation: Regulatory Analysis in the Administrative State

Most law today is a system of statutes and regulations rather than judge-made common law. For the 21st century lawyer, the ability to interpret and analyze statutes and regulations is central to success as a lawyer. This is the case most specifically for practitioners in all public law and regulatory fields. Practitioners in environmental law, health law, immigration law, securities law, trade law, communications law and intellectual property law need to be adept in this area to succeed. This course aims to explore theories of the legislative process, judicial interpretation of statutes, and agency implementation of legislation. We will explore ongoing controversies about legislation, regulation, and interpretation including deep debates about textualist, purposive, and dynamic interpretations; about the use of legislative history and canons of construction; and about the constitutional foundations of statutory interpretation. We will apply these theories to the very practical challenge of interpreting specific statutes and analyzing

Trial Advocacy: Law and Practice

This course is a semester-long limited enrollment course, which affords those intensely interested in litigation an opportunity to increase and refine their trial tactics and skills. This course provides an opportunity to enhance effectiveness as a litigator in many areas such as direct examination, including use of documentary evidence, cross-examination with emphasis on impeachment skills, expert testimony, exclusion of evidence through motions and objections, jury selection, and opening statements and closing arguments. Videotapes are used to instruct, and exercises are taped for your self-critique. The course ends with a mock jury trial. Prerequisite: Evidence.

Administration of Criminal Justice

This course covers a variety of topics in the criminal law/criminal procedure field. Students will be given an opportunity to participate in the selection and presentation of subject matter and materials to be covered and assigned. In the past, coverage has included the use of penal statutes to criminalize behavior that creates a risk of transmitting the HIV virus, electronic surveillance, and problems relating to informants. There will be no examination for this course; each student will be required to submit a paper on which the final grade will be primarily based, and to conduct a class on his or her topic. Topics will be decided jointly by the student and professor. This course requires a qualifying course paper that fulfills one half of the upper-level writing requirement.

Constitutional Law II

Con. Law II focuses on the study of individual liberties and civil rights guaranteed by the Constitution. The course considers the Bill of Rights, the Civil Rights Amendments, other textual provisions safeguarding individual rights, and unenumerated rights protected by the Constitution. Students will study the incorporation of the Bill of Rights with respect to the states and consider the extent to which the rights protected by the Constitution apply to private actions deemed to constitute government conduct under the state action doctrine. Individual rights studied include freedom of speech, press and religion under the First Amendment; rights guaranteed by various clauses of the Fifth and Fourteenth Amendments, including due process (both procedural and substantive), equal protection, and the Fourteenth Amendment Privileges or Immunities clause; as well as rights protected by the Contracts and Takings Clauses.

Components: Lecture

LAW 604B(2) Course ID:018876

American Constitutional Theory

This course will examine the connections between political theory and American constitutional theory, including originalist and non-originalist theories. Topics include the relationship between the individual and society, how much deference (if any) is owed to the decisions of prior generations, and the historical development of American constitutional theory. Students will read works by important political theorists like John Locke and Edmund Burke, as well as significant works of constitutional theory by scholars like Randy Barnett and David Strauss. This is a paper course.

Criminal Justice Reform: Policy and Politics in the 21st Century

With more than two million adults and children behind bars, the United States leads the world in its rate of incarceration. In recent years, politicians and leaders across the political spectrum have recognized that our criminal justice system is fundamentally broken and in desperate need of reform. And yet there are tremendous political barriers to achieving such reform. This seminar will explore the myriad ways in which American criminal justice is flawed, policy measures designed to repair the system, and the prospects for meaningful reform in the current political context. This seminar will examine several key questions. How did the current crisis in criminal justice come about? What are some of the most pressing aspects of the crisis today? And what reforms are available and politically feasible? Further, the group will examine an array of substantive topics, such as mass incarceration; access to counsel; race and class-based discrimination in the system; and the realities of incarceration in the 21st century, including over-crowding and solitary

LAW 607(2) Course ID:000069

International Criminal Law

This course introduces students to the many unique problems posed when the investigation or prosecution of offenses against the criminal law of one country (primarily the United States) have international consequences. It first explores the foundations of international criminal law, including the bases for criminal jurisdiction. It then covers in depth two issues central to international criminal law, the extradition of fugitives and mutual legal assistance (i.e., international evidence gathering). The course may incidentally touch upon other topics, including money laundering, the forfeiture of illegally obtained assets, the treatment of Nazi war criminals, and diplomatic immunity. Primary source material is emphasized, including international treaties, decisions of United States courts, and federal statutes.

Components: Lecture

LAW 607A(1) Course ID:016497

International Criminal Law

This course examines both substantive and procedural aspects of international criminal law. Substantive-law topics include genocide, crimes against peace, crimes against humanity and war crimes. Procedural topics include extradition, mutual legal assistance, and the jurisdiction and structure of the international criminal tribunals, including the International Criminal Court and the international criminal tribunals for Rwanda and the former Yugoslavia. This is an exam course.

International Economic Regulation

This course focuses on international and foreign national economic laws and policies that foster, or impair, transnational economic commerce. It explores the WTO and GATT, various transnational competition laws, IMF, the World Bank, and conflicting policies of developing nations designed to stimulate trade and investment while promoting internal growth and domestic control. At the discretion of the instructor, this course may include a qualifying course paper that fulfills one half of the upper-level writing requirement.

Components: Lecture

LAW 609(3) Course ID:000779

International Human Rights

A seminar course exploring legal principles involved in the creation and functioning of international bodies, with emphasis on their role in establishing and applying human rights standards. The legal basis for the authority of international bodies to act, and their relationships to individual nations and to other worldwide and regional associations, is examined in the context of specific case studies of current interest, with emphasis on human rights standards. Included among the case studies considered are war crimes issues involving former Yugoslavia and Rwanda, self-determination problems in Chechnya, and current United States policies relating to the treatment of Cuban and Haitian boat people. Special attention is given to how international bodies attempt to resolve areas of dispute between nations, and otherwise use their independent procedures to help develop standards of international conduct, and to monitor compliance by nations. Human rights laws, monitoring mechanisms, and enforcement experiences are considered extensively as models

Comparative and International Trade

This course examines the major issues of international trade and its regulation at the national and international level. The focus is on the United States trade laws, including the tariff system and customs laws, the safeguard provisions, antidumping and countervailing duty remedies, and retaliatory measures. Attendant issues such as the distribution of powers to regulate international trade, the delegation doctrine, and judicial review of regulating agencies are also examined. The international regulatory framework--principally, the General Agreement on Tariffs and Trade and the World Trade Organization--are examined in some detail, with a focus on the fundamental rule of nondiscrimination, the resolution of disputes through the dispute settlement system, and the relationship between international agreements and the United States law. Finally, the course also examines specialized topics including free trade areas and customs unions, treatment of nonmarket/transitional economies, developing countries, and international trade

Medieval English Law

This course provides an introduction to the legal systems of England from the thirteenth to the early sixteenth centuries. It concentrates upon the development of English common law, including laws of real property and of personal actions; the criminal law; canon law in ecclesiastical courts, with a particular focus upon matrimonial litigation; local customary law (the laws of manors and boroughs and their courts); the development of equity toward the end of the middle ages; and early legal education. The course will combine coverage of current secondary literature on each legal sector with intensive discussion of selected cases (with the case records provided in translation) and selected passages from a few of the more important legal treatises of the period (including Bracton, Lyndwood, Fortescue, and St. Germain). The principal aim of the course is to give students a comprehension of legal principles, institutions, and change in a formative period of the English-heritage legal system. No prior knowledge of law or English history is assumed, and

Law & Literature

Dr. Bloomfield's section explores the techniques by which creative writers--poets, playwrights, novelists, and short story writers--have dealt with significant legal issues. Topics include alternative/comparative legal systems; the competing claims of law and equity; the legal treatment of radical and religious minorities; the interpretation of statutes; changing professional mores; the role of the judge; women and the law; and popular criticism of bench and bar. Enrollment is limited to twenty students. Course grades will be based in part on class discussions and in part on a paper. The paper will not satisfy the upper-division writing requirement.

Mr. Wagner's section explores literature as a medium communicating basic questions about the meaning and value of law. The course seeks an abstract grasp of theoretical problems concerning law and its meaning and value that are communicated through literature. It seeks equally to elicit student insight into the meaning

Federal Indian Law Seminar

The popular belief is that Native Americans are fast becoming acculturated and will soon be extinct. Nothing could be further from the truth. The Native American population has increased rapidly in the twentieth century and Indian tribes own some 52,000,000 acres of land, some of it in coal, petroleum, oil, and other minerals, including most of the known United States deposits of uranium.

The seminar will focus on the major questions in Indian law today, especially state and federal incursions into tribal sovereignty; the federal-Indian trust relationship; and tribal ownership of land, including the legal bases for the tribes' northeastern land claims. Throughout the course the seminar participants will pose and attempt to answer the question: Do the Indian tribes occupy a preferred place in our democratic system? If so, should this special relationship be terminated?

Class participants will write a paper on a topic of their choice. Fulfills the upperclass writing

Sources of Christian Jurisprudence

This seminar surveys the theory and experiences that are primary sources of jurisprudence within the Christian tradition. It explores the value of these sources as a basis for understanding diverse attitudes towards the meaning of law found within contemporary Christianity. It seeks, in addition, to build a conceptual and historical foundation for developing, validating, and criticizing formal jurisprudential theory from the Christian vantage point. Relying on primary documents, students examine both formative Christian experiences of law which may be considered archetypal and Christian experiences of law which are more recent and of a more specifically American character. Through a close reading of original Christian authors, students encounter the progression of Christian theory about law from the Bible to the leading thinkers of the historically diverse strands of the later tradition. Unifying themes concern the relationship of reason to revelation, law to morality, and charity to justice. Paper/examination option. At the discretion

Financial Institutions Regulation

This course examines regulation that is intended to prevent systemic risk. Systemic risk is defined in a very general sense as the risk of a collapse of the entire financial system or an entire market. Regulation that addresses systemic risk is called prudential regulation. This course examines the traditional prudential regulation of commercial banks (often called micro-prudential regulation) and more recent forms of macro-prudential regulation of systemically important financial institutions. Specific topics include: licensing and corporate governance; restrictions on ownership and affiliation; capital regulation; limits on risk taking; insolvency and resolution; and institutional structures of regulation. The course focuses on federal law and includes consideration of international standards developed by the Basel Committee on Banking Supervision and other international organizations.

Components: Lecture

This is a course in civil practice. The first semester covers fundamental principles of federal subject matter jurisdiction and of jurisdiction over the person, federal venue, service of process in federal courts, joinder of claims and parties, multiparty actions (who may or must be parties, how to get them in, how to get them out), and the complexities of class suits and multidistrict litigation. The second semester covers stockholders' derivative suits and similar actions, federal inter-pleader, substitution and intervention, federal pleading, motions practice, summary judgment, federal discovery practice and pretrial procedure, methods of terminating actions before trial, verdicts and judgments, new trial, and relief from a judgment. The first semester is not required as a prerequisite to taking the second semester, but it is strongly recommended.

LAW 637(3) Course ID:003015

Comparative Law

The purpose of this course is to provide the student with knowledge about the basic legal systems in the world. Special emphasis will be given throughout the course to legal systems in Great Britain, France, Germany, and the countries of the former Soviet bloc. The course begins with discussion of legal education and the legal professions in these countries. The basic principles of British, French, and German constitutional law are studied to provide the political background necessary to compare these legal systems. The course also examines judicial structures and court organization as well as key principles of criminal and civil law.

LAW 639(3) Course ID:003020

Banking Law

This course surveys the regulation of all financial institutions, i.e., banks, insurance companies, securities firms, and mutual funds. The course will examine the history and development of regulation of each of these institutions and the markets in which they operate. Because commercial banks are the most regulated financial institutions, careful attention is devoted to the bank regulatory scheme, including chartering, branching, interstate banking, activities restrictions, and the regulation of troubled banks. Examination of insurance companies will include analysis of the insurance contract and federal/state relationship in insurance regulation. The securities industry will be examined through the regulation of broker-dealers and trading markets. The focus on the investment company industry will include consideration of fiduciary duties and required disclosure. Most importantly, the course will examine the deterioration of historic barriers between financial institutions and the services that they provide. The course will give careful consideration

Separation of Powers

A study of the doctrine of separation of powers in American constitutionalism. By analyzing specific confrontations over domestic and foreign policy issues, the student will gain a deeper understanding of the manner in which judicial, executive, and legislative forces interact to shape constitutional law. Includes analysis of appointment and removal powers, delegated powers, legislative veto, line item veto, independent commissions, independent counsel, executive privilege, congressional investigations, foreign affairs, war powers, and congressional power over federal courts. The grade will be based on two short papers presented to the class and a long term paper. Satisfies the writing requirement.

LAW 642(2) Course ID:003025

Securities Regulation: Mutual Funds and Investment Advisers

This course will cover federal regulation of the asset management industry, focusing primarily on the Investment Company and the Investment Advisers' Acts. It will address key case law and engage with significant interpretive and regulatory positions taken by the United States Securities and Exchange Commission and other regulators. Topics of study include regulation of the operation, management, and distribution of mutual funds, ETFs, and other pooled investment vehicles, including closed-end funds and hedge funds. It will also address the regulation of investment advisers, including their fiduciary obligations and organizational structure. Important new developments in the asset management space will be a focus, such as investments in crypto and digital assets by funds and use of social media in adviser marketing. Recommended but not required: Corporations.

LAW 644(2) Course ID:003028

Federal Regulation of Food and Drugs

This course explores the Food and Drug Administration's development of regulatory controls in response to Congress' legislative enactments regarding the safety of food and the safety and effectiveness of drugs. Course work entails an analysis of FDA's enforcement tools, the agency's substantive regulatory authority over foods, drugs, and selected other regulated commodities, and the agency's creative use of its legislative authority to develop regulatory mechanisms for the protection of the public health. While focusing on substantive food and drug law, the course also scrutinizes the operation and problems an administrative agency faces in dealing with sometimes conflicting legal, scientific, and policy concerns regarding a given issue. To this end, the course focuses on FDA's efforts to establish safe levels for added carcinogens in food, to ensure the safety of foods produced by recombinant DNA technology, to improve the public health by comprehensive food labeling reform, and to establish the safety and effectiveness of pharmaceuticals in an

LAW 645(2 - 3) Course ID:011421

Legal Issues of the Middle East Process

This law school course will consider legal issues related to the Israeli/Palestinian conflict, with special reference to the challenge of Jerusalem. We will consider the primary texts beginning with the Balfour Declaration and progressing through the relevant UN resolutions, Israeli laws and regulations. At least three weeks will be devoted to legal and political issues related to the juridical status of Jerusalem. We will analyze international agreements that may bear on Jerusalem, including the UNESCO and Hague Conventions and bi-lateral treaties such as the Vatican-Israel Fundamental Agreement, the Jordan-Israel Peace Accord and the Jordan-Palestinian Authority 2013 Jerusalem Agreement. We will discuss, as well, the present political situation in Jerusalem and proposals to alleviate the recurrent violence in the City.

Another two weeks will focus on legal issues related to Holy Places. We will also review legal issues related to the Israeli "occupation" of the West Bank and will read the ICJ and Israeli Supreme Court

Components: Seminar

LAW 647(2) Course ID:003032

Securities Markets Regulation Seminar

This course provides an in-depth analysis of several themes central to the regulation of exchange and over-the-counter trading in domestic securities. Topics covered include purpose and operation of securities markets; the implementation of self-regulatory oversight with focus upon the relationship between the exchanges and broker/dealers and the exchanges and the Securities and Exchange Commission; regulation of broker/dealers; the implication of listed and unlisted trading; the development of the national market system and the system's reliance upon intermarket communication and execution systems and brokers; performance of fiduciary duties of best execution; order flow issues; alternative trading systems and competition in the securities market; and the impact of off-board trading restrictions. This course requires a qualifying course paper that fulfills one half of the upper-level writing requirement. Refer to Academic Rule XIII, Writing Requirement and Directed Research. It is strongly advisable, but not an absolute prerequisite, that students

LAW 648(3) Course ID:003034

Civil Rights Law

This course serves as an introduction to various federal civil rights laws that prohibit discrimination on the basis of race, sex, gender identity, religion, national origin, disability, and various other identity statuses. We will explore statutes that have transformed America's modern landscape, including the Civil Rights Act of 1964, the Fair Housing Act of 1968, the Voting Rights Act of 1965 and the Violent Crime Control and Law Enforcement Act of 1994. Issues covered will likely include employment, housing, voting, education, policing/criminal justice, affirmative action, hate crimes, and other issues of interest to students.

Throughout this course, we will discuss the historical origins and context of these laws, whether they offer adequate protection to various groups of people, and whether they continue to be relevant today. We will also examine the legal standards required to prevail in the enforcement of these laws and prevalent defenses.

These laws and issues will be analyzed through constitutional principles, case law, regulations, politics,

Immigration Law: Deportation and Asylum

The course will explore substantive and procedural laws and regulations governing the adjudication of asylum claims by the U.S. Department of Homeland Security, the U.S. Department of Justice and federal courts. It will also examine procedural and strategic issues related to removal proceedings, including defensive asylum claims, cancellation of removal, and other forms of relief. In addition, students in this course will also analyze ethical issues related to the practice of immigration law.

Components: Lecture

Course Equivalents: LAW 651

LAW 650A(2) Course ID:016494

Immigration Law: Employment, Family and Naturalization

This course is designed to provide students with an understanding of U.S. immigration and naturalization law in the field of family, business and citizenship benefits. Topics include family based green cards, employment based immigrant visas, non-immigrant visas, non-immigrant and immigrant visa waivers and the Deferred Action for Childhood Arrivals (DACA) policy. At the conclusion of the course, students will possess a working knowledge of key elements of immigration and naturalization law, and understand ways in which they can incorporate this area of law into their future work as lawyers. Students will also engage in activities which closely mirror an actual immigration law practice, while at the same time gaining an understanding of ethical and integrity issues which are unique to immigration. This course is complementary to the Immigration Law: Deportation and Asylum course.

LAW 651(2) Course ID:003037

Immigration Law and Policy

This course is a survey of immigration law and the policy implications both informing and resulting from the immigration field. The course will explore the constitutional limits of the federal immigration power as enunciated in the federal courts, and the different roles of the departments and federal agencies involved in the administration and enforcement of immigration law. It discusses the various categories of immigrant and nonimmigrant visas, as well as the procedures used for admission into the United States. In addition, the course reviews removal grounds and the procedures, including appellate practice, used in removing aliens from the United States. International and domestic law affecting refugees, asylum seekers, and torture victims is also discussed. Finally, the course provides an overview of employment verification requirements and the requirements of acquiring and losing citizenship. Administrative Law is a suggested, but not required, prerequisite.

Immigration and Human Rights Seminar

This seminar will examine the ways in which U.S. immigration and refugee law offer protection to individuals whose civil, political, economic, or social rights have been violated in their home countries. We will focus on asylum law, protection for victims of trafficking, remedies for unaccompanied minors, temporary protected status, and aspects of U.S. refugee law. Students will read case studies and participate in practice-oriented exercises to develop a real world understanding of the way in which lawyers pursue immigration or refugee remedies for victims of human rights abuses. We will also explore the impact, from a human rights perspective, of recent legislative proposals to reform U.S. immigration and refugee law.

Components: Lecture

LAW 652(3) Course ID:005346

Complex Litigation

This advanced course offers an in-depth examination of procedural problems involved in multiparty, multiclaim litigation in federal and state court. The course focuses extensively on class action practice, criteria, and litigation strategy. The course covers the disposition of duplicative litigation, problems peculiar to large case discovery, judicial control of litigation, and res judicata and collateral estoppel involved in multiparty, multiclaim litigation. The course also explores alternatives to the class action device. Please view the registration website for an updated course description for a given semester

Federal Litigation

This course deals with specialized problems which arise in suits against the government: sovereign immunity, the nature and limitations of Tucker Act and Federal Tort Claims Act jurisdiction, suits against government corporations and officers, discovery and privilege, and representation problems - conflict of interest, lobbying, the Foreign Agents Registration Act, and attorneys' fees.

Components: Lecture

LAW 657(3) Course ID:003051

Comparative Law Seminar: Political Violence

This course examines the legal systems of three countries--the United Kingdom, Ireland, and the United States--in their response to the challenge posed by political violence. All share the tradition of Magna Carta and the Bill of Rights of 1689 and all exalt law as a fundamental basis of unity in society. Yet, their anti-terrorist laws and their courts' interpretations of those laws differ significantly. Students will be assigned (or select) a topic such as membership in proscribed organizations, extradition, surveillance, or detention without trial, will lead a seminar discussion and submit a paper on the topic. The course is intended to give students the opportunity to examine the concept of "the rule of law" when its institutions and procedures are subjected to extreme stress. Examples will also be drawn from the experiences of other countries in the common law tradition: Israel, South Africa, India, and Pakistan. Limited enrollment. This course requires a qualifying course paper that fulfills one half of the upper-level writing requirement.

Components: Seminar

LAW 658(3) Course ID:003052

The Law of Church & State Relations

This course is a survey of the law governing churches, their affiliates, and believers, and is taught from a "practice-oriented" perspective. Students will incorporate a hypothetical religious or religiously affiliated charitable organization, and provide advice to its Board of Directors concerning the options to be considered given the type of organization to be formed. Subjects to be covered will include federal and state constitutional and statutory protections for religious liberty; the structure and organization of churches and religiously affiliated organizations; the law of nonprofit and charitable corporations; taxation of churches and charities; labor and employment law; and the application of freedom of speech and association principles to organizations and groups. Prerequisite: Constitutional Law. Exposure to Corporations or Tax will be useful, but is not required.

Juvenile Law

This course provides a basic introduction to various legal issues regarding children. Topics may include: origins of parental and children's rights; allocation and balance of rights and responsibilities between parents, children and the state, especially in the context of medical decision-making and education; reproductive rights of minors; substantive and procedural laws regarding children as victims and as perpetrators; abuse and neglect; the foster care system; termination of parental rights; rights of children in schools; regulation of minors' conduct and restriction of minors' liberty; the juvenile justice system; delinquency proceedings; and representation of children in the legal system.

Components: Lecture

LAW 668(2) Course ID:014112

State Constitutional Law

This course is an overview of state constitutional law. Topics covered include: the history of state constitutional law and the relation to the federal constitution, construing state constitutions, state declaration of rights, the three branches of state governments, separation of powers, local government under state constitutions, revenue and taxation, and delegation.

Components: Lecture

LAW 669(3) Course ID:015627

Advanced Criminal Procedure: Anatomy of a Homicide

This practical seminar in advanced criminal procedure will immerse students in the facts of a First Degree Pre-Meditated Murder. Detailed and vibrant class discussions will tackle such issues as witness intimidation; cooperation agreements; use of the grand jury; attorney-client relationships; investigation and disclosure of exculpatory information, jury selection, affirmative motions practice and much, much more. Classroom discussions will not be abstract or theoretical. Rather, each discussion will grapple with issues presented by the facts as students assume the role of the litigators assigned to the case. Throughout the semester, students will acquire the tools necessary for both prosecutors and defense lawyers to properly investigate, prepare and bring to trial a serious and complex criminal case. There will be no final examination. Rather, students will be expected to conduct original research and draft three motions during the course of the semester. Students will be expected to make themselves available for the entirety of one business day to

Components: Lecture

LAW 670(2) Course ID:018689

Anatomy of a Civil Case

This course is designed to give students a practical understanding of a typical state court civil litigation, using a sample case and issues. Students will "litigate" a sample case from start to finish, with a focus on the practical, logistical and business aspects of litigation not typically covered in a civil procedure course. In this regard, most classes will be structured to provide for ample discussion of common issues encountered in civil litigation, stemming from real-life examples of pleadings, discovery documents, settlement negotiations, etc. In most classes, it will be necessary to break the class into "plaintiffs" and "defendants" to facilitate a discussion (and, perhaps, debate) on various topics. Woven throughout all classes will be discussions regarding the "business" aspects of civil litigation, as well as potential ethical issues to consider.

Components: Practicum

LAW 671(3) Course ID:003063

Public International Law

An introductory course exploring legal elements underlying relations and obligations among nations and their rights and responsibilities to each other and to their citizens. The problems this course examines will cut across the major issues of the international legal studies - sources and subjects of international law, problems of international jurisdiction, international claims, international organization, foreign investment, international finance, environmental protection, economic sanctions, and use of force in the international system. The students will explore these issues against the background of crucial events of our era. Paper/examination option. At the discretion of the instructor, this course may include a qualifying course paper that fulfills one half of the upperclass writing requirement, if the instructor allows papers in lieu of examination.

LAW 672(2) Course ID:003064

Comparative and International Trade

This course examines the major issues of international trade and its regulation at the national and international level. The focus is on the United States trade laws, including the tariff system and customs laws, the safeguard provisions, antidumping and countervailing duty remedies, and retaliatory measures. Attendant issues such as the distribution of powers to regulate international trade, the delegation doctrine, and judicial review of regulating agencies are also examined. The international regulatory framework--principally, the General Agreement on Tariffs and Trade and the World Trade Organization--are examined in some detail, with a focus on the fundamental rule of nondiscrimination, the resolution of disputes through the dispute settlement system, and the relationship between international agreements and the United States law. Finally, the course also examines specialized topics including free trade areas and customs unions, treatment of nonmarket/transitional economies, developing countries, and international trade

Fair Employment Law

A study of federal laws prohibiting discrimination in employment on the grounds of race, sex, age, religion, and national origin. Primary focus will be on Title VII of the Civil Rights Act of 1967, but other federal statutes (Equal Pay, Age Discrimination, and Americans with Disabilities Acts) will be surveyed. Study will include the structure of proof under Title VII, defenses and remedies available, and special problems such as sexual harassment, employment of aliens, and affirmative action. Exam/paper option. At the discretion of the instructor, this course may include a qualifying course paper that fulfills one half of the upper-level writing requirement, if the instructor allows papers in lieu of examination.

Jurisprudence

This course introduces the student to jurisprudence. It surveys the generic themes or issues which occupy inquiry in jurisprudence regardless of philosophical position. Such themes or issues extend to the legitimacy of the legal order; the relativity of the authority of law in relation to concepts of personhood, community, society, politics, or transcendence; the mediation of legal authority by patterns of interpretation and legal reasoning; the purposes of law relating to justice, civic order, public morality, and public welfare or well-being. The course's exploration of these themes or issues is designed to facilitate the restatement and critique of the diverse answers they elicit from differing approaches to jurisprudence. The course, then, proceeds to a synthesis of the key features of the schools or positions which comprise the primary options in contemporary normative jurisprudence. These schools or positions include Utilitarianism/Law and Economics, Libertarianism and Neo-Kantianism, Liberal Rights Theory, Natural Law, Critical Legal Studies, Postmodernism,

Jurisprudential Problems in Contemporary American Law

This course explores jurisprudential problems arising in the setting of contemporary American law. Some problems in contemporary law lend themselves to being understood theoretically. By considering these legal problems through the lens of theory, jurisprudence contributes indirectly to the resolution of doctrinal dilemmas across many legal areas for judges and legislators ultimately fall within the sway of ideas propounded by theorists. More importantly, at least from the vantage of the present course, by doing so, one opens the door to deeper insight into basic philosophical questions about law considered for their own sake. A systemic comparison of the diverse theoretical approaches that various contemporary thinkers offer to such problems is also conducive to gaining greater familiarity with the basic options in jurisprudential thought today. Thus, this course utilizes its philosophical survey of current issues in American law to distinguish alternative contemporary schools of jurisprudence.

Jurisprudence: A History of the Idea of Law

This course introduces the student to the Western tradition of thought on the nature and significance of law. By a close reading of canonical texts, students in the course gain exposure to basic theoretical questions raised by law's existence, including issues concerning law's distinctive purpose, nature, function, and value. They consider ideas that have advanced with regard to the criteria of law's legitimacy or validity. In addition, they explore ideas offered for the normative evaluation of law by reference to conceptions of justice, civic order, public morality or societal or individual well-being. Through its survey, the course identifies the major alternatives in philosophical perspective on law emerging in the course of the Western tradition. The course provides students with an opportunity to master the forms of reasoning and argument according to which law in any era becomes the object of theoretical reflection on larger questions of meaning. It equips students to understand deeper lines of division underlying differences in contemporary

Catholic Social Teaching & The Law

This course introduces students to the basic tenets of Roman Catholic Social Teaching - the response of the Catholic Church to the social, political, and economic order as it has evolved over the past one hundred years. These teachings began with the 1891 papal encyclical Rerum Novarum and have developed through later encyclicals, documents of the Second Vatican Council, and pastoral letters of bishops' conferences. Dominant principles include the notions of solidarity, subsidiarity, and a preferential option for the poor. Once the underlying principles of Catholic social thought are developed, the course will selectively compare American law with the Catholic ideal in four specific areas of study: economic and labor regulation; family law; war and peace and other life issues such as abortion and assisted suicide; and social policy (e.g. welfare reform, etc.).

LAW 699(2) Course ID:005432

Natural Resources Law & Policy

This is a survey course in Natural Resources Law. The course begins with a discussion of foundational concepts and examination of how perspectives on natural resources have changed over time. The course also examines in detail two basic charters of natural resources law, the Endangered Species Act and the National Environmental Policy Act and looks at how these charters, and other statutes affect public land management including the management of the National Parks, National Forests, wildlife refuges and lands managed by the Bureau of Land Management. The course will discuss the laws governing mineral and oil and gas extraction, timber harvest and grazing. The course will also survey the laws governing federal fisheries and the protection of marine resources and wildlife. Throughout the course emphasis will be placed on ongoing legal disputes in the federal courts. The course will, for example, discuss legal issues related to the Gulf Deepwater Horizon Spill, California water issues and conflicts between national security, military readiness

International Corruption and Compliance

The World Bank estimates that more than 8% of the world's gross domestic product, or \$4.9 trillion, consists of bribes paid to government officials and government contracts tainted by bribery. This figure exceeds the individual economies of every country on Earth except for the United States and China. To combat this staggering problem, the United States in 1977 became the first nation to criminalize the act of bribing foreign government officials. Since then, the Foreign Corrupt Practices Act (FCPA) has become one of the U.S. government's highest enforcement priorities, second only to fighting terrorism.

This course will expose students to the Foreign Corrupt Practices Act and the growing number of international treaties and foreign laws designed to combat bribery worldwide. The course will provide an in-depth analysis of FCPA's anti-bribery provisions, relevant federal case law, U.S. government advisory opinions, and the hundreds of settlements used by the Department of Justice and the Securities and Exchange Commission that

Comparative Law Seminar: Political Violence

This course examines the legal systems of three countries--the United Kingdom, Ireland, and the United States--in their response to the challenge posed by political violence. All share the tradition of Magna Carta and the Bill of Rights of 1689 and all exalt law as a fundamental basis of unity in society. Yet, their anti-terrorist laws and their courts' interpretations of those laws differ significantly. Students will be assigned (or select) a topic such as membership in proscribed organizations, extradition, surveillance, or detention without trial, will lead a seminar discussion and submit a paper on the topic. The course is intended to give students the opportunity to examine the concept of "the rule of law" when its institutions and procedures are subjected to extreme stress. Examples will also be drawn from the experiences of other countries in the common law tradition: Israel, South Africa, India, and Pakistan. Limited enrollment. This course requires a qualifying course paper that fulfills one half of the upper-level writing requirement.

Components: Lecture

LAW 712(2) Course ID:005439

Post-Socialist Legal Systems

This course is premised on the assumption that the recent political and economic restructuring of the Eastern and Central European countries is perhaps the most important event in post-World War II history. This event most likely will result in constitutional transformation in Eastern Europe.

Using the analytical techniques of Comparative Law, the course will examine the basic institutions and principles of Socialist and post-Socialist legal systems. It will focus on the Soviet system of law and the legal system of the new Commonwealth of Independent States, which emerged in the region of previous Soviet domination. The course also will take up contemporary legal systems of other major Socialist countries. Lectures, class discussions, and examinations will compare and contrast legal and political institutions of Western democracies and post-Communist systems.

Components: Lecture

Comparative Foundations of Modern Law (Crawcow)

This course looks back to a time when Europe had a common law that transcended national and legal boundaries. This system of law reigned from the twelfth to the seventeenth centuries. The term "common law" sounds strange to most English-speaking historians when applied to continental legal systems. We speak of common law as being the legal system that evolved in England from the eleventh century to the present. But, as Europe struggles to create a new common law, the history of the old may provide a model for thinking about how legal systems develop, how law might not necessarily be limited by national boundaries, and how legal norms might be seen as transcending the positive law of the nation state.

Three themes in the evolution of European legal systems over two millennia will be studied in depth: codification of law, development of procedural norms, role of the jurist in the legal system and in society.

Components: Lecture

LAW 721(2) Course ID:003127

Law of the European Union

The rationale of this course is to provide an overview of the political and legal framework of Common Market institutions, trade relations with the European Union, and legal and business implications of the European process of integration. The focus will be on the process of the creation of the European Community, goals and purposes of the Community, the structural framework and processes for the development of Community law, constitutional issues, the role of the European Court of Justice, East-West trade, and United States trade within the European Community. Examination/paper option. At the discretion of the instructor, this course may include a qualifying course paper that fulfills one half of the upper-level writing requirement.

Law of the European Union

The rationale of this course is to provide an overview of the political and legal framework of Common Market institutions, trade relations with the European Union, and legal and business implications of the European process of integration. The focus will be on the process of the creation of the European Community, goals and purposes of the Community, the structural framework and processes for the development of Community law, constitutional issues, the role of the European Court of Justice, East-West trade, and United States trade within the European Community. Examination/paper option. At the discretion of the instructor, this course may include a qualifying course paper that fulfills one half of the upper-level writing requirement.

Regulated Industries: A Comparative Perspective (Cracow)

This course provides an introduction to the scope and nature of government regulation in the United States and throughout the world. It examines the restraints on regulatory power and reviews the economic and other justifications for regulation (i.e., natural monopoly, destructive competition, allocation of scarce resources, assurance of quality or competence, consideration of otherwise ignored social costs, and wealth redistribution). Given the nature of contemporary efforts to reform the regulatory state, emphasis is placed throughout the course on the deregulation of traditionally regulated sectors of the economy.

Regulation of American Financial Institutions

This course examines regulation that is intended to prevent systemic risk. Systemic risk is defined in a very general sense as the risk of a collapse of the entire financial system or an entire market. Regulation that addresses systemic risk is called prudential regulation. This course examines the traditional prudential regulation of commercial banks (often called micro-prudential regulation) and more recent forms of macro-prudential regulation of systemically important financial institutions. Specific topics include: licensing and corporate governance; restrictions on ownership and affiliation; capital regulation; limits on risk taking; insolvency and resolution; and institutional structures of regulation. The course focuses on federal law and includes consideration of international standards developed by the Basel Committee on Banking Supervision and other international organizations.

LAW 726(3) Course ID:003134

Mediation Advocacy

This seminar is an interactive course designed to expose students to the area of Mediation with an emphasis on the role of the advocate. Through lectures, discussions, exercises, dispute simulations and videos, students will learn about conflict theory, the role of negotiation in mediation, what mediation is versus arbitration, the different types of mediation (facilitative, evaluative, and transformative), the benefits of mediation, the role of the mediator, when to use mediation, how to select a mediator, and, confidentiality and ethical considerations in mediation. Emphasis on the course will be placed on the role of the advocate pre, during and post mediation. Various documents that are used in a mediation will also be discussed (Pre-Mediation Agreement, Position Paper, and Settlement Agreement).

LAW 728(3) Course ID:003136

Mediation & Arbitration Skills

The focus of this course is on the theory, skills, and attitudes involved in the conduct of mediation and arbitration. In addition, some attention is given to the role of counsel in mediation and arbitration. Upon completion of this course, the student will have the knowledge and skills required to function as a mediator or arbitrator in a range of disputes. Skills are learned through active participation in simulated exercises, which are videotaped, reviewed, and critiqued by other students and the faculty member. Readings and discussion of the theoretical bases for mediation and arbitration and the ethical issues inherent in these practices also form a part of the course. Enrollment limited to sixteen. On occasion this course may be offered as a two-hour course for administrative convenience.

Mediation Skills

This is an introductory mediation skill development course. Mediation is one of the alternative dispute resolution conflict management mechanisms. The course will be approached from the perspective of educating the novice dispute resolver as to what mediation is, how it is different from other forms of dispute resolution, what skills are necessary to manage the mediation process and how to utilize the appropriate skills and dispute resolution tools to resolve a dispute. The classes will include lectures, demonstrations (video-taped and/or live), discussions, and simulations. The overall objective of the course is to give students a general understanding of mediation (from the perspective of the mediator, a party and an advocate), the basic skills necessary to manage the mediation process and a general familiarity with other dispute resolution processes. This is a simulation class (no exam/paper). This class will NOT qualify towards meeting the writing requirement. It WILL qualify towards meeting the Professional Skills

Environmental Justice

This seminar covers the foundations of, and current developments in, the field of environmental justice, and cultivates lawyering skills to proactively engage in this area of law and policy. Environmental justice - as a field of study, practice and citizen activism - grew out of the civil rights movement, supported by statistical evidence that marginalized and disenfranchised communities, often of color and lower income, are more likely to be proximate to industrial activities with residents exposed to negative environmental and public health conditions. The course focus is largely on U.S. environmental justice issues and practice. However, readings and discussions will address environmental concerns that extend beyond U.S. borders - including climate justice and disaster justice.

Components: Lecture

LAW 731(3) Course ID:003147

Education Law

This course will consider current legal problems in public and private education systems. Primary emphasis will be on public elementary/secondary education. Topics to be discussed include the roles and authority of state and local education agencies, compulsory education, curriculum control, students' and teachers' rights, desegregation, testing and ability grouping, allocation of educational resources, federal aid programs, and problems of church and state. The prerogatives of parents, the roles of such private groups as teachers' unions, the functions of courts and lawyers in resolving education law problems, and the usefulness of social science materials in elucidating education problems will be considered. Occasionally this course is also offered as a limited enrollment seminar that fulfills the upperclass writing requirement. Offered alternate years.

Comparative Foundations of Modern Law (Crawcow)

This course looks back to a time when Europe had a common law that transcended national and legal boundaries. This system of law reigned from the twelfth to the seventeenth centuries. The term "common law" sounds strange to most English-speaking historians when applied to continental legal systems. We speak of common law as being the legal system that evolved in England from the eleventh century to the present. But, as Europe struggles to create a new common law, the history of the old may provide a model for thinking about how legal systems develop, how law might not necessarily be limited by national boundaries, and how legal norms might be seen as transcending the positive law of the nation state.

Three themes in the evolution of European legal systems over two millennia will be studied in depth: codification of law, development of procedural norms, role of the jurist in the legal system and in society.

LAW 734(2) Course ID:010259

International Business Transactions (Cracow)

This course concentrates on private business transactions that cross national boundaries. It is designed to provide students with the tools they need to understand the various legal doctrines applicable to international commercial contracts. After an examination of some basic international and comparative law principles, the course focuses primarily on international sales of goods, distributor/agency agreements and international payments and security. In addition, it will examine relevant issues of private international law and the resolution of international disputes.

Components: Lecture

LAW 734A(2) Course ID:017043

International Investment Law (Cracow)

This course addresses a range of questions related to international investment law. This branch of international public law has already drawn special attention of legal scholars but also due to numerous arbitration proceedings worldwide, it became a field of intensive legal practice. Emphasis will be put on the specificity on Bilateral Investment Treaties as sources of international law and on case law which plays the role of clarification and creation of legal standards. Students will be also introduced to the specificity international responsibility resulting from international investment claims which is partly based on international customary law. Furthermore, we will also examine the definition of investment, definition of State and learn about standards of investment treatment (Most Favored Nation, national, fair and equitable standards). We will also study about direct and indirect expropriation; standards of compensation; principles of the settlement of investment disputes and about enforcement of arbitral awards. The course involves

Legal Drafting Seminar

This course offers an introduction to legal drafting, with an emphasis on such essential skills as writing with clarity and precision, conforming with statutes and ordinances, using form books appropriately, achieving the goals of clients, identifying and eliminating ambiguity, editing and proofreading a written product, and simplifying complex thoughts and ideas. The first half of this course will provide students with a thorough introduction to the principles of general drafting through the use of written exercises, peer critique, and in-class workshops. These may be general office documents or documents in a particular doctrinal area. Through the course of the semester, students will draft a minimum of three major legal documents in addition to rewrites and shorter written exercises. Successful completion of this course will satisfy one of the two upper-level legal writing requirements. Enrollment will be limited to 16 students per section.

Intellectual Property Transactions

This limited enrollment course is focused primarily on the analysis and drafting of documents related to transactions involving the transfer of interests in intellectual property, including patents, copyrights, trademarks, and know-how. Through the process of analyzing and drafting transactional documents, students will be introduced to the relevant statutory and case law and will become familiar with substantive legal principles related to title, express and implied licenses, license transfers, and assignments of rights in intellectual property. Students may also be exposed to substantive areas of the law having significant impact on intellectual property rights, such as international law, antitrust, tax, and bankruptcy. The grade will be based primarily on the final written work products produced by each student. This course meets the upper-level writing requirement. Prerequisite: Students must have taken at least one of the following: Patent Law, Copyright Law, Trademark Law, or Trademarks and Unfair Competition.

Components: Lecture

Enrollment Requirements: LAW 678 Patent Law or LAW 542 Copyright Law or LAW 557 Trademark Law, or LAW 570 Trademarks and Unfair Competition

LAW 753(2) Course ID:011256

Virginia Practice & Procedure

This course explores the specialized practice and procedures of the state courts of Virginia. The topics it covers include subject matter jurisdiction, active jurisdiction, parties, venue, pleading, discovery, pre-trial and trial motions, post-verdict motions, judgments, costs, and appeals. It also includes within its scope distinctions between law and equity and extraordinary writs. The course is directed primarily towards students planning to practice law in Virginia. It offers important preparation for those students who expect to become litigators in Virginia, and it seeks to convey insight into litigation and settlement strategies with distinctive application in the state. It seeks, as well, to serve to prepare students for practice in Virginia, who do not plan to litigate, but who merely seek more adequate knowledge of the more complex than usual procedural backdrop of general law practice in the state.

Components: Lecture

LAW 753A(1) Course ID:013882

Virginia Law Survey

Open to graduating day and evening division students. This course will introduce students to the substantive knowledge, thought process, and writing skills needed for success on the Virginia Bar Exam. The learning methodology will be iterative, consisting of substantive lectures and materials followed by extensive practice-testing and analysis. The course will begin by reviewing the Multistate Bar Examination (MBE) subjects; the majority of the course will then provide detailed coverage of heavily-tested essay subjects. Although designed to meet the particular needs of Virginia applicants, much of the substantive coverage will be relevant for other jurisdictions as well. Practice-testing will include actual MBE and Essay Examination questions, and all substantive materials will be written by the instructor specifically for this course. Students will be able to monitor their progress during the semester, both individually and relative to their peers. All students will also meet individually with the instructor to discuss their progress and specific

International Legal Issues in Protection of Cultural Heritage and Sacred Space

This course will consider legal issues relevant to the protection of cultural heritage and of sacred space, an increasingly desperate issue in both domestic and international Law. The course will consider the meaning of sacred space and the international legal system to protect sacred sites. It will also examine UNESCO and World Heritage Sites, destruction of religious sites as a war crime, military law issues and the protection of sacred space and United States law regarding the protection of sacred space.

LAW 765(3) **Course ID:003192**

Land Transactions and Finance

This course studies the law of real estate financing methods and transaction documentation. Lender liability, title insurance, and federal income tax considerations are included with an examination of the lawyer's role in the development and transfer of land.

Components: Lecture

Course Equivalents: LAW 766

LAW 766(3) **Course ID:005402**

Real Estate Transactions

Transactional lawyers examine the law of real property transactions and the lawyer's role. Topics include agency, contracts, zoning, commercial leases, the role of mortgage lenders, financing methods, title insurance, federal, state and property tax considerations and ethical concerns.

Components: Lecture

Course Equivalents: LAW 765

LAW 767(2) **Course ID:003194**

Land Use

This course studies the process of imposing limitations (legal, political, economic, and social) upon the use and management of privately owned land by judicially crafted principles of waste and nuisance; by contract; through the use of easements, covenants, and servitudes; by zoning and subdivision regulation; and by environmental legislation. Simulated exercises of land development conflicts (e.g., the administrative processes of zoning deliberations before a zoning board) and role-playing will assist the students in developing competencies and skills--particularly negotiation--when representing the full component of clients in a typical land-use conflict: the developer, private property owners, together with local, state, and federal administrative bodies. This course requires a qualifying course paper that fulfills one half of the upper-level writing requirement.

Construction Law

On any given day, construction lawyers deal with issues ranging from contract law, civil procedure, land use, zoning, torts, employment, ethics, consumer protection, commercial transactions, and insurance and suretyship. Students enrolled in this course will gain a valuable understanding of the business and legal principles underpinning the construction industry. The course will be structured to include a hypothetical project in the D.C. area. Depending on the lesson, students will assume the role of attorney for the project's owner, the contractor, the architect, or the tenant(s). The course will follow a typical lifespan of a construction project, from project inception to selecting an architect, selecting a contractor, constructing the building, to selling the project to a new owner and/or renting it to a tenant(s). Along the way, students will encounter legal issues that arise and discuss them as a group. Woven through all classes will be discussions regarding the business aspects of construction law, as well as potential ethical issues.

Tax Policy and Human Rights
The American tax system contains numerous provisions that are designed to encourage activities consistent with certain public policy concerns and to relieve various forms of personal hardship. These provisions are so important that they warrant public subsidies. Not surprisingly, many of the issues that arise in connection with tax policy relate to questions regarding the types of activities that government should or should not support. This course seeks to answer these questions by exploring the relationship between tax policy and internationally-recognized human rights. Using a comparative approach, this course specifically addresses the following considerations: (1) human rights principles as they relate to various tax-preferred activities, such as education, health, housing and retirement; (2) current trends in fiscal and tax policy and their impact on human rights; and (3) the effectiveness of different tax policies and practices, evaluated in accordance with recognized human rights principles and standards.

Education Law Practice: A Simulated Lawyering Experience

This course uses a variety of instructional formats to examine legal and policy problems in the nation's systems of public and private education. Primary emphasis is on higher education. Students are organized into two or three "law offices" that represent various individual and institutional "clients." The clients' problems involve matters such as discipline of emotionally disabled students, denial of faculty tenure, university regulation of hate speech or of protest activities, state legislative regulation of sexual harassment in schools and colleges, of university affirmative action plans for admissions or financial aid, and the rights of parents to "home school" their children. These problems and the assigned background readings emphasize special applications to education of contract law, tort law, administrative law, constitutional law, and civil rights law. Simulations, role-playing exercises, and writing assignments that accompany the problems help students develop lawyering competencies such as interviewing, counseling,

Human Rights and the Role of the Judge: Interpretation of Human Rights Instruments

This course primarily is about the legal skill of interpretation. We will explore the ways in which judges interpret documents, with a focus on human rights instruments. The course begins with an introduction to the theories and doctrines of statutory interpretation as it is practiced in the United States. This provides the necessary background for understanding what interpretation means and how it implicates the exercise of the judicial power. Then we will turn to two areas of human rights law that are especially well suited for a study of interpretation. First, the Alien Tort Statute, and second, the interpretation of treaties (which often, but of course not always, involve human rights concerns).

Components: Lecture

Human Rights and the Liberal Society

This course will examine the philosophical foundations of human rights. The first half of the course will be dedicated to reading key texts in the liberal philosophical tradition, including works by Locke, Rousseau, Burke, and Mill. The focus will be on the assumptions about human nature, politics, and law undergirding these different theories. The natural-law tradition will also be presented as part of the discussion, with an emphasis on Aristotle and Aquinas. The second half of the course will be dedicated to applying these theoretical frameworks to modern disputes about rights, including abortion, same-sex marriage, and the freedom of speech. Students will be exposed to contrasting views on these issues and learn to identify the philosophical assumptions of various positions.

Components: Lecture

LAW 799C(2) Course ID:019420

Ethical and Philosophical Approaches to Human Rights

This course serves as a historical, ethical, and philosophical introduction to various traditional and new human rights. For each human right we will discuss the historical origins, one battle related to that right, and the ends, values and principles that govern the topic. The course begins by discussing how courts, authorities, researchers, and people deduce human rights (the methodological question). This discussion will provide the participants with some key intellectual tools that will later help them to analyze many topics. Then, the following topics will be discussed: bioethics, life, health, transhumanism and human rights; environmental rights; political rights; freedom of movement, residence, domicile and assembly; the right to home, to the traditional land and to global citizenship; family rights; indigenous peoples and minorities; identity, the right to fashion, cultural rights; the new wave of digital rights; the right to feast and festivals, to hope, to dialogue, and to the city, among other new proposals. Students can opt to write one

Technology and Communications Law Practicum

This year-long course is designed to provide students with a practical overview of the work done by attorneys in the rapidly-changing field of technology and communications law, covering sectors including wireless, wireline, media, and satellite, as well as the emerging regulation of information communications and technology (ICT). Students will explore the role of attorneys in a variety of settings, including, but not limited to, private practice, government agencies such as the Federal Communications Commission (FCC), and trade organizations. This course will help students to advance their doctrinal and substantive knowledge of the administrative rulemaking process and the existing regulatory landscape for technology platforms and communications providers across the FCC, Federal Trade Commission (FTC) and other federal agencies, as well as the emerging role of the states; hone their problem solving, critical thinking, legal research and writing, and legal practice skills; and address professionalism, ethics and integrity in a specific

Telecommunications Regulation

A Communications Law Institute survey course encompassing the historical and contemporary treatment of telecommunications, including the Telecommunications Act of 1996. Topics include the history and development of common carriers in general (carriers by water, carriers by rail); the development of communications common carriers (carriers by wire, i.e., telephone and telegraph); the emergence of common carrier regulatory theories and policies; telecommunications legislation; government intervention in the regulatory process; and the emergence of competition. Special emphasis on U.S. v. A.T.&T.--the breakup of the Bell System. A major component of the course will be devoted to the regulatory and policy aspects relating to the merging of the technologies of information processing and telecommunications. Topics in this component will include the growth and composition of the information processing and telephone industries, their increasing interdependence, and the evolving regulatory environment regarding this phenomenon. This component will also

International Communications Law

News, opinions and messages are easily spread all over the world by social media. Messages usually arrive to several jurisdictions and are regulated by different laws, each one with quite different requirements. Today it is not enough to understand well the national legal system. For those dedicated to mass media, knowing the international ethical and legal standards is a significant career advantage. The purpose of this course is to provide participants with knowledge about the most influential international standards in communications. Special emphasis will be given throughout the course to the legal standards of the American, European and Inter-American human rights systems, including some mentions of the laws of the United Kingdom, France, Germany, Argentina, Venezuela, and other socialist countries. The course begins with the ethical and philosophical discussion of the means of communication: What are communications for? What must be protected? What guidelines do ethics provide us? That discussion about the goals, values and principles of the law will

Introduction to Communications Law

This course provides a basic survey of U.S. law and policy governing electronic communication. Special focus will be placed on issues arising from the sweeping technological and marketplace developments reshaping communications services and their regulation, including the growth of next-generation broadband networks and internet protocol services. The course is intended to provide a basic understanding of the legal, economic and technological forces that shape the communications marketplace, and to prepare students for both advanced course work and eventual practice in telecommunications law and policy and/or related fields.

Regulating the Internet and New Technologies

This course is intended to develop a deeper understanding of how to make quality regulatory choices in the face of dynamic technological change. The course will focus on efforts to regulate the Internet, but this will be used as a case study of how governments regulate new technology. The course will focus first on the question of why industries like communications are regulated at all and hone our understanding of when regulation is justified. Having established a basic foundation, the course will dive more deeply into the critical lenses through which any regulatory issue must be examined. These lenses include technology, economics, social objectives, politics and the law. With a strong command of these elements, the course will then apply these concepts to emerging issues involving the Internet: net neutrality, VOIP, applications, indecency, privacy, intellectual property, national security, and Internet governance.

Starting and Managing a Solo Law Practice

This course will provide hands-on instruction for establishing and maintaining a successful solo law practice. You will learn and apply the requirements needed to set up a law practice and the practical aspects of law firm management. Throughout the course, you will create Articles of Organization, a marketing plan, client letters and a cash flow budget for a law office. The course will also pay particular attention to the Rules of Professional Conduct and the requirements of the Attorney Grievance Commission. A discussion of why it is important to distinguish the law as a profession and not simply a business endeavor will conclude the seminar. This course will be graded on a pass/fail basis.

Components: Lecture

LAW 817A(1) Course ID:013808

Basic Principles of Law Firm Management

This course will provide an overview of the key financial and operational concepts that govern the practice of law in a contemporary law firm. Topics will include basic law firm economics; the evolution in law firm models (to include new categories of professionals and changing career paths); how firms can deliver services efficiently and effectively (to include pricing decisions and matter management); differing compensation models (particularly for associates); and selected risk management issues. In today's challenging economic climate, law firm leaders managing partners, executive committees and department chairs -- must understand these topics to manage and lead their firms effectively. While the course materials largely address practice in the context of a large firm, the concepts and principles presented generally apply to the organization and management of firms of any size.

Legislative Oversight of Intelligence

In the wake of 9/11 and 11/M (the terror attacks in Madrid on March 11 2004), many of those responsible for overseeing intelligence in both the legislative and executive branch are investigating their intelligence services and the ways political leaders handle intelligence. This course will examine oversight legislation in liberal democracies in the Americas, Europe, Africa and Asia focusing on agency design, the respective roles of the legislative and executive branches, and the possibility of independent review. Each seminar participant will be assigned (or select) a topic or a particular country and will lead a discussion and submit a paper on the assigned project. The course requires a qualifying course paper that fulfills one half of the upper-level writing requirement.

CCLS: General Practice Clinic

This clinical program provides students with the opportunity to experience the general practice of the law. Students handle the legal problems of low-income residents of the District of Columbia. The caseload of the clinic consists primarily of SSI/public benefits, special education, and family law matters. These cases offer the full range of client representation before administrative agencies on the local and federal level and the courts of the District of Columbia. The majority of the clinic's court cases are in the District of Columbia Superior Court and the District of Columbia Court of Appeals. Interns eligible for certification under the Student Practice Rule present their clients' cases in court. The program is designed to give students the opportunity to develop skills in time and office management, interviewing, counseling, negotiating, drafting, motions practice, trial techniques, and reflective lawyering.

In addition to the clinical work, a three-hour seminar is conducted once a week. The seminar includes

Telecommunications, Media and Human Rights

Telecommunications and the media can play an important role in protecting global human rights by facilitating people's access to information, fostering economic opportunity, and supporting establishment of democratic societies. In some nations, however, governmental practices such as media censorship, blocking access to the Internet, and use of telecommunications technology for surveillance and monitoring pose a serious threat to human rights. This course explores the relationship between telecommunications, media, and the protection of human rights around the globe. Class sessions will provide students with a basic understanding of both the capabilities of today's telecommunications technologies and various laws, policies and regulations that govern them. Students will have an opportunity to: (i) examine how telecommunications and media law can be shaped to benefit rather than oppress people; and (ii) consider examples of on-going national and international initiatives promoting use of telecommunications and media to protect human rights and advance

Legal Externship: Becoming a Lawyer

After consultation with the Coordinator of Clinical Programs or faculty instructor, students select a placement at which to do uncompensated legal work under the supervision of an attorney or faculty instructor. Placements must be approved by the Coordinator of Clinical Programs. Placements include federal, state, and local government agencies, judicial chambers, prosecutor's and defender's offices, law firms, corporate general counsel's offices, public interest organizations, and labor unions. The placement is combined with a seminar focused on enhancing learning from the externship, techniques for learning from experience useful after graduation, and issues in becoming a lawyer and joining the profession. For three credits, students are required to do 120 hours of uncompensated fieldwork; for four credits, 180 hours are required. One of the credits awarded is considered an academic credit and the remaining are clinical credits. Grading is on a Pass/Fail basis. Legal Externship: Becoming a Lawyer is a prerequisite for Legal Externship: Supervised

Problems in Telecommunication Law & Policy Capstone

This Communications Law Institute capstone course, limited to Institute students in their 3rd or 4th year, will examine a series of broadcasting, domestic and international common carrier, spectrum allocation, media definition, and technology planning issues. Students will prepare for each class by reading the assigned materials and generally taking responsibility for additional research to achieve a complete understanding of the major constituencies or coalitions involved and the policy choices presented. For each issue, an appropriate number of students also will prepare a written position statement advocating one particular constituency's legal interpretation/philosophy. These students will present this position in a panel discussion that at times may parallel a debate, moot court proceeding, FCC meeting, or international policy-making forum. After presentations by the students responsible for advocating particular positions, the entire class will have the opportunity to pose questions and additional complications.

CCLS: Immigrant & Refugee Advocacy Clinic

The Immigrant and Refugee Advocacy Clinic (IRAC) offers students the opportunity to advocate for immigrants and refugees in courts, administrative proceedings, and policy forums. Students, under the supervision of a clinic attorney, represent low income clients living in D.C., Maryland and Virginia who have experienced political persecution, violence or humanitarian crisis in their home countries. IRAC assists clients with immigration matters as well as related civil matters that affect or relate to the clients immigration status. Our clients include adults as well as unaccompanied minors. The caseload of the clinic consists primarily of immigration matters with involvement in related family law, employment and public benefits matters as needed. Students eligible for certification under the Student Practice Rule may have the opportunity to present their clients' cases in court and all students are eligible to advocate on behalf of clients with local and federal administrative agencies. Students also participate in limited legal assistance projects or policy reform

CCLS: Civil Practice Clinic

This clinical program provides students with the opportunity to experience the general practice of the law. Students handle the legal problems of low-income residents of the District of Columbia. The caseload of the clinic consists primarily of SSI/public benefits, special education, and family law matters. These cases offer the full range of client representation before administrative agencies on the local and federal level and the courts of the District of Columbia. The majority of the clinic's court cases are in the District of Columbia Superior Court and the District of Columbia Court of Appeals. Interns eligible for certification under the Student Practice Rule present their clients' cases in court. The program is designed to give students the opportunity to develop skills in time and office management, interviewing, counseling, negotiating, drafting, motions practice, trial techniques, and reflective lawyering.

In addition to the clinical work, a three-hour seminar is conducted once a week. The seminar includes

D.C. Law Students in Court: Criminal

D.C. Law Students in Court is a one-semester clinical program in trial advocacy which offers students the opportunity to develop skills as a criminal trial lawyer while representing indigent persons in the District of Columbia. Students choose to defend in Superior Court adults charged with misdemeanor offenses or juveniles charged with a range of offenses, excluding only the most serious felonies. Students are responsible for all aspects of litigation under the supervision of clinical instructors, including: interviewing clients and witnesses, conducting investigations, preparing pleadings, engaging in settlement negotiations or plea bargaining, and conducting all motions hearings and trials pursuant to the Superior Court's student practice rule. Students must have one day per week available for court appearances and plan to devote approximately 14 hours per week to the clinic, including attending a weekly seminar. Evidence and Criminal Procedure: The Investigative Process must be completed prior to participation in D.C. Law Students

Virginia Criminal Defense Clinic

The Virginia Criminal Defense Clinic is a four-credit, one-semester course that provides eligible students with a rigorous and intensive exposure to criminal defense practice through a combination of actual trial practice and classroom work. Students are assigned to work in a public defender's office, where they defend criminal cases in the trial or juvenile courts. After a short orientation, students are given a docket of cases for which they are responsible. Under the supervision of an assistant public defender, the students engage in investigation, plea bargain negotiations, motions practice, and criminal trials to the court. In addition, students have many opportunities to evaluate different styles of lawyering by watching criminal trial lawyers in action. To supplement and refine their practice experience, students attend a weekly class in which they discuss their pending cases and what they have encountered in court. Students must be eligible for certification under the relevant state or District of Columbia student practice rule.

Legal Internship: Becoming a Lawyer

After consultation with the Coordinator of Clinical Programs or faculty instructor, students select a placement at which to do uncompensated legal work under the supervision of an attorney or faculty instructor. Placements must be approved by the Coordinator of Clinical Programs. Placements include federal, state, and local government agencies, judicial chambers, prosecutor's and defender's offices, law firms, corporate general counsel's offices, public interest organizations, and labor unions. The placement is combined with a seminar focused on enhancing learning from the externship, techniques for learning from experience useful after graduation, and issues in becoming a lawyer and joining the profession. For three credits, students are required to do 120 hours of uncompensated fieldwork; for four credits, 180 hours are required. One of the credits awarded is considered an academic credit and the remaining are clinical credits. Grading is on a Pass/Fail basis. Directed Research

This course offers students the opportunity to conduct original, in-depth legal research and produce a quality, written analysis in an area of special interest under the close supervision of a faculty member. The course will fulfill one of the two upper-class writing requirements ("academic" writing requirement) if the student achieves a final grade of at least a B-. A faculty member who agrees to serve as the student's supervising instructor will provide guidance and feedback throughout the research and writing process. The student's final grade will reflect the supervising instructor's evaluation of the quality of the student's legal research and legal analysis, as well as the quality of his/her legal writing. Although the page number requirement is left to the supervising instructor's discretion, it is unlikely that a paper of acceptable quality could be completed in fewer than 40 pages. To register, a student must submit a statement of topic, signed by the supervising instructor, that describes the proposed research topic and establishes the

Public International Law Internship

The course is coordinated with pro bono activity of law school faculty members providing government-relations and legal support to the Roman Catholic Church in East Timor, particularly in coordination with Nobel Peace Prize-winning Bishop Bello. East Timor, currently under UN governance, is on the road to independence and is beginning to develop a set of relationship with foreign government, multilateral institutions (including the World Bank and IMF), and private, non-governmental actors in world affairs. The purpose of the internship is to train students in the broad range of legal issues governing economic and social development, including human rights, transitional justice, and the economic and political issues arising in structuring and implementing international assistance programs. These skills will be developed in the context of developing a lawyer-client relationship with the Church in East Timor, in which CUA students will act as counselors and advocates for Church interests in implementation of the UN mandate for East Timor. Students will have

Public Interest Advocacy: An Interdisciplinary Approach to Lawyering

This seminar adds a new dimension to the law school curriculum offerings on public policy. Using the firearms issue as a case study, the seminar focuses on corporate responsibility, legislative responses to public health issues, litigation as a tool for social change, and the role of lawyers advocating for public health and safety. Students use a public health problem-solving paradigm to analyze gun violence issues, develop workable interventions, set policy priorities, and evaluate their effectiveness. Candidates for the Master of Social Work degree in the National Catholic School of Social Service can also register for the seminar. The course provides additional in-depth analysis of core subject matter fields studied in the first year. In the context of third-party liability cases against gun manufacturers and dealers, students analyze negligence theory and theories of strict liability. In addition to providing the only law school classroom discussion of Second Amendment cases and theory, the seminar explores the constitutional limits on state and federal

SEC Student Honors Program

A clinical externship program under the supervision of Securities and Exchange Commission staff attorneys. Projects in the past have involved the drafting of proposed statutes and rules, investigation of industry and issues practices, and litigation of civil enforcement actions and administrative proceedings. Students attend a weekly seminar at the SEC covering different topics in securities law. Students are required to devote 180 hours during the semester of enrollment (including time spent in the weekly seminar) to fieldwork activities at the SEC. Students in this program are subject to the commission's conflict of interests rule. Completion of corporations, securities courses, and other related experience improves, but does not define, the student's chances of being selected by the SEC for this limited-enrollment program. There is an early application process for admission to this course. Contact the experiential learning office for details. Students should not submit an application to participate unless they are prepared to accept a placement if

CCLS: Families & the Law Clinic

The Families and the Law Clinic is designed to help students develop lawyering skills while focusing on a particular area of practice: domestic violence and family law. Whether a student is interested in family law issues or another area of law, the Families and the Law Clinic gives individualized instruction in and exposure to many aspects of legal practice. Among the skills developed in the clinic are oral argument, trial advocacy, legal interviewing, witness preparation, client counseling, case preparation, fact investigation, drafting motions and pleadings, and discovery practice.

Students will assist victims of domestic violence in obtaining temporary and permanent restraining orders in D.C. Superior Court. Students will also represent clients in general domestic relations litigation and advocate for clients before administrative agencies. Cases will address issues such as divorce, custody, visitation, property distribution, and child support.

Strategies & Preparation for the Bar Exam

This course is designed to prepare students to succeed on those parts of the bar examination that are common to all state bar examinations (except Louisiana). Specifically, the course will provide to participants intensive instruction on all aspects, including substantive law aspects, of the Multistate Bar Examination (MBE), and skills-based training in both MBE and essay writing strategies. In addition to this intensive instruction, participating students will take, and then be provided with the results of, at least two extensive diagnostic instruments designed to measure critical thinking skills, logical reasoning, and mastery of the legal doctrine tested on the MBE. Students will also have the opportunity to take a large number of carefully simulated MBE style questions online, and to receive extensive feedback on their performance on both the simulated MBE questions and also on practice essay answers. This is a pass/fail class. Credit will not be granted for both Strategies and Preparation for the Bar Exam and Virginia Bar Preparation & Procedure.

Criminal Prosecution Clinic

This clinical program is designed to promote the acquisition or improvement of basic lawyering skills essential to effective criminal practice in a prosecution setting, including familiarity with certain substantive legal principles, courtroom skills, the ability to learn from practical legal experience, the enhancement of problem-solving capabilities in a legal context, the recognition and principled resolution of ethical dilemmas arising in a criminal prosecution practice, and the development of an independent, critical perspective on the functioning of the criminal justice system. Students work with Assistant United States Attorneys or assistant states attorneys to prepare and try criminal cases in either the United States District Court or a state criminal court. Students are expected to devote sixteen hours each week to the prosecutor's office. A weekly, two-hour seminar is also required. The seminar is designed to prepare students to work effectively and ethically in the prosecutor's office. Students are expected to be familiar with the

D.C. Modern Prosecution Program

This experiential program is designed to introduce students to practices and trends in modern prosecution practice. A partnership with the District of Columbia Office of Attorney General (OAG), this program will teach each student how to be an effective prosecutor by allowing students to work directly with OAG prosecutors in handling select juvenile and adult criminal cases pending in the District of Columbia Superior Court. Students will be taught by OAG prosecutors how to work through juvenile and adult criminal cases. Students will be assigned specific cases for which they will be responsible to handle in conjunction with the lead prosecutors from beginning to the end of cases. The work will include conducting legal research, drafting motions, investigating and evaluating cases, working with witnesses, and developing compelling arguments to further the cases. The program, through pre-trial work and a classroom component, will focus on helping students acquire and develop basic pre-trial and trial lawyering skills essential to effective

Law Journal Writing

This course is open only to students who are producing a Writing Project for one of the school's law journals. These students must take this course if they choose to receive academic credit for their journal Writing Project or count it toward satisfaction of the upperclass writing requirement. Generally, students register for one credit for each of the two semesters; the credits are not awarded until the end of the second semester. During the first three weeks of the first semester, workshops will focus on writing skills such as organization, integrating research, transitions and headings, substantive footnoting, grammar and vocabulary appropriate to the journal audience, constructive use of editor and expert-reader feedback, and re-drafting. A writing specialist will schedule writing tutorials for students throughout the year as need dictates. Students must complete a journal portfolio that includes all drafts of the Writing Project, an Expert Reader's comments, the supervising editor's comments, the Editor-in-Chief's comments, and a

LAW 992(1) **Course ID:004009**

Law Journal Writing

To be eligible to register, a member must be certified by the faculty editor and the student editor of the Journal or Law Review. Enrollment is optional, but only those members who are certified may enroll in the course. Upon the recommendation of the student editor, the faculty editor will record a Pass/Fail grade for all successful members. As a general rule, students who register for this course will do so for one credit in each of the semesters. Grades will be entered at the end of each semester. The first semester credit will be awarded on the basis of research undertaken for the publication of case note or comment and may satisfy the school's writing requirement. The second semester credit will be awarded on the basis of fulfillment of normal responsibilities associated with the work of the Journal or Law Review.

Components: Practicum

Topics: Journal of Law and Technology, Law Review

LAW 993(2) **Course ID:005404**

Law Journal Editing

This course is mandatory for third and fourth year law journal members who supervise student Writing Projects (as determined by each editor-in-chief); it is optional for other third and fourth year journal members. During the first five weeks of the semester, the course will focus on topic selection, publication decisions, substantive editing, style editing, word editing, and professional working relationships. The instructor will provide editing exercises and workshops, and will lead discussions of classic law review articles and trends in legal scholarship. For the remainder of the semester, students will supervise and edit at least two student Writing Projects or will critique or edit at least two other manuscripts submitted to the law journal. During this time the instructor and a writing specialist will conduct editing tutorials, as the need arises, and will be available for student conferences. If a student has not completed the required editing assignments by the end of the first semester, work may continue into the second semester, in which case

Biomechanics

Mechanics of deformable bodies. Mechanical properties of biomaterials, bone, ligaments, and muscle. Uniaxial tension, compression, bending, and torsion applied to orthopedic biomechanics. Rigid body planar kinematics and dynamics, finite element techniques with applications to the biomechanics of walking, running, cycling, and other athletic activities. Formerly offered as 265. Prerequisite: ENGR 201.

Components: Lecture

Enrollment Requirements: ENGR 201

BE 315(3) Course ID:008356

Introduction to Biomedical Systems Analysis

This course introduces the techniques for analysis and modeling of biological and physiological systems. Students will derive mathematical models of the systems developed in the co-requisite physiology and apply them to generate simulation data. Time and frequency domain issues will be addressed. Students will use computer methods to solve problems in data analysis, system identification, and model validation.

Components: Lecture

Enrollment Requirements: ENGR 222

BE 398(3) Course ID:000327

Junior Biomechanical Design

Fundamentals of biomechanical design and design of mechanical elements for use in orthopedics and rehabilitation. Integration of static analysis, stress analysis, and failure theories with practical biomedical design constraints. Use of CAD, finite element techniques and interactive anthropometric computer graphics in ergonomics and rehabilitation. Group design homework projects in rehabilitation or other biomedical applications. Formerly offered as 298. Prerequisites: ENGR 106, 201; BE 202.

Components: Lecture

Enrollment Requirements: ENGR 106 & ENGR 201 & BE 202

BE 401(3) Course ID:008230

Biomaterials

Introduction to materials, their surface and mechanical properties. Biomaterials used in prosthetic devices, dentures, arterial grafts, orthopedic implants, and other medical applications. Biocompatibility, biomaterial/tissue interactions, and other factors involved in the design of implants, biosensors and neuroprostheses.

Components: Lecture

Enrollment Requirements: PHYS 215, PHYS 216, BIOL 105, BIOL 115, CHEM 103, and CHEM 113

BE 402(3) Course ID:017239

Advanced Biomechanics

This course provides students with advanced topics of traditional and contemporary biomechanics. Study will address mechanisms by which experimental and computational biomechanics investigate human and joint dynamics (kinetics and kinematics) and its association to ergonomics, orthopedic and sports biomechanics. Selected topics will include: biological materials, measurement techniques, advanced force system analysis, energy considerations, simulation using musculoskeletal models, optimization of inverse and forward dynamics, and applications of finite element techniques in biomechanics.

Components: Lecture

BE 405(3) Course ID:018639

Cancer

This course will provide a historical overview of cancer and a comprehensive description of cancer cell dynamics. The roles of extracellular matrix interactions in the cancer cell and tumor microenvironment will be highlighted as well as factors that influence cancer invasiveness, proliferation, and survival. The course will focus on cellular and molecular mechanisms that are being investigated to contribute to the development of more effective screening and treatment methods.

Biomedical Applications of Origami

Origami is a fascinating art form that occupies a unique niche at the intersection between art, biology and new ground breaking technologies that will revolutionize biomedical engineering. Origami has been successfully used to enhance technological developments in a number of areas including automobile safety (air bags), astronomy (foldable space telescope mirrors), and biomedical technology (stents). However, there are a host of other applications for origami in biomedical engineering that are currently being developed such as DNA origami, protein folding, and other processes that may be used to direct tissue and organ formation in tissue engineering applications. In this course, students will learn about origami design in biomedical engineering from a theoretical and practical viewpoint through fabricating bioactive paper, designing and constructing origami sculptures based on biological molecules (DNA, proteins) and tissue and organ systems, and exploring new avenues for origami in biomedical engineering.

Neural Control of Movement

This course examines the role of the nervous system in the production of voluntary movement in humans. Fundamental concepts and current issues will be incorporated into classroom discussions. Neural structures and pathways involved in motor control and feedback, including the cerebral cortex, basal ganglia, cerebellum, brainstem, spinal cord, muscle, sensory receptors, reflex arcs, and other control circuits will be introduced. The interaction of the motor control system with the environment in functional movements (e.g., reaching, locomotion, and balance) will be examined. Typical development and learning of motor control as well as atypical motor control, in the case of motor disorders, will be discussed.

Components: Lecture

Course Equivalents: BE 521

BE 422(3) Course ID:019235

Human Locomotion

Studies the biomechanics and neural control of human locomotion. Topics include kinematics, kinetics and muscle activity patterns of normal walking, measurement systems used in human motion analysis, and neurophysiological control of locomotion. Aims to provide students with the background required for work in the fields of musculoskeletal biomechanics, motor control, and rehabilitation.

Human Factors Engineering and Ergonomics

This in-person course presents fundamental concepts from multiple fields that are essential to practicing ergonomics and human factors engineering. The curriculum represents an interdisciplinary program that prepares students for practice in their emerging profession through a course sequence that emphasizes theory, practical applications, and research. The course includes core topics from cognitive psychology, industrial engineering, anatomy, kinesiology, and the physiology of work as applied to human abilities and limitations. The focus of ergonomics is the using the natural laws of work to improve fit between humans and their tools, tasks, and environments, while the focus of human factors is on improving human performance accounting for their cognitive and physical limitations. Pulling these pieces together ensures a comprehensive approach to human factors and ergonomics to both minimize injury and optimize worker performance. Students will evaluate different environments based on the concepts introduced in this course.

BE 438(3) Course ID:017957

Medical Device Usability

This in-person course presents fundamental concepts of medical device usability, leveraging insights from multiple disciplines that are essential to understanding user requirements, formulating usability goals, device evaluation, and recommendations for redesign. A portion of medical errors are those that arise from the use of technology in medical care. An increasing amount of technology and technological equipment is used in medical care and the technology becomes increasingly complex each year. Evaluating and predicting patient safety in medical device use is critical for developing interventions to reduce adverse events and medical errors either by redesigning the devices, or if redesign is not an option, by training the users on the identified trouble spots in the devices. The curriculum represents an interdisciplinary program that prepares students for practice in their emerging profession through a course sequence that emphasizes theory, practical applications, and research. The course includes core topics from biomedical engineering, industrial

Clinical Engineering - Medical Equipment Management

As clinical medicine has become increasingly dependent on more sophisticated technologies and the complex equipment associated with it, the clinical engineer has become the bridge between modern medicine and equally modern engineering. In this course, students will be exposed to the practice of clinical engineering, specifically medical equipment management within hospitals. The course will discuss the wide variety of medical devices used in clinical settings, the regulatory requirements to keep them safe, the challenges in keeping them running, the risk associated with them, the interaction with nurses and physicians to assure the equipment is used to its fullest capabilities and the complex world of Information systems and the integration of the devices. The class will include hands on examples demonstrating the skills necessary to support medical equipment within a hospital.

Engineering World Health - Study Abroad

Engineering World Health is a U.S.-based non-profit organization that engages the skills and passions of students and professionals from around the globe to improve healthcare delivery in low-income countries. In this study abroad course, student engineers use their unique abilities to install and repair life-saving equipment in resource-poor hospitals, and to train local technicians in order to build sustainable capacity. There are EWH programs in Asia, Africa, and Latin America to choose from. The program involves a home-stay with a local family and interactions with other student engineers placed by EWH in the community. Students work at the hospital each day as their "job". There are several fun outings planned through EWH as well. Students who engage in this program will already have taken a clinical engineering course as a prerequisite.

Telehealth, Telemedicine, and Telerehabilitation: Innovations in Healthcare Delivery

Faced with the challenges of our ever-changing healthcare environment, there is a tremendous need to improve the quality, accessibility, and cost of care. To meet this demand clinicians, researchers, engineers, and patients are working together to develop new innovative approaches to the ways in which people receive and deliver care. This course will offer an overview of the history, technology, underlying theories, and supporting research behind healthcare delivery innovations in areas such as telemedicine, mHealth, eHealth, home monitoring, and personal wellness. The objective of the course is to increase students' understanding and perspectives on how innovative approaches and technologies can be used to address real-world challenges and issues that face our healthcare system.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: BE 544

Room Requirements: DIGITAL PRESENTATION ROOM(1)

BE 446(3) Course ID:017376

Medical Device Design and Regulation

This course will consider the multiple steps in the development of a medical device and examine the regulatory processes applicable at each stage in the design, testing, manufacture and marketing of a medical device. The instructor and guest speakers will provide expert insight into device design planning, human factors engineering, device testing, quality systems requirements, marketing applications, device standards and guidance's, data integrity and interacting with FDA

Components: Lecture

BE 447(3) Course ID:017237

Biomedical Research Methods

This course provides students with basic and advanced tools for carrying out research at a graduate level. Specifically, the course discusses the essential aspects of the research process: formulation of hypotheses and project aims; literature review; biostatistics and hypothesis testing; data analyses and interpretation; research proposal writing. By using specific information and experimental data from previous research studies, students will obtain a basic understanding of each of these aspects, as well as the manner by which they are integrated in to a viable research program.

Components: Lecture

BE 456(3) Course ID:017943

Bone

Bone is a very important multifunctional material that provides structural support for our bodies in its role as a hard tissue. Bone also has a number of other physiological roles such as calcium, phosphate, and mineral storage. While the biological role of bone is important, bone has also served as a source of inspiration for a number of aspects of our society including tool development, archaeology, and art. This class will focus on key aspects of bone and how it contributes to the development of our society.

Components: Lecture

Course Equivalents: BE 556

Enrollment Requirements: Open to Biomedical Engineering undergraduate students

Room Requirements: DIGITAL PRESENTATION ROOM(1)

BE 458(3) Course ID:017236

Biomedical Engineering Innovation and Entrepreneurship

One of the main factors driving our society is the development of business opportunities. Entrepreneurial ventures are a key factor in promoting economic development through job production, but the skills which lead to success in these ventures are often neglected in traditional engineering education. This course will introduce students to entrepreneurial opportunities in biomedical engineering by looking at the history of entrepreneurship and current trends and needs. Students will have the opportunity to develop an idea from initial idea to design concept to business plan proposal

Engineering - Biomedical Engineering - Subject: Biomedical Engineering

BE 462(3) Course ID:017380

Bioethics

Advances in biomedical engineering technologies call for a more comprehensive understanding of ethics and the issues which arise when new technologies are discovered. This course will give students the opportunity to wrestle with the issues and help them to make the best informed decisions about the inherently complex questions and issues in bioethics that are needed to help us to make the best choices regarding how biomedical technologies are used to benefit the world.

Components: Lecture

Course Equivalents: BE 562

BE 463(3) Course ID:017387

Education Engineering - STEM

The K-16 Grand Challenge - Science, Technology, Engineering and Mathematics (STEM) Education is taking on an increasingly more important role in our education system worldwide due to the great advances, challenges, and fundamental questions which our world society faces as we learn more about our universe. This course will give students the opportunity to learn about STEM with a focus on engineering in a hands on and engaging fashion with an emphasis on how to help K-12 and undergraduate students learn the skill sets which lead to great engineering and problem solving skill sets most effectively. This course is appropriate for pre-service teachers, in service teachers, and engineering students with a interest in learning about teacher education.

Components: Lecture

Course Equivalents: BE 563

BE 471(3) Course ID:017390

Cardio-Pulmonary Biomechanics

This course is designed to be a first course covering the broad fields of cardiac and pulmonary biomechanics. The course begins with a review of anatomy and physiology of the human circulatory and respiratory systems before focusing on engineering approaches to the study of these respective areas of study. Topic areas will include: rheology of blood, mechanics of blood vessels and the airway, steady and unsteady flow models, cardiac and pulmonary bioinstrumentation, cardiac ejection mechanics, mechanics of ventilation, and applications of imaging techniques to study the cardiac and pulmonary systems. Prerequisite ENGR 331; Co-requisite BIOL 418.

Components: Lecture

Enrollment Requirements: requires prior enrollment in ENGR 331 and concurrent enrollment in BIOL 418

BE 481(3) Course ID:017235

Medical Imaging

Introduction to the physical principles, image reconstruction techniques, and advanced digital processing techniques used in modern medical imaging systems. Introduces common imaging modalities such as ultrasound, x-rays, computer-aided tomography (CAT), magnetic resonance imaging (MRI), and positron emission tomography (PET). Discussion of advanced computer methods for 2-D and 3-D image reconstruction as well as digital signal processing methods used in image recognition and enhancement of medical images. Fundamentals of medical imaging. Prerequisite:

Components: Lecture

Enrollment Requirements: MATH 221

Room Requirements: DIGITAL PRESENTATION ROOM(1)

BE 491(0) Course ID:008366

Seminar in Biomedical Engineering

Presentations by faculty, graduate students, and guest speakers in the areas related to Biomedical Engineering; Professional aspects of Biomedical Engineering presented through lectures and discussions by guest speakers.

Components: Seminar

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

BE 491B(0) Course ID:017832

Department Consent Required

BE Seminar Course B

Presentations by faculty, graduate students, and guest speakers in the areas related to Biomedical Engineering; Professional aspects of Biomedical Engineering presented through lectures and discussions by guest speakers.

Components: Seminar

Enrollment Requirements: Biomedical Engineering undergraduates only

Room Requirements: NO CLASSROOM NEEDED(1)

The Catholic Univ of America

BE Seminar C

Presentations by faculty, graduate students, and guest speakers in the areas related to Biomedical Engineering; Professional aspects of Biomedical Engineering presented through lectures and discussions by guest speakers.

Components: Seminar

Enrollment Requirements: Biomedical Engineering undergraduates only

Room Requirements: NO CLASSROOM NEEDED(1)

BE 494(3) Course ID:017058 Department Consent Required

Research Practicum

Students identify a BE faculty member who will mentor an independent research project based in their lab. The goals of the course are to allow the student to focus in-depth on a relevant topic of interest. Students will gain first-hand experience with laboratory skills and research methodologies, working directly with graduate students and other researchers. Typical projects may include design and performance of experiments, data collection and analysis. The final deliverable is a paper that summarizes the work performed.

Components: Independent Study

Room Requirements: NO CLASSROOM NEEDED(1)

BMED Internship Projects

Biomedical engineering internship projects. On-campus faculty supervised or off-campus student training, in which students are co-supervised by a professional at the supporting institution and a biomedical engineering faculty member. Includes a proposal, a mid-term report, and a final project presentation and report.

Components: Internship

BE 497(3) Course ID:000339

BMED Senior Design

Section 1

Primary component is student design projects in biomedical engineering, with projects focusing on nano- to micro-scale analyses involving cells, tissues, and biomaterials. Also, guest lectures and group discussions deal with patent searches and application, product liability, the role of technical standards, the FDA regulatory process for medical devices, research and development, and professionalism. This course will typically involve projects related to tissue engineering, optics, biomaterials, and microfluidics. Prerequisite: BE 398.

Components: Lecture

Enrollment Requirements: BE 398

BE 499(3) Course ID:000332

BMED Senior Project Lab

Laboratory experiments and design projects in areas of biomedical engineering. Topics may include measurements of cell deformability, adhesive strength, and parameters of cell migration. Primary component is student design projects and their presentation in class.

Components: Laboratory

BE 501(3) Course ID:000343

Biomaterials

Introduction to materials, their surface and mechanical properties. Biomaterials used in prosthetic devices, dentures, arterial grafts, orthopedic implants, and other medical applications. Biocompatibility, biomaterial/tissue interactions, and other factors involved in the design of implants.

Components: Lecture

Enrollment Requirements: PHYS 215, PHYS 216, BIOL 105, BIOL 115, CHEM 103, and CHEM 113

The Catholic Univ of America

BE 502(3) Course ID:010213 Department Consent Required
Advanced Biomechanics

This course provides students with advanced topics of traditional and contemporary biomechanics. Study will address mechanisms by which experimental and computational biomechanics investigate human and joint dynamics (kinetics and kinematics) and its association to ergonomics, orthopedic and sports biomechanics. Selected topics will include: biological materials, measurement techniques, advanced force system analysis, energy considerations, simulation using musculoskeletal models, optimization of inverse and forward dynamics, and applications of finite element techniques in biomechanics.

Components: Lecture
Room Requirements: DIGITAL PRESENTATION ROOM(1)

BE 504(3) Course ID:012770
Biomechanics of Hard Tissue

The inter-relationships among nanoscale and macroscale structural features and functional properties will be covered from a mechanical properties of materials and fracture mechanics perspective. Topics that will be covered in this course include atomic bonding, mechanical properties characterization tools and techniques for various length scales, and case studies involving unique biological hard tissues and biomineralized structures such as bone, teeth, nacre, arthropod shell, and hard organic materials such as wood and nut shells.

Components: Lecture

BE 505(3) Course ID:018638
Cancer

This course will provide a historical overview of cancer and a comprehensive description of cancer cell dynamics. The roles of extracellular matrix interactions in the cancer cell and tumor microenvironment will be highlighted as well as factors that influence cancer invasiveness, proliferation, and survival. The course will focus on cellular and molecular mechanisms that are being investigated to contribute to the development of more effective screening and treatment methods.

Components: Lecture(In Person)
Course Equivalents: BE 405
Enrollment Requirements: open to Biomedical Engineering students only
Room Requirements: DIGITAL PRESENTATION ROOM(1)

BE 506(3) Course ID:019290
Design and Fabrication of Engineering Prototypes

This course will cover CNC machining, 3D printing and laser machining.

Components: Lecture(In Person)
Course Equivalents: BE 406
Enrollment Requirements: open to Biomedical Engineering students only
Room Requirements: DIGITAL PRESENTATION ROOM(1)

BE 508(3) Course ID:014600 Department Consent Required
Biomedical Applications of Origami

Origami is a fascinating art form that occupies a unique niche at the intersection between art, biology and new ground breaking technologies that will revolutionize biomedical engineering. Origami has been successfully used to enhance technological developments in a number of areas including automobile safety (air bags), astronomy (foldable space telescope mirrors), and biomedical technology (stents). However, there are a host of other applications for origami in biomedical engineering that are currently being developed such as DNA origami, protein folding, and other processes that may be used to direct tissue and organ formation in tissue engineering applications. In this course, students will learn about origami design in biomedical engineering from a theoretical and practical viewpoint through fabricating bioactive paper, designing and constructing origami sculptures based on biological molecules (DNA, proteins) and tissue and organ systems, and exploring new avenues for origami in biomedical engineering.

Components: Lecture
Course Equivalents: BE 408

BE 513(3) Course ID:000347
Biomedical Instrumentation I

Introduces the fundamental principles of biomedical instrumentation and their application to real-world devices. In a combination of laboratory and classroom exercises, students design, construct, and test biomedical instruments from the ground level up. Emphasis on use of computers and digital signal processing techniques in biomedical instruments. Prerequisites: Engr 321, 355 or equivalent.

Components: Lecture
Course Equivalents: BE 413

The Catholic Univ of America
Course Catalog

Engineering - Biomedical Engineering - Subject: Biomedical Engineering

BE 514(3) Course ID:011610

Introduction to Biomedical Optics

This course introduces the fundamental principles of biomedical optics and their applications to real-world devices. In a combination of laboratory and classroom exercises, student will design optical systems for evaluation of optical properties of biological media as well as learn computational methods to simulate light transport into such media.

Components: Lecture

Course Equivalents: BE 414

BE 515(3) Course ID:000351

Biomedical Signal Processing

Provides a comprehensive treatment of signal processing techniques used in biomedical applications. Discusses fundamentals of digital signals and systems; covers classical spectral estimation techniques, including discrete Fourier transform, periodogram and Blackman-Tukey method, and cepstrum method. Covers adaptive filters such as the adaptive noise cancelling method and adaptive zero tracking; discusses modern signal processing methods such as autoregressive (AR), autoregressive moving average (ARMA), the Prony method, and neural networks and wavelets. Introduces and explores numerous biomedical examples.

Components: Lecture

BE 516(3) Course ID:000355

Bioelectromagnetics

Introduces use of linear systems analysis and control techniques in the field of biomedical engineering. Aims to provide students with the opportunity to use systems analysis techniques to enhance their understanding of biological systems and to use control systems engineering techniques to design control systems for medical devices. Extensively uses computer simulation to understand system causality, to perform sensitivity analysis, and to implement control system tools. Prerequisites: ENGR 222;BE 315.

Components: Lecture

BE 517(3) Course ID:017170 Department Consent Required

Advanced Biomedical Engineering Optics

This course provides an in-depth look at advanced optical and microscopy techniques used in biomedical research. Six learning modules combine extensive recent literature reviews from leading journals, lectures on theory, and practical labs where students will manipulate the instruments, collect, computationally process, and analyze data, and demonstrate understanding through writing and presenting in the style of technical white papers. Potential topics include: polarimetry, arthritis and epithelial dysplasia; digital holographic microscopy and cancer; small animal imaging and preclinical research; plasmonic sensors and nanoparticle tracking; and endogenous cell and tissue optical signals.

Components: Lecture

Course Equivalents: BE 417

Enrollment Requirements: PHYS 216 & CSC 113

Room Requirements: NO CLASSROOM NEEDED(1)

BE 518(3) Course ID:012771

Biomedical Sensors

This course introduces to various types of biomedical sensors including sensors measuring pressure, flow, motion, temperature, heat flow, evaporation, biopotential, biomagnetism, and chemical quantities. Underlying measurement principles and design will be emphasized. Various practical applications will be introduced.

Components: Lecture

BE 520(3) Course ID:016666 Department Consent Required

Medical Robotics

Students will become familiar with recent advances in medical robotics and their application in medical field. Student will learn how to design a simple medical robot using Computer-Aided Design (CAD) software. Students will learn how to derive the kinematic transformations for a given robot. Students will learn about dynamic equations for a robot. They will be able to develop a virtual model of a given medical robot. They will learn how to design, analyze, and implement different robot controllers on virtual models and actual robots.

Components: Lecture

Enrollment Requirements: BE 202, BE 398, and CSC 113

The Catholic Univ of America
Course Catalog

Engineering - Biomedical Engineering - Subject: Biomedical Engineering

BE 521(3) Course ID:006525

Neural Control of Movement

This course examines the role of the nervous system in the production of voluntary movement in humans. Fundamental concepts and current issues will be incorporated into classroom discussions. Neural structures and pathways involved in motor control and feedback, including the cerebral cortex, basal ganglia, cerebellum, brainstem, spinal cord, muscle, sensory receptors, reflex arcs, and other control circuits will be introduced. The interaction of the motor control system with the environment in functional movements (e.g., reaching, locomotion, and balance) will be examined. Typical development and learning of motor control as well as atypical motor control, in the case of motor disorders, will be discussed.

Components: Lecture

Course Equivalents: BE 421

BE 522(3) Course ID:000365

Human Locomotion

Studies the biomechanics and neural control of human locomotion. Topics include kinematics, kinetics and muscle activity patterns of normal walking, measurement systems used in human motion analysis, and neurophysiological control of locomotion. Aims to provide students with the background required for work in the fields of musculoskeletal biomechanics, motor control, and rehabilitation.

Components: Lecture

Course Equivalents: BE 422

BE 523(3) Course ID:008358

Biomechanical Assessment of Locomotion Disorders

This is an introductory course in the application of biomechanical techniques to the assessment of disorders of human movement. This course is intended to provide a foundation for engineers working in a gait laboratory and similar clinical environments, enabling them to interpret and discuss biomechanical test results with clinical personnel. Prerequisites: BIOL 518 and BE 522.

Components: Lecture

BE 524(3) Course ID:008359 Department Consent Required

Prosthetics & Orthotics

This is an introductory course in the theory and practice of prosthetics (artificial limbs), and orthotics (braces and splints). It is designed for Biomedical Engineering graduates working in the field of human locomotion.

Components: Lecture

Course Equivalents: BE 424

BE 525(3) Course ID:000367

Biomedical Heat and Mass Transfer

Analysis of heat and mass transfer, with examples chosen from the biomedical engineering field. Topics include review of the first law of thermodynamics; one-dimensional steady state and transient heat conduction; steady state and transient mass diffusion through a stationary medium; transfer of momentum, heat, and mass transfer in engineering problems; radiation from black surfaces; radiation heat transfer between black surfaces; elements of heat and mass exchangers design.

Components: Lecture

BE 526(3) Course ID:000368

Biomedical Transfer Processes

The purpose of the course is to provide the fundamentals of transport processes in the human body and principles of design of artificial kidney and heart-lung devices. Among topics covered are mass balances and physiological variables of the human body; physical and rheological properties of blood; dynamics of the circulatory system; heat production and transfer; modeling the body as biological membranes, especially the human kidneys. Artificial kidney devices; human lungs and artificial heart-lung devices, blood pumping devices.

Components: Lecture

Course Equivalents: BE 426

The Catholic Univ of America
Course Catalog

Engineering - Biomedical Engineering - Subject: Biomedical Engineering

BE 527(3) Course ID:000370

Cell and Tissue Engineering

The structure and function of cells, basic principles involved in cell culture, and safety rules in handling cells. Experimental methods used to investigate the cell deformability, adherence strength, and cell motility. Particular emphasis on laminar flow assays and micromanipulation methods. Discussion of recently published papers on tissue engineering.

Components: Lecture

BE 528(3) Course ID:000373 Department Consent Required

Rehabilitation Engineering

This course explores the principles and practices of rehabilitation engineering and the role of engineers in the delivery of health care to disabled individuals. Discussions of approaches to diagnosis and treatment of disorders involving motor function will be included as will an analysis of the design of devices and systems to aid the disabled. Disabilities as a result of stroke, spinal cord disorders, cerebral palsy and Parkinson's disease will be discussed. Examples of technologies examined include devices aiding mobility, limb prosthetics, robotic aids, functional electrical stimulation, and interfaces to microcomputers.

Components: Lecture

Course Equivalents: BE 428

BE 529(3) Course ID:010212 Department Consent Required

Clinical Engineering Facilities & Regulatory

This is an introductory course to clinical engineering which is a speciality within biomedical engineering. Students will learn to apply engineering techniques to patient care and hospital-based research environments. Specifically, the course discusses various aspects of clinical engineering in topics such as medical and research equipment planning, technology assessment, hospital organization and administrative functions, facilities and construction operations, regulatory practices, project and staff management, and other topics. The class will include hands on examples demonstrating the skills used to support hospital operations.

Prerequisites: Junior or Senior status

Components: Lecture

BE 530(3) Course ID:000375

Human Computer Interfaces

Principles underlying the design, evaluation, and implementation of interactive computing systems, as well as the major research topics associated with such systems. Technical breakdown of interfaces that are multimedia-based front ends to complex networks. Introduces graphical user interfaces, with related physiological and human factors issues. Design of interfaces using virtual reality, World Wide Web, and advanced interfacing devices such as voice and eye movement activation.

Components: Lecture

BE 531(3) Course ID:000404

Neural Stimulation in Rehabilitation

Aims to provide students with an understanding of electrical stimulation techniques for medical rehabilitation that are currently in use and/or development. Focus will be on rehabilitation engineering aspects of replacing nervous system function with electrical stimulation. Covers several medical applications of electrical stimulation, but emphasis is on restoration of motor function.

Components: Lecture

BE 532(3) Course ID:008748

Sensory Motor Integration

This course integrates engineering principles with physiological systems. A systems approach will be used to study regulation of posture, balance and movement control. The feedforward and feedback control methods used by the central nervous system to regulate motor performance are discussed. Current theories are presented on acquisition of skill and adaptation to perturbations. Use of robotics will be presented as the primary method to perform perturbation and motor learning experiments. Course instruction will be from both text and literature surveys. As a final project, each student will develop a relevant hypothesis, perform experiments using available lab facilities, analyze data and present results.

Required courses:

BE 533(3) Course ID:013026 Department Consent Required

Human Factors Engineering and Ergonomics

This course explores the principles and practices of human factors and ergonomics. The use of ergonomic principles to recognize, evaluate, and control work place conditions that cause or contribute to musculoskeletal and nerve disorders will be covered, and the methods available to reduce musculoskeletal injuries in the workplace will be introduced. Topics include: structure and function of musculoskeletal system, human biomechanical models, task evaluation, consideration in workplace design and device design. This course will emphasize case studies and exercises that require biomechanical/ergonomic analysis and development of ergonomic improvements for industrial applications.

Components: Lecture

Course Equivalents: BE 433

BE 534(3) Course ID:015814 Department Consent Required

Experimental techniques in motor neuroscience

The course introduces experimental methods used in the study of human motor control. Some techniques covered will include electroencephalography, electromyography, sensory stimulation, movement analysis (kinematics and kinetics), and transcranial magnetic stimulation. The course will include lectures, the study and discussion of published studies of motor control, the development of a research project investigating the sensorimotor system, and the collection and analysis of data using techniques introduced in class. Special focus will be placed on the use of experimental techniques to probe the motor system in the case of movement disorders.

Components: Lecture

BE 535(3) Course ID:000413

Optimization of Human Performance

Principles of optimum design, as related to human performance and the human-technology interface. Overview of musculoskeletal mechanics, with emphasis on human-device interaction for postural and propulsive tasks. Neurobehavioral measures of human performance, with emphasis on goal-directed neuromotor tracking tasks. Use of sensitivity analysis; optimal control theory applied to simple goal-directed movements. Techniques in numerical optimization, especially computer-aided optimization tools. Projects related to computer-aided design of assistive technology, interactive interface devices, performance evaluation technology, or human-powered vehicle interface. Prerequisite: BE 516 or similar control systems course.

Components: Lecture

Enrollment Requirements: BE 516

BE 536(3) Course ID:006264

Mechanics of Dance and Sports

An expose' of rigid body mechanics and its application to the study of human movement. The laws of motion and the extent to which they account for human and animal motion. Human body idealized as a collection of rigid bodies, connected by joints in a treelike configuration. Insights into mechanical aspects of leaps, turns, and other complex movements observed in ballet, diving, and gymnastics. Discussion of muscle force distribution during workout exercises such as pullups, situps, and pushups. Inclusion of examples where motion is determined by simulation software such as Autolev3 and Working Model 3D.

Components: Lecture

BE 537(3) Course ID:016864 Department Consent Required

Neural Tissue Engineering

This course explores tissue engineering and regenerative medicine in the context of the central nervous system. The course begins with a brief review of anatomy and physiology of the central nervous system to aid in understanding the challenges to tissue repair of the brain and spinal cord. The majority of the course will cover material and biological approaches to restoring natural function. Topics that will be covered include drug delivery from cells and materials and induced pluripotent stem cells. There will be discussion of recently published papers, case studies, and group projects that focus on applying the concepts learned in the course. Drug and Gene Delivery This course explores various methods to deliver therapeutic drugs and modify gene expression. The course begins with a review of the anatomy and physiology of tissues that can be barriers to delivery of therapeutic molecules, including the kidney, liver, blood brain barrier, and tumors. The rest of the course will cover pharmacokinetics and pharmacodynamics, small molecules, viral and non-viral

Medical Device Usability

This in-person course presents fundamental concepts of medical device usability, leveraging insights from multiple disciplines that are essential to understanding user requirements, formulating usability goals, device evaluation, and recommendations for redesign. A portion of medical errors are those that arise from the use of technology in medical care. An increasing amount of technology and technological equipment is used in medical care and the technology becomes increasingly complex each year. Evaluating and predicting patient safety in medical device use is critical for developing interventions to reduce adverse events and medical errors either by redesigning the devices, or if redesign is not an option, by training the users on the identified trouble spots in the devices. The curriculum represents an interdisciplinary program that prepares students for practice in their emerging profession through a course sequence that emphasizes theory, practical applications, and research. The course includes core topics from biomedical engineering, industrial

Clinical Engineering - Medical Equipment Management

As clinical medicine has become increasingly dependent on more sophisticated technologies and the complex equipment associated with it, the clinical engineer has become the bridge between modern medicine and equally modern engineering. In this course, students will be exposed to the practice of clinical engineering, specifically medical equipment management within hospitals. The course will discuss the wide variety of medical devices used in clinical settings, the regulatory requirements to keep them safe, the challenges in keeping them running, the risk associated with them, the interaction with nurses and physicians to assure the equipment is used to its fullest capabilities and the complex world of Information systems and the integration of the devices. The class will include hands on examples demonstrating the skills necessary to support medical equipment within a hospital.

Components: Lecture

BE 540(1) Course ID:006265

Home Care Technologies Seminar

A once-a-week seminar featuring guest lecturers and readings/discussions on alternate weeks. Each student will be required to write a short "breadth" paper and presentation.

Components: Lecture

BE 541(3) Course ID:000417

Home Care Technologies I: Foundations

Introduction to the broad foundations related to home health care and roles of technology. Begins with a review of the current state of home care technologies, followed by learning modules: clinical health assessment tools, geriatrics and the aging process, telecommunications and information technologies, human factors design, and health policy related to home care and disability rights.

Components: Lecture

Course Equivalents: BE 441

BE 542(3) Course ID:000421

Home Care Technologies II:Product Evaluation

Focuses on the multi-faceted evaluation process and provides students with tools for evaluating home health care technologies. Students are exposed to the underlying science and different aspects of product evaluation for key areas, with modules on biosensors and noninvasive technologies, objective human performance evaluation tools, and human usability and human error. Actual off-the-shelf products are evaluated, with the final project being team-based evaluations. Evaluation techniques include disassembly, technical engineering evaluation, user testing/usability evaluation, safety and risk management, economic considerations.

Prerequisite BE 541 or consent of the instructor.

Components: Lecture

Enrollment Requirements: Requires concurrent enrollment in BE 515

Medical Reliability Engineering

Reliability is defined as the probability that an item or device will perform a required function without failure under stated conditions for a stated period of time. Reliability engineering is performed throughout the entire life cycle of a system, including development, test, production and operation.

In this introductory course, we will explore such topics as: problem solving strategies, Failure Mode and Effects Analysis (FMEA); Failure Mode Effects and Criticality Analysis (FMECA); Reliability simulation modeling; Validation and Verification Analysis; Thermal analysis; Fault Tree analysis; Taguchi Method; Ishikawa Method; Human reliability; Built-in test (BIT); Maintainability, Maintenance and Availability Analysis's. Reliability Software will also be

Nano-Medicine

Physicist Richard Feynman in his 1959 presentation There's Plenty of Room at the Bottom, described the possibility of synthesis via direct manipulation of atoms. Inspired by Feynman's ideas, K. Eric Drexler used the term nanotechnology in his 1986 dissertation, Engines of Creation: The Coming Era of Nanotechnology, which proposed the idea of a nanoscale assembler which would be able to build a copy of itself and of other items with atomic control. For centuries scientists have been inspired to design the Philosopher's Stone, which produces the Elixir of Life; useful for rejuvenation and possibly for achieving immortality. There is an exciting possibility that through the use of nanomedicine via nanotechnology we are on the fringes of the Elixir of Life. Nanomedicine is an interdisciplinary science, which combines knowledge from Biology, Chemistry, Engineering, Physics and Medicine to treat conditions and diseases of the human body on an atomic and molecular level. Nanomedicine has many applications, from drug delivery to individual cell repair, to

Components: Lecture

BE 556(3) Course ID:016636

BONE

Bone is a very important multifunctional material that provides structural support for our bodies in its role as a hard tissue. Bone also has a number of other physiological roles such as calcium, phosphate, and mineral storage. While the biological role of bone is important, bone has also served as a source of inspiration for a number of aspects of our society including tool development, archaeology, and art. This class will focus on key aspects of bone and how it contributes to the development of our society.

Biomedical Engineering Innovation and Entrepreneurship

One of the main factors driving our society is the development of business opportunities. Entrepreneurial ventures are a key factor in promoting economic development through job production, but the skills which lead to success in these ventures are often neglected in traditional engineering education. This course will introduce students to entrepreneurial opportunities in biomedical engineering by looking at the history of entrepreneurship and current trends and needs. Students will have the opportunity to develop an idea from initial idea to design concept to business plan proposal.

Components: Lecture

BE 560(3) Course ID:015515 Department Consent Required

Computational Models of Complex Biomedical Systems

This course explores the cross-disciplinary field of complex systems, which are pervasive in biological and biomedical engineering topics at all scales of resolution, from molecules to society. It combines a review of the scientific literature with hands-on, basic-level programming and simulation of models (in NetLogo and MATLAB). We will touch upon some of the most important topics on both sides of the science/engineering aisle: "natural" biomedical complex systems (such as gene regulation, multicellular development, neural networks, or epidemiology) and "artificial" engineered complex systems (such as synthetic biology, tissue engineering, brain-machine interfaces, or scientific data mining).

Components: Lecture

BE 562(3) Course ID:017379 Department Consent Required

Bioethics

Advances in biomedical engineering technologies call for a more comprehensive understanding of ethics and the issues which arise when new technologies are discovered. This course will give students the opportunity to wrestle with the issues and help them to make the best informed decisions about the inherently complex questions and issues in bioethics that are needed to help us to make the best choices regarding how biomedical technologies are used to benefit the world.

Education Engineering - STEM

The K-16 Grand Challenge - Science, Technology, Engineering and Mathematics (STEM) Education is taking on an increasingly more important role in our education system worldwide due to the great advances, challenges, and fundamental questions which our world society faces as we learn more about our universe. This course will give students the opportunity to learn about STEM with a focus on engineering in a hands on and engaging fashion with an emphasis on how to help K-12 and undergraduate students learn the skill sets which lead to great engineering and problem solving skill sets most effectively. This course is appropriate for pre-service teachers, in service teachers, and engineering students with a interest in learning about teacher education.

Components: Lecture

Course Equivalent: BE 463

BE 571(3) Course ID:007209

Cardio-Pulmonary Biomechanics

A first course covering the broad fields of cardiac and pulmonary biomechanics. Review of anatomy and physiology of human circulatory and respiratory systems focusing mainly on engineering approaches to these systems. Other topics include :blood rheology, mechanics of blood vessels and the airway, steady and unsteady flow models, cardiac and pulmonary bioinstrumentation, cardiac ejection mechanics, mechanics of ventilation, and applications of imaging techniques to the study of the cardiac and pulmonary systems. Prerequisite ENGR 331; Co-requisite BIOL 518.

Components: Lecture

BE 581(3) Course ID:006266

Medical Imaging

Introduction to the physical principles, image reconstruction techniques, and advanced digital processing techniques used in modern medical imaging systems. Introduces common imaging modalities such as ultrasound, x-rays, computer-aided tomography (CAT), magnetic resonance imaging (MRI), and positron emission tomography (PET). Discussion of advanced computer methods for 2-D and 3-D image reconstruction as well as digital signal processing methods used in image recognition and enhancement of medical images. Fundamentals of medical imaging. Prerequisite: MATH 221.

Components: Lecture

BE 586(3) Course ID:014602 Department Consent Required

Ultrasound Imaging & Therapy

This course is intended to teach the basic concepts of ultrasound, used for both diagnostic imaging and therapy. Starting with the basic wave equations and the physical and acoustic parameters that determine wave propagation, interactions with biological tissues will then be covered, leading to the basic principles of ultrasound imaging and the devices involved for their application. The biological effects of ultrasound will then be discussed in relation to the mechanisms by which they occur. These will be presented in context to specific therapeutic ultrasound applications, such as healing, ablation, thrombolysis, and the mediation of drug and gene delivery. Finally, image guided ultrasound devices will be presented, including special topics such as remote elastography, real-time monitoring of therapy, and the use of ultrasound contrast agents for both imaging and drug delivery applications.

Components: Lecture

BE 595(3) Course ID:009817

BMED Grad Internship Projects

Lecture. Biomedical internship projects. On-campus supervised or off-campus student training, in which students are co-supervised by a professional at the supporting institution and a biomedical engineering faculty member. Includes a proposal, a mid-term report, and a final project presentation and report.

Components: Internship

BE 617(3) Course ID:008365

Soft Computing-BioMonitoring and Bio-Control

Foundations of soft computing (fuzzy expert systems, artificial neural networks, genetic algorithms). Use of intelligent tools for monitoring physiological signals, including automated recognition and alerting systems. Principles of fuzzy control systems for modeling hierarchical neurocontrol systems and designing smart interactive interfaces.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Biomedical Engineering - Subject: Biomedical Engineering

BE 621(3) Course ID:008357

Advanced Topics in Neural Control

This course provides an in depth analysis of current computational neuroscience techniques as applied to vestibular and oculomotor physiology. Topics will include basic neurophysiology, clinical studies, and vestibular rehabilitation. Students will develop computer simulations of neural control models and develop research proposals for future studies.

Components: Lecture

BE 651(3) Course ID:000439

Computations in Genetic Engineering

Discusses the theory and practice of molecular database searching and sequence alignment in genetic engineering. Covers databases and Internet access, sequence homology searching, and multiple alignment and sequence motif analysis. Practical classes include analysis of software setup and usage, sequence analysis over the Internet, and the interpretation of the results of database searches and sequence alignments.

Components: Lecture

BE 683(3) Course ID:013027 Department Consent Required

Principles and Biomedical Applications of Fluorescence

Fluorescence techniques have been widely used in biology, medicine and pharmaceuticals. Especially, fluorescence techniques have become powerful tools for researches in tissue molecular imaging for disease diagnosis and monitoring, biomedical sensing, clinical chemistry, environmental monitoring, and DNA sequencing. In this course, the principles of fluorescence, typical fluorophores and instruments (both in time-domain and frequency-domain) will be introduced. The modern fluorescence techniques will be demonstrated in laboratory, including measuring fluorescence lifetime at nanosecond order and molecular distance at nanometer distance.

Components: Lecture

BE 721(3) Course ID:006267

Advanced Neuro-Mechanical Modeling

Approaches for modeling muscle mechanics, skeletal structures, spinal neural networks. Neuromuscular models that include sensory feedback. Simulations of simple models of human eye, eye-head, and elbow systems for a variety of movement tasks. Use of inverse and forward dynamic simulations to investigate human movement strategies. Addressing redundancy in larger-scale elastostatic models of the head and shoulder systems. Use of sensitivity analysis and optimization as tools for understanding goal-directed movement strategies. Includes modeling project. Prerequisites: BE 516; 535 or 621.

Components: Lecture

Enrollment Requirements: Requires prior enrollment BE 516 & one of the following: BE 522 or BE 535

BE 728(3) Course ID:000062

Advanced Topics in Rehabilitation Engineering

In-depth engineering and service delivery analysis of four key topics in rehabilitation engineering, emphasizing the human-technology interface. Possible topic areas include therapeutic intervention strategies and the provision of assistive technology for a specific population of persons with disabilities (e.g., stroke); passive- and active-assist arm orthoses; rehabilitation robotics; virtual reality in rehabilitation; wheelchair and seating technology; and international rehabilitation. Includes eight presentations and short reports by each student, five short exams, and a final project. Prerequisite: BE 528 or equivalent.

Components: Lecture

Enrollment Requirements: BE 528

BE 729(3) Course ID:000441

Advanced Topics in Biomaterials

Provides an overview of the physical and chemical properties of the materials used in health care and biotechnology. Topics include crystal structures of metallic and ceramic alloys used in dental and orthopedic implants, surface properties such as chemical inertness, surface roughness and adhesivity, and factors that contribute to implant failure.

Components: Lecture

BE 733(3) Course ID:000446

Mathematical Modeling in Biology

Provides an overview of mathematical models of biological systems. Sliding filament theory of muscle contraction, mathematical models of cell migration and nerve signal propagation, regulation of cell division, etc. Mathematical models of the immune system, circulatory system, and other biological systems involving population dynamics and heterogeneity. Prerequisites: ENGR 222 ; BE 516, 621 or equivalent.

Components: Lecture

Course Catalog

Engineering - Biomedical Engineering - Subject: Biomedical Engineering

BE 734(3)

Course ID:006268

Molecular Dynamics and Simulation

Provides hands-on experience in the use of computational graphics and simulation in molecular dynamics such as the deformation of binding sites during bimolecular interactions. Emphasis is on rational design principles for drugs used in medicine.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 101(2) Course ID:008887

Elementary Construction Surveying

Introduction to the elements of the discipline of surveying, with concentration on applications for the construction process. Included are topics on: the background and history of the surveying profession and how it interacts with other disciplines; measurement concepts, error consideration, accuracy, precision, and significant figures; methods for distance measuring; elevation measurements and leveling; measuring angles, bearings and azimuths with transits; traverses and traverse computations; basic topography and mapping; a field trip to a major construction project to review surveying procedures; and a team project for completion of a traverse and an as-built survey for an existing building.

Components: Lecture

CEE 102(3) Course ID:001040

Introduction to Earth Science

The course is intended for all students, regardless of major. It introduces fundamental concepts of the processes that shape our earth. From volcanoes and earthquakes to the factors that control our weather, this course offers a solid approach to basic geology, hydrology, and climatology without requiring prior knowledge of physical science and mathematics.

Components: Lecture

CEE 110(3) Course ID:001042

Computers in Construction

Study of the key phases of a construction project, from feasibility studies to facility operations; major emphasis on use of state-of-the-art commercial computer software systems in support of estimation and scheduling functions. Basics of network scheduling concepts, using both activity-on-arrow and precedence diagrams. Basics of the construction estimating processes both by hand and with the latest computerized systems.

Components: Lecture

CEE 200(1) Course ID:018698

Applied Steel Design and Fabrication

The applied steel class is the first introduction to civil engineering and will include hands-on applications. The course will start with shop safety with discussion on hand tools, power tools, and welding. The class will also include the basics of steel design with AutoCAD and creating engineering drawings. The class will conclude with a steel fabrication project.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 201(3) Course ID:019119

Ancient Waters

Ancient waters will focus on the development of human society and its interactions with water. The course will start with a broad overview of global water use with specific implementations throughout world history, including the Tigris-Euphrates river system, the Nile River in Egypt, ancient hydrological infrastructure, and human migration for water resources. The course will then narrow in scope to concentrate on Roman water infrastructure including aqueducts, distribution, and sanitation. The class will explore Rome to find local examples throughout the entire 3-week session. Finally, the course will look at the interface between modern society and ancient infrastructure.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 301(3) Course ID:001044

Construction Systems and Planning

Presentation of the entire process of bringing a constructed facility on line. Construction Documents: owner-contractor, owner-architect, owner-CM, and standard subcontract agreements, plans and specifications, shop drawings, general and special conditions, addenda and modifications, types of contracts, bidding and award concepts, change orders, and other key documents. Building Component Systems: foundation, structural, roofing, mechanical, electrical, barrier and fire control systems. Field trips to local construction sites.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 302(3) Course ID:001048

Construction Management Systems and Economics

Engineering and management techniques and systems used in civil engineering projects. Methods for project estimating, cost control, and procurement of materials, equipment, and subcontracts. Options presented for scheduling, with concentration on the computerized Critical Path Method (CPM) of network analysis. Introduction to environmental aspects of civil works: sustainability; environmental impact statements. Also: engineering economics, labor relations, equipment management, productivity improvements, personnel management, and construction safety programs, plus field trips. As major project, student teams create a comprehensive Management Planning, Control, and Information System for a large project.

Components: Lecture

CEE 310(3) Course ID:017508

Introduction to Civil Engineering Systems

This course introduces a fundamental systems approach to civil engineering systems design and includes the various phases of civil systems development. The course discusses the different phases of development and the tasks typically faced by civil engineers at each phase. In addition, current and emerging issues associated with civil systems development such as legal, ethics, CE systems vulnerability, resilience, and sustainability, are discussed. The course exposes the CE undergraduate to real life instances and applications and lessons learned that are associated with each phase of the CE systems design process, and inculcates in the student, the need for life-long learning in today's fast-evolving world.

Components: Lecture

Course Equivalents: CEE 510

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 312(3) Course ID:001052

Theory of Structures

Analysis of determinate structures; Stability and determinacy; Influence lines and moving loads; Deflection methods. Analysis of indeterminate structures using the methods of compatibility of displacements; Slope-deflection method; Moment distribution method. Computer applications. Prerequisite: ENGR 201;ENGR 301

Components: Lecture

Enrollment Requirements: ENGR 201 and ENGR 301

CEE 357(3) Course ID:018473

Solid Waste Management

Introduction to various sources of hazardous, non-hazardous, biodegradable, and non-biodegradable waste materials. Focus areas are landfill systems, and their various components. The recycling segment will explore natural resources of raw materials including origin and use, and potential and limitation for recycling of materials. Focus on various applications of recycling recyclable and non-recyclable materials. Discussion of methods of manufacture and compositions of such materials will concentrate on advanced industrial applications for the reuse of non-recyclable waste materials.

Components: Lecture(In Person)

Course Equivalents: CEE 557

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 366(2) Course ID:001071

Introduction to Soil Mechanics

Soil properties and identification; Engineered soils and their properties; Soil water and water pressure; Stresses in Soil Mass; Compressibility of Soils; Shear strength of soils; Lateral earth pressure; Slope stability; Bearing capacity of shallow foundations. Prerequisite: ENGR 301

Components: Lecture

Enrollment Requirements: ENGR 301

CEE 367(1) Course ID:001117

Soil Testing for Engineers

Laboratory experiments to study physical, mechanical and hydraulic properties of soils and use of these properties to predict the soil behavior in geotechnical structures. Experiments to determine grain size distribution, specific gravity, Atterberg limits, permeability, compaction, consolidation, direct shear and triaxial tests. Co-requisite: CE 366.

Components: Lecture

Enrollment Requirements: requires concurrent enrollment in CEE 366

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 372(3) Course ID:001073

Engineering Hydraulics

Principles of engineering hydraulics as applied in the design of structures and systems for hydraulic developments: water pressure forces, flow in closed conduits, flow in open channels, water pumps; hydraulic modeling. Prerequisite: ENGR 331

Components: Lecture
Course Equivalents: CEE 537
Enrollment Requirements: ENGR 331

CEE 374(3) Course ID:001075

Introduction to Transportation Systems and Design

The course empowers students with a robust introduction to the principles of transportation engineering, specifically highway engineering and traffic analysis. By the end of the course, students will have learned the basic skill set that will allow them to solve transportation problems that are likely to appear in professional practice and on the Fundamentals of Engineering exam (FE) and the Principles and Practice of Engineering exam (PE). The material also serves as a foundation for future coursework in transportation should students wish to pursue further coursework in the field.

Components: Lecture

CEE 383(3) Course ID:018534

Ethics and Stewardship

This course critically examines the responsibility of architects and planners as authors of the built environment. It exemplifies environmental ethics as the preservation of creation: a symbiotic relationship between human dignity, the environment, and society as applied to the built environment. Environmental ethics is explored as a symbiotic relationship between the conservancy of human dignity, the environment, and society through investigations into various scales of man made structures from cities to buildings.

Components: Lecture(In Person)
Course Equivalents: ARPL 783, ARPL 383
Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 400(1) Course ID:001080

Seminar on Public Policy Issues

Case studies are developed that involved the interplay of legislative and administrative actions. Where appropriate, the third branch of government, the judiciary, is brought in. Issues cover a number of engineering topics including transportation and water resources development. Federal policy makers from the major agencies as well as Congressional Committee staff make invited presentations. Field trips to congressional hearings and administrative sessions.

Components: Seminar

CEE 402(3) Course ID:001109

Structural Steel Design

A structural design course covering principles and knowledge of component design for steel structures based on Load and Resistance Factor Design (LRFD) methodology and applicable building codes and standards. Topics covered by this course include steel material properties, design philosophies, and behavior and structural design of steel tension members, compression members (columns), beams and beam-columns, as well as bolted and welded structural connections. Prerequisite CEE 312

Components: Lecture
Enrollment Requirements: CEE 312 (or CE 312)

CEE 403(3) Course ID:001112

Reinforced Concrete Design

A structural design course covering fundamental topics related to material properties of reinforced concrete (RC) and designing of RC members and buildings based on applicable building codes and standards, including ASCE 7 and ACI 318. Topics covered by this course include concrete materials, engineering properties, and concrete mixture proportioning; design and analysis processes; design of RC members (beams, slabs) for flexure and shear; development length of reinforcement; deflections; design of RC columns for combined axial and bending loads; design of RC footings. Prerequisite CEE 312

Components: Lecture
Enrollment Requirements: CEE 312 (or CE 312)

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 405(3) Course ID:017036

Environmental Modeling

This course introduces students to the art and science of modeling environmental systems. Students will learn the mathematical representation of various processes including advection, dispersion, mass-transfer, reactions, and population dynamics. Lectures will help students learn how to translate processes occurring in natural and engineered systems into model components. Labs will provide students with hands-on experience in the design and construction of working models using computerized spreadsheets and programming languages. Applications will be drawn from a range of environmental issues including water flow, contaminant transport, population dynamics, and natural resource management.

Components: Lecture

Course Equivalents: CEE 505

CEE 406(3) Course ID:017019

Advanced Structural Systems

Analysis and design of structural systems. Specific topics include: Load and Resistance Factor Design (LRFD), steel constitutive behavior, elastic and plastic analysis of cross-sections under flexural, axial, shear, and combined loading, column buckling, methods of plastic analysis, and systematic plastic analysis of structures. Students also collaborate in teams to perform a literature review, complete a final report, and give a presentation on a particular structural system or structural engineering-related issue of their choice. Prerequisite CEE 312 and CEE 402

Components: Lecture

CEE 407(3) Course ID:017477

Energy and Buildings

The main focus of this course is to understand the connection between buildings operations and energy request. The course deals with the principles of heat transfer mechanisms with a particular focus on building related cases; the thermophysical characteristics of the building will also be treated. Winter heat loss calculations and estimation of heat loads in summer will be addressed. The human body and the thermal comfort will be treated: energy balance and thermal power of the human body, environmental variables influencing the comfort. Finally heat pumps and heating system efficiency will be presented.

Components: Lecture

Course Equivalents: CEE 507, ME 407

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 408(3) Course ID:017504

Transportation Characteristics

This course introduces students to the fundamentals of highway traffic engineering. The knowledge gained in this course is helpful in planning and carrying field observations of traffic characteristics, and in evaluating and improving performance of road facilities. Topics to be tackled in the course include highway safety; analysis of traffic flows on highway segments and at intersections; concepts and measurements of flow, density, speed, capacity, travel time, and delay; and characteristics of roads, drivers, vehicles, and pedestrians.

Components: Lecture

Course Equivalents: CEE 508

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 409(3) Course ID:017506

Highway Infrastructure Systems

This course deals with the management of physical highway assets and infrastructure such as pavements, bridges, safety assets such as guardrails, and other roadside/roadway assets. It also includes the management of safety-enhancing and congestion-mitigation assets at a system level. It is useful for all graduate and undergraduate students intending to pursue a career in the public or private sectors related to highway infrastructure planning, finance, design, construction, maintenance, and operations.

Components: Lecture

Course Equivalents: CEE 509

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 411(3) Course ID:016585 Department Consent Required

Geographical Information Systems

GIS (Geographic Information Systems) is a computer-based tool that uses spatial data to analyze and solve real-world problems. This course is designed to introduce the student to the basic principles and techniques of GIS, relational geo-referenced database systems, and vector and raster geospatial data. The lab material will emphasize GIS data collection, entry, storage, analysis, and output using QGIS.

Components: Lecture

Course Equivalents: CEE 611

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 413(3) Course ID:017030

Transportation Systems Evaluation

The goal of the course is to introduce the students to the techniques and methods of evaluation of transportation plans and projects. The course focuses on application of engineering economic analysis and evaluation of environmental consequences of transportation projects. In addition, such topics as transportation programming, financing and management are also discussed.

Components: Lecture

Course Equivalents: CEE 513

CEE 414(3) Course ID:016514

Structural Dynamics and Vibrations

Free and forced vibrations of single-degree-of-freedom (SDOF) systems under a variety of time-dependent loads. Damping in structures. Unit impulse response functions. Frequency domain analysis. Free and forced vibrations of multiple-degree-of freedom (MDOF) systems. Modal analysis, eigenvalues, and eigenvectors. Numerical integration, time history analysis, and modal analysis of MDOF systems. Vibrations of continuous systems.

Components: Lecture

Course Equivalents: CEE 514, ME 566, ME 466

Enrollment Requirements: CEE 312, ENGR 202, and ENGR 222 (or ENGR 222H)

CEE 415(3) Course ID:017689

Sustainable Buildings Design

The purpose of this class is to give basic tools for building design with the new BAT (Best Available Technology). In this way it is possible to introduce in new civil and environmental engineers and architects the new concept of the "Green Architecture".

Components: Lecture

Course Equivalents: CEE 515

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 416(3) Course ID:016544

Prestressed Concrete Design

This course provides the student an introduction to engineering analysis and design methods. This application-oriented course ensures a balance between analysis and design, giving the student an understanding of the proper application of the design methods. Computer applications will be introduced during the course.

Components: Lecture

Course Equivalents: CEE 516

CEE 419(3) Course ID:017941

Applied Finite Element Modeling for Structural Analysis

An application-oriented course that introduces finite element modeling procedures for analyzing and designing civil engineering structures. The objective is to help students understanding how to model, compute, and interpret structural analysis problems using computer software. Students will learn how to perform finite element analyses, understand how structural components behave, interpret analysis results, and validate models. This course includes structural analysis of elastic linear models, inelastic models with material and geometric nonlinearities, emphasizing on modeling assumptions and component behavior.

Prerequisite: CEE 426 - Introduction to Finite Elements; CEE 312 & Theory of Structures

Components: Lecture

Course Equivalents: CEE 519

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 420(3) Course ID:001127

Senior Capstone Design I

Students will start the semester by forming teams with a maximum of four students. They will write a General Civil Engineering Proposal for the Government of the District of Columbia. Next, the students will pick their design project and select a faculty member for advisement. An initial design pin-up review will occur on November and the fall semester will end with a final presentation.

Components: Lecture

Enrollment Requirements: CEE 402

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 421(3) Course ID:014774

Senior Capstone Design II

Students will continue the semester with their capstone projects assigned from last year. The students will have three separate submittals. First, they will have an initial design presentation. Next, the students will have a design pin-up review. Finally, all students will submit a report and present their final project.

Prerequisite Senior Standing

Components: Lecture

Room Requirements: COMPUTER LAB(1)

CEE 422(3) Course ID:018591

Environmental Geotechnics

The students will get expertise on the characteristics and performance of the barrier systems to protect soil and groundwater against migration of pollutants. In particular, the course aims at providing the students theoretical and technical skills on the geotechnical aspects of design and construction of liner systems for waste landfills and of cut-offs for isolation of polluted sites.

Components: Lecture(In Person)

Course Equivalents: CEE 522

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 423(3) Course ID:018850

Structural Loads on Civil Structures

This course focuses on load design requirements and calculations used in typical civil structures, following ASCE/SEI Minimum Design Loads and Associated Criteria for Buildings and Other Structures. The course discusses gravity loads on buildings and other structures, with emphasis on snow, ice, and rain loadings. In addition, design requirements for earthquake and wind loads on structures are introduced using practical design examples. Topics include basics on code procedures, loads estimation methods, and code assumptions.

Components: Lecture(Blended (in-person and online))

Course Equivalents: CEE 523

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 426(3) Course ID:016538

Introduction to Finite Elements

Introduction in theoretical background of the Finite Element Method (FEM); Derivation of a weak form and a discrete form using the finite element approximation; Implementation of FEM into a computer code.

Components: Lecture

Course Equivalents: CEE 526, ME 504

CEE 432(1) Course ID:001113

Laboratory Project

Students conduct laboratory projects under the supervision of various faculty members. Experiments must be planned and instrumented and results presented. Fall Semester

Components: Laboratory

CEE 433(1) Course ID:008244

Laboratory Project

Students conduct laboratory projects under the supervision of various faculty members. Experiments must be planned and instrumented and results presented. Spring Semester

Components: Laboratory

CEE 438(3) Course ID:016526

Introduction to Environmental Engineering

A first course for students interested in environmental engineering. The course discusses air pollution, indoor air quality, and global climate change; emission and control of air pollutants; water supply, quality, and pollution; treatment of drinking water and wastewater; and characterization and management of solid/hazardous waste. The problem-solving techniques based on mass balance, chemical kinetics, environmental microbiology, and energy conversion calculations are rigorously taught for quantitative analysis of environmental problems and their engineering solutions. Open-ended problems will be assigned and a tour to a local environmental engineering facility will be arranged.

Components: Lecture

Course Equivalents: ENGR 538, ENGR 438

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 451(2) Course ID:017678

Fundamentals of Engineering Review

FE exam preparation

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 463(3) Course ID:016539

Applied Hydrology

An introduction to engineering analysis and design methods. This application-oriented course ensures a balance between analysis and design, giving the student an understanding of the proper application of the design methods. Computer applications will be introduced during the course.

Components: Lecture

Course Equivalents: CEE 563

CEE 464(3) Course ID:016516

Surface Water Quality

The course focuses on the assessment, modeling quality of water in rivers, lakes, and estuaries. Hydrodynamic of water bodies, mass balance, transport and transformation of pollutants, oxygen-algae-nutrient dynamics in surface water and eutrophication will be covered.

Components: Lecture

Course Equivalents: CEE 564

CEE 465(3) Course ID:016870

Water Resources Engineering

The course covers the fundamentals of water resources engineering and management. Topics such as Water Sustainability, Hydraulic Processes, Flow in Pressurized pipes, Open Channel Flow, Hydrologic Processes, Surface Runoff, Stream flow routing, Stormwater Management and Sedimentation and Erosion Hydraulics will be discussed.

Components: Lecture

Course Equivalents: CEE 565

CEE 468(3) Course ID:006276

Foundation Engineering

Presentation of the fundamentals of foundation engineering. This course covers the mechanics of soils from compressibility, strength and lateral earth pressure, using various approaches and concepts. As well as explores the fundamentals of basic retaining structures, shallow foundations and deep foundations.

Prerequisites: CE 312, CE 366.

Components: Lecture

Course Equivalents: CEE 568

Enrollment Requirements: CEE 312 (or CE 312) and CEE 366 (or CE 366)

CEE 473(3) Course ID:016517

Traffic Engineering and Flow Theory

This course discusses macroscopic flow theories (including traffic stream characteristics, shock wave, queuing), microscopic theories (including car following, gap acceptance), distributions of traffic stream parameters, deterministic and probabilistic models, traffic simulation models, and traffic assignment.

Components: Lecture

Course Equivalents: CEE 573

CEE 474(3) Course ID:017472

Traffic Analysis and Simulation

This course exposes students to traffic signal design, traffic impact analysis, traffic simulation based on transportation performance measures (including travel time, delay, length of queues, equity, and emissions), and advanced traffic safety analysis.

Components: Lecture

Course Equivalents: CEE 574

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 478(3) Course ID:016518

Transportation Systems Management and Operations

This course provides students with an introduction to Transportation Systems Management and Operations (TSMO-I). TSMO skills gained from this course will allow students to better understand current needs of managing and operating Transportation Infrastructure. TSMO-I is designed to provide basic understanding of how transportation infrastructure is operated to meet the mobility needs of transportation system users. The focus is on interconnecting planning, design, organization, construction and maintenance functions of transportation systems leading to a comprehensive understanding of the inter dependencies involved in the establishment and sustaining of the TSMO. The course is designed primarily to serve as a TSMO refresher for practitioners and at the same time for the aspiring professionals to gain necessary foundational background to take up careers in TSMO.

Components: Lecture

Course Equivalents: CEE 578

CEE 480(3) Course ID:017649

Advanced Wastewater Treatment

This course focuses on the theory and design of wastewater treatment processes including wastewater microbiology, biofilms, biological carbon and nitrogen removal, solid processing, clarifies, and advanced treatment processes.

Components: Lecture

Course Equivalents: CEE 580

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 482(3) Course ID:016541

Value Engineering

The course introduces the concept of Value Engineering (VE) and demonstrates its application and technique. The VE process identifies opportunities to remove unnecessary costs while assuring quality, reliability, and performance. The course includes techniques used in VE such as creativity, weighted evaluation, design-to-cost, life cycle costing, FAST diagramming, and human relations.

Components: Lecture

Course Equivalents: CEE 582

CEE 483(3) Course ID:016520

Entrepreneurship, Sustain, and Lean Methods

Engineering Entrepreneurship builds on the technical foundations established in the engineering program focusing on the engineer as the catalyst for innovation and creating new ventures. It includes concepts and themes related to business planning, strategy, entrepreneurship, and critical thinking. It will explore the application of sustainability and lean methods to new and existing endeavors through case studies, business analysis, and student presentations. Classic and modern market analysis systems will be introduced along with business planning and finance, and exposure to the spectrum of corporate activities in the entrepreneurial and research and development environment. Students will assess their potential for entrepreneurial careers and develop skills that will be useful in engineering roles in new and ongoing ventures.

Components: Lecture

Course Equivalents: CEE 583

CEE 484(3) Course ID:016767

Construction Law

This course addresses the ways in which legal and operational systems interact with the design and construction process. Topics include contract and tort law, the relationships between the parties to the construction process, negligence, insurance and indemnification, and other statutory principles affecting construction. Emphasis is placed on the contractual and working relationships of the Owner-Contractor, Contractor-Subcontractor, and Owner-Architect/Engineer, using `real-world` examples and case studies to address the problems and disputes of these relationships that arise out of the variety of contemporary project delivery methods. Specialized issues include case law surrounding contract documents, schedule and cost control, delays, claims, change orders and damages, and defects and disputes.

Components: Lecture

Course Equivalents: CEE 584

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 487(3) Course ID:016521

Estimating and Bidding

Analysis of procedures for developing estimates for the General Contractor in the construction of building projects. The course examines external sources that impact on estimated costs. It also examines procedures for preparing bids with subcontractor input. The course includes the review of direct and indirect costs in building project estimates. Quantitative estimates included in class projects. The course is based on a review of all CSI Divisions of Work.

Components: Lecture

Course Equivalents: CEE 587

CEE 489(3) Course ID:016542

Construction Scheduling Techniques

Examines different types of schedules used in the construction process including bar chart, Critical Path Method (CPM), and Project Evaluation and Review Technique (PERT). Develops an understanding of the forward and backward passes for both the activity-on-arrow (AOA) and activity-on-node (AON). Analysis of cost and resource loaded schedules. Explains linear and repetitive schedules. Introduces advantages/disadvantages of different delay analysis techniques.

Components: Lecture

CEE 490(3) Course ID:016522

Construction Operations Analysis

The course provides students with an introduction to different types of construction equipment and their application, equipment economics, productivity measures, probability theory and statistics, and performance improvement. The course primarily focuses on modeling and simulation of field operations using discrete event simulation, including the use of specialized software. Activity cycle diagrams will be used extensively to describe processes and their elements, activities, and resources. Verification and validation of simulation models will be discussed. Analytical skills gained from this course will allow students to better understand and design construction operations.

Components: Lecture

Course Equivalents: CEE 590

CEE 491(3) Course ID:016532

Engineering Hydrogeology and Groundwater Flow

This course is an introduction to Physical Hydrogeology and will examine fundamental physical processes affecting the flow of groundwater and contaminants in the subsurface. Hydrogeology is a multidisciplinary field that incorporates topics such as geology, hydrology, chemistry, physics, and mathematics. We will be examining a wide range of topics including properties of materials (geologic and fluid), groundwater flow systems, fundamental groundwater flow equations, aquifer testing, unsaturated zone flow, groundwater/surface-water interactions, and contaminant transport. Emphasis will be placed on the application of theory and quantitative methods to solve practical problems. This course will provide you with an understanding of fundamental hydrogeologic principles and the tools necessary to investigate common groundwater related problems. Prerequisite ENGR 331

Components: Lecture

Course Equivalents: CEE 597

CEE 494A(1) Course ID:001120

Department Consent Required

Independent Study

CEE 494A-Independent Study bearing 1 SCH, is used only in the case of emergency such as non-existence of courses that are required for graduation or for a particular research or study and are not offered through the consortium of the local universities /colleges. This course is study of a specific issue to be proposed by the student and/or a faculty member and to be directed by the faculty member.

Components: Independent Study

CEE 497(3) Course ID:017249

Water and Wastewater Treatment Engineering

This course provides a survey of engineering approaches to the treatment of water with an emphasis on fundamental principles and models. Theory and conceptual design of systems for treating municipal drinking water and wastewater are discussed. Physical and chemical processes are presented, including sedimentation, filtration, disinfection, coagulation, and biological treatment.

Prerequisites ENGR 331

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 499(3) Course ID:016523

Transportation Safety Engineering

Topics covered in transportation safety engineering include motorized and non-motorized modes, safety management systems, human factors, data needs and limitations, identification of hazardous locations, diagnosis of problems, and development of countermeasures. Road safety audit process and the methodologies of conducting an audit and topics in motor vehicle accident reconstruction and cause analysis will be covered.

Components: Lecture

CEE 501(3) Course ID:006269

Advanced Mechanics of Solids

Analysis of stress and strain, stress-strain relations for elastic materials, Mohr's circle in three dimensions, strain energy, distortional energy, theories of failure, mechanical behavior of materials, unsymmetrical bending, shear center, shear flow, and curved beams.

Components: Lecture

CEE 503(3) Course ID:006271

Introduction to Elasticity

Theory of stress, theory of strain, stress-strain relations, equations of elasticity, two-dimensional elasticity, selected problems.

Components: Lecture

CEE 504(3) Course ID:010013 Department Consent Required

Stress-Strain Behavior of Soils

Experimental techniques for determination of soil strength and stress-strain behavior, methods of analyzing an presenting test results, compositional and environmental factors affecting stress-strain, volume change, pore pressure, and strength behavior of sands, clays, and compacted soils, relation between drained and undrained behavior, effects of 3-D stress conditions. Prerequisites: CE 366, CE 367 or equivalent.

Components: Lecture

Enrollment Requirements: CEE 366 (or CE 366) and CEE 367 (or CE 367)

CEE 505(3) Course ID:017035

Environmental Modeling

This course introduces students to the art and science of modeling environmental systems. Students will learn the mathematical representation of various processes including advection, dispersion, mass-transfer, reactions, and population dynamics. Lectures will help students learn how to translate processes occurring in natural and engineered systems into model components. Labs will provide students with hands-on experience in the design and construction of working models using computerized spreadsheets and programming languages. Applications will be drawn from a range of environmental issues including water flow, contaminant transport, population dynamics, and natural resource management.

Components: Lecture

Course Equivalents: CEE 405

CEE 506(3) Course ID:016352

Advanced Structural Systems

Analysis and design of structural systems. Specific topics include: Load and Resistance Factor Design (LRFD), steel constitutive behavior, elastic and plastic analysis of cross-sections under flexural, axial, shear, and combined loading, column buckling, methods of plastic analysis, and systematic plastic analysis of structures. Students also collaborate in teams to perform a literature review, complete a final report, and give a presentation on a particular structural system or structural engineering-related issue of their choice. Prerequisite CEE 312 and CEE 402

Components: Lecture

CEE 507(3) Course ID:017478

Energy and Buildings

This course introduces students to the art and science of modeling environmental systems. Students will learn the mathematical representation of various processes including advection, dispersion, mass-transfer, reactions, and population dynamics. Lectures will help students learn how to translate processes occurring in natural and engineered systems into model components. Labs will provide students with hands-on experience in the design and construction of working models using computerized spreadsheets and programming languages. Applications will be drawn from a range of environmental issues including water flow, contaminant transport, population dynamics, and natural resource management.

Components: Lecture

Course Equivalents: CEE 407, ME 407

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 508(3) Course ID:017505

Transportation Characteristics

This course introduces students to the fundamentals of highway traffic engineering. The knowledge gained in this course is helpful in planning and carrying field observations of traffic characteristics, and in evaluating and improving performance of road facilities. Topics to be tackled in the course include highway safety; analysis of traffic flows on highway segments and at intersections; concepts and measurements of flow, density, speed, capacity, travel time, and delay; and characteristics of roads, drivers, vehicles, and pedestrians.

Components: Lecture

Course Equivalents: CEE 408

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 509(3) Course ID:017507

Highway Infrastructure Systems

This course deals with the management of physical highway assets and infrastructure such as pavements, bridges, safety assets such as guardrails, and other roadside/roadway assets. It also includes the management of safety-enhancing and congestion-mitigation assets at a system level. It is useful for all graduate and undergraduate students intending to pursue a career in the public or private sectors related to highway infrastructure planning, finance, design, construction, maintenance, and operations.

Components: Lecture

Course Equivalents: CEE 409

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 510(3) Course ID:017783

Introduction to Civil Engineering Systems

This course introduces a fundamental systems approach to civil engineering systems design and includes the various phases of civil systems development. The course discusses the different phases of development and the tasks typically faced by civil engineers at each phase. In addition, current and emerging issues associated with civil systems development such as legal, ethics, CE systems vulnerability, resilience, and sustainability, are discussed. The course exposes the CE undergraduate to real life instances and applications and lessons learned that are associated with each phase of the CE systems design process, and inculcates in the student, the need for life-long learning in today's fast-evolving world.

Components: Lecture

Course Equivalents: CEE 310

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 511(3) Course ID:006272

Applied Plastic Design and Limit Analysis

Basic hypothesis, simple cases of plastic collapse, effect of end-fixity, rectangular portal frames, methods of plastic design, deflections, shear and axial load, applications to design.

Components: Lecture

Enrollment Requirements: ENGR 301

CEE 513(3) Course ID:017031

Transportation Systems Evaluation

The goal of the course is to introduce the students to the techniques and methods of evaluation of transportation plans and projects. The course focuses on application of engineering economic analysis and evaluation of environmental consequences of transportation projects. In addition, such topics as transportation programming, financing and management are also discussed.

Components: Lecture

Course Equivalents: CEE 413

CEE 514(3) Course ID:001126

Structural Dynamics and Vibrations

Free and forced vibrations of single degree of freedom systems under a variety of time dependent loads. Damping in structures. Unit impulse response functions. Frequency domain analysis. Free and forced vibrations of multi degree of freedom systems. Modal Analysis, eigenvalues, eigenvectors. Numerical integration, time history analysis, and modal analysis of MDOF systems. Vibrations of continuous systems.

Components: Lecture

Course Equivalents: ME 566, CEE 414, ME 466

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 515(3) Course ID:017690

Sustainable Buildings Design

The purpose of this class is to give basic tools for building design with the new BAT (Best Available Technology). In this way it is possible to introduce in new civil and environmental engineers and architects the new concept of the "Green Architecture".

Components: Lecture
Course Equivalents: CEE 415
Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 516(3) Course ID:006273

Prestressed Concrete Design

Basic concepts, materials, flexural analysis, partial prestressing, beam design, shear and torsion, losses of prestress force, composite beams, deflections, introduction to slabs and axially loaded members.

Prerequisite: CE 403.
Components: Lecture
Course Equivalents: CEE 416

CEE 519(3) Course ID:017942

Applied Finite Element Modeling for Structural Analysis

An application-oriented course that introduces finite element modeling procedures for analyzing and designing civil engineering structures. The objective is to help students understanding how to model, compute, and interpret structural analysis problems using computer software. Students will learn how to perform finite element analyses, understand how structural components behave, interpret analysis results, and validate models. This course includes structural analysis of elastic linear models, inelastic models with material and geometric nonlinearities, emphasizing on modeling assumptions and component behavior.

Components: Lecture
Course Equivalents: CEE 419
Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 522(3) Course ID:018592

Environmental Geotechnics

The students will get expertise on the characteristics and performance of the barrier systems to protect soil and groundwater against migration of pollutants. In particular, the course aims at providing the students theoretical and technical skills on the geotechnical aspects of design and construction of liner systems for waste landfills and of cut-offs for isolation of polluted sites.

Components: Lecture(In Person)
Course Equivalents: CEE 422
Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 523(3) Course ID:018851

Structural Loads on Civil Structures

This course focuses on load design requirements and calculations used in typical civil structures, following ASCE/SEI Minimum Design Loads and Associated Criteria for Buildings and Other Structures. The course discusses gravity loads on buildings and other structures, with emphasis on snow, ice, and rain loadings. In addition, design requirements for earthquake and wind loads on structures are introduced using practical design examples. Topics include basics on code procedures, loads estimation methods, and code assumptions.

Components: Lecture(Blended (in-person and online))
Course Equivalents: CEE 423
Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 524(3) Course ID:001130

Matrix and Computer Methods in Structural Analysis

Analysis of indeterminate structures by the force and displacement methods. Development of the stiffness and flexibility matrices for structures. Extensive computer use. Prerequisite: CE 312.

Components: Lecture
Enrollment Requirements: CEE 312 (or CE 312)

CEE 525(3) Course ID:009667 Department Consent Required

Nondestructive Evaluation and Condition Assessment of Structures

Methods for the condition assessment of civil structures. Theory and application of acoustic and electromagnetic techniques for the nondestructive evaluation of concrete, steel, and wood. Wave propagation in isotropic solids, ferromagnetism and physical properties of civil materials. Nondestructive evaluation technologies for quality assurance during construction. Introduction of sensors and instrumentation for health monitoring of civil structures.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 526(3) Course ID:011837

Introduction to Finite Elements

Introduction in theoretical background of the Finite Element Method (FEM); Derivation of a weak form and a discrete form using the finite element approximation; Implementation of FEM into a computer code.

Components: Lecture

Course Equivalents: CEE 426, ME 504

CEE 527(3) Course ID:018590

Finite Element Methods II

Advanced topics of the Finite Element Method (FEM) in solid mechanics and acoustics; Derivation of a weak form and a discrete form using the finite element approximation; Implementation of FEM into a computer code.

Components: Lecture(Blended (in-person and online))

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 537(3) Course ID:018905

Engineering Hydraulics

Principles of engineering hydraulics as applied in the design of structures and systems for hydraulic developments: water pressure forces, flow in closed conduits, flow in open channels, water pumps; hydraulic modeling.

Components: Lecture(In Person)

Course Equivalents: CEE 372

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 538(3) Course ID:014076

Introduction to Environmental Engineering

A first course for students interested in environmental engineering. The course discusses air pollution, indoor air quality, and global climate change; emission and control of air pollutants; water supply, quality, and pollution; treatment of drinking water and wastewater; and characterization and management of solid/hazardous waste. The problem-solving techniques based on mass balance, chemical kinetics, environmental microbiology, and energy conversion calculations are rigorously taught for quantitative analysis of environmental problems and their engineering solutions. Open-ended problems will be assigned and a tour to a local environmental engineering facility will be arranged.

Components: Lecture

CEE 541(3) Course ID:006275

Environmental Engineering Chemistry

Expands topics from the field of chemistry and adapts them to an environmental engineering context. Environmental: application of fundamental chemistry principles to water and water treatment process, combustion processes, and the fate and transport of pollutants in ground and surface water and the atmosphere. Chemical equilibria, stoichiometry, kinetics, sorption, basic concepts from organic chemistry, aerobic, anaerobic biotic reactions, nitrogen cycle, phosphorous cycle, and carbon cycle.

Components: Lecture

CEE 542(3) Course ID:001132

Environmental Chemistry Laboratory

Hands-on experience with common environmental testing methods. Emphasis on water, wastewater, ground and surface water testing, used to evaluate surface and groundwater pollution, support environmental modeling, and evaluate water and waste treatment design and operations. Includes tests for Ph, acidity, alkalinity, hardness. Field trip to local wastewater or water treatment facility.

Components: Laboratory

CEE 543(3) Course ID:001135

Environmental Microbiology & Biological Processes

An introduction to microbiology as it relates to environmental pollution. Energetics and kinetics of microbial growth. Biomass production. Aerobic and anaerobic biological processes for wastewater renovation. Degradation of pollutants by microbes and bioremediation.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 555(3) Course ID:001137

Environmental Law and Policy

Designed to impart a thorough understanding of the major environmental laws and implementing regulations. Covers methods used to implement federal environmental enforcement strategies, interrelations of major regulatory programs, current prospects for policy changes. Also: the Superfund and Community Right-to-Know Acts, Resource Conservation and Recovery Act, Occupational Safety and Health Act, and related permit and enforcement regulations and procedures.

Components: Lecture

CEE 556(3) Course ID:008713

Sustainable Development Principles and Practice

Introduction to the principles of sustainable development and sustainability. Current practices are presented using case histories from both national and international experience. Student will be exposed to policy and ethical aspects from both a technical and non-technical perspective. Outside speakers will present current issues related to the implementation of principles in practice nationally and internationally.

Components: Lecture

CEE 557(3) Course ID:018474

Solid Waste Management

Introduction to various sources of hazardous, non-hazardous, biodegradable, and non-biodegradable waste materials. Focus areas are landfill systems, and their various components. The recycling segment will explore natural resources of raw materials including origin and use, and potential and limitation for recycling of materials. Focus on various applications of recycling recyclable and non-recyclable materials. Discussion of methods of manufacture and compositions of such materials will concentrate on advanced industrial applications for the reuse of non-recyclable waste materials.

Components: Lecture(In Person)

Course Equivalents: CEE 357

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 560(3) Course ID:001144

Case Studies in Geotechnical and Geo-environmental Engineering

Focuses on techniques and procedures used to obtain design data and complete actual geotechnical and geo-environmental designs of facilities located within the region. Presents as short design projects a series of case histories covering broad aspects of design, including shallow foundations, deep foundations, ground improvement, slope stability, geotechnical or environmental design in karst terrain, design of waste containment liner systems, design of petroleum contamination remediation systems, and completing environmental site assessments or audits. Students will submit brief reports on their analysis and proposed design. . Prerequisites: CE 366, CE 468.

Components: Lecture

Enrollment Requirements: CEE 366 (or CE 366) and 468 (or CE 468)

CEE 563(3) Course ID:001223

Applied Hydrology

Hydrologic cycle, precipitation, runoff, hydrologic data sources, frequency analysis, peak flow determination at ungaged sites, hydrographs, hydrologic routing, effects of urbanization, storm water management facility, GIS in hydrology, computer applications for hydrologic analysis.

Components: Lecture

Course Equivalents: CEE 463

Enrollment Requirements: CE 372 or CEE 372

CEE 564(3) Course ID:000023

Surface Water Quality

This course will focus on the physical, chemical, biological, and hydrological characteristics of surface water system in junction to water quality modeling and management issues. Reaction kinetics and material balances will be investigated for use in modeling contaminant movement in the environment. Specific attention will be given to typical water quality problem domains in stream and river systems, lake and reservoir systems. Mixing in lakes and rivers, stratification, sediment transport, dissolved oxygen and pathogens, eutrophication, and the fate and transport of toxics in these systems will be discussed.

Components: Lecture

Course Equivalents: CEE 464

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 565(3) Course ID:014837

Water Resources Engineering

The course covers the fundamentals of water resources engineering and management. Topics such as Water Sustainability, Hydraulic Processes, Flow in Pressurized pipes, Open Channel Flow, Hydrologic Processes, Surface Runoff, Stream flow routing, Stormwater Management and Sedimentation and Erosion Hydraulics will be discussed.

Components: Lecture

Course Equivalents: CEE 465

CEE 568(3) Course ID:017615

Foundation Engineering

Identification and classification of soils. Hydraulic properties of soils and rock. Consolidation characteristics of soils. Stress-strain relationships of soils. Subsurface exploration. Footings and raft foundations. Foundations on compacted fill. Deep foundations. Foundations on clays and sands. Design of various types of foundations. Prerequisites: CE 312, CE 366.

Components: Lecture

Course Equivalents: CEE 468

Enrollment Requirements: CEE 312 (or CE 312) and CEE 366 (or CE 366)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 570(3) Course ID:001146

Pavement Management System

Introduction to innovative infrastructure management applications and the available tools and technologies. Covers physical infrastructure management using computer available technologies; physical infrastructure using computer assisted decision tools--highways, sewers, and underground systems; remote sensing technologies; energy management systems; assessment tools for environmental issues; and economic assessments--case studies. Case studies presented using Arc View and other Geographic Information System (GIS) tools.

Components: Lecture

CEE 571(3) Course ID:010551

Pavement Theory & Design

Basic mechanics, theory and design principles for highway and airport pavement structures. Emphasis will be paced on mechanistic-empirical structural pavement design. Contents include traffic characterization, materials selection and testing procedures, environmental consideration, mechanics of rigid and flexible pavements, also pavement performance modeling and reliability. Prerequisite: MATH 122.

Components: Lecture

CEE 572(3) Course ID:001147

Intelligent Transportation Systems

Introduces some of the technologies, processes, and demonstrations that are a part of intelligent transportation system development. Some technologies reviewed include global positioning system applications, sensor and communication systems for public transit, congestion management systems, commercial vehicle inspection management systems, and emergency/accident response improvements. Review of Geographic Information System technology applications for transportation planning, land use planning, impact assessment, and public communication, including specific application case studies. Presents new pavement design criteria developed under the Strategic Highway Research Program, along with improved pavement management system leveraging condition index technics. A review of the current status of the federal smart vehicle program and its implications on transportation in the future, including environmental benefits.

Components: Lecture

CEE 573(3) Course ID:009935 Department Consent Required

Traffic Engineering and Flow Theory

Various components of traffic systems, traffic flow characteristics, traffic data collection and traffic control of urban streets and freeways. Traffic operations of arterial streets and networks, optimal signal timing design, and capacity analysis using theoretical analysis, experimental techniques, and computer simulation. Traffic flow theory at micro-, meso- and macro-scopic levels will also be addressed.

Components: Lecture

Course Equivalents: CEE 473

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 574(3) Course ID:017345

Traffic Analysis and Simulation

This course exposes students to traffic signal design, traffic impact analysis, traffic simulation based on transportation performance measures (including travel time, delay, length of queues, equity, and emissions), and advanced traffic safety analysis.

Components: Lecture

Course Equivalents: CEE 474

CEE 575(3) Course ID:001152

Introduction to Systems Analysis

Introduces a scientific approach to decision making, usually under conditions requiring the allocation of scarce resources. Provides several of the most useful and realistic mathematical models available for solving engineering management problems, including linear programming, transportation and assignment models, deterministic economic order quantity inventory models, and network models. Same as CMGT 575.

Components: Lecture

Course Equivalents: DA 475, DA 575

CEE 576(3) Course ID:001154

Systems Design

Detailed system design by individual and student groups with projects selected from transportation, water resources, energy problems, policy planning, and the like. Prerequisite: Senior or graduate standing.

Components: Lecture

CEE 578(3) Course ID:016241

Department Consent Required

Transportation Systems Management and Operations

This course provides students with an introduction to Transportation Systems Management and Operations (TSMO-I). TSMO skills gained from this course will allow students to better understand current needs of managing and operating Transportation Infrastructure. TSMO-I is designed to provide basic understanding of how transportation infrastructure is operated to meet the mobility needs of transportation system users. The focus is on interconnecting planning, design, organization, construction and maintenance functions of transportation systems leading to a comprehensive understanding of the inter dependencies involved in the establishment and sustaining of the TSMO. The course is designed primarily to serve as a TSMO refresher for practitioners and at the same time for the aspiring professionals to gain necessary foundational background to take up careers in TSMO.

Components: Lecture

Course Equivalents: CEE 478

CEE 579(3) Course ID:001158

Harbors and Coastal Engineering

Basic hydromechanics. Surface and tidal waves. Wave reflection, refraction, and diffraction wave shoaling, wave transport, wave forces on structures. Forces due to breaking and nonbreaking waves. Coastal currents. Storm surges. Coastal processes and littoral currents. Beach erosion and protection. Wave oscillation in harbors. Harbor planning and design. Design of seawalls, breakwaters, revetments, and jetties.

Components: Lecture

CEE 580(3) Course ID:017650

Advanced Wastewater Treatment

This course focuses on the theory and design of wastewater treatment processes including wastewater microbiology, biofilms, biological carbon and nitrogen removal, solid processing, clarifies, and advanced treatment processes.

Components: Lecture

Course Equivalents: CEE 480

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CEE 581(3) Course ID:001173

Practical Construction Law

A series of lectures on various topics in construction from the perspectives of an owner, the project architect and the contractor. Lectures follow a detailed topical outline, updated each year by the instructor. Analysis of real world, practical cases in a lecture and open discussion format. Introduction to various construction law and litigation topics, contract clauses and topics. Develop a non-theoretical, practical course, using real world examples and case studies to supplement the mission of the Department of Civil Engineering, which mission is to provide a balanced education to students, strong in scientific, engineering, humanistic, and social bases, so that they may attain a leadership role in their profession and use their knowledge and skill for the enhancement of human welfare and the environment.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 582(3) Course ID:001177

Value Engineering

The course introduces the concept of value engineering (VE) and demonstrates its application and technique. The VE process identifies opportunities to remove unnecessary costs while assuring quality, reliability, and performance.

The course includes techniques used in VE such as: creativity, weighted evaluation, design-to-cost, life-cycle costing, FAST diagramming, and human relations.

Components: Lecture

Course Equivalents: CEE 482

CEE 583(3) Course ID:015937

Engineering Entrepreneurship, Sustainability, and Lean Methods

Engineering Entrepreneurship builds on the technical foundations established in the engineering program and focuses on the engineer as the catalyst for innovation and creating new ventures. It includes concepts and themes related to business planning, strategy, entrepreneurship, and critical thinking. It will explore the application of sustainability and lean methods to new and existing endeavors through case studies, business analysis, and student presentations. Classic and modern market analysis systems will be introduced along with business planning and finance, and exposure to the spectrum of corporate activities in the entrepreneurial and research and development environment.

Components: Lecture

Course Equivalents: CEE 483

CEE 584(3) Course ID:015812

Construction Law, Operations and Project Delivery

This course addresses the ways in which legal and operational systems interact with the design and construction process. Topics include contract and tort law, the relationships between the parties to the construction process, negligence, insurance and indemnification, and other statutory principles affecting construction. Emphasis is placed on the contractual and working relationships of the Owner-Contractor, Contractor-Subcontractor, and Owner-Architect/Engineer, using `real-world, examples and case studies to address the problems and disputes of these relationships that arise out of the variety of contemporary project delivery methods. Specialized issues include case law surrounding contract documents, schedule and cost control, delays, claims, change orders and damages, and defects and disputes.

Components: Lecture

Course Equivalents: CEE 484

CEE 587(3) Course ID:001200

Estimating and Bidding

In-depth analysis of the procedures for developing a detailed estimate of the general contractor and subcontractor for construction of building projects. Examines external sources that impact on the estimated costs. Determining the monitoring procedures for control of costs by subcontractors, suppliers, and vendors. Utilization of the estimate in the purchase budget, internal cost control, and determination of tax liabilities. Study of federal regulations impacting construction costs, safety requirements, insurance, and bonding costs. Use of the estimate in the interrelation between the architect/engineer and the contractor. Quantitative estimates included in class projects.

Components: Lecture

Course Equivalents: CEE 487

CEE 588(3) Course ID:001203

Construction Operational Management

Introduces mid-level administration and management techniques in the construction industry to maximize the understanding and participation of new managers in management procedures. Major managerial functions including planning, organizing, staffing, directing, and controlling. Specialized issues include leadership, motivation, communication, contract documents, construction schedules, change orders, claims, ethics, cost controls, interrelation within a corporate structure, working relationships with the legal, accounting, and other construction related professions.

Components: Lecture

CEE 589(3) Course ID:001205

Construction Scheduling Techniques

Examines the different types of schedules used in the construction process including bar chart, Critical Path Method (CPM), Project Evaluation and Review Technique (PERT). Develops an understanding of the forward and backward passes for both the Arrow Diagram Method (ADM) and the Precedence Diagram Method (PDM). Analysis cost and resource loaded schedules. Introduces advantages/disadvantages of different delay analysis techniques.

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 590(3) Course ID:011206

Construction Operations Analysis

The course provides students with an introduction to different types of construction equipment and their application, equipment economics, productivity measures, probability theory and statistics, and performance improvement. The course primarily focuses on modeling and simulation of field operations using discrete event simulation, including use of specialized software. Activity cycle diagrams will be used extensively to describe processes and their elements, activities and resources. Verification and validation of simulation models will be discussed. Analytical skills gained from this course will allow students to better understand and design construction operations.

Components: Lecture
Course Equivalents: CEE 490

CEE 591(3) Course ID:001216

Engineering Hydrogeology and Groundwater Flow

Introduces the practical and theoretical aspects of groundwater occurrence and flow. The geology, hydrology, and geochemistry of groundwater. Practical analytical tools, including flow net theory and use; aquifer test data collection and interpretation; construction dewatering; water supply well design; environmental contaminant transport. Federal and state regulations that pertain to groundwater development and quality.

Components: Lecture

CEE 597(3) Course ID:001229

Water and Wastewater Treatment

Formerly CE 596. This course provides a survey of engineering approaches to treatment of water with an emphasis on fundamental principals and models. Theory and conceptual design of systems for treating municipal drinking water and wastewater are discussed. Physical, and chemical processes are presented, including sedimentation, filtration, disinfection, coagulation, and biological treatment.

Components: Lecture
Course Equivalents: CEE 491

CEE 598(3) Course ID:001237

Hazardous Waste Treatment

Reviews the various methods currently available or being developed for treating hazardous wastes. Incineration, bioremediation, chemical treatment, and separation processes. Examples of multiphase hazardous waste treatment applications illustrate uses and limitations of alternative methods for treating hazardous wastes.

Components: Lecture

CEE 603(3) Course ID:009936

Inelastic Stress Analysis

Visco-elastic Behavior. Non-linear Visco-elastic Behavior in 1-D and 3-D. 1-D Plasticity and Visco plasticity. 3-D Non-Hardening Plasticity Theory. 3-D Plasticity with Strain and Strain-Rate Hardening. Application of Linear Visco-elasticity, Non-Linear Visco-elasticity and Plasticity Principles in the Analysis of Simple Structural Elements.

Components: Lecture

CEE 604(3) Course ID:010014 Department Consent Required

Constitutive Modeling of Frictional Materials

Brief overview of 3-D soil behavior, simple, hyperbolic, and rigid-plastic constitutive models for soils, Cam Clay model, stress-dilatancy theory, models for elastic behavior, general framework of work-hardening plasticity theory, associated versus non-associated plastic flow, double hardening and single hardening models, incrementalization procedure, large stress reversals, and rotational kinematic hardening models. Prerequisite: CE 504 or permission of instructor.

Components: Lecture

CEE 611(3) Course ID:001247

Management Information Systems and GIS in Civil Engineering

Information technology in various aspects of civil engineering. Overview of design and implementation of management information systems including geographic information systems and global positioning systems. File structures and access methods, relational database, database modeling, design and user interface, E-R diagram, information storage and retrieval, query languages ANSI SQL, normalization process, concurrency control, transaction processing, distributed, WEB-based and multi-tiered database systems. Applications of GIS and GPS in transportation and environmental engineering will also be emphasized.

Components: Lecture
Course Equivalents: CEE 411

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 614(3) Course ID:008168

Earthquake Engineering and Seismic Design

Mechanics of earthquakes and strong ground motions characteristics. Response spectra and seismic response of elastic and inelastic systems. Numerical methods for analysis of inelastic structures. Mechanical behavior of structural members under earthquake excitations. Seismic design philosophies, performance based structural design, pushover analysis, spectral capacity curves, design demand spectra. Special topics, code provisions.

Components: Lecture

CEE 615(3) Course ID:008351

Soil Dynamics and Geotechnical Earthquake Engineering

Introduction to seismology, seismic hazard analysis. Soil properties under dynamic conditions. Wave propagation. Ground response analysis, soil structure interaction, machine foundations. Local site effects, liquefaction. Special topics.

Components: Lecture

CEE 622(3) Course ID:001248

Variational Methods in Engineering

Variational approach to mechanics, calculus of variations. Hamilton's principle and Lagrange's equations of motion, Hamilton-Jacobi theory. Applications; theory of small oscillations, dynamical theory of thick plates, geometric theory of propagation. Prerequisite: Permission of instructor.

Components: Lecture

CEE 670(3) Course ID:009368

Risk and Reliability in CE Systems

Explores fundamental and advanced risk and reliability applied to civil engineering systems. Topics covered include hazard and failure consequences, definition and quantification of risk, risk aversion and risk acceptance, modeling uncertainty, probabilistic risk assessment, assessment of consequences and likelihood of failure, system reliability, maintainability. Projects will explore risk and reliability in structural systems, geotechnical, transportation, environmental systems, and construction processes.

Components: Lecture

CEE 675(3) Course ID:009666

Advanced Operations Research

Decision-making under uncertainty by application of quantitative techniques from operations research and management science (ORMS). Focus on the modeling and stochastic side of ORMS, with multidisciplinary applications in engineering. Multi-criteria decision making, stochastic network optimization and dynamic programming, system modeling and simulation, and stochastic processes. Students will gain necessary knowledge and skills to solve real world problems.

Components: Lecture

CEE 714(3) Course ID:008352

Passive and Active Control of Large Structural Systems

Introduction to energy management in structural systems. Basic concepts of seismic isolation, mechanical behavior of elastomeric and sliding isolation systems. Design concepts of isolation systems for buildings and bridges, code provisions. Theory and applications of active structural control and energy dissipation systems in large structures. Current methods of structural control, practical considerations, implementation issues. Case studies.

Components: Lecture

CEE 732(3) Course ID:006282

Theoretical Hydrodynamics

Basic equations, boundary and initial conditions. Three- and two-dimensional potential flow theory. Free streamline theory. Infinitesimal waves in deep water, higher order theory; shallow water waves.

Components: Lecture

Enrollment Requirements: ME 545

The Catholic Univ of America
Course Catalog

Engineering - Civil Engineering - Subject: Civil & Environmental Engineer

CEE 767(3)

Course ID:006292

Advanced Geotechnical and Structural Systems

Designed to provide students with advanced knowledge related to theories and practices of geotechnical, foundation, and structural systems, emphasizing: analysis and design of the group pile foundation, drilled shaft foundation, and underground structures (culverts, pipelines, etc.); reinforced concrete design of earth structures (spread footings, mat foundations, cantilever walls, etc.); and geotechnical and foundation stabilization and improvement methods. Also designed for hands-on experience in utilizing state-of-the art computer programs currently used in design practice for the analysis and design of geotechnical, foundation, and structural systems under static as well as dynamic loadings (foundation vibration, earthquake, etc.).

CSC 104(3) Course ID:000097

Introduction to Computers I

Intended for liberal arts majors who want an introduction to computing history, computer concepts, hardware, software, and application software such as operating systems, graphics, word processing, databases and spreadsheets. Introduces general problem-solving techniques including the concepts of step-wise refinement applied to the development of algorithms. Elementary programming in a high-level language. Not open to students who have completed MIS 104. Faculty.

Components: Lecture

CSC 105(3) Course ID:000098

Introduction to Computers II

This course is intended as an introduction to computer programming using Visual Basic.NET. Powerful and easy to use, Visual Basic has become the tool of choice for developing user-friendly applications in today's business world. The student will learn the fundamentals of accurate, modern programming methodology, and how to use Visual Basic as a front end to major applications. The course also includes a module on data controls, database programming and introduction to SQL. A wealth of learning aids, including exercises and programming projects, and case studies are provided for students to enhance their learning and programming skills. The course is comprised of the following modules: An Introduction to Computers with Visual Basic, Problem Solving with Programming Tools, Fundamentals of Programming, Modular Design, Decisions and Logical Operators, Repetition, Arrays & Controls, Files and access, Object-Oriented Programming, Relational databases and SQL.

Components: Lecture

CSC 106(3) Course ID:016203

Introduction to Computer Programming for Non-Engineers

Students will be provided with the basic knowledge and practical experience to understand computer programming. This will be accomplished by having the students learn the Python programming language. The course is intended to be beneficial to non-technical majors with little to no knowledge of computer programming but may also be useful to students with some programming experience that would simply like to learn Python. The course will help form a mental framework for students so they can not only understand some of the basic tools used by computer scientists but also how to use those tools themselves. By taking the course, students will understand basic computer science concepts such as variables, expressions, statements, functions, conditionals, recursion, strings and more. These concepts will be developed in a deep and significant way as students create their own programs using the popular and freely available Python programming language.

Components: Lecture

Room Requirements: COMPUTER LAB(1)

CSC 107(3) Course ID:016844

Introduction to Computer Security

CS 107 is an introduction to computer security, one of the "hottest" and most relevant areas of computing today. This is a course in the foundational aspects of security; not a course giving you practice in hacking. The student will develop an intuition about what computer security means, both in the abstract and in the context of real systems; be able to recognize potential threats to confidentiality, integrity and availability; be aware of some of the underlying formalisms and technologies that attempt to address these challenges; and be conversant with current security-related issues in the field.

Components: Lecture

CSC 109(3) Course ID:000169

Enter the World of Artificial Intelligence: Computing Principles, Ethics, and Impact

Have you ever wondered how a computer program could beat grandmasters at chess? How can voice assistants understand your commands and even carry conversations with you? How can cars drive themselves? What powers Facebook to predict what you will like or dislike, or decide what is fake news? How can a computer program play the stock market or diagnose diseases?

Enter the world of AI. This course will help you understand the computing principles that drive AI so that you can answer these and many other questions.

What's next? Advances in AI could soon place our society at a turning point as we entrust the management of our infrastructure, security, economy, healthcare, and social activities to AI. Such advances raise complex philosophical, ethical, and legal questions. What is AI? How does it relate to the human mind? How can we

Introduction to Computer Programming with MATLAB (Honors)

Honors section. Intended for engineering students and others who want a comprehensive introduction to fundamental programming concepts using a block-structured language. General problem-solving techniques, including the concept of step-wise refinement applied to the development of algorithms. Programming style, structure, documentation, and testing.

Components: Lecture

Course Equivalents: CSC 113

Enrollment Requirements: Open only to students in the University Honors Program

CSC 114(3) Course ID:017681

Computer Concepts

An introduction to the concepts, usage, and uses of computers. Topics include the social and ethical aspects of computing; the Internet, including the creation of web pages; digital logic and the binary number system; and overview of computer architecture, operating systems, and applications; an introduction to algorithms and programming using Python.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 115(3) Course ID:018983

Ethical Hacking and Network Defense

This course provides an in-depth understanding of how to effectively protect computer networks. Students will learn the tools and penetration testing methodologies used by ethical hackers. In addition, the course provides a thorough discussion of what and who an ethical hacker is and how important they are in protecting corporate and government data from cyber-attacks. Students will learn updated computer security resources that describe new vulnerabilities and innovative methods to protect networks. Also covered is a thorough update of federal and state computer crime laws, as well as changes in penalties for illegal computer hacking.

Components: Online(Online)

Room Requirements: ONLINE(1)

CSC 120(3) Course ID:017061 Department Consent Required

Introduction to Computational Thinking

The course introduces students to the principles of computational thinking. The first half of the course is all about big ideas in Computational Thinking: how can we describe a complex problem, understand what the problem is, and develop possible solutions using a computer. The second half of the course will cover a range of applications of computational thinking in different disciplines. Major areas in Computer Science and major problems in each area will be introduced and discussed.

CSC 123(3) Course ID:001221 Department Consent Required

Introduction to Computer Programming

Intended for computer science majors, this is an introductory course in computer programming. The course will cover the fundamentals of structured programming, including variables, types, expressions, and control structures. In addition, the course will cover language mechanisms for control and type abstraction, including function definition, parameters, arrays, structures, type declarations, and their use in modeling abstract data types. Students will learn techniques in algorithm development and basic principles in software engineering, such as top-down design, step-wise refinement, and data encapsulation. The language of choice will be C++.

Components: Lecture

CSC 124(3) Course ID:018485

Introduction to Computer Programming with Python

This is an introductory Python course in computer programming. The course covers fundamentals of procedural programming, including data types, control-flow, loops, functions, I/O, exceptions, and Object-Oriented Program (OOP) concepts including class, subclass, object, inheritance, overriding, etc. The course is designed for students with no prior exposure to computer science or programming languages. Students will learn to write programs to tackle useful data science problems.

Components: Lecture(In Person)

Course Equivalents: DA 124

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 203(3) Course ID:000101

Assembly Language Programming

An introduction to assembly language programming. Creation, editing, loading, execution, and on-line debugging of assembly language programs. Topics include addressing schemes, assembler directives and macros, subroutine linkages, and assembler processing. . Prerequisite: A grade of C or better in CSC 124.

Components: Lecture

CSC 210(3) Course ID:001225

Discrete Mathematics

This course studies the mathematical elements of computer science including propositional logic, sets, functions and relations, probability and combinatorics, mathematical induction, algorithms, matrices, graphs, trees, and Boolean logic. During the semester students will learn to recognize and express the mathematical ideas graphically, numerically, symbolically, and in writing. They will become self-regulated learners and help other students become cooperative learners. Prerequisites: None

Components: Lecture

CSC 212(3) Course ID:008905

Theory of Computing

A systematic study of theory of computing. Topics include Finite Automata, Fundamentals of computer programming languages grammars, Regular Languages, Context-Free and Context-Sensitive Languages, Turing machines, and Computability Theory. The class introduces the concepts of Computer Problems, Decidability, Reducibility, Intractability, and Computational Complexity.

Components: Lecture

CSC 223(3) Course ID:007192 Department Consent Required

Object-Oriented Programming with Java

Intended for computer science majors. This course is a continuation of CSC 123, focusing on a disciplined approach to designing, coding and testing programs; implementation of data abstractions; and an introduction and analysis of search and sort algorithms. Prerequisite: none

Components: Lecture

CSC 261(3) Course ID:018816

Introduction to Cybersecurity

This course introduces the fundamentals of cyber security and privacy. Topics include concepts and importance of cyber security and privacy, the introduction of information security, risk management, computer security, encryption, authentication, and Internet security and its impact on privacy.

Components: Lecture(In Person)

Enrollment Requirements: Open to undergraduate Computer Science majors

Room Requirements: DIGITAL PRESENTATION ROOM(1)

Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 280(3) Course ID:008902

Data Structures

Systematic study of data structures encountered in computing problems; methods of representing structured data and techniques for operating on them. Typical topics include arrays, lists, stacks, tree structures, files, string, and linked structures. Sorting and searching algorithms; set representations and hash tables. Prerequisites: CSC 123 or CSC 223

Components: Lecture

Enrollment Requirements: CSC 123 or CSC 223

CSC 306(3) Course ID:008903

Introduction to Operating Systems

Major concept areas of operating system principles. Topics include job scheduling, concurrent processes, memory management, dynamic allocation, protection, I/O traffic controls and evaluation models. Prerequisite: CSC390 or CSC391

Components: Lecture

Enrollment Requirements: CSC 390 or CSC 391

CSC 311(3) Course ID:008904

Design & Analysis of Algorithms

This course presents the fundamental techniques for designing efficient computer algorithm, providing their correctness, and analyzing their complexity. General topics include sorting, selection, graph algorithms, and basic algorithm design paradigms (such as divide-and-conquer, dynamic programming and greedy algorithms), lower bounds and NP-completeness. Prerequisite: CSC 280

Components: Lecture

Enrollment Requirements: CSC 280 (C or better)

CSC 312(3) Course ID:011629 Department Consent Required

Microprocessor Programming

This course presents the fundamentals of microprocessor architecture and interfacing. Topics include instruction set architecture, assembly language, debugging and IO device interfacing techniques. The PIC processor architecture will be studied, utilizing windows based integrated development environment and tools suite. A PIC hardware evaluation board is used as the basis for interfacing experiments. Software will be written in assembly language. The Pentium processor architecture and the PCI bus will be studied. A hardware/software project will be assigned toward the end of the course. The course is 50% lab and 50% lecture.

Prerequisites:

Components: Lecture

Enrollment Requirements: CSC 326 or EE 326

CSC 322(3) Course ID:014192

Introduction to Computer Graphics

Description: This course teaches the fundamentals of 2D and 3D computer graphics. Students will learn OpenGL and standard graphics algorithms. This introductory course will not only cover fundamental computer graphics concepts including transformation, viewing, modeling, rendering, illumination, and textures, but also cover the basic linear algebra (vector and matrix arithmetic). The completion of this course will prepare students ready for any advanced computer graphics course. Students are expected to be familiar with C/C++ programming.

Prerequisite: CSC 280

Components: Lecture

Enrollment Requirements: CSC 280

CSC 323(3) Course ID:008906

Introduction to Computer Networks

Introductory concepts of modern computer networks and its association with the Internet. Different protocol layers and architectures of a computer network. Particular emphasis will be given on application layer, transport layer, and network layer. Applications in multimedia networking and network management. Prerequisites: CSC 113 and CSC 123

Components: Lecture

Enrollment Requirements: CSC 113 or CSC 123

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 326(3) Course ID:001288

Switching Circuits and Logic Design

Analysis and design of digital circuits, number systems, combinational and sequential circuits. Basic computer arithmetic, applications and implementation of logic design.

Components: Lecture

Same As Offering: EE 326

Enrollment Requirements: requires concurrent enrollment in EE 327 or CSC 327

CSC 327(1) Course ID:014818

Switching Circuits and Logic Design Laboratory

This laboratory course is meant for students in an introductory digital electronics course that emphasizes logic circuit analysis, applications, and design. The lab work consists of circuit projects that range from investigating basic logic concepts to synthesizing circuits for new applications. Most digital design projects will be implemented using complex programmable logic devices (CPLDs) and/or field programmable gate arrays (FPGAs). The projects are intended to challenge students and to provide them with directed laboratory experience that develops insight into digital principles, applications, and techniques of logic circuit analysis and design.

Components: Laboratory

Same As Offering: EE 327

CSC 363(3) Course ID:008907

Software Engineering

The course will offer a wide perspective on software development, including: requirements analysis, technical design, estimating, modeling using UML, programming style, testing, and management issues. Hands-on practice through a team programming project using object-oriented programming language such as Java will be employed to promote learning and to produce high-quality software in an efficient and predictable manner.

Components: Lecture

Enrollment Requirements: CSC 280

CSC 370(3) Course ID:008908

Concepts of Programming Languages

This course is an introduction to concepts of programming languages, design and implementation of programming languages. This class will also cover C++ programming as it is one of the most efficient languages and broadly used in many areas. Prerequisites: CSC280

Components: Lecture

Enrollment Requirements: CSC 280

CSC 390(3) Course ID:000100

Computer Organization and Architecture

An introduction to digital logic design including combinational and sequential circuits; synthesis of memory and computation operations; illustrations of the organization of major hardware components of a digital computer. Prerequisite: CSC326

Components: Lecture

Enrollment Requirements: CSC 326 or EE 326

CSC 391(3) Course ID:008909

Computer Systems Architecture

An overview of advanced architectures, microprocessor structure, I/O subsystems, multiprocessor architecture, intra-system communication, buses, caches, memory hierarchies, addressing modes, microprogramming, parallelism, and pipelining.

Prerequisites: CSC113 or CSC123

Components: Lecture

Enrollment Requirements: CSC 113 or CSC 123

CSC 406(3) Course ID:017682

Introduction to Secure Computing

This course introduces the basic principles of computer security and information assurance. Topics include notions of threat, vulnerabilities, and risk analysis, malicious software, cryptographic primitives, data secrecy and integrity, privacy, communication security, assurance, and trusted computing. Security mechanisms and assurance methods will be introduced such as authentication, access control, confidentiality, information flow, confinement, auditing, formal methods and evaluation, software security.

Fundamentals of Cloud Computing

Overview of the field of Cloud Computing, its enabling technologies, main building blocks, and hands-on experience through projects utilizing public cloud infrastructures, such as Amazon Web Services (AWS) and Microsoft Azure. Cloud computing services are being adopted widely across a variety of organizations in many domains. Simply, cloud computing is the delivery of computing as a service over a network, whereby distributed resources are rented, rather than owned, by an end user as a utility.

Prerequisites: CSC 363 and CSC 323

Components: Lecture
Course Equivalents: CSC 510
Enrollment Requirements: CSC 323 and CSC 363
Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 411(3) Course ID:015832

Analysis of Algorithms

This course presents the fundamental techniques for designing and analyzing computer algorithms, providing their correctness, and analyzing their time complexity. Topics include sorting and selection algorithms, and basic algorithm design paradigms including brute force, divide-and-conquer, greedy technique, dynamic programming, and basic graph algorithms. Prerequisite: CSC 280

Components: Lecture

CSC 416(3) Course ID:018500

Application of Data Analytics and Development

This course develops an overview of the challenges of developing and applying analytics for insight and decision-making. Examples and cases will come from engineering, social media analytics, business analysis and other data-centered domains. The focus will be on programming and data manipulation techniques for constructing analytics-based applications. Topics include SQL or no-SQL databases, using web service API's to acquire data, introduction to Hadoop and MapReduce, and use of third-party analytic component API's.

Components: Lecture(In Person)
Course Equivalents: DA 516, CSC 516
Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 423(3) Course ID:018870

Business Data Analytics

In this course, students will learn how to transform data to gain insights for making informed business decisions. Current techniques, issues, and challenges in analyzing business data will be discussed. Data storytelling will be introduced to allow students to use these insights to develop a narrative that will convey their findings to business audiences. Students will learn analytical methods and tools that support data-driven decision making and generate solutions to business problems. Topics include managerial statistical tools in descriptive analytics and predictive analytics, including regression. Other topics covered include forecasting, risk analysis, data visualization, and data mining

CSC 426(3) Course ID:016843

Computer and Network Security

This course will introduce the application of cryptographic concepts in the practical implementation of network security practices and techniques. The issues here are: What are the risks and vulnerabilities of computer, Internet, and multimedia data? What are the countermeasures to fight these back? How does cryptographic technique enforce protection? What is digital signature? What is steganography and how is it used for authentication and counterfeit detection? What the different network security technologies are as applied to electronic mail, e-commerce, web transaction, and IP networks? Prerequisite: CSC 323

Components: Lecture

Course Equivalents: CSC 526, EE 526, EE 426

Enrollment Requirements: CSC 323

CSC 427(3) Course ID:016675

Fundamentals of Neural Networks

Introduces basic concepts of neural networks using the general framework of parallel distributed processing. Deals with architecture, principles of operation, training algorithms and applications of a number of neural networks. Each part of the course includes computer exercises performed by the student to demonstrate and reinforce the concepts learned in the class.

Components: Lecture

Course Equivalents: EE 527, CSC 527, EE 427, DA 527

Room Requirements: COMPUTER LAB(1)

CSC 428(3) Course ID:019291

Biostatistical Data Mining

Data mining enables turning a collection of information into knowledge. A popular synonym for data mining is knowledge discovery from data, or KDD. Data mining is the key step in the process of knowledge discovery. Data mining adopts techniques from many domains, such as information retrieval, data warehousing, database systems, pattern recognition, visualization, statistics, machine learning, algorithms, high-performance computing, applications, etc.

This course is an introductory course on data mining and will cover fundamental concepts, principles, methods, practical techniques, and applications for pattern discovery and cluster analysis. Materials will be given with an emphasis on the data from healthcare or biomedical domains.

Students are expected to be familiar with programming, and applying data mining tools as well as explore a topic of choice by completing a project over the course of the semester.

Components: Lecture(In Person)

Introduction to Computer Vision

This course introduces the fundamentals of major topics of Computer vision. The topics covered throughout the course include image filtering, thresholding, morphology and segmentation, edge detection, texture and shape analysis, basic image classification and the preliminaries of machine learning applications. Computer projects (involving student choice of either Python, MATLAB or C++) and technical reports will be undertaken to practice and demonstrate these concepts.

Components: Lecture(In Person)

Course Equivalents: CSC 529

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 430(3) Course ID:017716

Introduction to Data Analysis

This course introduces the computational methods for data analysis. Topics include signal processing, frequency filtering, feature extraction, principal component analysis, linear discriminant analysis, statistical tests, and current big data analysis approaches. Students will learn how to apply the data analysis techniques to data scientific research, starting from raw data filtering, going through feature selection and extraction, and finally concluding with data model construction and statistical inference. This course requires the background in probability, statistics, and linear algebra.

Components: Lecture

CSC 431(3) Course ID:017017

Data Communication Networks

This course deals with basic principles of networking. More specifically it covers the following topics: Network Architectures and Protocols. OSI model and TCP/IP protocol suite. Transmission media. Protocols at the physical, data link, network and transport layers. Multiplexing, error and congestion control. Circuit and packet switching. Local and metropolitan area networks. ATM and frame relay. Network security and distributed applications.

Components: Lecture

Course Equivalents: EE 531, CSC 531, EE 431

CSC 434(3) Course ID:016841 Department Consent Required

Communication and Computer Network Simulation

This course deals with simulation modeling, design and performance evaluation of communication and computer networks. It includes simulation of network elements and overall networks. Simulated network elements include point-to-point, multicast and broadcast links, wireless, satellite and radio links, queuing systems, circuit and packet switches and routers. Simulated overall networks include Local Area Networks (LAN), Internet, packet switched networks, Asynchronous Transfer Mode (ATM) and wireless networks. Development of simulation models for audio and video traffic sources and flow and congestion control algorithms are presented. Methods of presentation, analysis, interpretation and use of simulation results for design purposes are discussed. The course uses OPNET simulation software packages to provide hands-on experience in simulation. Prerequisite: CSC 531 or permission of instructor.

Components: Lecture

Course Equivalents: EE 534, CSC 534, EE 434

CSC 436(3) Course ID:016853

Distributed Computing and Networking

This course prepares students with the broad knowledge of distributed computing and networking, and the ability to apply knowledge to solve real-world problems related to distributed systems. It introduces the principles and design of distributed systems with an emphasis on the mechanisms that enable the components located on networked devices to interact with each other and coordinate their actions for achieving a common goal. Topics covered may include inter-process communication, remote procedure calls, task management, migration, distributed coordination, fault tolerance, virtualization, and cloud computing.

Components: Lecture

Course Equivalents: EE 536, EE 436, CSC 536

Enrollment Requirements: CSC 306 & CSC 323

Room Requirements: COMPUTER LAB(1)

CSC 442(3) Course ID:010544 Department Consent Required

Introduction to Database Management

The course covers the fundamentals of database systems. The course will provide the student with the foundation of knowledge necessary to design, implementation, and management of database systems. Topics to be covered include file systems and database concepts, database models, relational database model, introduction to SQL, database design and implementation, database integrity, and normalization of database tables. Implementation techniques using commercial DBMS will be considered. The course includes individual database application programming projects. Prerequisite: CSC363

Components: Lecture

Course Equivalents: DA 542

Enrollment Requirements: CSC 363

CSC 443(3) Course ID:017188

Introduction to Knowledge Management

This course explores data science topics including the fundamental concepts and algorithms of knowledge management, including explicitly capturing organizational knowledge; communicating that information robustly between organizations; and the process of semantically understanding the perspectives of other organizations. Organizational knowledge capture concepts include static (slowly changing) unique information represented through ontologies; and dynamic (more rapidly evolving) business processes through workflows. Tools are employed to develop understanding in each area. Conducted in a seminar style, where students will explore research and software tools in the area to understand concepts, collaborate with team and classmates to demonstrate knowledge gained. Ultimately the students will collaborate to apply these concepts towards improving knowledge management automation tools,

Components: Lecture

Course Equivalents: CSC 543

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 447(3) Course ID:016855

Artificial Intelligence

(Formerly 542) Topics may include state space search, heuristic search, knowledge representation techniques, expert systems, automated reasoning, definitions of intelligence, computer problem solving, game playing, pattern recognition, theorem proving, semantic information, processing, evolutionary systems, and heuristic programming. Prerequisite: Instructor's permission.

Components: Lecture

Course Equivalents: EE 547, EE 447

CSC 450(3) Course ID:010149 Department Consent Required

Fundamentals of Multimedia

Introduction to Multimedia; multimedia authoring and tools; Basics of digital audio, image, video, and graphics - their representation, design, and simple processing; Multimedia Data compression - algorithms, standards, and techniques; Issues in multimedia communication and networking.

Prerequisite: Senior Standing

Components: Lecture

CSC 451(3) Course ID:017455

Pattern Recognition

This course provides a broad introduction to pattern recognition. Topics include: Bayesian decision theory, density estimation, linear classifiers, nearest neighbor rules, decision trees, artificial neural networks, dimensionality reduction, feature extraction and feature selection, clustering. The course is directed towards advanced undergraduate and beginning graduate students. Prerequisite: background in probability, statistics, and linear algebra or permission of instructor.

Components: Lecture

Course Equivalents: CSC 551

Enrollment Requirements: MATH 301 & MATH 309

CSC 465(3) Course ID:018799

Introduction to Information Privacy and Security

This course teaches basic privacy and data security principles, and due the fact that information privacy has become a high priority in all private and public organizations, introduces the concepts of Privacy by Design (PbD) and Privacy Engineering, with practical applications to real-world scenarios.

Components: Lecture(Online)

Course Equivalents: CSC 565, EE 565, EE 465

Room Requirements: ONLINE(1)

CSC 469(3) Course ID:018445 Department Consent Required

Computer Security and Privacy

Importance of computer security and its effect on individual privacy. Topics include computers and their impact on privacy, data banks, physical security, administrative security, and computer systems and network security.

Components: Lecture(In Person)

Course Equivalents: CSC 569, EE 569, EE 469

Enrollment Requirements: Junior standing

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 471(3) Course ID:008910

JAVA, OOP, Network Programming

Principles and techniques of OOP and network programming presented in the Java programming environment. Explores advanced features of Java through programming projects. Topics include Objects and Classes, graphics programming with AWT, designing user interfaces with AWT, Applets, data structures, exceptions and debugging, input and output, multithreading, and networking. Prerequisite: 113 or 124 or permission of instructor.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 475(3) Course ID:017063

Quantum Computing

The course deals with a new field of computer computation called: quantum computation. This computation is based on quantum mechanical principles. In the 1980's the physicist Richard Feynman noticed that quantum physics cannot be efficiently simulated on classical computers.

This was taken as an indication that computers which exploit quantum physics could be substantially more powerful than computers build on the basis of classical physics. The essential reason for this potential efficiency is the fact that quantum systems can use superposition, entanglement, and nonlocality as a way to compute quasi in parallel. Since the development of real-world quantum computers requires enormous resources, theoretical computer science finds itself in the responsible situation to explore the possible benefits and limitations of such systems beforehand. Upon successful completion of the course, students

will be able to understand what Quantum computing and quantum circuits are about, why they matter, and what

Components: Lecture

Course Equivalents: CSC 575

Enrollment Requirements: CSC 326 or EE 326

CSC 476(3) Course ID:017004

Introduction to Robotics

Covers basic concepts in robotics such as robot arm kinematics, robot arm dynamics, trajectory planning, and control. Transformation between joint space and Cartesian space. Coordinate frames and homogeneous coordinate transformation. Solution of inverse kinematic problem and robot workspace. Differential motion and manipulator Jacobian matrix. Introduction to the control problem of robot manipulators. Prerequisite:

Senior Engineering or Graduate Students

Components: Lecture(In Person)

Course Equivalents: EE 576, CSC 576, EE 476

Enrollment Requirements: open to senior Engineering majors

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 480(3) Course ID:012168 Department Consent Required

Numerical Analysis and Optimization

Numerical Analysis and Optimization methods to solve practical problems in computer science, business, engineering and science. Practical problem solving based on analyzing empirical, experimental or measured data where the precise mathematical model is approximated or not necessarily known. Limitations, trade-offs and margins of error are evaluated for various practical examples such as network traffic, engineering, science and business applications. MATLAB and/or C++ are used for computational problem solving. Suitable for computer science, mathematics, engineering, and business majors. Pre-requisites:ENGR222&CSC280

Components: Lecture

Course Equivalents: DA 580, CSC 580, DA 480

CSC 484(3) Course ID:016673

Introduction to Machine Learning

The course introduces principles, algorithms, and applications of machine learning from the point of view of modeling and prediction; formulation of learning problems; representation, over-fitting, generalization; clustering, classification, probabilistic modeling; and methods such as support vector machines, hidden Markov models, and Bayesian networks.

Components: Lecture(In Person)

Course Equivalents: CSC 584, DA 515, EE 584, EE 484

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 491A(3) Course ID:009016

Senior Design I

Systematic steps towards writing a research/development project proposal including background research, problem identification, requirement analysis, specifications, and design for developing a significant software system. The course will also introduce principles and case studies of computing ethics and professional practices.

Components: Lecture

Enrollment Requirements: Open to Seniors only

CSC 491B(3) Course ID:009017

Senior Design II

Continuation of CSC 491. Implementation, testing, and presentation of the design done in CSC 491. The course wraps up with a final demonstration of the project.

Components: Laboratory

Enrollment Requirements: CSC 491A (formerly CSC 491)

**The Catholic Univ of America
Course Catalog**

Engineering - Electrical Engineering - Subject: Computer Science

CSC 502(3) **Course ID:013424** **Department Consent Required**
Engineering and Computer Science Management

This course is intended to provide students with an opportunity to merge the fundamentals of executive business analysis and decision making with their knowledge of computer science.

The course will cover a brief historical view of the evolution of I/T innovation from the personal computer through today's cloud computing with a strong focus on the executive decisions that helped drive this innovation. Students will complete deep dives into past successes and failures within the I/T industry and will come to understand the importance of business strategy, project management and ROI analysis as it relates directly to I/T investments. They will look at current industry trends and will have an opportunity to drive research that can change/alter the future landscape of several technology areas.

Components: Lecture

CSC 503(3) **Course ID:018524**
Distributed Computer Using Programmable Logic Controls

Course description: This course covers the concept, architecture, and programming characteristics of programmable logic controllers (PLCs). The functionality, structure, I/O communication, user interfaces, security, and applications will be overviewed. The students will then learn PLC software programming languages standards and tools including IEC 61131-3, ladder diagram, function block diagram, structured text, instruction list, and sequential function chart. RSLogix 500 will be used to create designs that will be tested on Allen Bradley PLCs. At the end of this course, students will be able to develop the software required for designing systems with Allen Bradley PLCs. Many of the concepts learnt during the lectures will be demonstrated in the lab exercises and final project. In addition, the course will also introduce embedded software development, particularly Java for embedded control.

Components: Lecture(In Person)

Room Requirements: OFF CAMPUS(1)

CSC 504(3) **Course ID:006306**
Compiler Construction

An in-depth study of the programming languages compilation process. The course encompasses various topics about programming languages including language structures, grammars, and parsing techniques. The course also studies the building blocks of a modern compiler, and the various stages of the compilation process from the language parsing to code generation and optimization. Prerequisite: CSC 306 or permission

Components: Lecture

Enrollment Requirements: CSC 306 or department consent

CSC 506(3) **Course ID:017683**
Introduction to Secure Computing

This course introduces the basic principles of computer security and information assurance. Topics include notions of threat, vulnerabilities, and risk analysis, malicious software, cryptographic primitives, data secrecy and integrity, privacy, communication security, assurance, and trusted computing. Security mechanisms and assurance methods will be introduced such as authentication, access control, confidentiality, information flow, confinement, auditing, formal methods and evaluation, software security.

Components: Lecture

Course Equivalent: CSC 406

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 507(3) **Course ID:001249**
Unix System Programming

Principles of object-oriented software development. Use of observer, strategy, composite, factory, and state patterns to build a framework for network protocol software. Discussion and implementation of several Client/Server communications methods: TCP sockets, Messages, and shared memory. Other topics include remote procedure calls (RPC) and multithreaded programming. Prerequisite: CSC 306

Components: Lecture

Course Equivalent: CSC 407

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 508(3) Course ID:006307

X Window Programming

An overview of the X Window System, explaining the network-transparent aspect of this windowing system, followed by the very basics needed to create an X Window

Application: establishing a connection to the X server, creating windows, drawing, color, selecting fonts, and manipulating events. Explores the C language xlib interface to graphics, window manager, and events through several programming assignments. The advantage of using a toolkit, using the C language interface to several public domain toolkits with emphasis on Tcl/Tk or the Hush C++ API to Tcl/Tk, and v a C++ GUI framework.

Components: Lecture

CSC 509(3) Course ID:011628 Department Consent Required

Web Design & Programming

This course provides the conceptual foundation for the logical structures necessary to develop web pages and websites. Topics include logic structures, control structures, variables, design contemplations, I/O operations, and other web programming considerations. Student will learn the basics of creating web pages and combining these into a functional website as a group assignment. A brief introduction to several web-based programming languages and tools, such as XHTML, CSS, JavaScript, Java Applets, XML, XSLT, DOM, Perl, CGI, Apache, Java Servlets, JSP, PHP, ASP.NET, MYSQL, JDBC, and HTTP is provided. Student will also learn the necessary skills to build, maintain, and host web pages and websites. Other topics include Web server platform and architecture, client-side and server-side programming concepts, static and dynamic web pages, database and data warehousing, data access techniques, and security issues in web design.

Components: Lecture

Course Equivalents: CSC 409, DA 509

CSC 510(3) Course ID:017685

Fundamentals of Cloud Computing`

Overview of the field of Cloud Computing, its enabling technologies, main building blocks, and hands-on experience through projects utilizing public cloud infrastructures, such as Amazon Web Services (AWS) and Microsoft Azure. Cloud computing services are being adopted widely across a variety of organizations in many domains. Simply, cloud computing is the delivery of computing as a service over a network, whereby distributed resources are rented, rather than owned, by an end user as a utility.

Prerequisites: CSC 363 and CSC 323

Components: Lecture

Course Equivalents: CSC 410

Enrollment Requirements: CSC 323 and CSC 363

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 511(3) Course ID:006309

Computational Complexity

Examination of computer algorithms from the point of view of computational complexity. Topics include polynomial algorithms, FFT and GCD; algorithms for vector and parallel machines, pipelines, and systolic arrays; NP completeness. Prerequisite: CSC 210.

Components: Lecture

Enrollment Requirements: CSC 580

CSC 512(3) Course ID:018525

Secure Communications for Real-Time Systems

This course includes elements of CSC 581: Cryptography and Steganography - Introductory concepts of cryptography and steganography; Classical and modern cryptographic algorithms - the underlying mathematics and analysis; Number theory; Cryptographic protocols in computer and data security applications; Fundamentals of information hiding - Techniques and applications. The course emphasises on industrial control systems with limited computational power.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 513(3) Course ID:012171 Department Consent Required

Fundamentals of Computer Graphics

This course covers the fundamental concepts and algorithms for computer graphics, including representations for images, curves, surfaces, transformations, and projections, interpolation, clipping, visibility, ray tracing, shading, photon mapping, texture mapping, animation, and special effects. Students should have background in linear algebra and strong programming skills

Components: Lecture

CSC 514(3) Course ID:013289

Introduction to Hardware Accelerated Computing

The past few years the High Performance Computing (HPC) community has witnessed a surge in the use of hardware acceleration, such as graphics processor units (GPU), field programmable gate arrays (FPGA), digital signal processors (DSP), cell processors, etc. This coincides at a time when conventional microprocessors are unable to keep up with Moore's Law, and become costly due to their increasing power requirements. This course is an introduction to hardware accelerated computational techniques and provides an introduction to FPGA and GPU-programming. Students are expected to have a strong understanding of programming in C, C++ or equivalent programming language. This course will enable students develop a solid understanding of the interaction between software and hardware, and gain hand-on experience in high performance computing.

Prerequisite: CSC 113, EE326

Components: Lecture

Enrollment Requirements: CSC 113 and either CSC 326 or EE 326

CSC 515(3) Course ID:014193 Department Consent Required

Mobile Programming

Description: This course will teach fundamental programming principles with a focus on the mobile environment such as iOS and Android. The course will emphasize practical application of numerous academic concepts. Students should already have a familiarity with C and Java, an understanding of basic object-oriented programming, studied basic algorithms and data structures. Hands-on programming will be a big part of this course.

Prerequisite: "Permission of Instructor"

Components: Laboratory

Enrollment Requirements: CSC 123

CSC 516(3) Course ID:018344

Data Analytics and Development

This course develops an overview of the challenges of developing and applying analytics for insight and decision-making. Examples and cases will come from engineering, social media analytics, business analysis and other data-centered domains. The focus will be on programming and data manipulation techniques for constructing analytics-based applications. Topics include SQL or no-SQL databases, using web service API's to acquire data, introduction to Hadoop and MapReduce, and use of third-party analytic component API's.

Components: Lecture(In Person)

Course Equivalent: DA 516, CSC 416

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 519(3) Course ID:006294

Digital System Design

Comprises both lectures and labs, introduces the most important aspects of real-world digital design. Emphasis on practical, hands-on experience in building a system of medium complexity. Design synthesis highlights modern ASIC devices. Staff.

Components: Lecture

Same As Offering: EE 519

Enrollment Requirements: CSC 326 or EE 326

Room Requirements: COMPUTER LAB(1)

CSC 520(3) Course ID:001252

Topics in Computer Science

An individual topic from the area of computer science, investigated in detail with students examining accepted and proposed ideas relative to the topic. Sample topics include, but are not limited to, software testing, issues in large-scale software development, current issues in artificial intelligence, issues in safety-critical software, issues in business-oriented software, database design and advanced analysis of algorithms. May be repeated for credit with different topics. Prerequisite: Permission of instructor.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 521(3) Course ID:015130 Department Consent Required

Programmable Logic Devices and HDL Design

This course covers the concepts, structure and programming characteristics of programmable logic devices (PLDs) such as Field-Programmable Gate Arrays (FPGAs). Hardware Description Languages (HDLs) are used to create designs that are tested on FPGA devices. In this course, students will learn how to design and implement general-purpose hardware components, such as computer arithmetic units and microprocessor data/control paths. Students will also learn how to design specialized hardware from different fields such as digital signal and image processing using techniques that are based on high-level environments, such as Matlab and Simulink, targeting FPGA devices.

Pre-requisites

EE / CSC 326 or instructor's permission.

Components: Lecture

Same As Offering: EE 521

Course Equivalents: EE 421

Enrollment Requirements: EE 326 or CSC 326

Room Requirements: COMPUTER LAB(1)

CSC 522(3) Course ID:010669 Department Consent Required

Operating Systems

A study of the major concept areas of operating systems. Topics include operating systems structure, process and thread scheduling, process synchronization, deadlock management, memory management, file-systems, protection, I/O traffic controls and evaluation models. Prerequisite: 306 or Permission of Instructor.

Components: Lecture

CSC 523(3) Course ID:018871

Business Data Analytics

In this course, students will learn how to transform data to gain insights for making informed business decisions. Current techniques, issues, and challenges in analyzing business data will be discussed. Data storytelling will be introduced to allow students to use these insights to develop a narrative that will convey their findings to business audiences. Students will learn analytical methods and tools that support data-driven decision making and generate solutions to business problems. Topics include managerial statistical tools in descriptive analytics and predictive analytics, including regression. Other topics covered include forecasting, risk analysis, data visualization, and data mining.

Components: Lecture(In Person)

Course Equivalents: CSC 423, DA 423, DA 523

Enrollment Requirements: CSC 530

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 524(3) Course ID:010219 Department Consent Required

Secure Programming

Introduction to Software Security, risk assessment, buffer overflows, design for security, security testing and auditing, security issues of open source and closed source software, guiding principles of software security, selection of appropriate technologies, access control, race conditions, trust management, input validation, and database security. Pre-req: CSC123

Components: Lecture

Same As Offering: EE 524

Enrollment Requirements: CSC 123

CSC 525(3) Course ID:010816 Department Consent Required

Embedded Systems Programming

CSC 525 Embedded Systems Programming gives an overview of embedded systems, including the concepts, design considerations and software development for an embedded computer system. The course will strive to cover embedded system design/development concepts, real world considerations in embedded system design and use, and platform-based Embedded System Design. At the end of this course, students will be able to develop the hardware and software required for designing an embedded system SoC on Xilinx FPGAs. Many of the concepts learnt during the lectures will be demonstrated in the lab exercises and final project. Use of platform based design for embedded systems is the current trend in embedded systems design, which will be helpful in industry as well as academic research.

Prerequisites: CSC390 or CSC391 or permission

Components: Lecture

Enrollment Requirements: CSC 390 or CSC 391

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 526(3) Course ID:008188

Computer and Network Security

This course will introduce the application of cryptographic concepts in the practical implementation of network security practices and techniques. The issues here are: What are the risks and vulnerabilities of computer, Internet, and multimedia data? What are the countermeasures to fight these back? How does cryptographic technique enforce protection? What is digital signature? What is steganography and how is it used for authentication and counterfeit detection? What the different network security technologies are as applied to electronic mail, e-commerce, web transaction, and IP networks? Prerequisite: CSC 323

Components: Lecture

Same As Offering: EE 526

Course Equivalents: EE 426, CSC 426

Enrollment Requirements: CSC 323

CSC 527(3) Course ID:016202

Fundamentals of Neural Networks

Introduces basic concepts of neural networks using the general framework of parallel distributed processing. Deals with architecture, principles of operation, training algorithms and applications of a number of neural networks. Each part of the course includes computer exercises performed by the student to demonstrate and reinforce the concepts learned in the class.

Components: Lecture

Course Equivalents: EE 527, EE 427, CSC 427, DA 527

CSC 528(3) Course ID:019292

Biostatistical Data Mining

Data mining enables turning a collection of information into knowledge. A popular synonym for data mining is knowledge discovery from data, or KDD. Data mining is the key step in the process of knowledge discovery. Data mining adopts techniques from many domains, such as information retrieval, data warehousing, database systems, pattern recognition, visualization, statistics, machine learning, algorithms, high-performance computing, applications, etc.

This course is an introductory course on data mining and will cover fundamental concepts, principles, methods, practical techniques, and applications for pattern discovery and cluster analysis. Materials will be given with an emphasis on the data from healthcare or biomedical domains.

Students are expected to be familiar with programming, and applying data mining tools as well as explore a topic of choice by completing a project over the course of the semester.

Components: Lecture(In Person)

Course Equivalents: CSC 428, DA 528

Room Requirements: COMPUTER LAB(1)

CSC 529(3) Course ID:008455

Introduction to Computer Vision

This course introduces the fundamentals of major topics of Computer vision. The topics covered throughout the course include image filtering, thresholding, morphology and segmentation, edge detection, texture and shape analysis, basic image classification and the preliminaries of machine learning applications. Computer projects (involving student choice of either Python, MATLAB or C++) and technical reports will be undertaken to practice and demonstrate these concepts.

Components: Lecture(In Person)

Course Equivalents: CSC 429

Room Requirements: DIGITAL PRESENTATION ROOM(1)

CSC 530(3) Course ID:015834

Introduction to Data Analysis

A hands-on introduction to the field of Data Science and its applications. Covers a wide range of topics to provide an overview of the use of data in different fields. Provides hands-on practice with basic tools and methods of data analysis. Prepares students to use data in their field of study and in their work and to effectively communicate quantitative findings. Focus is on the use of Python in data analysis and mastering tools for acquiring, parsing, manipulating, and preparing data for statistical analysis.

Components: Lecture

Course Equivalents: DA 501, CSC 430, DA 401

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 531(3) Course ID:010272 Department Consent Required

Data Communications Networks

This course deals with basic principles of networking. More specifically it covers the following topics:

Network Architectures and Protocols. OSI model and TCP/IP protocol suite. Transmission media. Protocols at the physical, data link, network and transport layers. Multiplexing, error and congestion control. Circuit and packet switching. Local and metropolitan area networks. ATM and frame relay. Network security and distributed applications. Prerequisite: EE 413 or equivalent.

Components: Lecture

Course Equivalents: EE 531, EE 431, CSC 431

Enrollment Requirements: EE 413

CSC 532(3) Course ID:006311

System Simulation

Modeling and simulation of continuous and discrete systems, simulation languages, digital simulation techniques, Monte Carlo method, queuing models, design of simulation experiments and analysis of results, applications. Prerequisite: Permission of instructor.

Components: Lecture

CSC 533(3) Course ID:006527

Optimization

A survey of mathematical programming, combinatorial optimization, and weak optimization. Studies practicalities, convergence and efficiency of different optimization methods.

Introduces contemporary methods such as Simulated Annealing and Genetic Algorithms. Considers applications in computer science, engineering, and business. Suitable for computer science, mathematics, engineering, and business majors.

Prerequisites: CSC 124, MATH 122.

Components: Lecture

Enrollment Requirements: CSC 113 & MATH 122

CSC 534(3) Course ID:013403 Department Consent Required

Communication and Computer Network Simulation

This course deals with simulation modeling, design and performance evaluation of communication and computer networks. It includes simulation of network elements and overall networks. Simulated network elements include point-to-point, multicast and broadcast links, wireless, satellite and radio links, queuing systems, circuit and packet switches and routers. Simulated overall networks include Local Area Networks (LAN), Internet, packet switched networks, Asynchronous Transfer Mode (ATM) and wireless networks. Development of simulation models for audio and video traffic sources and flow and congestion control algorithms are presented. Methods of presentation, analysis, interpretation and use of simulation results for design purposes are discussed. The course uses OPNET simulation software packages to provide hands-on experience in simulation.

Prerequisite: CSC 531 or permission of instructor.

Components: Laboratory

Course Equivalents: EE 534, EE 434, CSC 434

Enrollment Requirements: CSC 531 or department consent

CSC 536(3) Course ID:016860

Distributed Computing and Networking

This course prepares students with the broad knowledge of distributed computing and networking, and the ability to apply knowledge to solve real-world problems related to distributed systems. It introduces the principles and design of distributed systems with an emphasis on the mechanisms that enable the components located on networked devices to interact with each other and coordinate their actions for achieving a common goal. Topics covered may include inter-process communication, remote procedure calls, task management, migration, distributed coordination, fault tolerance, virtualization, and cloud computing.

Components: Lecture

Course Equivalents: EE 536, EE 436, CSC 436

Enrollment Requirements: CSC 306 & CSC 323

Room Requirements: COMPUTER LAB(1)

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 541(3) Course ID:009572

Database Systems

Principles of database system including database design, implementation, and management. Topics may include review of database language, data modeling, database security, advanced database concept, database connectivity with the internet and modern database management. Prerequisite: Permission of instructor.

Components: Lecture

Enrollment Requirements: CSC 280 (C or better)

CSC 543(3) Course ID:017189

Introduction to Knowledge Management

This course explores data science topics including the fundamental concepts and algorithms of knowledge management, including explicitly capturing organizational knowledge; communicating that information robustly between organizations; and the process of semantically understanding the perspectives of other organizations. Organizational knowledge capture concepts include static (slowly changing) unique information represented through ontologies; and dynamic (more rapidly evolving) business processes through workflows. Tools are employed to develop understanding in each area. Conducted in a seminar style, where students will explore research and software tools in the area to understand concepts, collaborate with team and classmates to demonstrate knowledge gained. Ultimately the students will collaborate to apply these concepts towards improving knowledge management automation tools.

Components: Lecture

Course Equivalents: CSC 443

CSC 547(3) Course ID:006323

Artificial Intelligence

(Formerly 542) Topics may include state space search, heuristic search, knowledge representation techniques, expert systems, automated reasoning, definitions of intelligence, computer problem solving, game playing, pattern recognition, theorem proving, semantic information, processing, evolutionary systems, and heuristic programming. Prerequisite: Instructor's permission.

Components: Lecture

CSC 551(3) Course ID:012170 Department Consent Required

Pattern Recognition

This course provides a broad introduction to pattern recognition. Topics include: Bayesian decision theory, density estimation, linear classifiers, nearest neighbor rules, decision trees, artificial neural networks, dimensionality reduction, feature extraction and feature selection, clustering. The course is directed towards advanced undergraduate and beginning graduate students. Prerequisite: background in probability, statistics, and linear algebra or permission of instructor.

Components: Lecture

Course Equivalents: CSC 451

CSC 564(3) Course ID:006528

Advanced Software Engineering

Examines the software development cycle with respect to the system life cycle. Topics include software size and cost estimation, relative effort and time distribution across software development phases, products of the major activities of the software development process, the various management techniques currently in use, and process models of software development. Review of the desired attributes of the software product (portability, reusability, maintainability, etc.) from the perspectives of benefits of the attribute and techniques for achieving the attribute. Prerequisites: CSC 370, CSC 280.

Components: Lecture

Enrollment Requirements: CSC 280 and CSC 370

CSC 565(3) Course ID:011384 Department Consent Required

Introduction to Information Privacy and Security

This course teaches basic privacy and data security principles, and due the fact that information privacy has become a high priority in all private and public organizations, introduces the concepts of Privacy by Design (PbD) and Privacy Engineering, with practical applications to real-world scenarios.

Components: Lecture

Same As Offering: EE 565

Course Equivalents: EE 465, CSC 465

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 567(3) Course ID:018522
Industrial Controls Cybersecurity, Architectures, and Interfaces

This course is concerned with Cybersecurity, Architectures, and Interfaces for Industrial Controls Systems (ICS), Risk Management Framework for Industrial Control Systems, ICS/Embedded system Auditing, Security Awareness, and Standards (e.g. NIST 800-82). In addition, the course deals with ICS Architecture and Embedded/PLC programming, protocols, and interfaces, Basics of encryption and authentication and challenges with embedded systems, Electromagnetic Compatibility (EMC), and Electro Mechanics. The course includes a hands-on lab.

Components: Lecture(In Person)
Course Equivalents: EE 567
Room Requirements: OFF CAMPUS(1)

CSC 568(3) Course ID:018523
Industrial Controls Software Development with Cybersecurity

This course is concerned with Secure Software Development, Principles of secure software development or designing software w/security in mind. The course focuses on embedded software systems, not for web portals, web interfaces or application, Software Systems Architecture, Architectural design principles/patterns, Documentation/evaluation of software architectures, Architecture Reuse Concepts (how to ensure roll forward), and Software System Design.

Components: Lecture(In Person)
Room Requirements: OFF CAMPUS(1)

CSC 569(3) Course ID:005810 Department Consent Required
Computer Security and Privacy

Importance of computer security and its effect on individual privacy. Topics include computers and their impact on privacy, data banks, physical security, administrative security, and computer systems and network security. Not open to students who completed this course under earlier numbering (597).

Prerequisite: Junior standing.

Components: Lecture
Same As Offering: EE 569
Course Equivalents: CSC 469, EE 469
Enrollment Requirements: Junior or higher class standing

CSC 575(3) Course ID:017062
Quantum Computing

The course deals with a new field of computer computation called: quantum computation. This computation is based on quantum mechanical principles. In the 1980's the physicist Richard Feynman noticed that quantum physics cannot be efficiently simulated on classical computers.

This was taken as an indication that computers which exploit quantum physics could be substantially more powerful than computers build on the basis of classical physics. The essential reason for this potential efficiency is the fact that quantum systems can use superposition, entanglement, and nonlocality as a way to compute quasi in parallel. Since the development of real-world quantum computers requires enormous resources, theoretical computer science finds itself in the responsible situation to explore the possible benefits and limitations of such systems beforehand. Upon successful completion of the course, students

will be able to understand what Quantum computing and quantum circuits are about, why they matter, and what

Components: Lecture
Course Equivalents: CSC 475
Enrollment Requirements: CSC 326 or EE 326

CSC 576(3) Course ID:014131
Introduction to Robotics

Covers basic concepts in robotics such as robot arm kinematics, robot arm dynamics, trajectory planning, and control. Transformation between joint space and Cartesian space. Coordinate frames and homogeneous coordinate transformation. Solution of inverse kinematic problem and robot workspace. Differential motion and manipulator Jacobian matrix. Introduction to the control problem of robot manipulators. Prerequisite: Senior Engineering or Graduate Students

Components: Lecture(In Person)
Course Equivalents: EE 576, CSC 476, EE 476
Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 580(3) Course ID:019113 Department Consent Required

Numerical Analysis and Optimization

Numerical Analysis and Optimization methods to solve practical problems in computer science, business, engineering and science. Practical problem solving based on analyzing empirical, experimental or measured data where the precise mathematical model is approximated or not necessarily known. Limitations, trade-offs and margins of error are evaluated for various practical examples such as network traffic, engineering, science and business applications. MATLAB and/or C++ are used for computational problem solving. Suitable for computer science, mathematics, engineering, and business majors. Pre-requisites:ENGR222&CSC280

Components: Lecture(In Person)

Course Equivalents: CSC 480, DA 580, DA 480

Room Requirements: COMPUTER LAB(1)

CSC 581(3) Course ID:006530

Cryptography and Steganography

Introductory concepts of cryptography and steganography; Classical and modern cryptographic algorithms - the underlying mathematics and analysis; Number theory; Cryptographic protocols in computer and data security applications; Fundamentals of information hiding - Techniques and applications.

Components: Lecture

Same As Offering: EE 581

CSC 582(3) Course ID:008879

Computer Graphics and Game Programming

The course will study the makeup of a 3D game engine, surveying the computational aspects required in the production of its individual components. The engine of choice will be the jMonkeyEngine 3D game engine, an open-source, cross-platform, Java-based engine. The students will program a novel game of their own design using the engine while learning about the computational techniques involved in the programming of game engine components in general.

Prerequisites: programming ability in C++ or C#, and understanding of basic linear algebra concepts such as vector and matrix.

Components: Lecture

CSC 584(3) Course ID:016670

Introduction to Machine Learning

The course introduces principles, algorithms, and applications of machine learning from the point of view of modeling and prediction; formulation of learning problems; representation, over-fitting, generalization; clustering, classification, probabilistic modeling; and methods such as support vector machines, hidden Markov models, and Bayesian networks.

Components: Lecture

Course Equivalents: CSC 484, DA 515, EE 584, EE 484

Room Requirements: COMPUTER LAB(1)

CSC 591(3) Course ID:019159 Department Consent Required

Data Science and Business Analytic Practicum

This is the last course for the students pursuing a Master of Science degree in Data Analytics. In this course, students select one of the issue areas and a method of execution. The course is designed to provide hands-on analytics project management experience, amplified by shared experiences with other students. Students currently working can choose issue areas related to the established set, but which are tailored to their work environment and use data sets supplied by their employer. Students will work throughout the semester in a professional project-like manner. Students will submit project proposals, plan of action milestone charts, and timelines as part of the practicum. Students will have scheduled reviews at various points that may be held in conjunction with the industry partners. At the end of the semester, each student will give a presentation on their project to a panel made up of CUA faculty and industry partners. Depending on the scope of the project, teams can be formed to address multiple aspects of the available data.

Components: Practicum(In Person)

Course Equivalents: DA 591

Room Requirements: COMPUTER LAB(1)

CSC 593(3) Course ID:001484 Department Consent Required

Directed Study

CSC 593 - Directed Research (Masters) (3) bearing 3 SCH, is used only in the case of emergency such as non-existence of courses that are required for graduation or for a particular research or study and are not offered through the consortium of the local universities /colleges. This course is study of a specific issue to be proposed by the student and/or a faculty member and to be directed by the faculty member. The maximum allowed number of directed studies is 1 (one) for master's degree programs.

Components: Directed Study/Research

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Computer Science

CSC 611(3) Course ID:006313

Logic for Computing Scientists

Topics may include propositional logic, syntax and semantics, proof theory vs. model theory, soundness, consistency and completeness, first order logic, logical theories, automated theorem proving, ground resolution, pattern matching unification and resolution, Dijkstras logic, proof obligation, and program proving. Prerequisite: CSC 312

Components: Lecture

CSC 612(3) Course ID:006314

Analysis of Algorithms

An advanced study in computer algorithms that delves deeply into a selected problem: linear programming (simplex, revised simplex, complementary slackness, Khachian's ellipsoid, etc) and duality; in addition, the course also covers suffix trees, minimum spanning trees, Bellman-Ford and Dijkstra's shortest paths algorithms, and computational geometry.

Prerequisites: CSC 311 or Permission of Instructor.

Components: Lecture

Enrollment Requirements: CSC 311

CSC 613(3) Course ID:006315

Combinatorial Algorithms and Intractability

Topics may include combinatorial algorithms, nondeterministic algorithms, classes P and NP, NP-hard and NP-complete problems, and intractability, and design techniques for fast combinatorial algorithms. Prerequisite: CSC 311

Components: Lecture

Enrollment Requirements: CSC 565 or EE 565

CSC 620(3) Course ID:013569 Department Consent Required

Digital Forensics Technology

The primary objective of this course is to provide a broad understanding of the technologies and tools used to perform digital forensics for the detection and prevention of computer crimes. Various techniques of forensic evidence acquisition, detection, and classification will be introduced. Core principles of a few forensically-oriented data processing technologies such as compression, watermarking, steganography, steganalysis, cryptanalysis, and multiresolutional analysis will be studied. The course will also include different modalities of data such as binary, text, audio, image, and video, as applicable to different modalities of forensics such as hardware, software, computer, network, and memory.

Components: Lecture

CSC 621(3) Course ID:006316

Computer Networks

Topics may include physical layer basics; network protocol algorithms; error handling; flow control; multihop routing; network reliability, timing, and security; data compression; cryptography fundamentals; advanced network protocols and infrastructure; applications of high-performance networks to distributed systems; and high-performance computing and multimedia domains. Prerequisite: CSC 323 or instructor's permission.

Components: Lecture

Enrollment Requirements: CSC 323

CSC 623(3) Course ID:006319

Real-Time Systems

This course provides a theoretical and practical study of real-time systems, applications, and operating systems. It studies real-time applications, real-time systems, uni-processor scheduling, resource access control, multi-processor and distributed scheduling, and specific attributes of real-time network protocols and operating systems. Prerequisites: CSC 306 or permission of instructor.

Components: Lecture

Enrollment Requirements: CSC 306 or department consent

Engineering - Electrical Engineering - Subject: Computer Science

CSC 633(3) Course ID:006320
Software Requirements & Specifications
Topics may include an examination of the definitional phase of software development; a survey of requirements and specification issues and techniques; and an analysis of specification representations and techniques emphasizing important application issues. Prerequisite:CSC 124 or equivalent
Components: Lecture
Enrollment Requirements: CSC 363

CSC 634(3) Course ID:018526
Automated Software Testing
This course covers Automated Software Testing, with emphasis on Industrial Controls Systems.
Components: Lecture(In Person)
Room Requirements: OFF CAMPUS(1)

CSC 635(3) Course ID:006322
Software Verification, Validation, and Testing
Topics may include an examination of the test phase of software development; test planning; requirements-based and code-based testing techniques; tools; reliability models; and statistical testing.
Components: Lecture
Enrollment Requirements: CSC 363

CSC 636(3) Course ID:001502
Distributed Computing
Topics may include the principles underlying the design and implementation of distributed client-server software components; technologies for developing distributed software components, such as sockets, database connections, dynamic type inspection, security, events, and dynamically building function calls; and an introduction to middleware for programming distributed asynchronous systems, including an introduction to events, call-backs, and connections. Prerequisite: CSC 306 or equivalent.
Components: Lecture
Enrollment Requirements: CSC 306 or department consent

CSC 637(3) Course ID:018527
Physical Systems Considerations for Industrial Controls Software Development
Course description: This course covers the interface between hardware and software, firmware and embedded software architecture, development and debugging, with emphasis on industrial controls systems. In-circuit debugging and emulating, tracing, and interfaces will be introduced. Reliability and error recovery techniques from both software bugs such as memory leaks and hardware errors will be discussed. Watchdog timer, trusted computing base, embedded hypervisor, and immunity-aware programming as well as software design for considering and troubleshooting hardware faults, sensor intermittency or failure, human-controller interface issues, etc. will be covered.
Components: Lecture(In Person)
Room Requirements: OFF CAMPUS(1)

CSC 638(3) Course ID:018529
Cyberattack Methodologies and Vulnerability Analysis
This course includes hardware and software issue, thinking like an adversary, automated security testing, etc.
Components: Lecture(In Person)
Room Requirements: OFF CAMPUS(1)

CSC 641(3) Course ID:001505
Data Mining
Introduction to data mining techniques, including data preprocessing, data mining primitives, association rules, decision trees, cluster analysis, classification and machine learning, data visualization, and data warehousing. Applications from a wide variety of domains will be studied. Prerequisite: CSC 541 or Permission of instructor.
Components: Lecture

CSC 650(3) Course ID:008911

Intelligent Multimedia

Lecture

Digital watermarking in multimedia applications, copyright protection, authentication, tracking, digital asset management, access control, information hiding in multimedia.

Prerequisite: EE 634 or Instructor's permission.

Components: Lecture

Enrollment Requirements: CSC 542

CSC 651(3) Course ID:008912 Department Consent Required

Multimedia Processing and Information Retrieval

This course covers topics including multimedia systems, multimedia applications, image compression and processing, video compression

and processing, content-based image retrieval, and content-based video indexing and retrieval. Prerequisite: EE 634 or Permission of instructor.

Components: Lecture

CSC 671(3) Course ID:010820 Department Consent Required

Cyber-Security Laws, Ethics and Policies

Enforcement, review, and analysis of computer and network crimes, Electronics Communications Privacy Act, HIPPA, SOX, critical infrastructure protection, computer espionage and foreign intelligence collection, direct and covert action in peace time, military action in time of war, and international responses to Cyber threats. Prerequisite: Permission of instructor.

Components: Lecture

CSC 681(3) Course ID:010817 Department Consent Required

Security Architecture and Analysis

This course focuses on the analytical approach to system security and survivability. Topics may include Security Architectures, analysis and tradeoffs of different architectures, survivable system analysis, intrusion detection, vulnerability assessment, computer forensics, security protocols, firewalls, and VPNs.

Components: Lecture

Enrollment Requirements: CSC 391 (C or better)

CSC 691(3) Course ID:007780

Advanced Computer Architecture

An overview of advanced processor architectures, I/O subsystems, multiprocessor architectures and high performance networking. Advanced pipelining and instruction level parallelism, memory hierarchy design, storage subsystems, interconnection networks, multiprocessors. Prerequisite: CSC 391.

Components: Lecture

Enrollment Requirements: CSC 391

CSC 693(3) Course ID:015816

Advanced Topics in Cyber Security

An overview of advanced and emerging cyber security topics relevant to the current cyber security environment. Cyber security topics, for the current security environment in government and industry on a global basis, will be the focus of this class. Topics include, but not limited to, cloud computing, Homeland Security, big data, and more. This class does not guarantee to repeat the same topics as class topics are based on the current cyber security environment.

Prerequisites: CSC 565, Information Security.

Components: Lecture

Enrollment Requirements: CSC 565

Room Requirements: COMPUTER LAB(1)

CSC 728(3) Course ID:008913

Visualization

The course focuses on visualization of scientific data. Both visualization principles and practical design issues are addressed. The course introduces the visualization pipeline. It covers the visualization of scalar data, vector data, and tensor data. It also covers image visualization, volume visualization and finally information visualization. It discusses the effective use of visualization in various areas of the natural sciences, and examples of application will be drawn from these areas. It emphasizes the importance of visualization in understanding observations, examining theories, and fostering new scientific hypothesis. representation and presentation, document visualization, and dynamic exploration

Permission of instructor.

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 311(3) Course ID:001280

Signals and Systems

Techniques for analysis and synthesis of signals, both continuous and discrete. Engineering applications involving simple design problems. Mathematical modeling methods for both continuous and discrete time systems. Techniques include the Fourier Series, Fourier and Laplace Transforms.

Computer-aided design methods used to obtain hands-on experience in analysis and simulation. Prerequisite: ENGR 212.

Components: Lecture

Enrollment Requirements: ENGR 212 or 212H

EE 312(3) Course ID:012565 Department Consent Required

Microprocessor Programming and Design

This course presents the fundamentals of microprocessor architecture and interfacing. Topics include instruction set architecture, C/C++ language, debugging and IO device interfacing techniques. The PIC processor architecture will be studied, utilizing windows based integrated development environment and tools suite. A PIC hardware evaluation board is used as the basis for interfacing experiments. Software will be written in C/C++ language. The Pentium processor architecture and the PCI bus will be studied. A hardware/software project will be assigned towards the end of the course. The course is 50% lab and 50% lecture.

Prerequisite:

Components: Lecture

Enrollment Requirements: EE 326 or CSC 326

EE 322(3) Course ID:001287

Electronic Circuits II

Study of feedback, the analysis, design, and applications of operational amplifiers, oscillators, multivibrators, wideband amplifiers, tuned amplifiers, and power amplifiers.

Prerequisites: ENGR 321.

Components: Lecture

Enrollment Requirements: EE 311 & ENGR 321

EE 326(3) Course ID:001288

Switching Circuits and Logic Design

Analysis and design of digital circuits, number systems, combinational and sequential circuits. Basic computer arithmetic, applications and implementation of logic design.

Components: Lecture

Same As Offering: CSC 326

EE 327(1) Course ID:014818

Switching Circuits and Logic Design Laboratory

This laboratory course is meant for students in an introductory digital electronics course that emphasizes logic circuit analysis, applications, and design. The lab work consists of circuit projects that range from investigating basic logic concepts to synthesizing circuits for new applications. Most digital design projects will be implemented using complex programmable logic devices (CPLDs) and/or field programmable gate arrays (FPGAs). The projects are intended to challenge students and to provide them with directed laboratory experience that develops insight into digital principles, applications, and techniques of logic circuit analysis and design.

Components: Laboratory

Same As Offering: CSC 327

Enrollment Requirements: requires concurrent enrollment in EE 326 or CSC 326

EE 342(3) Course ID:001289

Electromagnetic Fields and Waves

Theory and application of electromagnetic waves. Maxwell's equations in vector differential form introduced; solutions to the wave equation for bounded and unbounded cases examined. The rectangular waveguide and the transmission line are studied. Radiation from simple geometries included. Prerequisites: ENGR 222, PHYS 216.

Components: Lecture

Enrollment Requirements: ENGR 222 and PHYS 216 (or PHYS 216H)

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 356(2) Course ID:001292

Electrical Laboratory II

Correlated sequence of laboratory experiments designed to illustrate the theory of junior-level electrical engineering courses, including active filters, nonlinear applications of operational amplifiers, switching and logic circuits, digital system design, push-pull amplifiers, oscillators, A/D and D/A converters, signal processing and digital filters. Prerequisites: ENGR 355

Components: Laboratory

Enrollment Requirements: ENGR 355

EE 357(1) Course ID:012563 Department Consent Required

Electromag Laboratory

This laboratory course is offered in conjunction with the junior level courses on Electromagnetic Fields and Waves (EE342) and Analog and Digital Signal Processing (EE362). The electromagnetic component of the lab covers experiments related to the basic concepts, fundamental principles of antennas and electromagnetic fields. The signal processing component covers experiments related to techniques for analysis and synthesis of signals and includes techniques such as the Fourier series, Fourier and Laplace transforms digital filter design. Computer-aided design methods will be used to obtain hands-on experience in analysis and simulation.

Prerequisite: In conjunction with EE342

Prerequisite: EE326, ENGR 355

Components: Laboratory

Enrollment Requirements: ENGR 355 and concurrent enrollment in EE 342

EE 362(3) Course ID:001294

Analog and Digital Signal Processing

Analysis and synthesis of analog and digital filters. Laplace and Fourier analysis used in analog filter design, with z-transform analysis in digital filter design. Fundamentals of digital signal processing, relevant to digital filtering.

Computer-aided design and simulation. Prerequisite: EE 311.

Components: Lecture

Enrollment Requirements: EE 311

EE 404(3) Course ID:001296

Solid State Devices

Electronic properties of materials including conductivity, dielectric and magnetic permittivity. Semiconductor theory with emphasis on junction devices. Introduction to semiconductor lasers. Prerequisite: EE 342.

Components: Lecture

Enrollment Requirements: EE 342

EE 406(3) Course ID:010028 Department Consent Required

Advance Digital Logic Design

Analysis and design of advanced digital circuits such synchronous and asynchronous sequential circuits. Advanced computer arithmetic hardware and introduction to the design of micro-architecture hardware and performance concepts such as pipelining. The course also includes projects for the applications and implementation of digital logic design using programmable logic devices (PLDs) and/or field programmable gate arrays (FPGAs) for rapid prototyping.

Components: Lecture

EE 413(3) Course ID:000073

Communication Systems and Networks

(3) Lecture. This course deals with fundamental concepts of communication systems and networks. More specifically it covers the following topics: Concept of signals in the time and frequency domains. Digital communication Systems: Pulse Code Modulation (PCM), delta modulation and differential PCM, multiplexing and wave shaping. Modulation techniques: analog AM, FM, and PM schemes. Digital modulation schemes: On-Off Keying, Frequency Shift Keying and Phase Shift Keying, Optical Modulation Schemes. Computer communication networks: Local Area Networks, Performance of communication systems and networks: Noise considerations. Probability of Error, delay and throughput Concepts. Prerequisite: EE 311

Components: Lecture

Enrollment Requirements: EE 311

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 416(3) Course ID:016926

Power Systems

This is an introductory course in the field of electric power systems and electromechanical energy conversion. This course discusses not only traditional power systems but also new uses for electric power in transportation systems. Electric power has become increasingly important as a way of transmitting and transforming energy for industrial as well as military applications. Electric power systems is an indispensable tool for alternative energy systems, including wind and solar, geothermal and their integration with the power grid.

Prerequisite: ENGR 212, EE 321/322, EE 342 or instructor permission

Components: Lecture

Course Equivalents: EE 516

EE 417(3) Course ID:019003

Fundamentals of Radar Signal Processing

This course introduces the foundational signal processing methods at the core of most modern radar systems, namely target and interference models, matched filtering, waveform design, Doppler processing, parameter estimation, threshold detection, and CFAR. Introductions are provided to the advanced topics of synthetic aperture imaging and space-time adaptive array processing. Topics include fundamentals of radar systems; radar cross section, multipath, clutter; radar waveforms; sampling and quantization; Doppler processing; optimal detection; synthetic aperture radar.

Components: Lecture(In Person)

Course Equivalents: EE 517

Enrollment Requirements: EE 311

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

EE 420(3) Course ID:014158

Hybrid Gas/Electric Vehicles

This course will cover the basic theory and engineering in modern hybrid gas/electric vehicles. Topics will include hybrid drive trains, regenerative braking, electrical energy storage, fuel efficiency calculations, performance metrics, the economics of hybrid vehicles, future design of automobiles, including plug-in electric vehicles, hydrogen powered vehicles, and fuel cells. This course will dedicate a few weeks exclusively to the Toyota Prius, covering not only the design and engineering of the Prius, but also the social and economic impact of this particular hybrid vehicle.

Prerequisites

ENGR 321

Components: Lecture

Enrollment Requirements: ENGR 321

EE 421(3) Course ID:016999

Programmable Logic Devices and HDL Design

This course covers the concepts, structure and programming characteristics of programmable logic devices (PLDs) such as Field-Programmable Gate Arrays (FPGAs). Hardware Description Languages (HDLs) are used to create designs that are tested on FPGA devices. In this course, students will learn how to design and implement general-purpose hardware components, such as computer arithmetic units and microprocessor data/control paths. Students will also learn how to design specialized hardware from different fields such as digital signal and image processing using techniques that are based on high-level environments, such as Matlab and Simulink, targeting FPGA devices.

Pre-requisites

EE / CSC 326 or instructor's permission.

Components: Lecture

Course Equivalents: EE 521, CSC 521

Enrollment Requirements: EE 326 or CSC 326

EE 422(3) Course ID:012355

Mixed Signal VLSI Design

Design of very large scale electronic circuits, including layout, circuit analysis and component selection, extensive use of SPICE and circuit layout CAD tools. Following current industry paradigms, the class emulates a design house, where chips are completely designed and thoroughly simulated prior to their fabrication in a foundry.

Components: Lecture

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 423(3) Course ID:017897

Electromagnetic Compatibility

Electromagnetic devices exchange energy by means of conduction currents, inductive effects, and electromagnetic radiation. Generally, the specifics of this exchange are integral part of the design of devices intended to operate as components of a larger system. However, additional exchanges of energy may occur among devices during their normal operation, which were not intended in the original design. These effects may lead to a distortion or degradation of a device's performance, or even to irreversible damage. Another, more sinister, concern with such unwanted energy exchanges is that the undesired energy emanating from a device constitutes a signal, which can potentially be captured by a resourceful agent and exploited to eavesdrop on sensitive communications. Such malicious activities are known as side-channel attacks, and pose a major cybersecurity threat. Electromagnetic Compatibility (EMC) is the modern term, which has largely supplanted Electromagnetic Interference (EMI), used to designate the study of all effects related to the

High Power Electromagnetic Effects on Electronic Systems

High-Power Electromagnetic (HPEM) environments, whether generated deliberately or accidentally, can have significant effects on electronic systems exposed to them. Such effects range from intermittent or temporary malfunction, which are reversible, to outright destruction, which is irreversible. In this course we present a classification and detailed description of HPEM environments, discuss their modes of coupling with susceptible electronic systems, the ensuing effects, and available protection (hardening) schemes. These topics are of extraordinary relevance in our era, due to a combination of factors: our civilization's ever-increasing dependence on electronic systems in every aspect of modern life, the continuing decrease in the systems' size and increase in their density, which both make the systems more vulnerable to HPEM fields, and the growing efforts towards the development of HPEM-based weapon systems on the international scene.

Components: Lecture(In Person)

Enrollment Requirements: EE 342

Room Requirements: DIGITAL PRESENTATION ROOM(1)

EE 426(3) Course ID:016842

Computer and Network Security

This course will introduce the application of cryptographic concepts in the practical implementation of network security practices and techniques. The issues here are: What are the risks and vulnerabilities of computer, Internet, and multimedia data? What are the countermeasures to fight these back? How does cryptographic technique enforce protection? What is digital signature? What is steganography and how is it used for authentication and counterfeit detection? What the different network security technologies are as applied to electronic mail, e-commerce, web transaction, and IP networks? Prerequisite: CSC 323

Components: Lecture

Course Equivalents: CSC 526, EE 526, CSC 426

Enrollment Requirements: CSC 323

EE 427(3) Course ID:016674

Fundamentals of Neural Networks

Introduces basic concepts of neural networks using the general framework of parallel distributed processing. Deals with architecture, principles of operation, training algorithms and applications of a number of neural networks. Each part of the course includes computer exercises performed by the student to demonstrate and reinforce the concepts learned in the class.

Components: Lecture

Course Equivalents: EE 527, CSC 527, CSC 427, DA 527

Room Requirements: COMPUTER LAB(1)

EE 431(3) Course ID:017016

Data Communication Networks

This course deals with basic principles of networking. More specifically it covers the following topics: Network Architectures and Protocols. OSI model and TCP/IP protocol suite. Transmission media. Protocols at the physical, data link, network and transport layers. Multiplexing, error and congestion control. Circuit and packet switching. Local and metropolitan area networks. ATM and frame relay. Network security and distributed applications.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 434(3) Course ID:016840

Communication and Computer Network Simulation

Deals with simulation modeling and performance evaluation of communication networks.

Presents simulation of network elements and overall networks.

Simulated network elements include point-to-point, multicast and broadcast links, satellite and radio links, queueing systems, and circuit and packet switches. Simulated overall networks include Local Area Networks (LAN), packet switched (X.25) networks, and Asynchronous Transfer Mode (ATM) based Broadband Integrated Services Digital Networks (BISDN), mobile radio and packet video networks. Development of simulation models for audio and video traffic sources and flow and congestion control algorithms. Discussion of methods of presentation, analysis, and interpretation of simulation outputs. Course will use OPNET software packages to provide hands-on experience. Prerequisite: EE 413 or permission of instructor.

Components: Lecture

Course Equivalents: EE 534, CSC 534, CSC 434

Enrollment Requirements: EE 413

EE 436(3) Course ID:016852

Distributed Computing and Networking

This course prepares students with the broad knowledge of distributed computing

and networking, and the ability to apply knowledge to solve real-world problems related to distributed systems. It introduces the principles and design of distributed systems with an emphasis on the mechanisms that enable the components located on networked devices to interact with each other and coordinate their actions for achieving a common goal. Topics covered may include inter-process communication, remote procedure calls, task management, migration, distributed coordination, fault tolerance, virtualization, and cloud computing.

Room Requirements: COMPUTER LAB(1)

EE 441(3) Course ID:016671

Electromagnetic Theory

Theory of electromagnetic field equations and their application to wave propagation in waveguides and resonant structures. Discussion includes partially filled waveguides, corrugated guide, and other structures.

Prerequisite: EE 342 or equivalent.

Components: Lecture

Course Equivalents: EE 541

Enrollment Requirements: EE 342

EE 443(3) Course ID:016730

Introduction to Remote Sensing and Imaging Applications

This course addresses the theory and principles of passive and active remote sensing at different frequencies. The course emphasis is on electromagnetic phenomena rather than image processing techniques for the remotely captured data. Topics include wave propagation and scattering from targets and natural surfaces, basic antenna systems, radiometry and the radar equation. Effects of different media and boundaries such as rough surfaces on wave characteristics (e.g. dispersion, reflection, refraction, attenuation) are discussed.

Prerequisite: EE342

Components: Lecture

Course Equivalents: EE 543

EE 444(3) Course ID:018826

RF and Microwave Circuits

This course is an introduction to the analysis and design of RF and microwave circuits from the perspective of distributed circuit theory. Fundamental concepts of impedance matching, network theory, S-parameters, coupled line theory, and system noise are discussed in relation to the design of passive and active components used in wireless communication circuits and mixed-signal circuits. Topics covered in the course include transmission lines, impedance matching, filters, power dividers, couplers, resonators, oscillators, mixers, active microwave transistor amplifiers, and design techniques for optimizing system gain, bandwidth, noise figure, and input/output impedance. Industry-standard microwave CAD tools will be used to analyze and design circuits. Students will fabricate several circuits in planar microstrip and learn how to characterize circuit performance on network/spectrum analyzer instruments to complete the design learning cycle.

Course Equivalents: EE 545

EE 447(3) Course ID:016857

Artificial Intelligence

(Formerly 542) Topics may include state space search, heuristic search, knowledge representation techniques, expert systems, automated reasoning, definitions of intelligence, computer problem solving, game playing, pattern recognition, theorem proving, semantic information, processing, evolutionary systems, and heuristic programming. Prerequisite: Instructor's permission.

Components: Lecture

Course Equivalents: CSC 447, EE 547

EE 452(3) Course ID:017187

Mathematical Analysis for Electromagnetics

This course covers various mathematical methods useful for solving electromagnetic field problems. The topics covered are: A) Vector calculus: Green's theorem, line, surface and volume integrals, Divergence and curl of vectors, Divergence and Stokes theorem. B) Partial Differential Equations: Separation of variables, Fourier series and integrals. Separation in Cylindrical and Spherical coordinates. C) Greens functions for non-homogenous partial differential equations: Construction of Green's functions for Poisson and Wave equations.

Components: Lecture

EE 457(1) Course ID:012564 Department Consent Required

Communications Laboratory

A correlated sequence of laboratory experiments designed to illustrate the theory of senior level communication courses including sampling and analog to digital conversion, analog and digital amplitude, frequency and phase modulation and demodulation schemes, analog and digital fiber optic link design and architectures and protocols of local area networks.

Prerequisite: EE 357

Co-requisite: EE 413

Components: Laboratory

Enrollment Requirements: EE 357; requires concurrent enrollment in EE 413

EE 458(3) Course ID:019001

Energy Harvesting Technologies

Ambient energy is energy that is present in our surroundings that remains unutilized. Energy harvesting refers to any efforts to collect and put this energy to use. This course aims to acquaint students with the state-of-the art of Energy Harvesting Technologies: photovoltaic, thermoelectric, and kinetic. The course is inherently interdisciplinary, spanning the realms of electrical, mechanical, and materials engineering, and it is designed to be self-contained, so that, other than fundamental notions common to all engineering majors, no prior knowledge is assumed.

EE 459(3) Course ID:013605

Introduction to Wind Energy Technology

This course will take an interdisciplinary approach to understanding wind power, focusing first on the evolution of the technology and reviewing basic technical principles associated with wind turbines and their operation. There will also be an explanation of the electric industry context within which wind technology must operate and the challenges associated with integrating a variable resource such as wind into the utility industry's resource mix. The course will review the impacts and effectiveness of renewable energy policy in the U.S. over the past few decades, and will explore the economics of wind as well as the basics of the industry's structure and operations. Finally, the course will explore the potential for wind power in the U.S., as well as the barriers or constraints to achieving that potential.

Optical Systems and Devices

This graduate-level course covers the principles and operation of various electro-optic devices such as semiconductor light sources, photo-detectors, image detectors, acousto-optic devices and light switches, and how they are used to design electro-optic systems.

Components: Lecture
Enrollment Requirements: EE 311

EE 504(3) Course ID:012433 Department Consent Required

Introduction to Fourier Optics

Students will be introduced to the principles of linear systems and Fourier theory applied to the analysis of optical propagation, diffraction, coherent and incoherent image formation. Topics will include two-dimensional signals and systems, diffraction theory, and the simplifying approximations to diffraction in the Fresnel and Fraunhofer regimes. Transforming properties of lenses will be studied along with the concepts of spatial filtering and aperture coding in image formation. Prerequisites: EE342

Components: Lecture
Enrollment Requirements: EE 342

EE 514(3) Course ID:013334

Introduction to Hardware Accelerated Computing

The past few years the High Performance Computing (HPC) community has witnessed a surge in the use of hardware acceleration, such as graphics processor units (GPU), field programmable gate arrays (FPGA), digital signal processors (DSP), cell processors, etc. This coincides at a time when conventional microprocessors are unable to keep up with Moore's Law, and become costly due to their increasing power requirements. This course is an introduction to hardware accelerated computational techniques and provides an introduction to FPGA and GPU-programming. Students are expected to have a strong understanding of programming in C, C++ or equivalent programming language. This course will enable students develop a solid understanding of the interaction between software and hardware, and gain hand-on experience in high performance computing.

Components: Lecture
Enrollment Requirements: CSC 113 & MATH 221

EE 515(3) Course ID:001320

Advanced Digital Signal Processing

This course examines the properties of signals and systems, sampling, data acquisition, Discrete-Time Fourier Transform (DTFT), Discrete Fourier Transform (DFT), Z-transform theory, spectral analysis, digital filter design and discrete transforms. Practical applications of digital signal processing will be emphasized with a number of hands on MATLAB Programming exercises.

Electromagnetic Compatibility

Electromagnetic devices exchange energy by means of conduction currents, inductive effects, and electromagnetic radiation. Generally, the specifics of this exchange are integral part of the design of devices intended to operate as components of a larger system. However, additional exchanges of energy may occur among devices during their normal operation, which were not intended in the original design. These effects may lead to a distortion or degradation of a device's performance, or even to irreversible damage. Another, more sinister, concern with such unwanted energy exchanges is that the undesired energy emanating from a device constitutes a signal, which can potentially be captured by a resourceful agent and exploited to eavesdrop on sensitive communications. Such malicious activities are known as side-channel attacks, and pose a major cybersecurity threat. Electromagnetic Compatibility (EMC) is the modern term, which has largely supplanted Electromagnetic Interference (EMI), used to designate the study of all effects related to the

High Power Electromagnetic Effects on Electronic Systems

High-Power Electromagnetic (HPEM) environments, whether generated deliberately or accidentally, can have significant effects on electronic systems exposed to them. Such effects range from intermittent or temporary malfunction, which are reversible, to outright destruction, which is irreversible. In this course we present a classification and detailed description of HPEM environments, discuss their modes of coupling with susceptible electronic systems, the ensuing effects, and available protection (hardening) schemes. These topics are of extraordinary relevance in our era, due to a combination of factors: our civilization's ever-increasing dependence on electronic systems in every aspect of modern life, the continuing decrease in the systems' size and increase in their density, which both make the systems more vulnerable to HPEM fields, and the growing efforts towards the development of HPEM-based weapon systems on the international scene.

EE 560(3) Course ID:018611

Shipboard Electrical Power Systems

This course covers shipboard electrical generation, distribution and propulsion. The course offers students relevant shipboard architectures, an overview of class rules and certification requirements, three-phase power, protection, power electronics, energy storage methods, grounded and ungrounded systems, electric propulsion drives, and standards governing marine electrical systems. The course begins with a refresher of power systems and circuit analysis techniques including fundamental properties of electric system behavior, electric power concepts, 1-phase and 3-phase systems, phasor diagrams, dc systems, and the physical principles of power system building blocks consisting of rotating electric machinery, transformers and switchgear.

Components: Lecture(In Person)

Room Requirements: OFF CAMPUS(1)

EE 561(3) Course ID:001420

Random Signal Theory

Mathematical techniques for analysis and measurement of random signals and processes needed as a foundation for work in radar/sonar, communication theory, or detection, and estimation. Probability; random variables; correlation functions and power spectra stationarity, ergodicity; linear and nonlinear systems with random inputs.

Components: Lecture(In Person)

Course Equivalents: EE 461

Room Requirements: DIGITAL PRESENTATION ROOM(1)

EE 562(3) Course ID:017434 Department Consent Required

Intro to Electric Power

This course will provide a basic understanding of electric power systems, including the generation, transmission, and distribution of electricity. Topics will include basic AC system analysis, complex loads and power, quality factor, three phase systems, system stability, and power flow. The material presented will be approached within the contexts of the traditional power grid as well as touching upon the benefits and challenges presented by emerging alternative energy technologies. This course discusses the following topics: Electric power systems, AC voltage, current and power, transmission lines, polyphase systems, electrical and magnetic circuits, transformers, polyphase lines and single-phase equivalents, synchronous machines, system analysis and protection, and load flow.

Components: Lecture

Course Equivalents: EE 462

Enrollment Requirements: ENGR 212 (or ENGR 212H) and PHYS 216 (or PHYS 216H)

Room Requirements: NO CLASSROOM NEEDED(1)

EE 562A(1) Course ID:017786 Department Consent Required

Intro to Electric Power Lab

This course will provide a basic understanding of electric power systems, including the generation, transmission, and distribution of electricity. Topics will include basic AC system analysis, complex loads and power, quality factor, three phase systems, system stability, and power flow. The material presented will be approached within the contexts of the traditional power grid as well as touching upon the benefits and challenges presented by emerging alternative energy technologies. This course discusses the following topics: Electric power systems, AC voltage, current and power, transmission lines, polyphase systems, electrical and magnetic circuits, transformers, polyphase lines and single-phase equivalents, synchronous machines, system analysis and protection, and load flow.

Components: Laboratory

Room Requirements: OFF CAMPUS(1)

EE 564(3) Course ID:006841

Control and Dynamics in Power Systems and Microgrids

This course describes fundamental concepts to understand microgrids vs conventional electric grids. Technical contents include two major topics: 1) Components of microgrids and 2) microgrid operation and control. The first topic covers the key components of microgrids and their operating characteristics including micro-generators (conventional and renewable-based), energy storage technologies, and their interfacing (power electronics) requirements. The second topic focuses on operation and control of microgrid including different modes of operation in islanded vs. grid-connected operating conditions and different control schemes applied to each mode as well as protection schemes in microgrids. Local and supervisory control of microgrids and its components will be discussed in detail.

Components: Lecture

Introduction to Information Privacy and Security

This course teaches basic privacy and data security principles, and due the fact that information privacy has become a high priority in all private and public organizations, introduces the concepts of Privacy by Design (PbD) and Privacy Engineering, with practical applications to real-world scenarios.

Components: Lecture

Same As Offering: CSC 565

Course Equivalents: EE 465, CSC 465

EE 566(3) Course ID:017634

Introduction to Electric Machines and Drives

Fundamentals of Electric Machines are covered using both theoretical and practical methods and practices. Various motors (DC, BLDC, Stepper, Induction) are discussed in detail, as well as the relevant power drives and control systems. Particular emphasis is placed on covering both the origins of these systems and their modern implementations. Lab modules provide hands-on experience in CAD simulation and empirical modeling and analysis.

Components: Lecture

Course Equivalents: EE 466

Room Requirements: DIGITAL PRESENTATION ROOM(1)

EE 566A(1) Course ID:019386

Electric Machine Laboratory

A hands-on laboratory course for learning the structure of Electric Drive systems and their role in various applications such as flexible production systems, energy conservation, renewable energy, and electric vehicles, making Electric Drives an enabling technology. Students will utilize lab bench experiments and simulator software to model DC and AC motors, power electronic drivers, and control systems. Objectives include correlating theoretical study with experiential learning.

Components: Lecture(In Person)

Course Equivalents: EE 466A

Room Requirements: DEPARTMENT SPACE(1)

EE 567(3) Course ID:018521

Industrial Controls Cybersecurity, Architectures, and Interfaces

This course is concerned with Cybersecurity, Architectures, and Interfaces for Industrial Controls Systems (ICS), Risk Management Framework for Industrial Control Systems, ICS/Embedded system Auditing, Security Awareness, and Standards (e.g. NIST 800-82). In addition, the course deals with ICS Architecture and Embedded/PLC programming, protocols, and interfaces, Basics of encryption and authentication and challenges with embedded systems, Electromagnetic Compatibility (EMC), and Electro Mechanics. The course includes a hands-on lab.

Components: Lecture(In Person)

Course Equivalents: CSC 567

Room Requirements: OFF CAMPUS(1)

EE 568(4) Course ID:017462 Department Consent Required

Introduction to Power Electronics

This course describes the role of Power Electronics as an enabling technology in various applications such as flexible production systems, energy conservation, renewable energy, transportation etc. In this course, students will learn how to design and model using PSpice/MATLAB the switching power-pole using power semiconductor devices, their drive circuitry, and driver ICs. This course will provide basic concepts of soft-switching and their applications to dc-dc converters and how to model and design dc-dc converters and their controllers. Also, this course will focus on the design and simulation of single-phase and three-phase thyristor converters and the design of the single-phase power factor correction (PFC) circuits. Finally, this course will provide basic magnetic concepts to help students analyze transformer-isolated switch-mode power supplies, design high-frequency inductors and transformers, and design the interface between the power electronics equipment and single-phase and three-phase utility using diode rectifiers.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

EE 569(3) Course ID:005810 Department Consent Required

Computer Security and Privacy

Importance of computer security and its effect on individual privacy. Topics include computers and their impact on privacy, data banks, physical security, administrative security, and computer systems and network security. Not open to students who completed this course under earlier numbering (597).
Prerequisite: Junior standing.

Components: Lecture

Same As Offering: CSC 569

Course Equivalents: CSC 469, EE 469

The Catholic Univ of America
Course Catalog

EE 572(3) Course ID:011194 Department Consent Required

Basics of Information Coding and Transmission

Introduces the basic notions of quantifying information content using entropy, and establishes lower bounds on file sizes for data compression. Covers commonly used compression methods (Huffman, Lempel-Ziv, etc). Introduces the notion of channel capacity for storage and transmission, and provides an introduction to error correction coding and its role in reliable transmission and storage over error-prone channels

Components: Lecture
Course Equivalents: EE 472
Enrollment Requirements: EE 413

EE 576(3) Course ID:001422 Department Consent Required

Introduction to Robotics

Covers basic concepts in robotics such as robot arm kinematics, robot arm dynamics, trajectory planning, and control. Transformation between joint space and Cartesian space. Coordinate frames and homogeneous coordinate transformation. Solution of inverse kinematic problem and robot workspace. Differential motion and manipulator Jacobian matrix. Introduction to the control problem of robot manipulators.

Components: Lecture(In Person)
Course Equivalents: CSC 576, CSC 476, EE 476
Room Requirements: DIGITAL PRESENTATION ROOM(1)

EE 581(3) Course ID:006530

Cryptography and Steganography

Introductory concepts of cryptography and steganography; Classical and modern cryptographic algorithms - the underlying mathematics and analysis; Number theory; Cryptographic protocols in computer and data security applications; Fundamentals of information hiding - Techniques and applications.

Components: Lecture
Same As Offering: CSC 581

EE 584(3) Course ID:018504

Introduction to Machine Learning

The course introduces principles, algorithms, and applications of machine learning from the point of view of modeling and prediction; formulation of learning problems; representation, over-fitting, generalization; clustering, classification, probabilistic modeling; and methods such as support vector machines, hidden Markov models, and Bayesian networks.

Components: Lecture(In Person)
Course Equivalents: CSC 584, CSC 484, DA 515, EE 484
Room Requirements: DIGITAL PRESENTATION ROOM(1)

EE 617(3) Course ID:008916

Adaptive Signal Processing

This course is concerned with the theory of adaptive signal processing. Topics include adaptive systems, adaptive linear combiner, theory of adaptation with stationary signals, searching the performance surface, LMS algorithm, z-Transform in adaptive signal processing, adaptive algorithms and structures, adaptive modeling and system identification, inverse adaptive modeling, deconvolution, and equalization, and adaptive interference canceling. This course is accompanied with MATLAB computer projects.

Components: Lecture
Enrollment Requirements: EE 561

EE 618(3) Course ID:008917

Optimum Signal Processing

This course examines the properties of linear model, least-squares estimation (recursive and batch), Singular-Value Decomposition (SVD), Best Linear Unbiased Estimation (BLUE), likelihood, Maximum-Likelihood (ML) estimation, multivariate Gaussian random variables, mean-squares estimation of random parameters, Maximum a Posteriori (MAP) estimation of random parameters, Expectation-Maximization (EM) algorithm. Practical applications will be emphasized with a number of hands on MATLAB Programming exercises.

Components: Lecture
Enrollment Requirements: EE 561

EE 620(3) Course ID:017752 Department Consent Required

Drone-Based Distributed RF Systems

Investigates key challenges of on-the-move RF systems that operate as a swarm to remote sense properties of interest from a scene. Topics covered will include light-weight broadband antenna designs, synchronization of swarm elements to operate as a collective system, imaging and detection applications of on-the-move distributed RF systems.

Components: Lecture

EE 621(3) Course ID:006299

Fundamentals of Kalman Filtering and Smoothing

This course examines the properties of linear model, least-squares estimation (recursive and batch), Singular-Value Decomposition (SVD), Best Linear Unbiased Estimation (BLUE), likelihood, Maximum-Likelihood (ML) estimation, multivariate Gaussian random variables, mean-squares estimation of random parameters, Maximum a Posteriori (MAP) estimation of random parameters, Expectation-Maximization (EM) algorithm. Practical applications will be emphasized with a number of hands on MATLAB Programming exercises. Prerequisite: EE561.

Components: Lecture

Enrollment Requirements: EE 561 (C or better)

EE 625(3) Course ID:006300

System Optimization

Calculus of extrema. Variational calculus and continuous optimal control. The maximum principle and Hamilton-Jacobi theory. The linear regulator. The linear servomechanism. Euler-Lagrange equations. Discrete optimal control and mathematical programming. Optimal state estimation. The linear quadratic Gaussian problem. Prerequisite: EE 522.

Components: Lecture

Enrollment Requirements: EE 522

EE 627(3) Course ID:008918

Neural Networks and Bioinformatics

Introduces basic concepts of neural networks using the general framework of parallel distributed processing. Deals with architecture, principles of operation, training algorithms and applications of a number of neural networks. Emphasizes designing networks from first principles to solve engineering problems. Application of neural networks to several engineering problems, including pattern classification, data and image compression, robotics, target tracking, and signal processing.

Components: Lecture

Enrollment Requirements: EE 311

EE 628(3) Course ID:008761

Computational and Molecular Imaging

This course is designed to provide students with a comprehensive foundation of computational and molecular imaging and applications, recognizing the cross-disciplinary nature of the subject. It should be an informative exploration of tomographic imaging, image computation, and molecular characterization, with an emphasis on the strategic frontier between informatics and biomedicine.

Components: Lecture

Enrollment Requirements: EE 311

EE 631(3) Course ID:001425

Broadband Integrated Services Digital Networks

Broadband services and principles of BISDN. BISDN architecture and protocol reference model. Functions of the BISDN layers: ATM and ATM Adaptation layers, physical layer for BISDN (cell based, SONET/SDH, FDDI and DWDM based). ATM switching. User-Network Interface specifications: physical and ATM layers specifications and Signaling for point-to-point, point-to multipoint and multipoint-to-multipoint connections. Congestion control, analytical and simulation modeling and performance evaluation. ATM switching, Wireless ATM. Applications: circuit and LAN Emulation, IP, Multiprotocol and MPLS over ATM. Prerequisite: EE 531 or equivalent

Components: Lecture

Enrollment Requirements: EE 531 (C or better)

Course Catalog

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 634(3) Course ID:010218 Department Consent Required

Digital Image Processing

This course deals with the fundamentals of the major topics of digital image processing. The topics used in the course include the two-dimensional systems and mathematical preliminaries, image sampling and quantization, image transforms, stochastic models, image enhancement, filtering, restoration, reconstruction, and compression. This course is accompanied with computer projects. Prerequisite: Random Signal Theory, EE 561 or equivalent.

Components: Lecture

Enrollment Requirements: EE 561

EE 642(3) Course ID:006758

Electro-Optics and Photonics

Introduces electro-optics, acousto-optics, magneto optics, and photonic switching. Covers the bulk electro-optic effect, with discussion of switching, phase and amplitude modulation, optical isolation and beam deflection applications. The Faraday effect and Faraday isolators, waveguide electro-optic effects, with application to switching, modulation, and computer logic circuits; the acousto optic effect, with application to switching, frequency modulation, beam deflection, and optical filtering; and principles of photonic switching.

Components: Lecture

Enrollment Requirements: EE 342

EE 643(3) Course ID:008919

Photonic Communication Network Devices

Introduces the principles of operation for photonic communication devices. These include optical fibers, couplers, splitters, taps, isolators, circulators, attenuators, tunable filters, laser diodes, modulators/demodulators, photodetectors, lightwave amplifiers, wavelength converters/routers, wavelength division multiplexers/demultiplexers, optical add/drop multiplexers, optical switches, optical packet switches.

Components: Lecture

Enrollment Requirements: requires prior enrollment in EE 404 & EE 413 or in EE 550

EE 644(3) Course ID:001427

Optical Communications

Introduction to Optical Communications. Optical sources and transmitters: Light Emitting Diodes (LED), Laser Diodes and modulation techniques. Optical fibers: waveguiding and signal degradations. Photodetectors: P-I-N and Avalanche Photodiodes. Optical receivers: Direct detection and coherent detection receivers. Optical components: connectors, splices, couplers, switches and wavelength division multiplexers. Transmission link design. Advanced systems. Prerequisite: EE 413 or equivalent.

Components: Lecture

Enrollment Requirements: EE 413

EE 645(3) Course ID:001428

Optical Communication Networks

This course deals with building blocks, architectures, principle of operation and protocols of single and multiwavelength optical communication networks. More specifically, the following topics are to be covered: Principles of optical networks. Network resources: Network links, optical network nodes, network access stations, overlay processors, logical network processors and logical network overlays. Enabling technologies. Single wavelength networks: FDDI and SONET/SDH networks. Multiwavelength (DWDM) networks: Static networks, Wavelength routed networks, Linear lightwave networks, Logically routed networks. Survivability: protection and restoration. Management and control. Applications: IP, ATM, and SONET over Optical Transport Networks.

Components: Lecture

Enrollment Requirements: EE 644

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 646(3) Course ID:008920

Optical Internet

This course deals with the architecture and protocol stacks for transmission of TCP/IP over Optical Transport Networks (OTN). The protocols involved are: TCP/IP, Multi-protocol Label switching (MPLS), Asynchronous Transfer Mode (ATM), Point-to-point (PPP), HDLC, Frame Relay, Gigabit Ethernet, Synchronous Optical Network (SONET) and Optical Transport Network. Relevant functionalities and interaction among these protocol layers to the operation of optical internet are presented. Optimal architecture and protocol layers needed for optical internet is developed. The Integrated, Overlay and augmented architectures for TCP/IP/MPLS over OTN are presented. Technologies needed for implementation of an all-optical transport network is presented. Management and control of such networks are to be discussed. Survivability

Components: Lecture

Enrollment Requirements: EE 531

EE 647(3) Course ID:008921

Intelligent Broadband Multimedia Networks

This course deals with building blocks, architectures, examples and applications of intelligent broadband multimedia networks. Topics to be presented are: Basic intelligent network concepts, examples of types of intelligent networks, Global, advanced and future intelligent networks, Architecture of knowledge machines and knowledge Processing systems. Examples of intelligent networks: Network based educational systems, Integrated medical systems and PC based intelligent home networks. Social and cultural impact of intelligent broadband multimedia networks.

Components: Lecture

Enrollment Requirements: EE 531

EE 652(3) Course ID:006302

Wireless Communications

Intended to give an introduction to wireless communications engineering. Includes characterization of the radio environment; link and system performances and the cellular concept. Study of the effect of the environment on the mobile systems and methods of mitigating degrading effects. Analysis of state-of-the-art wireless communication technologies and systems. Prerequisite: Permission of instructor.

Components: Lecture

Enrollment Requirements: EE 413

EE 656(3) Course ID:001430

Digital Communications

Fundamentals of digital data transmission. Performance analysis of basic digital modulation techniques. Detection of binary signals in AWGN. The matched filter and general formula for probability of error. BPSK, ASK, FSK modulations. Quadrature-multiplexed signaling schemes. Power spectra and probability of error of QPSK, OQPSK, MSK. Noncoherent digital modulation methods; FSK, DPSK. Signaling through band-limited channels. Designing for zero ISI: Nyquist's pulse-shaping criterion. Optimum transmitting and receiving filters. Duobinary signaling. Equalization in digital data transmission systems. Fundamentals of spread spectrum systems. Computer projects. Prerequisite: EE 561 or equivalent.

Components: Lecture

Enrollment Requirements: EE 561 (C or better)

EE 657(3) Course ID:008923

Spread Spectrum Communications

Studies the foundations of Spread Spectrum Communications. Includes basic types of spread-spectrum modulation, generation of pseudo-noise sequences for the modulation/demodulation process, and synchronization between the transmitter and receiver. Investigates performance of spread spectrum systems in a noise or jamming environment. Considers application of spread spectrum communications to a common communication system including digital cellular telephones. Prerequisite: EE 656 or equivalent.

Components: Lecture

Enrollment Requirements: EE 656

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 659(3) Course ID:001432

Satellite Communications

This course deals with subsystems, operations and applications of satellite communication systems. Topics to be included are: Spacecraft subsystems: Telemetry, Tracking and Command subsystem, Communication subsystem, and Antennas. Satellite link design: uplink and downlink, effect of propagation impairments, examples. Efficient modulation and multiplexing techniques. Multiple access techniques: FDM/FM/FDMA, TDMA, CDMA and DAMA. Encoding for forward error correction: Linear block codes, Binary cyclic codes and convolutional codes. VSATs. Applications: satellite television, ATM over satellite. Prerequisite: EE 413 or equivalent.

Components: Lecture

Enrollment Requirements: EE 413

EE 660(3) Course ID:006304

Electromagnetic Radiation and Scattering

Formerly EE 746

Provides an introduction to advanced electromagnetic theory with emphasis on radiation and scattering theory. Field equations derived for radiation and scattering problems and applied to simple antennas and bodies. Geometrical optics and geometrical theory of diffraction are presented for antenna problems, edge diffraction, and scattering from simple conducting bodies. Prerequisite: EE 541 or equivalent.

Components: Lecture

Enrollment Requirements: EE 541 (C or better)

EE 662(3) Course ID:017499

Department Consent Required

Advanced Power Systems

This course will provide a more advanced understanding of electric power systems, Topics covered include: using system modeling for large-scale power networks; network admittance and impedance matrix formation; optimal dispatch; time-domain modeling of generators, symmetrical component modeling; balanced and unbalanced fault analysis; transient stability studies, and Power control. Computer work is an integral part of the learning process and will involve the use of MATLAB and engineering software toolboxes.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

EE 666(3) Course ID:018678

Department Consent Required

Electric Machine Design

The study of Electric Machines is both a classic topic and a newly prevalent engineering application. We will advance our basic knowledge of various motors (DC, BLDC, Stepper, Induction) to include design processes and research. Emphasis is placed on modern applications and recent developments in electro-mechanical power conversion. The core objective of this course is for students to develop design, analysis, and research skills for advanced study of Electric Machines. The course will cover both theoretical and practical methods.

EE 671(3) Course ID:008924
Statistical Signal Processing

Provides a rigorous foundation in detection and estimation theory. Binary hypothesis tests. Receiver Operating Characteristic (ROC). M hypotheses. Bayes estimation. Multiple parameter estimation. Maximum likelihood estimation. Composite hypotheses. Representation of random processes. Karhunen-Loeve transformation. Detection and estimation of signals. Computer projects. Prerequisite: EE 561.

Components: Lecture

Enrollment Requirements: EE 561

EE 672(3) Course ID:008925 Department Consent Required
Error Control Coding

Introduction to Galois fields; linear codes and cyclic codes; BCH codes and their decoding procedures. An introduction to convolutional codes and decoding procedures. Practical applications of block codes and convolutional codes. Prerequisite: EE 561.

Components: Lecture

EE 673(3) Course ID:019011 Department Consent Required
Vector Control of Drives

Review of machine modeling techniques and simulation methods, principles of power converters for motor drive applications; analytical modeling and dynamic behavior of machine-drive systems; modulation, regulation, and control techniques; simulation of drive systems; case studies. Specific topics include:

- ¿ Introduction to high-performance motor drives and review of induction and synchronous motor characteristics.
- ¿ Mathematical and Simulation models of AC Machines.
- ¿ Pulse Width Modulation (PWM) of DC/AC Converters.
- ¿ Induction Motor Drives and Associated Control Techniques (V/Hz, Hysteresis, Sine-Triangle PWM).
- ¿ 3 Phase AC / Direct-Quadrature transformation. Applications to motor model simplification and high-performance control of motor drives.

Power System Protection

Provides the underlying principles and applications of power system protection. Topics will include balanced/unbalanced fault analysis, relays, relay coordination, protection strategies, equipment protection, relay instrumentation, and modeling and simulation of power/protection systems.

Components: Lecture(In Person)

Room Requirements: NO CLASSROOM NEEDED(1)

EE 710(3) Course ID:008926

Wavelet Theory and Applications

Introduces the basic concepts of time-scale processing as provided through wavelet analysis. Focuses on both the development and construction of orthogonal and biorthogonal wavelet filters for time-scale processing as well as issues related to their implementation. Compares wavelet analysis and standard Fourier techniques. Engineering applications include image processing, fractal waveform analysis, sonar processing, and noise reduction techniques. Includes computer simulation projects. Prerequisite: Permission of instructor.

Components: Lecture

Enrollment Requirements: EE 541

EE 712(3) Course ID:001435

Communication Theory

Optimum receiver design; theory and implementation. Analysis of waveform communication problems in terms of its vector equivalent. Signal set notation and analysis. Fundamental concepts involving the theoretical limits of communication system performance. Analysis of time, bandwidth, and dimensionality parameters. Channel capacity and reliability functions. Effect of quantization on communication system performance. Rudimentary concepts of information and its measure. Non-AWGN channel models. Prerequisite: EE 561 or equivalent.

Components: Lecture

Enrollment Requirements: EE 561 (C or better)

EE 717(3) Course ID:001439

Advances in Adaptive Signal Processing

More recent advances in adaptive signal processing are explored, including higher-order statistic methods, nonlinear filter structures including Volterra and Bussgang filters, infinite impulse response (IIR) adaptive filters, and applications to medical imaging, wireless communications, and data analysis and forensics. The course will be project oriented, with students researching recent literature on a particular theme and developing adaptive signal processing algorithms tailored to the specific theme.

Components: Lecture

Enrollment Requirements: EE 515

EE 725(3) Course ID:001444

Information Theory and Source Coding

Introduction to information theory from a communication system viewpoint. Source and channel encoding. Information measures for both continuous and discrete sources. The source coding theorem and channel coding systems developed. Practical methods of source and channel coding investigated. Prerequisite: EE 561.

Components: Lecture

Enrollment Requirements: EE 561 (C or better)

EE 731(3) Course ID:001454

Computer Communication Networks

This course deals with analytical modeling and design of computer communication networks. Topics to be covered are: Delay models: Queueing models: Little's formula, M/M/1, M/M/m, M/M/?, M/M/m/K and M/G/1, MMPP, Fluid flow and fractal models and Network of Queues. Graph Theoretical models and routing algorithms: Bellman-Ford, Dijkstra's and Floyd-Warshall algorithms. Multiaccess Communications: The ALOHA system, carrier sense, reservation, polling and splitting algorithms. Flow control: Window flow control, and rate control schemes, delay and loss analysis of audio and video multiplexers. Call admission control. Prerequisite: EE 531 or equivalent.

Components: Lecture

Enrollment Requirements: EE 531 (C or better)

The Catholic Univ of America
Course Catalog

Engineering - Electrical Engineering - Subject: Electrical Engineering

EE 740(3) Course ID:001461

Numerical Methods in Electromagnetics

Investigates modern techniques in computational electromagnetics. Emphasis on applying computational methods to practical applications such as microwave circuit analysis, scattering, radiation, and optics problems.

Prerequisite: EE541

Components: Lecture

Enrollment Requirements: EE 541 (C or better)

EE 741(3) Course ID:011958 Department Consent Required

Advanced Electromagnetic Scattering Phenomena

Time domain methods have several advantages over conventional frequency domain methods in the area of numerical electromagnetic solutions to scattering/radiation problems. For example, time domain methods work better for wide-band signature studies, are better suited for parallel and GPU processing. These methods are also provide better visual representations for understanding the field interactions. The material covered in this course includes direct solution of the domain integral equations using marching-on-time (MOT) methods, finite difference time domain method (FDTD), Transmission Line matrix (TLM) method, time domain finite element (TDFE) method, and time domain finite volume method (TDFV).

Components: Lecture

Enrollment Requirements: EE 671

EE 771(3) Course ID:001465

Detection and Estimation Theory

Estimation of continuous waveforms. No-memory modulation system and modulation systems with memory. Multidimensional waveform estimation. Estimation of signals in colored noise. Linear estimation. Wiener and Kalman filters. Computer projects.

Prerequisite: EE 671

Components: Lecture

Enrollment Requirements: EE 671

EE 772(3) Course ID:001468

Detection and Estimation Theory II

Provides a rigorous foundation in detection and estimation theory. Binary hypothesis tests. Receiver Operating Characteristic (ROC). M hypotheses. Bayes estimation. Multiple parameter estimation. Maximum likelihood estimation. Composite hypotheses. Representation of random processes. Karhunen-Loeve transformation. Detection and estimation of signals. Computer projects. 772: Estimation of continuous waveforms. No-memory modulation system and modulation systems with memory. Multidimensional waveform estimation. Estimation of signals in colored noise. Linear estimation. Wiener and Kalman filters. Computer projects. Prerequisite: EE 561.

MSE 501(3) Course ID:013686 Department Consent Required

Introduction to Materials Engineering

This course is for scientists and engineers trained in their own disciplines and now needing understanding of the concepts and practices employed in the science and technology of advanced materials. Metals, ceramics, polymers and composite materials will be covered. The course shows that the behavior of materials is directly linked to their fundamental structures, and how structures and hence properties may be altered through processing. Properties, processing, design and environmental protection and degradation will be considered. Case studies in materials selection will be included and some examples of state-of-the-art applications of novel materials will be given. Advanced techniques available for materials characterization will also be introduced.

Components: Lecture

MSE 511(3) Course ID:016679

Optical and Magnetic Materials: Properties and Synthesis

An introductory course to provide basic background on the behavior of materials; dielectric, optical, and magnetic properties. This course will emphasize on the structural-property relation of the materials. It will also provide the background on synthesis techniques for optical and magnetic materials.

Components: Lecture

MSE 513(3) Course ID:017632

Introduction to 3D-Printing Science & Engineering

Additive Manufacturing (AM), often referred to as 3D-Printing, is a fabrication process in which a computer model stored in a CAD file guides the deposition of build material (feedstock) by a specially designed machine (3D-printer) at specified locations, until the entire volume of the object is filled in. This course presents the science behind the suite of AM technologies that have been developed to date.

Experimental Methods in Materials Engineering

A survey course in experimental methods for MSE with lecture coverage and demonstrations, laboratory visits, and practical problem assignments.

Successful completion of this course will enable you to:

¿ Be familiar with modern experimental methods for materials processing and properties characterization, and the science behind these methods

¿ Obtain confidence and competence in assessing, selecting and designing experimental approaches to practical problems in MSE

¿ Evaluate and interpret experimental MSE data

¿ Be familiar with control and measurement of important experimental parameters related to processing and

Mechanical Properties of Materials

In this course we will learn about the mechanical properties of materials, from the continuum description of properties to the atomistic and molecular mechanisms that confer those properties to all materials. We will cover elastic and plastic deformation, creep, and fracture of materials including crystalline and amorphous metals, ceramics, and (bio)polymers, and will focus on the design and processing of materials from the atomic to the macroscale to achieve desired mechanical behavior.

Components: Lecture

MSE 524(3) Course ID:017647

Additive Manufacturing Processes

Machining, injection molding, casting, thermoforming, sheet metal forming. Rate, quality, cost, flexibility, sustainability. Multi-step process and automated manufacturing system for complex products.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

Introduction to Soft Materials

This course will serve as an introduction to soft condensed matter (polymers, colloids, liquid crystals, amphiphiles, gels and biomaterials) and will cover general aspects of chemistry, structure, properties and applications with emphasis on chemistry and forces related to molecular self-assembly. Topical coverage will include: 1) kinetics in materials synthesis, growth and transformation; 2) preparation methods; 3) formation, assembly, phase behavior, and molecular ordering; 4) structure, function, and phase transition of nucleic acids, proteins, polysaccharides and lipids; 5) techniques to characterize structure, phase and dynamics of soft materials and 6) application of soft materials in nanotechnology. Examples illustrate technologically relevant materials in current nanoscience, nanotechnology, and nano-biotechnology, such as block copolymers thin films, colloidal photonic crystals, micelles, vesicles, hydro-gels, photosensitive materials, and materials in soft lithography.

Components: Lecture

Electrical Properties of Materials

This course covers the fundamental concepts that determine the electrical, optical, magnetic and mechanical properties of metals, semiconductors, ceramics and polymers. The roles of bonding, structure (crystalline, defect, energy band and microstructure) and composition in influencing and controlling physical properties will be discussed. Also included will be case studies drawn from a variety of applications: semiconductor diodes and optical detectors, sensors, thin films, and others. Students will be introduced to the fundamentals of quantum mechanics and will be taught the concepts of tunneling, superconductivity, giant-magneto resistivity with the help of such concepts.

Components: Lecture

Physical Properties of Materials

This course focuses on the phase transformation and solidification kinetics in metallic systems. Topics to be included are i) Solution Thermodynamics, ii) Phase Diagrams, iii) Solid-State diffusion, iv) Nucleation and growth, v) Annealing phenomena, vi) Solid Solutions, vii) Precipitation hardening, viii) Application to technologically important alloy systems. Various electron microscopic analytical methods (SEM and TEM) and X-ray analyses will be covered. Other concepts to be introduced are bonding and crystal defects such as: vacancies, dislocations, grain boundaries.

Components: Lecture

MSE 562(3) Course ID:016450

Corrosion Engineering

A 3-credit course on corrosion engineering will address the above holistic aspects of corrosion engineering with respect to basic principles, protection methods, newer developments and failure analyses. The course is tailored for graduate students in materials science and engineering and engineering undergraduate students.

Artificial Organ Engineering

Due to shortage of donor organs, hybrid tissue-engineered organs, skin and urinary bladders, are being increasingly designed and used successfully for various purposes such as: burn-injury and replacing cancerous bladder. Students will be introduced to a variety of cultured cells and tissues which are grown in controlled environments of bioreactors with the precursors of amino-acids and growth factors assembled on biodegradable biomaterials, e.g. polylactate and polyglycolate in the shape of replaceable organs. Students will learn how the biodegradable polymers with donor cells are slowly degraded by regional tissues enzymes. An interdisciplinary approach using basic biology, biomaterials science and cellular assembly will be incorporated to introduce students to design artificial organs to prolong human life. A variety of materials (metals, alloys, polymers (synthetic and natural), immobilized drugs and their combination) will be evaluated for organ designing purposes. Differences in reaction of the human body for prosthetic materials and organ

Metamaterials

Metamaterials are not materials in the ordinary sense, but rather, man-made structures that are engineered to exhibit physical properties not found in naturally occurring materials. Energy transport through matter takes place by the propagation of waves. Therefore, achieving control upon wave propagation in a material enables one to control how energy is transported through physical structures and/or devices made with that material. Wave propagation properties in ordinary materials are determined by the nature of the materials; atomic constituents and by the atoms; geometrical arrangement in space. Metamaterials can be designed and fabricated with spatial structures not found in natural materials, thereby affecting wave propagation in novel ways. This course presents the relationship between spatial structure and wave propagation properties, thus explaining how electromagnetic and acoustic fields travel through different ordinary materials. Equipped with knowledge of the structure-propagation relationship, students will learn how to design metamaterials with the

Glass Science

This course aims at teaching the unique characteristics of the glassy state, and to describe their role in the processing, application and engineering performance of amorphous materials and glass products. The course will teach the fundamental concepts of amorphous structure, and then utilize them to establish structure-property relations in various glass systems and how they are useful in containing nuclear wastes. The viscosity, thermal expansion, chemical durability, strength behavior, and optical properties of silicate glasses will be emphasized, although the important properties of phosphate, halide and chalcogenide glasses will not be overlooked. Also included will be phenomenological descriptions of glass formation, liquid-liquid immiscibility, viscous flow, structural relaxation, stress relaxation and crystallization in glass. Various methods for the synthesis of glass will be reviewed (melting, CVD and sol/gel), along with important manufacturing processes for commercial glass products. Throughout the course, the applications of glass and

Metasurfaces

Metasurfaces are artificial structures engineered to mimic the effect on waves of 2-dimensional interfaces separating different media. They are designed and constructed to be much thinner than the wavelengths to be processed, so that the structures appear effectively 2-dimensional to the waves. Metasurfaces are generally engineered to feature properties that affect waves in ways not attainable with ordinary interfaces, thus leading to novel phenomena and unprecedented energy transport capabilities. The course covers electromagnetic, optical, acoustic, and thermal metasurfaces, presenting both the state-of-the-art and prospective new developments in various areas of this transformative technology.

CMGT 572(3) Course ID:002135

Organizational Theory and Behavior

Develops the competencies and knowledge that one needs to be an effective professional, leader, or manager. Now, more than ever, the keys to an organization's effectiveness and competitiveness are its employees. Technology, financial capital, physical assets, and access to proprietary information are increasingly recognized as being little more than short-term sources of competitive advantage. Long-term competitive advantage comes from the rich array of individual and team-based competencies capable of being put into action by an organization's employees, managers, and leaders. Emphasizes seven competencies: managing self, managing communication, managing diversity, managing ethics, managing across cultures, managing teams, and managing change.

DA 516(3) Course ID:018330

Applications of Data Analytics and Development

This course develops an overview of the challenges of developing and applying analytics for insight and decision-making. Examples and cases will come from engineering, social media analytics, business analysis and other data-centered domains. The focus will be on programming and data manipulation techniques for constructing analytics-based applications. Topics include SQL or no-SQL databases, using web service API's to acquire data, introduction to Hadoop and MapReduce, and use of third-party analytic component API's.

Components: Lecture

Course Equivalents: CSC 516, CSC 416

Enrollment Requirements: DA 501 and DR 514

Room Requirements: COMPUTER LAB(1)

DA 523(3) Course ID:018873

Business Data Analytics

In this course, students will learn how to transform data to gain insights for making informed business decisions. Current techniques, issues, and challenges in analyzing business data will be discussed. Data storytelling will be introduced to allow students to use these insights to develop a narrative that will convey their findings to business audiences. Students will learn analytical methods and tools that support data-driven decision making and generate solutions to business problems. Topics include managerial statistical tools in descriptive analytics and predictive analytics, including regression. Other topics covered include forecasting, risk analysis, data visualization, and data mining.

Components: Lecture(In Person)

Course Equivalents: CSC 423, CSC 523, DA 423

Enrollment Requirements: DA 501 and DR 514

Room Requirements: DIGITAL PRESENTATION ROOM(1)

DA 527(3) Course ID:018660

Fundamentals of Neural Networks

Introduces basic concepts of neural networks using the general framework of parallel distributed processing. Deals with architecture, principles of operation, training algorithms and applications of a number of neural networks. Each part of the course includes computer exercises performed by the student to demonstrate and reinforce the concepts learned in the class.

Components: Lecture(In Person)

Engineering - Engineering, General - Subject: Data Analytics

DA 528(3) Course ID:019293

Biostatistical Data Mining

Data mining enables turning a collection of information into knowledge. A popular synonym for data mining is knowledge discovery from data, or KDD. Data mining is the key step in the process of knowledge discovery. Data mining adopts techniques from many domains, such as information retrieval, data warehousing, database systems, pattern recognition, visualization, statistics, machine learning, algorithms, high-performance computing, applications, etc.

This course is an introductory course on data mining and will cover fundamental concepts, principles, methods, practical techniques, and applications for pattern discovery and cluster analysis. Materials will be given with an emphasis on the data from healthcare or biomedical domains.

Students are expected to be familiar with programming, and applying data mining tools as well as explore a topic of choice by completing a project over the course of the semester.

Components: Lecture(In Person)

Course Equivalents: CSC 428, CSC 528

Room Requirements: COMPUTER LAB(1)

DA 529(3) Course ID:018488

Introduction to Computer Vision

This course introduces the fundamentals of major topics of Computer vision. The topics covered throughout the course include image filtering, thresholding, morphology and segmentation, edge detection, texture and shape analysis, basic image classification and the preliminaries of machine learning applications. Computer projects (involving student choice of either Python, MATLAB or C++) and technical reports will be undertaken to practice and demonstrate these concepts.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

DA 542(3) Course ID:018661

Introduction to Database Management

The course covers the fundamentals of database systems. The course will provide the student with the foundation of knowledge necessary to design, implementation, and management of database systems. Topics to be covered include file systems and database concepts, database models, relational database model, introduction to SQL, database design and implementation, database integrity, and normalization of database tables. Implementation techniques using commercial DBMS will be considered. The course includes individual database application programming projects.

Components: Lecture(In Person)

Course Equivalents: CSC 442

Room Requirements: COMPUTER LAB(1)

DA 575(3) Course ID:018866

Introduction to Systems Analysis

Introduces a scientific approach to decision making, usually under conditions requiring the allocation of scarce resources. Provides several of the most useful and realistic mathematical models available for solving engineering management problems including linear programming, transportation and assignment models, deterministic economic order quantity inventory models, and network models. Same as CE 575.

Components: Lecture(In Person)

Course Equivalents: CEE 575, DA 475

Room Requirements: DIGITAL PRESENTATION ROOM(1)

DA 580(3) Course ID:018662

Numerical Analysis and Optimization

Numerical Analysis and Optimization methods to solve practical problems in computer science, business, engineering and science. Practical problem solving based on analyzing empirical, experimental or measured data where the precise mathematical model is approximated or not necessarily known. Limitations, trade-offs and margins of error are evaluated for various practical examples such as network traffic, engineering, science and business applications. MATLAB and/or C++ are used for computational problem solving. Suitable for computer science, mathematics, engineering, and business majors.

Components: Lecture(In Person)

DA 591(3) Course ID:018874

Data Science and Business Analytic Practicum

This is the last course for the students pursuing a Master of Science degree in Data Analytics. In this course, students select one of the issue areas and a method of execution. The course is designed to provide hands-on analytics project management experience, amplified by shared experiences with other students. Students currently working can choose issue areas related to the established set, but which are tailored to their work environment and use data sets supplied by their employer. Students will work throughout the semester in a professional project-like manner. Students will submit project proposals, plan of action milestone charts, and timelines as part of the practicum. Students will have scheduled reviews at various points that may be held in conjunction with the industry partners. At the end of the semester, each student will give a presentation on their project to a panel made up of CUA faculty and industry partners. Depending on the scope of the project, teams can be formed to address multiple aspects of the available data.

Components: Practicum(In Person)

Course Equivalent: CSC 591

Enrollment Requirements: DA 501, DA 514, DA 515, and DA 516

History and Hidden Principles of Geometry in Art and Applied Science

This course addresses the Enduring Question, "What is beauty, goodness, and truth?" We will survey how outstanding artists, architects, and scientists across history achieved astonishing beauty through simplicity. Basic graphical rules led to intricate creations to solve practical problems. We will uncover hidden threads in the layout of Stonehenge, Plato's Elements, classic proportions, illuminated manuscripts, medieval Gothic cathedrals, perspective in paintings, Leonardo da Vinci's genius in arts and mechanics, Copernicus' and Kepler's models of the cosmos, Renaissance fortresses and public architecture, and traditional building crafts. Their language was drawings with paper, pen, and compass. We will become familiar with selected methods and gain an appreciation for their continued importance. Weekly exercises and assignments will use the Bodleian Library and its specialty collections to explore aspects within their historical context. The final project will select an application and investigate it in a scholarly essay. A

Components: Lecture(In Person)

Topics: Oxford, England

Room Requirements: ABROAD(1)

ENGR 102(3) Course ID:001335

Introduction to Engineering Design and Professionalism

Lectures focus on the design process and professionalism. Implementation of the design process through interdisciplinary design projects with emphasis on teamwork, scheduling, analysis, decision making, and oral and written communication skills.

Components: Laboratory, Lecture

Enrollment Requirements: open to first-year and sophomore students in the School of Engineering or joint degree BSArchitecture/BCE students

ENGR 106(3) Course ID:005802

Computer Aided Engineering Tools

Introduction to Graphical Communications Tools. Two-dimensional engineering drawings using Computer Aided Design (CAD) software; three-view drawings; auxiliary views; isometric and oblique projections; sections. Introduction to 3-D and advanced modeling using CAD Tools.

Components: Lecture

ENGR 192(3) Course ID:017939

iOS App Design

The class is an introduction to the Swift Code and it is useful to understand how it is possible to implement an App to promote in Apple Store. During the class there will be theoretical lessons and tutorials to practice with single view application for iOS. The main topics will be: Apple Developer Program; retina display technology; what is the sandbox; main terms; Xcode; bitmap and vectoral graphics; asset catalog; storyboard and how to connect different view controller; autolayout; my first app; structure of a project for an app; based knowledge about coding; our and Apple classes; structure of a typical app; instance and type any; memory management: pointers and ARC; struct; syntax of swift 5; variables, optionals, action and thread; If, else, else if e switch methods; ; working with array, dictionary, string and numbers; protocols, closure and extensions; design pattern: singleton; how an app works and AppDelegate; navigation controller; debug; UITableViewController; several tutorial.

Components: Lecture

Room Requirements: COMPUTER LAB(1)

ENGR 201(3) Course ID:000075

Engineering Mechanics I

Topics covered include: Vector algebra, force vectors; concurrent force systems and equilibrium of particles; moment systems and equilibrium of rigid bodies. Structural applications and machines; internal forces; friction; moments of inertia. Math 122 and Phys 215 are co-requisites.

Components: Lecture

Enrollment Requirements: MATH 121 and concurrent enrollment in both MATH 122 and PHYS 215 (or PHYS 215H)

The Catholic Univ of America
Course Catalog

Engineering - Engineering, General - Subject: Engineering, General

ENGR 202(3) Course ID:001349

Engineering Mechanics II

Kinematics and kinetics of particles and of rigid bodies in plane motion; equations of motion in various coordinate systems; integral forms, work and energy, impulse and momentum; computer simulation software.

Components: Lecture

Enrollment Requirements: MATH 122, PHYS 215 (or PHYS 215H), and ENGR 201

ENGR 207(3) Course ID:016845

Programming Robots and Sensors

An introduction to principles of robotic systems: types of robots and applications; locomotion; homogeneous coordinates and transformations; simulating equations of motion; sensor technologies; random vectors and uncertainty; feedback control; motion planning. Assignments and will emphasize programming in MATLAB. Labs will include hands-on programming and prototyping of circuits as well as programming a mobile robot in the Arduino (C++ based) language.

Components: Lecture

ENGR 211(3) Course ID:005803

Thermodynamics

An introductory course in thermodynamics, intended to introduce sophomores to the fundamentals of thermal processes. It is one of three courses composing the fundamentals of the thermo-fluid sciences curriculum, the other two being fluid mechanics and heat transfer.

Components: Lecture

Course Equivalents: ENGR 211H

Enrollment Requirements: MATH 122, PHYS 215 (or PHYS 215H), and ENGR 201

ENGR 211H(3) Course ID:017656

Thermodynamics (Honors)

An introductory course in thermodynamics, intended to introduce sophomores to the fundamentals of thermal processes. It is one of three courses composing the fundamentals of the thermo-fluid sciences curriculum, the other two being fluid mechanics and heat transfer.

Components: Lecture

Course Equivalents: ENGR 211

Enrollment Requirements: MATH 122 & University Honors Program

ENGR 212(3) Course ID:001351

Electric Networks

The basic theory of electric circuits including the basic laws and techniques used in the analysis of electric circuits, transient and steady state response, and steady state sinusoidal analysis are studied.

Components: Lecture

Course Equivalents: ENGR 212H

Enrollment Requirements: MATH 122, PHYS 215 (or PHYS 215H), and PHYS 216 (or PHYS 216H)

ENGR 212H(3) Course ID:017657

Electric Networks (Honors)

The basic theory of electric circuits including the basic laws and techniques used in the analysis of electric circuits, transient and steady state response, and steady state sinusoidal analysis are studied.

Components: Lecture

Course Equivalents: ENGR 212

Enrollment Requirements: open to students in the University Honors Program who've taken MATH 122 and PHYS 216 (or PHYS 216H)

ENGR 222(4) Course ID:000072

Engineering Mathematics I

Differential equations is the language of engineers and is an important tool for formulating mathematical models of physical problems encountered in everyday engineering practice. In this class, you will be taught various tools for formulating, solving, analyzing, and interpreting mathematical models of physical problems. Analysis of 1st & 2nd order differential equations using analytical, numerical, and graphical techniques will be taught. Lectures will be complemented by weekly computer laboratory sessions teaching and using Matlab for solving real-world problems in engineering.

Components: Laboratory, Lecture

Course Equivalents: ENGR 222H

ENGR 301(3) Course ID:001353

Mechanics of Solids

An introductory course in the mechanics of deformable bodies. Analysis of simple structural members to resist safely axial, torsional, and bending stresses caused by static loads on structural systems.

Components: Lecture

Enrollment Requirements: MATH 122, PHYS 215 (or PHYS 215H), and ENGR 201

ENGR 314(3) Course ID:013040

Introduction to Alternative Energy

This course will deal with the issues of alternative energy sources and sustainable energy sources. We will pay particular attention to the efficiency of each alternative energy source as well as what limitations exist in terms of extracting useable energy. The course will start out covering solar energy but will then move to other alternative energy sources such as Wind, Tides, Hydroelectric, Ocean Currents, and Geothermal. This course is not intended to be overly technical, in the sense that non-engineering majors should be able to understand the material.

Components: Lecture

ENGR 321(3) Course ID:001376

Electronic Circuits I

The course presents the fundamentals of electronic circuits. The course includes the study of semiconductor materials, junction diodes, bipolar junction transistors, field effect transistors, and operational amplifiers.

Components: Lecture

Enrollment Requirements: ENGR 212 (or ENGR 212H) and MATH 122

ENGR 331(3) Course ID:000077

Fluid Mechanics

This course covers the basic concepts, laws, processes, and problem-solving techniques of fluid flows. It discusses fluid properties, statics, kinematics, dynamics, conservation of mass & momentum, Bernoulli's equation, potential (inviscid) flows, viscous flows, boundary layers theory, dimensional analysis, and engineering applications of internal and external flows.

Components: Lecture

Enrollment Requirements: ENGR 201, ENGR 222 (or ENGR 222H), MATH 122, PHYS 215 (or PHYS 215H)

ENGR 355(1) Course ID:001378

Electrical Laboratory I

A correlated sequence of laboratory experiments to illustrate the fundamentals of electronic principles and components as a basis for engineering system design. Emphasis on analog filters, semiconductor devices, operational amplifiers, digital circuits, and transducers, followed by diodes, bipolar junction and field effect transistor applications.

Components: Laboratory

Enrollment Requirements: Co-req: ENGR 321; Pre-req: ENGR 212, MATH 122, PHYS 216

The Catholic Univ of America

Engineering - Engineering, General - Subject: Engineering, General

ENGR 370(3) Course ID:017837

Engineering Business Fundamentals

Engineering Business Fundamentals is designed to provide a sound understanding of the business processes that engineering graduates will be involved with, either directly or indirectly, as they start and progress through their careers. This course provides the student with an advantage moving into the workforce and supporting a fast start to their career. Students will interact with industry executives offering real world experiences related to the subject matter. The course addresses three major areas of business processes: financial processes, business strategy and innovation and operation processes.

Components: Lecture

Enrollment Requirements: Open to undergraduates with sophomore or higher standing

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ENGR 391(3) Course ID:019026

Introduction to Materials Science and Engineering

Materials Science and Engineering is a multidisciplinary subject that outlines approaches to understand, utilize, and manipulate the abundant properties, including mechanical, thermal, electrical, optical, magnetic, and chemical properties, of materials. In the course, we will study (1) the basis for understanding the materials properties with respect to chemistry, atomic, and crystal structure of materials. (2) the characteristics and phase transformation of engineering materials - metals, ceramics, plastics, and composites. (3) the effects of intrinsic defects and microstructures on materials properties. (4) the environmental impacts on engineering materials degradation and durability. Hands-on lab sections will be included in the course to conduct experiments to determine the mechanical properties of materials including steel, wood, plastics, and concrete. Students will learn about the determination of Young's Modulus, Poisson's ratio, ductility, yield strength, ultimate strength, toughness, and the hardness for steel,

ENGR 413(3) **Course ID:017572**

Introduction to 3D-Printing Science & Engineering

Additive Manufacturing (AM), often referred to as 3D-Printing, is a fabrication process in which a computer model stored in a CAD file guides the deposition of build material (feedstock) by a specially designed machine (3D-printer) at specified locations, until the entire volume of the object is filled in. Depending on the specific technology, some post-processing may or may not be required to lead to the finished product. In this manner a three-dimensional physical replica of the digital model is built by sequentially adding material, generally layer-upon-layer.

This course presents the science behind the suite of AM technologies that have been developed to date. Topics include: 1) review of extant technologies and available materials; 2) thermodynamics and kinetics of relevant phase transformations; 3) heat and mass transfer and fluid flow during the printing process; 4) residual

Social Innovation

This course will provide students with a framework for identification of socially relevant problems, and for the creation of sustainable and scalable solutions to those problems. This is an intensive, project-based course with small, multi-disciplinary teams. Teams will conceive, develop and test creative technological solutions to real-world problems. The course will introduce students to Design Thinking, and make use of the Lean Launchpad curriculum, including use of the business model canvas, customer development and agile engineering. Teams will be given a toolkit for innovation and exposed to a wide range of frameworks for managing and driving innovation.

Enrollment Requirement:

Open to students from any school.

Components: Lecture

Pollution and Climate Change

This is a 3-credit elective course for Engineering graduate students and upperclassmen. It discusses the sources, dispersion, health effect, environmental impacts, and engineering solutions of various air pollutants: PM10, PM2.5, SOx, NOx, VOCs, CO, Smog-O3, and HAPs, from traditional fossil fuel-fired energy systems and natural sources. It also presents an overview of carbon emission, global warming, O3-depletion, climate changes, and natural disasters from energy systems and other human activities. The outlook of renewable/green energy and carbon control technologies will be discussed. This course gives a broad, contemporary, global, practical view, and quantitative analysis of pollution & climate change.

Interdisciplinary Senior Design I

This is the first course in the two-semester capstone design sequence. Students will be engaged in a team-based design process, synthesizing knowledge and skills to create an innovative result. The teams will take the design process from brainstorming through final design, including prototyping and testing as appropriate. Students will learn project organization, application of appropriate standards, and decision-making within the context of appropriate constraints and consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Effective communication of complex ideas through formal oral and written forms is emphasized. Projects are proposed and guided by mentors, who are School of Engineering faculty or scientists and practitioners at external companies and government laboratories.

Components: Laboratory

Mobile Computing

Mobile Computing refers to the intersection of hardware, software, and communication technologies that enable the transmission of data, voice, and video via a wireless-enabled device that is expected to be transported during normal usage, not tethered to a fixed physical link. This course explores various challenges and opportunities of mobile computing, including topics such as wireless network protocols and standards (3G/4G, WiFi, Bluetooth), location awareness (GPS), sensing (video, audio, motion), user interfaces (touch, high-res display), application development, and security/privacy concerns.

This course will give the student significant hands-on experience in programming mobile devices using iOS and Android smartphones, tablets, and smart watches as development platforms (Note: students supply their own devices). Students will have the opportunity to explore various features of mobile devices such as

Math Refresher for Engineering Graduate Students

This was developed for students that feel their math skills have atrophied and want a review before starting a graduate program in engineering. It's assumed that a student has seen all the material in the past but that might have been the distant past. This class is not a substitute for the standard math sequence that undergraduate engineering students typically have. Topics include, algebra, calculus, ordinary differential equations and linear algebra. A course fee is charged for enrollment.

Components: Lecture(In Person)

Strategic Standardization

A survey course, intended for graduate engineering and law students. Provides students with a broad understanding of the interdisciplinary issues associated with standardization, which is a difficult concept to define. From a broad perspective, the term covers every product, material, and service in commerce, anywhere in the world; it is one of the most critical components associated with the development of the global economy and all of its individual parts.

Components: Lecture

ENGR 516(3) Course ID:008173

Computational Methods for Graduate Students

Discretization methods (finite differences, finite volumes, finite elements), stability and convergence; parabolic, hyperbolic, and elliptic PDEs: model equations and numerical solutions method. Numerous programming exercises will be assigned.

Components: Lecture

ENGR 518(3) Course ID:007229

Experimental Techniques for Graduate Students

This course introduces students to the different aspects of experimental research in engineering. The course will cover fundamental issues such as: planning and design of an experimental campaign, laboratory safety, data acquisition and signal processing. State-of-the-art experimental techniques in different areas of engineering research will also be presented, with focus on modern, non-intrusive, laser-based measurement methods. The goal is provide students with the knowledge required to plan, design and conduct an experimental campaign, which they can eventually apply to their own research efforts.

Components: Lecture

ENGR 520(3) Course ID:001404

Mathematical Analysis for Graduate Students

This course covers the needed analytical skills in applied mathematics for graduate studies. It discusses both theorems and applied examples of six topics: ODEs, Laplace & Fourier Transforms, PDEs, Vector Calculus and Coordinates, Matrix Theory, and Complex Analysis.

Components: Lecture

ENGR 521(3) Course ID:017216

Advanced Applied Mathematics for Engineers

This graduate-level course is an advanced introduction to applications and theory of numerical methods for solution of ordinary and partial differential equations. In particular, the course focuses on physically-arising partial differential equations, with emphasis on finite differences and finite volumes methods and programming techniques to solve steady-state and transient partial differential equations arising from physical, chemical and biological systems.

Components: Lecture

Course Catalog

Engineering - Engineering, General - Subject: Engineering, General

ENGR 522(3) Course ID:013405 Department Consent Required

Mechanical Properties of Materials

This course will teach students about the response of materials to loading. Mathematical foundations: linear transformations, vectors and tensors will be covered. Fundamentals of linear elasticity: stress, strain, Hook's law, solution of static problems, antiplane and plane strain elasticity will be taught. Wave propagation through elastic media, criteria for plastic yielding will be explained. Fundamentals of dislocation theory and fracture, forces on dislocations, dislocation interactions, Griffith criterion, ductile fracture, etc. will be discussed.

Components: Lecture

ENGR 523(3) Course ID:017314

Social Innovation

This course will provide students with a framework for identification of socially relevant problems, and for the creation of sustainable and scalable solutions to those problems. This is an intensive, project-based course with small, multi-disciplinary teams. Teams will conceive, develop and test creative technological solutions to real-world problems. The course will introduce students to Design Thinking, and make use of the Lean Launchpad curriculum, including use of the business model canvas, customer development and agile engineering. Teams will be given a toolkit for innovation and exposed to a wide range of frameworks for managing and driving innovation.

Enrollment Requirement:

Open to students from any school.

Components: Lecture

Course Equivalents: ENGR 420, ENT 420

ENGR 524(3) Course ID:017600 Department Consent Required

Social Innovation, Part II

Second semester of a two semester course sequence. This course will provide students with a framework for identification of socially relevant problems, and for the creation of sustainable and scalable solutions to those problems. An intensive, project-based course with small, multi-disciplinary teams. Teams will conceive, develop and test creative technological solutions to real-world problems.

Components: Lecture

Enrollment Requirements: ENGR 420 or ENGR 523

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ENGR 525(0) Course ID:018991

Software Development Refresher

To provide a refresher for students in the area of software development and/or students that may require additional knowledge in coding. A course fee is charged for enrollment.

Components: Online(Online)

Room Requirements: ONLINE(1)

ENGR 525V(3) Course ID:019070

Engineering the Future: Design Solutions for World Challenges

There is a critical need to design innovative strategies to address the key challenges that face our Nation and World. Many of these challenges are embodied in the 14 Engineering Grand Challenges. This course will provide students with a rich virtual exchange learning opportunity to engage with designing team based solutions to Worldwide challenges related to the Engineering Grand Challenges, Food Security, Biotechnology, Recycling and Waste Management, Alternative Energy, and Green Manufacturing.

Components: Online(Online)

Course Equivalents: ENGR 425V

Room Requirements: ONLINE(1)

ENGR 526(3) Course ID:013406 Department Consent Required

Electrical Properties of Materials

This course covers the fundamental concepts that determine the electrical, optical, magnetic and mechanical properties of metals, semiconductors, ceramics and polymers. The roles of bonding, structure (crystalline, defect, energy band and microstructure) and composition in influencing and controlling physical properties will be discussed. Also included will be case studies drawn from a variety of applications: semiconductor diodes and optical detectors, sensors, thin films, and others. Students will be introduced to the fundamentals of quantum mechanics and will be taught the concepts of tunneling, superconductivity, giant-magneto resistivity with the help of such concepts.

Engineering - Engineering, General - Subject: Engineering, General

ENGR 529(3) Course ID:013676 Department Consent Required

Computational Fluid Mechanics

Course provides an in-depth introduction to the methods and analysis techniques used in computational solutions of fluid mechanics and heat transfer problems. Contemporary methods for incompressible viscous flows are studied and some basics of turbulent flow will also be presented. CFD methods for internal and external flows will be discussed. Finite differences and finite volume techniques are emphasized.

Components: Lecture

ENGR 534(3) Course ID:017397

Pollution & Climate Change

This is a 3-credit technical elective course for Mechanical and other Engineering upperclassmen and graduate students. It discusses the sources, dispersion, health effect, environmental impacts, and engineering solutions of various air pollutants, including PM10, PM2.5, SOx, NOx, VOCs, CO, Smog-O3, and HAPs, from traditional coal-, oil-, and NG-fired energy and power systems. It also presents an overview of carbon emission, global warming, O3-depletion, and climate changes from traditional energy systems, and outlook of emerging renewable energy and technologies. This course gives a broad, contemporary, global, practical view, and quantitative analysis and assessment of pollution, warming, climate change.

Components: Lecture

Course Equivalents: ENGR 434

ENGR 535(3) Course ID:016689

Introduction to Climate Change & Energy

This course presents an overview of energy production and usage, environmental problems caused by energy systems, global warming and atmospheric changes, climate changes and adverse impacts, and policies and possible engineering solutions. In addition to terminology, basic concepts, phenomenon of processes, and methodologies for climate change and energy, problem-solving techniques based on material, kinetics, and energy balance are also taught for quantitative analysis.

Components: Lecture

ENGR 536(3) Course ID:017100

Environmental Protection & Energy

This course presents an overview of modern energy production, conversion, and usage, and their various environmental impacts. Scientific and engineering solutions to air pollution, ozone depletion, acid precipitation, global warming and climate change, and solid, liquid, and hazardous waste generated from stationary and mobile energy systems will be discussed. Problem-solving techniques based on mass/energy balance, and chemical reactions are taught for quantitative analysis and design.

Components: Lecture

ENGR 538(3) Course ID:001405

Introduction to Environmental Engineering

A first course for students interested in environmental engineering. The course discusses air pollution, indoor air quality, and global climate change; emission and control of air pollutants; water supply, quality, and pollution; treatment of drinking water and wastewater; and characterization and management of solid/hazardous waste. The problem-solving techniques based on mass balance, chemical kinetics, environmental microbiology, and energy conversion calculations are rigorously taught for quantitative analysis of environmental problems and their engineering solutions. Open-ended problems will be assigned and a tour to a local environmental engineering facility will be arranged.

Components: Lecture

Course Equivalents: ENGR 438, CEE 438

ENGR 540(3) Course ID:001407

Reliability Engineering

Reliability is the ability of a product to perform as intended (i.e., properly function without failure and within specified performance limits) for a specified period of time, in its life cycle application environment. This course presents classical reliability concepts and definitions based on statistical analysis of observed failure distributions, introduces techniques to design and manufacture products with improved reliability based on the study of root-cause failure mechanisms, covers methods to design and implement accelerated testing, and address the various reliability issues associated with warranties, safety, and regulatory requirements.

Mobile Computing

Mobile Computing refers to the intersection of hardware, software, and communication technologies that enable the transmission of data, voice, and video via a wireless-enabled device that is expected to be transported during normal usage, not tethered to a fixed physical link. This course explores various challenges and opportunities of mobile computing, including topics such as wireless network protocols and standards (3G/4G, WiFi, Bluetooth), location awareness (GPS), sensing (video, audio, motion), user interfaces (touch, high-res display), application development, and security/privacy concerns.

This course will give the student significant hands-on experience in programming mobile devices using iOS and Android smartphones, tablets, and smart watches as development platforms (Note: students supply their own devices). Students will have the opportunity to explore various features of mobile devices such as

Internet of Things

The Internet of Things (IoT) is the overarching term for the large-scale networking of smart devices able to interact with the environment and communicate with other devices and Internet-based cloud services. IoT applications span the scale from personal appliances and home automation, to smart buildings, and healthcare monitoring, to industrial applications like advanced manufacturing, power grid automation, smart cities, smart highways and autonomous vehicles. In this course students will learn about the diverse set of technologies and disciplines that enable the design, deployment, and operation of IoT applications.

Topics include: survey of IoT applications; smart device technologies including embedded processors, sensor and actuator interfacing, signal processing; energy management and energy harvesting; operational constraints of low-latency, high-reliability, real-time, small size; wireless communication technologies and network

Components: Lecture

ENGR 549(3) Course ID:018738

Engineering Research Methods

This course provides students with basic and advanced tools for carrying out research at a graduate level. Specifically, the course discusses the essential aspects of the research process: formulation of hypotheses and project aims; literature review; biostatistics and hypothesis testing; data analyses and interpretation; research proposal writing. By using specific information and experimental data from previous research studies, students will obtain a basic understanding of each of these aspects, as well as the manner by which they are integrated into a viable research program.

Components: Lecture(In Person)

Course Equivalents: BE 547

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ENGR 552(3) Course ID:007230

Introduction to Imaging Technologies

Introduction to common imaging modalities such as ultrasound, x-rays, computer-aided tomography (CAT), magnetic resonance imaging (MRI), and positron emission tomography (PET). Advanced computer methods of 2-D and 3-D image reconstruction as well as digital signal processing methods used in image recognition and enhancement of medical images will be covered. Physical principles of imaging, images reconstruction techniques, and advanced digital processing techniques will be discussed.

Components: Lecture

ENGR 561(3) Course ID:016986

Medical Ultrasound

This is a 3-credit, elective course for students in mechanical and biomedical engineering. It aims to provide fundamentals of acoustic propagation and mechanical characterization of biological tissue in the context of medical applications. The course will cover: acoustic wave propagation; acoustic radiation force; attenuation, absorption and scattering; Doppler effect; piezoelectric effect; ultrasonic transducer; ultrasonic imaging (B-mode); Beamforming; synthetic aperture imaging; Doppler flow measurements; color Doppler flow imaging; acoustic radiation force imaging; shear wave elastography, supersonic shear wave imaging; harmonic imaging; photoacoustic imaging; biological effects of ultrasound (heating, cavitation); in vitro and in vivo methods for speed, attenuation, absorption and scattering measurements.

ENGR 562(3) Course ID:016983

Corrosion Engineering

A 3-credit course on corrosion engineering will address the above holistic aspects of corrosion engineering with respect to basic principles, protection methods, newer developments and failure analyses. The course is tailored for graduate students in materials science and engineering and engineering undergraduate students.

Components: Lecture

Course Equivalents: MSE 562

ENGR 565(3) Course ID:011381

Nonlinear Dynamics and Chaos

An introduction to nonlinear differential equations and chaos, with emphasis on applications from various fields of engineering and science. Topics include stability analysis and bifurcations, phase plane analysis, limit cycles, Poincare maps, chaos, iterated maps, fractals, and strange attractors.

Components: Lecture

Enrollment Requirements: ENGR 222 or Graduate Student

ENGR 570(3) Course ID:015672 Department Consent Required

Basics of High Performance Computing for Engineers

This course will explore the concepts and capabilities of high performance computing using modern GPUs (graphics processing unit). GPUs are not only used for traditional graphics applications, many engineering computations can be performed faster on the GPU than on a traditional CPU. The concept of general-purpose GPUs will also be introduced. Emphasis will be given on how to program GPUs to solve complex engineering problems efficiently.

Topics Included: History of GPUs, Modern GPUs : A Hardware Perspective, CUDA Programming Model, CUDA Threads, CUDA Memories, GPU Performance, Advanced Techniques, Heterogeneous Systems, Multi-GPU systems.

Pre-requisite: Basic understanding of C/C+ is desired but experience in any programming language (or MATLAB)

Components: Lecture

ENGR 575(3) Course ID:009018

Introduction to Systems Analysis

Introduces a scientific approach to decision making, usually under conditions requiring the allocation of scarce resources. Provides several of the most useful and realistic mathematical models available for solving engineering management problems, including linear programming, transportation and assignment models, deterministic economic order quantity inventory models, and network models. Same as CMGT 575.

Components: Lecture

ENGR 584(3) Course ID:014439

Introduction to Nanotechnology

As nanotechnology becomes more prevalent and important in the 21st century, there are increasing demands for graduates with strong interdisciplinary education in this area. This course aims to introduce the emerging field of nanotechnology and its applications. Focus will be on defining nanotechnology, presenting a history of nanotechnology development and projecting its potential impact on the 21st century, nano-materials, nano-fabrication and nano-engineering, nano-mechanics, applications of nanotechnology, challenges in research and development of nanotechnology, nanotechnology ethics, and the role of engineers in the exciting field of nanotechnology.

Components: Lecture

Enrollment Requirements: Junior, Senior, or Graduate Standing

ENGR 585(3) Course ID:016239

Optimization Methods for Engineering Systems

This is a survey course of advanced numerical and computational optimization methods as applied to equations governing engineering systems. It will employ the MATLAB numerical package and review engineering modeling techniques: first principles, empirical data and numerical solution techniques for ordinary differential equations, partial differential equations. The course will then cover fundamental principles of optimization techniques as applied to modeled engineering systems. This is an applied course that will consist of assigned problems requiring computer-based solutions to optimize engineering systems.

Kalman Filtering

This course covers basic problem of state estimation (prediction, Kalman filtering, smoothing), the steady-state Kalman filtering for linearized state variable model, and state estimation for the "not-so-basic" state estimation. The state estimation is also discussed for nonlinear model. The course is accompanied with computer projects. Prerequisites: Random Signal Theory, EE 561 or equivalent.

Components: Lecture

ENGR 626(3) Course ID:015783

Wave Propagation Analysis

Wave equations describe the motion of energy away from a disturbance the way that Newton's second law describes the motion of masses exposed to forces. In this class a variety of mechanical wave equations are derived and Fourier techniques are used to examine wave motion through space. Both the integral form and discrete Fourier analysis are used extensively to examine propagation phenomena including dispersion and diffraction. Concepts studied here are directly related to electromagnetic waves.

Components: Lecture

ENGR 634(3) Course ID:001412

Digital Image Processing

This course deals with the fundamentals of the major topics of digital image processing. The topics used in the course include the two-dimensional systems and mathematical preliminaries, image sampling and quantization, image transforms, stochastic models, image enhancement, filtering, restoration, reconstruction, and compression. This course is accompanied with computer projects. Prerequisites: Random Signal Theory, EE 561 or equivalent.

Components: Lecture

Directed Study - Doctoral Qualification

A student in this course will study a specific area under guidance of a faculty member. The student must select a faculty member (course advisor) for this course before registering for it. The course advisor will assign a study area to the student in consultation with the department chair and guide the student to study the assigned area. The student must submit a Directed Study - Doctoral Qualification Form and get approval from the course advisor and the department chair before registering for this course. The student should prepare and submit a written report and should also prepare a presentation and take an oral exam related to the study area before the end of the semester. The oral exam is conducted by a committee consisting of the course advisor and at least two other faculty members determined by the department chair. The committee will determine the grade of the student. This course has a Pass(P)/Fail(F) grade.

Components: Directed Study/Research(In Person)

ME 311(3) Course ID:015595

Introduction to Energy and Energy Systems

This is a required, 3-credit course, primarily for Mechanical Engineering juniors. It is the first course for energies, and energy systems and technologies, including electric utility, power, propulsion, HVAC, refrigeration, and cryogenic systems. It is a course in applied thermal sciences, and discusses internal and external combustion heat engine cycles, heat pump cycles, mixtures and psychrometrics, fuels and combustion, and their associated engineering components and subsystems. An overview of form/type of energy, energy consumption, production, and reserves in the USA and the world, and modern direct energy converters are also discussed. Emphasis is placed on the quantitative analysis of performance of various energy systems and processes, and on the tradeoffs necessary for improved efficiency, operational characteristics, and environmental acceptability.

Components: Lecture

Enrollment Requirements: ENGR 211 or ENGR 211H

ME 314(3) Course ID:015847

Fundamentals of Mechatronics

This is a 3-credit, upper-level course offered to engineering juniors, seniors and graduate students. This course covers the fundamentals of technologies involved to understand, design and optimize mechatronic systems. Topics include: electric circuits and components, semiconductor electronics, digital circuits, operational amplifiers, A/D & D/A converters, sensors and measurement systems, actuators, microcontrollers and interfacing, control system and system response. The course will take a narrative approach, emphasizing the understanding of fundamentals, the importance of building intuition and integration of engineering systems.

Components: Lecture

Enrollment Requirements: ENGR 212 or 212H

ME 342(3) Course ID:002663

Junior Design

General topics: Standards; engineering economics; manufacturing processes; and intellectual property. Fundamentals of mechanical design: stress analysis; deflection analysis; failure theories; fatigue. Design of machine elements: screws; fasteners; springs; bearing; gears; shafts. Design process and the assignment of an open-ended design problem. An introduction to solid modeling.

Components: Laboratory, Lecture

Enrollment Requirements: ENGR 202 & ENGR 301

ME 344(3) Course ID:002670

System Dynamics

Major topics: Mathematical modeling of dynamic systems, Laplace transforms. Transient response analysis and frequency response analysis of mechanical, electrical and fluid systems. Computational solutions of responses of dynamic systems in state space. MATLAB used for analysis and design problems.

Components: Lecture

Enrollment Requirements: ENGR 202 & ENGR 222

ME 362(3) Course ID:002674

Heat Transfer

This is a survey course of basic heat transfer: conduction, convection, and radiation. The approach is to present the fundamental governing equation for each mechanism and discuss the relevant simplifications for practical engineering applications. This course emphasizes the practical aspects of the student's engineering education; hence, the course seeks to develop and refine the student's ability to analyze arbitrary engineering applications.

Components: Lecture

Enrollment Requirements: ENGR 211 (or ENGR 211H) and ENGR 331

ME 371(3) Course ID:016909

Introduction to Aerospace Engineering

This course presents introductory principles of flight, lift and drag calculation and application to aircraft performance parameters in level flight, turning flight, introduction to stability, control, propulsion, launch vehicle sizing and orbital flight.

Components: Lecture

Enrollment Requirements: ENGR 202

The Catholic Univ of America

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 392(2) Course ID:008234

Dynamics Laboratory

Computer simulation of dynamic mechanical systems. Experimental methods for measuring the temporal and frequency response of dynamic systems. Statistical theories of measurement (error analysis, sampling, averaging, correlation).

Components: Laboratory, Lecture

Enrollment Requirements: ME 344

ME 404(3) Course ID:016551

Structural Mechanics

A fundamental engineering course that introduces elasticity and mechanics analyses of solid structures, whose topics include: 3-D stresses and strains; stress and strain relations; Airy stress function; 2-D elasticity problems; stress concentrations; failure criteria; introduction to plasticity, fracture and fatigue; bending, torsion and combined loading on structural elements; strain energy and energy method; introduction to the finite element method; plates and shells; buckling.

Components: Lecture

Enrollment Requirements: ENGR 301

ME 405(3) Course ID:018732

Programming & Software Tools for Mechanical Engineering

As technologies involve at an ever-increasing pace, software components and tools are playing an important role in numerous mechanical systems. ME405/505 is an advanced elective course that introduces computer algorithms and programming as well as selected commercial software for mechanical engineering. This course is offered only in the summer.

Topics include: algorithm design and programming with C++ and Java; Python programming for deep machine learning; Arduino programming for microcontrollers; learning commercial finite element analysis and simulation tools.

Components: Online(Online)

Course Equivalents: ME 505

Room Requirements: ONLINE(1)

ME 407(3) Course ID:018860

Energy and Buildings

The main focus of this course is to understand the connection between buildings operations and energy request. The course deals with the principles of heat transfer mechanisms with a particular focus on building related cases; the thermophysical characteristics of the building will also be treated. Winter heat loss calculations and estimation of heat loads in summer will be addressed. The human body and the thermal comfort will be treated: energy balance and thermal power of the human body, environmental variables influencing the comfort. Finally heat pumps and heating system efficiency will be presented.

Components: Lecture(In Person)

Course Equivalents: CEE 407, CEE 507

Enrollment Requirements: open to engineering juniors and seniors only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ME 411(3) Course ID:018711

Aircraft Simulation and Control

"The simulation of the dynamic movement of an aircraft is essential in its design. Within a project, it is necessary to verify the aerodynamic response of the aircraft to command inputs and also how its response changes with the incorporation of flight control systems. The behavior of an aircraft can be modeled using a set of nonlinear equations, resulting from the application of known laws of physics (Newton's 2nd Law, for example). The numerical integration of these equations is a mature and well-known process, and several numerical routines are available. Due to requirements in maneuverability, performance, radar signature, etc. several modern aircrafts have inherently poor flight characteristics. In addition, the extended flight envelope found in modern aircrafts does not allow satisfactory flight qualities at all operational points. To correct such deficiencies, the use of stability enhancement systems (SAS) is used. These systems adjust the frequencies and dampenings of an aircraft's dynamic modes. When it is desired to correct such deficiencies

Hydro and Coastal Energy Technology

The course will cover the challenges and rewards from hydropower and harvesting offshore renewable energy. An overview of Hydropower, Offshore Wind Energy, Tidal Energy, Wave energy systems, Ocean Thermal Energy Conversion OTEC systems as well as smaller scale flow extraction energy technology. The course covers: 1 Estimation of the available energy based on models of the hydropower elevation, wave, current and wind environment. Characteristic equations and parameters are introduced which allow linkage to coastal site data. 2 Energy Conversion- life cycle operation. Laboratory, pilot and full-scale installation results for hydropower installations and ocean harvesting systems are discussed. Examples are presented to provide realistic energy harvesting estimates for these systems. 3 Techno-economic analysis is introduced to illustrate how to evaluate the viability of these systems within current and higher regional electrical rates \$/kW. The main cost driver is offshore installation costs. A review of several cost reduction schemes is

Energy Storage: Technology & Design

Reducing global warming and carbon emission have increased the adoption of Solar and Wind renewable electric power. This has resulted in Solar and Wind energy costs being lowered to match conventional fossil fuel electric power plant acquisition and operating costs. It is also recognized that adding energy storage to renewable solar and wind systems insures maximum energy utilization.

The course introduces energy storage systems, their storage technology, design, operation and integration issues with the electric grid. The course begins with a brief overview of home and commercial energy-electricity usage. Typical renewable wind and solar systems are then introduced along with different types of energy storage such as pumped hydro, electric storage batteries, hydrogen fuel generation, desalination of seawater, etc. The students work with statistical models used to estimate the variation in wind and solar energy. Typical application case studies are presented. The case studies include an estimate

Senior Design

Students will learn topics essential for the design of mechanical systems. Topics will include design, materials and manufacturing, lubrication, friction and wear, columns, and pressure vessels. Students will incorporate engineering standards, and use freehand sketching as well as PC based tools including CAD and Matlab. The course will emphasize individual and group projects. Effective communication of complex ideas through formal oral or written form and informal free hand sketching will be emphasized.

Components: Lecture

Enrollment Requirements: ME 342 & senior standing

ME 442(3) Course ID:002681

Senior Project

Provides students with optimum design and synthesis techniques of thermal and mechanical systems. Students apply the presented methods to creative design of complex thermal and mechanical systems. Risk, reliability, and economic analyses are introduced and utilized in the design process. Group discussion, teamwork, oral presentation, and oral reports.

Components: Lecture

Enrollment Requirements: ME 342 & ME 441

ME 445(3) Course ID:017905

Applied Gas Dynamics

The objective of this course is to provide an understanding of fundamentals of gas dynamics. It is a course in applied thermodynamics and fluid mechanics which consider the important, basic energy and compressible fluid flows. This course places an emphasis on the steady, one-dimensional flow problems and a general understanding of the principles of multi-dimensional flows, and provides an engineering approach to isentropic flows, shock waves, and propulsion. It is expected that the student has some familiarity with material derivatives, control volume analysis, derivation of governing equations, etc. Open-ended design and computer problems are assigned. Prerequisite: ME 311 or Graduate Student Status.

Metamaterials

Metamaterials are not materials in the ordinary sense, but rather, man-made structures that are engineered to exhibit physical properties not found in naturally occurring materials. Energy transport through matter takes place by the propagation of waves. Therefore, achieving control upon wave propagation in a material enables one to control how energy is transported through physical structures and/or devices made with that material. Wave propagation properties in ordinary materials are determined by the nature of the materials; atomic constituents and by the atoms; geometrical arrangement in space. Metamaterials can be designed and fabricated with spatial structures not found in natural materials, thereby affecting wave propagation in novel ways. This course presents the relationship between spatial structure and wave propagation properties, thus explaining how electromagnetic and acoustic fields travel through different ordinary materials. Equipped with knowledge of the structure-propagation relationship, students will learn how to design metamaterials with the

ME 511(3) Course ID:018681
Aircraft Simulation and Control

The simulation of the dynamic movement of an aircraft is essential in its design. Within a project, it is necessary to verify the aerodynamic response of the aircraft to command inputs and also how its response changes with the incorporation of flight control systems. The behavior of an aircraft can be modeled using a set of nonlinear equations, resulting from the application of known laws of physics (Newton's 2nd Law, for example). The numerical integration of these equations is a mature and well-known process, and several numerical routines are available. Due to requirements in maneuverability, performance, radar signature, etc. several modern aircrafts have inherently poor flight characteristics. In addition, the extended flight envelope found in modern aircrafts does not allow satisfactory flight qualities at all operational points. To correct such deficiencies, the use of stability enhancement systems (SAS) is used. These systems adjust the frequencies and dampenings of an aircraft's dynamic modes. When it is desired to correct such deficiencies

Design of Solar Systems and Wind Power

This course covers the design and engineering of renewable energy systems. To establish the user demand, the residential and commercial energy use for heating, AC lighting, as well as washing and cooking, are first reviewed. Low energy European homes are compared to current designs. The process of estimating available wind and solar energy is presented with example calculations. This provides the basis for designing the wind and solar renewable energy collection systems. The trade-off of designing systems with large energy collection or using a more economical system utilizing combination wind, solar and energy storage is presented. In addition to land-based renewable energy systems, the design of offshore wind farms and the installation logistics is covered. The students will complete a renewable design as an individual or team project.

Components: Lecture

ME 539(3) Course ID:008235

Combustion and Incineration

This course discusses the fundamentals of combustion science and processes, and its engineering applications to combustion and incineration systems. The topics include combustion thermodynamics and chemical kinetics; characterization of fuels and chemical wastes; premixed and diffusion flames; ignition, extinction, deflagration, and detonation; environmental impacts due to combustion and incineration; modern combustion technologies and devices; incineration technologies and systems; and pollutants removal from combustors and incinerators.

Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 557(3) Course ID:007782

Advanced Dynamics

Multiple methods for obtaining equations of motion for rigid multibody systems. Topics to be covered will include the differentiation of vectors, kinematics, mass distribution, energy functions, and formulation of the equations of motion.

Components: Lecture

ME 558(3) Course ID:014153

Introduction to Ocean Engineering

This course offered primarily to upperlevel undergraduate and beginning-level graduate students. This objectives of this course are to (1) introduce the different types of offshore structures, (2) provide a theoretical and applied understanding of the structural loading on offshore structures due to waves, wind, and currents, and (3) introduce simple mathematical models of offshore structures and techniques used to characterize the dynamical response.

Components: Lecture

Course Equivalents: ME 458

ME 560(3) Course ID:012852

Introduction to Acoustics

The goals of this course include exposing students to mathematical foundations of acoustics. Topics include a brief introduction to one degree of freedom vibrations followed by an in-depth examination of the acoustic wave equation. This knowledge will then provide a foundation for the semester's remaining topics, which include: acoustic metrology, sound propagation, Matlab signal processing, reflection, and transmission.

Components: Lecture

ME 562(3) Course ID:017930

Acoustic Signal Processing

This course examines the properties of signals and systems, sampling, data acquisition, Fast Fourier Transform (FFT), spectral analysis, digital filter design, power spectrum, Hilbert transform and the convolution integral. Practical applications of digital signal processing will be emphasized with a number of hands on MATLAB Programming exercises.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

ME 563(3) Course ID:016187

Acoustics Media & Design

This applied course covers design and measurement related issues in acoustics. Topics include the acoustics of natural and artificial porous media like gravel, mineral wool, foams and grass. The course addresses the use and design of data acquisition systems, the design of sound absorbers materials as well as the design of apparatuses for measuring acoustic properties. Experimental topics includes, impedance tube measurements, room acoustic measurements and design topics includes, design of sound absorber materials, design of acoustic measurement apparatus: porosity, flow resistivity and tortuosity apparatus. Open to seniors with department consent

Components: Lecture

ME 565(3) Course ID:012437

Atmospheric Acoustics

This research orientated class will cover practical and experimental issues related to the study of sound propagation in the Earth's atmosphere. A primary technique that is covered is the parabolic equation method which is used for solving the wave equation. Additional topics will include environmental noise standards, finite difference time domain modeling of sound propagation. Students will collect and analyze data from field measurements that will illustrate the effects of wind and temperature gradients on sound propagation.

Components: Lecture

ME 566(3) Course ID:009917

Vibrations I

Free and forced vibrations of single degree of freedom systems under a variety of time dependent loads. Damping in structures. Unit impulse response functions. Frequency domain analysis. Free and forced vibrations of multi degree of freedom systems. Modal Analysis, eigenvalues, eigenvectors. Numerical integration, time history analysis, and modal analysis of MDOF systems. Introduction to vibration of continuous systems. Open to graduate students and by department consent to undergraduates who've taken ME 344

Components: Lecture

Course Equivalents: CEE 514, CEE 414, ME 466

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 573(3) Course ID:016476

Marine Bioacoustics

The course takes an interdisciplinary approach that links areas in ocean acoustics, marine biology, and environmental sciences. The topics covered ranging from physics of underwater sound, marine animal communication and hearing, acoustic methods in marine biology studies, digital signal processing, underwater noise impacts on marine animals, marine ambient noise and soundscape, and current hot topics in marine bioacoustics research. Students will be required to carry out a research project and to report their findings.

Components: Lecture

ME 574(3) Course ID:016291

Orbital Mechanics and Mission Design

A 3-credit course on orbital mechanics. The foundational concepts of space flight dynamics, orbit determination, trajectory design, and satellite perturbations are presented including a brief review of relevant concepts in algebra and mathematics. It covers also flight mission's concepts, examples of classical mission requirement for near Earth satellites and interplanetary spacecrafts. The course offers real flight mission examples, and an introduction to space mission design. Open to all graduate students as well as undergraduates who have taken ME 371 & ENGR 202 with department consent.

Components: Lecture

Course Equivalents: ME 474

ME 575(3) Course ID:017083

Transduction

This course provides a detailed look at the modeling and design of transducers for acoustics, vibrations and other engineering areas. The fundamental concepts relating to the transmission and reception of signals will be examined, including an analysis of relevant transducers utilized in the lab and experienced in everyday life. Specific topics covered include transducers for airborne sound (audio microphones and loud speakers), underwater sound (hydrophones and projectors) and vibrations (accelerometers). Open to seniors and with department consent to undergraduates who've taken ME 344

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

ME 576(3) Course ID:016913

Aerodynamics

This is a 3-credit, required course for students in the Aerospace concentration offered to engineering juniors. It extends fluid mechanics concepts to the aerodynamic performance of wings and bodies in sub/supersonic regimes. The course will cover: subsonic potential flows; viscous flows; aerodynamics of airfoils and wings; and supersonic and hypersonic airfoil theory (steady normal shock waves, steady oblique shock waves, Prandtl-Meyer expansion, shock-expansion theory).

Components: Lecture

Course Equivalents: ME 476

ME 577(3) Course ID:015332

Applied Mechatronics

This course covers the fundamentals of technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply these technologies to mechatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. The course will take a narrative approach, emphasizing the importance of building intuition and understanding, with focus on the integration, system design and engineering. Open to graduate students and to seniors with department consent.

Components: Lecture

ME 578(3) Course ID:016910

Ocean Acoustics

The course provides a comprehensive introduction on the ocean acoustics and acoustical oceanography. The topics covered ranging from physical principles of underwater acoustics to applications of sound to find fish, submarines, and study the ocean. Students will be required to carry out a research project and to report their findings.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 579(3) Course ID:016869

Acoustic Metamaterials

This is a 3-credit, elective course for students in mechanical and biomedical engineering. This course aims to provide fundamentals of acoustic propagation and mechanical characterization of biological tissue in the context of medical applications. The course will cover: acoustic wave propagation; acoustic radiation force; attenuation, absorption and scattering; Doppler effect; piezoelectric effect; ultrasonic transducer; ultrasonic imaging (B-mode); Beamforming; synthetic aperture imaging; Doppler flow measurements; color Doppler flow imaging; acoustic radiation force imaging; shear wave elastography, supersonic shear wave imaging; harmonic imaging; photoacoustic imaging; biological effects of ultrasound (heating, cavitation); in vitro and in vivo methods for speed, attenuation, absorption and scattering measurements. Open to graduate students and to seniors with department consent.

Components: Lecture

ME 580(3) Course ID:009918

Introduction to MEMS and Microfabrication

This course presents an introduction to the principles, materials, microfabrication techniques, applications and design issues/constraints to realize modern MicroElectroMechanical Systems (MEMS). Students will gain an understanding of microfabrication techniques for MEMS including photolithography, surface and bulk micromachining, LIGA, and other processes. Transduction mechanisms for sensors and actuators (coupling thermal, mechanical and electrical domains) and micro-scale engineering design issues will also be discussed. The course will include laboratory demonstrations with the newly established microfabrication-outside-clean-room facility. Students will do class projects to demonstrate the mastery of basic concepts in design and fabrication process of a MEMS device. Prerequisite: Senior status and graduates.

Components: Lecture

ME 581(3) Course ID:015968

Introduction to Microfluidics and Lab-on-a-Chip Technologies

This course presents fundamentals and applications of microfluidic technologies for lab-on-a-chip applications. The course provides a broad view of the field of microfluidics and knowledge of relevant fabrication methods and analysis techniques. Microfluidic fabrication techniques, transport processes, flow control methods, molecular separations and detection techniques will be emphasized. Students will do class projects and are expected to demonstrate mastery of basic concepts in microfluidic modeling, design, and fabrication of a microfluidic system selected in consultation with the instructor. Prerequisite: Undergraduates who've taken ENGR 331 and have department consent or graduate student status

Components: Lecture

ME 582(3) Course ID:010432

Introduction to Mechanical Fundamentals of Electronic Systems

An introduction to mechanical fundamentals required for designing reliable electronic systems. The focus will be on the fundamental principles of semiconductor devices, circuit theory and electrical design considerations, electronic packaging technologies, effect of materials compatibility, manufacturing processes, thermal stress, mechanical stress, environmental effects on product performance, failure analysis, reliability prediction, durability and cost.

Components: Lecture

ME 584(3) Course ID:010552

Introduction to Nanotechnology

As nanotechnology becomes increasingly important in the 21st century, there will be increasing demand for graduates with strong interdisciplinary education in this area. With this in mind, the objective of this course is to introduce nanotechnology and its applications. Focus will be on defining nanotechnology, presenting a history of nanotechnology development and projecting its potential impact on the 21st century, nano-materials, nano-fabrication and nano-engineering, nano-mechanics, applications of nanotechnology, challenges in research and development of nanotechnologies, and the role of mechanical engineers in the exciting field of nanotechnology.

Components: Lecture

ME 587(3) Course ID:017630

Mechanics & Applications of Composite Materials

Properties and uses of polymeric composite materials. Determination of stresses, strains, and their constitutive relationships for fiber-reinforced laminated composites. Testing and characterization. Applications in aerospace and wind turbine structures. Prerequisites: ENGR 301 and ENGR 390.

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 589(3) Course ID:016692

Smart Structures

Mechanics of smart materials and current approaches for engineering smart structures to monitor health, self-sensing and self-healing. Smart structures. Constitutive models for smart materials. Piezoresistive materials, piezoelectric ceramics, electro-active polymers, shape memory alloys, bio-inspired materials and self-healing materials. Sensors and sensor networks. Structural health monitoring. Prerequisites: ENGR 301 and MSE 395/ENGR 395/

Components: Lecture

Course Equivalents: ME 489, MSE 589

ME 590(3) Course ID:017636 Department Consent Required

Sensors and Actuators

In our daily lives we are surrounded by advanced mechanical and electrical systems, which contain sensors to observe our environment and actuators to operate on and affect the world around us. This course provides a detailed look at the modeling and design of sensors and actuators for electro-mechanical systems, such as those relating to temperature, pressure, sound and mechanical vibrations. The fundamental concepts relating to the transmission and reception of signals as well as the underlying physical principles will be examined, including an analysis of relevant sensors and actuators utilized in the lab and experienced in everyday life.

Components: Lecture

Room Requirements: OFF CAMPUS(1)

ME 591(3) Course ID:017631 Department Consent Required

Sonar and Ocean Noise

The course builds on fundamental knowledge of underwater acoustics and focuses on the analysis, design, and performance of sonar applications. The topics covered includes basic concepts of sound propagation and transmission loss through the ocean, noises, signal detection theory, and target detection and localization.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

ME 593(3) Course ID:018740 Department Consent Required

Underwater Transducers and Arrays

This course provides a detailed look at the modeling and design of electroacoustic transducers and arrays for underwater applications. Common types of underwater transducers will be examined for both acoustic transmitters and receivers, and the corresponding array characteristics will be discussed. Specific topics covered will include modeling of piezoelectric transducers for various geometries, hydrophone and projector designs, phased arrays and array directivity.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

ME 622(3) Course ID:010565

Turbulence

This course presents the fundamentals of turbulence. Topics include: introduction and motivation, statistical techniques for analysis, mean flow dynamics (Reynolds decomposition), Kolmogorov's theory, instrumentation, classical turbulent flowshear layers, jets, wakes, boundary layers (pipe flow) and introduction to numerical simulation of turbulent flows.

Components: Lecture

Enrollment Requirements: ME 549

ME 627(3) Course ID:017755

Advanced Renewable Energy Systems

An in-depth review of renewable energy sources, their usage and problems, will be conducted. Special focus will be on biomass/biofuels and Waste-to-Energy, geothermal, wind power, hydropower and solar energy. Quantitative and qualitative methods of analysis will be used. Practical and/or hands-on projects will be undertaken to validate the learnt renewable energy theories and principles.

This course builds on previous ones that deal with alternative energies and renewable energy technologies, and provide a good breath of knowledge for graduate students preparing for master and/or doctoral degrees.

Components: Lecture

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 640(3) Course ID:002742

Advanced Thermodynamics

Advanced topics in thermodynamics: energy and exergy analysis of open systems; entropy, irreversibility, and availability; equations of state and general thermodynamic relations; gas mixtures and liquid solutions; phase equilibrium and stability; external-field effects; low temperature thermodynamics; introduction to irreversible thermodynamics; and direct energy conversion. Prerequisites: ME 530 or Graduate Student Status.

Components: Lecture

Enrollment Requirements: ME 530

ME 642(3) Course ID:006329

Advanced Heat Transfer

Specialized topics in heat transfer. The topics will be selected based on the interest of the students.

Components: Lecture

Enrollment Requirements: ME 548

ME 645(3) Course ID:002743

Advanced Fluid Dynamics

Specialized topics in fluid mechanics. The topics will be selected based on the interest of the students.

Components: Lecture

Enrollment Requirements: ME 549

ME 647(3) Course ID:006331

Multiphase Flows

Fundamental laws, physical interactions and dimensionless parameters, governing momentum transfer equations, solution techniques, and industrial, applications of multiphase flow processes, including gas-solid, gas liquid, and liquid-solid systems. Emphasis is primarily placed on particle-fluid interactions.

Components: Lecture

Enrollment Requirements: ME 544

ME 648(3) Course ID:007200

Heat Exchangers-Theory and Applications

Transport properties and dimensionless parameters; heat exchanger classification, heat exchanger design; UA-LMTD and ϵ -NTU methods; fouling; header design; flow regimes in two-phase heat transfer; pressure drop and heat transfer correlations for boiling and condensation. Applications include double pipe heat exchangers, shell and tube heat exchangers, compact heat exchangers, evaporators, and condensers. Prerequisites: ME 548 or Graduate Student Status.

Components: Lecture

ME 651(3) Course ID:014809

Advanced Topics of Infrared Systems

This course is intended to provide a comprehensive review of Surveillance and Reconnaissance (S&R) imaging system modeling and performance prediction. The goal of S&R systems is to provide information-detection, classification and identification of objects and features based on image characteristics. Given a set of information requirements, the system designer and operator must design and operate a system in a manner that will provide the required information. They thus require the ability to model and predict the performance of S&R systems based on design attributes and measurable operating parameters. Performance is defined in terms of the ability of users to extract the desired information. System descriptions, S&R modeling history, system characteristics, and performance models are all provided. While there are many texts describing imaging systems in the realm of linear shift invariant systems, target acquisition, driving and flying, there are few texts that address the specific design and analysis techniques used with S&R imaging systems. In

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

ME 654(3) Course ID:007201

Computational Structural Mechanics

Introduction to Finite Elements. Finite Element model construction applying direct and variational principles. Condensation techniques. Isoparametric elements. Introduction to dynamic models. Coupled problems: structural-electromagnetic systems and fluid-structure interactions. Numerical integration methods. Prerequisite: ME 503.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 656(3) Course ID:008474

Optimal Control

Linear quadratic Gaussian optimal control; linear quadratic regulator; introduction to robust control; gain margin, phase margin; H-2, H-infinity controller. Prerequisites: ME 510 or Graduate Student Status.

Components: Lecture

ME 657(3) Course ID:008236

Advanced Dynamics

A more in-depth study of material covered in ME 557. Multiple methods for obtaining equations of motion for rigid multibody systems, based on Kane's method. Topics to be covered will include the differentiation of vectors, kinematics, mass distribution, energy functions, and formulation of the equations of motion. Prerequisites: Graduate Student Status.

Components: Lecture

ME 660(3) Course ID:013121

Intermediate Acoustics

The course will cover issues related to linear acoustics that stem from an understanding of the acoustic wave equation. The topics include acoustic metrology, attenuation of sound, radiation and reception, wave-guides human hearing and transduction. These analytic concepts will be applied to applied topics including musical instruments, audio, and biomedical ultrasound. Prerequisite: Graduate student status.

Components: Lecture

ME 661(3) Course ID:006332 Department Consent Required

Acoustics Metrology & Materials

Topics covered in this class include both passive and active acoustical measurements. The passive measurements, covered in the first quarter of the class and will include digital audio recording, environmental noise, reverberation in architectural spaces and radiated sound power measurement. The remainder of the semester will focus on active techniques where a computer-generated sound is broadcast and then recorded after it has interacted with some target or environment. This section of the class will start with a discussion of excitation signals including pulses, chirps and noise as well as speaker / microphone characterizations. With this background established we will then cover acoustic materials and impedance tube measurements of surface impedance, reflection, and absorption. Experimental results will be compared to published values and simple model of acoustic interaction with porous materials. Prerequisite: ME 561 or equivalent.

Components: Lecture

Enrollment Requirements: ME560

ME 663(3) Course ID:015018

Transduction in Acoustics/Vibration

This course provides a detailed look at the modeling and design of transducers for acoustics and vibrations. The fundamental concepts relating to the transmission and reception of signals will be examined, including an analysis of relevant transducers utilized in the lab and experienced in everyday life. Specific topics covered include transducers for airborne sound (audio microphones and loud speakers), underwater sound (hydrophones and projectors) and vibrations (accelerometers).

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

ME 664(3) Course ID:008237

Modal Analysis

Theoretical modal analysis. Random vibrations. Estimation of natural frequencies and mode shapes from experimental data. Experimental techniques for vibration measurements. Vibration sensors. Signal processing and data handling. Prerequisite: ME 666.

Components: Lecture

ME 666(3) Course ID:008195

Advanced Vibrations and Structural Dynamics II

Vibration of single degree of freedom systems. Multi-degrees of freedom systems. Introduction to modal analysis: natural frequencies and mode shapes. Distributed parameter systems: vibration of beams and plates. Analytical dynamics: LaGrange equations and Hamilton's principle. Prerequisites: Undergraduates who have taken ME 344 and have department consent or Graduate Student Status.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 668(3) Course ID:008239

Active and Passive Vibration Control

Passive surface damping treatments: visco-elastic materials and sandwich structures. Active damping treatments. Application of optimal control techniques to vibration reduction. Adaptive control techniques. Magnetic damping treatments. Prerequisites: ME 507, ME 666.

Components: Lecture

ME 669(3) Course ID:012516 Department Consent Required

Nonlinear Vibration

This course includes derivation of nonlinear equations of motion for large amplitude mechanical vibrations (such as of beams and plates) but focuses on the analysis of the dynamics of nonlinear oscillators (such as Duffing, Van der Pol, and Mathieu/Hill equations). Topics considered include phase-plane analysis and stability, asymptotic and perturbation methods such as Lindstedt-Poincaré, multiple scales, and Krylov-Bogoliubov-Mitropolsky, the harmonic balance method, external excitation, primary and secondary resonances; parametric excitation, Floquet theory, and multi-degree of freedom systems including nonlinear normal modes and center manifold theory.

Components: Lecture

Enrollment Requirements: ME 566

ME 670(3) Course ID:017234

Theory of Elasticity

This course provides an introduction to the theory of continuum mechanics and elasticity. The concepts of continuum, deformation, strain, stress and equations of motion for a deformable body are presented including a brief review of relevant concepts in algebra and mathematics. It covers also constitutive relations for elastic materials, three-dimensional elasticity, plane strain and plane stress, variational energy principles, and an introduction to thermoelasticity and other multiphysics phenomena. Prerequisite: ME 503

Components: Lecture

Enrollment Requirements: ME 503

ME 681(3) Course ID:017081

Micro- & Nanoscale Fluid Mechanics

This graduate level course that presents the physics of fluid transport in micro- and nanoscale liquid-phase systems, with the consideration of gas bubbles, solid particles, and macromolecules. The course brings together fluid mechanics, electrostatics, interfacial chemistry and electrochemistry with a focus on continuum fluid mechanical systems with micro- and nanofabricated devices. Students will do class projects to demonstrate his/her mastery of concepts and analysis of a selected microfluidic device or system with practical applications.

Components: Lecture

ME 701(3) Course ID:008991

Finite Element Method: Theory and Applications

The course describes the fundamentals of finite element theory. Finite Element formulations for various physical systems are derived through variational forms of energy functionals. Finite elements for elastic structures, porous materials, piezo-electric materials, fluid and thermal systems are analyzed with emphasis on interaction phenomena and coupled behaviors.

Components: Lecture

ME 702(3) Course ID:016912

Advanced Prob. Computational Vibrations & Acoustics

This class focuses on numerical approaches to solving wave equations that describe the motion of energy away from a disturbance the way that Newton's second law describes the motion of masses exposed to forces. In this class a variety of mechanical wave equations are derived and Fourier techniques are used to examine wave motion through space. Both the integral form and discrete Fourier analysis are used extensively to examine propagation phenomena including dispersion and diffraction. Concepts studied here are directly related to electromagnetic wave.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

ME 703(3) Course ID:002745 Department Consent Required

Advanced Problems in Vibration and Acoustics

Topics include longitudinal and transverse waves in solids: bars, plates, and cylindrical shells; dispersion and impedance. Sound radiated by vibrating structures, effect of fluid loading on structural vibrations, sound-induced vibrations and fluid/structure interactions.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 704(3) Course ID:002746

Advanced Problems in Vibrations and Acoustics II

A follow on course to ME 703. Continued discussion in topics of longitudinal and transverse waves in solids: bars, plates, and cylindrical shells; dispersion and impedance. Sound radiated by vibrating structures, effect of fluid loading on structural vibrations, sound-induced vibrations and fluid/structure interactions.

Components: Lecture

ME 721(3) Course ID:006334

Advanced Computational Fluid Dynamics

Numerical solution of inviscid flow equations, Navier-Stokes equations, boundary layer equations, and turbulent flows. Emphasis on grid generation. Practice problems with commercial codes. Prerequisite: ME 521.

Components: Lecture

Enrollment Requirements: ME 521

ME 726(3) Course ID:002749

Advanced Combustion and Multiphase Systems

Based on the interest of the students, this course discusses in detail a few selected, advanced topics in one of the following subareas: gas-solid suspensions, fluidization, gas-liquid systems, slurry flows, coal combustion, ICES, boilers and fuels, incineration systems, and multiphase mechanics. Emphasis is placed on training students in independent study and in grasping the forefront of the particular research field. Final project by students. Prerequisites: ME 539, 544.

Components: Lecture

Enrollment Requirements: ME 647

ME 728(3) Course ID:002750

Advanced Problems in Pollution Control

Based on the interest of the students, this course discusses in detail a few selected, advanced topics in one of the following application areas: air pollutants emission control, indoor air quality control, wastewater treatment, water quality control, soil contamination and remediation, incineration of chemical waste, and microbiological treatment of waste. Emphasis is placed on training students in independent study and in grasping the forefront of the particular research field. Final project by students. Prerequisite: ME 537.

Components: Lecture

Enrollment Requirements: ME 537 & ENGR 538

ME 733(3) Course ID:002752

Turbulent Flows

Nature of turbulence and the formulation of governing equations. Application to free shear and wall flows, statistical description of turbulence, spectral dynamics, turbulence modeling, experimental methods. Final project by students. Prerequisite: ME 645.

Components: Lecture

Enrollment Requirements: ME 645 & ME 646

ME 741(3) Course ID:006335

Advanced Problems in Thermal Science

Based on the interest of the students, this course discusses in detail a few selected, advanced topics in one of the following subareas: applied thermodynamics, advanced thermodynamics, heat conduction, convective heat/mass transfer, thermal radiation, heat/mass exchangers, and heat transfer enhancement. Emphasis is placed on training of students in independent study and in grasping the forefront of the particular research field. Final project by students. Prerequisite: ME 548.

Components: Lecture

Enrollment Requirements: ME 640 & ME 641 & ME 642

ME 751(3) Course ID:007202

Advanced Topics in Vibration Control

Finite element modeling of beams, rods, plate and shells with shape memory or piezo-electric actuators. Experimental validations. Surface damping treatment and active constrained layer damping. Variable structure control and LMS control. Prerequisites: ENGR 503, ME 566 or ME 666.

Components: Lecture

The Catholic Univ of America
Course Catalog

Engineering - Mechanical Engineering - Subject: Mechanical Engineering

ME 752(3) Course ID:008826

Advanced Topics in Mechanics

This course provides an introduction to the phenomena of nonlinear oscillations. Emphasis is placed on identifying the phenomena from a physical perspective, understanding their behavior, and obtaining approximate closed-form solutions that define the essential characteristics of their behavior. Results are compared to those obtained from similar linear systems. Examples are limited to single-degree-of-freedom systems, in order to enable sufficiently rigorous study of some of the most common phenomena. This course serves as an introduction to more advanced study in the nonlinear oscillations of multi-degree-of-freedom and continuous systems, nonlinear control, and chaos theory. Prerequisite: Permission of Instructor.

Components: Lecture

ME 754(3) Course ID:002753

Advanced Computational Structural Analysis

Vibration of discrete systems, the eigenvalue problem, discrete systems, continuous systems, discretization of continuous systems, the finite element method, condensation methods and sub-structure synthesis. Final project by students. Prerequisite: ME 654.

Prerequisite: ME 504.

Components: Lecture

Enrollment Requirements: ME 504

ME 756(3) Course ID:002756

Advanced Problems in Controls

Topics include optimal control of continuous and discrete systems, linear quadratic regulator and tracking, Riccati equations and eigenstructure of Hamiltonian, and robust control techniques for linear systems (H4 and H2). Adaptive control techniques with emphasis on real-time parameter estimation, mode reference adaptive and self-tuned systems. Nonlinear control analysis and design using feedback linearization and variable structure control. Final project by students. Prerequisite: ME 512.

Components: Lecture

Enrollment Requirements: ME 510

ME 760(3) Course ID:013713

Advanced Topics in Acoustics

Research oriented course focused on sound environments. This course covers ocean and atmospheric acoustics as well as architectural acoustics. This course also includes topics related to nonlinear phenomenon such as shock wave propagation and parametric arrays. Prerequisite: ME 560

Components: Lecture

ME 761(3) Course ID:014238

Acoustic Imaging

Research oriented course focused on the variety of imaging techniques that use sound waves. The course will introduce students to how acoustic imaging is used in the sciences and engineering. These including biomedical imaging, seismic imaging for geological research and oil and gas exploration, side scanning sonar, synthetic aperture acoustic detection, photoacoustics and elastography. Students will investigate theoretical and practical issues related to the above topics including resolution, cavitation, heating, and noise limitations. Participants will be exposed to lab work, data processing and design of experiments.

IENG 50(0) Course ID:003141

Language Lab

Language lab, taken by full-time students in conjunction with some of the courses listed below, emphasizes experiential assimilation of the linguistic skills taught in class, with particular focus on oral production and comprehension.

Components: Laboratory

IENG 78(0) Course ID:013218

ESL Academic Lectures

This course bills at the equivalent of 3 credit hours.

Components: Lecture

IENG 80(0) Course ID:011123

ESL Listening/Speaking

Intensive work in developing receptive and productive oral fluency. This course bills at the equivalent of 3 credit hours.

Components: Seminar

IENG 81(0) Course ID:011124

ESL Reading/Writing

Intensive work in sentence structure and paragraph development. This course bills at the equivalent of 3 credit hours.

Components: Seminar

IENG 93(0) Course ID:003345

ESL Reading/Writing

Intermediate-level training in reading and writing fluency. This course bills at the equivalent of 5 credit hours.

Components: Seminar

IENG 94(0) Course ID:003347

ESL Listening/Speaking

Intermediate-level training in oral fluency. This course bills at the equivalent of 3 credit hours.

Components: Seminar

IENG 96(0) Course ID:003352

ESL Reading/Listening

High-intermediate level training in academic reading and vocabulary development, as well as in listening comprehension of academic lectures. This course bills at the equivalent of 3 credit hours.

Components: Seminar

IENG 98(0) Course ID:003355 Department Consent Required

ESL Vocab Development

An intermediate-level ESL class meant to enhance all language skills by focusing intensively on vocabulary development. This course bills at the equivalent of 3 credit hours.

Components: Seminar

IENG 100(0) Course ID:003358

ESL Writing/Grammar

High-intermediate intensive practice in various expository patterns necessary for academic writing. A mini-research paper prepares students for more advanced work in ENG 103/104--the advanced level ESL classes. This course bills at the equivalent of 5 credit hours.

Components: Seminar

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metropolitan: Administration

MADM 525(3) Course ID:016895

Research Methods and Quantitative Analysis

Entry graduate-level survey of research methods with an emphasis on comprehension of the business research literature. Course includes exploration of scientific method, locating and summarizing published research, sampling, measurement, statistics, research design, and critique of published research.

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies students only

MADM 611(3) Course ID:016898

American Health Care System

This course introduces students to the history of healthcare delivery in the United States from pre-colonial times to the present. The course would be most valuable to students who do not have a broad work background in healthcare. Comparisons are made with healthcare delivery in other countries, especially with regards to healthcare financing. Students will learn how healthcare services are organized, accessed and delivered. The course will explore influences that impact access and healthcare public policy decisions; factors that determine the allocations of healthcare resources; the establishment of priorities within the healthcare system; and the relationship of healthcare costs to measurable benefit.

Components: Lecture

Enrollment Requirements: open to Master of Health Administration majors only

MADM 612(3) Course ID:016887

Information Technology for Health Care Administration

This course provides an understanding of the role of Information Systems in the administration of contemporary health care organizations through lecture, readings, case study, and practical exercises. Students will learn about the strategic and tactical challenges involved with an end-to-end implementation of an Information System. It is part of a curriculum of study leading to a graduate degree in Health Care Administration.

Components: Lecture

Enrollment Requirements: open to Master of Health Administration majors only

MADM 613(3) Course ID:016899

Legal Aspects of Health Care Administration

This course provides an overview of the legal aspects of health care delivery and the impact on health care institutions. It provides students with an intermediate to advanced working knowledge of health law. It is a comprehensive and inclusive review of a wide variety of health care legal issues.

Components: Lecture

Enrollment Requirements: open to Master of Health Administration majors only

MADM 614(3) Course ID:016894

Organizational Theory for Health Care Administration

This course introduces students to the field of organizational theory and behavior and their application to the management of health care organizations. It also explores the major health care developments over the past decade and demonstrates the contribution of organization theory to a deeper understanding of the changes in the delivery system.

Components: Lecture

Enrollment Requirements: open to Master of Health Administration majors only

MADM 615(3) Course ID:016900

Public Health Administration

This course introduces students to the field of public health administration research, inquiry, and practice by providing in-depth coverage of important topics that helped shape the nature of public health administration. Concepts such as the discussions of public health managers; responsibilities and preservation of public values will equip students with an understanding of the cultural, institutional, organizational, and ethical context of public administration through experiential and collaborative learning.

Components: Lecture

Enrollment Requirements: open to Master of Health Administration majors only

MADM 621(3) Course ID:016903

Disaster Response and Recovery for Communities and Organizations

Disaster Response and Recovery for Communities and Organizations is designed to provide the participant with an opportunity to develop an understanding of the various methods and processes that communities and governments utilized to respond to and recover from emergency events. The course will build upon previous MADM Emergency Preparedness courses and will prepare the participant to present information in a fashion that furthers the work of the emergency management professionals. Though the use of case studies and other methodologies, the participants will be exposed to developing and presenting mock briefings to communities prior to, during and after emergency events. The participants will also learn means to establish community partnerships, mutual aid agreements, and accrue volunteer assistance to assist with community recovery.

Components: Lecture

Enrollment Requirements: Open to Master of Science in Emergency Service Administration students only

MADM 622(3) Course ID:016904

Hazard Risk & Vulnerability Assessment

This course is designed to give students an understanding of the natural and human made threats facing communities and ways in which emergency managers can prepare for and mitigate those threats.

Components: Lecture

Enrollment Requirements: Open to Master of Science in Emergency Service Administration students only

MADM 623(3) Course ID:016906

Information Technology for Emergency Services

This course explores the role of information technology in emergency management practices for communities and the organizations that support them. All aspects emergency management technology are examined including needs assessment, technology selection, community impact. This course provides the student with the principles, guidelines, practices and frameworks to understand the strategic approach to the application of information technology to emergency management. The successful student will have a broad basis of understanding on the nature, role, evaluation, implementation and operation of technology-based emergency management systems.

Components: Lecture

Enrollment Requirements: Open to Master of Science in Emergency Service Administration students only

MADM 624(3) Course ID:016907

Organizations and Systems in Emergency Response

This course is designed to give participants an understanding of organizations that respond to emergency incidents. The course will explore the roles and functions of organizations that respond to emergencies and how they collaborate together to respond to incidents in the community. Participants will also compare and contrast the systems used by different organizations during an emergency to gain insight into their application during an incident. These may include incident management systems, incident command systems, and communication systems used to effectively respond to emergency situations. Participants will examine case studies of emergency response incidents and engage in other methodologies to aid in their understanding and enhance their participation in the course.

Components: Lecture

Enrollment Requirements: Open to Master of Science in Emergency Service Administration students only

MADM 625(3) Course ID:016905

Principles and Practices of Emergency Management and Intervention

Principles and Practices of Emergency Management and Intervention is designed to provide the participant with an understanding of the arrangement of the agencies responsible for preparing for, responding to, and recovering from community emergencies. The course will establish the framework for strategic planning within the community and the agency to develop long term, functional methods to mitigate the risk associated with natural and man-made disasters and other critical events. Participants will gain an understanding of the means of emergency management agencies in their dealing with critical events. These can include preparedness training, communication plans, evaluation matrices, recovery options, and inter-agency cooperation strategies. Participants will be exposed to case studies and other methodologies to broaden their experience and enhance participation individually and in groups.

MADM 631(3) Course ID:016901

Diversity in a Multicultural Society

This course examines the challenges of addressing diversity within the workplace environment. The course examines perspectives on injustice and oppression, based on theoretical and conceptual models. The course examines the social construction of difference in lieu of persistent inequalities operating at personal, institutional, and societal levels. This course is designed to enhance the students awareness of the complex issues involved with ethnicity, immigration status, religion and spirituality, sex and gender, sexual orientation, age, disability, and socioeconomic status.

Components: Lecture

Enrollment Requirements: Open to Master of Sciece in Social Service Administration students only

MADM 632(3) Course ID:016886

Legal Aspects of Social Services

The purpose of this class is to give the student a basic understanding of the of legal aspects and risk management issues related to the management of social service agencies, including malpractice, confidentiality, client management, staff management and preventing lawsuits.

Components: Lecture

Enrollment Requirements: Open to Master of Sciece in Social Service Administration students only

MADM 633(3) Course ID:016888

Organizational Theory for Human Services

This course focuses on dynamics in the environment and operations of human service organizations and how those organizations evolve and adapt to changes in client demographics and needs; regulatory, policy, and funding changes; competition threats and collaboration opportunities; and changes resulting from emerging scientific findings and advances in technology.

Components: Lecture

Enrollment Requirements: Open to Master of Sciece in Social Service Administration students only

MADM 634(3) Course ID:016889

Public Policy and Social Services

This course represents a consideration of the present day political aspects of major social welfare programs and the realities of policymaking. We will look at the issues and challenges of social welfare programs, such as Social Security, Public Assistance, Affordable Health Care, and Disability.

Components: Lecture

Enrollment Requirements: Open to Master of Sciece in Social Service Administration students only

MADM 635(3) Course ID:016902

Public Relations and Fund Raising

This is a graduate course, providing an overview of the realm of public relations and fundraising in organizations. As such, it is an introduction to these subjects, involving understanding of the principles and practices, the history and grow of media, especially social media, as a means of `getting the message out, to the public in a focused, and effective way. The course, particularly as this is an online course, will focus on case studies as learning tool. Students will interact individually, in virtual teams, and in discussions of critical learning areas any manager needs to understand the importance of planned, effective, and efficient publicity and fundraising efforts.

MBU 100(3) **Course ID:005824**
Introduction to Business
A survey of the conceptual foundations and organizations of American business since World War II. Emphasis on the production process within the private sector and analysis of the contribution of capital, labor, and management.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 105(3) **Course ID:002540**
Business Mathematics
A foundation course in mathematics designed to refresh the individual in the business uses of math. Covers material on fractions, percentages, ratios, proportions, introductory algebra, simple and compound interest, discounts, loans, and set theory. Also stresses hand calculators and computers.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 110(3) **Course ID:002542**
Accounting I
A two-semester offering. Begins with analysis of accounting concepts, assumptions, and principles; progresses to evaluation of accounting data for management and decision making.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 111(3) **Course ID:002543**
Accounting II
A two-semester offering. Begins with analysis of accounting concepts, assumptions, and principles; progresses to evaluation of accounting data for management and decision making.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 140(3) **Course ID:005826**
Principles of Economics
Provides a broad explanation of the American socioeconomic system as well as the factors affecting behavior and decision making by various units and institutions operating within the system.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 141(3) **Course ID:002549**
Macroeconomics
An introduction to modern economic analysis and its implications. Centers on the applications of economic theory to national policy problems such as growth, inflation, unemployment, and government expenditures and taxation. Provides a broad introduction to the understanding of the American socioeconomic system.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 142(3) **Course ID:002550**
Microeconomics
A continuation of the introduction to modern economic analysis concentrating on the factors affecting behavior and decision making by households, business firms, and institutions operating under a mixed socioeconomic system.
Components: Lecture

MBU 160(3) **Course ID:005827**
Public Relations
Basic principles covering the role of public relations in society, public relations principles and their application, procedures for planning and implementing campaigns, identification of publics, and strategies for influencing them.

Business Communication

Helps to increase knowledge of, and develop skills in, effective oral and written communication. The course focuses on preparing and delivering oral presentations and writing business letters, memos, reports, and e-mails.

Components: Lecture

MBU 167(3) Course ID:011951 Department Consent Required

Conflict Resolution

Introduces the terminology, concepts, and practice of conflict resolution, especially as it relates to problem solving in smaller groups. Students will examine case studies and participate in role plays to learn practical mediation skills and interpersonal tools for recognizing, preventing, and resolving conflicts.

Components: Lecture

MBU 200(3) Course ID:002552

Principles of Management

An overview of what management is. First, a review of the development of management from the late nineteenth century through today. Discusses the functions and activities of a manager. Finally, describes the requirements and capabilities for today's and tomorrow's managers and how they utilize them to perform effectively, both domestically and globally, enhancing a multicultural focus. Many cases used for discussion.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 201(3) Course ID:011447

Management and Organizational Behavior

This course provides an introduction to the field of organizational behavior, as practiced today, along with what the trends indicate for the future. Active discussion and cases, including analysis of ethically-related situations is an integral part of the course.

Components: Lecture

MBU 205(3) Course ID:002554

Contemporary Marketing

Covers all the functions and activities of marketing, as practiced today, along with what the trends indicate for the future. Some reflection on marketing's professional development. Active discussion and cases, including analysis of ethically-related situations.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 210(3) Course ID:002556

Intermediate Accounting I

After review of the accounting cycle, concentrates on the valuation and accounting of tangible and intangible assets like receivables, inventories, fixed assets, goodwill, patents, etc. The concepts of present value and discounting are presented. Prerequisites: MBU 111

Components: Lecture

Enrollment Requirements: MBU 111 and Metro College Only

MBU 211(3) Course ID:002558

Intermediate Accounting II

Complementary course to 210, considers in-depth accounting of current, contingent, and long-term liabilities; stockholders' equity; statement of changes in financial position. The concepts of present value and discounting are reinforced. Prerequisites: MBU 210

Components: Lecture

Enrollment Requirements: MBU 210 and Metro College Only

MBU 251(3) Course ID:002573

Financial Analysis

Introduction to financial analysis, planning and control, working capital management, financial structure, and financial decisions. Emphases on both supply and demand for capital as well as the return on and cost of capital investment.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

The Catholic Univ of America
Course Catalog

MBU 275(3) **Course ID:005828**
Public Opinion Research
Examination of the informational needs of management. Procedures and techniques by which public opinion and attitudes are identified and measured. Discussion of advanced research techniques in measurement and analysis. Prerequisite: MBU 100 or MBU 120 or MBU 160.
Components: Lecture
Enrollment Requirements: MBU 100, or MBU 120, or MBU 160 and Metropolitan College Students Only

MBU 310(3) **Course ID:005829**
Cost Accounting
Discussion of such concepts as job order and process cost accounting, predetermined cost, management by exception, and cost control; introduces the student to the standard cost system. Prerequisite: MIS 104.
Components: Lecture
Enrollment Requirements: MIS 104 and Metropolitan College Students Only

MBU 320(3) **Course ID:002577**
Introduction to Records & Information Management
Provides an introduction to the history and development of information and records management, including planning and establishing a records management program, records classification, cost/benefit analysis, hardware and software selection, and management style.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 321(3) **Course ID:002579**
Information Development & Documentation
Focuses on how to develop and document an information and records management system, including such topics as feasibility studies, data collection techniques, storage and retrieval practices, legal issues, forms management, documentation standards, and records protection.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 322(3) **Course ID:002582**
Records Technology
A survey of technologies used in information and records management, including bar coding, CD-ROM, computer database and records systems, electronic imaging, integrated systems, local area networks, micrographics, optical scanning, and telecommunications.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 323(3) **Course ID:002583**
Archives Management
An introduction to the theory and practice of archives management, including the storage and protection of records in various formats. Discussions include acquisition and appraisal, processing, storage, preservation, access, and retrieval.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 324(3) **Course ID:008781**
Strategic Management Practices
A survey course that includes topics such as: the role of HR in organizations, human resources planning, organization design and development, budgeting, motivation and leadership. Course emphasizes strategic planning and policy making, with focus on ability to interpret knowledge of an organization environment and develop internal organizational structures, policies, evaluation techniques to be effective in a changing environment.

Electronic Records Management

This course covers Implications of Records Management on the Organization, Basic Concepts of Electronic Management Systems, Scheduling and Maintenance of Electronic Records Management Sytems, Implementing an Electronic Records Management Project, Access to Electronic Information, Legal issues related to Electronic Records, and Looking Ahead-How Technology will affect Electronic Records Management.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 326(3) Course ID:008782

Developing Employee Capability

Provides a summary of topics such as equal employment opportunity and affirmative action, recruitment, selection, career planning and development; and addresses organizational exit such as constructive discharge, layoffs, and retirements. Provides an introduction to the organizational practices related to developing and training employees to meet specific organizational goals and objectives. The course examines methods to determine training needs and to develop internal training and development programs, or selecting outside sources for training needs.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 327(3) Course ID:008783

Employment Operations

This course will provide an overview of union representation and employees, unfair labor practices, collective bargaining, management/labor relationships in organizations, strikes, and boycotts. Federal and state laws have been promulgated and established to protect employees in the workplace. One of the major Federal initiatives is the Occupational Safety and Health Administration (OSHA).

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 328(3) Course ID:008784

Employee Compensation and Benefits

This course provides a framework for understanding various types of compensation approaches. It distinguishes between job-based and person-based pay structures and the ongoing management functions that maintain internal alignment, enhance organizational competitiveness, and create employee incentives within these various types of pay systems. The course also examines the compensation of special groups, external market forces that impact compensation, the collective bargaining process, and the role of government and legal compliance issues in determining compensation practices.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 330(3) Course ID:009973

Retirement Plans: Basic Features and Defined Contribution Approaches

After an historical introduction of private pension plan development, this course reviews the objectives of plan design. Subjects discussed include profit-sharing plans, thrift and savings plans, Section 401(k) cash or deferred arrangements, employee stock ownership and stock bonus plans, individual retirement accounts, simplified employee pensions, SIMPLE plans, tax-deferred annuities, and executive retirement arrangements.

Components: Lecture

MBU 331(3) Course ID:009879

Employee Benefits: Concepts and Health Care Benefits

This course begins with an overview of the environment of employee benefit plans and then addresses issues pertaining to health care plans, plan design, and cost-control techniques. Specifically, topics covered include selecting health and managed care plans, maintaining and improving employee health, and purchasing quality health care. Dental plans and specialized benefits - mental health/substance abuse, prescription drugs, vision and hearing care plans - are covered, as are medical benefits for retirees and long-term care.

Components: Lecture

MBU 332(3) Course ID:009880

Employee Benefits: Design, Administration and Other Welfare Benefits

Examines a wide variety of welfare benefits including dependent care and family leave benefits; work/life benefits; and vacation and other time-off benefits. Flexible benefit plans and flexible spending accounts are also discussed, as are the administration, funding, communication, and taxation of welfare plans. Topics on multi-employer welfare benefit plans and benefits technology and information management are also included.

Recommended: MBU 331.

Components: Lecture

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Business

MBU 334(3) Course ID:009881

Retirement Plans: Defined Benefit Approaches and Plan Administration

Covers the contemporary fundamentals of pension plans with particular emphasis on the defined benefit approach to providing retirement income. Major subject areas include plan design, actuarial aspects (costs and funding), investments of plan assets, and plan termination insurance. The course also addresses the creation of hybrid plans, early retirement incentives, and structuring retirement plans to meet the special needs of executives. Recommended: MBU 330.

Components: Lecture

MBU 339(3) Course ID:009882

Health Economics

This course examines health economic issues using various microeconomic tools. The purpose of the course is to provide a theoretical basis for understanding the practical issues in health plan design, management, and administration.

Components: Lecture

MBU 340(3) Course ID:002597

Business Ethics

An examination of ethical questions in various business and professional situations including the film, savings and loan, stock, chemical, farming, and manufacturing industries and their responsibilities to their consumers and employees. Analyzes some professions including physicians, lawyers, and ministers and the situations they encounter. Use of films and literature to demonstrate some of the ethical questions.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 341(3) Course ID:002599

Business Law I

An overview of certain basic legal concepts and principles pertaining to the business world, focusing on business organizations and property rights. Covers agency law and the legal aspects of the formation, operation, and termination of partnerships and corporations. Also addresses public regulation of business.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 342(3) Course ID:002601

Business Law II

An overview of certain basic legal concepts and principles pertaining to the business world, focusing on business organizations and property rights. Covers agency law and the legal aspects of the formation, operation, and termination of partnerships and corporations. Also addresses public regulation of business. Prerequisites: Metropolitan College Students Only.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 350(3) Course ID:007455

Supervisory Management Skills

This course will examine the specific competencies and skills required at the front-line supervisory management level in organizations. It will cover a variety of topics, such as the role of the supervisor on the management team, planning and controlling, organizing and staffing, motivating employees, work-force diversity, stress management, and productivity improvement.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 351(3) Course ID:002602

Managerial Leadership

Application of management principles and practices to policy making. Develops universality of management functions to all phases of business and need for policy formulation. Prerequisite: MBU 200 or MBU 201 or MBU 204 or MBU 469.

Components: Lecture

Enrollment Requirements: MBU 200 OR MBU 201 OR MBU 204 OR MBU 469

The Catholic Univ of America
Course Catalog

MBU 353(3) Course ID:002604

Government and Business

Public policies toward business, with special reference to the maintenance of competition, the control of monopoly, public enterprise, and the protection of consumers, investors, and the environment.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 354(3) Course ID:005830

International Financial Management

Focuses mainly on finances that businesses must consider to negotiate international enterprise activities.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 355(3) Course ID:002605

Lobbying

Provides the groundwork for a career in the lobbying profession, and provides students in other fields an opportunity to learn how to influence political decisions.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 357(3) Course ID:002606

Managing Non-Profits

Designed for the non-profit professional; covers the roles and functions of the principal types of non-profit organizations, proposal writing, foundations and corporate giving, fund-raising systems and procedures, forms and record-keeping aids and etc.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 358(3) Course ID:009980

Asset Management

This course introduces asset management in the context of setting investment objectives for pension plan assets. The course provides the necessary background on financial markets, how they are organized, and how they operate. The concepts of risk versus return and efficient markets and the impact of modern portfolio theory are presented, followed by a detailed discussion on bonds, stocks and derivatives. The course also covers mutual funds, managed accounts, and guaranteed investment contracts.

Components: Lecture

MBU 360(3) Course ID:005831

Marketing & Sales Promotion

Examines the role of marketing and sales promotion in the American economic system; analyzes the management of distribution. Introduction to the study of demand analysis, evaluation of various tools used in marketing research.

Components: Lecture

Enrollment Requirements: MBU 100, or MBU 120, or MBU 160 and Metropolitan College Students Only

MBU 361(3) Course ID:008169

Department Consent Required

Human Resource Management

This course provides an overview of the management of human resources in organizations, examining the major issues in creating a productive workforce and fostering effective employee/management relationships. The course addresses such topics as job design, recruitment and selection, performance appraisal, incentive programs, total compensation approaches and strategies for their implementation, employee rights, labor relations, and the collective bargaining process.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 363(3) Course ID:009984

Executive Compensation and Compensation Issues

This course presents an overview of executive compensation issues and practices. Various components of executive compensation - including direct pay, employee benefits, perquisites, short-term incentives, and long-term incentives - are covered. Other topics include balancing current versus deferred incentives, tax and financial considerations, and establishing and monitoring executive compensation. Recommended: MBU 328.

Components: Lecture

The Catholic Univ of America

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Business

MBU 365(3) Course ID:010025

Key Legal Issues in Human Resource Management

This course reviews key employment laws and how they impact human resource managers. It also provides students with an appreciation for the legal underpinnings of employment policies and practices, and discusses how legal issues impact employees at various levels throughout the organization. Students learn how to draft and implement employment policies.

Components: Lecture

MBU 370(3) Course ID:002607

Statistics

A survey of statistical methods and techniques most commonly used by accountants and business managers. Covers descriptive statistics, followed by an introduction to the topics of statistical sampling, statistical inference, and simple regression analysis.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 410(3) Course ID:002608

Income Tax Accounting

Covers the difference in accounting and legal concepts underlying tax laws and regulations. Also covered: the mechanics of tax return preparation and the development of case law over the years.

Components: Lecture

Enrollment Requirements: MBU 100 and Metropolitan College Students Only

MBU 411(3) Course ID:005834

Tax Accounting II

Continuation of 410; focuses on corporate tax returns. Prerequisite: MBU 410.

Components: Lecture

Enrollment Requirements: MBU 410 and Metropolitan College Students Only

MBU 453(3) Course ID:005835

Labor Relations

Focuses on the economic and institutional aspects of collective bargaining. Studies attitudes and policies of unions and management, negotiation and grievance procedures, wage and economic security plans, union security, programs for coping with job displacement, and public policies toward collective bargaining.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 462(3) Course ID:008498

Human Resources Staffing

Introduction to the organizational practices related to developing and training employees to meet specific organizational goals and objectives. The course examines methods to determine training needs and to develop internal training and development programs. The course ends with exploring the techniques to evaluate training effectiveness.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 463(3) Course ID:008171

Managing Diversity

Emphasis of cross-cultural differences and the contributions made by each. In-depth examination of how different cultures and ethnic groups have addressed similar problems and similarities in solving problems and discussion of differences as well. Review of the management of and creation of diversity programs with an eye toward analysis of both real and imagined discrimination. Discussion of "equal protection of the law" and perceived differences in the understanding of this historical development of this constitutional protection and its application to "state action".

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Business

MBU 465(3) Course ID:008500

Human Resources Development and Training

Introduction to the organizational practices related to developing and training employees to meet specific organizational goals and objectives. The course examines methods to determine training needs and to develop internal training and development programs or selecting outside sources for training needs. The course ends with exploring the techniques to evaluate training effectiveness.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 466(3) Course ID:008501

Managing Performance, Supervision, and Evaluation

Study of theories of management from management of objectives, top-down management, team organizations, versus the production line. Evaluation of performance including employee input into evaluations, both self-examination and evaluation of management.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 467(3) Course ID:008172

Employee and Labor Relations

An in-depth study of the requirements of Equal Opportunity Employment including programs that must be in place, reporting requirements, independent internal EEO oversight. Rights of employees to bring actions for wrongs and requirements to do so in the proper procedure and format.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 468(3) Course ID:008502

Human Resources Health, Safety and Security

Federal and state laws have been promulgated and established to protect employees in the workplace. One of the major Federal initiatives is the Occupational Safety and Health Administration (OSHA). The course will examine the provisions in health (such as employee wellness programs, and stress management); safety (such as accident investigations and human factors engineering - ergonomics), and security (such as control systems and theft and fraud). This course explores some recent cases.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 469(3) Course ID:008503

Organizational Development and Behavior

Introduction to individual and group behavior in organizations, i.e., examination of research regarding the ways members of organizations behave, behavior of work groups and supervisors, inter-group relations, employees goals and attitudes, and problems in communication. Examines procedures for supporting and strengthening emergent behavior. Explores methods for making organizations and individuals more productive through intervention techniques, such as team building and feedback. Examines the organizational interaction with the environment.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 470(3) Course ID:008785

Organizational Research and Performance Enhancement

An introduction to individual and group behavior in organizations. The examination of research regarding the ways members of organizations behave, behavior of work groups and supervisors, inter-group relations, employees goals and attitudes, and problems in communication. Examines procedures for supporting and strengthening emergent behavior. Explores methods for making organizations and individuals more productive through intervention techniques, such as team building and feedback. Not open to students with previous credit for MSO 185.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 490(3) Course ID:002610

Entrepreneurship

A detailed review of what existing or new small business of all types require in terms of entrepreneurial characteristics and capabilities, followed by an analysis of the various functions and activities necessary. Discusses the preparation of a viable, integrated business plan that is directed towards achieving a successful, profitable organization.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MBU 501(3) Course ID:012614

Communicating Effectively as a Manager

Helps develop knowledge of, and skills in, effective communication by exposing students to a combination of communication theory and applications. The course emphasizes the development of advanced written and oral communication skills through its focus on preparing and delivering oral presentations, writing business reports and communiqués, and managing interpersonal communications.

Components: Lecture

Same As Offering: MSM 501

MBU 505(3) Course ID:012905

Project Management

Introduces students to the principles underlying effective project management, providing the knowledge, skills, and framework necessary to manage a real project in the workplace. Topics covered include the project life cycle, stakeholder identification, resource allocation, cost management, scheduling techniques, and human resource aspects of project management. Reviews MS Project as a useful tool to effectively and efficiently manage a project.

Components: Lecture

Same As Offering: MSM 505

MBU 507(3) Course ID:015585

Project Scheduling and Cost Control

Teaches the attributes and methods of both project scheduling and project cost control. The critical elements of project planning, management, and control functions will be studied and applied in an integrated approach. An emphasis will be placed on the deconstruction of the project elements and development of the project Work Breakdown Structure (WBS). This includes the role of the WBS in project cost estimating, cost control and project scheduling.

Components: Lecture

Same As Offering: MSM 507

Enrollment Requirements: MBU 505

MBU 508(3) Course ID:015586

Risk Management

A risk is any event that may or may not have an adverse impact on a project. It is the inherent uncertainty that comes with risks that make them so dangerous. The importance of risk management lies in the fact that if done improperly, or not done at all, it can add unplanned costs or greatly delay a project. As a result, all project managers should know how to identify, respond to, monitor and control project risks. And with proper risk management, the value of a project can actually be increased because the impact that adverse events could have on the project are minimized. As a result, in well managed projects risk management is iterative and conducted throughout the entire project life cycle. Prerequisite: MBU 505 (Project Management) or equivalent.

Components: Lecture

Same As Offering: MSM 508

Enrollment Requirements: MBU 505

MBU 510(3) Course ID:012202 Department Consent Required

Organizational Theory and Behavior

Covers both the theoretical and empirical research on human behavior in business, public, and nonprofit institutions. Begins with the examination of internal structures such as hierarchy and authority and structural variations. Addresses the dynamic aspects of organization behavior, including such topics as leadership, motivation, supervision, communication, and control. The impact of cultural and ethical issues on organizational behavior is also covered.

Components: Lecture

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Business

MBU 512(3) Course ID:012203 Department Consent Required

Conflict Resolution

Introduces the terminology, concepts, and practice of conflict resolution, especially as it relates to the performance of human resource managers. Students examine case studies in conflict management to learn practical mediation skills and managerial tools for recognizing, preventing, and resolving conflicts and fostering teamwork in the workplace.

Components: Lecture

MBU 514(3) Course ID:012906

Leadership Foundations

Surveys, compares, and contrasts contemporary theories of leadership, providing students the opportunity to assess their own leadership competencies and how they fit in with models of leadership. Students also discuss current literature, media coverage, and case studies on leadership issues.

Components: Lecture

Same As Offering: MSM 514

MBU 516(3) Course ID:012615

Managing People and Performance

Examines human behavior in organizations and its implications for managing individuals, groups, and teams to achieve organizational effectiveness. Topics covered include group dynamics, team-building, performance appraisal processes, diversity, and managing a global workforce.

Components: Lecture

MBU 523(3) Course ID:012204

Legal Environment in Human Resource Management

Provides an understanding of the legal issues impacting organizations. Examines current laws, regulations and court decisions and how they impact the role and responsibilities of the human resource manager. Covers such topics as equal employment/ affirmative action programs, OSHA, and employee rights to privacy.

Components: Lecture

Same As Offering: MSM 523

MBU 533(3) Course ID:012616

Human Resource Management and Strategy

Explores the function of human resource management in an organization, addressing such critical areas as recruitment and selection, compensation and benefits, performance management, and organization development. Addresses how human resource programs and activities can be aligned with an organization's strategic goals and objectives to enhance organizational effectiveness.

Components: Lecture

Same As Offering: MSM 533

MBU 540(3) Course ID:014281

Integrated Communications: Marketing & Public Relations

Addresses the coordinated use of public relations, marketing, and internal/stakeholder communications to achieve an organization's strategic goals.

Components: Lecture

MBU 543(3) Course ID:012206 Department Consent Required

Labor-Management Relations

Analyzes the economic and institutional aspects of collective bargaining and their impact on the economy. Addresses attitudes and policies of unions and management, negotiation and grievance procedures in both unionized and non-unionized firms, ethical issues in labor-management relations, and public policies toward collective bargaining.

Components: Lecture

Same As Offering: MSM 543

MBU 564(3) Course ID:012207 Department Consent Required

Compensation and Benefits

Examines the integral parts of total compensation packages as they exist within the various economic sectors. Rationale for design and implementation of cost-effective compensation benefits programs. Explores specifics of wage and salary program structure and administration within the framework of existing business and economic climates.

Components: Lecture

Human Resource Training and Development

Explores theories, processes, and practices in training and development, addressing such topics as adult learning, instructional design, evaluation, coaching, management development, organization development and change, job training, and career development.

Components: Lecture

Same As Offering: MSM 566

MBU 570(3) Course ID:013295

Federal Contract Management and Administration

Discusses the acquisition and contract management environment from the government's and the contractor's perspectives. The focus is on federal acquisition regulations, contract types most frequently used in federal contracting, and duties performed by contracting personnel during the contract administration phase of the acquisition process.

Components: Lecture

Same As Offering: MSM 570

MBU 573(3) Course ID:013436

Legal Aspects of Government Contracting

Addresses the principal legal issues that often arise in federal contracting and discusses the purpose, interpretation, applicability, and administrative ramifications of laws, regulations, and executive orders relevant to prime contracts and subcontracts. Decisions from the Comptroller General, the Boards of Contract Appeals, and the courts are examined. Topics include:

formation of government contracts and formal dispute resolution.

Components: Lecture

Same As Offering: MSM 573

MBU 576(3) Course ID:013634

Contract Pricing, Negotiations, and Source Selection

Emphasizes factors to consider in contract pricing, contracting by negotiation, and source selection. Primary focus is on analytical techniques for conducting price and cost analysis in preparation for negotiations.

Discusses methods for examining all categories of costs along with the theory and practice of negotiations in order to develop the knowledge, attitude and skills required to successfully negotiate the best value for the government. Methods and techniques, from developing requirements to final source selection and contract award, are examined.

Components: Lecture

Same As Offering: MSM 576

MBU 578(3) Course ID:014036

Performance of Government Contracts

Emphasizes the use of performance-based methods in contracting, such as statements of objectives, contractor-developed statements of work, oral proposals, past performance evaluation, and risk identification and mitigation. The content is completely current with federal laws, regulations and operating procedures.

Components: Lecture

Same As Offering: MSM 578

MBU 594(3) Course ID:012125 Department Consent Required

Independent Study

Individual learning projects can be designed under faculty supervision credit. Permission of the dean is required prior to enrolling.

Components: Independent Study

Topics: Federal HR Law, Labor-Mgt. Relations, Entrepreneurship, Ethical Leadership, Effective Managerial Communication, Adv. Topics in Project Mgt., Intrapreneurship, Master's Capstone, Stratg & Pract in Fed Staffing, Leading Organizational Change, Org Theory & Behavior, Organization Development, Contract Pricing, Negotiation, Source Selection, Leading Nonprofit Organizations, Strategic Planning & Implementation, Developing Leadership Competencies, Compensation and Benefits in the Federal Sector, Project Scheduling and Cost Control, Adv. MBU 619(3) Course ID:012907

Strategic Planning and Implementation

Effective organizations strategically design their mission, vision, structure, and operations to anticipate and respond to external threats, opportunities, and conditions. This course explains how organizations formulate, implement, and evaluate strategies that help ensure their sustainability and profitability. Integrates case studies to provide practical examples of strategic management concepts.

Components: Lecture

Same As Offering: MSM 619

MBU 627(3) Course ID:012209 Department Consent Required

Human Resource Information Systems and Communications

Provides an understanding of the leading Commercial Off-The-Shelf (COTS) human resource software packages available to large enterprises: Enterprise Resource Planning (ERP) Software. Applications such as PeopleSoft, SAP, or BAAN, will be compared with respect to the principles of information resources and systems management in the human resource function of a company. Emphasizes the role of ERPs in multi-national firms. Class will discuss challenges of project management.

Components: Lecture

Same As Offering: MSM 627

MBU 629(3) Course ID:012210 Department Consent Required

Strategic Planning for Human Resource Managers

Provides an analysis of methods and techniques for strategic planning and implementation. Discusses how a strategic approach to human resource management can support and enhance the organization's overall goals and objectives, examining HR functions such as recruitment and selection, compensation and benefits, and organization development.

Components: Lecture

MBU 630(3) Course ID:012442 Department Consent Required

Management of Human Resources in the Federal Government

Surveys the strategies, policies, methods, realities, and ethical issues involved in human resource management within the Federal Government. Looks beyond a traditional focus on HR transactions to provide a strategic view of Federal human resources, offering a solid framework and overview on issues facing the federal sector and preparing students with the knowledge and competencies necessary to perform in this changing environment.

Components: Lecture

MBU 632(3) Course ID:012487 Department Consent Required

Compensation and Benefits in the Federal Sector

Examines the integral parts of total compensation packages as they exist within the Federal Government. Rationale for design and implementation of cost-effective compensation benefits programs. Explores specifics of wage and salary program structure and administration within the framework of the Federal Government as needed to remain competitive with the Private Sector.

Addresses emerging practices in pay banding, pay for performance and work-life balance programs.

Components: Lecture

MBU 633(3) Course ID:012211 Department Consent Required

Legal Environment of Human Resources in the Federal Sector

Provides a general understanding of the legal issues impacting organizations. Examines current laws, regulations and court decisions and how they impact the role and responsibilities of the human resource manager. Incorporates legal issues that are unique to the federal government, such as Title 5 law and regulations, the Merit Systems Protection Board, and proprietary rights of tenured public employees.

Components: Lecture

MBU 635(3) Course ID:012329 Department Consent Required

Performance Management in the Federal Sector

Covers the performance management process, including planning, performance support, evaluation, feedback, and appraisal. Explores the reward systems that can impact employee motivation. Surveys the policies and practices involved in managing the performance of a Federal workforce, and the trend to link individual performance to the organization's goals and objectives. Addresses strategies for dealing with performance issues, including the managerial tools for recognizing, preventing, and resolving conflicts and fostering teamwork.

Components: Lecture

The Catholic Univ of America
Course Catalog

MBU 637(3) Course ID:012824 Department Consent Required

Strategies and Practices in Federal Staffing

Explores sourcing and hiring, including strategies and practices for attracting employees to public service. Introduces the policies and methods for Federal staffing, including merit system principles and competitive examining. Examines the current issues and trends in talent management such as workforce planning, hiring flexibilities and selection systems, and succession planning.

Components: Lecture

MBU 638(3) Course ID:012904

Strategic Human Capital Management in the Federal Sector

Provides an understanding of the strategic context in which HR programs must function in the federal sector. There will be a focus on the role of HR as a business partner, using strategic human capital planning, metrics and measurement as the focal point. The Federal Strategic Human Capital Accountability Assessment Framework, the Federal Competency Assessment Tool, and the Human Capital Survey also will be covered.

Components: Lecture

MBU 640(3) Course ID:012991

Public Relations: Managing External Relations

Examines methods by which an organization can develop and maintain communications with external stakeholders and constituencies. The focus of the course is on how to implement an actual Public Relations program. Discusses a wide range of external communications involving, for example, the media, government, customers/consumers, and international/cross-cultural communities.

Components: Lecture

MBU 641(3) Course ID:013297

Integrated Organizational Communication

Discusses the importance of, and approaches for, developing a communication strategy that allows an organization to project a single "voice" and image to all of its constituencies. Examines various components of a corporate communication strategy that incorporates media, investor, and government relations; advertising; and internal communications.

Components: Lecture

MBU 647(3) Course ID:013422

Advanced Managerial Communication

Building on the groundwork laid in Communicating Effectively as a Manager, this course focuses on developing the more advanced personal and interpersonal communication skills typically required of managers. Addresses such areas as writing proposals, communicating with the media, handling high-stress communications, and crisis management.

Components: Seminar

MBU 652(3) Course ID:012825

Managerial Decision Making: Finance & Budgeting

Serves as an introduction to decision-making tools used by managers. The course focuses heavily on financial management, addressing concepts and principles, terminology, budgeting techniques, and financial reporting. Introduces the concept of metrics and discusses how they are used to enhance management effectiveness.

Components: Lecture

Same As Offering: MSM 652

MBU 653(3) Course ID:012213 Department Consent Required

Human Resource Budgeting and Metrics

Addresses the concepts and principles of financial management of particular relevance to human resource practitioners. Emphasis is placed on learning the principles of budgeting. Also examines organizational and HR-specific measures that can be used to help determine the effectiveness of the HR function.

Components: Lecture

MBU 661(3) Course ID:012992

Ethical Leadership

Explores the moral, ethical, and social responsibilities of organizational leaders. Addresses theoretical and practical applications of ethical principles to help illustrate how ethical considerations impact decision-making, organizational functions, and the work environment. Assists aspiring leaders in refining their own moral and ethical compasses to guide them in leading their organizations.

Components: Lecture

MEDU 201(3) Course ID:018332

Health, Safety & Nutrition for Infant/Toddler Care

Provides information on the health, safety and nutrition of children from birth to five. This course offers students opportunity to explore, examine, and identify health and safety policies and practices; to identify resources and agencies that support professionals and parents to provide children safe and healthy environments, learning, and special care needs; to examine sanitation and hygiene policies and procedures in early care environments; and, to identify various techniques and strategies that enable them to adjust and enhance care practices to accommodate children and those with special health care needs and their families. Moreover, this course will also enable students to explore strategies for communicating with families to support the latter in meeting their children's nutritional needs.

Components: Lecture(In Person)

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MEDU 202(3) Course ID:018333

Responsive Curriculum for Infants and Toddlers

This course takes an in-depth look at planning and implementation of a responsive curriculum for infants and toddlers.

This course will introduce students to the basic concepts of infant-toddler development related to the influence of curriculum planning and their role in curriculum planning and implementation.

Students will examine:

¿ the components of a curriculum framework and connection to the individualized approach to curriculum planning;

¿ the steps of the curricular planning cycle and the role of team planning;

¿ the role of routine care practices in the curriculum planning cycle;

¿ various theories regarding play and their impact on development and learning;

MEDU 205(3) Course ID:018336

Leadership & Management for Infant/Toddler Professionals

This course focuses on exploring quality leadership and management that influence quality programming and services for infants, toddlers, and their families. Specifically, the course focuses on reviewing various theories and principles governing quality leadership and management in early childhood education. It also entails reviewing established leadership and management styles and practices in early childhood education programs. This course also provides understanding of career lattice framework in the field of early childhood education, and its relationship to professional development and career advancement, recruitment and hiring practices. Students will have the opportunity to structure staff development and evaluation measures and experiences that promote high level of professionalism and high quality of infant, toddler and family services.

Components: Lecture(In Person)

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MEDU 206(3) Course ID:018337

Observation & Assessment of Infants and Toddlers

Observation and Assessment provides an introduction to a framework for the use of structured observations and assessments with infants and toddlers in early education settings. This framework emphasizes the processes of observation to enable students to acquire the knowledge and skills to observe physical, cognitive, language, and social interactions and behaviors and to record the observations in an accurate and meaningful way. Assessment will be presented within the context of the Teaching Strategies: GOLD₂ Assessment. The curriculum includes structured video clips of observation and assessments to enable students to carry out many observations and some assessment independently. The students will demonstrate knowledge and utilization of observation, screening, assessment, evaluation and data collection skills to analyze an early childhood classroom that serves children of diverse abilities, languages, and cultures.

Components: Lecture(In Person)

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MEDU 495(3) Course ID:018338

Infant/Toddler Internship

This course is designed to reinforce prior knowledge rather than introduce new knowledge. Videos from other infant/toddler courses are used to help students reinforce concepts. Students plan a variety of experiences for infants and/or toddlers during this course, demonstrating their knowledge and ability to work with these age groups. Students must complete a specified number of hours in a developmentally appropriate infant and/or toddler setting.

Components: Internship

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

MHU 152(3) Course ID:003892

Composition and Research

Teaches the research skills individuals need during and after their college careers, including researching topics, preparing bibliographies, and gathering data, documenting and organizing research, and writing and presenting a research report.

Components: Lecture

Enrollment Requirements: MHU 151 & Metro College Students Only

MHU 203(3) Course ID:009593

Leadership in the Classics

This course will be an investigation of moral leadership in the specific areas of pacifism and civil disobedience.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 204(3) Course ID:010286

Creative Writing

While your fiction is the focus of this class, you will be required to read extensively, keep a journal, and give written comments to your fellow students. As well as a few short writing assignments, the Instructor will expect you to submit four short stories to the workshop. While there are no strict deadlines for the submission of these stories, you need to roughly stick to one story every four weeks. Some of you may be wondering exactly what a short story is and how long your stories should be. Joyce Carol Oates provides wise guidance: "My personal definition of the form is that it represents a concentration of imagination, and not an expression; it is no more than 10,000 words; and, no matter its mysteries or experimental properties, it achieves closure-meaning that, when it ends, the attentive reader understands why."

Components: Lecture

MHU 205(3) Course ID:010531

Creative Writng: Poetry

This course is designed to improve your poems and poetry writing skills. While you will choose the topics and forms of the poems you submit to the workshops, classes will be enhanced with in-class writings and discussions of craft and the landscape of American poetry. Readings and out-of-class writings, both topically and formally driven, will be assigned. The formal exercises will help you express yourselves in various rhythms and patterns, and the topical exercises will allow you to tap into new perspectives and tucked-away portions of your memories.

Components: Lecture

MHU 210(3) Course ID:005838

American Culture

Study of social customs, folklore, popular culture, and the mass media at given periods in American life; the literary and religious roots; conflict and consensus in music and art.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 211(3) Course ID:011262

Cultural Diversity in American Literature

This class will be a survey of the principal contributors to American literature, particularly writers from diverse backgrounds. This course will cover the following periods as presented in the Heath Anthology. The 1900s to the Negro Renaissance, the 1950s, the 1960s, the 1970s and 80s and into the twenty first century. We will focus on the major writers and texts, along with their respective periods, through lecture and discussion, and concluding with a student essay on each major section. This course supports the mission of the Catholic University of America by providing insight into diverse thinking about America and the World. Like the University, this course seeks to discover and impart truth through exposure and examination of American writers from diverse backgrounds.

Components: Lecture

Subject: Metro: Humanities

MHU 235(3) Course ID:017893

History of Media in the United States

This course provides an historical overview of American mass media. The course examines newspapers in the colonial period, the growth of newspapers in the early years of the republic, the impact of the Civil War, the development of the yellow press, and the rise of muckrakers and public relations. The course also treats the history of film, radio, television, and advertising. Recent conflicts between the press and government are examined, and the impact of the Internet is considered.

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MHU 236(3) Course ID:013299

Art of the Early Middle Ages: Celts to Charlemagne

This course will survey important surviving works of Christian art from the early medieval period, focusing in particular on the incredible fusion of artistic traditions of the Germanic barbarian tribes and the art of late Rome and the Christian empire of Byzantium in the East. We will look closely at decorative arts, such as metalwork, stone and ivory carving, manuscript illustration, and textiles of western Europe in the early middle ages, from the 5th to 10th centuries.

Components: Lecture

MHU 261(3) Course ID:005842

Western Literature

Ancient and medieval literature, with an emphasis on the epic tradition from Homer to Dante.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 262(3) Course ID:005843

Western Literature II

The development of "Modern" consciousness from Romanticism to Realism to 20th Century writers such as Doris Lessing, Ellison, Kafka, Achebe, and Garcia-Marquez.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 320(3) Course ID:003901

Film and Literature

Novels and short stories have been interpreted for film and television; studies the differences and similarities of the two art forms.

The course will explore various connections between film and literature. Through an analysis of select stories and movies, students will gain an understanding of plot, character, point of view, form, style, metaphor, and theme. They will also develop an ability to recognize recurring patterns in the genres of film and literature, identify audiences and authorial intentions, and assess socio-cultural contexts. Selected short stories and film excerpts of the same works will be studied and discussed in the context of adaptation and translation.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 321(3) Course ID:017892

Science Fiction Literature

Through reading, analysis, and writing, the course will explore literary and rhetorical concepts focused on enhancing an understanding and appreciation of science fiction. Students will gain an understanding of various forms, styles, and themes of science fiction literature. They will also develop an ability to recognize recurring literary patterns in the genre, identify audiences and authorial intentions, and assess sociocultural contexts. Special attention will be given to plot and character construction, language, dialogue, voice, style, and point of view.

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MHU 327(3) Course ID:009928

Professional Research and Writing

A writing course required of all transfer students, this course will emphasize proper citation and proper academic, as well as, business writing.

Components: Lecture

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Humanities

MHU 350(3) Course ID:017451

Music: From Chant to Rock

This course is an introduction to Western musical history and tradition, from early liturgical chant to the beginning of rock and roll. Students will gain a general knowledge of music, basic musical terminology, music history including lives of major composers, the evolution of musical styles, and performance practice through the ages.

Components: Lecture

MHU 355(3) Course ID:018703

Shakespearean Drama

Investigation of various of Shakespeare's major works. Includes sonnets, comedies, histories, and tragedies. Also includes history, social and cultural conditions, literary background, staging, and writing.

Components: Lecture(In Person)

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MHU 358(3) Course ID:017891

Contemporary British Literature

Through reading, analysis, and writing, the course will explore literary and rhetorical concepts focused on enhancing an understanding and appreciation of contemporary British literature. Students will gain an understanding of various forms, styles, and themes of James Joyce's fiction and W. H. Auden's poetry. They will also develop an ability to recognize recurring literary patterns in the genres, identify audiences and authorial intentions, and assess sociocultural contexts. Special attention will be given to plot and character construction, language, imagery, metaphor, voice, theme, style, dialogue, and point of view.

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MHU 359(3) Course ID:017888

Latin American Literature

Through reading, analysis, and writing, the course will explore literary and rhetorical concepts focused on enhancing an understanding and appreciation of contemporary Latin America literature. Students will gain an understanding of various forms, styles, and themes of Latin America fiction and poetry. They will also develop an ability to recognize recurring literary patterns in the genres, identify audiences and authorial intentions, and assess sociocultural contexts. Special attention will be given to plot and character construction, language, imagery, metaphor, voice, theme, style, dialogue, and point of view.

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies undergraduates only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MHU 360(3) Course ID:003904

Minorities in America

Traces the experience of minorities in America from the slaves who arrived in Jamestown to women in the 1990s; from the ethnic migrations of the late nineteenth century to the boat people a century later.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 361(3) Course ID:005845

American Literature

Selected writers from the Puritans to the Civil War.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 362(3) Course ID:005846

American Literature II

Selected writers from the Civil War to the present.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Humanities

MHU 363(3) Course ID:006539

African-American Literature

A survey of the principal contributors to American literature made by Black writers, especially in the twentieth century, including slave narratives and early protest writing, the debate between Booker T. Washington and W.E.B. DuBois, the Harlem Renaissance, Zora Neale Hurston, Richard Wright, Ann Petry, Ralph Ellison, James Baldwin, the Black Arts Movement, and contemporary writers such as Alice Walker, Toni Morrison, Charles Johnson and August Wilson.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 365(3) Course ID:017160

World Literature: Poetry and Prose

This course introduces the reader to major works and themes of earlier literature from the earliest imaginative writing of antiquity to the beginnings of the modern world. Important genres and styles are considered, as well as the elemental themes of the hero's quest and the theme of love. Writings from four continents and diverse cultures are represented. Formerly MHU 365

Components: Lecture

Enrollment Requirements: METRO students only

MHU 368(3) Course ID:003906

Civil Rights in America:1950 to the Present

A survey history of the issues, leaders, legislation, and activities of the modern Civil Rights Movement from 1950 to the present.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 370(3) Course ID:010048

The Jazz Age

A survey of American literature after World War I. The course will include F. Scott Fitzgerald's, *The Great Gatsby* and "The Diamond Big as the Ritz" & Other Stories, Ernest Hemingway's, *In Our Time* or *Men Without Women*, Edna St. Vincent Millay's *First Fig* & Other Poems, Willa Cather's, *My Antonia* or selected short stories, Eugene O'Neill's, *The Emperor Jones* OR *Anna Christie*. Selections from *The Harlem Renaissance Reader* and 101 Great American Poems will be covered as well.

Components: Lecture

MHU 371(3) Course ID:011305

International Cultures in American Literature

This course is a close study of selected works of fiction and poetry of American literature about international cultures, especially in the twentieth and twenty-first century. The instructional method is lecture and discussion.

Components: Lecture

MHU 410(3) Course ID:003911

Women's Literature

A social, psychological, and literary exploration of writings by or about women.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MHU 490(3) Course ID:005849

Topics in the Humanities

From time to time, special offerings presented to discuss specific topics in the humanities.

Components: Lecture

Topics: Masterpieces of Classical Music, Women in Lit.: Multicul. Persp, Frndshp, Love, Hmn Flourishing, Music-From Chant to Rock, Spanning the Globe in the 20th Century, Contemporary World Literature, Contemporary British Literature, Contemporary German Literature, Narratives of the Holocaust, Online Writing Skills, History of Media in the U.S., Science Fiction, Advanced Writing for Social Work Students, Writing for Public Relations, Novels of Margaret Atwood and the #MeToo Movement

Enrollment Requirements: Open to Metropolitan School of Professional Studies students only

Synthesis, Application, and Integration of Learning
Synthesis, Application, and Integration of Learning (SAIL) is designed to facilitate the assessment of college-level learning (i.e., prior learning) acquired outside the traditional classroom environment (i.e., as a result of life and work experience). Students enrolled in this course will work closely with the course instructor and discipline-specific faculty mentors to critically analyze their prior learning experiences and build a portfolio evidencing the integration of prior learning with academic theory. This course is required for all MSPS students seeking to earn credit for prior learning through portfolio development.
Components: Seminar

MID 100(3) Course ID:003926 Department Consent Required
Critical Thinking
Introduction to techniques of sound reasoning in written and verbal communication, including formulation and testing of arguments, means of identifying and testing fallacious reasoning, and the art of persuasion.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MID 101(3) Course ID:003928
Problem Solving
Students develop skills involved in effective problem solving, including defining the problem, creating alternative solutions to it, and evaluating those alternatives. Emphasis on providing a general approach to problems.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MID 150(3) Course ID:011707
College Mathematics
This course covers topics in college mathematics with applications in business, finance and marketing. This course examines the operations and applications of whole numbers, fractions, mixed numbers, decimals, ratios, rate, proportions, percentages, statistics, graphs, measurement, the metric system, geometry, the real numbers, and introduction to algebra.
Components: Lecture

MID 210(3) Course ID:005850
Introduction to the Biological Sciences
A one-semester survey of the animal and flower kingdoms.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MID 211(3) Course ID:005851
People and the Environment
The purpose of the class is to provide students a primary understanding of the interplay of population and environment. The course will examine the issue of environmental sustainability among a growing human population. The course will broaden students' thinking about the environment. Upon completion of this course, students will be able to demonstrate a fundamental understanding of current environmental issues and gain a new-found appreciation for humans' relationship with the earth.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MID 213(3) Course ID:011873
Earth Science
The purpose of this course is to encourage the student to think critically regarding the fundamentals of earth science.
Components: Lecture

MID 214(3) Course ID:011872
Mythology
This course is a cross cultural survey of some of the world's mythologies and the myths of various cultures. It is designed to facilitate an inquiry into these enigmas and to learn how myth delineated individual societies and how it continues to define our lives.
Components: Lecture

MIS 105(3) Course ID:003967 Department Consent Required
Introduction to Information Technology
A survey of basic microcomputer operation and software with hands-on experience in operating systems, spreadsheets, database management, and management analysis. Not open to students with previous credit for MBU 220.
Components: Lecture
Enrollment Requirements: Open to Metropolitan School of Professional Studies students only

MIS 107(3) Course ID:003969 Department Consent Required
Application of Information Technology
A continuation of MIS 105; emphasizes more in-depth cases in MS Word, MS Excel, MS Access, MS Power Point, and MS Outlook to create impressive business documents, financial statements, database systems, daily schedule, and presentations. Students will explore all the programs in the suite with their interactions with each other and will also learn how to create Web pages simply by converting MS programs to HTML. Prerequisite: MIS 105.
Components: Lecture
Enrollment Requirements: MIS 105 or CSC 105 & Metro College Students Only

MIS 110(3) Course ID:008936 Department Consent Required
Introduction to Programming
Basic concepts of programming with procedural languages. Not open to students with previous credit for CSC 105.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 135(3) Course ID:003974 Department Consent Required
Desktop Publishing
Students will learn to design professional-quality typeset documents with multiple input files, typographical control, inserting pictures, and more complex works. Using PageMaker as a versatile program, they will also produce electronic publishing; documents that are meant to be viewed electronically, not in print. Not open to students with previous credit for MBU 135. Prerequisite: MIS 105.
Components: Lecture
Enrollment Requirements: MIS 105 or CSC 105 & Metro College Students Only

MIS 201(3) Course ID:009672 Department Consent Required
Introduction to Health Informatics
This course introduces students to the concepts and practices of health informatics in various health care environments. Topics addressed include: introduction to the health informatics discipline; types of information systems used in health care; data standards, classifications and coding systems, and nomenclature; uses of information systems in addressing clinical and managerial issues in health care, information systems design and engineering; and, new opportunities and emerging trends.
Components: Lecture

MIS 204(3) Course ID:013844 Department Consent Required
Medical Terminology & Anatomy - Health Info Techn
This course deals with issues and trends in the field of health informatics, with primary emphasis on elements of medical terminology. Individuals preparing to work in the health informatics environment must be able to apply proper terminology and spelling for major pathological conditions. Students begin developing a medical vocabulary through a study of roots, prefixes, and suffixes, and practices of correct pronunciation and usage of terms related to the following body systems: musculoskeletal, integumentary, gastrointestinal, urinary, male and female reproductive, blood, lymphatic, immune, cardiovascular, respiratory, nervous, mental and behavioral health, special senses such as eye and ear, and endocrine.
Components: Lecture

MIS 206(3) Course ID:014034
Medical Coding & Billing I
To provide the tools needed to enhance careers in the healthcare coding and reimbursement industry through gaining skills and proficiency as a Medical Coding Specialist. The program includes critical knowledge in medical coding while providing a unique perspective of the healthcare field. Course instruction will include usage of CPT, HCPCS, and ICD-9 codes according to the guidelines and up-to-date information regarding federal health care regulations.
Components: Lecture
Enrollment Requirements: MIS 204

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Computer/Mgt Info Sys

MIS 207(3) Course ID:014205

Medical Coding & Billing II

The curriculum focuses on reimbursement and the payment systems appropriate to outpatient and ambulatory reimbursement. Emphasis is placed on medical claims processing and regulatory requirements.

Components: Lecture

Enrollment Requirements: MIS 206

MIS 208(3) Course ID:014206

Electronic Health Records I

Introduces the basic concepts and functions, as well as technological requirements and challenges, of Electronic Health Records. Addresses the importance of EHRs to the healthcare industry, implementation of EHR systems, privacy and security considerations, health information technology standards, and software options. Medical office procedures, requirements and customer service are also addressed.

Components: Lecture

Enrollment Requirements: MIS 206

MIS 209(3) Course ID:014207

Electronic Health Records II

Reviews the basic and advanced concepts and functions, as well as technological requirements and challenges, of Electronic Health Records within a hospital setting. Addresses the importance of EHRs to the healthcare industry, implementation of EHR systems, privacy and security considerations, health information technology standards, and software options. Medical office procedures, requirements and customer service are also addressed.

Components: Lecture

Enrollment Requirements: MIS 208

E-Business

This course provides an introduction to e-business strategy and the development of e-business solutions. Focuses on the linkage between organizational strategy and informational technologies to implement a variety of business models. Presents organizational value and supply chain concepts, types of business relationships, consumer issues involved in e-commerce systems (e.g., shopping carts, interface designs), hardware and software system components, and ethical issues involved in electronic business.

Components: Lecture

MIS 240(3) Course ID:003982 Department Consent Required
Management Information Systems

A survey course covering all aspects of the management perspective of implementing a corporate information system; the development of user requirements using business process reengineering/system planning methods; the process of selecting the appropriate hardware, software and communication systems; and the implementation and maintenance of the system. Uses real world case studies to cover state-of-the-art technical solutions. Not open to students with previous credit for MBU 240. Prerequisite: MIS 104.

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies students only

MIS 260(3) Course ID:003985 Department Consent Required
Multimedia Authoring/Software

An introduction to multimedia using two authoring systems. Issues include hardware requirements, facility support, cost of development, time to develop, limitations of authoring tools, and screen design. Internet resources, such as discussion groups, developers, and forums, are integrated into the course. Not open to students with previous credit for MBU 260. Prerequisite: MIS 104 and MIS 105.

Components: Lecture

Enrollment Requirements: CSC 104 or MIS 104 and Metropolitan College Students Only

MIS 300(3) Course ID:009329 Department Consent Required
Graphics for the Web

Introduces students to a variety of design techniques for creating professional-looking Web graphics and graphic layouts. Students will learn to create their own original graphics for the Web using industry-standard software.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 314(3) Course ID:010461 Department Consent Required
Fundamentals of IT System Technologies: Hardware and Software

The course provides an introduction to computer components, laptops and portable devices, wireless connectivity, security and safety, environmental concerns, and diagnostic tools. Prerequisite: MIS 105

Components: Lecture

Enrollment Requirements: MIS 105

MIS 319(3) Course ID:008862
Unix/Linux for Users and Administrators

Unix/Linux for Users and Administrators is an introductory course to practical Unix and Linux, covering basics of two similar operating systems. It is aimed at Unix novices with limited or no experience in operating systems other than indows. Topics include: Unix shells and shell commands; File systems; Ownerhip and Mask; File manipulation; Processes; Common Unix/Linux graphical interfaces; Vi editor; Unix communication; Grep Sed and Awk; Bourne Shell scripting; Unix and Linux Administration

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 321(3) Course ID:005855 Department Consent Required
Operating Systems

Development of operating systems, implementation techniques, multiprogramming and multiprocessing, memory management, performance considerations, inter-process communication and interfaces, and deadlocks. Includes an introduction to operating systems such as UNIX, NT, Windows, DOS, and MacOS. . Prerequisite: MIS 105.

Components: Lecture

Enrollment Requirements: MIS 105 or CSC 105 & Metro College Students Only

The Catholic Univ of America

Subject: Metro: Computer/Mgt Info Sys

MIS 323(3) Course ID:003987 Department Consent Required
Data Communication and Network Security
Covers the various concepts of business data communications and data processing, the application of these ideas in computer networks, basic principles of telecommunications technology, computer network technology, data management in distributed database systems, and management of the technical and functional components of telecommunications technology. Prerequisite: MIS 105.
Components: Lecture
Enrollment Requirements: MIS 105 or CSC 105 & Metro College Students Only

MIS 325(3) Course ID:003988 Department Consent Required
Project Management
Teaches the student how to plan and implement a business/computer project from the beginning stages of design through planning, development of specifications, the use of flow charts, and reporting techniques. Prerequisite: MIS 105.
Components: Lecture
Enrollment Requirements: MIS 105 or CSC 105 & Metro College Students Only

MIS 326(3) Course ID:011818
Project Management II
Prerequisite: MIS 325.
Components: Lecture
Enrollment Requirements: MIS 325

MIS 327(3) Course ID:003990 Department Consent Required
Introduction to Software Engineering
Teaches traditional analysis and design through dataflow analysis and the system development life cycle approach. Includes methods of structured analysis and design, with emphasis on gaining an ability to use the various tools associated with systems analysis. Emphasizes use of the project team in producing specifications of current systems, and developing and implementing a new system. Prerequisite: MIS 105.
Components: Lecture
Enrollment Requirements: MIS 105 or CSC 105 & Metro College Students Only

MIS 334(3) Course ID:009519 Department Consent Required
An Introduction to Security & Security Awareness
This course focuses on security issues and how security integrates into the enterprise. Various aspects of employee involvement, security training, ethics, and trust are highlighted. Security concepts and issues that face industries today are defined and discussed.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 336(3) Course ID:003991 Department Consent Required
C Language
Introduces the student to structured programming techniques. No prior programming is needed for this course; provides adequate introduction and usage of the seven control structures with which a program can be written. The student will write programs as early as the second class of the semester. Includes using arrays, structures, and pointers; prototyping, building, and calling functions, and using standard C library; dynamic memory allocation; repetition structures (while, for, do/while); and selection structures (if, if/else, switch). Not open to students with previous credit for MBU 336. Prerequisite: MIS 104, or MIS 105, or MIS 107.
Components: Lecture
Enrollment Requirements: MIS 104 or MIS 105 or MIS 107 and Metropolitan College Students Only

MIS 337(3) Course ID:003994 Department Consent Required
C++ Language
A comparison of Object-Oriented programming to C structured programming concepts and how C++ strong typing and classes complements C. Includes C++ declaration of function, specifications, and using the standard IO functions cout and cin, as well as stream manipulation for formatting outputs. Also includes using arrays, structures and pointers; prototyping, building, and calling functions; using standard C++ library; dynamic memory allocation; repetition structures (while, for, do/while), selection structures (if, if/else, switch); new classes definition; encapsulating public functions and data members; object declaration, accessing and modification; and inheritance. Prerequisite: MIS 336.

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Computer/Mgt Info Sys

MIS 338(3) Course ID:003996 Department Consent Required
Internet Architecture

A comprehensive course designed to provide background information as well as hands-on practice. Topics include the history of the Internet, Internet topology (hardware, software, and communications), current Internet applications (browsers, search engines, and e-mail), and Internet uses (web page design, navigating the Internet for personal and professional research). Not open to students with previous credit for MBU 338. Prerequisite: CSC 104, MBU 130, or MIS 104; command of the Windows '95 operating system.

Components: Lecture

Enrollment Requirements: CSC 104 or MIS 104 and Metropolitan College Students Only

MIS 339(3) Course ID:005857 Department Consent Required
Advanced Internet

This course is designed to introduce students to the basics of creating graphics and designing layouts for professional web sites. Students will learn the basics of Adobe Photoshop and Illustrator to create original graphics for the web, and then apply them using web site development tools Macromedia Dreamweaver and Flash. Prerequisite: MIS 338.

Components: Lecture

Enrollment Requirements: MIS 338 and Metropolitan College Students Only

MIS 340(3) Course ID:009735 Department Consent Required
Practicum In Web Site Technologies

Students work in teams on an organization's Web site to enhance it through the incorporation of sound e-business, design, and database concepts.

Components: Lecture

MIS 341(3) Course ID:009736 Department Consent Required
Practicum In Info and Org Security

Students work in teams on a problem involving information security submitted by a local organization, applying the concepts and methods discussed throughout the program.

Components: Lecture

MIS 345(3) Course ID:003997 Department Consent Required
Java Language

Introduces the student to JAVA language, its relationship to other languages such as C and C++, application development resources, JAVA program structure, packages and libraries, variables and data types, operators and precedence, methods, arrays, strings, and program flow. The student will learn how to design, program, and execute JAVA programs. Prerequisite: MIS 336 or MIS 337.

Components: Lecture

Enrollment Requirements: MIS 336 or MIS 337 and Metropolitan College Students Only

MIS 351(3) Course ID:009520 Department Consent Required
Security Technologies & Threat Detection Prevention & Avoidance

The main focus of this course is an overview of software technologies such as firewalls and web servers with add-in security devices and applications. Various software intrusion applications such as viruses and worms will be discussed. A review of the techniques used by the anti-virus vendors and freeware offerings to protect electronic assets from harm or other compromise is highlighted.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 352(3) Course ID:009521 Department Consent Required
Security Policies, Disaster Recovery, Risk Management

This course examines the necessity of security policies and the role of employees in the enactment and management of security procedures. Students will explore and discuss various security policies and the role of risk management and disaster recovery in the formulation of security procedures. The course concludes with security policies regarding incident response, forensics, and the rules of evidence.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

Subject: Metro: Computer/Mgt Info Sys

MIS 353(3) Course ID:009522

Information Privacy, Ethics and the Law

This course begins with the legal protection and enforcement of the issues regarding Internet and local access computer security and information privacy. The most important statutes, regulations, and court cases that establish rights and liabilities for information privacy are discussed. The use and protection of corporate and client information assets are examined with regard to ethical and legal usage.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 354(3) Course ID:009523 Department Consent Required

Threat Perception & Evaluation Psychology

Employees are front-line monitors and sensors to organizational threat. They use their personal abilities to perceive, identify, and evaluate threat using first impression analysis as a function of organizational security. Students will be exposed to cognitive and behavioral aspects of assessing environmental threats and preemptive decision making. Case studies, tools, and evaluation techniques will be utilized to underscore the intuitive and cognitive nature of threat perception and prevention.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 355(3) Course ID:009524 Department Consent Required

Organizational Security and Terrorism

Feelings of security have changed into feelings of insecurity. The workplace, once an extension of our safety net, is now more vulnerable to personal attack, property attack, vandalism, information theft, and now, terrorism. Students discuss the role of the security manager and employees in the identification, analysis, and response to a variety of human and natural crises. Case studies and literature research aid in the examination of threats resulting from riots, demonstrations, product tampering, work stoppage activities, terrorism, and natural disasters.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MIS 401(3) Course ID:017735

Introduction to Cybersecurity

Cybersecurity is reported to be one of the hottest careers in current employment. There are more than one million cybersecurity job openings. Companies are eagerly seeking and hiring cybersecurity professionals to protect data, networks, systems, and critical infrastructures. With the advancement of technology into artificial intelligence, robotics, drones, Internet of Things, social media, communications, mobile technology, and more, a career in cybersecurity can open career doors for you. This course introduces the basics of cybersecurity beginning with the language and terminology of security and cybersecurity, and advances into networks, data, systems, security, network security, cryptography, operating systems, cybersecurity attacks, and current technologies of robotics, Internet of Things, mobile security, social media, and more. This fundamental cybersecurity course will propel you into higher level courses to start your cybersecurity career.

Components: Online(Online)

Enrollment Requirements: MIS 105; open only to undergraduates in Metropolitan School of Professional Studies

MIS 431(3) Course ID:004001 Department Consent Required

Database Management Systems

A comprehensive beginning course on the Relational Database System covering three major areas: industry trends, relational database theory, and database applications. Industry trends addresses the major vendor database engines, CASE tools, industry leaders and industry direction. Database theory includes RDBMS structure, normalization, SQL (Structured Query Language), data modeling, and design. Database applications analyzes the distributed databases, data warehousing, data marts, data mining, multimedia, object and intelligent databases. Not open to students with previous credit for MBU 431. Prerequisite: MIS 105.

Components: Lecture

Enrollment Requirements: MIS 105 or CSC 105 & Metro College Students Only

MIS 451(3) Course ID:008347 Department Consent Required

Database Management Systems I-SQL

Develop skills in writing PL/SQL procedures, functions and packages. PL/SQL is the heart-of Oracle development and will be used to write program units and database triggers using supplied packages. Learn how to use these program units in your web applications aaas server-side programs.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Legal Assisting

MLA 101(3) Course ID:004105

Introduction to Paralegal Studies

This course provides an overview of the U.S. legal system with an additional focus on the role of the paralegal professional. Topics will include the operation and structure of the federal and state criminal and civil law systems; federal and state court organization; practical computer, research, and writing skills for the paralegal; resume creation; basic introduction of various areas of law.

Course Objectives:

Demonstrate understanding of the roles and obligations of paralegals and attorneys.
Describe the duties of the paralegal within the legal system and law office.
Distinguish the operations and structure of the Federal and State criminal and civil court systems.
Demonstrate proficiency in practical computer skills required for paralegals.
Demonstrate a basic understanding of the various areas of law within the U.S. legal system.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MLA 110(3) Course ID:017082

Professional Responsibility and Legal Ethics

This course provides an overview of the various ethical issues of the paralegal profession. Topics will include the unauthorized practice of law, attorney-client privilege, attorney-paralegal ethics and responsibility, and competence.

Course Objectives:

Understand and determine ethical violations.
Describe the fundamental principles of legal ethics.
Understanding of the working relationship between attorney, paralegal, and client.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

MLA 201(3) Course ID:005860

Legal Research and Writing

A review of techniques of legal writing, including the drafting of legal memoranda and pleadings and correct citation form. Assignments include preparation of a legal memorandum, basic correspondence, and draft pleadings.

This course will focus on legal research skills for the paralegal, including traditional tools and electronic sources with a focus on training with Westlaw Next and Lexis Advanced. Additionally, focus will be on legal writing skills, such as format, citation of sources, memoranda, briefs, and letters.

Course Objectives:

Demonstrate proficiency in researching federal and state case law.
Demonstrate proficiency in using online research tools, such as Westlaw Next and Lexis Advanced.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MLA 211(3) Course ID:017084

Civil Procedure

This course is a study of the process and roles of the paralegal in civil litigation from the commencement of a lawsuit, discovery, and management of civil cases in state and federal court through final judgment under modern statutes and rules of court. Topics include filing a civil action, pleadings, motions, discovery, trials, judgments, and appeals.

Course Objectives:

Demonstrate understanding of the various stages of a civil case.
Demonstrate the ability to locate and apply the Federal, State, and Local Rules of Court.
Demonstrate proficiency in drafting complaints, motions, and discovery requests.
Understand the concepts of jurisdiction, venue, and various time limits as applied to civil litigation.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

MLA 216(3) Course ID:017095

Corporations

This course is a study of legal entities formed by businesses, including sole proprietorships, partnerships, corporations, and limited liability corporations. Focus will be placed on how these entities are created, managed, taxed, and dissolved. Additional topics will include the relationship between employer and agent/employee and liability.

Course Objectives:

Understanding the various forms, advantages, and disadvantages of business entities.
Demonstrate the ability to identify and prepare the necessary documents for business entity formation.
Understanding the relationship between employer-agent and potential sources of liability.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Legal Assisting

MLA 230(3) Course ID:011325

Criminal Law and Procedure

This course is a study of substantive criminal law and procedure. Focus will be placed on the various types of crimes, elements of crimes, and defenses. Emphasis will also be on various constitutional issues related to criminal procedure, including searches and seizure, arrests, interrogation, pretrial procedures, trial, sentencing, and appeal.

Course Objectives:

Understanding of substantive criminal law and procedures.

Understanding of the U.S. Constitution and the various rights afforded to citizens.

Demonstrate the ability to understand and apply various court decisions as they relate to arrest, search and seizure, and other areas of criminal procedure.

Components: Lecture

MLA 252(3) Course ID:011309

Administrative Law

This course will provide an introduction to Administrative Law with an examination of how agencies are created, sources of administrative law, administrative procedures, trials and hearings, and ethical considerations. Topics will include an overview of administrative law in various areas such as social security, immigration, taxation, Medicaid, education, workers Compensation, child support, professional licensing and healthcare facility regulation.

Course Objectives:

Demonstrate understanding of the difference between administrative and judicial proceedings.

Demonstrate ability to differentiate between federal, state, and local government administrative proceedings.

Utilization of various sources of administrative law in application to administrative procedures.

Components: Lecture

MLA 253(3) Course ID:017096

Constitutional Law

This course will examine the United States Constitution and its Amendments with emphasis on the allocation of powers, the system of checks and balances, commerce, and the concepts of individual rights, liberties, and protection.

Course Objectives:

Demonstrate understanding of the Bill of Rights and its application to citizens and the government.

Demonstrate understanding of how laws are created and amended.

Demonstrate understanding of the various landmark United States Supreme Court Cases impacting citizen rights.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

MLA 254(3) Course ID:017097

Family Law

This course will be an examination of the various areas of family law. Topics will include prenuptial and postnuptial agreements, marriage, dissolution, equitable distribution, alimony, shared parental responsibility, child support, property settlement agreements, adoption, paternity, and juvenile law.

Course Objectives:

Demonstrate proficiency in drafting dissolution of marriage documents.

Demonstrate understanding of child custody, child support, and the various types of alimony.

Demonstrate understanding of the process of termination of parental rights.

Components: Lecture

MLA 255(3) Course ID:017098

Employment Law

This course provides an overview of the legal relationship between employers and employees, including the employment-at-will doctrine, employment contracts, privacy, harassment, federal and state anti-discrimination laws, and worker's compensation proceedings. Administrative procedures as well as court actions are studied.

Course Objectives:

Demonstrate understanding of the relationship between employer and employee.

Demonstrate understanding of discrimination, privacy, and harassment laws.

Demonstrate understanding of liability as relates to the employer and employee.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Legal Assisting

MLA 256(3) Course ID:017099

Intellectual Property

This course is an examination intellectual property law including, patent, copyright, trademark, and trade secret, and related protections and liability for infringement.

Course Objectives:

Demonstrate understanding of how patents, copyrights, and trademarks are utilized to protect trade secrets and other intellectual property.

Demonstrate understanding of the application process and documentation for patents, copyrights, and trademarks.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

MLA 257(3) Course ID:017676

Real Estate Law

This course examines interests in real property, contracts, deeds, mortgages, and other encumbrances, foreclosures, title searches and insurance, and leases. Emphasis will be placed on the preparation of closing documents for a real estate transaction.

This course is an examination of interests in real property, contracts, deeds, mortgages, and other encumbrances, foreclosures, title searches and insurance, and leases. Emphasis will be placed on the preparation of closing documents for a real estate transaction.

Course Objectives:

Understand the basic principles of substantive real estate law and basic real estate terms.

Demonstrate proficiency in performing title searches.

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies students only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MLA 258(3) Course ID:017677

Wills, Trusts, and Estates

This course examines the various devices used to plan an estate, such as wills, trusts, and joint ownership. Focus is placed on the drafting of wills and the preparation of estate administration and probate documents.

Course Objectives:

- Demonstrate understanding of the devices used to plan an estate

- Demonstrate proficiency in drafting wills and trusts

- Demonstrate proficiency in the preparation of estate administration and probate documents

Components: Lecture

Enrollment Requirements: Open to Metropolitan School of Professional Studies students only

Room Requirements: DIGITAL PRESENTATION ROOM(1)

MLA 271(3) Course ID:017102

Evidence

This course will examine the various forms of evidence, including direct, circumstantial, oral, physical, hearsay, and exceptions to hearsay. Topics will also include admissibility, competency, relevancy, and presentation of physical and other material evidence in court.

Course Objectives:

Demonstrate understanding of the various forms of evidence.

Demonstrate understanding of hearsay and exceptions to hearsay.

Demonstrate understanding of the Federal and State laws and rules pertaining to criminal evidence.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

MLA 273(3) Course ID:017103

Civil Procedure II

The course will examine the usage of primary and secondary sources of law. Topics to be covered: pleadings, service of process, parties, default, dismissals, discovery, trial, judgements, and post-judgment relief.

Prerequisite: MLA 211

Course Objectives:

Demonstrate the ability to apply procedural rules to civil cases in various areas of law.

Demonstrate proficiency in drafting various discovery documents and motions.

Demonstrate understanding of the various stages of a case from pretrial to appeal.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

The Catholic Univ of America
Course Catalog

Metropolitan Schl of Prof Stud - Metropolitan Schl of Prof Stud
Subject: Metro: Legal Assisting

MLA 274(3) Course ID:017104

eDiscovery

This course will examine the use of technology in litigation. Topics will include, the challenges, best and emerging practices, and management of e-discovery. Emphasis will be placed on the discovery process and the collection, review, and production of electronic evidence as it applies to the law firm, government agency, and corporate legal department.

Course Objectives:

Demonstrate the ability to manage eDiscovery projects.

Demonstrate the ability to prepare and collect eDiscovery.

Demonstrate proficiency in using the computer applications utilized in eDiscovery.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

MLA 275(3) Course ID:017105

Trial Practice

This course will be an examination of the paralegal skills essential to supporting litigation. Emphasis will be placed on criminal and civil trial processes and the paralegals role in preparation of documents in support of litigation.

Course Objectives:

Demonstrate understanding to the trial process for both criminal and civil cases.

Demonstrate proficiency in preparing documents and pleadings for litigation.

Demonstrate proficiency in creating a trial folder and preparation of evidence for trial.

Components: Lecture

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

MLA 312(3) Course ID:005862

Torts

Deals with civil wrongs (or injuries) and the remedies for those wrongs. Covers intentional torts, negligence, defamation, and product liability.

This course is study of tort law, including topics of intentional torts, negligence, products liability, strict liability, and defamation. Students will examine personal injury claims, the liability related to tort claims, defenses, and remedies arising from civil actions.

Course Objectives:

Demonstrate understanding of the various tort claims and their associated defenses and remedies.

Demonstrate understanding of the standards of conduct and duty resulting in tortious liability.

Proficiency in identifying the elements of tortious conduct.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MLA 340(3) Course ID:005864

Contract Law

Common Law contracts oral and written, statutory changes required in writing. Real Estate property and the different types of estates, the requirement of a writing: deeds, deeds of trust, mortgages and title work.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MLA 360(3) Course ID:005865

Computer Applications in Law

An overview of uses of the computer in the legal environment. Explains the concepts and theory of computer operations in the context of need analysis for law firms.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MLA 400(3) Course ID:005866

Advanced Legal Research

The course will be an intensive review and expansion of legal research and writing. Focus will be placed on the preparation of documents and pleadings in criminal and civil cases. Topics will include, Bluebook citation, cite checking, legislative analysis, and advanced research techniques. Emphasis will be placed on research utilizing Westlaw Next and Lexis Advanced. Prerequisite: MLA 201

Course Objectives:

Demonstrate proficiency in the preparation of legal briefs, pleadings, and persuasive motions for criminal and civil cases.

Demonstrate the ability to property cite legal authority.

Demonstrate the ability to effectively communicate a legal argument both orally and in writing.

Demonstrate proficiency in legal research utilizing Westlaw Next and Lexis Advanced.

Components: Lecture

Enrollment Requirements: MLA 101 and Metropolitan College Students Only

The Catholic Univ of America
Course Catalog

MLA 495(3)

Course ID:017101

Paralegal Internship

This course will provide practical experience and on job training in applying paralegal skills within selected law firms, corporate law departments, and government agencies. The goal is to afford students work experience that expands their knowledge, ability as a paralegal, and to enhance their understanding of the paralegal role in assisting attorneys.

Course Objectives:

Gain practical working experience in a real world legal setting.

Demonstrate proficiency in working within a professional environment.

Utilization of legal research and writing skills.

Completion of weekly threaded discussions and journal their experience.

Components: Internship

Enrollment Requirements: Open only to undergraduates in the Metropolitan School of Professional Studies

Room Requirements: NO CLASSROOM NEEDED(1)

Foundations of Economic Thought: Part 1

This course introduces students to the economic way of thinking. The course begins with a survey of big ideas in economics, and then moves into a fast-paced sequence on comparative advantage, supply and demand, the price system, taxes and subsidies, and international trade. The course then moves to cover principles of firms and labor markets, especially profit maximization, competition, monopoly, oligopoly, price discrimination, labor supply and wages. Before concluding, the course introduces students to externalities and social costs, problems of asymmetric information, and classic public goods dilemmas.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: ECON 102, ECON 104, SRES 101

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Room Requirements: OFF CAMPUS(1)

MMGT 102(3) Course ID:019215

Foundations of Economic Thought: Part II

The second course in the FET sequence, Foundations of Economic Thought II introduces students to the macro effects of the micro behaviors studied in the Foundations of Economic Thought I. The course will teach the foundations of the following aspects of a modern complex economy: money (its origin and its production), the distribution of income, the performance of economic systems, international trade, interest and debt securities (yield curve), and public choice analysis.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: SRES 102

Enrollment Requirements: open to students in the Tucson program who've taken MMGT 101 (formerly SRES 101P)

Room Requirements: OFF CAMPUS(1)

MMGT 118(3) Course ID:018747

The Vocation of Business

The Vocation of Business is a course that has to be both experienced and studied. Most courses teach you how to pursue a goal, achieve an objective, accomplish a task. This course helps you figure out how to go about setting the goal, objective and task in the first place place. The class helps students to discern and plan their business career and vision for their life. During the first part of course, we will focus on personal development. Then, in the second half, we will focus more on the setting of business. In the last modules of the semester, we will bring together these two elements. Over the course of this semester, we will explore what business is and how it fits into your overall life mission. We will learn how to live a happier and more integrated life. Students have a chance to put their insights of this course into practice by setting goals and writing a mission statement that reflects who they truly are and create the vision and plans for their career in business.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: MGT 118, ENT 118

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Room Requirements: DEPARTMENT SPACE(1)

MMGT 123(3) Course ID:018907

Foundations of Business

This course provides a comprehensive introduction to the fundamentals of strategy, management, and operations in a business organization. Topics include: foundational concepts in organization theory (division of labor and job specialization, agency costs, economies of scale, value chains, integration and competitive advantage); the history of management thought; business ethics; incentives and motives; corporate strategy, culture, organization & governance; managerial decision making; industry dynamics; business operations, performance & control; human resources; leadership; and teamwork. Special emphasis is paid to the mental models (ethical, economic and behavioral) critical for managerial decision making. Includes a freshman-cohort-wide series of master classes on special topics in business taught by leading experts in the field (see parallel lab section).

Components: Lecture(Blended (in-person and online))

Course Equivalents: MGT 123A, MGT 123B

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Room Requirements: DEPARTMENT SPACE(1)

MMGT 171(3) Course ID:018746

Human Advantage & the Future of Work

In this course, students study the nature of business and the economy; examine the many misleading stereotypes about business; explore the key features of the high-tech workplace; and identify and cultivate the virtues needed to succeed in 21st century business and in life.

Components: Online(Online)

Enrollment Requirements: Open to undergraduate students at the Tucson campus

MMGT 205(3) Course ID:019080

Introductory Accounting

Designed for both users and producers of accounting data. Balanced coverage of procedures used to prepare financial statements, the measurement theories underlying the procedures, and the economic environment in which accounting operates. Analysis of financial statement information. Minimal focus on bookkeeping techniques, but includes adequate conceptual preparation in accounting processes for students intending to take additional courses. Also see Enrollment Requirements.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: ACCT 205, IEDM 505

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Room Requirements: OFF CAMPUS(1)

MMGT 206(3) Course ID:019213

Managerial Accounting

Use of accounting data by financial managers in the planning and control of organizational activities. Provides a framework to develop the methodology of managerial accounting as an integral tool of managerial decision making in a contemporary business environment. Topics include cost concepts, profit planning, budget decision techniques, planning pricing decisions, inventory control, and quantitative decision techniques. Also see Enrollment Requirements.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: ACCT 206

Enrollment Requirements: open to students in the Tucson program who've taken MMGT 205 (formerly ACCT 205P)

Room Requirements: OFF CAMPUS(1)

MMGT 226(3) Course ID:019341

Introduction to Finance

This course provides an introduction to the theory, the methods, and the concerns of corporate finance. The concepts developed in FIN 226 form the foundation for all elective finance courses. The main topics include: 1) introduction of financial management; 2) understanding financial statements and cash flow; 3) the valuation of future cash flows; 4) valuing stocks and bonds; 5) capital budgeting; 6) risk and return; and long and short term financial management.

Components: Lecture

Course Equivalents: FIN 226

Enrollment Requirements: Open to undergraduate students at the Tucson campus

MMGT 240(3) Course ID:019214

Management of Information

A survey course for business and economics students covering all aspects of the management perspective of identifying, developing, implementing and managing a corporate information system (IS). This course introduces IS concepts and vocabulary, distinguishes between information technology (IT) and information systems (IS) and overviews the issues, difficulties and opportunities that information systems (IS) present to businesses. The integration of management, technology and organizations is presented in a unified IS framework. Case studies and/or in-class computer lab exercises. Also see Enrollment Requirements.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: MGT 240

Enrollment Requirements: open to students in the Tucson program who've taken MMGT 118 (formerly MGT 118P) and MMGT 123 (formerly MGT 123P)

Room Requirements: OFF CAMPUS(1)

MMGT 250(3) Course ID:019081 Department Consent Required

Business Communications

This course focuses on the principles, strategies, and techniques of effective written, oral, and digital business communication. The course addresses critical business communication skills with an emphasis on organization, preparation, grammar, and mechanics as students create successful oral and written messages including e-mails, memos, letters, presentations, reports, and other business documents.

Components: Blended (Online and In Person)(Blended (in-person and online))

Course Equivalents: MGT 250

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Room Requirements: OFF CAMPUS(1)

The Catholic Univ of America

MMGT 301(3) Course ID:019342

Ethics in Business and Economics

Develops a view of ethics through theory and cases that animates leaders capable of making a deep, positive, and lasting impact on people, firms, and society through professionalism, integrity, and a spirit of service. Examines actual business practice and the functional areas of business for their relation to relevant habits/virtues (i.e., prudence, justice, temperance and fortitude) and principles (i.e., human dignity, the common good, solidarity and subsidiarity).

Components: Lecture

Course Equivalents: MGT 301, ECON 301

Enrollment Requirements: Open to undergraduate students at the Tucson campus

MMGT 310(3) Course ID:019343

Leadership & Organization

Covers leadership theory and the process of leading in both the private and the public sector. Relates the leadership function to organizational development. Covers topics such as managers versus leaders, managing from a global perspective, ethical dilemmas in leadership, gender and leadership and leading through empowerment.

Components: Lecture

Course Equivalents: MGT 310

Enrollment Requirements: Open to undergraduate students at the Tucson campus

MMGT 311(3) Course ID:019344

Organizational Behavior

Organizational Behavior (OB) is the study of individuals and groups in organizations and is also concerned with the behavior of organizations as whole systems. This class considers each of these dimensions and their interrelations relevant to the functioning, performance, viability and vitality of human enterprises. Specific topics addressed include the history of management and organization concepts; perception, attitudes and individual differences; motivation; communication; group dynamics; work teams and intergroup relations including managing collaboration and conflict; leadership, power and decision making; the organizational environment; organization structure and design; organizational culture and effectiveness; organization development and change; and OB research methods. Also see Enrollment Requirements.

Components: Lecture

Course Equivalents: MGT 311

Enrollment Requirements: Open to undergraduate students at the Tucson campus

MMGT 322(3) Course ID:019405 Department Consent Required

Introduction to Business Law

This course is an overview of basic legal concepts and principles underlying business. The core assets of a business rise from the acquisition and use of land, labor, and capital. For Tucson Program students only.

Components: Blended (Online and In Person)(Blended (in-person and online))

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Room Requirements: OFF CAMPUS(1)

MMGT 345(3) Course ID:019340

Marketing Management

A study of managerial policies, strategies and decisions with respect to products and/or services offered by a firm. Major variables, both internal and external to the firm, which mutually interact and influence decisions, pricing, promotions and distribution. Additional topics include market analysis, new product development and implementation of marketing programs.

Components: Lecture

Course Equivalents: MKT 345

Enrollment Requirements: Open to undergraduate students at the Tucson campus

MMGT 365(3) Course ID:019345

Quantitative Methods in Decision Making

An intermediate level course for students who need to become familiar with the tools used in business decision making with an emphasis on systems modeling and systems thinking. Students are introduced to computer-based decision-making aids and simulations. Issues in effective implementation of decision support systems. Review and analysis of various expert systems including tools and generators, classification vs. diagnostic type systems and building modules. Design of decision support and expert systems. Use of a decision support systems tool to investigate a managerial decision-making scenario. Methods of dealing with unstructured and under-specified problems from management and organizational perspectives. Case studies and/or in-class computer lab exercises.

Components: Laboratory

Course Equivalents: MGT 365

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Medical Spanish Essential

This 5-week online asynchronous course is designed for current and future health care professionals who have basic to no previous experience with Spanish language. This is the first course of a four-course certificate of Spanish for Health Professionals designed to lay the foundation for the lifetime learning of medical Spanish and cultural competence. Participants are introduced to the basic principles of Spanish necessary for working in the field of medicine and health care. Emphasis on developing conversational and written skills needed to deal with medical situations through web-based lectures, role play exercises, interactive video and audio assignments, voice recordings and dialogues. The goal of this course is to facilitate better communication between health care providers and the Spanish-speaking community. This weekly online course allows participants to proceed through the material at their own pace within defined time limits. 3.5 Continuing Education Units (CEUs) will be awarded upon successful completion of this course.

Components: Online(Online)

Enrollment Requirements: Open only to non-credit students in the Metropolitan School of Professional Studies

Medical Spanish Informative

This 5-week online asynchronous course is designed for current and future health care professionals who have minimal experience with Spanish language. This is the second course of a four-course certificate of Spanish for Health Professionals. Participants will practice practical Medical Spanish language skills needed to effectively communicate with Spanish-speaking patients and families. The course has a strong emphasis on developing conversational and written skills needed to deal with medical situations through web-based lectures, role-play exercises, dialogues, voice recordings, interactive video and audio assignments related to the clinical setting. Emphasis is placed on understanding the various language barriers that may occur with Hispanic patients and their effect on health care. This weekly online course allows participants to proceed through the material at their own pace within defined time limits. 3.5 Continuing Education Units (CEUs) will be awarded upon successful completion of this course.

Cultural Competence in Health Care

This is a five-(5) week/module online asynchronous course where you can access course materials at any time along with scheduled discussions with the professor and threaded discussions with peers. Class will be held fully online. There will be no synchronous sessions or mandatory class meetings. This course is taught in English and there will be nuances of Spanish to better explain the cultural material. Learners will receive 3.5 Continuing Education Units for successful completion of this course. The objective of this online course is to develop cultural awareness and sensitivity skills that will help professionals provide competent and excellent health care to Hispanic populations. This course is designed for native and proficient speakers of English. The course stresses sensitivity to and respect for cultural, ethnic and spiritual diversity in a health care setting. Cultural competency is one of the main ingredients in closing the gaps relating to disparities in health care. As the

Contemporary Moral Issues

This course is a survey of the major ethical theories in Western philosophy (from Aristotle, Aquinas, Hume, Kant, Mill, Wotija, Hartman, Rawls, and others), presented simultaneously with case studies of contemporary moral issues (abortion, capital punishment, euthanasia, racial profiling, free speech, environmental degradation, human right abuses, etc.). The course is meant to expose students to ethical theories in an abstract framework, and then exercise their understanding of these theories in practical and relevant contexts. The class will use canonical texts, but will also draw from elucidating contemporary polemical articles, court cases and judicial rulings, news sources, and social media outlets.

Components: Lecture

MPH 325(3) Course ID:005893

Philosophy of Science

Considerations of the major problems affecting the assumptions, methodologies, and conclusions of the natural sciences.

Components: Lecture

MPH 330(3) Course ID:005894

Philosophy of Human Nature

An examination of the nature of a human being; body-soul and mind-matter relationships; sense perception, imagination, reasoning, free will, immortality.

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 202(3) **Course ID:018437**
Topics in American History
This course will explore the moral underpinnings of war as expressed by St. Thomas Aquinas. We will focus on the phenomenon of warfare and discuss what defines ¿just¿ or ¿unjust¿ use of violence by a people or entire nations. Because nations have engaged in activity such as genocide and the Holocaust we will also study what type of behavior remains clearly beyond the pale of ¿legalized¿ violence and has crossed over into the realm of ¿crimes against humanity.¿ Accordingly, we will start with an examination of the Thirty Years War and discuss the reordering of rules and international law as they pertain to warfare and how the western world was fundamentally transformed by the Peace of Westphalia (1648). Progressing quickly through the Napoleonic era and wars of the 19th century, we will discuss at length the mode and methods of warfare of both World Wars to include some of the literature that emerged from them and that written by eyewitnesses and participants. A discussion of the rise of fascism and human rights will be very important to our

Room Requirements: ONLINE(1)

MSO 268(3) Course ID:012441

Comparative World Politics

This course is an introduction to comparative world politics, focusing on the political environments within the international system. The focus will be on how our U.S. political system is different from other established democracies, and other non-democratic actors.

Components: Lecture

MSO 270(3) Course ID:009943

Understanding Global Issues

This course identifies and examines some of the political and social issues that go beyond the traditional boundaries of our nation-state. Using a normative and value-oriented parameters, students are encouraged to identify and examine some of those issues and then make assessment as to how these global issues have affected or changed our lives. Some of the topics include globalization, violence and international terrorism, nuclear weapons and arms control, epidemic and endemic diseases, human rights, and the role of the US.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 271(3) Course ID:004179

World Politics

Stresses a historical and theoretical approach to the understanding and evaluation of contemporary world politics and familiarizes the student with the central theories, concepts and debates in the fields of international relations.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 272(3) Course ID:005913

Comparative Politics

Introduces students to the major social and political movements and systems that have shaped our twentieth-century world. Focuses on common features of the developmental experiences of the western liberal capitalist, communist, ex-communist, and Third World nations, as well as the ways in which differing political structures have shaped differences between these worlds.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 273(3) Course ID:007248

Impact of Technology on International Relations

This course, in seminar form, is a general examination of the impact of modern information and communication technology on international affairs. It will concentrate principally, but not exclusively, on exploring the decision making process and the "speed" with which policy-makers must respond to events in our increasingly interdependent geopolitical environment.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 275(3) Course ID:004180

Public Administration

A survey of American public administration, considering its structure, management, and role in the American governmental system.

Components: Lecture

Enrollment Requirements: Not open to students who've taken MSO 275; Open to MSPS students only

The Catholic Univ of America
Course Catalog

MSO 276(3) Course ID:010297

Public Policy

This course represents a study of public policy and process. We will study historical trends and institutions. And we will examine the role of regulators, lobbyists, political action committees, special interest groups, elections, the media, and elected lawmakers at various stages of the process on the local, state, and federal levels.

Components: Lecture

MSO 313(3) Course ID:007789

Contemporary American Politics

Looks at "what lies behind the headlines," examining the institutional and theoretical underpinnings of the American political system. This course seeks to uncover the logic of contemporary American politics by using the tools that political science provides, and by reading the writings of those who helped frame the system as well as those who have played important roles in it since its founding.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 317(3) Course ID:014035

Global Economic Environment

With the rise of competitive states like China and India, with the expansion of the European Union, with the instability of the international currency markets, and with the rise of the global Internet, international business operates in a complex environment. As international business continues to expand, it is evolving the global economic environment. This course will present an overview of international business. We will consider cultural influences, trade relations, legal and labor agreements, governments, and business structures in our global economy.

Components: Lecture

MSO 328(3) Course ID:004181

Public Policy & Human Services

Designed to provide students with an understanding of how changes within the local government affect the way social and human services are provided to the poor and indigent in the District of Columbia.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 335(3) Course ID:011821

Human Services Delivery: Skills, Strategies, and Resources

Prerequisite: MSO 101 or MSO 334.

Components: Lecture

Enrollment Requirements: MSO 101 or MSO 334

MSO 340(3) Course ID:012641

Human Services Administration

Serves to focus on the operational activities associated with managing and growing a human services organization. Emphasizes issues such as strategic planning and management, organizational assessment, community outreach, and fund-raising.

Components: Lecture

MSO 345(3) Course ID:012640

Legal and Ethical Issues in Human Services

Explores the legislative issues and court decisions related to client rights and care as well as the legal standards to which human service workers are held accountable. The dynamic interplay between law, ethical codes of conduct, and good professional practice is examined.

Components: Lecture

MSO 350(3) Course ID:005917

The American Civil War

A study of the background, development, personalities, and aftermath of the Civil War. Special attention to the coming of the war and the different explanations of its causes. Prerequisite: MSO151.

Components: Lecture

Enrollment Requirements: MSO 151 and Metropolitan College Students Only

MSO 358(3) **Course ID:004182**
Immigrant Experience in America
Discusses the cultural, social, political, religious, and psychological aspects of immigration to the United States, the adjustment of immigrant groups to American society, and the reaction of Americans to the arrival of new groups.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 359(3) **Course ID:004183**
Urban Immigrant Politics
This course surveys the history and experiences of immigrants in the American urban centers. It also considers urban immigrant politics since the Civil War.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 365(3) **Course ID:004184** **Department Consent Required**
Introduction to Counseling
Provides the student with background in the three basic elements of counseling: self-development, skill development, and process development. Engages students in research on theoretical issues and practical applications of various counseling modalities, as well as examining the process of assessment, treatment, and evaluation as practiced in professional counseling. Provides opportunities to practice a variety of counseling skills with appropriate monitoring and assessment of application.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 380(3) **Course ID:004187**
Social Psychology
An introduction to the study of the individual interacting in a social context. Theories of attitude development and change, social perception, and small group behavior. Applications of social psychology in social work and other professional fields.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 381(3) **Course ID:004188**
Psychology of Aggression & Violence
Examines interpersonal, intergroup and international violence and aggression from the standpoints of physiological, motivational, learning, cognitive, and interpersonal factors, as well as structural and sociological factors. Also covers aspects of the psychology of nonviolence.
Components: Lecture
Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 384(3) **Course ID:014765**
Principles and Practices of Social Entrepreneurship
This course provides an introduction to principles and practices in social entrepreneurship. Students gain an overview of the perspectives and strategies of visionaries who are creating new ways to address intractable social problems. Students identify and assess social needs and how they are addressed by entrepreneurs, philanthropists and government.
Components: Lecture
Enrollment Requirements: Not open to students who've taken MSO 584

MSO 385(3) **Course ID:014766**
Public Private Partnerships
This course provides an introduction to the role public agencies and private corporations play in partnership to solve social problems in a variety of sectors. Discusses the framework used to identify, establish and sustain partnerships, and reviews US and international case studies of public-private partnerships.
Components: Lecture
Enrollment Requirements: Not open to students who've taken MSO 585

Corporate Social Responsibility

Through thought leadership and effective management, socially responsible corporations can expect to attract investors, customers, recruit and retain highly talented employees, and improve their bottom line. This course explores how corporations design, manage and measure social strategies to generate social and business value. Students learn the frameworks, methodologies and tools used by leading corporations to create socially responsible businesses.

Components: Lecture

Enrollment Requirements: Not open to students who've taken MSO 586

MSO 395(3) Course ID:004190

Conflict Resolution

The study of the analysis and resolution of human conflict. Emphasis on the role of mediation in dispute resolution focusing on language, listening, and problem-solving techniques.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 396(3) Course ID:007793

Working with Couples and Families

Addiction problems affect more than the substance user. Finding solutions to addiction problems can be enhanced by engaging families in the treatment process. Integrating diverse approaches to family therapies through a multi-phase process will be presented. Participants will have the opportunity to apply the model to clinical situations they wish to discuss.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 397(3) Course ID:004191

News Media International Affairs

This course presented in Seminar form, is an examination of the relationship between the news media and government decisions in international affairs. It will concentrate principally, but not exclusively, on the relationship between the press and the U.S. government. The press is often called the "fourth branch of the government" because of its extensive influence on international and domestic activity. The course will examine the complexities of this relationship.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 398(3) Course ID:011673

International Conflict Resolution

The goal of this course is to introduce students to major theories and approaches in the field international conflict resolution, including material from political science and peace studies. Students will also gain familiarity with important case studies of interstate and intrastate conflict, and learn how to apply different theories to practical cases. At the conclusion of the course, students will be able to demonstrate understanding of different theoretical approaches to international conflict, and assess case studies according to the approaches learned.

Components: Lecture

MSO 401(3) Course ID:004192

Management for Public Health

This course provides the student with a broad range of factors that can affect public health policy development and implementation, which can influence how public health services are organized and developed. The differing approaches to develop and implement public health policy and to organize and manage a unit within the public health service.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 412(3) Course ID:013431

Social Entrepreneurs, Innovators, and Problem Solvers

This course will introduce students to some key social innovators that are attempting to solve today's social problems in creative and innovative ways. Students will analyze the vision, activities and challenges of these visionaries.

Components: Lecture

Africa Rising

This course covers some trends, prospects, challenges and opportunities in the economic growth and development of Africa.

Components: Lecture

MSO 415(3) Course ID:013292

International Social Entrepreneurship

This course introduces students to the traditional methods of social change, and then examines new approaches for effective social change in the 21st century. Students will learn about the international social entrepreneurs, innovators and visionaries who are creating new strategies for solving social problems.

Components: Lecture

MSO 417(3) Course ID:013637

Social Enterprise Development

This course focuses on innovative approaches to creating social value through the development of social businesses. Students learn about the strategic tools that social entrepreneurs use, factors pivotal to success, and the challenges that social enterprises face from inception to maturity. Students prepare a blueprint to address a social problem of their choice.

Components: Lecture

Enrollment Requirements: Not open to students who've taken MSO 587

MSO 450(3) Course ID:012642

Case Management and Crisis Intervention

Provides the foundation of good practice, including models, theories and ethics of case management and crisis interventions, including intake, assessment, action plans, resources, referrals, and informational strategies. Explores the use of case management in both public and private human services programs; focuses on issues of eligibility coordination, efficient use of community resources, program planning, crisis response, and models of case management.

Components: Lecture

MSO 455(3) Course ID:005918

Psych. Child Abuse & Neglect

Review of current literature on child abuse and neglect, including identification, etiology, treatment, prevention, and legal aspects. Also discusses family violence. Prerequisite: MSO180 or MSO190.

Components: Lecture

Enrollment Requirements: MSO 180 or MSO 190 and Metropolitan College Students Only

MSO 461(3) Course ID:004194

Psychology of Group Behaviour

An analysis of the effects of the individual on the group and the group on the individual. Investigates unstructured collective behavior, group formation and development, member characteristics, conformity, cohesiveness, and leadership.

Components: Lecture

Enrollment Requirements: Metropolitan School of Professional Studies undergraduate students only

MSO 470(3) Course ID:017123

Research Methods and Statistics for Social Science

Entry-level undergraduate survey of research methods with an emphasis on comprehension of the social science business research literature. Course includes exploration of scientific method, locating and summarizing published research, sampling, measurement, statistics, research design, and critique of published research.

Components: Lecture

Enrollment Requirements: Open only to MSPS undergraduates who have taken MBU 370

MSO 490(3) Course ID:004195

Topics in Social Science

Selected subjects in the social science fields discussed from time to time.

Components: Lecture

Topics: Psy/Interpersonal Relations, Public Policy Process Analy, Anth: African Religions, Islam in Modern World, Views from the Third World, Urban Ethnic Politics, Issues in Interntl Pol Economy, Youth Unemployment in Developing Economies, Catholic Social Justice, Human Behavior and Social Environment II

Catholic Servant Leadership

Servant leadership is both a theoretical and practice model of management. Catholic servant leadership adds a theological/spiritual dimension to the model, placing the teaching of Jesus Christ, as passed on by the gospels and doctrinal documents of the Catholic Church, at the center of servant leadership.

This course explores Catholic servant leadership as a means for managers and administrators to help their organizations and the people they lead to grow, thrive, and succeed. The course examines the foundation of Catholic servant leadership in the traditions and books of the Old and New Testament, and the witness of saints who exemplify Catholic servant leadership.

Finally, the course allows the student to consider the practice of Catholic servant leadership in the

History of Art: From the Renaissance to the Modern Age in Rome and Beyond

This course is a survey of Western art from the fifteenth century to the present as exemplified by the art and architecture of Rome. Students will investigate Renaissance, Baroque, Neoclassical, Romantic, Modern, and Contemporary masterworks in terms of their formal development and cultural context through readings, lectures, class discussions, and field trips. The course will address the ways in which individuals and communities have sought to explore and express the most profound of human experiences and concerns across the ages, including concepts of identity, mortality, war, peace, justice, divinity, love, beauty, and transcendence. In this process, we will also investigate the cultural context surrounding the development of various genres of art (including portraits, landscapes, religious and historical art, and abstraction), and the role of these art forms in conveying ideas on an individual and a communal level. We will weigh, in other words, how art both reflects and inspires society's values in Rome and beyond. Class instruction and writing

Dig. Art/Visual Communication

Digital media platforms offer ways to instantly reach vast audiences globally. Much of this communication is visual and often cross-disciplinary in form. This course examines foundational digital art media as a vehicle for communication within networked society. Students will consider how emerging digital art and design tools can amplify their individual ideas and ideals. The course requires students to consider the question: What does it mean to be an individual, and how do we live as members of society? Students will utilize a variety of industry-standard computer software packages and concepts as they develop visual communication projects. Students will learn how to translate and communicate their own concepts and viewpoints into effective graphic visuals, in the form of posters, brand identities, info-graphics, cross-platform campaigns and other time-based digital content. Fulfills Explorations in Fine Arts course requirement.

Cell Phone Photography

With the ever-present cell phone comes the practiced use of the built-in camera feature. ART 229, Cell Phone Photography, explores the possibilities of the phone as the modern day camera. Having the camera present at all times allows for the documentation of everyday life and the idea that art and imagery are all around you. This course will heighten student's sensory skills, leading to better images and opening up a new form of photography. With the cell phone and the use of the computer, students will create new art forms based upon assignments given to them specifically to be photographed in day-to-day situations. Students will acquire photographic skills in composition, computer rendering techniques in such programs as Photoshop and will create imagery suitable for internet and gallery display. No prerequisites are necessary.

Components: Studio

ART 230(3) Course ID:016588

Smart Phone Filmmaking

SMART FILMMAKING ON SMART PHONES (or just SMART PHONE FILMMAKING)

The best camera is the one you've got with you -- that's what still photographers like to say, but it's also becoming more and more relevant to daring independent filmmakers, and anyone who likes to use the video capability of their phone. In 2005, the first feature length film was made on a mobile phone and indie filmmakers around the world took careful note. Smart phones like the iPhone 6 shoot very high quality video, have customized tripods, lenses, and apps; they record remarkably good quality sound and can be modified to record with professional microphones. Every year smart phone video technology improves and more and more customized filmmaking tools are added by developers. But you'd be surprised what you can accomplish with just the basic tools -- you, your phone, and some editing software. During six intensive classes this course will help you improve your skills working with your own smart phone and make videos that will catch

CUA @ the National Gallery of Art

CUA@NGA: Women and Art.

Art history is not static. Our interpretations of works of art are shaped by our understanding of the past as seen through the lens of the present. This holds especially true for works with women as subjects. This course focus both on art that features women and art made by women to see how gender issues have shaped the creation and reception of art across time. The class will include both religious and secular imagery, and will be arranged chronologically beginning in the Renaissance and ending with contemporary works that require us to address social and cultural issues at play today. Fulfills Explorations in Fine Arts course requirement.

Components: Lecture
Topics: Renaissance Art, Baroque Art, American Art

ART 252(3) Course ID:015329

CUA@NGA

This class will meet at the National Gallery of Art and will take place entirely in the galleries. Students will closely study paintings and sculptures executed in Europe and America from around 1500 to today. Through interactive discussions and shared discovery, we will explore how individual works fit into broader artistic, social, and cultural contexts especially as it connects to ideas around identity. Fulfills Explorations in Fine Arts course requirement.

Components: Lecture
Topics: In Depth Modern Art from Manet to Dali, The Northern Renaissance and Baroque, Portraiture - 15th to 20th Centuries

Art of Mary at the National Gallery

Mary, the mother of Jesus, is perhaps the most painted woman in history. Her image is the inspiration behind much of western spirituality and devotion. This course will explore the rich and complex nature of Marian art and iconography through an in-depth analysis of works from the Gallery's permanent collection. Objects to be discussed include major works of Byzantine and medieval art as well as masterpieces by Giotto, Duccio, Botticelli, Raphael, Van Eyck, Durer, Rembrandt and Tiepolo. Class meetings take place in the museums, galleries, and research facilities.

ART 254(3) Course ID:018918

Contemporary Art in Washington: Objects and Issues

This course will make use of public collections in metropolitan Washington to grapple with the most important issues in contemporary art. Six case studies of art objects will provide lenses through which to view the major themes and contributors of art-making in America. These themes include political and visual representation, the roles and gestures of the artist, and the place of monuments and monumental figures. The course will regularly include field trips, live broadcasts, and digital studio visits with contemporary artists wherever possible.

Components: Lecture(Blended (in-person and online))

Room Requirements: DEPARTMENT SPACE(1)

ART 271(3) Course ID:015790

Introduction to Ceramic Art

Students learn basic methods of clay construction, decorating and glazing techniques, and various firing procedures. Clay/ceramic and glaze chemistry explained. A studio course promoting an understanding of the ceramic process and its contributions to the human endeavor by the ceramic art expressed by cultures past. Students achieve these goals by the design, production and analysis of assigned and final ceramic projects.

Components: Studio

ART 272(3) Course ID:018692

The Cosmopolitan Renaissance

The Renaissance city was defined by collisions of people and ideas; it was a site of contest between old and new, sacred and profane, elite and common, and insider and outsider. In this course we will examine five major cosmopolitan cities (Bruges, Florence, Venice, London and Milan) to understand how the diverse international populations of these mercantile communities shaped artistic practice. We will look to the powerful role of patronage in both creating desire for new styles and subjects, as well as in transporting knowledge between disparate nations. We will also attend to the role of national identity in the nascent realm of artistic self-consciousness. By tracing cross-cultural movements, this course will ultimately work to de-center traditional conceptions of the Renaissance as constrained by borders. Fulfills Explorations in Fine Arts course requirement. Counts as both a fulfillment of the Ren/Baroque requirement and as an Art History elective.

Components: Lecture(In Person)

Made in America: The American Revolution to Present Day

This lecture course surveys American art from the American Revolution through present day. Our primary focus will be on painting, but we will also touch upon sculpture, photography, architecture, and printmaking. As we move from the revolutionary eighteenth-century all the way to our contemporary moment, we will explore the dynamic interplay between works of art and their specific historical, social, and political contexts as well as those objects; situation within the broader material and visual culture of the United States. Special attention will be paid to the relationships between art and artmaking and notions of religion, nationalism, crisis, the environment, identity (e.g. race, ethnicity, class, gender, sexuality), and more.

Introduction to Gallery and Museum Practices

Gallery Practices is composed of three main components - curatorial research and practice, exhibition design, and public-out-reach and network building through traditional and new media communication platforms. Students will attain the primary research skills needed to interpret the work of both living and historic artists through applied interview techniques and secondary research. Strategies for effective exhibition design will be explored with a current practitioner, and through direct observation and analysis of various types of art exhibitions, ranging from non-profit galleries to museums. The public communication component will include a focus on graphic design, public interpretation (wall-label, brochure, catalogue, MP3, and web-mounted texts), and public out-reach through multiple platforms (including press-release statements, and interactive social media). In this hands-on course, students will develop and design an exhibition.

Components: Lecture

ART 280(3) Course ID:018906

Creative and Critical Thinking and Inquiry

Creativity and critical thinking skills and mindsets are essential to those who desire to be makers of change in the world and promote others' abilities to do the same. In this course, explore artmaking individually and collaboratively "as a way of knowing." This class utilizes active, inquiry-driven learning to address contemporary issues in society. Activate your creative confidence using design thinking, a human-centered, transdisciplinary, collaborative process highlighting empathy, reflection, analysis, and action. Former art experience not required.

Splendors of Byzantium: Art and Culture of the Empire, 330-1453

This course will explore the visual culture of Byzantine Empire from the founding of Constantinople in A.D. 330 to the 15th century. The class will use the resources of Dumbarton Oaks Museum, which holds one of the most important collections of Early Christian and Byzantine art in North America. We will experience first hand the objects in the collection, including mosaics, metalwork, ivories, textiles, icon paintings, and illuminated manuscripts from a variety of contexts, secular and ecclesiastical, private and public. Through a number of case studies we will think and talk about forms of visual expression in Byzantium and their use in the shaping and reproduction of main cultural and social structures.

Components: Studio

ART 302(3) Course ID:016467

Death, Art & the Afterlife

This course will explore Greek and Roman conceptions of death and afterlife, and their expression in funerary art and architecture from the early Archaic period through Late Antiquity. The course will examine rituals such as cremation, inhumation, funerary processions and other mourning and commemorative practices, as well as various types of burial markers and monuments, including stelai, urns, ossuaries, sarcophagi, catacomb paintings, and chamber tombs. Decorative imagery, inscriptions, and tomb structures will be studied from various perspectives as indicators of social status and cultural identity, gender and family structure, and beliefs about the afterlife. The dynamic effects of cross-cultural influence in Hellenistic Asia Minor and Roman Egypt will be investigated, as will the enduring impact of these ancient cosmologies and art forms on later cults and cultures, including Christianity in the later Roman period. Fulfills Explorations in Fine Arts course requirement.

ART 310(3) Course ID:015601

Introduction to Early Christian Art and Archaeology

An exploration of art, architecture, and material culture from the mid-3rd century through the 8th century AD, a time when the Christian faith grew from one of many practiced throughout the Roman world to an empire-wide state religion. This course will investigate Christian iconography's origins in the pagan and Jewish art of late antiquity, and the innovative visual forms that arose to express Christianity's new spiritual concepts. The dynamic effects of competing "heresies," iconoclasm, and the increasingly defined doctrines, rituals, and structures of the Church will be examined in relation to the visual arts, within the context of the political fracturing of the Roman Empire, the persistence of Greco-Roman cultural heritage, and the rise of Islam in the 7th century. Examples drawn from western Europe and the eastern Mediterranean region will include church architecture, wall paintings, mosaics, icons, sculptures, manuscripts, and objects in ivory, ceramic, and glass. Visits to Dumbarton Oaks in Washington, D.C. and the Walters Art Museum in

ART 319(3) Course ID:001140
Renaissance Art and Architecture - Art in the First Global Age

This course explores the artists, patrons, craftsmen, and scholars of Europe between 1400 and 1600 as well as the art objects and buildings that reflect the cultural exchange triggered by the first global age -- a time period commonly referred today as the "Age of Discovery." We begin in Italy, with the origins of the Renaissance in Florence, and the rivalry between leading artists, including Michelangelo and Titian, and power city states, such as Rome, Milan, and Venice. North of the Alps, we will survey the rich urbanized courts and cities of Flanders, France, Germany, and the Iberian Peninsula. We will also investigate signal artists with trans-European careers, and the art created in response to the exchange of goods, ideas, flora, fauna, and people brought on by European exploration in Europe and across the globe, including the Ottoman Empire, Latin America, Africa, the Indian Subcontinent, and East Asia. Fulfills Explorations in Fine Arts course requirement.

Components: Lecture

ART 320(3) Course ID:005614
The Art of the Baroque World

Seventeenth-century Europe was a period of intense religious reform, economic and scientific developments, and the growth of and challenges to political absolutism. As European colonies and trade routes solidified following the Age of Discovery, these developments resulted in theatrical, dramatic, emotional and psychologically engaging works of art and architecture created across the world in a global Baroque. This course explores painting, sculpture, printmaking, book production, luxury arts, and architecture in both Europe and its colonies and trading partners across the seas. We will explore visual culture from the Vatican to Versailles to the villages of Holland, meeting characters such as the mischievous Caravaggio, the showman Gian Lorenzo Bernini, the courtly Peter Paul Rubens and Diego Velázquez, and the elusive Johannes Vermeer, as well as the prints and books of daily life used for worship, political satires, and romance. We will also investigate the impacts of European art globally, from both admiring emperors and colonial subjects

Components: Lecture

Course Equivalents: ART 620

ART 321(3) Course ID:008727
Venetian Art

This course surveys visual arts and architecture emerging in the late fourteenth century to the late sixteenth century. It will explore the history of art not only in Venice, but also the Venetian Republic's other possessions: the domini di Terraferma, such as Padua, and its Stato da Mar, such as Crete. Rather than presuming a "Venetian" style defined in contrast to other centers of the Italian Renaissance, we will aim to understand regional and individual tendencies on their own terms. The course will present the canonical works of Venetian Renaissance painting, sculpture, and architecture, but it also aims to expand the scope of relevant items for art historical inquiry, covering material culture, manuscripts, and early printed books. The works themselves within a historic context will be the focus, including their means of production, the places for which these images were intended, the concerns of patrons and art collectors, and the expectations and responses of the works' first viewers.

Components: Lecture

Course Equivalents: ART 621

ART 322(3) Course ID:009571
The Visual Culture of Renaissance Rome

A study of the art and culture of one of the most magnificent and powerful cities in history. Considers Rome in the 15th and 16th centuries as both a religious and political center, across a broad spectrum of life from the papacy to the local population. Addresses the impact of ancient Rome on the Renaissance, and how Rome shaped itself as a modern city. Examines the art and architecture of churches, palaces, and villas - including the treasures of St. Peter's and the Sistine Chapel -- in all aspects of artistic production, from paintings, frescoes, fountains, and sculptures, to urban planning and public festivals.

Components: Lecture

ART 323(3) Course ID:001141
Nineteenth Century Art: Neoclassicism, Romanticism, Realism, and Impressionism

An illustrated survey of the art of the Nineteenth Century, one of the most dynamic periods in the development of Western culture. Considers some of the sweeping transformations that took place in art and society during the century and traces the rise of modern art in the painting, sculpture, and design of this vital turbulent age. Artists discussed include David, Ingres, Gericault, Delacroix, Friedrich, Goya, Courbet, Manet, Degas, Cassatt, Monet, and Renoir. Replaces 563; see also 331, which partially replaces 563 and 462.

Rome, the Eternal City

No city in the world has an urban fabric so rich in historical layers and dense in historic monuments as Rome. As the heart of the ancient Roman empire, a major Christian pilgrimage destination, the seat of the papacy, and the capital of the modern nation of Italy, Rome has been the site of extraordinary urban development and artistic patronage for more than two millennia. This course surveys the topography and urbanism of Rome from its ancient origins to the present. We will examine the built environment in the largest sense of the term: architecture and urban planning in particular, but also other art forms that played a role in the defining the geography of the city, including sculpture, painting, and mosaic. The objective is to understand not only the formal qualities of Rome's great monuments, but also how they functioned, both individually and collectively, in relation to the changing social and cultural conditions of the city. In tracing this history, we will utilize literary descriptions and maps, prints, and drawings

Components: Lecture

ART 328(3) Course ID:011343

The Art and Literature of Paris

This course offers an introduction to the art, literature, history, and culture of the City of Lights. Through field trips, assigned readings, class discussions, and on-site visits to a selection of the city's many splendid sacred sites, magnificent museums, and historic monuments, students will encounter the history and culture of one of the world's most venerable and beautiful capitals. Particular attention will be paid to art works and texts that have helped to define French culture and style throughout the ages.

Art as Action: Art and Politics in the 20th and 21st Centuries

What is the relationship between politics and art? This question will guide our course. Moving across the twentieth-century through present-day, we will explore the many ways that western artists have sought to achieve social and political transformation through their work. We will ask whether art can be at once politically powerful and aesthetically impactful, and we will also weigh the merits of such a goal. We will consider a range of different mediums that artists have used to make social statements and to support political action, from painting to performance art to posters, as we examine topics including Mexican muralism, American painting during the Cold War, the Guerrilla Girls, and the art of Black Lives Matter, among other fascinating and historically important episodes. A special unit dedicated to civil unrest during the 1960s will involve museum visits.

ART 346(3) Course ID:012322

Art, Religion and Magic in Renaissance and Baroque Italy

This course explores Renaissance and Baroque beliefs in the power of images to transform their beholders. The idea that images might produce profound mental and physical changes in viewers was widely articulated in the period 1450 to 1650. They might soothe a troubled soul, create healthy and beautiful bodies, and mitigate physical suffering. This course will consider varied types of images, including miraculous images, and magical images, their functions and their efficacy. How did images heal the sick, cheer distressed or melancholic beholders, or transform the physical appearance of their beholders? To what extent did the expectations of efficacy attaching to paintings differ from other forms of talismanic images? Among the questions this course will consider: how did artists approach the creation of images with such expectations in mind? And knowing that their paintings were supposed to transform, how did they address specific audiences (male vs. female, for example)?

Northern Renaissance Art: From Van Eyck to Bruegel

The fifteenth and sixteenth centuries were a period of intense artistic innovation not only in Italy, but also North of the Alps. This course explores the distinct visual culture of the Low Countries (modern Belgium and the Netherlands) and Germany from the time of Jan Eyck, whose stunning depiction of mundane beauty aimed to uncover the world's divine order, to that of Pieter Bruegel the Elder, whose painting of reveling peasants and of the unusual topic broke with established conventions. Another focus will be the emergence of the medium of print, particularly the extraordinary works of Albrecht Durer, and its central role for artistic exchange in the period.

Museum Studies

This course focuses on museum display as a form of multi-dimensional, interactive media. It will offer an in-depth look at exhibition creation from inception to display. Readings, field trips, guest speakers, and in-class discussions will explore the dynamic relationship between museum visitors, collections, and public and private spaces, including innovative applications of technology, essential conservation principles, and advances in enhanced accessibility. The class is designed to draw upon the wealth of museum resources in the Washington area.

American Pop Art in the 1960's

When Pop Art burst onto the American art scene in the early 1960's, it constituted a profound challenge to prevailing definitions of high culture through its introduction of the imagery and style of mass culture-pin-ups, comic books, advertisements, etc.-into the realm of fine art. In this course we will examine the initial controversy provoked by the movement through an exploration of the work of artists such as Andy Warhol, Roy Lichtenstein, and James Rosenquist, as well as the writings of early critics who attacked-or defended-their work. In order to understand the controversy provoked by the movement, we will also look closely at its historical context. The post-World War II socio-economic boom led to heated debates about the interrelationship of class, taste, and culture; these debates were exacerbated by the emergence of Camp and a youth-oriented mass culture by the mid-1960s. In conclusion we will examine the legacy of Pop: its pioneering of post-modernist themes and artistic practices, as well as its impact on subsequent artistic theory. The

ART 355(3) Course ID:005617

Art and Devotion

The fifteenth century saw the rise of a mystic piety, which focused on direct personal engagement with holy figures and the recreation of the sights and sensations of biblical events in one's own mind. The increasing fascination with spiritual vision on the one hand, and a rising interest in the close observation of the natural world on the other led to an art that celebrated physical vision and material beauty as manifestations of the divine. This course explores the role of art in both public liturgy and private devotional practice, focusing on the work of Netherlandish artists such as Jan van Eyck, Rogier van der Weyden, and Hieronymus Bosch. After the Protestant Reformation, the traditional liturgical and devotional functions of religious art were called into question. Artists like Albrecht Dürer, Joachim Patinir, and Pieter Bruegel the Elder, creating images for both Catholic and Protestant patrons, had to navigate a more diverse confessional culture, and religious images began to serve as exempla and focal points for moral

Topics in 17th Century Art: Artemisia Gentileschi & Caravaggio

This course examines the lives and art of two seventeenth-century Italian painters, whose dramatic biographies have often informed, and sometimes overshadowed, the interpretation of their art. Caravaggio and Artemisia are beloved by scholars and the public alike, and have been the subjects of intense study in recent years. Their careers are exemplary of the many social, economic, cultural and psychological obstacles contemporary artists faced, and of the methods by which they overcame these in the pursuit of artistic achievement, livelihood and fame. The following are among the many questions this course will consider: to what extent did the artist's personal experience necessarily inform his/her art, and what other historical forces may have conditioned it? How did Artemisia assimilate stylistic innovations first introduced by Caravaggio, and how did she subsequently develop a style of painting that enabled her to compete with male painters? Why have these two artists come to dominate the study of Italian Baroque art and what can they tell

The Cult of Saints in Medieval Europe

From the earliest days of Christianity, certain holy men and women were dubbed saints and their bones, the places where they died, and the stories of their lives were given special status and became the focus of artistic activity. This course will focus on the art and architecture produced in the service of the cult the saints, and will cover not only major architectural monuments and richly decorated reliquaries and manuscripts, but also the smaller, more humble keepsakes made for the pilgrims who visited the shrines. The monuments discussed will be primarily western European, but non-Western saints and pilgrimage activities, particularly Byzantine and Islamic, will receive some attention. In addition to art-historical literature, students will read some medieval texts including saints' Lives and first-hand accounts of pilgrimage. No previous coursework in art history is required, but some familiarity with medieval studies will be helpful.

Michelangelo, Leonardo and Raphael

This seminar will examine the historic life and remarkable work of Leonardo da Vinci, Michelangelo Buonarroti, and Raphael Santi, arguably the three most consequential figures in Western Art. We will focus on the significant relationship, and sometime rivalry, between these figures. We will also evaluate the dynamic theoretical, theological, philosophical, political, and economic contexts from which masterworks like the Last Supper, Sistine Ceiling, and Vatican Stanze emerged. Furthermore, we will examine these artists; seminal roles in shaping many of the notions we associate with the modern artist, including concepts such as artistic genius and subjectivity. Throughout the seminar, students will approach the material critically coming to terms with issues of historical interpretation itself.

Art and Spirituality: Making and Meaning in Medieval Italy 1100 - 1400

This course focuses on the creation and meaning of medieval Italian art, paying particular attention to technique and display. We will examine a wide range of visual material in a variety of media such as sculpted portals, tombs and pulpits, illuminated manuscripts, painted panels, frescoed chapels and enameled reliquaries. This will include consideration of settings and space; the decisions made by both artists and patrons; and audiences. Consideration will be given also to the development of new types of images in relation to the cult of the saints and the rise of new religious orders, particularly the Franciscans and the Dominicans. Making use of works in local art collections, special attention will be devoted to panel painting and the various functions panels served within the medieval church as well as issues related to their display within the modern museum. The course includes visits to the National Gallery of Art and the Walters Art Museum.

How to Survive the Bomb: Art, Music, and Literature in the 1950s

By 1950, the Cold War was in full swing and fear of nuclear annihilation was increasingly palpable. This course will examine how artists explicitly and implicitly addressed the political, cultural, and ethical implications of this situation. Beginning with the abstract art of the Abstract Expressionists, and working our way through the Beat poets, the musical compositions of John Cage and Morton Feldman, and jazz, the cryptic, collage-like works of Robert Rauschenberg and Jasper Johns, the figuration of Larry Rivers, the performance-based Happenings of Allan Kaprow, as well as photography and film, we will consider the variety of ways that artists responded to the fear and repression of the Cold War. We will read a variety of texts ranging from artists' writings, literature, contemporary criticism, and scholarly accounts to gain a better understanding of the artistic diversity of the 1950s.

Components: Lecture

ART 375(3) Course ID:015835

Rethinking the Renaissance: Artistic Exchange Between North and South

This course examines art made between ca. 1400-1600 that has traditionally been described as belonging to the Italian Renaissance (that is, art made on the Italian peninsula) and to the Northern Renaissance (that is, art made in what is today the Netherlands, Belgium, France, Germany and Austria). While these two subjects are often taught as separate historical and artistic phenomena, this course will consider possible alternatives to this prevalent model. By focusing on artists and art works that traveled in both directions across the Alps, students will have the chance to consider a more inclusive definition of the Renaissance.

Undergraduate Comprehensive Examination: Art History

Art History seniors take a three-part comprehensive essay examination that is given over two or three days. Each candidate is asked to write three essays from a selection of five or more essay questions for each of the three parts of their comprehensive exam. Part I of the Art History Comprehensive Examination tests the candidate's knowledge of Ancient, Early Christian, Byzantine, and Medieval Art and Architecture; part II covers Renaissance and Baroque Art and Architecture; and part III assesses the candidate's knowledge of Critical Theory and the Art and Architecture of the Modern and Contemporary world.

ART 498S(0) Course ID:015179

Undergraduate Comprehensive Examination: Studio Art

This intensive capstone project evaluates Studio Art seniors' abilities to conceive, develop, and fully realize an original body of art work accompanied by a written artist's statement and an oral presentation of the project. These written and oral statements must demonstrate the major's understanding of art historical context and their own personal creative influences. The Studio Art Senior Thesis Capstone Project measures the sum of each studio student's academic experience in mastering the technical skills needed for the production of art in each student's chosen media -- painting, sculpture, or digital art. It also demonstrates each studio student's essential understanding of critical thinking and art history. Since the creative process consists of the application of all these learned elements, the senior project assesses the student's technical proficiency, his or her ability to function as a productive visual artist, and his or her basic comprehension of his or her major undergraduate curriculum.

ART 501(3) Course ID:014082

Byzantium and the West

This course will explore the visual culture of Byzantine Empire from the founding of Constantinople in A.D. 330 to the 15th century. The class will use the resources of Dumbarton Oaks Museum, which holds one of the most important collections of Early Christian and Byzantine art in North America. We will experience first hand the objects in the collection, including mosaics, metalwork, ivories, textiles, icon paintings, and illuminated manuscripts from a variety of contexts, secular and ecclesiastical, private and public. Through a number of case studies we will think and talk about forms of visual expression in Byzantium and their use in the shaping and reproduction of main cultural and social structures.

Components: Studio

ART 502(3) Course ID:016753

Art, Death & the Afterlife

This course will explore Greek and Roman conceptions of death and afterlife, and their expression in funerary art and architecture from the early Archaic period through Late Antiquity. The course will examine rituals such as cremation, inhumation, funerary processions and other mourning and commemorative practices, as well as various types of burial markers and monuments, including stelae, urns, ossuaries, sarcophagi, catacomb paintings, and chamber tombs. Decorative imagery, inscriptions, and tomb structures will be studied from various perspectives as indicators of social status and cultural identity, gender and family structure, and beliefs about the afterlife. The dynamic effects of cross-cultural influence in Hellenistic Asia Minor and Roman Egypt will be investigated, as will the enduring impact of these ancient cosmologies and art forms on later cults and cultures, including Christianity in the later Roman period.

ART 509(3) Course ID:016404 Department Consent Required

Metal Sculpture

The welded steel and cast metal sculpture creation are the focus of this course. Students will gain a hands-on introduction to the methods of constructing and fabricating metal sculpture. They will explore a survey of historical methods of making metal sculpture through illustrated lectures, and field trips to local art museums and galleries; and they will be challenged to create works that are self-expressive and engaged with aesthetic concerns in their studio assignments. This course may be repeated for credit.

History of Art and Architecture: From the Renaissance to the Modern Age in Rome and Beyond

This graduate level course is a survey of Western art from the fifteenth century to the present as exemplified by the art and architecture of Rome. Students will investigate Renaissance, Baroque, Neoclassical, Romantic, Modern, and Contemporary masterworks in terms of their formal development and cultural context through readings, lectures, class discussions, and field trips. The course will address the ways in which individuals and communities have sought to explore and express the most profound of human experiences and concerns across the ages, including concepts of identity, mortality, war, peace, justice, divinity, love, beauty, and transcendence. In this process, we will also investigate the cultural context surrounding the development of various genres of art (including portraits, landscapes, religious and historical art, and abstraction), various styles of building and monumental sculpture from the Renaissance to the present, and the role of these art and architectural forms in conveying ideas on an individual and a

Intro to Digital Photography and Photoshop

With the ever-present cell phone comes the practiced use of the built-in camera feature. ART 229, Cell Phone Photography, explores the possibilities of the phone as the modern day camera. Having the camera present at all times allows for the documentation of everyday life and the idea that art and imagery are all around you. This course will heighten student's sensory skills, leading to better images and opening up a new form of photography. With the cell phone and the use of the computer, students will create new art forms based upon assignments given to them specifically to be photographed in day-to-day situations. Students will acquire photographic skills in composition, computer rendering techniques in such programs as Photoshop and will create imagery suitable for internet and gallery display. No prerequisites are necessary.

Architecture of Renaissance Venice (1500-1600)

At the dawn of the 16th Century, Venice was at the height of its wealth and power as the strategic and political center of northern Italy, the leading port to Europe, and a gateway to the Levant. During the High Renaissance, Venice and Veneto (its surrounding region) were home to remarkable cultural and architectural innovations. Arguably the most important architect of this brilliant age was Andrea Palladio (1508-1580). His design projects, inspired by the ancient Romans, were all constructed in the Venetian Republic; but his legacy can be seen throughout the world. Among the greatest examples of Palladian architecture may be counted Wren's St. Paul's Cathedral (London), Jefferson's Monticello (Charlottesville), and even the US Capitol. This seminar will focus on the development of Palladio's style in his churches, palaces and especially villas, and the enduring legacy of both his influential writings and his timelessly elegant design. It will draw upon the superb collection of works from the Italian Renaissance at the National

Venetian Renaissance Art

This course will focus in-depth on the Venetian artists of the 15th and 16th centuries, including the painters Andrea Mantegna, Giovanni Bellini, Giorgione, Tintoretto, Veronese and Titian, whose contributions are central to the subsequent course of western art, both religious and secular. The course will also address the architecture of Andrea Palladio. Venetian art in the Renaissance will be discussed in its unique religious, historical, political, geographical, socioeconomic and literary context. The course will be taught in seminar format with an emphasis on close visual analysis of the art and in-depth discussion of critical readings. At least one class session will be conducted at the National Gallery of Art, which has one of the finest collections of Venetian Renaissance painting in the United States. Departmental approval required.

Voice IA: Speech and the Actor I

Based on the teaching of Kristin Linklater and her work "Freeing the Natural Voice," the goal of this course is to enrich students' physical, vocal, mental and emotional understanding of their voice instrument, habits and patterns; enable them to experience and, by choice, to release negative habitual patterns; explore the relationships among concentrated relaxation, breathing and sound initiation and resonance production and to extend the students' discovery of habitual tension release and sound exploration into text, characterization and emotional life of those characters.

Components: Studio(In Person)
Enrollment Requirements: open to students in the BFA - Acting program

Survey of Theatre History

This course introduces students to the major periods of theatre history, from the earliest forms of performance through the 19th century. The students will examine the social, cultural and political climate that of each of these periods and their impact on the theatre. Students will also study the major play, artists and production practices of these periods.

Components: Lecture

Enrollment Requirements: DR 101

Room Requirements: DEPARTMENT SPACE(1)

DR 202(3) Course ID:001551

Theatre Topics

Study of drama, theatre, criticism, and culture through focus on selected problems, issues, or periods. Topics and faculty for each term announced in advance. Recent topics have included theatre architecture; critical approaches to drama from Freud to feminism; plays of political, social, and personal expression; the role of the director in pre-modern, modern, and post-modern eras; and plays since World War II. Open as humanities electives. Drama concentrators must take a total of three theatre topics courses, one of which must be 305 (see below). Courses may involve costs of attending professional theatre productions.

Components: Lecture

Topics: Playwriting Since WW II, To Be Announced, Agit-prop, Social, Personal, Renaissance to Resoration, Theatre and Censorship, Theatre of the Absurd, Ethnic Drama, Irish Drama & Theatre, Restoration to Today, American Drama/Theatre, Docudrama, The Creative History of Acting Technique, Reggae Theatre, Greeks to Restoration, 18th through 20th Centuries, History of American Theatre, History and Theory of Acting, Restoration Theatre, Dramatic Literature Post 9/11, Theatrical Collaborations--a brief history, Great Collaborations, Elizabethan Theatre, Social Issue Theater, English Restoration Theatre, The Director:Pre-Modern,Modern,Post-Modern, Transformations, The New American Theatre, Spirituality & Acting Theory, Greeks to Shakespeare, Subsequent Productions, Post Modern Theater, French Neoclassicism: Molière and his Contemps, Contemporary Women

Enrollment Requirements: ENGL101

Theatre in Healthcare

Healthcare Theater provides students with the acting, feedback, and debriefing skills needed to become standardized patients (SPs). This course studies the theory and practice of healthcare theater. Acting students work alongside nursing students to portray a variety of roles involved in healthcare settings, including patients who are examined and evaluated in mock clinical settings and embedded participators (e.g., family and friends) involved in patient care scenarios. The course examines the growing field of applied theater (specifically theater in health education) and SP-based education (including domains of best practices). By training healthcare professionals and actors, this collaborative, interprofessional course supports the Catholic University of America's aim to create a community of scholars that seeks to meet the needs of our nation, particular healthcare needs.

Theatre Internship

Advanced Drama students work with a professional theatre company or distinguished art institution in such capacities as are mutually agreed upon by the student, the company, and the student advisor. Each student is responsible for seeking and winning such an internship position; the availability of internships cannot be guaranteed. The student must develop, in conjunction with the instructor/advisor and responsible members of the professional theatre staff, a detailed proposal that includes a description of the responsibilities of the student, the extent of the commitment in terms of time, and the means by which the student is to be evaluated at the end of the internship. Proposals will be reviewed on a case-by-case basis, considering the impact on the department's productions, the value of the internship for the particular student's development, and the student's overall record. Students working in internships should commit to no other department obligations in that term and should be aware that an internship may lengthen the time needed to complete

Components: Internship

Speech Communication in the Workplace

Students develop an understanding of interpersonal, intercultural, small group and large group communications. Students will learn both theoretical knowledge and practical applications of basic speech communications principles. Students use the tools of observation, investigation, and discussion to acquire theoretical knowledge and develop skills specific to their intended career. The instructor will tailor assignments and exercises to meet the needs of each student. The students will be assessed by how well they apply their knowledge and demonstrate their proficiency through the preparation and delivery of individual speeches, presentations, and panel discussions before their peers. This course meets once each week. Its enrollment is limited to six graduate students.

Drama in Education I

When students are actively engaged in their learning, they are more motivated and attentive learners. Take this course to learn proven practical ways to use drama methods in K-12 classroom instruction. Arts integration is an approach to learning that merges an art form with a curriculum topic and increases student learning in both areas. It is integral to this coursework. Read about, practice, and reflect on proven and practical educational drama strategies detailed in the writings and videos of educational drama practitioners.

Components: Lecture

Process Drama in the Classroom

Process Drama is a classroom teaching and learning strategy that focuses on the process of engaging in a dramatic situation, not on a product (a performance) for an audience. Together, students and teachers role-play imagined characters in circumstances that relate to curriculum content. In this course, learn how to plan and implement effective and practical drama strategies in your classroom. Add Process Drama to your teaching repertoire as you read about and practice ways to merge drama with curriculum content and increase student learning, motivation, and engagement. NOTE: You do not have to take Drama in Education, Part I before Part II.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

DR 517(1) Course ID:018650

Voice and Speech for the Professional

Students will learn vocal exercises and engage in techniques to develop the following areas: Relaxation, Alignment, Breathing, Phonation, Resonation, Articulation, Vocal Range, Inflection, and Rhythm. By acquiring these skills, students will be able to understand how their voices work and how they can use their voices and bodies to express the thoughts, images, and intentions of various texts. This course meets once each week. Its enrollment is limited to six graduate students.

Components: Studio(In Person)
Room Requirements: DEPARTMENT SPACE(1)

DR 524(3) Course ID:001633 Department Consent Required

Acting/Directing Workshop

The goal of this course is to provide educators who work with young people strategies for helping beginning actors enhance their performance work. Using scenes and monologues, course participants will explore the rehearsal process from both the actor's and director's points of view. They will experience exercises and practices intended to increase their effectiveness coaching actors both in the drama classroom and on the stage.

Components: Online(Online)

Educational Theatre: Acting, Directing, and Producing

Most theatre teachers are also the directors and producers of their school's plays and musicals. The goal of this course is to provide educators with tools and strategies for the planning, communicating, directing, coaching, coordinating of all the elements of an extracurricular production in K-12 schools. These tools include web sites, forms, and other uses of technology as well as resources for choosing productions, holding auditions, casting, scheduling, communicating and marketing.

Audio Drama: Readers Theatre, Radio Drama, and Podcasts

Podcasts are the 21st century's radio dramas and their popularity provides promising motivation for increasing student interest in the power and potential of the spoken word. In this course, educators will explore the vast number of old-time radio scripts and readers theatre scripts available online, learn how to create new original scripts, coach students to speak clearly and communicate character through voice, and guide students to find or create sound effects to enhance their recorded productions. Educators will also learn how to upload student productions to podcast sites for sharing with audiences beyond the classroom.

Components: Online(Online)

Room Requirements: NO CLASSROOM NEEDED(1)

DR 542(3) Course ID:011822

Design Applications

This course is designed to explore the fundamentals of the execution of scenery, scenic painting, costumes, properties, lighting, and sound design as practiced in contemporary theatre. Instruction will focus on active learning experiences within each subject area and culminate in a final technical project. The level of complexity will be based on the experience and goals of the individual student and the application methods most appropriate to the student's specific area of interest. The objective is to supply the student with the understanding of basic production techniques.

Components: Lecture

From Shakespeare to Sheridan, the Irish in the Theatre, 1600-1775

This course examines how plays staged in London and Dublin between 1590 and 1790 represented Ireland, its history, and inhabitants. The students will read the most important dramatic literature concerning Ireland written during this period, including the works of William Shakespeare, Roger Boyle, Thomas Shadwell, George Farquhar, Richard Brinsley Sheridan, and John O'Keefe. In addition to reading and discussing the plays, the students will tour Dublin virtually to learn how the city's streets, walls, castles, churches, and greens served as a backdrop for a social drama in which the kingdom's subjects performed different roles.

Introduction to Theatre Research

An introduction to tools for research in theatre history and dramatic literature and to traditional and new methods in historiography. Each student develops, with the guidance of the instructor, a research project. Required in the M.A. program; open to all graduate students and to seniors by permission of instructor.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 603(3) Course ID:001778

Western Theatre and Culture I

A study of theatrical production in selected major periods in Western nations such as ancient Greece and Elizabethan-Jacobean England (603) or eighteenth-century England and nineteenth-century America (608). Chief attention to the play in performance, to staging methods, theatre architecture, acting, audiences, production organization and finance, and all of these as they intersect with cultural processes. Also introduces historiographical issues such as periodization problems, and cultural studies in race, gender, power, and class.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 604(3) Course ID:001779

Dramatic Structures I

Historical and comparative exploration of significant plays in major periods in Western drama. The historic sequence of plays is intersected with responses to them from throughout the ages in plays and theories. For example, the Medea works of Seneca and Heiner Muller are juxtaposed and examined in light of feminist and semiotic readings; Sophocles and Euripides are read in conjunction with Aristotle, Nietzsche, and Lee Breuer's The Gospel at Colonus; the Don Juans of Tirso de Molina, Moliere, Mozart, and Shaw are juxtaposed, considered in light of contemporary productions, and read with Kierkegaard. Contextual readings are not limited to dramatic theory.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 605(3) Course ID:001780

Modern European Drama

Analysis and interpretation of the works of major European playwrights: Ibsen, Chekhov, Strindberg, Shaw, Pirandello, Anouilh, Brecht, Durrenmatt, Beckett, and Ionesco.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 606(3) Course ID:001781

Theatre Theory

Study of selected texts in Western criticism, with emphasis on twentieth-century theories. Critical readings and considerations of theatrical performances are selected to raise contemporary intellectual, ethical, and aesthetic problems. Twentieth-century readings include works representing gender studies, post-colonial studies, and cultural materialism. A sound background in the drama and theatre of major western periods is necessary. Prerequisites: Permission of instructor.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 607(3) Course ID:016958

History of Drama and Theatre in Education

This course will examine the history and philosophies of drama and theatre as processes for active and creative learning in educational settings. Students will study the field's development and trends through the work of significant practitioners and pedagogies, and trace the development of the educational uses of drama in American schools from the late 1800s to the present.

Components: Lecture

DR 608(3) Course ID:006006

Western Theatre & Culture II

A study of theatrical production in two or three selected major periods in Western nations, such as ancient Greece and Elizabethan-Jacobean England (603) or eighteenth-century England and nineteenth-century America (608). Chief attention to the play in performance, to staging methods, theatre architecture, acting, audiences, production organization and finance, and all of these as they intersect with cultural processes. Students also are introduced to historiographical issues, such as periodization problems, and to cultural studies in race, gender, power, and class.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 610(3) Course ID:001783

Twentieth Century Theatres

A study of selected major European and American innovators and innovative movements in theatre from the late 19th to the early 21st-century. The readings focus on those artists and movements that have influenced how contemporary practitioners and audiences produce and view live performance. By investigating the major innovators alongside readings in multicultural, feminist, and postmodern theatre practices as well as popular theatre and performance art, the course examines how alternative forms of performance have impacted mainstream and commercial theatre. The course's readings include but are not limited to the selected works of Maeterlink, Tzara, Apollinaire, Meyerhold, Artaud, Grotowski, Brook, Bogart, and Taymor.

DR 632(2) Course ID:001787

Alexander Technique

Students learn and begin to apply principles of the Alexander Technique to class work. The objective: to enable students to free the body for maximum efficiency of self-expression by identifying unwanted movement patterns and emotional constrictions and by releasing bodily tension. Students learn to move with more ease and freedom, and in general become more conscious of and accountable for the ways in which they use their bodies. Class work includes simple anatomy, developmental movement, monologue video critique, breathing, and relaxation techniques. Private hands-on sessions are included in the course work. For M.F.A. students.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 633(2) Course ID:001788

Alexander Technique II

Continuation of Alexander I. This course is a more intense exploration of the students' emotional and physical bodies. Application of the principles of the Alexander Technique becomes more specific. Students gain a greater understanding of the stress and startle patterns of their bodies and that of their characters. Study of emotional anatomy and other movement modalities will be included. Private hands-on sessions continued. Includes the application of the principles to character and scene work. For M.F.A. students. Pre-requisite: DR 632.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 634(2) Course ID:001789

Forms of Movement I

Self awareness. This course is designed to develop greater physical condition, strength and flexibility; a sense of "relaxed readiness", and to deepen the students availability for thought, feeling and impulse. It will focus on developing a sense of how to move economically in space along with an increased kinesthetic observation for characterization purposes. Exercises and improvisations will awaken the actor's availability to physical, emotional, psychological impulse while strengthening and stretching the body.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 635(2) Course ID:001790

Forms of Movement II

Physical characterization. This work can include but is not limited to bringing the techniques of "vocal sequencing", physical impulse work, yoga, neutral mask work, and Pilates into a personal acting process from which to create characterization.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 636(2) Course ID:001791

Forms of Movement III

Commedia dell'Arte plus. This work can include but is not limited to a concentration on body language, pantomime, isolation, balance, body mask, improvisations in silent acting using various styles and approaches such as Chaplin, Commedia, melodrama, grotesque, farce and comedy. . It can include group improvisation and scene study leading into the development of a production in this style, exploring various elements such as sound, music, costume and props.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 637(2) Course ID:001792

Forms of Movement IV

Stage violence. Stage combat is the art of creating the illusion of violence for the stage. This course will study the basics of unarmed as well as rapier techniques, creating choreography and ensemble work.

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 651(3) Course ID:008893

Elements of Directing I

This process-oriented and hands-on course introduces students to the fundamental principles of Directing. Approaching dramatic material from a directorial point of view, the focus is on the methods of collaboration between the director and the actors. The course, drawing upon Stanislavski's ideas of theatre, develops the student's directorial talent, imagination, skills and craft. The transitional process from page to stage, including the analytical process, casting, rehearsal process, and working with the actors and other artists, creators, and collaborators are explored and investigated. This course culminates in the direction of a short scene from a play for public performance. For MFA students

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 652(3) Course ID:008894

Elements of Directing II

This is continuation of DR 651. The focus is on more complex directorial issues, including the creation of an imaginary world on the stage and the presence of the actor/character in space and time. Dealing with action, composition, and mise-en-scene are explored and addressed. This work culminates in the direction of a One-Act play or an Act from a full-length play. For MFA students

Portfolio Evaluation

Designed for students entering an M.F.A. program with considerable prior professional experience in the theatre who seek specific course credit for knowledge gained in their extra-institutional work. These credits are not for courses completed at another academic institution. Students who seek credit for prior learning in a professional setting are required to demonstrate an understanding and command of the skills and knowledge expected of students completing an M.F.A. program in the Drama Department. Prior to being admitted into a program, an applicant must present a portfolio to the appropriate program Head. The portfolio should provide comprehensive evidence of the skills and knowledge for which academic credit is being requested. The applicant may provide documentation in the form of theatre programs, photographs, audio/video recordings, reviews by professional critics, letters from directors or professional theatre teachers, and an essay by the applicant explaining the match between this work and the goals and objectives of the course for which credit

Public Speaking for the Professional

This course combines the skills learned in 505 and 517. In DR 505, students learn to craft their spoken communication. In DR 517, they strengthen their vocal instruments. DR 703 offers the skills associated with actor training and applies them to any public speaking situation. The course strengthens and puts into practice the skills needed for effective communication in public settings. Topics include speech development and structure, audience analysis, presentation techniques, and critical listening. This course meets once each week. Its enrollment is limited to six graduate students. The work begun in DR 505 and DR 517 culminates in DR 703, creating a confident and polished public speaker.

DR 733(2) Course ID:001800

Voice I

First in a four semester sequence designed to: enrich students' physical, vocal, mental and emotional understanding of their voice instrument, habits and patterns; enable them to experience and, by choice, to release negative habitual patterns; explore the relationships among concentrated relaxation, breathing and sound initiation and resonance production and to extend the students' discovery of habitual tension release and sound exploration into text, characterization and emotional life of those characters. Plan = M.F.A.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 734(2) Course ID:001801

Voice II

Second in a four semester sequence designed to: enhance students' hearing ability to enable them both to hear individual sounds and the variations used in world languages and enable students' to produce individual sounds and the variations used in world languages through the study of the International Phonetic Alphabet in specific relationship to text, characterization and intentions and emotional life of those characters. In addition, students will develop a methodology for learning and researching all dialects and accents work through basic European and American dialects used regularly in theatre and film, work with texts specifically written for the various accents to enable students to create dialects based on playwright's language work, time period, social and cultural conditions and characters. Plan = M.F.A.

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 739(3) Course ID:001802

Performance Studio III

Styles in performance. The class will explore the presentational and representational performance with classical texts. It will concentrate on Shakespearean characterization, utilizing sonnets, monologues and scenes. The second half of the semester will rehearse the plays of Moliere and Restoration comedies.

Components: Laboratory, Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 750(3) Course ID:001803

Elements of Directing IV

Students in the M.F.A. directing program discuss current production projects and issues in contemporary theatre practice.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

DR 751(3) Course ID:012477

Graduate Directing V

This course is the third segment of a three-year program, rigorously immersing the students in all aspects of the great art of theater direction. In this semester, we will focus on the heightened texts and classical theater, investigating the director's role as an interpreter of classical works, and exploring the process of coming up with a

world in which the text can live. Practical work will be done on editing or cutting within a verse structure, text analysis, approaching heightened text, reducing cast size, doubling roles, and rehearsal techniques for large cast classical plays. We will discuss the implications of the playwright's intent versus the director's and look at the director's role as interpreter or auteur. Overall, the goal is to hone the student's abilities to analyze the arc or core of the work, develop their own artistic vision and to turn that vision into theatrical production and action.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 755(3) Course ID:012378

Department Consent Required

Directing Thesis Workshop

A preparatory course for 3rd year M.F.A. Directing candidates for their Thesis Production.

Components: Lecture

DR 762(3) Course ID:006008

Adaptation

Second-year playwrights explore issues of adaptation, considering both dramatic and nondramatic sources. Students with a working knowledge of a foreign language are encouraged to explore issues of translation. Final project: an adaptation or translation of a text selected by the student. For M.F.A. students. Faculty.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 831(3) Course ID:002907

Master Class

Directors, playwrights, educators, and actors undertake assigned, abbreviated performance projects intended to challenge their range, sometimes in collaboration with playwrights or dramaturges.

Continuation of the emphasis on collaboration and process.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 832(3) Course ID:002912

Master Class II

Directors and actors undertake assigned, abbreviated performance projects intended to challenge their range, sometimes in collaboration with playwrights or dramaturges. All projects are supervised by faculty.

Continuation of the emphasis on collaboration and process. For M.F.A. students.

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 833(2) Course ID:006009

Voice III

Lecture/Studio Third in a four semester sequence designed to review first year vocal work; extend first year vocal work through pitch, inflection and range work within text: Greek Choral Work; singing as an extension of speech; work with Poetic Structures, primarily Shakespeare and Moliere; work with Heightened Text and Imagery, using opening choruses and soliloquies from Shakespeare and scenes and monologues from Moliere. Research period language with Shakespearean history, romance and confrontation scenes and research translation language through work on Moliere's poetry and prose translations of the same monologues and scenes. Plan = M.F.A

Components: Lecture

Enrollment Requirements: Open to graduate drama students

Room Requirements: DEPARTMENT SPACE(1)

DR 834(2) Course ID:006010

Voice IV

Lecture/Studio Fourth in a four semester sequence designed to extend work on Shakespeare; integrate extended physical and vocal use in plays; extend students' vocal capacity in range, resonance and volume to accommodate various performance spaces and to prepare students for specific potential vocal careers in the theatre: radio, voice-over work in industrial film, television and radio commercials, books-on-tape as well as auditions, cold readings and prepared auditions. Plan = M.F.A.

Voice V: Dialects/Voice Over

A class designed to learn through physical exploration, listening and observation, the IPA alphabet, its uses and applications. To codify a personal system creating, acquiring, and speaking a variety of dialects, using the tools at your disposal. To erase, if desired, any traces of idiolect that may hamper you in your work as an actor.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 839(3) Course ID:002913

Performance Studio IV

Working with Contemporary Styles and Living Playwrights. Beginning with an exploration of contemporary style work and absurdist texts, the course will continue into more contemporary works by important emerging playwrights in the American theatre from the 1980's to today. Contemporary styles include such writers as Pinter, Beckett, Stoppard, Pirandello and Mamet. More recent and emerging contemporary playwrights include such writers as: Durang, Greenspan, Grimm, Howe, Emily Mann, Mac Wellman, Paula Vogel and others. Students will develop a one-person show, first by exploring an existing performance project and then by mounting a solo performance piece.

DR 931(3) Course ID:014665 Department Consent Required

Field Studies in Theatre Education

M.A.T.E. students, in conjunction with an instructor/advisor, will develop a detailed proposal for a project that will give them field experience in theatre education. The proposal will include a description of the responsibilities of the student, the extent of the commitment in terms of time, and the means by which the student is to be evaluated at the end of the project. Students will identify a site for their work and use this time in the field to put theory into practice and learn by doing and reflecting on their experiences.

Components: Field Studies

Room Requirements: DEPARTMENT SPACE(1)

DR 937(1) Course ID:002925

Audition Workshop

The business of acting. This class concentrates on choosing contemporary and classical monologues best suited for an audition. Class will explore the audition process itself, how to find work as an actor and insights into the day to day workplace of theatre, television, film and commercials. The class will discuss cold readings, creating showcases, voice-overs, meeting agents, contacting regional theatres, pictures & resumes, mailings and life as an actor in New York, Los Angeles and Washington, D.C. It will endeavor to provide auditions and lectures with professional casting directors and guest artists. Actors will prepare performance material for either a NY showcase and/or the Washington, D.C. theatre community.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

DR 939(3) Course ID:002926

Performance Studio V

Touring Company. Selected actors that will prepare material suitable to perform and teach in various schools and colleges located in the greater D.C and Baltimore areas.

Supervised Theatre Education Project

The goal of Supervised Theatre Education Project is to further the Master of Arts in Theatre Education (M.A.T.E.) students' development of skills as educators and theatre practitioners. Students will develop and implement a project designed to give them intense practical experience focused on a chosen aspect of the field of theatre education. Each student, in conjunction with an instructor/advisor, will develop a detailed proposal for the project. The proposal must be submitted to the student's project supervisor and to the M.A.T.E. Faculty Advisory Committee the semester before the student plans to begin the Supervised Theatre Education Project. In this culminating M.A.T.E. project, students are encouraged to be imaginative, innovative, reflective, and thorough in their approach to whatever aspect of theatre education their project addresses. All students must successfully complete 27 credits before they begin the supervised project.

MUS 80(0) Course ID:016933

Catholic University Summer Band Workshop

The Catholic University Summer Band Workshop is open to any student currently enrolled in 8th, 9th, 10th, or 11th grade. The workshop will provide an opportunity for students to prepare, rehearse, and perform a concert of concert band literature at the end of one week. Students will be coached in specific instrumental technique and large-ensemble skills by Catholic University faculty and other professional musicians.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 99(0) Course ID:016731

High School Musical Theatre Institute

This course is an introduction to an action oriented contemporary approach to acting technique. Each class will explore and expand upon our understanding of the actor's process, the world of the play, the world of the professional theatre, and the means and techniques an actor uses in order to serve the story. Each class will incorporate elements of exercise work, improvisation, script analysis, rehearsal, observation, and discussion.

Components: Workshop

Enrollment Requirements: open to High School Summer students

Room Requirements: DEPARTMENT SPACE(1)

MUS 100(0) Course ID:010381

Studio X

Weekly lectures, master classes, or performances by invited guests. Registration and attendance required of all undergraduates each semester. Pass/Fail.

Components: Lecture

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

Room Requirements: DEPARTMENT SPACE(1)

MUS 101(3) Course ID:001977

Fundamentals of Music Theory

The basic concepts of western classical common practice music, including notation, terminology, and rudiments of harmony, sight singing, and ear training. No prior knowledge of western classical music theory is assumed, nor is any proficiency on an instrument required. Music majors typically are assigned to this course via their score on the Theory Entrance Test and must complete the course successfully as a prerequisite for MUS 121 Ear Training and Sight Singing I and MUS 123 Harmony I; they cannot use it to fulfill degree requirements nor to fulfill an elective. Non-music majors may enroll in MUS 101 without taking the Theory Entrance Test and may use the course for elective credit.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 103(1) Course ID:001983

Acting the Text

This course explores fundamental performance techniques with a strong emphasis on monologue work, preparing students for the demands of professional auditions. From Shakespeare to contemporary works, students will utilize analytical skills and acting methods to develop truthful, compelling, characters. The course will culminate with a showcase of contemporary monologues.

Components: Lecture

Introduction to Singing

This introductory course will explore the basic elements of singing in a creative group setting. Students will learn about the anatomy of the voice, breath, resonance, and body/sensory awareness as they discover their individual voice. Students will also learn about preparing and presenting music, and will choose repertoire to work on during the course of the semester in consultation with the instructor. This course will culminate in an open studio performance during the final class. Previous musical experience/background is not required.

Components: Lecture(In Person)

Room Requirements: DEPARTMENT SPACE(1)

MUS 111(3) Course ID:019366

The Fundamentals of Dance

This course is designed to introduce students of all skill levels to the fundamentals of dance and to the world of dance. Along with learning practical dance terminology, students will explore basic movement and learn proper etiquette used in a dance class. In addition, students will learn about dance history through exploring the rich heritage it has had in both societal and spiritual cultures throughout the world. Finally, students will attend dance performances in a variety of venues.

Engaging the Culture: Performing Arts and Society

Performing Arts are a mirror of the culture and the culture mirrors performing arts. In this course, students will examine art forms that use performance as their vehicle for full creative realization. Historic and modern performance works will be studied in relation to the society in which they were produced. Focus will be given to studying the rich and varied Italian performing arts, which originated from artistic and intellectual movements of the 16th century to present day. Explorations will include attendance at performances in some of Rome's performing art centers and musical venues, along with visits to museums. We will look at traditional and non-traditional thought relating to the performing arts, giving attention to artistic objectiveness, aesthetic consideration, and critical evaluation of elements that define interpretation. Topics for discussion will include: performing arts among the many paradoxes of our historic and modern world; the role of performing arts as an often unnoticed backdrop to human activity;

Components: Lecture(In Person)

Topics: Rome, Italy

Room Requirements: ABROAD(1)

MUS 278(3) Course ID:014631

Discovering Classical Music

An exploration of Western European music from the Middle Ages to the present day. Emphasizes understanding musical elements and learning how to interpret and find meaning in music. Also includes consideration of musical works within their larger historical and cultural contexts. No previous musical experience or ability to read music required. Available only to students who have completed their first year. Not intended for music majors; does not fulfill any music major requirement.

Components: Lecture

Enrollment Requirements: Not open to music majors

Room Requirements: DEPARTMENT SPACE(1)

MUS 283(1) Course ID:002158

Class Piano III

Continuation and intensification of skills begun in 183 and 184. Special emphasis on using the piano as a musicianship tool and developing functional keyboard skills required for the piano proficiency examination. Limited enrollment. For music majors; others with School of Music approval. Prerequisites: 183, 184, Department Consent.

Greek Tragedy and Opera

A historical survey to explore the integral connection between the two genres. Selected number of tragedies will be studied and compared with the libretti of operas based on them. The course will cover fundamentals of performance practice of both genres, examine similarities and differences, and consider the degree to which opera adapts tragedy to its own needs or adapts itself to tragedy. Weekly listening and reading assignments (both primary and secondary literature). One presentation and one term paper required. Cross-listed with Department of Greek and Latin: academic elective for both Music and non-Music majors; elective for Classical Civilization majors.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 301(3) Course ID:014679

Roman History and Opera

A team-taught historical survey designed to explore the reception of ancient Roman culture into Western opera. Selected episodes from Roman mythology and history will be studied and compared with operatic libretti based upon them. The course will also cover fundamentals of operatic form and performance practice, and consider the degree to which opera adapts Roman tradition to its own needs and priorities. Weekly listening and reading assignments in both primary and secondary literature, with a significant online resource component. Music reading ability not required: open to all undergraduate students except music majors: does not fulfill any MUS degree requirement for music majors.

Components: Lecture

Enrollment Requirements: Open to students in the CUA Rome program only.

Room Requirements: DEPARTMENT SPACE(1)

MUS 302(3) Course ID:014792

Silent Film Music

The emergence of synchronized film sound in the late 1920s, and the many attempts to synchronize sound with image prior to that time, will also be studied, although the primary focus of the course will be live accompaniment to silent film. The course will examine silent film performance practice from the silent era to the present, and observe how improvisation influences film score composition. Music reading ability is not required; open to all undergraduate students except music majors: does not fulfill any MUS degree requirement for music majors.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 303(3) Course ID:014680

Italy and Musical Tradition

Many of the most important musical genres originated in Italy: the sonata da chiesa and sonata da camera, which gave birth to chamber music; the concerto grosso, progenitor of the modern concerto; the cantata, and the oratorio. Opera began in Italy (Florence) around 1600, and Italian preeminence in the operatic field persists to the present day, both in the richness of its repertory and the quality of its performers. The course will consider such topics as the influence of the Counter-Reformation on Mass settings, the nature of the concerto grosso, the stylistic distinctions between sacred and secular music, the importance of melody and drama in Italian stage music, and other topics. Also, the course will introduce students to important, standard musical terminology. Chronologically organized, course topics will be anchored by focusing on a specific composer or work: the development of musical trends and genres is an important aspect of study. Course content will consist of reading (in English) of primary sources and secondary scholarship, listening

The Birth of the Public: Music and Society in Eighteenth-Century England

The eighteenth century witnessed tremendous change in almost every aspect of British life: The political system gradually shifted from the ideal of an absolute monarch and sovereign upper class to a more democratized parliament led by a prime minister, and the middle class emerged as a potent social force, transforming economic and cultural institutions. This course investigates these changes in eighteenth-century British society through the lens of music, focusing especially on the institutions in which music was heard; from opera houses and concert halls to pleasure gardens and coffee houses; and the practices by which music was consumed. As the century progressed, musical patronage shifted from a model in which music and musicians were supported by the upper class for its own benefit to one in which financial support came primarily from the general public, leading to models of musical consumption that are still with us today. Specific topics covered in the course include the political, religious, and social functions of Handel's

The Music of Latin America

An overview of the traditions and cultures as studied through history, traditional folk songs, dance, and compositions. The course aims to provide an eclectic approach to the exploration and study of the richness and diversity of Latin American music. The course serves as an introduction to the various art forms and genres and offers experiential activities through singing, dancing, and listening, as a means to a deeper understanding of how the music shaped the various cultures and traditions of the Spanish- and Portuguese-speaking countries in the Americas. An undergraduate-level course for students pursuing a degree in music education; also open as an elective to all students of the university (undergraduate and graduate) and specifically for those students pursuing any music performance or composition degree; a graduate-level course designed for those students who already possess an undergraduate degree in music performance who are pursuing a degree in music education and/or music performance. Department consent. Bound course with MUS

Secondary Instrumental Student Teaching

A seven-week (full-time) teaching experience in secondary school through which the prospective music teacher gains experience in the strategies of teaching instrumental music under a competent secondary instrumental music teacher. Prerequisite: MUS 456. Departmental consent.

Components: Practicum

Course Equivalents: MUS 522B

Enrollment Requirements: open to Music Education students only

Room Requirements: DEPARTMENT SPACE(1)

MUS 423(1) Course ID:014274 Department Consent Required

Combined: Gen/Choral-Instrumental Student Teacher Seminar

A weekly meeting of all in-field combined gen/choral-instrumental music education student teachers, to be taken concurrently with MUS 423 and MUS 423A. Topics include curriculum and instruction issues as they emerge from student teaching experiences, certification and graduation requirements, job search strategies, resumé preparation, interview techniques, and other issues related to professional development. The course also requires the creation of a senior portfolio. Departmental consent.

Components: Seminar

Enrollment Requirements: open to Music Education students only

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Enrollment Requirements: open to Music Education students only

Room Requirements: DEPARTMENT SPACE(1)

MUS 424(3) Course ID:002335

Chamber Music Techniques

Techniques of preparation, rehearsal, and performance of chamber music works involving piano. Discussion of interpretive, technical, and ensemble issues for various combinations of instruments and preparation of individual works for performance. MUS 424 is required of undergraduates in the Collaborative Piano degree program. MUS 525 is required of graduate students in the DMA Chamber Music degree program. Offered on a rotational basis. May be repeated with permission of the instructor. Prerequisite: Permission of instructor.

Components: Lecture

Same As Offering: MUS 524

Room Requirements: DEPARTMENT SPACE(1)

MUS 425(3) Course ID:002331

Piano Literature I

A study of piano literature in the pre-Baroque and Baroque periods. Includes readings, lectures, live and recorded performances. Offered on a rotational basis.

Components: Lecture

Same As Offering: MUS 525

Room Requirements: DEPARTMENT SPACE(1)

MUS 425A(3) Course ID:002332

Piano Literature II

A study of piano literature in the Classic Period. Includes readings, lectures, live and recorded performances. Offered on a rotational basis.

Components: Lecture

Same As Offering: MUS 525A

Room Requirements: DEPARTMENT SPACE(1)

MUS 425B(3) Course ID:002342

Piano Literature III

A study of piano literature in the Romantic Period. Includes readings, lectures, live and recorded performances. Offered on a rotational basis.

Components: Lecture

Same As Offering: MUS 525B

Room Requirements: DEPARTMENT SPACE(1)

MUS 425C(3) Course ID:002344

Piano Literature IV

A study of piano literature in the Impressionist and Contemporary periods. Includes readings, lectures, live and recorded performances. Offered on a rotational basis.

Components: Lecture

Same As Offering: MUS 525C

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Benjamin T. Rome Sch of Music - Music - Subject: Music

MUS 425D(3) Course ID:002346

Piano Literature V: The Piano in Chamber Music

Includes sonatas, piano trios, piano quartets, and piano quintets by such composers as Mozart, Beethoven, Brahms, Schubert, Schumann, Franck, Faure, Debussy, Ravel, and other composers through the twentieth century. Lecture and listening. Offered on a rotational basis.

Components: Lecture

Same As Offering: MUS 525D

Room Requirements: DEPARTMENT SPACE(1)

MUS 433(2) Course ID:019056 Department Consent Required

The Business of Independent Studio Teaching

Lecture. Focuses on the business skills necessary to run a successful independent music studio. Issues such as preparing studio policy sheets, planning lessons, group classes and recitals, bookkeeping, zoning, filing of taxes, publicity and retirement planning will be covered. Students will study policy sheets of successful teachers, prepare their own policy sheets, and establish short and long term goals for the studio. Offered on a rotational basis.

Components: Lecture(In Person)

Course Equivalents: MUS 533

Room Requirements: DEPARTMENT SPACE(1)

MUS 434(3) Course ID:014482 Department Consent Required

Counterpoint

An introduction to the techniques of counterpoint, with an emphasis on counterpoint in the style of Palestrina and the style of J.S. Bach. Prerequisites: 221, 222, 223, 224. Department consent.

Components: Lecture

Enrollment Requirements: MUS 221 & MUS 222 & MUS 223 & MUS 224

Room Requirements: DEPARTMENT SPACE(1)

MUS 435A(2) Course ID:002357

Introduction to Vocal Pedagogy and Physiology

A study investigating the vocal physiology and various teaching methods and tools necessary to the successful singer and pedagogue. Required study for all voice majors, undergraduate and graduate. Offered fall semester only.

Components: Lecture

Same As Offering: MUS 535

Room Requirements: DEPARTMENT SPACE(1)

MUS 436A(2) Course ID:006535

Stage Movement for Singers I

Stage movement skills are a necessary component in the education and training of young singers. Effective stage movements differ from everyday body movements in scope, variety, and rhythm. The significance of communication through body movement is well documented in the literature on psycho-physical reflexes, non-verbal communication, kinesthetic intelligence, and neuro-linguistic programming. This course is based on the methods of Stanislavski, Dalcroze, Alexander, and Feldenkrais, who view body movement as a learned form of communication. Class exercises introduce students to the stage fall and simulated stage combat. MUS 436A required of undergraduate vocal performance students; MUS 536A elective credit for graduate students.

Components: Lecture

Same As Offering: MUS 536A

Room Requirements: DEPARTMENT SPACE(1)

MUS 436B(2) Course ID:010346

Stage Movement for Singers II

Continuation of Stage Movement for Singers I.

Components: Lecture

Same As Offering: MUS 536B

MUS 437(3) Course ID:008273 Department Consent Required

Meisner Technique

Through a step by step progression of acting exercises developed by the famous acting teacher Sanford Meisner, students will develop their ability to work organically and to create truthful and expressive behavior. The exercises are designed to promote active listening, authentic reactions, concentration, imagination and an emotional connection. The class culminates in assigned scene work in which the student learns how to approach a text, make strong acting choices and bring the words of the script to life. Attendance is mandatory, and considerable time outside of class devoted to practice and rehearsal is expected. Prerequisite: DR 206 Fundamentals of Acting, Drama and Musical Theatre majors only without Dept. consent.

Components: Lecture

Course Equivalents: DR 437

Room Requirements: DEPARTMENT SPACE(1)

MUS 438(3) Course ID:007249 Department Consent Required

Senior Coaching Class:Musical Theatre

Preparation of senior recital for majors in the musical theatre program.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 441(1) Course ID:002263 Department Consent Required

Musical Theatre Practicum: Minor Role

Credit awarded for the preparation of a minor role in a musical theatre production. May not substitute for musical theatre required courses. May be repeated for credit. Prerequisite: Department Consent.

Components: Practicum

Room Requirements: DEPARTMENT SPACE(1)

MUS 442(3) Course ID:002265 Department Consent Required

Musical Theatre Practicum: Major Role

Credit awarded for the preparation of a major role in a musical theatre production. May not substitute for musical theatre required courses. May be repeated for credit. Prerequisite: Department Consent.

Components: Practicum

Room Requirements: DEPARTMENT SPACE(1)

MUS 449(1) Course ID:014228

Business of Theatre

This course is designed to assist senior level musical theatre majors to make the transition from student to practicing professional. This course provides practical preparation and acquisition of audition materials, training in the interaction with trade professionals, and introduction to the business of theatre, and music rehearsal for the senior showcase. Prerequisite: MUS 315A Popular and Contemporary Vocal Styles for the Theatre Performer: Level II.

Components: Lecture

Course Equivalents: DR 450

Enrollment Requirements: MUS 315A

Room Requirements: DEPARTMENT SPACE(1)

MUS 449A(1) Course ID:014227 Department Consent Required

Senior Showcase

This course will focus on the preparation and performance of a showcase in Washington DC and/or New York City. Additionally, the course will continue to develop an understanding of professional conduct practices specific to the industry of professional theatre. Prerequisites: MUS 449 Business of Theatre. Department Consent.

Components: Lecture

Enrollment Requirements: MUS 449

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Benjamin T. Rome Sch of Music - Music - Subject: Music

MUS 450(3) Course ID:010056 Department Consent Required

Musical Theatre Directing

During the semester students will learn the fundamentals of the director's craft and how to apply them to the direction of a musical number. The course focuses on the director's preparation process and how to apply it to a successful collaboration with singing actors, choreographers, and music directors. The course culminates with a final musical scene directed entirely by the student. Music elective for undergraduate music majors; academic elective for qualified undergraduate non-music majors. Prerequisite: DR 206. Basic music reading skills required; non-music majors must contact the instructor prior to registering for the course to demonstrate these skills. Departmental consent required.

Components: Seminar
Enrollment Requirements: DR 206 or MUS 215
Room Requirements: DEPARTMENT SPACE(1)

MUS 451(3) Course ID:002280

Elementary General-Choral Music Methods

Eclectic approach to teaching general music in the elementary school. Overview of current methods such as Orff, Kodaly, and Dalcroze. Field based, includes a practicum.

Components: Lecture
Course Equivalents: MUS 551
Room Requirements: DEPARTMENT SPACE(1)

MUS 452(3) Course ID:002284

Secondary General-Choral Music Methods

A continuation of 453 at the secondary school level.

Components: Lecture
Course Equivalents: MUS 552
Room Requirements: DEPARTMENT SPACE(1)

MUS 457(2) Course ID:017112 Department Consent Required

Intermediate Conducting

Focuses on developing score study and podium conducting skills through practical experience. The course will include instruction in the practical considerations germane to instrumental ensembles (such as string bowings and articulations, and wind techniques) as well as choral ensembles (such as diction and vocal technique). In addition to instructor feedback during class, students will review video recordings of their conducting in order to evaluate their personal progress in the course. Prerequisite: for undergraduate students MUS 337; for graduate students, background or training equivalent to MUS 337). MUS 457 is bound with MUS 557.

Components: Lecture
Course Equivalents: MUS 557
Enrollment Requirements: MUS 337
Room Requirements: DEPARTMENT SPACE(1)

MUS 458(3) Course ID:002287

Elementary And Middle School Instrumental Music Methods

Designed to help the student acquire prescribed knowledge, skills, and dispositions to become an effective teacher of instrumental music at the elementary and middle school levels. Department consent.

Components: Lecture
Course Equivalents: MUS 558
Enrollment Requirements: open to Music Education students only
Room Requirements: DEPARTMENT SPACE(1)

MUS 459(3) Course ID:016702 Department Consent Required

History of 20th-Century Directing

Examination of the role and impact of the director in 20th-Century Theatre. Students will study specific directors and their techniques in regard to musical and non musical landmark productions. Students will be expected to produce written analysis and practical demonstrations of studied techniques culminating with a semi-produced one-act production. (Bound with 559A) Prerequisite: DR 206.

Components: Lecture
Course Equivalents: MUS 559A, DR 459, DR 559
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Benjamin T. Rome Sch of Music - Music - Subject: Music

MUS 460(3) Course ID:002293

Music in the Early Childhood and Elementary Instruction

Designed for teachers engaged in early childhood instruction and/or elementary education. Includes basics in note reading, rhythmic notation, sight reading, singing, and piano; the use of classroom instruments; and methods, materials, and procedures employed in teaching music. For the nonmusic major. Offered on a rotational basis.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

MUS 462(3) Course ID:002292

Secondary Instrumental Music Methods

Designed to help the student acquire prescribed knowledge, skills, and dispositions to become an effective teacher of instrumental music at the secondary level. Department consent.

Components: Lecture
Course Equivalents: MUS 562
Enrollment Requirements: open to Music Education students only
Room Requirements: DEPARTMENT SPACE(1)

MUS 468(3) Course ID:002401

Orchestral Literature for String Players

A survey of standard orchestral literature, requiring weekly class performance, with supplemental work on sight reading and audition preparation. Offered on a rotational basis.

Components: Lecture
Same As Offering: MUS 568
Room Requirements: DEPARTMENT SPACE(1)

MUS 468A(3) Course ID:002407

String Pedagogy

Treatises on string teaching from the eighteenth through twentieth centuries (e.g., Geminiani and Galamian) examined as a background for an inquiry into contemporary pedagogical issues. For string majors. Offered on a rotational basis.

Components: Lecture
Same As Offering: MUS 568A
Room Requirements: DEPARTMENT SPACE(1)

MUS 468B(3) Course ID:016262 Department Consent Required

Guitar Literature

This course aims to study the development of the classical guitar and its literature from ancient history to the twentieth-first century. Students will be introduced to the most important composers and performers of the various plucked string instruments that comprise the family tree of the modern guitar. Most representative compositions will be studied analytically, placed in historical and cultural context. Emphasis will be given on the challenges of performing early music in guitar. By the end of this course, students will be able to identify the differences in guitar literature based on time period, region, composer, and musical style.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

MUS 468C(3) Course ID:016264 Department Consent Required

Guitar Pedagogy

This course aims to study the process of teaching classical guitar and to develop an effective teaching technique approach. This course will examine some of the most popular pedagogical books in the guitar literature and will focus on their integration with basic guitar instruction.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

MUS 470(1) Course ID:006867

CUA Chamber Choir

Rehearsal and performance of the spectrum of literatures appropriate for chamber chorus. Limited enrollment; by audition and with permission of the conductor. Fulfills major ensemble requirement.

Components: Lecture
Same As Offering: MUS 507
Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Benjamin T. Rome Sch of Music - Music - Subject: Music

MUS 472B(3) Course ID:009939

German Lyric Diction and Repertoire

Uses the international phonetic alphabet (IPA), with emphasis on the difference between sung and spoken diction. Practical training through recordings and performance in class. Includes introduction to interpretation of musical texts (dictionaries, translations) from the repertoire. Written and oral assignments. MUS 472B required of undergraduate vocal performance majors; MUS 572B elective credit for graduate students.

Components: Lecture
Same As Offering: MUS 572B
Room Requirements: DEPARTMENT SPACE(1)

MUS 473(3) Course ID:013779 Department Consent Required

Introduction to Electronic Composition

This class is an introduction to the tools and theory of making music with various technologies. The course begins with the basic physics of sound and signal routing in a digital workstation, followed by units on basic sound recording and effects processing, sequencing audio and MIDI, synthesis, and interactive systems. Work for the class largely revolves around a series of composition exercises, culminating in a final composition and end-of-semester concert event. Departmental consent.

Components: Lecture
Same As Offering: MUS 573A
Room Requirements: DEPARTMENT SPACE(1)

MUS 476(2) Course ID:013401 Department Consent Required

Combined Lyric Diction I

An overview of Italian, German, and French Lyric Diction particularly designed for undergraduate voice principals pursuing the General-Choral Music Education degree program and graduate students whose major is Orchestral Conducting or Vocal Accompanying. Department Consent.

Components: Lecture
Same As Offering: MUS 576A
Room Requirements: DEPARTMENT SPACE(1)

MUS 476A(2) Course ID:013402 Department Consent Required

Combined Lyric Diction II

An overview of Latin and Spanish Lyric Diction particularly designed for graduate students whose major is Orchestral Conducting or Vocal Accompanying and undergraduate students whose major is Collaborative Piano. Departmental Consent required.

Components: Lecture
Same As Offering: MUS 576B
Room Requirements: DEPARTMENT SPACE(1)

MUS 479(3) Course ID:002425 Department Consent Required

The Organ as a Church Instrument

An integration of essential skills and materials for organists. Topics include principles of organ design, registration, and maintenance, with applications to hymn-playing, accompanying, and performance of repertoire. Readings on organ construction, registration practices, technique, and ornamentation. Assignments at the organ emphasize transposition, harmonization, and service-playing skills. Limited enrollment. Offered on a rotational basis. Prerequisite: permission of instructor.

Components: Lecture
Same As Offering: MUS 579
Room Requirements: DEPARTMENT SPACE(1)

MUS 479A(3) Course ID:006344 Department Consent Required

The Organist as a Church Musician

A continuation of 579 with special focus on score reduction at the organ, continuo realization, and improvisation. Selected readings on performance practice. Written assignments in figured bass and organ arranging. Limited enrollment. Offered on a rotational basis. Prerequisites: 579 or permission of instructor.

Components: Lecture
Same As Offering: MUS 579A
Room Requirements: DEPARTMENT SPACE(1)

MUS 480(1) Course ID:002446

University Symphony Orchestra

By audition. May be repeated for credit.

MUS 480J(1) Course ID:017317

Production Orchestra

Participants will play in the mainstage musical and/or opera productions as assigned. Open to music majors and non-music majors, this course is a music elective that may be repeated for credits. For elective credit only and does not fulfill the ensemble requirement.

Components: Lecture
Course Equivalents: MUS 508J
Room Requirements: DEPARTMENT SPACE(1)

MUS 481(3) Course ID:014226

Seminar in Vocal Performance

An examination of performance practices in the solo song and operatic repertoire, including a study of standard texts pertaining to the repertoire in French, German, Italian, Russian, Spanish, and English. Guest lecturers, study of vocal performances captured on film, and compilation of an annotated bibliography of works dealing with performance practices in opera and song. Student performances of song and opera repertoire. For advanced students. Required of undergraduate vocal performance majors. Offered every spring semester.

Components: Seminar
Room Requirements: DEPARTMENT SPACE(1)

MUS 483(2) Course ID:016914 Department Consent Required

Composing for the Liturgy

This course examines criteria that make music appropriate for the liturgy. Learn methods and approaches to composing music for the sacred liturgy. Acquire composition skills with a focus on practical application. Department consent required. Prerequisites for undergraduates: successful completion of MUS 222/224. Prerequisites for graduate students: passing both portions of the Theory Placement Exam or completing MUS 488/489.

Components: Lecture
Enrollment Requirements: MUS 222 & MUS 224
Room Requirements: DEPARTMENT SPACE(1)

MUS 487(3) Course ID:015621

Writing for Voice

Study of methods of writing for voice, creation of practical projects designed for performance. Topics include study of the physiological mechanism of the voice, voice types, study and analysis of examples of vocal writing from the Middle Ages to the present in genres including but not limited to solo song, chamber music, opera, choral music, musical theatre and popular styles. Students collaborate with singers, writing specially-tailored projects for reading and/or performance in class. Prerequisites MUS 222, 224.

Components: Lecture
Course Equivalents: MUS 587A
Enrollment Requirements: MUS 222 & MUS 224
Room Requirements: DEPARTMENT SPACE(1)

MUS 488(2) Course ID:011370

Graduate Harmony Review

A one-semester review of written harmony topics designed for graduate students who have completed an undergraduate harmony (written theory) sequence. Topics include figured bass and part-writing, Roman numeral analysis, modulation, diatonic and chromatic harmony (including modal borrowing, Neapolitan and augmented 6th chords), extended tertian chords, atonal pitch-class theory and dodecaphonic operations, brief review of forms (binary, ternary, sonata, rondo), fugue, and orchestral score reading with special emphasis on instrumental transpositions. If placed in both the Graduate Harmony and the Aural Skills Review, it is recommended that the student take the Harmony Review prior to the Aural Skills Review.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 489(2) Course ID:011337

Graduate Aural Skills Review

A one-semester review of aural skills topics designed for graduate students who have completed an undergraduate aural skills sequence. Topics include sight singing of melodies (diatonic, chromatic, modulating, modal, atonal) and rhythms (including syncopations, mixed meters, asymmetrical meters), aural identification of intervals (melodic and harmonic), triads and 7th chords (in root position and inversion, melodic (including modulations and modes), rhythmic, and harmonic dictation. If placed in both the Graduate Harmony and the Aural Skills Review, it is recommended that the student take the Harmony Review prior to the Aural Skills Review.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 490(3) Course ID:011369

Graduate Music History Review

Designed as a review class for graduate students who have completed a full music history survey. Begins with an overview of the development of Gregorian chant and the Mass and some other specific topics in medieval music. Continues with an intensive survey of music since ca. 1500 with emphasis on the most important composers, compositional techniques, genres, and styles in each period. May be taken concurrently with Research Methodology.

Components: Lecture

MUS 495B(3) Course ID:016066 Department Consent Required

Music Management Internship

Music students interested in the management/business side of the profession work for a professional performing arts organization in such capacities as are mutually agreed upon by the student, the organization, and the faculty adviser. Each student is responsible for seeking and winning the internship position; the availability of internships cannot be guaranteed. The student must develop, in conjunction with the adviser and responsible members of the professional organization staff, a detailed proposal that includes a description of the student's responsibilities, the extent of the commitment in terms of time, and the means by which the student is to be evaluated at the end of the internship. Proposals will be reviewed on a case-by-case basis and will also be evaluated by the Office of Career Services (OCS). Available only to students who have completed their sophomore year and have a cumulative GPA of 3.0 or higher. Does not fulfill the requirement of the musical theatre internship. Departmental Consent.

Components: Internship
Room Requirements: DEPARTMENT SPACE(1)

MUS 496(0) Course ID:011043 Department Consent Required

Senior Project /Thesis

Required of majors in Music History and Literature. Registration includes oral presentation of the project or comprehensive exams. The Pass/Fail will be assigned only after all aspects of the Senior project/thesis are completed. Department consent. This class is billed at the equivalent of one credit hour.

Components: Thesis Research
Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.
Room Requirements: DEPARTMENT SPACE(1)

MUS 498(0) Course ID:015201

Undergraduate Comprehensive Examination

Comprehensive examination for undergraduate music majors.

This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

Room Requirements: DEPARTMENT SPACE(1)

MUS 499CW(0) Course ID:011045

Chamber Work Performance

Performance of a complete chamber work required of majors in Orchestral Instruments; Piano. May be repeated for violin, viola, cello majors for whom two complete chamber work performances are required. This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

Room Requirements: DEPARTMENT SPACE(1)

MUS 499ME(0) Course ID:014174

Senior Music Education Lecture/Recital/Paper

Lecture-recital, consisting of a 30-minute performance (four languages required) and a 30-minute lecture (research-based; hard copy required) on a topic approved by the Music Education Committee. One of three options open to voice principals in undergraduate music education degree programs for satisfying the senior capstone experience, the other two being the solo senior recital (MUS 499) and the senior music education lecture-recital (MUS 499D).

This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

Room Requirements: DEPARTMENT SPACE(1)

MUS 499MEH(0) Course ID:014173

Senior Music Education Honors Recital

Honors recital, consisting of a 45-minute performance (four languages required) with a research paper on a topic approved by the Music Education Committee. One of three options open to voice principals in undergraduate music education degree programs for satisfying the senior capstone experience, the other two being the solo senior recital (MUS 499) and the senior music education lecture-recital (MUS 499E). This course bills at the equivalent of one credit hour.

Components: Recital

Room Requirements: DEPARTMENT SPACE(1)

MUS 499MT(0) Course ID:018756

Senior Solo Musical Theatre Recital

Senior-level solo recital required of majors in Musical Theatre. This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: MUS 309

Room Requirements: DEPARTMENT SPACE(1)

MUS 499OI(0) Course ID:018758

Senior Solo Orchestral Instruments Recital

Senior-level solo recital required of majors in Orchestral Instruments and Orchestral Instruments/Instrumental Music Education (double major). This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: open to undergraduate music majors

Room Requirements: DEPARTMENT SPACE(1)

MUS 499OR(0) Course ID:018760

Senior Solo Organ Recital

Senior-level solo recital required of majors in Organ. This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: open to undergraduate music majors

Room Requirements: DEPARTMENT SPACE(1)

MUS 499PI(0) Course ID:018759

Senior Solo Piano Recital

Senior-level solo recital required of majors in Piano. This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: open to undergraduate music majors

Room Requirements: DEPARTMENT SPACE(1)

MUS 499PIM(0) Course ID:013201

Senior Piano Minor Recital

Recital for undergraduate students pursuing a subconcentration (minor) in piano. This course bills at the equivalent of one credit hour.

Components: Recital

Room Requirements: DEPARTMENT SPACE(1)

MUS 499VP(0) Course ID:018757

Senior Solo Vocal Performance Recital

Senior-level solo recital required of majors. This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: MUS 309

Room Requirements: DEPARTMENT SPACE(1)

MUS 499X(0) Course ID:011049

Senior Non-Degree Solo Recital

Senior-level solo recital required of majors in Composition; General-Choral Music Education; Instrumental Music Education; Combined General-Choral & Instrumental Music Education; Musical Theatre; Orchestral Instruments; Orchestral Instruments/Instrumental Music Education (double major); Organ; Piano; Voice; B.A. in Music. This course bills at the equivalent of one credit hour.

Components: Recital

Enrollment Requirements: open to undergraduate music majors

Room Requirements: DEPARTMENT SPACE(1)

MUS 500(2) Course ID:008414

Piano Pedagogy I: Early Study

Focuses on the early piano training of children and adults. Includes an exploration of beginning piano technique, standard and supplementary teaching methods and editions, approaches to the early stages of student development, studio management, and the professional development of the independent music teacher. Opportunities for in-class teaching and observation of experienced teachers provided. Offered on a rotational basis.

Components: Lecture

Same As Offering: MUS 400

Room Requirements: DEPARTMENT SPACE(1)

MUS 500A(2) Course ID:008415

Piano Pedagogy II: Intermediate Study

An examination of pianistic development at the intermediate level. Emphasis placed on repertoire that can stimulate and excite young pianists during this crucial period of study. Students become familiar with this repertoire through performance, analysis, and presentation of lesson plans in music from all style periods. Opportunities for in-class teaching and observation of experienced teachers provided. Offered on a rotational basis.

Components: Lecture

Same As Offering: MUS 400A

Room Requirements: DEPARTMENT SPACE(1)

MUS 500B(2) Course ID:008416

Piano Pedagogy III: Advanced Study

A study of issues affecting the advanced student of all ages. Topics include technique, repertoire, practice methods, and recital preparation. The larger world of music, including competitions, auditions, and career choices are examined also. Opportunities to observe and to give master classes are an important part of this course. Offered on a rotational basis. Prerequisite: 461.

Components: Lecture

Same As Offering: MUS 400B

Room Requirements: DEPARTMENT SPACE(1)

The Catholic Univ of America
Course Catalog

Benjamin T. Rome Sch of Music - Music - Subject: Music

MUS 500D(2) Course ID:008418

Group Issues in Piano Teaching

An examination of the different approaches for teaching piano to more than one student at a time. Special focus is given to class piano, including the use of digital keyboard instruments, new teaching materials, and recent applications of technology. The advantages of incorporating other types of ensemble playing in the private studio are addressed also. Offered on a rotational basis.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 500E(2) Course ID:008424

The History of Piano Pedagogy

Examines the meaning of piano pedagogy, past and present. Topics include early pedagogy as well as contemporary theories and methodologies. Presents a comparison of culturally diverse schools of piano training, including Russian, French, Asian, American, and others. Explores the evolution of teaching repertoire and the growth of psychology as a critical element in piano pedagogy. Offered on a rotational basis.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 501A(3) Course ID:013801 Department Consent Required

Concert Creativity: developing conceptions, presentations, funding, marketing

The purpose of this course is to introduce students to many forms of non-traditional concert presentations and to assist students in conceptualizing new concert formats, to offer in-class experience in experimenting with these formats under supervision, learning how to make the case for funding experimental concerts, where to find grants, how to apply for grants and other forms of financial assistance, and learning how to market these concerts. Some of the specific topics that will be explored: illuminations in the concert hall: from Leonard Bernstein to Jeffrey Siegel's Keyboard Conversations, The Kronos Quartet, the Emerson Quartet, and other experiments at audience engagement; conceptualizing the event(s); scripting; speaking to audiences; collaborations with actors, dancers, musicologists, visual artists; fund raising; grant writing; board-room presentations; marketing the event(s); public relations: presenting oneself and developing a website. Final exam will be a public concert presentation for the class, open to the public.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 503A(2) Course ID:013800 Department Consent Required

Repertoire for Conductors

A survey of basic and selected repertoire with which conducting students should become familiar. Genres: symphonic, opera, ballet, and oratorio, repertoire for young peoples concerts, pops concerts, outdoor and other special event concerts. The class will become familiar with repertoire most needed for assistant conductors: symphonies of Beethoven, Brahms, Tchaikowsky, Dvorak, and others; ballets: Nutcracker, Sleeping Beauty, Appalachian Spring, and others; operas: Hansel and Gretel, Magic Flute, Don Giovanni, La Bohème, and others; oratorios: Messiah, selected Bach cantatas, Fauré Requiem, and others. This course will assist students in developing a basis for further and detailed study of the music they are most likely to encounter as performers, conductors, and assistant conductors in their formative years. Departmental consent. Prerequisite: Harmony IV, Basic Conducting.

Components: Lecture

Enrollment Requirements: MUS 224 & MUS 337

Room Requirements: DEPARTMENT SPACE(1)

MUS 503B(2) Course ID:013799 Department Consent Required

Conducting Seminar for Conducting Minor

Introduction to score reading: orchestral, opera, and oratorio scores. How to learn a score as a conductor. Score reading at the keyboard: open-score Bach chorales, and slow movements of string quartets. Transpositions. Conducting technique: developing further upon the lessons of Basic Conducting, refining the language of gesture, and applying the lessons to actual scores of the orchestral, opera, ballet, and oratorio repertoire. Analyzing the technique requirements of various sections of scores, arias, recitatives, developing a concept of color, balance, blend and ensemble. Departmental consent.

Components: Seminar

Room Requirements: DEPARTMENT SPACE(1)

MUS 504(2) Course ID:018776

The Assistant Conductor

To study all facets of the assistant conductor, variety of concerts and audience verbal presentations.

Components: Practicum(In Person)

Enrollment Requirements: open to concentrators in Conducting

Room Requirements: DEPARTMENT SPACE(1)

Introduction to Orff and Kodály

An introductory overview to the study of the music pedagogies of Orff and Kodály. This course provides the music student with a background knowledge of both pedagogies including basic tools, philosophical foundations, activities, classroom management techniques and teaching strategies that are necessary in order to teach these pedagogies to students in grades PK-5. The practice of these pedagogies will be achieved through singing games, movement, and listening activities. This course will serve as a precursor to the Levels course offered through accredited programs at institutions across the country during the summer months. Department consent. Prerequisites: MUS 453, MUS 454 and/or with permission of instructor.

Components: Lecture

Enrollment Requirements: MUS 453 & MUS 454

Room Requirements: DEPARTMENT SPACE(1)

MUS 506(2) Course ID:008417

The Musician in Modern Society

Explores the role of the musician in today's society, focusing on different aspects of performing and teaching careers. Assists performers with the acquisition of basic knowledge and skills needed for self-management, private studio development, job interviews, auditions, preparation of publicity and promotional materials, resumes, budgeting, marketing, fund-raising, and grant writing. Offered on a rotational basis. Open to School of Music graduate students and to undergraduate students with permission of the instructor.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 507(1) Course ID:006867

CUA Chamber Choir

Rehearsal and performance of the spectrum of literatures appropriate for chamber chorus. Limited enrollment; by audition and with permission of the conductor. Fulfills major ensemble requirement.

Components: Lecture

Same As Offering: MUS 470

Room Requirements: DEPARTMENT SPACE(1)

MUS 507A(0) Course ID:013209 Department Consent Required

Chamber Choir, Non-Credit Participation

For students in the Master of Music in Sacred Music and the DMA in Sacred Music degree programs, required to participate in Chamber Choir each semester in residence, and who have already fulfilled their credit requirement.

Components: Lecture

Same As Offering: MUS 470A

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

Room Requirements: DEPARTMENT SPACE(1)

MUS 507B(1) Course ID:014483

University Singers

University Singers is the advanced chorus of the School of Music. Rehearsal and performance of works of all periods, occasionally with the University Symphony Orchestra. By audition. May be repeated for credit. Fulfills major ensemble requirement.

Components: Lecture

Same As Offering: MUS 470B

Room Requirements: DEPARTMENT SPACE(1)

MUS 507C(1) Course ID:002444 Department Consent Required

University Chorus

University Chorus provides a performance forum in which students develop their musical and vocal skills. Rehearsal and performance of a wide spectrum of literature; joins the other choral ensembles and University Symphony Orchestra on an occasional basis. By audition. May be repeated for credit. Fulfills major ensemble requirement.

Components: Lecture

Action Research in Music Education

A capstone course for the Master of Arts in Teaching Music (MAT, to be taken concurrently with the student teaching internship. The course will provide guided support for research that will explore (a) inquiry into a relevant and approved aspect of instruction, curriculum, or other valid area of K-12 music teaching and learning (the topic, will be informed by the particular context and/or content of each individual student's concurrent student teaching internship), and (b) application of current and best practice models that may be applied to that particular student teaching internship. A final research document that reports on procedures, results and implications of the project will be required at the conclusion of the course. Prerequisites: MUS 453 and MUS 454 for the Gen/Choral Music Emphasis or MUS 455 and MUS 456 for the Instrumental Music Emphasis; enrollment concurrently with appropriate student teaching course section: MUS 521E, 521F, 521G for the Gen/Choral Music Emphasis or MUS 522E, 522F, 522G for the Instrumental Music Emphasis.

Components: Directed Study/Research

Enrollment Requirements: Requires completion of one of the following pairs: MUS 453 & MUS 454 or MUS 455 & MUS 456

Room Requirements: DEPARTMENT SPACE(1)

MUS 533(2) Course ID:002354

The Business of Independent Studio Teaching

Lecture. Focuses on the business skills necessary to run a successful independent music studio. Issues such as preparing studio policy sheets, planning lessons, group classes and recitals, bookkeeping, zoning, filing of taxes, publicity and retirement planning will be covered. Students will study policy sheets of successful teachers, prepare their own policy sheets, and establish short and long term goals for the studio. Offered on a rotational basis.

Components: Lecture

Course Equivalent: MUS 433

Room Requirements: DEPARTMENT SPACE(1)

MUS 535(2) Course ID:002357

Introduction to Vocal Pedagogy and Physiology

A study investigating the vocal physiology and various teaching methods and tools necessary to the successful singer and pedagogue. Required study for all voice majors, undergraduate and graduate. Offered fall semester only.

Components: Lecture

Same As Offering: MUS 435A

Room Requirements: DEPARTMENT SPACE(1)

MUS 535A(2) Course ID:010593

Vocal Pedagogy Practicum

Students who have successfully completed MUS 535 Introduction to Vocal Pedagogy and Physiology (or a similar course at another university, accepted by the instructor) teach students privately and in a classroom situation. Participating students to be taught by practicum students must be scrutinized by the instructor for vocal health and assured interest in participation. Each practicum student will select a male and a female student to teach privately. Twice during the semester the practicum student will present a sample lesson--approximately a twenty-minute session--with both his/her students, in front of the class. Instructional guidance and peer evaluation offer insight and confidence to the prospective teacher. A final presentation during the final exam period for the instructor will complete the project. Guest speakers and numerous faculty observations included. Required of all graduate vocal pedagogy students; optional for vocal performance students. Offered spring semester only.

Components: Practicum

Room Requirements: DEPARTMENT SPACE(1)

MUS 536A(2) Course ID:006535

Stage Movement for Singers I

Stage movement skills are a necessary component in the education and training of young singers. Effective stage movements differ from everyday body movements in scope, variety, and rhythm. The significance of communication through body movement is well documented in the literature on psycho-physical reflexes, non-verbal communication, kinesthetic intelligence, and neuro-linguistic programming. This course is based on the methods of Stanislavski, Dalcroze, Alexander, and Feldenkrais, who view body movement as a learned form of communication. Class exercises introduce students to the stage fall and simulated stage combat. MUS 436A required of undergraduate vocal performance students; MUS 536A elective credit for graduate students.

Components: Lecture

Same As Offering: MUS 436A

Room Requirements: DEPARTMENT SPACE(1)

Vocal Pedagogy Practicum: Musical Theatre and Pop/Rock Concentration

Each practicum student will select a male and a female student to teach privately and in a classroom situation. Participating students to be taught by practicum students must be scrutinized by the instructor for vocal health and assured interest in participation. Twice during the semester the practicum student will present a sample lesson; an approximately twenty-minute session; with both his/her students in front of the class. Instructional guidance and peer evaluation offer insight and confidence to the prospective teacher. A final presentation during the final exam period for peer evaluation offers insight and confidence to the prospective teacher. A final presentation during the final exam period for the instructor will complete the project. Guest speakers and faculty observations included. Required of all Master of Music graduate vocal pedagogy students in the Musical Theatre and Pop/Rock emphasis. Department consent.

Components: Practicum

Room Requirements: DEPARTMENT SPACE(1)

MUS 537(3) Course ID:002359 Department Consent Required

Music in the Middle Ages

A survey of sacred and secular music, both monophonic and polyphonic, from the early Christian liturgy through the Ars Nova, with special emphasis upon the historical development of forms and the emergence of distinct national styles. Consideration of poetic and musical form, and stylistic analysis. Offered on a rotational basis. Prerequisite: MUS 325, 490.

Components: Lecture

Enrollment Requirements: MUS 325 & MUS 490

Room Requirements: DEPARTMENT SPACE(1)

MUS 537A(3) Course ID:008419 Department Consent Required

Music in the Renaissance

Music and musical style in western Europe from about 1400 to about 1600. Development of polyphonic Mass and motet; changing forms of secular music; and the rise of instrumental music. Offered on a rotational basis. Prerequisite: MUS 325, MUS 490.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 537B(3) Course ID:008420 Department Consent Required

Music in the Baroque

A study of baroque music focusing upon national styles from the late sixteenth century through Bach and Handel. Emphasizes formal and stylistic developments in sacred and secular music, the intervention and influence of monody, and the evolution of idiomatic writing in instrumental composition. Offered on a rotational basis. Prerequisites: MUS 325, MUS 326, MUS 490.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 537C(3) Course ID:008421 Department Consent Required

Music in the Classical Period

An examination of the stylistic elements of repertoire from the Mannheim, Viennese, and North German traditions through Haydn, Mozart, and Beethoven, and their contemporaries. Emphasizes development of major instrumental forms and operatic genres. Offered on a rotational basis. Prerequisite: MUS 326, MUS 490.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 537D(3) Course ID:008423 Department Consent Required

Music in the Romantic Period

A survey of the development of instrumental and vocal genres during the nineteenth century. Emphasizes the cultural and aesthetic environment of the composition and performance of western European art music. Offered on a rotational basis. Prerequisites: MUS 326, MUS 327, MUS 490.

Components: Lecture

The Music of Latin America

An overview of the traditions and cultures as studied through history, traditional folk songs, dance, and compositions. The course aims to provide an eclectic approach to the exploration and study of the richness and diversity of Latin American music. The course serves as an introduction to the various art forms and genres and offers experiential activities through singing, dancing, and listening, as a means to a deeper understanding of how the music shaped the various cultures and traditions of the Spanish- and Portuguese-speaking countries in the Americas. An undergraduate-level course for students pursuing a degree in music education; also open as an elective to all students of the university (undergraduate and graduate) and specifically for those students pursuing any music performance or composition degree; a graduate-level course designed for those students who already possess an undergraduate degree in music performance who are pursuing a degree in music education and/or music performance. Department consent. Bound course with MUS

Components: Lecture

Course Equivalents: MUS 335

Room Requirements: DEPARTMENT SPACE(1)

Elementary And Middle School Instrumental Music Methods

Designed to help the student acquire prescribed knowledge, skills, and dispositions to become an effective teacher of instrumental music at the elementary and middle school levels.

Components: Lecture

Course Equivalents: MUS 458

Room Requirements: DEPARTMENT SPACE(1)

MUS 559(3) Course ID:006888 Department Consent Required

World Music

A study of the indigenous musics of Native America, Africa, India, East Asia, Indonesia, and Latin America. After acquiring a knowledge of basic musical elements such as rhythm, tempo, dynamics, and melody, students go on to investigate a variety of music-cultures, examining not only the music itself but also its meaning and role in the definition of society, ritual, and history. A field research project allows students to draw on their musical backgrounds to identify and document a music-culture within their own scope of experience. Open to students in the University Honors Program (for whom the course is cross listed as HSMU 459), to upper-class undergraduate students with a G.P.A. of 3.5 or better, and to graduate students. For music and non-music majors. Students need not know how to read music.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 559A(3) Course ID:016703 Department Consent Required

History of 20th-Century Directing

Examination of the role and impact of the director in 20th-Century Theatre. Students will study specific directors and their techniques in regard to landmark productions. Students will be expected to produce written analysis and practical demonstrations of studied techniques culminating with a semi-produced one-act production, design, or research paper (Bound with MUS 459).(Bound with MUS 459)

Guitar Literature

This course aims to study the development of the classical guitar and its literature from ancient history to the twentieth-first century. Students will be introduced to the most important composers and performers of the various plucked string instruments that comprise the family tree of the modern guitar. Most representative compositions will be studied analytically, placed in historical and cultural context. Emphasis will be given on the challenges of performing early music in guitar. By the end of this course, students will be able to identify the differences in guitar literature based on time period, region, composer, and musical style.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

MUS 568C(3) Course ID:016265 Department Consent Required

Guitar Pedagogy

This course aims to study the process of teaching classical guitar and to develop an effective teaching technique approach. This course will examine some of the most popular pedagogical books in the guitar literature and will focus on their integration with basic guitar instruction.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

MUS 571(3) Course ID:002410

Twentieth Century Piano Literature of the Americas

A study of piano literature composed in the Americas during the twentieth century. Makes use of resources from the library of The Latin American Center for Graduate Study in Music and visits from faculty specialists where appropriate. Open to graduate and upper-level undergraduate students. Offered on a rotational basis.

Components: Lecture

MUS 572C(3) Course ID:006343

Spanish Lyric Diction and Repertoire

Use of phonetic alphabet to emphasize the difference between spoken and sung Spanish, as well as the difference between Castillian Spanish and Latin American Spanish. Repertoire will cover songs from the Renaissance through the 20th century and Spain and Latin America. Arias and duets from Zarzuelas will also be presented. Classes will be comprised of lecture, performances by students, and the use of recordings. Translations will be provided for all music covered. Students not in vocal performance degree programs can participate by either accompanying or by presenting papers on the repertoire. Offered on a rotational basis.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 572D(3) Course ID:002424

Russian Lyric Diction

Introduces voice students to the technique of singing in Russian, with emphasis on the phonetic requirements of the Russian language. Students apply the international phonetic alphabet (IPA) to the Cyrillic alphabet. Practical training through lecture, recordings, in-class performance, and periodic quizzes. Offered on a rotational basis.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 572E(2) Course ID:002426

Russian Vocal Repertoire

A survey of Russian art songs, arias, and operatic scenes from the eighteenth, nineteenth, and twentieth centuries, in which musical styles and vocal performance traditions are explored. In-class performance, listening, and lectures. Students are required to perform this literature in an end-of-semester recital. Offered on a rotational basis. Prerequisites: 577 or permission of instructor.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 572F(2) Course ID:006346

English Lyric Diction

The international phonetic alphabet (IPA) applied, with emphasis on sung diction. Practical training through performance in class. Written and oral assignments. Offered on a rotational basis.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 572G(3) Course ID:009366

Topics in Scandinavian Song

Primarily a repertoire and performance class, with brief introduction to the history of Scandinavian music and poetry, with special emphasis on folk poetry, and introduction to the diction, with the help of the IPA symbols, in order for the students to perform the selections in the original languages. Features songs by Weise, Heise, Lange-Muller, Gade, Nielsen, Grieg, Rangstrom, Alfven, and Sibelius. Practical training through lecture, recordings, and in-class performance.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

Advanced French Repertoire

This course explores French vocal repertoire by a broad spectrum of composers, accommodating various voice classifications. Class work combines research, performance, and lyric diction. Prerequisite: acceptable foundation in French diction, either from language or lyric dictions courses. Department consent required. Offered every year.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 573(3) Course ID:002415

Intro to Mus Notation Software

Instruction in employing music notation software through weekly lecture-demonstrations supplemented by assignments and projects. Topics include document setup and layout; note entry methods; articulation, dynamic, symbol, and text entry methods; advanced notation tools; creating and editing parts; importing and exporting files; MIDI; templates; plug-ins; working with graphics and video; internet publishing.

Prerequisites: MUS 121, 122, 123, 124, 221, 222, 223, 224. Limit 8 students.

Components: Lecture

Enrollment Requirements: MUS 121, MUS 122, MUS 123, MUS 124, MUS 221, MUS 222, MUS 223, and MUS 224

Introduction to Electronic Composition

This class is an introduction to the tools and theory of making music with various technologies. The course begins with the basic physics of sound and signal routing in a digital workstation, followed by units on basic sound recording and effects processing, sequencing audio and MIDI, synthesis, and interactive systems. Work for the class largely revolves around a series of composition exercises, culminating in a final composition and end-of-semester concert event. Departmental consent.

Arts Administration: Creative Management in the Non-Profit Sector

During the past fifty years, rapid proliferation of non-profit music, dance, and theater performing organizations has taken place in the United States. Today, there are over 1.5 million non-profit arts, education, religious, and human service organizations registered in this country. This hands-on course is designed to build sound management techniques required for the organization and perpetuation of performing arts organizations and arts in education. Topics include defining the mission; building and working with the board; incorporation, by-laws, and taxes; unions, agents, and contracts; creating the budget and fiscal responsibility; fundraising; writing proposals and securing grants; short-term/long-term/strategic planning; audience development; volunteerism; and community education and outreach. Using landmark publications as references, management skills using latest techniques, technology, and strategies are explored and evaluated. Required readings. Mid-term examination and final project (such as writing a grant proposal, developing a

Introduction to Stage Music
Consideration of the particularities of musical composition in combination with other art forms. Technical emphasis placed upon general musical issues of balance, timing, underscoring, instrumentation, and dramatic support, with intensive study of examples selected from a variety of periods and genres. Coursework consists of reading and listening assignments and one in-class presentation. The presentation, generally understood to be a work-in-progress, will be a lecture-presentation of a musical excerpt composed specifically for an interdisciplinary performance setting: e.g. incidental music for play, music for dance, or an operatic scene.
Components: Practicum
Room Requirements: DEPARTMENT SPACE(1)

MUS 617B(1) Course ID:018739
Stage Music Practicum: Collaborations
A continuation of MUS 617A Stage Music Practicum. Stage Music Practicum: Collaborations will be a series of collaborations between student composers and other artists in dance, drama, opera, and musical theatre.

Choral Seminar

Repeatable for credit, combined study of choral literature (score study and analysis), performance practice, topics of choral development (e.g. diction, intonation, voice classification, correction of vocal faults in group settings, etc.). This course will also cultivate choral leadership skill development, including score reading, figured bass reading, and solfeggio on a weekly basis. Running every fall and spring semester, this course provides for a continuing discussion of choral literature and interpretation, as well as a more holistic treatment of the vast body of choral music topics and materials that must be integrated in the professional choral musician. Organists should ordinarily take the 2Cycle A2 semester, which includes discussions of early choral music and tuning and temperament.

The Assistant Conductor for the American Orchestra

There is no specific training available anywhere that prepares young conductors to undertake successfully the position of the assistant conductor of the American orchestra. This 2 credit elective will introduce the varied required assignments for the position, and teach the skills the young conductor will need to audition, interview, and prove ready to undertake all expectations. The following categories and techniques will be introduced and taught in this course:

Young Peoples Concerts: concepts, repertoire, and script writing, audience communication skills.

Pops Concerts: repertoire, scripts, entertainment techniques, working with Pops performers, and preparing concerts in 1 or 2 rehearsals.

Outdoor Concerts: appropriate repertoire, audience communication skills. Building the varied concert program

Organ Improvisation I

Acquisition of practical skills in harmony, based on the study of figured bass playing. Includes the study of ostinatos, variations, and figured bass fugues, always with reference to the repertoire. Graduate students will realize more difficult exercises, both prepared and non-prepared. For organists and other keyboard players. Prerequisites: MUS 224, or successful completion of the Theory Placement Exam or the Graduate Harmony Review, or permission of the instructor. Required for the D.M.A. program in Sacred Music with concentration in organ performance, among the twelve required credits of Sacred and Choral Music (by advisement with the director of the program); does not apply toward the M.M. in Sacred Music; satisfies three semester hours of music electives in the B.M. program in Organ. Organ Improvisation I is a prerequisite for Organ Improvisation II.

Survey of American Song

The study of American song literature and its relationship to world music from the seventeenth century through modern times. Areas of emphasis include the first New England school (seventeenth century); eighteenth-century ballad opera, its introduction and influence in the colonies; the influence of the Italian Bel Canto school on nineteenth-century American parlor song; the second New England school (nineteenth century); and the world influence of the twentieth-century American composers. Composers discussed include Andrew Barton, Stephen Foster, Charles Ives, William Grant Still, Amy Marcy Cheney (Mrs. H.H.A.) Beach, Thomas Pasatieri, and Dominic Argento. Students prepare two in-class presentations, with live musical examples, on assigned topics. Offered on a rotational basis.

Components: Lecture

Room Requirements: DEPARTMENT SPACE(1)

MUS 708(2) Course ID:002528

Survey of English Song

The study of English song literature and its relationship to European music from the thirteenth century through modern times. Areas of emphasis include Elizabethan song, English folk song tradition, Victorian ballads, and the influence of twentieth-century British composers on international song literature. Composers discussed include Henry Purcell, Edward Elgar, Ralph Vaughan Williams, Gustav Holst, and Gerald Finzi. Students prepare two in-class presentations, with live musical examples, on assigned topics. Offered on a rotational basis.

MUS 718(3) Course ID:002555 Department Consent Required

Seminar in Pianism

Study of piano technique and its relation to issues of pianism, both physical and musical. Topics include stages of technical study, beginning to advanced, as well as literature on pianism (Czerny, Chopin, Liszt, Leschetizky, Neuhaus, and others) and the influence of technique on tension, memorization, and interpretation. Offered on a rotational basis.

Components: Seminar
Room Requirements: DEPARTMENT SPACE(1)

MUS 720(3) Course ID:008428 Department Consent Required

Seminar in Music History Topics

This seminar is an in-depth look at Robert Schumann's song output, organized around the poets of some of his most beloved songs and song cycles: Joseph Freiherr von Eichendorff, Adelbert von Chamisso, and Heinrich Heine. Attention will be paid to both the poetry and the music, focusing especially on the text-music relationship and the construction of musical meaning within Schumann's Romantic aesthetic. Throughout the semester we will approach the works both through critical evaluations of the work of other scholars and through our own hands-on engagement with the poetry and music.

Components: Seminar
Topics: Music of Stravinsky, The Romantic Song Cycle, The Operas of Alban Berg, Sacred Music 17th Century Vienna, The Chamber Music of George Crumb, History of Jazz Through Analysis, Seminar in Musicology: The Opera Seria of Mozart, American Experimentalism: Ives, Cowell, and Cage, Schumann's Lieder, Operas of Puccini, Music and Sacred in 17th-Century Rome: Motet, Orat, A Mordent on Modernism: Analytic Perspectives of P, Music and the Mexico Vogue, 1920-1950, Music and Poetry in Robert Schumann's Lieder, Music, Identity, and Politics in the US, 1890-1930, Narratology and the Lied, Sacred Music in 17th Century Venice, Medieval Sacred Polyphony, ca. 1100-1300A.D., Music and Print Culture

Explaining The Unexplained: Using Ethnography and Science To Examine Life's Big Questions

Ethnography using the scientific method is a skill that is used in a multitude of professions, and therefore would be of interest and use to CUA undergraduates from a variety of backgrounds. These could include, but not limited to anthropology, psychology, social work, education, history, criminology, sociology, and politics. This course could also be redesigned to that it met the requirements as part of the social science track for the Honors program. In addition, the focus on using ethnography as the primary method of learning will enhance the students' experience of being in Rome as they are asked to observe more closely the world around them.

As individuals, we are often faced with questions about which we want to know more, yet do not have the tools or knowledge to adequately explore those questions. This course will teach students how to use the scientific method, with a focus on ethnography, as a way to learn how to systematically seek the answers to their

Crime and Punishment: How Culture Shapes our understanding And Response To Crime

What do we really know about why people commit crimes? Much of our perceptions come from the media, including pop culture TV shows. Yet how much of that is based in reality? Why do people commit crimes? How do different societies intervene? How do different social policies ultimately impact how we respond to crimes in our society? This course will explore these questions and compare and contrast the how the US vs. Italian and European systems differ in both our understanding of the origins of crimes and how we ultimately intervene to prevent future ones. As part of the course, students will be asked to write a position brief comparing an issue related to crime between the US and Italy. As part of this process, they will describe how this issue impacts certain stakeholders, critically examine what each country is doing to address the issue, and provide recommendations regarding how the response could be improved.

Understanding criminal behavior is a topic that crosses multiple fields, including but not limited to, social

How Do We Create Mental Wellness: An International Approach

What contributes to mental and psychological wellness? How do different cultures define mentally well versus mentally ill? What are the individual, family, community, and societal factors that contribute to someone's mental wellness or illness? The recent COVID pandemic has demonstrated how vulnerable individuals are as well as how individuals and communities can bolster health and well-being.

This course will introduce students to how mental health is defined and promoted in different cultures. The focus of the course will be for students to explore how within the Italian culture mental health is promoted across all levels of society and systems. Through visits to community organizations that seek to promote wellness, students will experience the multitude of ways that Italians seek to support individuals, families, and communities. They will also design their own program that will promote mental health within a segment of the population, which could be on an individual or group level, and should be focused on a population that

Anthropology of Development

This course introduces undergraduates to the basic theory and practice of international development within an anthropological context. Students will explore an applied, interdisciplinary approach to some of the big questions in this field: What does development mean? Why are some countries persistently poorer than others? How have different stakeholders sought to address the challenges of development in the past, and how are they approaching these challenges now? What are the avenues through which students can develop their own careers in the development field? In addition, this course will cover the basic skills necessary to conduct development work in the 21st Century including designing and managing development projects, conducting development research and evaluating the success of projects.

Diversity in a Multicultural Society

Examines social problems and the sociocultural conditions which influence the way people interact. Considers both developmental and situational stresses and problems, the "isms" and cultural diversity within a social justice context. Prerequisite: SSS 101 or permission of advisor.

Components: Lecture

Course Equivalents: SOC 326

SSS 340(3) Course ID:000232

Social Work Research and Statistics I

Teaches the basic elements of research design and research methodology. Students learn how to formulate problems and hypotheses, draw samples, use standardized instruments, develop questionnaires and scales for data collection, and understand how statistics aid in data analysis. At the end of the course, students should be able to formulate questions about social work issues in a researchable way and propose ways to explore those questions. Students are expected to be critical consumers of research presented by others.

Components: Lecture

SSS 341(3) Course ID:014764

Social Work Research & Statistics II

This course is the second course of two required courses in social work research for social work majors. It is designed to introduce undergraduate students to the research process used by social workers and other social scientists by engaging in basic statistical analyses. The goal of this course is to gain statistical literacy while learning to appreciate ethical standards and behaviors required for conducting social work research. Empirical data and numerical arguments are present in everyday life and are used to guide social work practice decisions.

Components: Lecture

Enrollment Requirements: SSS 340

SSS 352(4) Course ID:003255

Social Work Practice I

Introduction to generalist social work practice; its purpose, theory, values, methods. Focuses on the generic process for helping individuals, families, groups, and/or communities deal with problems or needs arising from their interactions with interpersonal and organizational environments. Required: Four-hour supervised field practicum per week. (Total of 48 hours).

Components: Lecture

SSS 453(3) Course ID:003257

Social Work Practice II

Use of generic social work processes and interviewing skills in working with individuals, families, and treatment groups. Emphasis on psychosocial assessment and the following intervention models: fiduciary responsibilities, crisis intervention, case management, advocacy, counseling. Must be taken concurrently with field instruction. Prerequisite: SSS 352; Concurrent SSS 465.

Components: Lecture

Undergraduate Concurrent Field Instruction I

A classroom, integrative seminar covering theory and practice issues in depth is held weekly throughout the senior year. Students spend two days each week in a social welfare agency in supervised field instruction and use their practicum experience to participate in this integrative seminar. Taken concurrently with SSS 453.

Components: Practicum

SSS 466(4) Course ID:003263

Undergraduate Concurrent Field Instruction II

A classroom, integrative seminar covering theory and practice issues in depth is held weekly throughout the senior year. Students spend two days each week in a social welfare agency in supervised field instruction and use their practicum experience to participate in this integrative seminar. Taken concurrently with SSS 454.

Components: Practicum

SSS 490(3) Course ID:003265

Coordinating Seminar

A seminar to synthesize and integrate knowledge acquired in the social work curriculum and the liberal arts program. It is used to guide the Seniors in the writing of their comprehensive paper which serves as their senior comprehensive assessment. The class and the senior comprehensive assessment paper are graded independently of each other.

Components: Seminar

Undergraduate Comprehensive Examination

The comprehensive examination is a requirement of The Catholic University of America. Within the National Catholic School of Social Service, the comprehensive examination takes the form of a senior thesis. The purpose of senior comprehensives is to give students an opportunity to integrate and synthesize the knowledge gained from undergraduate education in both liberal arts and social work.

Components: Comprehensive Exam

SSS 544(1.5) Course ID:017009

Motivational Interviewing

The purpose of this course is to introduce students to the spirit, tasks, processes, and principles of motivational interviewing. Students will understand the philosophy and perspective of the intervention and demonstrate proficiency with its techniques and skills.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America

SSS 544A(1.5) Course ID:019224

Motivational Interviewing in Clinical Practice

The purpose of this course is to introduce students to motivational interviewing, an evidence based, collaborative, goal-oriented style of communication with particular attention to the language of change (Miller & Rollnick, 2013). Students will understand motivational interviewing as a means to facilitate social change in individuals, families, and organizations. Students will learn the tools of motivational interviewing that guide a client toward change while acknowledging the strengths, dignity, and worth of that client. Students will explore the compatibility of motivational interviewing with the values of social work and its applicability to many social work practice issues including drug and alcohol use, health behaviors, homelessness, advocacy, and community organizing. Students will demonstrate understanding of the philosophy and perspective of the intervention and proficiency with its techniques and skills.

SSS 550(1.5) Course ID:019101

Environmental Justice

This survey course introduces students and practitioners to environmental social work. Anchored in the profession's mission and values, the course explores current environmental crises using both distributive and restorative justice lenses. We consider ethical, psychological, technological, spiritual, and policy-based dimensions of current environmental crises and the disproportionate harmful impacts on marginalized people and places. Emphasis is placed on identifying multi-solving, restorative justice action steps for individuals, organizations, and communities seeking ways to cultivate eco-social health, mental health, and well-being.

Components: Lecture(In Person)
Room Requirements: DIGITAL PRESENTATION ROOM(1)

SSS 550A(1.5) Course ID:019225

Environmental Justice as Social Work Practice

This survey course introduces students and practitioners to environmental social work. Anchored in the profession's mission and values, the course explores current environmental crises using both distributive and restorative justice lenses.

SSS 757(3) Course ID:003376

Evaluation of Social Work Programs

Introduces students to the basic theoretical and methodological concepts of program evaluation. Topics include needs assessment, program monitoring, program effectiveness and efficiency, measurement, survey and group designs, and quantitative and qualitative analytical techniques. Prerequisites: Foundation-year curriculum.

Components: Lecture

Enrollment Requirements: MSW Students

SSS 758(3) Course ID:019012

Research I

This required course is the first course in a sequence of two research courses (SSS 758, SSS 759) designed for the advanced level, second year graduate students in social work. The contents immerse students in the application of scientific knowledge using traditional quantitative and qualitative research methods.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SSS 759(3) Course ID:019013

Research II

This required course is the first course in a sequence of two research courses (SSS 758, SSS 759) designed for the advanced level, second year graduate students in social work. The contents immerse students in the application of scientific knowledge using traditional quantitative and qualitative research methods.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

SSS 801(3) Course ID:003464

Clinical Social Work With Older Adults

Presents the diversities of the aging experience and its historical, and bio-psycho-social-spiritual, aspects. Emphasizes primary, secondary, and tertiary levels for effective practice with elderly clients. Examines major theories of aging and interventive strategies, with special attention to at-risk populations, especially older women and older minorities. Prerequisites: Foundation-year curriculum.

Components: Lecture

Enrollment Requirements: MSW Students

SSS 802(3) Course ID:006386

Clinical Social Work With Adults

Building on the first-year theoretical framework of ecological systems, the course intends to prepare students for advanced clinical practice with individuals in diverse populations. Practice skills are primarily rooted in the explanatory and change concepts of psychodynamic theory as applicable within a multicultural context. Prerequisites: Foundation-year curriculum.

Components: Lecture

Enrollment Requirements: MSW Students

SSS 802D(3) Course ID:015858 Department Consent Required

Clinical Social Work with Adults

Building on the first year theoretical framework of ecological systems, the purpose of this course is to prepare the student for advanced clinical practice with individuals in diverse populations. SSS 822(3) Course ID:006388

Clinical Social Work Practice w/Families

Grounded in the strengths perspective, prepares students to empower the families of children-at-risk to prevent placement in foster care, residential or inpatient psychiatric treatment, and juvenile detention. Reflects both traditional social work in its emphasis on natural helping networks and work in the home and community, and contemporary solution-focused brief family therapy methods. Prerequisites: Foundation-year curriculum.

Components: Lecture
Enrollment Requirements: MSW Students

SSS 822D(3) Course ID:015867 Department Consent Required

Clinical Social Work Practice w/Families

This course introduces students to assessment and treatment of clients through a family systems perspective with an emphasis on family resilience and supporting motivation for growth and change. The course introduces students to some of the major traditional perspectives in family assessment and treatment through the works of Bowen, Minuchin, and Haley. Through lecture, experiential exercises and work with case material, students will learn to apply theoretical concepts to promote change in thinking and interactional patterns as well as to mobilize environmental support.

Components: Lecture(Online)
Enrollment Requirements: National Catholic School of Social Service online-only students
Room Requirements: ONLINE(1)

SSS 831(3) Course ID:006389

Advanced Policy Analysis

Builds on first-year course content on policy, community, and organization. Presents the analytic frameworks and "tools of the trade" employed by policy analysts and advocates. Students learn how to obtain, organize, and use relevant information to promote beneficial social change. Prerequisites: Foundation-year curriculum.

Components: Lecture
Enrollment Requirements: MSW Students

SSS 832(3) Course ID:003541

Management of Non-Profit Organization

Presents management theories and the various functions of management. Emphasis on management as a social work method and on the conceptual, human, and technical skills needed to manage agencies in a manner consistent with social work values and ethics. Prerequisite: Foundation-year curriculum.

Components: Lecture
Enrollment Requirements: MSW Students

SSS 835(3) Course ID:011638

Community Organizing for Equitable Development

The course is designed to deepen students' knowledge and skills in community development practice with an emphasis on learning skills to awaken power and build leadership in residents of low-income communities for resident-led community development efforts. The course is grounded in the popular education methods of Paulo Friere. These methods honor the wisdom, knowledge, and experience of all members of a community. Popular education methods apply a problem-focused approach to action where community members reflect on a shared problem, plan a response to that problem and further reflect on the process and outcome of their action.

Social Justice: Theory and Practice

This course focuses on theory and practice that helps social workers conceptualize what social justice looks like and critically assess organizational, community, and policy contexts in collaboration with marginalized and oppressed populations. Students will develop a sophisticated understanding of theories of social justice; prevailing social, economic, and political contexts that shape living and working conditions; and approaches to engagement, assessment, and problem identification rooted in anti-oppressive and anti-racist perspectives. Specifically, students will apply social justice frameworks to analyze social policies and develop policy recommendations that are intentional about ameliorating suffering and contributing to more just living conditions. Additionally, students will develop an understanding of social justice praxis in organizational, community, and policy contexts--focusing on participatory and reflexive methods of engagement and assessment, restorative justice practices, and planning for social change. At the end of the course, students will

Components: Lecture(In Person)

SSS 871(3) Course ID:003547

Advanced Field Instruction & Seminar: Clinical I

Students are placed in field agencies which provide them with supervised clinical practice experience. Concurrent with the practicum, the seminar prepares students to integrate skills learned in academic courses with practice in the field and provides opportunities for the sharing of student cases and/or projects. Prerequisite: Foundation-year curriculum; prerequisite or co-requisite: 756, and advanced year theory and practice courses.

Components: Field Studies

Enrollment Requirements: MSW Students

SSS 871D(3) Course ID:015869 Department Consent Required

Advanced Field Instruction and Seminar: Clinical I

In the advanced year students are placed in field placement, which are consistent with their clinical. The integrative seminar (871D/872D) is taken concurrently with the field placement, and prepares students to integrate skills learned in theory and practice courses with their field experience. It provides opportunities for the sharing of clinical cases and practice experience. In the clinical seminars, discussion, and class assignments prove the student opportunity to gain professional and peer feedback regarding the application of clinical social work theory to clinical practice.

Components: Field Studies(Online)

Room Requirements: ONLINE(1)

SSS 872(3) Course ID:006390

Advanced Field Instruction and Seminar: Clinical II

Students are placed in field agencies which provide them with supervised practice experience consistent with their chosen concentration. Concurrent with the practicum, the seminar, sectioned by concentration, prepares students in integrate skills learned in academic courses with practice in the field and provides opportunities for the sharing of student cases and/or projects. The seminar instructor directs the graduation assignment in which students implement the principles of practice or program evaluation. Prerequisites: 871 and 756, and advanced year theory and practice courses.

Components: Field Studies

Enrollment Requirements: MSW Students

SSS 872D(3) Course ID:015870 Department Consent Required

Advanced Field Instruction and Seminar: Clinical II

The second semester of this course will be designed to ensure student opportunity to reflect upon and discuss direct practice work in agency setting with clients. Students will develop a client assessment, and share it with their peers in a video format. All students will have the benefit of presenting a case, as well as offering and receiving feedback from peers and instructor regarding their clinical presentation.

Components: Field Studies(Online)

Room Requirements: ONLINE(1)

SSS 873(3) Course ID:007823

Advanced Field Instruction and Seminar: Combined/Macro

Students are placed in field agencies which provide them with supervised experience in both clinical and macro social work practice. Concurrent with the practicum, the seminar prepares students to integrate skills learned in academic courses with practice in the field and provides opportunities for the sharing of student cases and/or projects. Prerequisites: foundation year curriculum; prerequisites or corequisites: 756 or 757 and advanced year theory and practice courses.

SSS 880(3) Course ID:003548

Organizational Theory and Change

Examines types of organizational theories, their purposes, and applications to human service systems, structures, and processes, as well as theories of organizational change. Included for analysis are classic bureaucratic theory, scientific management, public organization theory, communication theory, behaviorism, and organizational development theories. Explores themes, questions, and explanatory bases of organizational theories as they relate to specific attributes of human service organizations.

Components: Lecture

SSS 882(3) Course ID:003551

Adult Learning Theories for Professional Education

Designed to familiarize students with adult learning theory and other theoretical approaches to learning and teaching. Emphasis on curriculum construction and instructional design as well as on the philosophy of higher education.

Components: Lecture

SSS 886(3) Course ID:003555

Issues in International Social Development

Focuses on such international concerns as migration, refugees, disaster assistance, and adoption. Considers policies and programs to positively influence these problems.

Components: Lecture

SSS 890(3) Course ID:003581

Analysis and Critique of Social Policy Methods

Presents the major social welfare policy and planning conceptual schemas. Considers these schemas and variables such as beliefs, values, ideologies, customs, and the economy in relation to policy and planning. Also considers policy analysis and formulation and implementation methods and procedures. Participants engage in special projects to pursue policy analysis, development, or planning in their major substantive area. Includes research findings in relation to policy and planning.

Sociological Theories Influencing Social Work Scholarship and Research

This course examines theoretical perspectives drawn from the classical social sciences that are useful in examining various issues of concern to social workers. The purpose of this course is to familiarize the student with sociological theories that influence scholarship and research in the social work profession. These sociological theoretical perspectives are examined in terms of their assumptions regarding human nature, the nature of the social order, their historical roots, and their application to contemporary social issues. This course will enable students to think deeply, critically, and creatively about the use of theory in professional social work.

Components: Seminar

SSS 932(3) Course ID:013336

Psychological Theories Influencing Social Work Scholarship and Research

This course examines theoretical perspectives drawn from the classical and contemporary psychological and learning theories that are useful in examining various issues of concern to social workers. The purpose of this course is to familiarize the student with the strengths and weaknesses of these theories that influence scholarship and research in the social work profession. These theoretical perspectives are examined in terms of their assumptions regarding human nature, the nature of the social order, their historical roots, and their application to contemporary social issues.

History and Philosophy of Social Work

Focusing on knowledge development for the social work profession, includes three content units: philosophical underpinnings of social work knowledge, nature of knowledge, and knowledge development issues in the social work profession.

Components: Lecture

SSS 944(3) Course ID:003612

Theoretical Framework for Ethical Decision Making and Knowledge Building

Designed to aid the student to become more effective in dealing with contemporary ethical issues in social work and to contribute to knowledge building for the profession. Provides a theoretical framework for ethical decision making as a point of departure to examine value and ethical issues in a systematic way and to contribute to the knowledge base of the profession.

Components: Lecture

SSS 946(3) Course ID:003613

Theories of Social Justice

Examines and compares several theories of social justice, including utilitarian, egalitarian, libertarian, communitarian, and feminist approaches. Principles of equality, equity, utility, and natural rights considered from both micro and macro perspectives. Illustrations from health care; child, family, and intergenerational justice; juvenile and adult corrections; racism; gender justice; and global issues. Prerequisite or concurrent: 944.

Components: Lecture

SSS 947(3) Course ID:003614

Multivariate Statistics and Design

Presents principles of multivariate analysis and interpretation, including regression, analysis of variance and covariance, path analysis, logit and log linear models, factor analysis, and reliability coefficients. Applications discussed in relation to various research designs. Prerequisite: 501 or equivalent.

Components: Lecture

SSS 948(3) Course ID:003615

Multivariate Statistics and Design II

Presents principles of multivariate analysis and interpretation, including regression, analysis of variance and covariance, path analysis, logit and log linear models, factor analysis, and reliability coefficients. Applications discussed in relation to various research designs. Prerequisite: 501 or equivalent. Continuation of SSS 947.

Components: Lecture

SSS 950(3) Course ID:003616

Research Foundations: Introduction

Provides foundations of research measurement and the conceptual foundations of research design. Includes principles of data collection as well as an overview of methods. Emphasis on research methodology for use in knowledge development for the social work profession. Prerequisite or concurrent: 940.

Components: Lecture

SSS 953(3) Course ID:003617

Advanced Social Work Research

Builds on earlier course work in research methodology and statistical analysis as well as concentration coursework. Designed to enhance knowledge and skills in conducting social work research. Emphasizes qualitative and quantitative research methods, data collection procedures, and data analysis procedures appropriate for conducting research in clinical, policy, and administrative contexts. Section I : Clinical Section II: Policy

Components: Lecture

SSS 955(3) Course ID:007466

Qualitative Research Methodologies

Explores critical issues in qualitative research methods, including the philosophical underpinnings, ethical and socio-cultural considerations, and value stances. Focus is placed on connecting the epistemology of knowledge with methods and with the recognition that different research questions require different methods of appropriate research. Introduces the student to the use of computer software for the analysis and presentation of qualitative data.

Women's Health in Primary Care: A Lifespan Approach

This course addresses the promotion, maintenance, and restoration of health for women from adolescence to post-menopause. The course emphasizes the physiological, environmental, cultural, and behavioral factors and issues that impact the health of adolescent and adult women.

The course focus on patient-centered evidence-based care is congruent with the University's mission which seeks to discover and impart the truth through excellence in teaching and research- all in service to others.

Components: Lecture(In Person)

Topics: Rome, Italy

Room Requirements: ABROAD(1)

NURS 302(3) Course ID:019414 Department Consent Required

Care of the Older Adult

The purpose of this 3.0 credit elective course is to introduce undergraduate nursing students to the unique physiological, social, psychological, developmental, economic, cultural, spiritual, and advocacy needs of older adults using an evidence-based approach.

Components: Lecture(Blended (in-person and online))

Enrollment Requirements: successful completion or concurrent enrollment in NURS 258 & NURS 310

Room Requirements: DIGITAL PRESENTATION ROOM(1)

NURS 309(4) Course ID:016337 Department Consent Required

Fundamental Applications

Fundamental Applications lecture is a didactic course which provides foundational nursing knowledge, skills and decision-making for delivery of nursing care to patients/clients in the general clinical setting. This course introduces classic nursing principles that underpin future clinical practice. These principles include such things as comfort measures, assistance with daily living activities, environmental concerns, positioning and transporting, asepsis and sterile technique, medication administration, invasive therapies utilizing the nursing process with particular emphasis on the intervention component.

Develop a foundational nursing knowledge, skills, and decision-making necessary to provide safe, quality, and evidence-based care to patients/clients in a general clinical setting. This includes the nursing process, basic critical thinking skills, and evidence-based guidelines relevant to patients/clients in the general clinical setting.

Components: Laboratory(In Person), Lecture

Enrollment Requirements: BIOL 223, BIOL 232, BIOL 233, CHEM 109, CHEM 119, NURS 151, NURS 254A, NURS 257, and NURS 371

Room Requirements: DEPARTMENT SPACE(1)

NURS 310(3) Course ID:000004 Department Consent Required

Pharmacology

This course focuses on the pharmacologic treatment of diseases covered in pathophysiology. Both pharmacologic and nonpharmacologic treatment modalities will be discussed. Pharmacology is designed to bridge the gap between the basic sciences and the clinical practice of nursing. The course expands beyond knowledge and comprehension of concepts studied in chemistry, microbiology, and human anatomy and physiology to emphasize analysis and application of that knowledge to the study of disease processes and their pharmacologic and nonpharmacologic management for individuals across the lifespan.

Components: Lecture

Enrollment Requirements: NURS 151, NURS 254A, NURS 257, NURS 371, and concurrent enrollment in NURS 258 and NURS 309

NURS 313(3) Course ID:019413 Department Consent Required

The Nurse's Role in Disaster Preparation, Response/Management, and Recovery

The purpose of this 3.0 credit elective course is to introduce the undergraduate nursing student to the core elements of disaster preparation, response/management, and recovery with the intent on assisting the student to understand the role of the nurse in a potential/actual disaster situation.

Components: Lecture(In Person)

Enrollment Requirements: Open to Junior or Senior BSN students who have passed or are concurrently enrolled in both NURS 275L and NURS 275C

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Catholic Univ of America
Course Catalog

NURS 370(3) Course ID:002794

Community and Population Health Lecture

This course provides a foundation in population health, including community and population assessment, intervention and evaluation of culturally diverse and vulnerable populations. It explores the nurses role related to the care of vulnerable groups in the community. Emphasis is on primary, secondary and tertiary prevention of health problems, and concepts of community and population health affecting cultural diverse and vulnerable populations.

Prerequisites: NURS 151, 256, 154A, 257 and concurrent enrollment in NURS372

Components: Lecture

Enrollment Requirements: Open to Nursing BSN students only; Traditional (non-accelerated) students must have a 2.75 average or better in BIOL 232, BIOL 233, BIOL 223, CHEM 109, and CHEM 119

NURS 371(3) Course ID:000005 Department Consent Required

Pathophysiology

Pathophysiology introduces the pre-clinical nursing student to human disease states and their clinical management. It is designed to assist students in applying knowledge from human anatomy and physiology to the study of adaptive and maladaptive responses to alterations in health. Requires four clock hours of class per week, plus one hour of peer-led discussion. Offered first semester. Open to students in other schools with permission of instructor.

Components: Lecture

Enrollment Requirements: Cumulative 2.75 or better GPA in BIOL 223, BIOL 232, BIOL 233, CHEM 109 and CHEM 119; prior enrollment in NURS 151; and concurrent enrollment in NURS 254A, NURS 256, and NURS 257

NURS 371A(1) Course ID:017651 Department Consent Required

Pathophysiology for ACU Students

Pathophysiology introduces the pre-clinical nursing student to human disease states and their clinical management. It is designed to assist students in applying knowledge from human anatomy and physiology to the study of adaptive and maladaptive responses to alterations in health. Requires four clock hours of class per week, plus one hour of peer-led discussion. Offered first semester. Open to students in other schools with permission of instructor.

Components: Online(Online)

Enrollment Requirements: Cumulative 2.75 or better GPA in BIOL 223, BIOL 232, BIOL 233, CHEM 109, and CHEM 119

Room Requirements: ONLINE(1)

NURS 372(2) Course ID:012829 Department Consent Required

Community and Environmental Nursing: Clinical Applications

Provides undergraduate nursing students an opportunity to apply concepts in clinical prevention and population health to a community health problem. Students will be required to implement a community health project and evaluate the results of the project during the semester. The course is a combined seminar/clinical project activity.

Components: Clinical

Enrollment Requirements: Concurrent enrollment in or successful completion of NURS 370

NURS 373(3) Course ID:016714

Community Health Nursing Lecture

This course addresses population-focused health care. It explores the nurse's role related to the care of vulnerable groups in the community. Emphasis is on primary, secondary and tertiary prevention of health problems. and concepts of community and population health affecting cultural diverse and vulnerable populations. Prerequisites: NURS 151, 256, 254A, 257 and concurrent enrollment in NURS 374

Components: Lecture

Enrollment Requirements: BIOL 223, BIOL 232, BIOL 233, CHEM 109 ,CHEM 119, NURS 151, NURS 254A, NURS 256, NURS 257, NURS 371, and concurrent enrollment in NURS 374

Mental Health Nursing Lecture

The focus of this course is on the biological, psychological, and social/learned basis of psychiatric disorders. This course builds on the concepts from basic psychology and physiology to the study of pathology of mental illness. The course explores nursing interventions including the use of the Nurse-Patient Relationship, the use of medications and managing the patient's environment and social milieu. Recovery concepts are incorporated as are the issues of stigma. Legal and ethical issues frequently encountered in the area of psych/mental health nursing are addressed. Self-awareness, personal growth, socio-cultural sensitivity, and professional development are vital components of the course. Contemporary mental health issues and their sequela are addressed.

Components: Lecture

Enrollment Requirements: BIOL 223, BIOL 232, BIOL 233, CHEM 109, CHEM 119, NURS 151, NURS 254A, NURS 257, NURS 371 and concurrent enrollment in NURS 377

Spirituality and Care of the Sick

The purpose of this course is to explore the interface between spirituality and the practice of nursing. Although spirituality will be examined broadly, according to a variety of theologies, the primary orientation of the course content is derived from the Judaeo-Christian tradition. The course incorporates an historical perspective on spirituality and the healing arts, as well as contemporary theological and spiritual approaches to assessment and intervention in relation to the spiritual needs of those experiencing health deficits. The newly emerging subfield of parish nursing is also addressed. Finally, the spiritual needs of professional caregivers are identified and explored and potential spiritual support mechanisms are discussed. Enrollment for nursing students only.

Theatre in Healthcare

Healthcare Theater provides students with the acting, feedback, and debriefing skills needed to become standardized patients (SPs). This course studies the theory and practice of healthcare theater. Acting students work alongside nursing students to portray a variety of roles involved in healthcare settings, including patients who are examined and evaluated in mock clinical settings and embedded participates (e.g., family and friends) involved in patient care scenarios. The course examines the growing field of applied theater (specifically theater in health education) and SP-based education (including domains of best practices).

By training healthcare professionals and actors, this collaborative, interprofessional course supports the Catholic University of America's aim to create a community of scholars that seeks to meet the needs of our

Healthcare Biostatistics

This online graduate level statistics course utilizes Blackboard as an interface. It will provide students with skills in quantitative reasoning through the use of healthcare biostatistics. Students will use and apply descriptive and inferential statistical techniques to answer research questions in nursing and health sciences. The course will familiarize the student with basic concepts in biostatistics as well as the fundamentals of data management and analysis using advanced statistical software. This course meets the requirements for the prerequisite graduate level statistics course required for entry to the MSN/DNP/PhD programs in the School of Nursing.

Course Objectives:

1. Discuss the relationship of data to evidence/information in nursing and health sciences.

Components: Directed Study/Research

Course Equivalents: NURS 671D

NURS 671D(3) Course ID:015360 Department Consent Required

Health Promotion Across the Lifespan

Lecture (2 clock hours per week) Examines data, studies, and models which present and interpret health behavior and the disparities of health status. Reviews health promotion activities in managed care environments, workplaces and schools and discusses knowledge, values and decision which affect health-seeking behavior. Department consent required.

Components: Lecture(Online)

Course Equivalents: NURS 701

Enrollment Requirements: enrollment restricted to students in the School of Nursing's online-only programs

Room Requirements: ONLINE(1)

NURS 708(3) Course ID:010798 Department Consent Required

Research in Nursing: Methods and Outcomes

The focus of this course is the scientific method of problem-solving and decision making in clinical nursing practice. Students are guided in using research knowledge and methods to identify appropriate solutions/outcomes for clinical conditions. The course provides content foundational to the measurement of outcomes, and the relationship of outcome measurement to quality improvement. This course has a Statistics pre-requisite; NURS665 or NURS671 can be taken to fulfill this requirement.

Components: Lecture

Course Equivalents: NURS 708D

NURS 730D(3) Course ID:015801

Evidence Based Practice I

This course focuses upon the synthesis, critique, and application of evidence to support quality in clinical practice. Students will identify a clinical practice problem and articulate their ideas and plan for transforming a practice problem into answerable clinical research questions. Students will review, analyze, and synthesize clinical evidence using basic epidemiological, biostatistical, and scientific principles in support of the identified problem. Students will explore EBP models in order to integrate best evidence with patients; values and preferences and organizational culture. Students will be expected to have completed a systematic review of a body of research in support of the identified clinical problem by the end of the semester

Components: Lecture(Online)

Enrollment Requirements: enrollment restricted to students in the School of Nursing's online-only programs

Room Requirements: ONLINE(1)

NURS 731D(3) Course ID:012000 Department Consent Required

Evidence-based Practices II

This course focuses upon extending the work in the EBP I course. Students further refine their proposed clinical practice project developing the project implementation and evaluation plan. Seminar discussion will focus upon EBP strategies and evaluation methods and analysis. Students will be expected to have completed the EBP proposal by the end of the semester.

Components: Practicum

Primary Care of Adults I

Seminar/Practicum

(Seminar 3 clock hours; clinical practicum 9 clock hours per week/135 per semester)

This is the first of two seminar and practicum courses which address advanced nursing practice and the management of clients with health problems commonly encountered in the delivery of primary care. Didactic content focuses on physical, psychological, socio-cultural and spiritual dimensions of human needs. Practicum activities emphasize refinement of advanced nursing practice skills. Developmental and pharmacological content is integrated throughout the course. The client system of the course is the adolescent, adult, or geriatric individual as a member of the family. NURS 657 (or coreq) and NURS 661 (or coreq) and NURS 698 (or coreq) Department consent required.

Components: Lecture

Course Equivalents: NURS 782D

Enrollment Requirements: Must have taken or be concurrently enrolled in NURS 657

NURS 782D(3) Course ID:016244 Department Consent Required

Primary Care of Adults I

This course addresses strategies for the non-pharmacologic management of challenging behaviors of older adults with dementia. The course is designed for advanced practice registered nurses/students, and members of the healthcare team with an interest in the care of older adults. NURS605 course requires a case study of a client with dementia and behavioral problems.

Components: Lecture(Online)

Course Equivalents: NURS 782

Capstone Research Project

This course provides students with the opportunity to integrate, synthesize and apply knowledge gained throughout the Master's program. Policy, theoretical, research and ethical principles along with sound clinical knowledge will be utilized to produce an evidence based project. The project will be developed for and in collaboration with a health care organization, professional organization, policy director, or other similar entity.

Components: Lecture

Seminars in Nursing History and Nursing History Research

The purpose of this course is to introduce the graduate nursing student to legacy moments in nursing history with the intent on assisting the student to connect nursing's past to its current state in terms of nursing education, role/responsibility development, practice contributions/trends, clinical competency mastery and specialty, collaboration with other healthcare providers, and impact on patient/family outcomes. During this course, the graduate nursing student will also be introduced to both descriptive and qualitative approaches to nursing history research, the role of academic nursing history centers in nursing history research, and to the use of archival nursing data.

Advanced Statistics and Research Methods in Healthcare

The emphasis in this course is on the acquisition of methods and techniques for extending the scientific base of knowledge for nursing practice. Research studies that address questions of importance to nursing will serve as the focus for discussion. Experimental and quasi-experimental designs and related statistical procedures will be examined in terms of their appropriateness for addressing various nursing problems.

Components: Lecture

Multivariate Statistics in Healthcare Research

The course will review basics of statistical theory and teach bivariate and multivariate statistical methods. The emphasis is on the acquisition of methods of statistical analysis for analysis of data to extend the scientific base of knowledge for nursing practice. Acquisition encompasses presentation of the theoretical basis of the statistical methods to promote understanding of the purpose of the method and how it achieves its outcome. In addition, acquisition encompasses application for learning how to use SPSS for analysis of data using multiple statistical methods. Statistical procedures will be examined in terms of their appropriateness for addressing various healthcare research questions.

Readings in Gerontological Research

(3 clock hours) Review of current research in selected topics in gerontology. Discussion of methodological considerations. Emphasizes the application of findings in the advanced practice role of the nurse. Development of a research program in a selected area of gerontological research.

Components: Lecture

NURS 835(3) Course ID:006705

Program Development and Evaluation

This course is designed to support the ongoing development of the role of nurse as educator. The development, implementation, and evaluation of educational programs are analyzed. Standards for nursing education provide the context for analysis. Characteristics of the reflective teacher and the reflective learner are examined. While emphasis is placed on the role of the nurse faculty member in an educational institution, the role of the nurse as patient and staff educator also is explored. Pre or co-requisites include NURS 708 Research in Nursing: Methods and Outcomes, NURS 661 Theoretical Foundations of Advanced Practice Nursing, and at least one clinical course. Permission of the instructor required

Advanced quantitative methods for health care providers

This doctoral course builds upon the work in N923D Clinical Problems: Theoretical Considerations in which students were guided in their exploration of the identification and defense of a clinically relevant problem, and the theory-practice-research linkage as it relates to the problem and N924D Clinical Problems II: Design Considerations in which students learned how to develop a comprehensive literature review demonstrating the current state of the science, critical evaluation of the literature, and syntheses of the literature to identify gaps and how the proposed research would contribute to overcoming the gaps and develop new knowledge. In this course, the content focuses on chapter 3 in which students will learn how to develop a rigorous methodology. Students will 1) identify a research design that demonstrates a fit for the procedures and analyses of the research questions/hypotheses and maximizes control over factors that could threaten the validity of the findings, 2) select and describe a setting with substantiation of access to target

Doctoral Research Practicum

This course provides the doctoral student with a chance to experience the research process on a day-to-day basis and helps students to integrate practical and theoretical knowledge. Students will work with a CUA faculty or community research mentor an estimated 6-9 hours/week and focus on some aspect of the research process. Examples could include: literature review and synthesis, research design, sampling, data collection, or methods. Placements will be arranged by the course coordinator. The experience will be tailored to the individual student's needs relative to developing doctoral level research skills. Students will be encouraged to pursue practicum experiences that will enhance and strengthen developing their research. The practicum course will also contain seminar component and online components to facilitate learning.

The Desire to Know

This course discusses the nature and function of logic in philosophical and nonphilosophical context. It teaches students the basic skills requisite for the appreciation of Aristotle's philosophy. It progresses through Aristotle's "Organon" presenting syllogistic and scientific reasoning. Exercises require evaluation and application of course materials in the contexts of philosophy, science, politics, and literature.

Components: Lecture

Course Equivalents: PHIL 201, PHIL 211, PHIL 201P

Enrollment Requirements: University Honors Program; Not open to students who have already taken PHIL 201, PHIL 211 or HSPH 101 without department consent

HSPH 102(3) Course ID:003074 Department Consent Required

Human Action and Government

An introduction to moral and political philosophy with emphasis on the concepts of right reason and right action as developed in Aristotle's Nicomachean Ethics and Politics. Focuses on the perfection of the soul through intellectual and moral virtues and the function of these virtues in the larger human context, along with an explanation of Aristotle's praxis.

Components: Lecture

Course Equivalents: PHIL 202, PHIL 212

Enrollment Requirements: University Honors Program; Not open to students who have already taken PHIL 202, PHIL 212 or HSPH 102 without department consent

HSPH 203(3) Course ID:003075

Nature & Human Nature

The key concept of the first part of the course is nature in the sense of physis or natura. Comparisons to mathematical explanations are offered by the founders of modern physics and chemistry. Psyche or anima is the focus of the second part of the course. Exploration of parallels with explanatory principles in biology, psychology, and cognitive science.

Components: Lecture

Enrollment Requirements: University Honors Program

HSPH 204(3) Course ID:003083 Department Consent Required

Ultimate Questions

Aristotle's Metaphysics and Aquinas' Summae Theologia provide the basis for the examination of the transition from being to a natural theology and the subsequent modern embrace of rationalism. "Ultimates" to be questioned include: Being, Truth, and the Good. Readings complemented by texts of David Hume and Immanuel Kant.

Components: Lecture

Enrollment Requirements: University Honors Program

Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 101P(3) Course ID:018931 Department Consent Required

Reasoning and Argumentation

An introduction to logic. Topics include rhetoric, dialectic, types of definition, informal fallacies, deductive validity, syllogistic logic, and legal reasoning. Simple inductive procedures also considered. Area I. Enduring question addressed: What does it mean to know? What and how much can we know? Offered spring semester. For Tucson Program students only.

Components: Lecture(Blended (in-person and online))

Enrollment Requirements: Open to undergraduate students at the Tucson campus

Room Requirements: OFF CAMPUS(1)

PHIL 201(3) Course ID:000215 Department Consent Required

The Classical Mind: The Origin and Growth of Western Philosophy

An introduction to philosophy, using the original writings of several philosophers from the ancient and medieval periods, with a more general consideration of the history of philosophy. Enduring Questions addressed: (1) What does it mean to be human? What is our place in nature and in the cosmos? (2) What makes a life good? How can we live a good life or best pursue it? What is opposed to it?

Components: Lecture

Course Equivalents: HSPH 101, PHIL 211, PHIL 201P

Enrollment Requirements: Not open to students who have already taken PHIL 201, PHIL 211 or HSPH 101 without department consent

Room Requirements: DIGITAL PRESENTATION ROOM(1)

The Modern Mind (UH)

An introduction to modern philosophy focusing on texts from selected modern and recent thinkers; traces the development of Western philosophical thought from the seventeenth to the twentieth century. The intent of this course and its prerequisite is to utilize history and the texts of great philosophers to establish the structure and methodology of philosophical thinking. Enduring Questions addressed: (1) What does it mean to be human? What is our place in nature and in the cosmos? (2) What makes a life good? How can we live a good life or best pursue it? What is opposed to it? Offered for Honors program students only.

Components: Lecture

Course Equivalents: PHIL 202, HSPH 102

Enrollment Requirements: PHIL 211; Not open to students who have already taken PHIL 202, PHIL 212 or HSPH 102 without department consent

PHIL 301(3) Course ID:000217

Reasoning and Argumentation

An introduction to deductive logic. Topics include rhetoric, dialectic, types of definition, informal fallacies, deductive validity, syllogistic logic, and legal reasoning. Simple inductive procedures also considered. Area I. Enduring question addressed: What does it mean to know? What and how much can we know? Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Course Equivalents: PHIL 302

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 302(3) Course ID:017834

Introductory Logic

An introduction to deductive logic. Topics include rhetoric and dialectic; definition; use and mention; informal fallacies; the nature of deductive reasoning; syllogistic logic; and propositional logic. Simple predicate logic and inductive methods also considered. Special attention paid to philosophical issues, and the relationship between natural and formal languages. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent. For philosophy majors and minors only.

Components: Lecture

Course Equivalents: PHIL 301

Enrollment Requirements: Philosophy majors and minors only

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 303(3) Course ID:001453

Biomedical Ethics

An introduction to bioethics which examines human nature, moral action, and moral reasoning within the context of medicine and health care. Topics investigated may include reproductive technologies, abortion, experimentation on human subjects, genetic therapy, euthanasia, brain death, doctor-patient relationships, and the just allocation of health care. Enduring Questions addressed: The Human Condition. Area I. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 305(3) Course ID:001467

Metaphysics

An introduction to the philosophy of being for non-majors. Typical topics include the following: the nature of metaphysical inquiry; the basic categories of being; properties common to all beings; the analogy of being; the problem of universals; substance, accident, essence, and existence; God. Enduring Questions addressed: (1) What does it mean to know? What and how much can we know? (2) What is wisdom? How can we attain it? Area II. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

The Catholic Univ of America
Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 308(3) Course ID:001474

Philosophy of God

A critical examination of the traditional arguments for the existence of God and of their scientific, epistemological, and logical requirements; a discussion of the philosophy of God as conceived by the principal representatives of modern philosophy. Enduring Questions addressed: God. Area II. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 309(3) Course ID:000191

Theories of Ethics

A study of classical and contemporary theories of moral conduct. Special emphasis on problems of moral judgment, justification, and ideas. Area I. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Course Equivalents: PHIL 309A, PHIL 309B

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 309A(3) Course ID:017045

Theories of Ethics

A study of major ethical theories, including virtue ethics, natural law theory, duty ethics, and utilitarianism. Readings will include works of Aristotle, Aquinas, Kant, and Mill.

Components: Lecture

Course Equivalents: PHIL 309, PHIL 309B

Enrollment Requirements: Philosophy majors and minors only

PHIL 309B(3) Course ID:017046

Theories of Ethics

A study of classical and contemporary theories of moral conduct. Special emphasis on problems of moral judgment, justification, and ideas. Enduring Questions addressed: (1) The Good Life; (2) Freedom and Justice. Area I. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Course Equivalents: PHIL 309, PHIL 309A

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 310(3) Course ID:001480

Philosophy of Art

Philosophical treatment of a range of art forms that focuses on the nature of creativity, beauty, and representation. Major arts compared and contrasted. Enduring Questions addressed: What are beauty, goodness, and truth? Area I. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Topics: Rome, Italy

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 311(3) Course ID:001486

Contemporary Moral Issues

A study of ethical principles and their application to selected moral issues from various fields of contemporary human action. Enduring Questions addressed: (1) The Good Life; (2) Freedom and Justice. Area I. Offered both semesters. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 313(3) Course ID:000161

Philosophy of Human Nature

Comparison and contrast of texts from Plato, Aristotle, Augustine, Descartes, Nietzsche and others on such themes as: nature and convention, freedom, solitude, and community. Offered both semesters. Area II. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Course Equivalents: PHIL 313A, PHIL 313B

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 313A(3) Course ID:017047

Philosophy of Human Nature

A study of major philosophical questions concerning human nature, especially on the relationship between body and soul, free will, and immortality. The major approaches discussed will include materialism, dualism, and hylomorphism. Readings will include pre-modern, modern, and contemporary authors. For philosophy majors and minors only.

Components: Lecture

Course Equivalents: PHIL 313, PHIL 313B

Enrollment Requirements: Philosophy majors and minors only

PHIL 313B(3) Course ID:017048

Philosophy of Human Nature

Comparison and contrast of texts from Plato, Aristotle, Augustine, Descartes, Nietzsche and others on such themes as: nature and convention, freedom, solitude, and community. Enduring Questions addressed: (1) The Human Condition, (2) Freedom and Justice. Offered both semesters. Area II. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Course Equivalents: PHIL 313, PHIL 313A

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 315(3) Course ID:001494

Philosophy of Language

A philosophical inquiry into the nature and function of language. Studies classical, medieval, and modern philosophers; discusses topics such as meaning, reference, and truth. Enduring Questions addressed: What does it mean to know? What and how much can we know? Area II. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 317(3) Course ID:001498

Philosophy of Religion

An examination of philosophical questions that have arisen in the Western tradition regarding such fundamental issues as the relationship between faith and reason; the nature of religious language; rational arguments for and against the existence of God; the problem of evil; the nature and attributes of God; the relationships between God and human freedom, and between morality and religion; the problem of miracles; and the prospect of life after death. Enduring Questions addressed: God. Area II. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Course Equivalents: PHIL 517

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 319(3) Course ID:019416

Darwin and Design

This course aims to introduce students to the nature and implications of evolutionary theory, at both the scientific and philosophical levels. We will begin with one of the classic arguments from design, familiar to Darwin himself, before proceeding to Darwin's alternative in the Origin of Species. We will then read contemporary accounts of the impact of Darwin's theory on traditional, purposive ways of explaining biological phenomena, before proceeding to contemporary accounts of the status of function, design, and purpose in biological explanation. We then conclude with a discussion of the ethical and religious implications of Darwinian theory from the perspective of the present day. Enduring Questions addressed: (1) What does it mean to be human? What is our place in nature and the cosmos? (2) What does it mean to know? What and how much can we know? (3) What is the proper relationship between faith and reason? Area II.

Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture(In Person)

Enrollment Requirements: Open to undergraduate Philosophy concentrators who've taken one of the following pairs:
PHIL 201 & PHIL 202, PHIL 211 & PHIL 212, or HSPH 101 & HSPH 102

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHIL 320(3) Course ID:019112 Department Consent Required

Philosophy of Sport

An examination of philosophical issues that arise in the context of sports, such as the following: the nature of sports, games, and play; the function of rules in sports; the role of sports in a good human life; virtues and vices in sports; fairness, cheating, doping, and technological enhancement in sports; the relationship between amateur and professional sports; and the justification for dividing sports into single-sex and disabled categories.

Area I. Enduring Questions Addressed: (1) The human condition: What is the relationship between our body and our soul, our physical and our spiritual identity, (2) The good life: What makes a life good? How can we live a good life or best pursue it? What is opposed to it? Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture(In Person)

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 328(3) Course ID:001506

Philosophy of the Social Sciences

Philosophical issues arising in the theory and practices of the social sciences. Special emphasis on the epistemic status of theoretical laws in the social sciences and the role and function of models. Area II.

Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 329(3) Course ID:001507

Philosophy of Science and Nature

Logic of inquiry in the sciences (primarily natural); explanation, prediction, causality, scientific law, induction, and other concepts involved in understanding the scientific enterprise. Offered both semesters. Area II.

Components: Lecture

Course Equivalents: PHIL 329A, PHIL 329B

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 333(3) Course ID:001515

Philosophy of Natural Right and Natural Law

The discovery of natural right as the origin of political philosophy. Topics include classic natural right in its Socratic-Platonic, Aristotelian, and Thomistic forms, as well as natural right and natural law. Machiavelli and modern natural law and right in Hobbes, Locke, and Rousseau, the attack on natural right in the name of 'history.' Area I. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Components: Lecture

Course Equivalents: PHIL 333A, PHIL 333B, PHIL 633

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 333A(3) Course ID:017049

Philosophy of Natural Right and Natural Law

A study of the principles of moral and political practice knowable by reason and grounded in human nature. Topics will include happiness; the character of voluntary action, including its analysis in terms of object, end, and circumstances; virtue and vice; moral precepts and the natural law. Some applications to specific moral and political questions will be considered. Special emphasis will be given to the philosophy of Thomas Aquinas. For majors and minors only.

Components: Lecture

Course Equivalents: PHIL 333, PHIL 333B, PHIL 633

Enrollment Requirements: Philosophy majors and minors only

PHIL 333B(3) Course ID:017050

Philosophy of Natural Right and Natural Law

The discovery of natural right as the origin of political philosophy. Topics include classic natural right in its Socratic-Platonic, Aristotelian, and Thomistic forms, as well as natural right and natural law. Machiavelli and modern natural law and right in Hobbes, Locke, and Rousseau, the attack on natural right in the name of 'history.' Enduring questions addressed: (1) The Human Condition; (2) Freedom and Justice; (3) The Good Life. Area I. Prerequisites: 201 and 202, or 211 and 212, or equivalent.

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 334(3) Course ID:014692

Philosophy in the Islamic World

On the one hand, under the Abbasids (8th-10th centuries) many Greek philosophical texts, and in particular those of Aristotle, were translated from Greek into Arabic. On the other hand, as soon as Muslims felt the need to defend their faith, they elaborated philosophical concepts, as we can observe in Kalâm or theology. As Aristotelian concepts and Kalâm concepts did not always share the same presuppositions tensions arose between some philosophers who closely followed Aristotle and some theologians who found some of Aristotle's views incompatible with Islam. Some thinkers tried to integrate the two approaches. Philosophers in the Islamic world were from various ethnic backgrounds - few were Arab - and from various religious persuasion - not only Muslims but also Christians and Jews - but they all interacted and often used Arabic as their linguistic mode of communication. They developed interesting and sophisticated new positions and kept a philosophical tradition alive long after the Middle Ages. Some of their texts were translated into Latin in

PHIL 335(3) Course ID:018658

Islamic Political Philosophy

An introduction to the history of Islamic political philosophy from the medieval period to the present. The primary focus will be two flashpoints of encounter between the religion of Islam and other philosophical/political systems of thought—an early one with ancient Greek and Roman philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western (and often secular) political thought, from the late 19th century to present. Our goal is to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. Area I.

Components: Lecture(In Person)

Course Equivalents: PHIL 635

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHIL 336(3) Course ID:019127

Introduction to Asian Philosophy

The course offers a basic overview of some of the most influential traditions of thinking in India, China, and Japan particularly in pre-modern times, with a special focus on issues in ethics (the main goals of human life and the paths to attain them) and metaphysics (the nature of ultimate reality, God, and the nature of self). References to sacred texts and wisdom literature will be present, given their key role in shaping those cultures, but greatest attention will be given to argumentative debates carried out by major thinkers within those traditions. No previous knowledge of the topic is required. Enduring Questions addressed: (1) What is the relationship between our body and our soul, our physical and our spiritual identity? (2) What is wisdom? How can we attain it? (3) What can we say about God, and what is our relationship to Him? What might our obligations be to Him? Area II.

Components: Lecture(In Person)

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHIL 347(3) Course ID:019128

Justice, Education, and Leadership in Plato's Republic

Working from their two foundational philosophy courses, students deepen their philosophical studies through a careful reading of Plato's Republic. More than any other text the Republic explores diverse philosophical topics, from metaphysics, logic, epistemology, and psychology to moral philosophy, political philosophy, and aesthetics. These larger philosophical questions are raised in the context of a sustained reflection on the nature of justice, the right education, and virtuous leadership. While principally studying this important and foundational dialogue, students also explore these themes—justice, education, and leadership—by engaging with the literary, historical, and political heritage of Ancient Greece. Enduring Questions addressed: (1) What does it mean to be an individual, and how do we live as members of society? (2) What is justice? Can it be achieved in this world, and if so, how? (3) What makes a life good? How can we live a good life or best pursue it? What is opposed to it? (4) What is wisdom? How can we attain it? Philosophy minors and non-majors

Components: Lecture(In Person)

Course Equivalents: POL 347

Enrollment Requirements: open to non-Philosophy majors who have taken one of the following pairs: PHIL 201 & PHIL 202, PHIL 211 & PHIL 212, or HSPH 101 & HSPH 102

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHIL 353(3) Course ID:001518

History of Ancient Philosophy

The beginning of philosophy from the pre-Socratics to Plotinus. Emphasis is placed on nature and language as the origin of philosophical problems in Heraclitus, Parmenides and Plato. Key elements of Aristotle's philosophy are presented with an emphasis on categories and the background for metaphysics. Skepticism, Epicureanism, and Stoicism are explored in relation to materialism, fate, and natural law. Concentrators only.

Components: Lecture

Enrollment Requirements: Open to Philosophy concentrators who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202, PHIL 211 & PHIL 212, or HSPH 101 & HSPH 102

The Catholic Univ of America
Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 354(3) Course ID:001524

History of Medieval Philosophy

The history of philosophy from the Fathers of the Church until the end of Scholasticism. Emphasis is placed upon texts by Augustine, Boethius, Anselm, Bonaventure, Aquinas, Scotus, and Ockham. Topics covered include the nature of being, the existence and attributes of God, the human person, and the problem of faith and reason. The course builds upon the study of ancient philosophy and provides essential background for the study of early modern philosophy.

Concentrators only.

Components: Lecture

Enrollment Requirements: Open to Philosophy concentrators who have taken PHIL 353

PHIL 355(3) Course ID:001528

Metaphysics I

Historical and theoretical analysis of the nature of metaphysical thinking; being; essence-existence; matter-form; substance-accident; person and supposit; efficient and final causality, transcendentals and the problem of evil. Concentrators only.

Components: Lecture

Enrollment Requirements: Open to Philosophy concentrators who've taken PHIL 353, PHIL 354, and one of the following pairs: PHIL 201 & PHIL 202, PHIL 211 & PHIL 212, or HSPH 101 & HSPH 102

PHIL 356(3) Course ID:001530

Metaphysics II

Historical and theoretical analysis of the nature of metaphysical thinking; being; essence-existence; matter-form; substance-accident; person and supposit; efficient and final causality, transcendentals and the problem of evil. Concentrators only. Prerequisite: 355.

Components: Lecture

Enrollment Requirements: Open to Philosophy concentrators who've taken one of the following pairs: PHIL 201 & PHIL 202, PHIL 211 & PHIL 212, or HSPH 101 & HSPH 102
AND have taken PHIL 353 and PHIL 354
AND have taken PHIL 355 or HSPH 204

PHIL 362(3) Course ID:001536

Professional Ethics in Engineering

An examination of professional activity as essentially related to human fulfillment, both personal and social. Also treats, using case studies, standards for good judgment in matters specific to engineering, including risk assessment, whistleblowing, and environmental protection. Offered only for juniors and seniors in the School of Engineering.

Components: Lecture

Enrollment Requirements: School of ENGR Juniors & Seniors

PHIL 374(3) Course ID:001644

Ritual Language and Action

A survey of basic speech techniques and drama skills applied to the language and action of the liturgy. Students learn through lecture, classroom discussion, and ongoing development of skills and group critique. Leading prayer in the seminary community also serves as a practicum. For seminarians only.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 375(3) Course ID:001645

Rhetoric in Theory and Practice

This course critically analyzes the rhetorical aspects of public discourse, both from philosophical and practical standpoints, focusing on the first rhetorical tenet, invention. The goal of the course is not only to identify the primary rhetorical errors and remedies discussed in ancient, medieval, and contemporary texts, but also to identify the causes of such activities. Students will have the opportunity to develop both rhetorical and philosophical habits through lecture, seminar discussions, and individual presentations.

Components: Lecture

The Catholic Univ of America
Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 403(3) Course ID:001646

Morality and Law

A study of the relation between law and morality and its consequences for the resolution of human conflict. Emphasis on the issues between natural law/right theory and its diverse critics. Topical problems deal with the legal enforcement of morals, punishment, discrimination. Enduring Questions addressed: (1) The Human Condition; (2) Freedom and Justice. Area I. Prerequisites: 201 and 202, or equivalent.

Components: Lecture

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 453(3) Course ID:001647

History of Modern Philosophy

A treatment of the main philosophers of the rationalist, empiricist, and Kantian traditions, from Descartes through the nineteenth century. Concentrators only. Junior standing required.

Components: Lecture

Enrollment Requirements: Open to Philosophy concentrators who have taken PHIL 353 & PHIL 354

PHIL 454(3) Course ID:001648

Contemporary Philosophy

Beginning with the nineteenth century, a treatment of the roots of contemporary philosophical movements such as analytic philosophy, on the one hand, and phenomenology and existentialism, on the other. Explores the implications of these movements in twentieth century philosophy. Authors treated may include Frege, Husserl, Nietzsche, Peirce, Wittgenstein, Heidegger, Quine.. Concentrators only. Junior standing required.

Components: Lecture

Enrollment Requirements: Open to Philosophy concentrators who have taken PHIL 353, PHIL 354, and PHIL 453

PHIL 455(3) Course ID:015825 Department Consent Required

Junior Seminar

Juniors deepen their philosophical experience through a careful reading of Plato's Republic, discussing its relevance for metaphysics, epistemology, ethics, political philosophy, aesthetics, or other related areas. While principally studying this foundational philosophical text, the students will also refine the skills required for higher level studies and exams such as the senior comprehensive examination. A series of short papers will be required. For concentrators only.

Components: Seminar

Enrollment Requirements: Open to Junior Philosophy concentrators who've taken one of the following pairs: PHIL 201 & PHIL 202, PHIL 211 & PHIL 212, or HSPH 101 & HSPH 102

PHIL 456(3) Course ID:016247

Senior Seminar

Seniors coordinate their previous philosophical experience through a study of philosophers from one or more historical periods. The topics for the Seminar are chosen according to the special interests of the faculty member teaching it. Texts are chosen because they are revealing of key philosophical issues related to material covered in the regular philosophy curriculum. The Senior Seminar assists the students in preparing for the senior comprehensive examination in philosophy. For concentrators only. Prerequisite: PHIL 455

Components: Seminar

Course Equivalents: PHIL 556

Enrollment Requirements: Philosophy Concentrators Only

PHIL 494(3) Course ID:016594 Department Consent Required

Independent Study

Independent Study is not offered on a regular basis. Please contact philosophy@cua.edu for more information.

Components: Independent Study

PHIL 498(0) Course ID:015196

Undergraduate Comprehensive Examination

All graduating seniors in the School of Philosophy, as well as all senior philosophy majors in the School of Arts and Sciences, must pass a comprehensive exam. The exam, which occurs during the Spring semester, takes place on three consecutive days. The first day tests the student's knowledge of the history of philosophy; the second day tests the student's grasp of general philosophical issues; and the third day tests the student's ability to comprehend and evaluate philosophical texts. The outcome of the exam will be indicated on the student's final transcript as ¿Passed,¿ ¿Failed,¿ or ¿Passed with Honors¿.

Components: Comprehensive Exam

Enrollment Requirements: Open to students who've taken one of the following pairs, as well as to graduate students in the pre-theology certificate program and transfer students in the PhB program: PHIL 201 & PHIL 202 or PHIL 211 & PHIL 212 or HSPH 101 & HSPH 102

PHIL 505(3) Course ID:001649

Moral Issues in Health Care

Study of ethical principles and their application to such issues as the right to health care, abortion, eugenics, reproductive technologies, human experimentation, behavior control, and euthanasia. For nursing students only.

Components: Lecture

Enrollment Requirements: Nursing Students Only

PHIL 510(3) Course ID:008459

Freedom and the Human Person

Investigation of the meaning and fate of freedom, through study of great thinkers of the Western tradition. Topics include the relation between political freedom and the good life, the individual's exercise of freedom, the relation between freedom and the natural order, and challenges to freedom from historicism and scientific reductionism. Emphasis placed on the relation of freedom to nature within the human person.

Components: Lecture

PHIL 515(1) Course ID:017609

Before Printing: The Establishment and Transmission of Ancient and Medieval Philosophical Texts

After looking at some Latin and Greek Manuscripts in the library, we will reflect on how editors establish a text and how a text is transmitted. Our main case study will be Aristotle's De anima. After examining the three main editions (Ross' two editions and Siweck), we will consider how the text was transmitted via the Greek commentators, the Arabic and Latin translations and commentaries. Prerequisite: some Greek or Latin.

Components: Lecture

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 517(3) Course ID:018946 Department Consent Required

Philosophy of Religion

An examination of philosophical questions that have arisen in the Western tradition regarding such fundamental issues as the relationship between faith and reason; the nature of religious language; rational arguments for and against the existence of God; the problem of evil; the nature and attributes of God; the relationships between God and human freedom, and between morality and religion; the problem of miracles; and the prospect of life after death.

Components: Lecture(In Person)

Course Equivalent: PHIL 317

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHIL 551(3) Course ID:018893

Intermediate Logic

Treatment of the general nature of deductive argument, language, and logic. Knowledge of syllogistic and propositional logic is presupposed. Course focuses on predicate logic with an emphasis on modern symbolic techniques and their connection with natural language. The soundness and completeness of first-order logic, as well as its relationship to higher-order logics briefly considered. The theory and grammar of modern modal logics will also be considered. Offered once a year. Prerequisites: PHIL 302 or equivalent.

Components: Lecture(In Person)

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 556(3) Course ID:016248

Senior Seminar

Seniors coordinate their previous philosophical experience through a study of philosophers from one or more historical periods. The topics for the Seminar are chosen according to the special interests of the faculty member teaching it. Texts are chosen because they are revealing of key philosophical issues related to material covered in the regular philosophy curriculum. The Senior Seminar assists the students in preparing for the senior comprehensive examination in philosophy. For concentrators only. Prerequisite: PHIL 455

Philosophy - Philosophy - Subject: Philosophy

PHIL 601(3) Course ID:001666

Philosophy of Science

A study of what it means to be scientific according to the current consensus, and of the difficulties in attempting to be scientific in dealing with human beings. Nursing students only. Others by permission of the School.

Components: Lecture

Enrollment Requirements: Nursing Students Only

PHIL 602(3) Course ID:001669

History of Medieval Philosophy

Surveys selected major figures in the history of Western philosophical thought, from Augustine to William of Ockham. Concentrates on primary sources. Primarily for students in the Program in Medieval and Byzantine Studies in the School of Arts and Sciences.

Components: Lecture

PHIL 603(3) Course ID:014624

The Ethics of Belief

Recent analytic philosophers have advanced the argument that Christian beliefs are irrational since there is insufficient evidence for holding them. Christian philosophers of the analytic school have in turn responded to the objection with different and mutually incompatible replies based upon different and mutually incompatible epistemologies. The purpose of this seminar is to study the evidentialist objection to Christian beliefs, to study the various replies to it by prominent analytic philosophers, to study the epistemologies underlying the objection and replies, and to show how Aquinas speaks to the objection.

Components: Seminar

PHIL 604(3) Course ID:014627

Plato: Statesman

This course offers a detailed examination and interpretation of Plato's Statesman. Special emphasis will be placed on elucidating the political model advanced in this text, the dialectical use of myth, and the relation between philosophy and statesmanship. Our exploration of these themes will involve consideration of some of the most intriguing and fascinating aspects of Plato's late metaphysics and epistemology: the dialectical method of collection and division, the communion of forms, the doctrine of due measure or the mean, etc. A holistic approach, integrating ethical, epistemological and metaphysical threads, will guide our discussion all the way.

Components: Seminar

PHIL 605(3) Course ID:014626

German Idealism

A study of the origins and development of German Idealism before Hegel, focusing on Kant and Fichte. Other authors include Jacobi, Herder, Reinhold, Schulze, and Schelling.

Components: Seminar

PHIL 606(3) Course ID:014625

The Origins of the Platonic Tradition

The aim of this course will be to identify the basic features of Plato's developing metaphysics and philosophical psychology. It will require detailed reading of the Symposium and the Republic with more than passing glances at other dialogues, both earlier and later, but especially the Phaedo, Phaedrus, Sophist and Philebus. Its purpose will be to give an account of Plato's position without anachronistic readings, yet still with an eye to contemporary philosophical needs.

Components: Seminar

PHIL 607(3) Course ID:001674

Hegel's Phenomenology of Spirit

A close reading of Hegel's first mature statement of his philosophic system, a work he called his 'voyage of discovery.' Among points to be considered: What does Hegel mean by 'science of the experience of consciousness?' as the history of the 'shapes and forms' of consciousness itself? How does this science contain a probing criticism of modern philosophy, one which proceeds 'as the path of doubt, or, more authentically, as the path of despair' toward an affirmation of reason? How does this path of thought arise out of problems in Kantian and post-Kantian philosophy? How does it attempt to reconcile modern thought and institutions with Christianity?

Components: Lecture

The Catholic Univ of America
Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 609(3) Course ID:001676

Virtue and Human Action

Discusses the role of action, character, and virtue in ethics. Reading of Aristotle's Nicomachean Ethics; writings of Aquinas, Kant, and Mill; and a book by Yves R. Simon.

Components: Lecture

PHIL 610(3) Course ID:013665

Substantial Unity

What sort of unity must something have in order to count as a true substance and not a mere heap or collection? This question will be examined by considering sources from the history of philosophy up to the present.

Components: Lecture

PHIL 612(3) Course ID:001680

Wittgenstein's Tractatus

An introduction to the text, beginning with its roots in Frege and focusing on basic conceptions like the difference between atomic facts and states of affairs, the picture theory of meaning, logic as tautology.

Components: Lecture

PHIL 612(3) Course ID:002329

Augustinian Themes in St. Bonaventure and Early Franciscan Philosophy

Focuses on Augustinian themes in the thought of St. Bonaventure (1217 - 1274) and his Franciscan predecessors and contemporaries. Chief themes: the composition of body and soul in man; the doctrine of illumination; the notion of creation; the human person as an imago Dei, and the nature of God. Considers the same themes in other Franciscan authors of the period. Knowledge of Latin not required, but desirable.

Components: Lecture

PHIL 613(3) Course ID:015333

Contemporary Virtue Ethics

Elizabeth Anscombe's "Modern Moral Philosophy" (1958) is typically credited for reawakening contemporary interest in the virtues. In recent years, "virtue ethics" has emerged as a credible alternative to deontological and utilitarian ethical theories. Especially because contemporary accounts depart from classical accounts of virtue in fundamental ways, however, it is not always clear what "virtue ethics" is. In this course we will examine the origins of contemporary virtue ethics, as well as the different versions of virtue ethics that contemporary theorists now advocate.

Components: Lecture

PHIL 616(3) Course ID:007086

The Concept of Number

This course will consist in the reading of Jacob Klein, Greek Mathematical Thought and the Origin of Algebra (Dover, 1992). Klein argues that between ancient Greek and Modern (17th Century) philosophy there occurred a change in the way we form concepts. According to Klein this transformation is paradigmatically exhibited in the history of mathematics, and specifically in the number concept which will be the focus of our attention.

Components: Lecture

PHIL 623(3) Course ID:012838

Moral Issues in Aquinas

An examination of Aquinas's moral theory, with a focus on STh II-II q.64 a.3. This course will examine various scholarly interpretations of Aquinas's pivotal article on killing in self-defense, with a special focus on the way in which this text has served as the basis for double effect reasoning. In addition to examining relevant texts from Aquinas and the history of double effect reasoning, this course will examine the specification of moral action, the theory of Proportionalism, and the notion of intrinsic evil. Although we will occasionally deal with Aquinas's treatment of concrete ethical issues such as lying and murder, this course will mainly seek to examine the philosophical principles that serve as the foundation of Aquinas's broader moral theory.

Components: Lecture

PHIL 624(3) Course ID:015334

Aquinas on Book of Causes

Initially received by the Latin West as a work of Aristotle's, the Neoplatonic Book of Causes (Liber de Causis) was recognized first by Thomas Aquinas to be an Arabic work consisting of emended excerpts from Proclus's Elements of Theology. This course will consist of a slow reading of Thomas's Commentary on the Book of Causes, one of his later works (1272). Focus will be on metaphysical themes such as the nature of causality in general, God's creative act, and the nature of the separate substances. Special attention will be paid to Thomas's interpretation of the Book of Causes in light of the thought of Aristotle and Ps.-Dionysius. Some familiarity with both Latin and Aquinas's metaphysics is recommended but not required.

Components: Lecture

PHIL 625(3) Course ID:016193

Aquinas on the Virtues

An examination of Aquinas's understanding of virtue. Among other topics, this course will examine the relation of virtue to man's end, the formation of virtue, and contemporary debates over the possibility of "pagan" virtue. We will also address Aquinas's notion of infused virtue

Components: Seminar

PHIL 626(3) Course ID:016195

Aquinas's On the Separate Substances

This course will consist of a slow reading of Thomas Aquinas's De substantiis separatis (1271). Written with the expressed theological intention of showing the excellence of the holy angels as far as possible, this unfinished work is nevertheless predominantly philosophical in its investigation, examining the history and accuracy of philosophical views regarding the separate substances. The course will focus on metaphysical themes in this work, such as the existence and nature of the separate substances, their causal role in the order of the universe, and their relation to God. Special attention will be paid to Aquinas's treatment of his predecessors' views on these and other relevant issues. In addition, comparison will be made with his consideration of the separate substances in some of his other works, most notably the earlier De spiritualibus creaturis (1267-1268). Some familiarity both with Latin and with Aquinas's metaphysics is recommended, but not required.

Components: Seminar

PHIL 628(3) Course ID:011662 Department Consent Required

Thomistic Principles in Political Philosophy Today

Lord Acton in one of his Essays in the history of liberty praises Aquinas as "the First Whig." To test the limits of this title we will examine how 20th-century Thomists have drawn upon such concepts as person, liberty, community, practical wisdom (prudence), common good, civitas, common sense, the division of powers, sin, epistemological realism, "secular," and others, from the works of Aquinas.

Components: Lecture

PHIL 633(3) Course ID:017961 Department Consent Required

Philosophy of Natural Right and Natural Law

A study of the principles of moral and political practice knowable by reason and grounded in human nature. Topics will include happiness; the character of voluntary action, including its analysis in terms of object, end, and circumstances; virtue and vice; moral precepts and the natural law. Some applications to specific moral and political questions will be considered. Special emphasis will be given to the philosophy of Thomas Aquinas.

Components: Lecture(In Person)

Course Equivalents: PHIL 333, PHIL 333A, PHIL 333B

PHIL 634(3) Course ID:017912

Philosophy in the Islamic World

On the one hand, under the Abbasids (8th-10th centuries) many Greek philosophical texts, and in particular those of Aristotle, were translated from Greek into Arabic. On the other hand, as soon as Muslims felt the need to defend their faith, they elaborated philosophical concepts, as we can observe in Kalâm or theology. As Aristotelian concepts and Kalâm concepts did not always share the same presuppositions tensions arose between some philosophers who closely followed Aristotle and some theologians who found some of Aristotle's views incompatible with Islam. Some thinkers tried to integrate the two approaches. Philosophers in the Islamic world were from various ethnic backgrounds - few were Arab - and from various religious persuasion - not only Muslims but also Christians and Jews - but they all interacted and often used Arabic as their linguistic mode of communication. They developed interesting and sophisticated new positions and kept a philosophical tradition alive long after the Middle Ages. Some of their texts were translated into Latin in

Islamic Political Philosophy

An introduction to the history of Islamic political philosophy from the medieval period to the present. The primary focus will be two flashpoints of encounter between the religion of Islam and other philosophical/political systems of thought-an early one with ancient Greek and Roman philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western (and often secular) political thought, from the late 19th century to present. Our goal is to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical.

Philosophy - Philosophy - Subject: Philosophy

PHIL 705(3) Course ID:001697

Plato's Sophist

This course offers a detailed examination and interpretation of Plato's Sophist. The main themes to be addressed will include: the nature of sophistry, the possibility of falsehood, the ontological status of images, the relation between philosophy and sophistry. Exploration of these themes will involve consideration of some of the most challenging areas of Plato's late metaphysics and epistemology, namely the dialectical method of division, the inter-participation of forms, the form of Non-Being and Plato's view regarding earlier attempts to address the question concerning the meaning of Being.

Components: Lecture

PHIL 706(3) Course ID:001699

Plato's Republic

This course will consist of a close reading of Plato's greatest dialogue and an exploration of its main problems with special reference to the relationship of happiness to knowledge and virtue, and the political implications following therefrom.

Components: Lecture

PHIL 708(3) Course ID:006710

Husserl's Logical Investigations

The focus will be on the First and Sixth Investigation, but the others will be examined as well. We will examine Husserl's early formulation of his analysis of truth and meaning; the nature of intentional acts; the place of syntax and form in language; meaning and verification.

Components: Lecture

PHIL 710(3) Course ID:017552 Department Consent Required

Al-Farabi's Ethics

For al-Farabi there are two kinds of ethics: pre-philosophical ethics, which precedes the study of logic and is intended for beginners, and demonstrative ethics, flowing from metaphysical principles. We will read Directing Attention to the Way to Happiness as example of the former and The Principles of the Opinions of the People of the Excellent City as example of the latter.

Components: Lecture

Room Requirements: NO CLASSROOM NEEDED(1)

PHIL 711(3) Course ID:016192

The Beginning and End of Human Life: Ethical and Metaphysical Controversies

An exploration of contemporary ethical and metaphysical controversies regarding the beginning and end of human life. The course begins with an overview of basic ethical concepts and principles, then goes on to examine contemporary philosophical debates on issues such as euthanasia, brain death, abortion and assisted reproductive technologies. Specific topics to be covered can be tailored to the interests of students. Examination of these issues will also involve an evaluation of competing accounts of personal identity; the psychological view, the animalist view, and the Aristotelian-Thomistichylomorphic view. Readings will be taken mostly from the works of contemporary philosophers and bioethicists, such as Patrick Lee, Robert George, Jeff McMahan, Robert Veatch, Judith Jarvis Thomson, Mary Ann Warren, Julian Savulescu, John Keown and Francis Beckwith.

Components: Seminar

PHIL 712(3) Course ID:001707

Aristotle's De Anima

A careful reading of the text with emphasis on the nature of sensible and intellectual cognition and their relation to behavior. Selected related passages from the Parva Naturalia and the biological works will also be considered, as well as from the Physics and Metaphysics. The objective of the course is an understanding of the overall structure and tenets of the work, its ontological foundation, methodological approach and foundational role for the Ethics and Rhetoric. Comparison with some modern approaches to the philosophy of mind will be indicated where pertinent as well as its general foundational significance for today's biology and psychology.

Components: Lecture

PHIL 715(3) Course ID:001722

Descartes Passions of the Soul

A study of natural-philosophic notions at work in the origins of modern psychology, and an attempt to make sense of a book that is as subtle and obscure as it is seminal and radical.

Components: Lecture

The Catholic Univ of America
Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 717(3) Course ID:001711

Plato's Timaeus

The Timaeus, which was a rather neglected dialogue, has recently become a focus for scholarship. The class will focus on a careful reading of this dialogue as well as an assessment of some of the secondary literature. Discussions will center on the main philosophical issues. At the end we will consider the afterlife of this text in the Hellenistic, Latin and Islamic worlds.

Components: Lecture

PHIL 720(3) Course ID:014364 Department Consent Required

Hume's Religion

A close reading of Hume's two principal works on religion, the Natural History of Religion and the Dialogues Concerning Natural Religion, with some limited consideration, time permitting, of other works in which Hume concerns himself expressly with that subject.

Components: Lecture

PHIL 721(3) Course ID:011402

Philosophy of Language

Examines key themes in the philosophy of language. Topics will include some or all of the following: the relationship between language and thought; meaning; supposition and signification; sense and reference; theories of naming; referential opacity; speech acts; semantics and pragmatics. Texts from various periods of the history of philosophy will be examined.

Components: Lecture

PHIL 723(3) Course ID:016197

Aristotle's De anima

A close reading of the text, with special emphasis on Books I and II. The course focuses on Aristotle's use of the categories of potentiality and actuality and on the ensouled body as a continuous and active whole.

Components: Lecture

PHIL 724(3) Course ID:010201

Aristotle's Categories and On Interpretation

The elements of Aristotle's material logic, and their interpretation by late antique and twentieth century commentators. Includes reference to Plato's Cratylus and Sophist.

Components: Lecture

PHIL 725(3) Course ID:016026

Aristotle's Generation of Animals

A careful reading of Books I and II of the Generation of Animals, as well as of select passages from Books III-V. The course will focus on the presence and activity of the soul as the cause of the generation of the living substance. Some relevant passages from Aristotle's Physics, Metaphysics, and De Anima will also be considered.

Components: Lecture

PHIL 726(3) Course ID:010796

Plato's Meno

A careful reading of Plato's dialogue on virtue and learning. Particular attention is given to the account of learning as recollection, the relationship between knowledge and virtue, and the overall unity of the dialogue. Additionally, the place of recollection in the Platonic corpus and the Aristotelian response to this account of how knowledge is acquired will be examined.

Components: Lecture

PHIL 728(3) Course ID:014367 Department Consent Required

Humans, Persons, and Embryos: The Philosophy of the Abortion Debate

An examination of philosophical arguments about abortion. Among other topics, this course will examine philosophical debates about delayed hominization, personhood, and parental responsibility.

Components: Lecture

PHIL 729(3) Course ID:001773

Aristotle's Posterior Analytics

The Posterior Analytics is one of the most important texts for the medieval development of Aristotelian philosophy. This course is a close study of the text in its ancient context. Topics include theory of science, explanation through causes, induction and deduction, definition and signification.

Components: Lecture

The Catholic Univ of America
Course Catalog

Philosophy - Philosophy - Subject: Philosophy

PHIL 730(3) Course ID:011875

The Metaphysics of Creation in Aquinas's De Potentia

A consideration of Aquinas's metaphysical doctrine of creation as it is presented in his work Quaestiones disputatae De potentia. In addition to addressing what Aquinas means by 'creation', this course will examine such topics as how a multiplicity of things can be caused by one first principle, whether God creates freely or of necessity, and whether God alone can create. Some familiarity with both Latin and Aquinas's metaphysics is recommended for this course, although neither is required.

Components: Lecture

PHIL 747(3) Course ID:002178

Plotinus

Careful reading of extensive selections from the Enneads, with a view to developing a synthetic understanding of Plotinus' philosophy. Emphasis on metaphysical issues, but attention also given to ethical, aesthetic, and spiritual dimensions of Plotinus' thought.

Components: Lecture

PHIL 749(3) Course ID:002180

Plato's Theory of Forms

Examines the theory in its metaphysical, epistemological, and ethical dimensions, from its appearance in the early dialogues to its full presentation in the middle dialogues, and its critical discussion in the later dialogues.

Components: Lecture

PHIL 750(3) Course ID:002181

Kant's Critique of Practical Reason

An examination of Kant's account of how pure reason is practical and of freedom as the keystone of "a system of pure reason, even of speculative reason." Continues the cycle of courses dedicated to Kant's three Critiques.

Components: Lecture

PHIL 751(3) Course ID:002183

Divine Foreknowledge and Human Freedom

Considers the major positions taken on the problem of the reconciliation of divine foreknowledge and human freedom. Begins with Aristotle's De interpretatione IX, then considers the development of the issue by Augustine, Boethius, Aquinas, Scotus, Ockham, and Molina. Also considers the contemporary discussion of this issue and these figures by analytic philosophers of religion.

Components: Lecture

PHIL 752(3) Course ID:018671

Modern & Contemporary Teleology

This course will consist of an examination of the nature and status of teleology and teleological explanation in the life sciences in the modern and contemporary periods. In particular, the focus will be on (i) early modern critiques of Aristotelian teleology, up to and including Kant's (very partial) defense of natural teleology, and (ii) efforts in post-Darwinian philosophy of biology to make teleology 'respectable' again. Questions to be considered are: what kind of unity, if any, does the very notion of 'teleology' possess in the history and philosophy of science?; what counts as a good, scientific explanation of natural phenomena?; how are explanations of living and non-living phenomena different? and, more distantly, to what extent is an Aristotelian ethics founded on biological functions viable today?

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHIL 753(3) Course ID:006784

Aristotle's Physics

This course is an introduction to the premodern science of nature as presented in the Physics of Aristotle. The Metaphysics and the Commentary on the Physics of Thomas Aquinas will also be used in presenting issues and clarifying difficult and often cryptic arguments. Two questions guide the reading: What is the internal unity of the work? What is the relation between Aristotle's Physics and our own tradition of natural science?

Components: Lecture

Philosophy - Philosophy - Subject: Philosophy

PHIL 754(3) Course ID:010797

The Problem of Evil in Neoplatonic Philosophy

Plotinus's conception of evil as mere privation of the good resolved the problem of dualism which Plato seemed to have accepted in his dialogues. However, his interpretation did not remain unchallenged. Proclus defended the existence of evil against Plotinus and claimed that although absolute evil does not exist, evils, which are not just privations of the good but contraries to it, do.

The course will focus primarily on Plotinus, Ennead I, 8 (Where Do Evils Come From?) and on Proclus, On the Existence of Evils, but cover relevant texts from Plato's dialogues and from other Platonic thinkers too. Some knowledge of Greek and Latin is welcome, but not required.

Components: Lecture

PHIL 755(3) Course ID:016449

Three Ways to Utopia

Human beings time and again have dreamed of an ideal society, often disastrously. In the Republic Plato tried to build a perfect society on the basis of a realist metaphysics and a brilliant (but ultimately flawed, as he himself later realized) theory of human nature. Augustine's view of human nature was darker and induced him to abandon the classical ideal of a good society and concentrate on the moral virtues (so far as they can be achieved) of the good Christian. Thomas More was fascinated by platonizing schemes, but as a hardened Augustinian recognized their inevitable weaknesses. In this course we shall therefore look at Plato's Republic. Augustine's City of God (books 11-end) and More's Utopia. Hopefully we may be able to draw some realistic conclusions.

Components: Lecture

PHIL 758(3) Course ID:002194

Francis Bacon and the Mastery of Nature

A reading of the New Atlantis, the philosopher's fictional charter for the hitherto unheralded alliance between scientists and society, his Wisdom of the Ancients, which reflects in a more sustained way upon nature both human and sub-human, and the New Organon, the foundational account of Baconian natural science.

Components: Lecture

PHIL 759(3) Course ID:011708

Medieval and Contemporary Theories of Free Will

Medieval and contemporary theories of free will can be put into fruitful dialogue because the inquiries they respond to are partly the same and partly complementary to each other. Medieval thinkers debated questions like the relation between free decision (liberum arbitrium) and the good, the presupposition of free decision for moral responsibility, the relation between occurrent knowledge and free volitions and between ignorance and evil-doing, and the compatibility of free will with certain forms of necessity and with divine foreknowledge. Our own contemporary debates center on the relation between the ability to do otherwise and moral responsibility and on the compatibility of free will with determinism and with indeterminism. We will begin with key issues in recent literature, which tends to be closer to our own philosophical sensibilities, and then study seminal medieval texts. We will thus read medieval theories with the critical eye sharpened by the contemporary discussions and see how medieval and contemporary theories can enrich each other.

Components: Lecture

PHIL 760(3) Course ID:017873

Duns Scotus's Ethics

A close reading of selected texts of Duns Scotus's ethics and action theory, using John Duns Scotus: Selected Writings on Ethics, trans. Williams, OUP 2017

Components: Lecture

Room Requirements: DIGITAL PRESENTATION ROOM(1)

PHIL 763(3) Course ID:018896

God, World, & Soul in Classical Islamic Philosophy

A careful study of some key debates in the classical period of Islamic philosophy from three of the most central thinkers: Avicenna (Ibn Sina), al-Ghazali, and Averroes (Ibn Rushd). Many of the philosophical positions and some of the relevant texts formed a critical background for the medieval Latin and Western traditions. Discussions include eternity of the world, God's knowledge of particulars, causation, and the afterlife.

PHIL 764(3) Course ID:010209

Divine Providence: Book 3 of the Summa contra Gentiles

The purpose of the first three books of the Summa contra gentiles is to articulate the ways in which Aristotelianism coheres with the truths of the Christian faith. The purpose of this course is to engage in a close reading of Book III of the Summa contra gentiles. In accord with the internal division of the text, the course will consider three main issues. The first is God as the end and good of all things. The main focus in this section, and indeed of the course, will be on the question of human happiness: How does Aristotelian eudaimonism cohere with the Christian faith? What is the end of man? Is there a natural end or a supernatural end? The very possibility of a Thomistic "ethic" depends upon how that question is answered. The second main issue is God's general governance of things: How does God govern things in a way that allows for genuine creaturely causality and autonomy? The third main issue is God's governance of rational creatures by law: How do divine and natural law function in God's providence?

Components: Lecture

PHIL 765(3) Course ID:002217

Metaphysical Themes in Thomas Aquinas I

Based on a close reading of qq. 5 and 6 of Thomas Aquinas's Commentary on the De Trinitate of Boethius and other texts, this course will consider his views concerning the nature and subject of metaphysics, our discovery of being as being, analogical predication of being, participation and the problem of the one and the many, and the distinction and composition of essence and esse in finite beings.

Components: Lecture

PHIL 766(3) Course ID:008181

Metaphysical Themes in Thomas Aquinas II

This course presupposes the completion of Metaphysical Themes in Thomas Aquinas, Part I, or its equivalent. This course will concentrate on Aquinas's view on the essential structure of finite being. Topics will include his views on the nature of substance and accident, the derivation of the predicaments, the relationship between the individual subject and the act of being (esse), the issue of a distinctive esse for accidents, the causal relation between substance and accidents, the relationship between the soul and its powers, the nature of prime matter and substantial form, unicity of substantial form and the problem of the individuation of material substances.

Components: Lecture

PHIL 767(3) Course ID:011876

Aquinas on Infused and Acquired Virtue

A study of Aquinas's theory of virtue as it is presented in the Summa Theologiae and in his Quaestiones disputatae De virtutibus. This course will (a) examine the differences between the infused and acquired moral virtue and (b) consider the role that each type of virtue plays in Aquinas' broader moral theory.

Components: Lecture

PHIL 769(3) Course ID:012231

Aquinas and His Contemporaries on Conscience and Prudence

This course concentrates on Thomas Aquinas's accounts of conscience and prudence, the guides of moral action in the particular. Historically, these notions have different origins (patristic theology vs. classical Greek philosophy). They are attributed similar and yet importantly different roles in medieval ethics. By contrasting these two notions, we can attain a better understanding of the nature of each. Comparing Aquinas's position with rival accounts (especially St. Bonaventure's teaching on conscience and Duns Scotus's and William of Ockham's accounts of prudence) will allow for a better grasp of Aquinas's position and for a deeper philosophical assessment of its key points.

Components: Lecture

PHIL 770(3) Course ID:013387

Kant's Moral and Political Philosophy

This course is a comprehensive study of Kant's major writings in moral and political philosophy, including the Groundwork of the Metaphysics of Morals, Critique of Practical Reason, Metaphysics of Morals, and several political essays, focusing especially on the relationships between Kant's political and moral philosophy.

Components: Lecture

PHIL 776(3) Course ID:002299

Plato's Laws

A careful reading of Plato's other great dialogue about politics. Particular scrutiny of the following issues: the Laws's relationship to the Republic, the unity of the work, the nature of law, the relationship of natural right and natural theology, similarities with the moral and political philosophy of Aristotle.

Components: Lecture

PHIL 781(3) Course ID:002301

Descartes' Science

Regulae, Le Monde, Discourse, Principles. Mathematization of nature: what is gained, what is lost? Traditional cosmology of natural goodness vs. Descartes's cosmogony of natural indifference (eidetic vs. genetic accounts). Method and mastery vs. theoria and wonder. The problem of judgment and causality.

Components: Lecture

PHIL 785(3) Course ID:016485

Avicenna's De Anima

In the Shifā, Avicenna gave his most extensive presentation of his views on the soul. The Medieval Latin translation became famous and very influential. Thanks to the courtesy of Dr. Deborah Black, we will be able to use the draft of the complete English translation of the Arabic text that she and Dr. Michael Marmura worked on. This translation will be posted on Blackboard. There are two editions of the Arabic text and Simone Van Riet critically edited the Medieval Latin text (this edition includes detailed indices). In medieval fashion we will carefully read this text together and at times examine further developments in referring to some other works of Ibn Sīnā. Though considering himself an Aristotelian, Ibn Sīnā did not hesitate to be innovative in his views on the soul and, among other developments, presented a highly sophisticated and detailed study of the inner senses.

Components: Lecture

PHIL 787(3) Course ID:011921

Avicenna, Averroes, and Aquinas on Intellect

An in-depth investigation into the competing theories of intellect from Avicenna (Ibn Sina), Averroes (Ibn Rushd), and Thomas Aquinas. These are three of the most important medieval noetic systems, adapting Aristotelian and Neo-Platonic views, while shaping influential debates lasting into later medieval and Renaissance philosophy. We will strive to understand each thinker on his own terms as much as possible in order to evaluate the three positions. Readings include Avicenna's Psychology of The Cure; Averroes's Long Commentary on De Anima; Aquinas's De Unitate Intellectus; and important secondary scholarship.

Components: Lecture

PHIL 788(3) Course ID:002309

Medieval Epistemology: Thirteenth Century Themes, Abstraction, Illumination and the First Known

This course aims at articulating the overarching themes of the theory of knowledge in thirteenth century philosophy. Beginning with the classical texts that posed epistemological problems for thinkers of that century -- Aristotle's Physics and De anima, Augustine's De libero arbitrio, and Avicenna's De prima philosophia and De anima, and Averroës, Commentarium in libros De anima--, we shall treat each of the major themes in tandem by reading, among other texts, Albert the Great's De homine, Thomas Aquinas's Super Boetium De Trinitate, and selections from St. Bonaventure's Comm. in Sent. as well as his QQ. disp de scientia Christi. Thereafter, we shall pursue the themes in their treatment by later authors, including Henry of Ghent, Matthew of Aquasparta, Vital du Four, and John Duns Scotus. Reading knowledge of Latin is required, inasmuch as not all course reading materials will be made available in English translation.

Components: Lecture

PHIL 789(3) Course ID:016669

Abelard & Twelfth Century Thought

This course will focus upon the writings of Peter Abelard (1079-1142), chiefly the Historia calamitatum, the Logica ingredientibus, and several of the theological treatises, in particular the Theologia scholarium, and the Theologia Christiana. Situating Abelard into the various historical, cultural, and religious contexts that framed his life, we will explore the significance of his thought and its impact upon contemporary and subsequent twelfth-century figures. Reading knowledge of medieval Latin is required inasmuch as only a few of the texts are available in English translation. Please consult the instructors to determine whether or not your level of Latin is sufficient for taking the course.

PHIL 791(3) Course ID:002318

Thought of William of Ockham

This course mainly studies the epistemology, logic, semantic theories, and philosophical theology of the fourteenth-century Franciscan philosopher-theologian, William of Ockham (1285-1349). Ockham's theories of intuitive and abstractive cognition were central to late medieval epistemological discussions, but also provide the remote background for early modern epistemology; his logic and semantics influenced both the growing nominalist movement and the opposing realist school. Although we shall mainly examine texts from Ockham's Quodlibetal Questions and philosophical writings, some consideration will also be given to Ockham's political works. A reading knowledge of medieval Latin is recommended, but the works read are available, for the most part, in English translation.

Components: Lecture

PHIL 792(3) Course ID:015048

Directed Reading - Doctoral

A one-semester program of directed reading, specified by a regular member of the faculty and under his or her tutelage, on some philosophical topic. Enrollment in such a program of reading requires the special approval of the dean of the School of Philosophy, which will only be granted in unusual circumstances.

Components: Directed Reading

PHIL 795(3) Course ID:015590

Bonaventure and His Sources

This course will focus on Augustinian themes in the thought of St. Bonaventure (1217-1274) and his Franciscan predecessors and contemporaries. Chief among the themes singled out for treatment and examination are the following: the intellectual journey of the human person back to God, the existence and nature of God, the divine ideas, the notion of creation, the human person as an imago Dei and microcosm of the world order, the role of sense and intellect within human knowledge, the doctrine of illumination, elements of moral psychology, and the return of all knowledge by tracing it to its source in God. After surveying the necessary background in St. Augustine and St. Anselm, we shall read Bonaventure's De reductione artium ad theologiam, Itinerarium mentis in Deum, and selections from his Commentarius in libros Sententiarum provided in English translation. In addition, the same themes will be considered in other Franciscan authors of the period. Although reading knowledge of Latin is not required for this course, it is desirable and

Components: Lecture

PHIL 797(3) Course ID:002348

Metaphysics of John Duns Scotus

This course focuses on the metaphysics, epistemology, and philosophical theology of the late thirteenth-century Franciscan philosopher-theologian John Duns Scotus (1265-1308). Advocating a metaphysical position largely inspired by Avicenna, Scotus was one of the pivotal figures in the development of medieval philosophy, while conceptualism and nominalism, the subsequent critical reactions to his theory of knowledge, provided the immediate background for Renaissance and early modern epistemology. Chief themes considered are: the nature of metaphysical knowledge, being and its properties, the ontology of universals and individuals, the sources and extent of human knowledge, and the existence and nature of God. Texts include selections in English translation from Scotus's Lectura, Ordinatio, Quaestiones in libros Metaphysicorum Aristotelis, excerpts from the logical writings, and recently edited Quaestiones super secundum et tertium De anima. Although most of the Latin texts will be available in English translation, a reading knowledge of

Components: Lecture

PHIL 798(3) Course ID:015817

Pre-Modern Philosophy in the First Person

A reading of Plato's Apology will serve as a prologue. The main texts of the course will be Augustine's Confessiones, Boethius's Consolatio Philosophiae, and Anselm's Proslogion. A reading of Dante's Convivio will serve as an epilogue. Reading knowledge of Latin is recommended, but not required. Reading knowledge of Ancient Greek and of Italian will also be useful, but not necessary.

Components: Lecture

PHIL 799(3) Course ID:014968

Augustine's City of God

The course will focus on the City of God both for its own merits and as an introduction to the thought of the mature Augustine. Topics treated will include the rational defence of Christianity, the significance of original sin in ethics, philosophy and "theology", Augustine's attempts to solve the "soul-body" problem, and his recipe for the moral politician and public figure in "this darkness of social life". Dyson's translation will be used.

PHIL 808(3) Course ID:006407

Hegel's Science of Logic

Examines Hegel's masterpiece, one of his most difficult works, with the aim of a full understanding of the nature of dialectic. Establishes connections with ancient, Kantian, and contemporary philosophy.

Components: Lecture

PHIL 809(3) Course ID:014366 Department Consent Required

The Common Good

The idea of the common good has served as an ideal for political institutions and practices in the West since antiquity. We will look at some classical texts on the common good from Plato, Aristotle, Cicero, and Aquinas. Then we will examine more recent philosophical work on the common good by, e.g., Charles De Koninck, Jacques Maritain, Yves Simon, John Finnis, Alasdair MacIntyre, and Mark Murphy. Among the chief questions we will discuss are (1) how are the contemporary discussions related to the classical historical texts? (2) How should we characterize the theoretical disagreements between the various modern accounts? (3) What are the respective merits of the recent discussions? (4) Is the common good still a helpful way to think about political practices and institutions in the context of contemporary politics?

Components: Lecture

PHIL 810(3) Course ID:006788

Wholes, Parts, & Principles of Motion

This course is about the psychophysical problem in terms of Cartesian, Newtonian, and quantum physics. The guiding question is, does physics allow soul, or consciousness, or mind, or subjectivity to be a cause of motion in the bodies of animals and humans, or not? The widely-held opinion that it does not has something to do with the power of physics to explain wholes in terms of simpler, mathematical-law-governed parts, an idea arising in Descartes and attaining historic success in Newton and our subsequent tradition of mathematical and experimental physics. In general, reductionist science inspires deterministic philosophy. But is the ascent from particular scientific results to universal philosophic claims warranted? We shall examine several reductionist, determinist, materialist claims in order to assess their cogency. Basic familiarity with Aristotle's account of soul as holistic principle of motion in living bodies is assumed.

Components: Lecture

PHIL 814(3) Course ID:002380

Aristotle's Metaphysics

Close reading of the text, with special emphasis on books 1-7. Discussion of Aristotle's understanding of being, substance, identity, and first philosophy.

Components: Lecture

PHIL 815(3) Course ID:017855

Hegel and Heidegger on Experience

The course aims to restore a pre-existing conversation between two outstanding philosophers of experience: we will read selections from Hegel's Phenomenology of Spirit alongside Heidegger's 1930/31 course on the same and his "Hegel's Concept of Experience" (1950). Topics of discussion will include the nature of spatiotemporal particulars, perception, the relation of being to cognition, and the nature of phenomenology generally.

Components: Lecture

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 816(3) Course ID:002390

The Confessions of St Augustine

A study of the text, with reference to philosophical sources and Augustine's other works. Some ability to read Latin is recommended but not required.

Components: Lecture

PHIL 818(3) Course ID:006408

Wittgenstein's Later Philosophy

Treatment of the central issues in Wittgenstein's philosophy after the Tractatus, including language games, following a rule, private language, family resemblances. Emphasis is placed on the Philosophical Investigations. Different interpretations of the later Wittgenstein will be examined.

Components: Lecture

PHIL 819(3) Course ID:002396

Aquinas Treatise on Passn of Soul

A study of Summa Theologiae I-II, QQ. 22-48, and related texts by Aquinas. The sources of his doctrine of the passions will also be considered. Reading knowledge of Latin is desired but not required.

Philosophy - Philosophy - Subject: Philosophy

PHIL 820(3) Course ID:017849

Mind, World, and "Mind and World"

The 20th century saw roughly two dominant threads in analytic philosophy. One thread sought a reductive naturalism, rooted in sense experience and eschewing the "metaphysical flights of fancy" of earlier traditions. Another thread developed in response. This year marks the 25th anniversary of the publication of John Henry McDowell's *Mind and World*, which constitutes a nuanced engagement with these rival philosophical traditions in analytic philosophy. The course will consider the relationship between human knowers and the world they come to (or fail to) know. We shall first consider the empiricist tradition, and then turn to McDowell's predecessor anti-empiricists. In the third part of the course we shall read *Mind and World* itself. In the final weeks we shall consider criticisms of McDowell's work, as well as ways in which his thought has developed in the quarter century since its publication.

Components: Lecture
Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 823(3) Course ID:002404

Kant's Critique of Judgment

Kant's final critique examines how humans dwell in the universe as a species open to the disclosure of contingent order. The "reflective" modes of judging nature and art aesthetically and teleologically are related to freedom, moral culture, history and the highest good. The place of this work in Kant's entire project and its relation to the philosophic tradition will be central concerns. Reading knowledge of German is recommended.

Components: Lecture

PHIL 825(3) Course ID:017856

Aesthetics and Phenomenology

The term "aesthetica" was first used in its modern sense by Baumgarten in 1735, while the notion of "phenomenologia" was then introduced by Oetinger in 1736. This course will scrutinize the close roots of these two disciplines. The aim is both to present a survey of the development of aesthetics throughout the eighteenth and nineteenth centuries, and to examine general topics in the phenomenology of aesthetics in the twentieth. We are interested in examining the respects in which phenomenology and aesthetics were conceived as alternatives to Enlightenment thought, how different philosophers have understood the relation between truth and beauty, and what is the distinctive character of aesthetic experience. The syllabus will include selections from Baumgarten, Shaftesbury, Hume, Herder, Kant, Schiller, Hegel, Nietzsche, Ingarden, Heidegger, Gadamer, Merleau-Ponty.

Components: Lecture
Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

PHIL 828(3) Course ID:006962

Contemporary Natural Law Thrs

The course will examine the ethical and meta-ethical (rather than legal/political) aspects of the so-called "new natural law theory." The first part of the course will present an overview of the theory, drawing from the writings of Germain Grisez, John Finnis, Joseph Boyle, and others. The remainder of the course, in dialogue with critics such as Ralph McInerny, Russell Hittinger and Kevin Flannery, will analyze in greater detail the elements of the new natural law account that have generated the most criticism. Topics to be considered in this latter part of the course include the incommensurability of basic human goods, the relationship between human nature and morality, and the first person perspective for determining the object of an action.

By the end of the course, students should have a clear, nuanced understanding of the new natural law theory

Components: Lecture

PHIL 830(3) Course ID:016447

Kierkegaard's Either/Or

A close reading of Kierkegaard's first pseudonymous work, with an eye to understanding his three existential stages (aesthetic, ethical, religious).

Components: Lecture

PHIL 831(3) Course ID:002411

Husserl's Cartesian Meditations

Basic principles of Husserl's later philosophy as expressed in his *Cartesian Meditations*. Treats such themes as philosophy as science, the epoche, apodicticity, and adequacy of reflective experience, temporality, genetic and static constitution, and intersubjectivity.

Components: Lecture

PHIL 832(3) Course ID:002414

Kant's Critique of Pure Reason

A detailed study of Kant's metaphysics and epistemology in the Critique of Pure Reason, focusing especially on what transcendental idealism means and how Kant argues for it.

Components: Lecture

PHIL 833(3) Course ID:006963

Plato's Philebus

Plato's Philebus is a fascinating dialogue which focuses primarily on determining the proper nature and place of pleasure and knowledge in a good life. This course is dedicated to a close reading and exploration of the Philebus in light of several thematic threads. We are going to focus on the metaphysical investigation which deciphers the structure of reality in terms of Limit, the Unlimited, the Mixture of the two and the Cause of their mixture, the dialectical method of collection and divisions, the relevance of the metaphysical investigation for a thorough characterization of the good human life, true and false pleasures, pure and impure pleasures and the relation between knowledge and pleasure. By the end of the course everyone will have experienced the true and pure pleasure of learning!

Components: Lecture

PHIL 834(3) Course ID:016448

Aquinas on Justice

The seminar will consider Aquinas's thinking about justice beginning with his commentary on the fifth book of Aristotle's Nicomachean Ethics, and continuing into his sprawling Treatise on Justice in the Summa theologiae. There we will concentrate on the initial questions on right (ius) and justice and its subjective parts. We will then spend some time on the questions concerning killing, property, and religion. A subtheme of the seminar will concern the similarities and differences between Aquinas's account and those of some characteristically modern theories of justice, e.g., utilitarianism and social contract theories.

PHIL 835(3) Course ID:016027

Aquinas on Evil

A close reading of Aquinas's Disputed questions on evil. This disputation of Aquinas's late career addresses ontological, ethical, theological, and psychological dimensions of the problem of evil. The focus is on philosophical issues and on philosophical aspects of theological issues. Is evil something? What causes it? (Q.1) What specifies an act as, for example, theft, and therefore as a sin? (Q.2) Can one do evil in full knowledge of the good? (Q.3) What is the psychological basis for free choice, and is free choice compatible with determinism? (Q.6) How are sins connected with other sins (Q.7-15, on the capital vices) How could the angels, who had perfect knowledge and no inclination to evil, sin, and what makes their decision irreversible? (Q.16).

PHIL 836(3) Course ID:011871

Thomas Aquinas on the Divine Nature (Summa contra Gentiles I)

Using Bk I of the Summa contra Gentiles as its primary source, this course will begin with a discussion of Aquinas's much disputed purpose in writing the first three books of this work. It will then consider his views on the faith-reason relationship, and his effort to determine what philosophical argumentation can establish about the divine nature and attributes including his development of the via negativa, and analogical predication of certain names of God with positive content such as goodness, intellect, truth, will, freedom to create, love, life and happiness. An effort will be made to correlate what he says in this writing with what he says elsewhere about praeambula fidei.

PHIL 839(3) Course ID:007799

Stoics, Epicureans, & Skeptics

Recent research has highlighted the importance of Philosophy as Medicine of the Soul. In the Phaedo Plato attempts to cure the fear of death as well as to show how we should live by arguing for the immateriality and immortality of the soul. The Epicureans too desired to dispel this fear, but by means of arguments for the materiality and mortality of the soul. As for the Stoic Epictetus he claims that "death is nothing terrible;...what is terrible is the judgment that death is terrible" and that soul is material. A careful reading of the Phaedo and of Lucretius' On the Nature of the Universe followed by some reading of the Stoics will help us to understand the various philosophical underpinnings for curing the fear of death as well as the nature of passions and their relation to mind.

PHIL 847(3) Course ID:007803

Universal & Particulars in Analytic Metaphysics

This course is an in-depth look at the metaphysical issues surrounding universals and particulars. We will mostly (although not exclusively) be grappling with investigations of these topics carried out within analytic philosophy. Topics to be discussed will include: what the "problem of universals" is in the first place; various competing solutions; distinctions among kinds of universals; the difference between universals and particulars; the principle of individuation; the nature of particular substances. This course should be of special interest to students interested in metaphysics and to students who want to learn more about the way philosophy is carried out by the majority of English-speaking philosophers today.

Components: Lecture

PHIL 848(3) Course ID:009310

Hume's A Treatise of Human Nature

A close reading of this seminal work. Themes include Hume's critique of the first phase of modern philosophy as worked out in his epistemology, moral psychology and political philosophy; the nature of human and Humean nature; the sense or senses in which Hume thinks of the work as a treatise; the unity of the book's three books; and Hume's imitation of Socratic philosophy.

PHIL 860(3) Course ID:016463

Fall of the Angels: Augustine to Scotus

Medieval thinkers take angelic sin as a test case for refining their theories of free will, just as philosophers today employ thought experiments to test commonly accepted opinions and develop innovative ideas. For one thing, in analyzing an evil choice by a perfectly intellectual creature free of habits and bodily emotions, the essential factors of free choice come sharply into focus, because the first choice of the angels results from the interplay of intellect and will alone. For another thing, the narrative of the angelic fall, which medieval thinkers accepted on theological grounds, contains four key details that pushed commonly accepted philosophical ideas to the limit. (1) Although God created all angels good, some sinned. (2) Their choice was irreversible, such that the evil angels could no longer have a good will and the good angels could no longer sin. (3) Lucifer, the highest angel, sinned in a particular way, by aspiring to equality with God. (4) The evil angels sinned immediately upon their creation. The task of accounting for

PHIL 864(3) Course ID:008956

Aquinas on the Goodness and Malice of Human Acts

A close reading of Summa theologiae 1a2ae.18-21. What constitutes an action's specifically moral character (as opposed to its ontological, biological or physical nature)? How can one assess the moral value of an action? These questions are answered in ST 1a2ae.18-21, where Aquinas discusses the distinction between good and evil action, the constitutive elements of good or evil action (the end, the object and circumstances), the question of the existence of indifferent acts, the distinction between interior and exterior acts, and the problem of erring conscience. Special attention will be paid to the historical background of the topics discussed in this treatise and to the development of Aquinas's thought throughout his career.

Components: Lecture

PHIL 865(3) Course ID:008954

Essence and Necessity in Analytic Metaphysics

A study of how essence and necessity have been understood in analytic metaphysics, including a look at connections with language and logic. Authors to be studied will include Kripke, Plantinga, and D. Lewis. Comparisons with non-analytic approaches will be made.

Components: Lecture

PHIL 867(3) Course ID:008955

Husserl's Crisis of European Sciences

A close reading of the text, with development of concepts such as the life-world, modern mathematical science, the person as the agent of science, history, psychology, and philosophical discourse.

PHIL 870(3) Course ID:008952

Avicenna's Metaphysics

Avicenna is one of the greatest metaphysicians and had much influence on Aquinas and Duns Scotus. A close analysis of selected passages of the metaphysical part of the Shifa', known in both Arabic and Medieval Latin, will introduce his ontology.

Components: Lecture

PHIL 871(3) Course ID:009932

Thomas Aquinas on Free Choice

For Aquinas, the will is essentially ordered toward the known good. The fundamental problem of morality consists in appropriately knowing the good, so that the will can adhere to it. Accordingly, liberum arbitrium (free choice or free decision) is a "power of reason and will." The course will consist in the close reading of selected texts from the Prima pars and Prima secundae of the Summa theologiae and from De malo. Besides a general study of the nature of the will and of free choice, special attention will be given to the question of how, though the will adheres to the known good, it is possible to choose evil.

PHIL 872(3) Course ID:016668

Boethius's Consolatio Philosophiae

Study of the text, with reference to its sources, its relation to Boethius's other works, and its influence. Students should have some reading knowledge of Latin.

Components: Lecture

PHIL 875(3) Course ID:009933

Plato's Early Dialogues

A close analysis of some of the early and transitional dialogues, such as Euthyphro, Apology, Crito, Laches, Meno, and Protagoras. We shall examine the theme of Socratic ignorance and irony, the claim that virtue is knowledge and the unity of virtue, as well as why Socrates uses patently fallacious arguments and is so fond of craft analogies.

Components: Lecture

PHIL 876(3) Course ID:002449

Hobbes Leviathan

Study of the entire work, with intention to show the differences between the ancient city and the modern state. Topics include Hobbes' anthropology and epistemology as a setting for his political theory, the nature of rule and the sovereign according to Hobbes, his definition and derivation of the passions, his concept of representation, his understanding of religion, and his concepts of philosophy and science.

Components: Lecture

PHIL 877(3) Course ID:010543

Aquinas Questions on the Soul

A study of the themes of soul and power in Quaestiones disputatae De anima, with reference to the sources, particularly Aristotle's De anima, and to parallel texts in Aquinas's work. Some reading knowledge of Latin is desired but not required.

Components: Lecture

PHIL 878(3) Course ID:006873

Philosophy of Law

This course will focus on the contemporary debate between advocates of natural law theory and legal positivism. The core readings will be taken from H.L.A. Hart's The Concept of Law (1961), Joseph Raz's Practical Reason and Norms (1975), John Finnis's Natural Law and Natural Rights (1980) and Ronald Dworkin's Law's Empire (1986). We will be concerned with questions about the nature and validity of legal norms and legal systems, the relationship of legal reasoning to practical reason more generally (as related especially to the practice of interpretation, but also to the political context of law), as well as to some methodological questions about philosophical jurisprudence.

Components: Lecture

PHIL 881(3) Course ID:012472

Aquinas on Divine Ideas

A consideration of Aquinas's doctrine of the divine ideas, with a focus on their role as causal principles. This course will examine how, for Aquinas, the divine ideas play an integral role in accounting for the existence and order of the created universe. After looking at the historical influences on his doctrine, the course will consider his arguments for the existence of the divine ideas, his defense of their multiplicity, and his view of their role as exemplar causes. Some familiarity both with Latin and with Aquinas's metaphysics is recommended for this course, although neither is required.

Components: Lecture

PHIL 885(3) Course ID:012473

Plato's Gorgias

The course will consist of a close reading of Plato's Gorgias, with special reference to the problem of natural right.

PHIL 889(3) Course ID:002460

Husserl's Formal and Transcendental Logic

Usually considered Husserl's most elegant work, this book represents his later philosophical analysis of language, logic, and thinking. The course treats such topics as formal and material dimensions of logic, consistency and coherence, vagueness as a matrix for thinking and logic, difference between logic and mathematics, nature and philosophical analysis, and the place of phenomenology in modern philosophy.

Components: Lecture

PHIL 894(3) Course ID:016825

Fichte's Ethics and Political Philosophy

A detailed study of Fichte's System of Ethics (1798) and Foundations of Natural Right (1796) alongside recent secondary literature, considering also the place of these works in Fichte's philosophical system, their originality in relation to Kant's views on these subjects, and to some extent their enormous influence on later European philosophy.

Components: Lecture

PHIL 897(3) Course ID:013388

Aquinas on Pleasure

A consideration of Aquinas's complex analysis of delectatio (pleasure, enjoyment, delight), and of important anthropological and moral aspects of delectatio brought out by Aquinas. Reference will be made to Aristotle's accounts of hedon, Albert the Great's commentary on Nicomachean Ethics, Aquinas's commentary on Nicomachean Ethics, Aquinas's Summa Theologica, and other works of Aquinas.

Components: Lecture

PHIL 899(3) Course ID:016697

Arabic into Latin: the Influences of Arabic Texts on Medieval Latin Authors

The course presents some themes from Arabic philosophy, such as the classification of the sciences, the "flying man", the transcendental "thing" (res), the inner senses, the primacy of ethics over metaphysics, etc., that much influenced the Medieval Latin world. If some Medieval Latin philosophers adopt them fairly faithfully, others endowed them with a life of their own and so these themes give rise to lively controversies and unexpected developments. The course also examines some of the relevant methodological issues and initiates to useful research tools.

Components: Lecture

PHIL 901(3) Course ID:016987

Aristotle on Intellect and Intellectual Virtue

This course is a close reading of De Anima Book III, which is Aristotle's account of intellectual capacities, and of Eudemian Ethics Book V (Nicomachean Ethics VI), which is Aristotle's account of intellectual virtues. We also consider selections from Aristotle's logical and biological works, as well as relevant texts from other ancient and more recent thinkers. We begin, however, with a paradigmatic case of human intellectual activity, namely imitation. Aristotle says in the Poetics that "Imitation is natural to human beings from childhood and in this way they differ from the other animals, because he is the most imitative of animals, and he accomplishes his first learnings through imitation" (1448b5-8). This presents an interesting contrast with standard Aristotelian definitions of man as a rational or reason-possessing animal. The activity of intellectual imitation and its objects frames the course. Following Aristotle, we seek to understand these intellectual activities and achievements by comparison and contrast with

Aristotle's Nicomachean and Eudemean Ethics

Several ethical treatises have come down to us in the Aristotelian corpus, including two that are widely agreed to be authentic. Since the middle ages, scholars have focused their attention on the Nicomachean Ethics. There is good evidence, however, that in antiquity the Eudemean Ethics enjoyed a certain pride of place. In view of this discovery, recent decades have seen renewed scholarly attention to the EE, having been somewhat neglected in the modern period. Today, by contrast, all serious scholarship in Aristotle's moral philosophy presupposes some familiarity with the EE and questions about its fraught relationship with the EN, not least of which concerns the place of the three "common books." We shall consider some recent scholarship on these questions, but the bulk of the course will be a careful reading of the whole of both treatises, including the five books proper to the EE, the seven proper to the EN, and the three books common to both. This course, then, will attend to an important ethical treatise of Aristotle's that has been--and at

PHIL 907(3) Course ID:018883

Heidegger's The Basic Problems of Phenomenology

A careful reading of The Basic Problems of Phenomenology, a lecture course given by Martin Heidegger in 1927. The course deepens the analyses begun in Being and Time and belongs to Heidegger's so-called "metaphysical" phase.

In this course, Heidegger presents four "theses about Being" that have appeared in Western history of philosophy at different stages of its development: 1) "Being is not a real predicate" (Kant); 2) "to the constitution of the Being of a being there belong essence and existence" (Post-Aristotelian Medieval ontology); 3) "the basic ways of Being are Being of nature and Being of mind (Descartes)"; 4) "Every being, regardless of its particular way of Being, can be addressed and talked about by means of the is-copula" (Logic). Heidegger delves into each one of the four theses through an original phenomenological-hermeneutical approach, and argues in the end that phenomenology is the basic problem of

Plato's Sophist and Statesman

This course provides a detailed examination of two Platonic dialogues that have been written as a sequence, the Sophist and the Statesman. There is an organic continuity between the themes addressed in the two texts and the methods of dialectical investigation employed and analyzed in them. Our discussion will focus on: the nature of sophistry and of statesmanship, the possibility of falsehood, the ontological status of images, the dialectical method of collection and division, the relation between this method and the cosmic myth of reverse cycles, the interparticipation of Forms, the role of due measure in every craft, the complex relationships among philosophy, sophistry, and statesmanship. Exploration of these themes will involve consideration of some of the most challenging areas of Plato's late metaphysics, ethics, and epistemology. A holistic approach will guide our discussion throughout.

PHIL 927(3) Course ID:017290

Towards a History of the Concept of the Person

The development of the concept of person is largely a Christian phenomenon, but its roots lie in both Graeco-Roman and Christian thought. In the Middle Ages there was further development, though the job remained unfinished. Demolition began even before early modern times and has continued more or less unabated, in parallel to the dechristianization of Western thought in general, though there have been interesting if rather uninfluential attempts to reinvigorate the tradition. The aim of the present course is to introduce students to the pursuit of the relevant intellectual history - to the possible significance of persons and to possible justifications for claims about human dignity.

PHIL 928(3) Course ID:017337

Thucydides

While Thucydides is not generally regarded as a philosopher, he is often read as pioneering a distinct approach to history, one that is considerably more scrupulous in distinguishing legend from fact and that is informed both by elements of pre-Socratic philosophy and the Hippocratic corpus. Moreover, he is often treated as an early theorist of international politics. In addition to this he is essential background to important themes in the political thought of Plato and Aristotle. Our approach will be to read the text with an eye to how Thucydides teaches us to understand political things from the standpoint of political men, and to understanding Thucydides's own moral judgments, especially as they are related to the question of natural right and to the idea of the common good, both of which are important themes in his history.

Components: Lecture

PHIL 929(3) Course ID:017338

Aquinas's Commentary on the De hebdomadibus

This course will consist of a slow reading of Thomas Aquinas's Exposition on Boethius's De hebdomadibus. In this commentary work, Aquinas follows Boethius in examining the question of how created substances are good inasmuch as they exist, despite the fact that they are not substantial goods; for only God is good by his very essence. In looking at Aquinas's own answer to this question, this course will examine such themes as his account of participation, his doctrine of the real distinction between essence and esse, his metaphysics of goodness, and his use of semantics principles as a tool for such metaphysical investigations. Some familiarity with both Latin and Aquinas's metaphysics is recommended, but not required.

Components: Lecture

PHIL 930(3) Course ID:017339

Hegel and his Critics

The course will survey some of the main figures of nineteenth century philosophy as directly responding to Hegel's influence. After an overview of Hegel's thought, we'll read selections from Feuerbach, Kierkegaard, Marx, and Nietzsche. The main leitmotif is: what is philosophy's aim? What form should it take? Other neighboring themes to be discussed in this context are the relationships between ethics and history, empirical science and morality, metaphysics and art.

TRS 220(3) Course ID:009531

Church Through the Ages: Paul to Luther

This course will examine the history of Christianity from the Apostolic Age to the beginning of the Protestant Reformation. Seven major themes will be considered: Christian identity in the Roman world; the emergence of orthodoxy and heresy; conciliar debate and the flowering of monasticism; spiritual reflection in the late antique West; the making of Christian Europe; the reforming spirit; and the Christian intellectual life.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 221(3) Course ID:009532

Church Through the Ages:Trent to Vatican II

The Council of Trent (1545-1562) was convened by the Church to respond to the challenge of the Protestant Reforms. In many ways it defined a Catholic identity that was to endure to the 20th century. The course will study in its historical context the major aspects of "tridentine Catholicism": hierarchical structure, Roman centralization, definite faith, missionary zeal. It will consider the men and women who influenced this movement, their faith, their spirituality; as well as the ways in which such as identity as been challenged in the modern era, culminating with the changes introduced by the Second Vatican Council.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 230(3) Course ID:002445

Introduction to Moral Theology/Ethics

A general introduction to ethics in the Christian tradition. Will consider ethical decision-making, moral development, and the place of community and Church in the moral life. Examines traditional sources for Christian ethics - Scripture, theological texts, and Church teachings - as well as the current work in the social sciences.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 240(3) Course ID:009533

Christian Liturgy Prayer Sacrament

Introduction to the fundamentals of Christian Liturgy, including the meaning of assembly, ritual, symbol and gesture, proclamation of scripture and blessing prayers as central to liturgical celebration, and the relationship of liturgy to life.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 251(3) Course ID:002574

The Dynamics of Christian Spirituality

Critically examines themes in Christian spirituality. Special attention will be given to love as it pertains to various human practices, experiences, and ideals, including friendship, family, sexuality, liturgy, and mystical experiences. Includes studies of classic texts.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 261(3) Course ID:007516

Enduring Questions in Catholic Theology

An analysis of current questions on topics such as God, evolution, evil, revelation, Christ, Church, and sacrament. Examines Scripture, Tradition, and Magisterial teaching in an effort to engage the modern Catholic with classical answers to age-old questions.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 270(3) Course ID:016837

Lives of the Saints

Examines lives of saints from across Christian history through historical, hagiographical, and theological study.

Introduction to Christianity

An introduction to Christian beliefs and practices for students with little or no familiarity with Christian faith or Catholicism. Topics covered may include: Christian scriptures, the life and teaching of Jesus, the emergence of the early Church, basic Christian teachings, sacraments, and liturgies. Elements that distinguish the Roman Catholic tradition from other Christian denominations will be explained.

Components: Lecture

TRS 300(3) Course ID:002477

Narrative in the Old Testament

Narrative literature in general, its aims and procedures; Old Testament narrative tradition, overview and detailed analysis of selected narratives from historical, didactic, mythic, and apocalyptic traditions.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 300A(3) Course ID:014620

The Old Testament and Film

This course is designed to assist the student in recognizing and understanding the use of the Old Testament in film, for through this medium religion and culture intersect. By the end of the course, students will not merely have an increased awareness of the abundance of Biblical themes and references used in movies, but will see how films engage in interpretative expression, never merely "re-creating" the story but always "re-interpreting."

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

Room Requirements: DIGITAL PRESENTATION ROOM(1), BLACKOUT CURTAINS(1)

TRS 301(3) Course ID:011616

Introduction to Biblical Archaeology

This course will discuss the insights into the world and material culture of the Old Testament that were gained during the past century. It will give an overview of the archaeology of ancient Israel, focus on new trends in recent research, and reflect on the relationship of the archaeological data and the Old Testament.

Components: Lecture

Women in the Bible

This course will examine the biblical women of Genesis, Judges, and Samuel, as well as the New Testament, using close readings of the biblical text as informed by intertestamental writings, early Church interpretations, and rabbinic midrash, as well as contemporary literary and analytic perspectives.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 303(3) Course ID:012767

Creation in the Old Testament

This course examines how peoples of the Ancient Near East explained the origins of the world. This is done by reading primary texts from Egypt, Mesopotamia, and Canaan alongside Genesis 1-3 and allusions to creation in Job, Psalms, Isaiah, etc. It focuses on interpreting the light that non-biblical texts shed on the Bible, science vs. "creationism" issues, and the theological meaning of the biblical creation texts read in dialogue with modern interpreters from Dietrich Bonhoeffer to Benedict XVI.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 304(3) Course ID:012768

The Psalms

A detailed study of the book of Psalms, including its interpretation in Jewish and Christian traditions and its use in worship and liturgy. The Psalms as a summary of the Bible and a school of prayer.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 305(3) Course ID:013515

Justice and the Old Testament

This course is a study of social justice and Old Testament ethics, in particular the social vision of the prophets and legal traditions of the Bible and their application to contemporary issues. It offers an in-depth examination of the prophets' exhortations and teachings on God's justice for Israel. Particular attention will also be given to the Exodus as a paradigm for liberation. The course will regularly examine the use of the biblical social justice message for the life and work of the modern Church and provide an opportunity to discuss the significance of the prophetic cry for justice for the Church today.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 306(3) Course ID:013576

War and Violence in the Old Testament

An examination of biblical passages involving war and interpersonal violence. Includes a study of the moral critique of Scripture, how interpreters have responded to this critique, and the wider analogous issue of violence in the media.

Components: Lecture

Course Equivalents: TRS 616

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 307(3) Course ID:013863

Prophecy in Israel

The course will begin with a general orientation to prophets and prophecy in the Bible. It will then focus on selected biblical prophets, looking at them in their chronological order.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 308B(3) Course ID:017398

Race and Ethnicity in the Bible and Ancient World

In Racial Justice and the Catholic Church, Bryan Massingale writes, "A coherent presentation of why in the light of faith racism is contrary to the Gospel is missing." This course works to amend that. With focus on the Old Testament and Ancient Near East, this course explores how "race" was viewed, if at all, in the ancient world and Bible, how ethnic differences were understood and ethnic minorities treated. We will also look at the role played by Africans in the history of Israel. We will look at how the Bible can help us understand race, how the Bible can be fruitful for anti-racial theology, and how the Bible has been used to reinforce racism. Finally, postcolonial, and other minority-centered readings of the Bible will be sampled. Counts as an elective for the Peace and Justice Minor (<http://pjsp.cua.edu/PeaceJusticeStudies.cfm>).

Components: Lecture

Wisdom from the Sages of Israel

This course will focus on the Old Testament wisdom books, exploring their historical and social settings as well as each book's theology. Particular attention will be paid to the themes of creation, justice, suffering, the cultivation of virtue, and what it means to live "the good life".

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 310(3) Course ID:002592

The Gospels of Matthew, Mark & Luke

An introduction to the synoptic gospels, Matthew, Mark, and Luke; their origins and significance in the apostolic church. Includes an investigation of contemporary methods of New Testament interpretation: historical-critical and theological-ecclesial.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 311(3) Course ID:002585

The Gospel of John

The structure of John: the Book of Signs, the Book of Glory. Jesus as incarnate Logos; Jesus as the source of Christian life. Religious symbol in John.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 312(3) Course ID:002588

The Letters of Paul

After a discussion of Paul's life and ministry as narrated in the Acts of the Apostles, this course provides a close reading of several Pauline letters in light of the religious message they communicate. The course gives special attention to Paul's understanding Christ, sin and redemption, the Church, the moral life and hope of the believer.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 313(3) Course ID:016001

Book of Revelation

This course will examine the genre, historical origins and theological vision of the Book of Revelation (the Apocalypse of John), through a close reading of the text. Attention will also be paid to Revelation's ambiguous position in the life of the Church across the centuries, and its wider cultural impact.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 314(3) Course ID:016836

The Bible and the Quran

This course will examine the sacred texts of the three Abrahamic traditions (Judaism, Christianity, and Islam). It will consider the historical context in which these texts appeared as well as the history of their interpretation within their respective traditions. It will also provide a close reading of the texts with special attention given to shared characters and narratives (e.g. Abraham, Joseph, Moses, Mary, etc.).

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 315(3) Course ID:005786

Narrative in the Synoptic Gospels

The use of literary technique in the Synoptic Gospels. The importance for theological emphasis of structure, identification, gapping, and reader response.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 316(3) Course ID:016002

Suffering in the Bible

This course will examine the presentation of suffering and trauma in several biblical texts including the causes of suffering and responses to it. It will also consider how some of these texts (such as those found in Job, Isaiah, the crucifixion narratives and the letters of Paul) have been understood in later Jewish and Christian traditions.

Makers of Hispanic Catholic History

The historical origins of contemporary Hispanic/Latino Catholicism seen through representative "history makers": (1) La Reconquista and the Age of Discovery (Isabel and Fernando, Catherine of Aragón, Ignatius of Loyola, Teresa of Avila); (2) La Conquista and Christianization (Bartolomé de las Casas, Sor Juana de la Cruz, Junipero Serra); (3) Independence and Immigration (Hidalgo, Varela); (4) Twentieth Century (Pro, Romero, Chávez, Elizondo).

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 329(3) Course ID:018539 Department Consent Required

Martyrdom in the Christian Traditions, Antiquity to the Present

Early Christianity inherited and embraced the developing understanding of martyrdom -- witness under persecution -- from Second Temple Judaism. But since the second century, martyrdom has been understood to be at the center of Christian devotion, and the martyr has been seen as the site of significant power: power to understand divine mysteries, to perform stunning acts of bravery in defiance of state power or invisible adversaries, and to overcome perceptions of female weakness in leading other Christians to the act of witness. This course traces various Christian interpretations of martyrdom from the first century to the present. Its chronological focus allows for attention to the ongoing Jewish tradition of sacrificial suffering, and the incorporation of the discourse of martyrdom into Islam. The course concentrates on primary texts in translation, with attention to scholarly discussion.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

TRS 330(3) Course ID:005780

The Church and Social Issues

A review of the social teaching of the Church introduces a discussion of the grounds and limits of the Church's intervention in social and political issues. Specific problems focus the discussion.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 331(3) Course ID:016632

Theology and Human Rights in Latin America

The course introduces students to the Latin American theological tradition of human rights and its preferential option for the poor. It considers key theological figures within Latin America's Christian history from Bartolomé de las Casas in the sixteenth century to Gustavo Gutiérrez in the twentieth. Moral issues considered within a social context include slavery, conquest, poverty, neocolonialism, war, and immigration. Attention is devoted to the important, though sometimes deeply conflicted, role of the Church in giving voice to the poor through its liberating ethic of evangelization and its witness of solidarity.

TRS 338(3) Course ID:011399

War Ethics and Film

A exploration of the following questions surrounding the nexus of war, film, and morality. How do films convey ethical messages regarding their subjects? How do they convey religious meanings? How is moral judgment relevant to warfare? How has the development of modern warfare been bound up with visual media? What possibilities for moral commentary on war are afforded by different film genres such as documentaries, dramas, and comedies? Is it appropriate to make ethical assessments of artistic products such as films? Are there limits to the power of film to express the moral reality of combat or suffering? What commentary does the public reception of individual films provide on the ethical climate of a society?

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

Room Requirements: DIGITAL PRESENTATION ROOM(1), BLACKOUT CURTAINS(1)

TRS 338A(3) Course ID:016425

Religion and Ethics on Film

Over the past century film has established itself as an influential medium of artistic expression, social commentary and cultural formation. This course will explore a number of questions surrounding the nexus of film, ethics, and religion. How do films convey ethical messages regarding their subjects? How do they convey religious meanings? What distinctive possibilities does cinema offer for exploring or analyzing religious questions and phenomena? Can films "do theology"? How has the development of modern ethical sensibilities been bound up with visual media? Is it appropriate to make ethical assessments of artistic products such as films? How is the sort of experience involved in watching films related to religious experience? What does how the public responds to given films say about the ethical or religious climate of a society?

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

Room Requirements: DIGITAL PRESENTATION ROOM(1), BLACKOUT CURTAINS(1)

TRS 339(3) Course ID:016150

Technology and Theology

This course will examine the effects of technological innovation on society from a theological perspective. It will analyze different accounts of technology, as either a collection of mere instruments or a distinctly modern worldview, look at historical ties between the rise of contemporary technologies and Christianity, and investigate how new technologies relate to Christian understandings of what it means to be human. Using this foundation, the course will evaluate ethical concerns surrounding individual technologies and consider religious responses to problems generated by new technologies.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 340(3) Course ID:002481

Christian Celebration: The Mass

Considers the meaning of the Mass in the lives of Christians today. Studies the origin and history of the Mass, the revised rites, and contemporary practice.

Components: Lecture

Topics: Rome, Italy

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 341(3) Course ID:008987

Sickness, Death and Christian Ritual

A liturgical theological study of "Pastoral Care of the Sick: Rites of Anointing and Viaticum" and the "Order of Christian Funerals" as well as an exploration of customs such as pilgrimage to shrines associated with healing and ritual practices accompanying death.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

The Catholic Univ of America
Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 342(3) Course ID:002482

The Sacraments of Initiation

A historical theological study of the present Rites of Initiation, particularly the Rite of Christian Initiation of Adults. Selected pastoral questions connected with initiation will also be considered.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 343(3) Course ID:002490

Christian Feasts and Devotions

An exploration of the origin, development, and significance of feasts, seasons, and devotions in the life of the Christian community. Sunday observances, Easter and Lent, Christmas and Advent, devotion to the saints, Marian devotions, and Eucharistic devotions.

Components: Lecture

Topics: Rome, Italy

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 344(3) Course ID:012198

Spiritualities and Liturgies of the Eastern Churches

This course consists of two parts. The first will be an introductory study of the Divine Liturgies of the various Eastern Church traditions. A comparison will be made of the various texts, and the theology of each tradition will be examined. The second part of the course will present an introduction into the spiritual traditions of the Syriac speaking and Byzantine Churches. It will study the writings of the major figures of each tradition with the view of developing the common themes that characterize the spirituality of the Eastern Churches. It will also provide the theological world-view out of which these spiritual writers developed their insights.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 345(3) Course ID:013428

Liturgical Art and Architecture

An exploration of the theology expressed in Christian liturgical art, architecture and worship space. Using a historical approach, the diverse forms, contexts and worldviews that shaped ritual, visual objects and worship space will be investigated from the early church to the present, each with the purpose of understanding the underlying theology of the worshiping community's understanding of the sacred, their relationship to God and their relationship to each other. Course will incorporate local churches (either Washington DC metropolitan area or Rome) in the study of the ways that human beings construct meaning in liturgical art, architecture and worship space as well as how images and spaces are a theological reflection of the faith tradition.

Components: Lecture

Topics: Rome, Italy

TRS 351(3) Course ID:003725

Contemporary Christian Spirituality

Survey of some significant Christian spiritual writers and movements of the twentieth century, addressing such issues as modern monasticism, inter-religious dialogue, martyrdom, service to the poor, lay spirituality, a spirituality of work, and Pentecostalism.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 352(3) Course ID:016435

Pilgrimages in the History of Christianity

A central experience of Christians since the first century has been travel to holy sites, whether local or distant. The fourth century saw the establishment of Jerusalem as the central goal of pilgrimage for the devout; similar sites sprang up to imitate or compete with the Holy City, from late antiquity through the present. This course first explores the history and interpretation of the practice of pilgrimage to the current day; it then concentrates on the history of particular sites, including Jerusalem, in various sectors of the globe. Students are encouraged to visit and interpret a pilgrimage site to fulfill a portion of the course requirements.

The Mission of the Contemporary Catholic

The Second Vatican Council states that it is the mission of the laity to witness, evangelize and sanctify the world. This course will consider how today's Catholics fulfill this mission as they live and practice the faith witnessed for two millennia. We will look at scripture, baptism, spirituality, the theological tradition, the lives of lay saints, the teachings of Vatican II and the post-conciliar Church, and the cultural context of the American Church to identify and understand this mission.

Components: Lecture

Enrollment Requirements: TRS 2## or HSTR 1##

TRS 356(3) Course ID:009296

Francis of Assisi: Prophet of Peace and of Creation

In the pursuit of peace and the preservation of the environment, Francis of Assisi is universally proposed as a patron, intercessor, and model. In addition to examining the life of Francis and the struggles of his times, this course will examine in depth the portrait of Francis written by St. Bonaventure, who understood Francis to be a model of every Christian called to be an instrument of peace and a catalyst in respecting creation.

Components: Lecture

Enrollment Requirements: TRS 2## or HSTR 1##

TRS 356A(3) Course ID:013321

Francis and Clare

Examines the life and writings of Francis and Clare of Assisi in order to understand their theological vision and its consequences for Christian life.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 356B(3) Course ID:016436

Bonaventure Journey

This course explores the text and context of St. Bonaventure's classic work, The Journey of the Mind to God.

Theology of the Church

As an introduction to ecclesiology, this course seeks to provide a fundamental understanding the Church's origin, nature, structure, and mission. Old Testament precursors to the Church will be discussed as well as various New Testament texts about the Church. The course will also study magisterial and theological writings pertaining to the Church from various historical periods, including: the Patristic era, the Middle Ages, and modernity. In addition, this course seeks to elucidate the connection between the mystery of the Church and other mysteries of the Christian faith. Some of the topics to be discussed are: the divine origin of the Church, the Church as the body and bride of Christ, the papacy, episcopal collegiality, the Church as local and universal, the three-fold munera of the Church (to govern, to teach, and to sanctify), and the Church in the modern world. Ecumenical concerns will also be considered in connection with some of these topics

TRS 363(3) Course ID:002456

Jesus as the Christ: Contemporary Perspectives

The question of the "historical Jesus." Origin and meaning of belief in Jesus' resurrection. The christological process in the New Testament, classical dogma, and contemporary challenges.

Components: Lecture
Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101; TRS 202 is also required for Sophomores and Juniors. Seniors are exempt from taking TRS 202.

TRS 363R(3) Course ID:013567

Christology in the City of Rome

The past two thousand years of Roman history is marked by Christianity. Indeed, for much of this time, and still today for Roman Catholics, Rome was and is the premier Christian city, rivaling the Holy Land as a place of pilgrimage, prayer, and encounter with Jesus Christ. The course will study this aspect of Rome by examining the Christian understanding of Jesus, his life, death, resurrection, his continued presence in the Church, and his influence on Christians throughout time. It will use the places, the architecture, and the art of Rome to illustrate and deepen the reading of classic texts in Christology. Through this course, students will come to a critical understanding of the Christian belief in Jesus as the Christ and Son of God and how this belief is manifest throughout ages in texts, images, and architecture.

Components: Lecture
Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101
Room Requirements: ABROAD(1)

TRS 364(3) Course ID:009411

The Catholic Church and other Churches

This course will discuss the relation of the Catholic Church to other Christian communities and churches. Students will be asked to study a particular Christian tradition, including attending a worship service. The Catholic understanding of other churches and communities and their relation to the Catholic Church will be studied. Recent dialogues between churches will be taken up.

Components: Lecture
Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 365(3) Course ID:008191

The Triune God

What does it mean that Christians confess God to be Father, Son and Holy Spirit? How has this traditional faith changed the way human beings have thought about God? What significance should trinitarian faith have in the lives and prayers of Christians?

Components: Lecture
Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 366(3) Course ID:016416

The Mysteries of the Life of Christ in Theology and Music

This course discusses theological and musical interpretations of the life of Jesus. Following the liturgical year, we will read theological interpretations of "the Mysteries of the Life of Christ" (St. Ignatius of Loyola, St. Thomas Aquinas, Pope Benedict XVI) and we will listen to and analyze several musical interpretations, starting with Händel's Messiah and including Bach (Mattäus Passion), contemporary (Pärt, Tavener, MacMillan) and popular (Jesus Christ Superstar) interpretations. We will also look at the history of sacred music (Schaefer) and a contemporary discussion (Begbie).

Theology of the Patristic Period

Explores the theology of the Fathers of the Church from the end of the Apostolic period to the beginning of the medieval and Byzantine periods. This class includes attention to the period's significant themes, figures, and ecumenical councils.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 367A(3) Course ID:012761

Unity and Diversity: Theology in the Middle Ages

Covers the breadth of the medieval heritage, from its grounding in Augustine and Jerome, to its ecclesial, lay and scholastic forms in both East and West. Anselm, Bonaventure and Aquinas receive particular attention as do their contribution to our understanding of issues of theological method, Trinitarian theology, Christology, and Sacraments.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 368(3) Course ID:016657

Christianity and Capitalism

Christianity and Capitalism will explore the origins and history of economic theory and, in particular, capitalism within the Christian Tradition. Starting with the Scriptures and the many different ways in which the Christian Tradition has made use of the Scriptures on economic matters, we shall look at case studies down through the centuries: Pope Gregory the Great's management of the papal estates in Sicily in the closing decade of the sixth century; the invention of capitalistic theory by the thirteenth-century Franciscans; the first attempts at investment banking by the Knights Templar, etc. These case studies will show the Christian Tradition's approach to economic theory and capitalism to be nuanced and theologically deep.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 368A(3) Course ID:017118

Christianity and Politics

This course examine the history of Catholic Christianity in relation to the nature of political order. As such, the course places a heavy emphasis on the teaching of popes, councils, and doctores ecclesiae. However, students will also examine alternative accounts of political order and the challenges they have posed to Catholic thought. The course will give special place to the relation of religion and respublica and the right ordering of the common good to the highest good that is God.

Components: Lecture

Religion and World War II

World War II was a catastrophic global event. It cost tens of millions of lives, radically altered world geo-political realities, dramatically advanced human technology, and profoundly affected all aspect of human culture-including religion. This course explores the relationship between WWII and religion, primarily in the North American context. It does so in a thematic and interdisciplinary way. The strategy is dialectic: How did the war impact the nation's religious culture? How, in turn, did religion influence the conditions of war at the individual and societal levels. What lessons are to be learned for the contemporary religio-cultural situation.

Islamic Thought: Selected Topics

Just as biblical themes and stories have permeated much of western civilization, so Islamic culture, both Arabic and non-Arabic, is imbued with quranic imagery. Through a close reading of a selection of writings from the Islamic word (in English translation), TRS 399 will explore the relationship between the quranic text and later Islamic civilization. Topics covered will include stories of the prophets, family law, and contemporary approaches to the Quran.

Components: Lecture

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 405MJ(3) Course ID:019312 Department Consent Required

Scripture: Inspiration and Interpretation

Intended for TRS majors and minors, this course lays the foundation for Catholic theological interpretation of the Bible. Beginning with the Vatican II Constitution Dei Verbum, with readings from Pontifical Biblical Commission documents, themes of creation, the nature of evil, and redemption are traced through both Testaments. Readings, especially of the Gospels, provide opportunity to employ principles of Catholic biblical interpretation.

Components: Lecture(In Person)

Enrollment Requirements: TRS Majors & Minors Only

Room Requirements: DEPARTMENT SPACE(1)

TRS 410(3) Course ID:009548 Department Consent Required

Special Topics in New Testament

This course examines the contribution of visual artists as interpreters of the Gospels, drawing on the concept of `visual exegesis; to complement more traditional methods of gospel study. A range of artists and artworks from different periods and cultural contexts will be considered (including interpretations of key Gospel scenes such as the Nativity, the Baptism of Christ, the Sermon on the Mount and the Passion and Resurrection).

Components: Seminar

Topics: The Historical Jesus, Visualizing the Gospels: The Gospel in Art

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

TRS 420(3) Course ID:009552 Department Consent Required

Special Topics in Church History

Topics of interest to the church today are explored through a historical lens and the expertise of the instructor.

Components: Seminar

Topics: Council of Trent, Renaissance Papacy, Passion, Compassion, and Healing

Enrollment Requirements: TRS 201 or TRS 201H or HSTR 101

This course is an investigation of the main theological issues, theologians, theological controversies, and religious movements in the early church. It covers the period from the second to the fifth century, from Apostolic Fathers to Augustine, from Gnosticism to Pelagianism.

Components: Lecture

TRS 621B(3) Course ID:015311

History of the Reformation

Examines current scholarship on such topics as the state of religion on the eve of the Reformation, Luther, the Peasants' War, diffusion of Reformation ideas (printing, sermons, art, etc.), Reformation in German cities, origins of Anabaptism, Calvin, evangelism in Italy, role of civil government in the English Reformation, women, Jews, witch-craze, confessionalization, and the effects of the Reformation.

Components: Lecture

TRS 621C(3) Course ID:000309

Church History from the High Middle Ages to the Present

This course, the second in a survey of all of Church History, starts from the dawn of a new civilization in the mid-eleventh century, when cultural, economic, religious, and social changes all created a new and dynamic European era, during which the Church itself went through dynamic changes. Proceeding down through the centuries, this course provides an overview of the major developments in the History of the Church through the end of the pontificate of Benedict XVI. At the same time it focuses on particular thinkers and documents that shed light on the broader institutional developments in the High Middle Ages, the Early Modern period, and the Modern era. Owing to the broad scope (almost a millenium of Church History) this course, which combines lectures and seminar-style discussion, requires both substantial preparatory reading and in-class participation in the discussions.

Components: Lecture

TRS 622(3) Course ID:003789

Ancient and Medieval Church History

A survey of the history of Christianity from the first century to 1300. Topics include the rise of the episcopate, persecution, conversion of Constantine, doctrinal controversies, monasticism, Carolingian reform, growth of the papacy, investiture controversy, scholasticism, and medieval heresies.

Components: Lecture

TRS 623A(3) Course ID:000353

The Roman Catholic Missionary Experience of the 16th Century

TRS 641C(3) Course ID:003750

Sacraments of Reconciliation and Anointing

A theological and historical study of the liturgical rite of sacramental reconciliation and of the anointing and pastoral care of the sick. Participants will distill the theological significance of these sacraments from the rites and euchological texts of their liturgical celebration. Students who are candidates for ordination will be given a confessional practicum in conjunction with this course. This course is best taken after 641A and 641B and after some study of Moral Theology.

Components: Lecture

Enrollment Requirements: TRS 640, TRS 641A, & TRS 641B

TRS 641D(3) Course ID:012219

Ordained Ministries

A historical, theological and liturgical study of Ordained Ministries, examining the development of the Church's understanding of the sacrament of Holy Orders through four main periods: New Testament; patristic; scholastic; and modern. Recent ecumenical perspectives on Ordination are considered, together with canonical aspects, the relationship between Holy Orders and celibacy, and the relationship between Holy Orders and gender.

Components: Lecture

Enrollment Requirements: TRS 640, TRS 641A, & TRS 641B

TRS 641MC(3) Course ID:015774

Eucharist: Summit and Font of Christian Life

This course introduces students to the history, theology, and practice of the Roman Catholic celebration of the Eucharist. Throughout the course, students will gain familiarity with the texts, ritual forms, and theological content of the Eucharist. Students will consider how the Eucharist, particularly as celebrated within the context of the Mass, provides a foundation and framework for teaching, ministry, and faith formation. Students will apply course content to a pastoral setting by developing written projects and responses which consider the celebration of the Eucharist as a context for catechesis.

Components: Lecture

Enrollment Requirements: Open to Master of Catechesis students only

Room Requirements: NO CLASSROOM NEEDED(1)

TRS 643A(1) Course ID:012791

Ministry of Liturgical Presider

Consideration of the Church's liturgical heritage, reflection the introductions to the Church's rites, and classroom experiences in presidential leadership combine to develop the students' abilities to preside at eucharistic and other sacramental liturgies. Limited enrollment.

Components: Practicum

Liturgical Ministry of the Deacon

This course introduces the seminarian who is preparing for diaconal ordination to the liturgical rites of the Roman Catholic Church that may be celebrated by a deacon. The course is primarily a practicum but will also examine the pastoral application of these rites. Rites to be covered include select rites from the Rite of Christian Initiation of Adults, the Rite of Baptism of Children, the Rite of Marriage Outside Mass, select rites from the Order of Christian Funerals, Benediction and the role of the Deacon at Mass. This course does not fulfill degree or ordination requirements.

Components: Practicum

Room Requirements: NO CLASSROOM NEEDED(1)

TRS 643MC(3) Course ID:015936

Liturgical Catechesis I (RCIA)

This blended online course examines the nature, principles and stages of liturgical catechesis and mystagogy. Course modules focus on key themes in liturgical catechesis from documents of the universal and local Church, contemporary directions and issues in liturgical catechesis, and key authors and sources in the field of liturgical catechesis.

Components: Lecture(Online)

Enrollment Requirements: Open to Master of Catechesis students only

Room Requirements: ONLINE(1)

TRS 644(3) Course ID:003786

Canon Law and Sacramental Ministry

This course studies the canonical provisions for the valid and licit celebration of six sacraments (Sacraments of Christian Initiation, Penance, Anointing of the Sick, and Orders) in light of history and liturgical rites. Particular attention will be given to issues arising from the celebration of the sacraments as actions of Christ and the Church within a given community. In preparation for future ministry, the students will address case studies dealing with practical issues and problems. Prerequisite: TRS 665A

Components: Lecture

Enrollment Requirements: TRS665A

TRS 644A(3) Course ID:013343

Canon Law of Marriage

A study of the principal canons on matrimony in their historical and doctrinal context: the canonical definition of marriage and its ends and properties, canonical preparation for marriage, impediments, form of marriage, mixed marriage, dissolution of the bond, convalidation. Attention will also be given to how marriages can be declared invalid. Prerequisite TRS 665A.

Components: Lecture

Enrollment Requirements: TRS665A

TRS 644B(1) Course ID:017201

Basics of Marriage Law

This one-credit course is an optional supplement for those electing to take TRS644 (Canon Law and Sacramental Ministry) instead of TRS644A (Canon Law of Marriage) but who want some canonical basics concerning the sacrament of matrimony. This course may not be taken as a stand-alone course. Those choosing this course must be simultaneously enrolled in TRS644 and have previously taken TRS665A (Basic Principles of Latin Canon Law) or TRS665B (Introduction to Eastern Canon Law).

Components: Lecture

Enrollment Requirements: concurrent enrollment in TRS 644

TRS 644MC(3) Course ID:016639

Liturgical Catechesis II Sacraments

This course surveys the history of catechesis from Christianity's founding to the present to explore various catechetical methods and theories stemming from historical and cultural influences. Understanding catechesis as "echoing" or communicating the Christian faith, we will examine primary and secondary sources to pay special attention to past appropriation of evolving communication forms. This course then provides creative opportunities to apply traditional theories using new forms of media.

Components: Lecture(Blended (in-person and online))

Enrollment Requirements: Open to Master of Catechesis students only

The Catholic Univ of America

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 650A(3) Course ID:003805

Introduction to the History of Christian Spirituality

A consideration of Christian spirituality both as a lived experience and as an academic discipline. Focuses on the major figures and movements in the history of Christian spirituality. A number of texts by these figures will be studied, including some from the Protestant tradition.

Components: Lecture

TRS 650B(3) Course ID:003810

Modern Spirituality

Lecture examines the most important movements and figures in Christian spirituality in the past 100 years, with emphasis on the most recent decades within that time frame.

Components: Lecture

TRS 650C(3) Course ID:011404

Eastern Spirituality

This course presents an introduction into the spiritual traditions of the Syriac speaking and Byzantine Churches. It will study the writings of the major figures of each tradition with the view of developing the common themes that characterize the spirituality of the Eastern Churches. It will also provide the theological world-view out of which these spiritual writers developed their insights.

Components: Lecture

Course Equivalents: TRS 750G

TRS 651A(3) Course ID:000036

Psychology and Religion

Psychology of religion in a historical perspective, with focus on such pioneer figures as James, Boisen, and Freud. An analysis of the dialogue between religion and psychology, with emphasis on such figures as Jung, Homans, and Browning. Contemporary perspectives of religion and psychology on selected topics such as mysticism, prayer, discernment, conversion, sin, and guilt.

Components: Lecture

TRS 651C(3) Course ID:014823

Evolution and Its Theological Implications

The goal of this course is to provide students with the intellectual tools necessary for a dynamic and fruitful Christian spiritual life and ministry in an evolutionary universe. Science itself has an important insight to present to theology, by showing the complexity, the grandeur, and yet the mathematical simplicity of the universe we inhabit, with whatever conclusions one can draw from that about the nature of God. God works "in and through" the divinely created universe. Scientific discoveries are presented in order to enhance understanding of such important traditional theological topics as divine activity, suffering, original sin, prayer, love and other virtues.

Components: Lecture

TRS 652A(3) Course ID:003820

Basic Supervised Ministry I

A two-semester course. A student spends a minimum of four hours each week at a designated ministerial placement and two hours in a supervision seminar. Through the use of verbatim presentations, the seminar explores communication skills, interpersonal dynamics, theological reflection on issues raised, and the student's emerging pastoral identity. Students receive a written evaluation at the end of each semester. Limited enrollment.

Components: Practicum

TRS 652B(3) Course ID:003822

Basic Supervised Ministry II

A two-semester course. Building on TRS 652A, the seminar explores how to communicate the gospel in an appropriate, pastoral, caring way. Through the use of verbatim, video and role-play, attention is given to the process of theological reflection on ministerial encounters. Students receive a written evaluation at the end of each semester. Limited enrollment.

Introduction to Hispanic Ministry

This practice-oriented course will consider the following dimensions of Hispanic Ministry: [1] Hispanic Ministry as cross-cultural experience: cultures of context and content; [2] Hispanic/Latino communities: diversity, demographics, mestizaje; parish profiles; [3] feligreses: immigrants: internacionales e indocumentados, generación Ñ, guiones; [4] sacramental ministry: Bautismo, Misa, Primera Comunión, Bodas, Unción de enfermos; [5] religiosidad popular: fiestas, quinceañera, velorio, via crucis, día de los muertos; [6] pastoral de conjunto: grupos de oración, comunidades de base; [7] Dios Habla Hoy: preaching, bible study (Knowledge of Spanish is helpful, but not required for this course).

Components: Lecture

TRS 654A(3) Course ID:016314

Hispanic Ministry, Blessings, and Challenges

This course presents a historical and theological overview of recent Hispanic ministry in the United States incorporating the role of ecclesial documents and Encuentros that provide direction for pastoral ministers for effective ministry among Hispanics as well as within parishes with diverse cultural groups. It examines the signs of vitality for parishes with Hispanic ministry as well as the areas of concern that require immediate pastoral attention indicated in the document: Hispanic Ministry in Catholic Parishes: A Summary Report of Findings from the National Study of Catholic Parishes With Hispanic Ministry.

Theological reflection enables participants to explore the integration of culture and faith in the Hispanic world-view/spirituality. This course utilizes the research of Fr. Virgilio Elizondo, Timothy Matovina, and Hosffman Ospino, whose expertise contributes to the continual development of effective ministry among Hispanics.

Components: Seminar

Pastoral Accompaniment and Life Stages

This course prepares those going into ministry for the challenge of accompanying people at various stages of life who are dealing with different age-related issues. In today's world of specialization, individuals and families will turn to professional counselors and therapists for assistance with serious problems, but they look to priests and other ministers for companionship and guidance as they negotiate issues such as religious identity, spiritual development, religious parenting, losses including loss of meaning, coping with illness of family members and dealing with suffering, death and dying. Effective ministry to people dealing with such experiences requires that ministers have empathy, well-honed listening skills, and the ability to engage in caring conversations with people at various points in the lifespan. Ministers also need basic knowledge of how human, spiritual, religious development unfolds from infancy to old age.

The Art of Pastoral Leadership

The goal of this course is to enable students to develop and demonstrate pastoral leadership in a parish setting. Students will be engaged in the practice of parish ministry. The seminar addresses pastoral skills such as group facilitation (giving special attention to the dynamic of the capstone seminar group), pastoral planning, lay empowerment, the exercise of authority, the importance of boundaries, effective collaboration, conflict management, and pedagogy. Students will prepare a proposal for a parish project that they will implement in the second part of the capstone seminar.

Components: Seminar

TRS 657B(3) Course ID:011357

Pastoral Leadership: Reflection, Evaluation, and Integration

Reflection, Evaluation and Integration The goal of this course is the development and demonstration of pastoral leadership. Students will be engaged in the practice of parish ministry. Students develop a project for the parish community, which they will implement, or they will analyze and evaluate an existing program in which they are already engaged. Students will evaluate their strengths and weaknesses in terms of parish leadership with specific reference to the skills covered in TRS 657A and discuss ways in which they can hone their strengths and compensate for their weaknesses. They will consider how ministry enhances and solidifies pastoral identity. They will engage in a process of theological reflection on their ministry, their identity as pastoral leaders, and the connection between ministry and spirituality and their project in ministry.

Creed: Content of Christian Faith Formation

The United States Catholic Conference of Bishops notes, "Catholic belief is succinctly expressed in the profession of faith or credo called the Nicene Creed." Unfortunately, because it is so brief and repeated so frequently, we oftentimes overlook the theological depth and richness of the creed. Therefore, this course carefully considers not only the meaning of the text of the creed but also its historical origin in the Baptismal rite. In addition, the course examines the overall structure of the creed, its roots in Scripture, and the differences between the Nicene Creed and Apostles' Creed.

Components: Lecture(Online)

Enrollment Requirements: Open to Master of Catechesis students only

Proseminar for New Master's Students

Introduction and information about theological research and resources. Students must complete a fourfold process in this course: 1. Library tour (to be completed during the student's first semester on campus); 2. Introduction to Research Methodology: access and correct scholarly use and citation of biblical, patristic, and other classical sources; 3. Research Methodology: access to and correct scholarly use and citation of modern, contemporary and electronic sources; 4. Academic style: how to properly write an academic paper. Completion of these items will be indicated on each student's tracking sheet and should be fulfilled within one academic year.

Components: Seminar

Enrollment Requirements: Must be concurrently enrolled in at least one course that generates a tuition charge.

TRS 699A(0) Course ID:017829

Proseminar: New Graduate Ministerial Students

This course provides incoming master's ministerial degree level students (M.Div, S.T.B., S.T.B./M.Div.) with an introduction to the process of completing a master's or equivalent level degree within the school of theology and religious studies as well as to research methods and higher-level scholarship.

Components: Lecture

Enrollment Requirements: Open to M.Div, S.T.B. and joint S.T.B./M.Div students who are concurrently enrolled in at least one other course that generates a tuition charge

Room Requirements: DIGITAL PRESENTATION ROOM(1)

TRS 701(3) Course ID:006482

The Book of Ezekiel

Provides an overview of Ezekiel's person, time, book, and message, followed by a detailed study of selected passages.

(Previously THEO 736)

Components: Lecture

TRS 701A(3) Course ID:017032

Introduction to Biblical Archaeology

This course will discuss the insights into the world and material culture of the Old Testament that were gained during the past century. It will give an overview of the archaeology of ancient Israel, focus on new trends in recent research, and reflect on the relationship of the archaeological data and the Old Testament.

Components: Lecture

Course Equivalents: TRS 301

TRS 702(3) Course ID:003848

The Ethical Dimensions of the Prophets

"Ethical" is taken broadly to include all that relates to personal and communal response to the God of Israel as perceived by the prophets. Procedure includes investigation of the sources of prophets' ethical teaching, review of early and classical prophets, and synthesis in particular areas, including social justice and issues of war and peace.

TRS 703A(3) Course ID:006481

Three Covenants of Israel

The course begins with remarks on the treaty-texts of the Ancient Near East as a background for the covenantal material in the Old Testament. It then offers a detailed study of three key biblical covenants, i.e. those with Noah (Genesis 9), Abraham (Genesis 15 and 17) and with Israel at Sinai (Exodus 19-34).

Components: Lecture

TRS 703B(3) Course ID:003780

Messianism and Redemption

Studies the roots of messianism and redemption in Israel's experience. Surveys the development of future hope and eschatology in Israel's historical and prophetic writings and examines the transformation and fulfillment of messianic hope in the New Testament.

Components: Lecture

TRS 704(3) Course ID:003781

Spirituality of the Psalms

General introduction to the Psalter (principles of Hebrew poetry, literary forms of the Psalms, etc.); in-depth treatment of themes of praise, love, longing, hope, repentance, mercy, worship, as found in the Psalms, and of the concrete images in which such themes are embodied; Israel's liturgy.

Components: Lecture

TRS 705(3) Course ID:012541

Old Testament Prophecy

An overview of the historical and theological dimensions of Old Testament prophecy

Components: Lecture

TRS 705C(3) Course ID:012766

Theology of the Old Testament

After a consideration of the nature and method of Old Testament theology, the course considers some of the major theological themes of the Old Testament: revelation, the names and natures of God, eschatology, divine, creation and redemption, human beings and God, angelology, sin and forgiveness, the Decalogue and Wisdom.

Components: Lecture

TRS 706(3) Course ID:019313

Elijah in Jewish, Christian and Muslim Tradition

The figure of Elijah has been the subject of reflection, embellishment, and emulation since the book of Malachi and the Transfiguration. This course begins with close reading of the Elijah narratives in Kings, then traces his later biblical appearances. Jewish, Christian, and Muslim traditions about Elijah will be studied in translation. Particular attention is given to Elijah as "founder" of the Carmelite order and writings of Carmelite authors.

New Testament Christology

An examination of the Christologies found in the writings of the New Testament.

Components: Lecture

TRS 707B(3) Course ID:008928

New Testament Ecclesiology

An examination of the New Testament texts that contribute substantially to its various understandings of the church.

Components: Lecture

TRS 709A(3) Course ID:003953

New Testament Ethics

An examination of the moral teaching in the writings of the New Testament, with special attention to the Gospels and the Pauline Epistles.

Components: Lecture

The Catholic Univ of America
Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 709B(3) Course ID:004357

Human Sexuality According to the New Testament

A detailed historical-critical and literary study of the NT texts that speak of human sexuality. The significance of these for a biblically based contemporary Christian ethic will also be examined.

Components: Lecture

TRS 720A(3) Course ID:003962

Patristic Seminar: The Life and Thought of St. Augustine

A survey of the life of Augustine and the major controversies that helped shape his theology. Topics include the problem of evil, the holiness of the Church, grace and free will, and predestination. Students who wish to pursue further study of Augustine should take this course first.

Components: Lecture

TRS 720D(3) Course ID:012078

Augustine: The Confessions

'This is a course on Augustine's spiritual, intellectual, and moral autobiography. In the Confessions, Augustine tells his story in the form of various conversions (philosophical awakening, Manicheism, skepticism, neoplatonic philosophy, and Catholic Christianity). Students who wish to pursue further study of Augustine should take this course first.

Components: Lecture

TRS 720E(3) Course ID:012749

Augustine's Controversies

This course focuses on Augustine's major theological controversies: Manichean, Donatist, Jovinian, Pelagian, Priscillianist/Origenist, Predestinarian, Homoean, and Christological controversies.

Components: Lecture

TRS 721(3) Course ID:003964

Principles of Patristic Exegesis

A study of some important Latin patristic hermeneutical theories, which inform and guide biblical exegesis. Selected texts include the writings of Augustine, Jerome, Tyconius, Eucherius, Cassian, Cassiodorus, and Junillus. Focus will be on the authors' understanding of language, semiotics, communication, and the recommended hermeneutical techniques.

Components: Lecture

TRS 721B(3) Course ID:017001

Early Christian Exegesis

Early Christian interpretation of biblical texts began within a II Temple Jewish context and developed into a practice distinguished by language, region and context. This course explores both the form of the biblical text and the practice of interpretation in various forms (school; church; monastery), primarily in the Greek- and Syriac-speaking domains.

Components: Seminar

TRS 721C(3) Course ID:017200

Survey of Latin Patristics I

A survey of the major Church Fathers of the Latin Patristic Tradition

Components: Lecture

TRS 721E(3) Course ID:017598

Survey of Latin Patristics 2

A theological study of the Latin Church Fathers in historical context.

Methods in Church History and Historical Theology

An examination of the methods used in the disciplines of Church History and Historical Theology, the course will encourage students to develop a critical awareness and understanding of the literature.

Components: Seminar

TRS 725(3) Course ID:018535

American Church History

This is a history of American Catholicism. During the colonial period, American meant {of the Americas,} the interconnected colonies on the edge of European empires. The independent United States grew out of three colonial systems and inherited Catholic faithful who had to work out for themselves what it meant to be both Catholic and American. This course will introduce students to the experiences of American Catholics and the corresponding transformations of the institutional American Catholic Church across the centuries. Themes related to the laity, vowed religious, clergy, and models of leadership are integrated into the historical narrative. Students will also have the opportunity to research and write on topics of their choice.

Components: Lecture(In Person)

Room Requirements: DIGITAL PRESENTATION ROOM(1)

TRS 727(3) Course ID:003837

Introduction to Medieval Theology

Introduces some of the key figures of Medieval Christian theology, their texts and historical context. The course will concentrate primarily on Western figures from the ninth through the fourteenth centuries.

Components: Seminar
Same As Offering: TRS 868B

TRS 727K(3) Course ID:016172
Franciscan Theology of the Word of God
Franciscan Theology of the Word of God: This course examines how Franciscans understood Scripture, its relationship to Theology and other sciences, and its relationship to Christ, the Word incarnate. Bonaventure's inaugural sermon, better known as the Reduction of the Arts to Theology will receive special treatment. The course will also emphasize select writings of Francis, Clare, John Pecham, Peter Olivi, and Peter Auriol.
Components: Seminar

TRS 727L(3) Course ID:016468
The Natural World and Human Nature in Early Christianity
The books of Genesis and Revelation, among others, presented distinct challenges to learned early Christians attempting both to understand those books in harmony with contemporary medical and natural science, and to defend their deeper interpretations against recurrent challenges from pagans and Christians alike. This course examines the development of differing early Christian accounts of the created natural world in its observable complexity, and of embodied human nature, intricately structured but permeable to invisible influences and capable of various metamorphoses. Considers thinkers from Latin-speaking west to Syriac-speaking east including, but not limited to, Origen, Basil of Caesarea, Firmicus Maternus, Nemesius of Emesa, Synesius of Cyrene, Augustine of Hippo, Sergius of Reshaina, Maximus the Confessor.
Components: Seminar

TRS 728A(3) Course ID:007775
Medieval Church History
Readings and discussions on specialized topics in medieval church history.
Components: Lecture

TRS 728B(3) Course ID:000407
Christian Faith and Religious Mentalities
The religious life of men and women in seventeenth- to nineteenth-century Europe as perceived through the major themes of modern historical sociology, and interpreted in the inner context of faith and spirituality. Childhood and Education; Women; Marriage and Family; Feasts and Pilgrimages; the Poor, Aging and Death.
Components: Lecture

TRS 728C(3) Course ID:000405
Colloquium: Council of Trent
An in-depth study through readings, papers, and discussion of select topics dealing with the background, debates, contents, interpretation, and implementation of conciliar decrees on scripture and tradition, justification, sacraments, sacrifice of the Mass, preaching, episcopal duties, the lower clergy, seminaries, religious orders, sacred art and music, the Roman Catechism, Index of Forbidden Books, Congregation of the Council, etc.
Components: Lecture

TRS 728D(3) Course ID:008144
Early Modern Catholicism from Trent to the French Revolution
A survey of the Catholic renewal that developed from the Council of Trent to the French revolution. Based on recent historiography it will examine the main features of this movement, its strength and weaknesses, its successes and failures, as well as Catholic resistance and alternatives that were opposed to it.
Components: Lecture

TRS 728E(3) Course ID:008938
Modern Catholicism from the French Revolution to Vatican II
A survey of the history of the Catholic Church, from the end of the French Revolution to the Council of Vatican II.

TRS 728F(3) Course ID:006433

Colloquium: From Mission Territories to Young Churches

A study of the place of missions in the life of the Catholic Church, based primarily on documents presenting the foreign missions to the European public.

Components: Lecture

TRS 728G(3) Course ID:008386

Models of the Church from Trent to Vatican I

A case study of the several visions of the Catholic Church that were presented between 1563 and 1870 as alternatives to the structure resulting from the Council of Trent. Will examine the strengths and weaknesses of the "Tridentine Model," the values and limitations of the adverse proposals, as well as their validity in the wider ecclesiological tradition.

Components: Lecture

TRS 728H(3) Course ID:006434

Public Catholicism and the US

The course addresses Catholics' interaction with the U.S. public and the nation's political culture as related to specific social, economic, and political issues. Models or styles of Catholic activism, the public's perception of Catholics, and Catholics' relationship to other religious traditions and secular movements are explored.

Components: Lecture

TRS 728I(3) Course ID:000411

The Laity in American Catholic Life

Case studies of men and women activists, lay organizations, and movements with an emphasis on social thought, social action, and the evolution of lay self-understanding in the context of the development of public Catholicism ca. 1800-1950.

Components: Lecture

TRS 728J(3) Course ID:000412

American Catholics and Social Reform, 1875-1975

A reading course that intends to discern historical models of reform. Focuses on Catholic leaders and organizations committed to promoting a wide range of social change. Explores the religious responses to industrialism, unionism, racism, the Depression, and the civil rights and women's movements. Class discussion based on books and articles that examine the historical significance of the social encyclicals, organized Catholic charities and social work, Daniel Rudd and the Black Catholic Congress, labor and lay movements, Father John A. Ryan and the National Catholic Welfare Conference, Dorothy Day, and many other topics. Concludes with a consideration of new models of social Catholicism originating in the post-Vatican II period.

Components: Lecture

TRS 728K(3) Course ID:003920

Vatican II: History and Theology

This course examines the Second Vatican Council against the background of the history and tradition of the Church, especially in the 19th and early 20th centuries. We particularly consider the four movements for renewal, patristic, biblical, liturgical and ecumenical, that strongly influenced the council, some of the leading pioneers in those movements, and seven of the major texts promulgated by the council, namely the constitutions on the liturgy, revelation, the Church and the Church in the modern world, together with the documents on ecumenism, religious freedom and relations with non-Christian religions. The course finally reflects on the impact and reception of the council both within the Catholic Church and beyond.

Components: Lecture

TRS 728L(3) Course ID:014014

Renaissance & Reformation Papacy

A study of the institution of the papacy, its officials (popes, cardinals, court and curial officials, diplomats, governors, etc.) and finances, its ecclesiology, its governance of Rome and the Papal States, the pope's efforts to preserve orthodoxy and suppress heresy, heal the schisms with the Eastern churches, support missionary activities, promote crusades, relations with Christian rulers, patronage of the arts and culture, attitudes toward church reform. May be taken as a lecture course or seminar.

Components: Lecture

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 728N(3) Course ID:014305

Medieval Papacy

This seminar will concentrate on the history and development of the papacy from the Age of Reform in the eleventh century to the Age of Conciliarism in the fifteenth century. The pontificates of Popes Gregory VII, Alexander III, Innocent III, Innocent IV, Boniface VIII, John XXII, Martin V will receive special emphasis. The course will focus on the development of papal monarchy during this period and its effect on the structure and institutions of the Church. A final research paper will be required. There is no language requirement.

Components: Lecture

TRS 728O(3) Course ID:014613

Gender in American Catholic Life

The course explores the developing roles, status, influence, contributions, and tensions involving lay persons, vowed religious, and Church officials related to gender issues. The transitions in understandings of men and women from the general culture are considered along with the responses within Catholic culture with its ethnic variations, accommodations to national life, and canonical direction from Church authorities at several levels. The course uses the rapidly developing scholarly literature to address these issues from the Early Republic through the twentieth century.

Components: Lecture

TRS 728Q(3) Course ID:015620

The Church in Latin America

This course explores the history of the Catholic Church in Latin America from the colonial era to the present. Students will survey classic and contemporary scholarship of the Church in the Spanish, Portuguese, and French speaking Americas. The course emphasizes transformations in the Church within the missionary experience, colonial institutions (especially Atlantic slavery), state-building, lay movements, and globalization.

Components: Lecture

TRS 729A(3) Course ID:012989

Sources of Canon Law

Readings in Gratian, the Decretals, the Glossa ordinaria, and the commentators before the Council of Trent. Explores the doctrines of canon law and the institutional norms established by canon law.

Components: Lecture

TRS 729B(3) Course ID:012990

History of Canon Law: Sources and Science, Selected Issues

Legal texts, church orders, Oriental collections, Dionysiana, Hispana, Pseudo-Isidorian forgeries, Decretum of Burchard, collections of Ivo of Chartres, the formation of the Corpus Iuris Canonici, developments after the Council of Trent. Church structures: the episcopate, presbyterate, patriate, papacy, councils, and the like.

Components: Lecture

TRS 730A(3) Course ID:004242

Virtue in Contemporary Theology

Examines the challenges posed by modernity for the concept of virtue in Christian tradition, then surveys some of the widely differing reappropriations of virtue in the current discussion: classical, communitarian, confessional, developmental, feminist, and transcendental (i.e. fundamental option theories).

Components: Lecture

TRS 730B(3) Course ID:003840

Moral Imagination

An inquiry into the moral dimensions of the imagination, exploring questions arising along the boundaries of ethical theory, literature, and hermeneutics. Issues include the role of narrative in morality, the social construction of agency, and relationships among virtue, character, and principle.

Components: Lecture

TRS 731A(3) Course ID:004248

History of Catholic Moral Theology

A survey of the history of Catholic moral theology. Topics include ethics in the early and patristic church, the rise of private auricular confession, moral syntheses of the medieval period, Trent and the Reformation, the manualist tradition and casuistry. Attention to the evolution of the discipline's self-understanding. Analysis of relationship between actions, laws, and virtues.

Components: Lecture

The Catholic Univ of America
Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 732A(3) Course ID:003893

Sexuality, the Person and Ethics

Brief examination of the contributions of sciences such as biology, genetics, ecology, psychology, and cultural anthropology to an understanding of human sexuality. This will be followed by an examination of various philosophical and theological accounts of sexuality in relation to the person and a consideration for their significance in regard to issues of gender and sexual ethics.

Components: Seminar

TRS 732B(3) Course ID:004229

Beginning of Life Issues

Examines issues at the beginning of life, including the moral status of the embryo, pre-natal testing, IVF and other reproductive technologies, contraception, abortion, cloning, and stem cell research. These issues will be examined in relation to contemporary attitudes in our society to and theological understandings of the place of children and childbearing.

Components: Lecture

TRS 732C(3) Course ID:008145

End of Life Issues

Examines key biomedical issues at the end of life and the distinctions and principles necessary for their moral evaluation. Issues analyzed will include euthanasia and physician-assisted suicide, withdrawal of life support, informed consent, relief of pain and suffering, and the determination of death.

Components: Lecture

TRS 732F(3) Course ID:009876

Sex and Virtue

This course offers a virtue-based approach to issues of sexual ethics, attempting to bring the contemporary revival of interest in virtue theory to bear on an understanding of sexuality, sexual flourishing, and sexual morality. The intersection of virtue theory, psychology, and sexuality will be considered.

Components: Lecture

TRS 733C(3) Course ID:003915

Topics in War and Peace

The purpose of the course is to understand the rationale and meaning of the just war tradition. In particular, we shall understand, with von Clausewitz, that the just war is an extension of politics "by other means," and not the abrogation of the political. Thus, war is a rational activity. We shall investigate this in contact with pacifism, and with ancient and current conceptions of unlimited war in the form of "holy" war.

Components: Lecture

TRS 733D(3) Course ID:011878

Human Rights: Religious and Ethical Perspectives

The course is an inquiry into central quandaries in the theory and practice of human rights. Topics include the conceptual character of rights language, the historical relationship of human rights to natural rights and natural law, the universality and/or relativity of human rights, the relation between religion and human rights, the problem of conflicting rights claims, and the justification of humanitarian intervention. Selected case studies will be examined.

Components: Lecture

TRS 733E(3) Course ID:017607

Human Nature and Biotechnology

One of sources of controversy surrounding bio-technologies is over how possible genetic, mechanical, and pharmaceutical manipulations relate to human nature. Some commentators fear that these interventions might violate important aspects of human nature while others claim that our nature is precisely to manipulate ourselves. The first part of this class will explore contemporary theological and philosophical accounts of nature and natural law. The second part of the class will examine how these accounts are drawn on and can illuminate specific ethical issues in contemporary biotechnology and moral theology.

Components: Seminar

TRS 734B(3) Course ID:003817

Comparative Ethics

Combines a survey of diverse religious and moral traditions with a study of methodological issues in the comparative study of ethics. Comparative strategies include sociological, anthropological, conceptual, structuralist, ecumenical, and hagiographical approaches. Traditions addressed include Judaism, Christianity, Islam, Theravada Buddhism, Hinduism, and Confucianism.

Components: Lecture

TRS 734C(3) Course ID:013326

Theories of Justice

Theories of Justice: A survey of influential theories of justice, from Aristotle to Rawls and his interlocutors. Special attention will be paid to Catholic social thought and current debates regarding global justice and constitutive justice.

Components: Lecture

TRS 734D(3) Course ID:017384

Theology and Totalitarian Politics

The course is provoked by the rise of populist and nationalist movements worldwide, a rise that at least once previously in history led to politics subordinating entire peoples to themselves. We will look at a variety of theological writings, some provoked by the rise of European totalitarianisms, and some appearing independently of those historic developments. The purpose of the course is to continue the student's reflections on the proper shape of government, its limitations, and its relationship to persons and other social organizations and institutions.

Components: Seminar

TRS 735(3) Course ID:006449

Moral Issues and Moral Education

Considers specific moral issues in areas of sexuality, social justice, and bioethics within the context of Catholic moral theology. Current catechetical materials relative to these issues will be reviewed and critiqued. Faculty.

(Previously REL 708)

Components: Lecture

TRS 735A(3) Course ID:011751

Pastoral Ethics

This seminar offers students the opportunity to reflect on their ministerial experience in conversation with ethical resources from both the theological and secular world. These resources include foundational ideas in Christian ethics, including Catholic moral theology, as well as classic Western philosophical theories. They also include concrete case studies and the contemporary discussion of professional ethics considered in relation to ministerial practice. In the process, we will examine the often complex issues that arise during the practical tasks of Christian love.

Components: Lecture

Aquinas on Formation in Virtue

This course examines in depth Aquinas' thought on virtue formation or development, with particular attention to his scholastic, medieval, and Dominican historical context, as well as to how Aquinas' virtue theory grew and developed over the course of his career and across his corpus. This will lead to exploration of issues that arise regarding growth in virtue, including infused virtue, and to how these connect to related work in recent scholarship.

Ethics and Action

A seminar in methodology in moral theology, focusing on the nature of human action. Covers questions concerning human ends, practical rationality, choice, intention, object, and the relationship between these and questions of the self and narrative. Readings drawn from classical and contemporary commentators and theorists.

Components: Lecture

TRS 737B(3) Course ID:010802

The Virtues

Examines the challenges posed by modernity for the concept of virtue in the Christian tradition. This seminar explores selected ancient, patristic, and medieval treatments of the virtues, then surveys some of the widely differing re-appropriations of virtue in the current discussion: classical, communitarian, confessional, developmental, feminist, and transcendental (i.e. fundamental option theories).

Components: Lecture

TRS 737C(3) Course ID:010833

Law in Moral Theology

Part of the history of western philosophy is the periodic declaration of the death of the natural law, but as one commentator noticed, the natural law always "has risen livelier than ever and buried its undertakers." What some see as a weakness—the multiple forms of the natural law—others acknowledge as the genius of the system. Explores how the natural law may be newly justified in our age, a task made urgent by the fact that Western, and increasingly, global, culture presupposes the existence in law of a system of "natural" or human rights.

Components: Lecture

TRS 737D(3) Course ID:010918

Twentieth-Century Theological Ethics (MT/E Core #4)

Part I of the course will present an historical, critical study of Christian ethics (Moral Theology) in the Catholic tradition. Topics will be: the moral theology manuals; the renewal of moral theology in the light of Vatican II; the new accounts of Thomistic moral theology; situationism and the problem of relativism; the meaning of "objective" in ethics; "physicalism;" the "New natural law" theory and its critics; proportionalism and its critics; personalist ethics; the ethics of "Gift." Part II of the course will study Christian ethics in other traditions; in particular the ethics of Karl Barth and Stanley Hauerwas. In the sphere of secular ethics, "discourse ethics" and procedural ethics will be explained and critiqued. Finally the search for a "common ethics" will be discussed.

Components: Lecture

TRS 737E(3) Course ID:013601

Freedom, Law, Rights (MT/E Core #3)

This course will examine the importance of early modern/modern ideas as a source for contemporary reflection on human freedom and human rights. Attention will be devoted to certain key concepts or themes in order to organize and trace the impact of these ideas on the Christian moral tradition and identify their relevance for current theological, ethical, and political discussions. Among the key concepts and themes that may be considered are: natural rights, political sovereignty, ecclesiastical authority, conscience, and just war.

Components: Seminar

TRS 738(3) Course ID:010578

Ethics and The Environment

To be human is to be 'placed' in the world, both in a 'natural' and 'built' environment. Our vision of what it means to be human shapes what we build, especially in relation to the natural environment. Our buildings, from the humblest shack to the grandest Cathedral, make moral statements. This course surveys historical and contemporary theories of how humans are to build, whether it be, e.g. homes, cities, monuments, or churches.

Components: Lecture

Liturgy of Hours and Community Prayer

Theological foundations for Christian communal prayer. The historical and theological dimensions of the monastic and cathedral offices and popular forms of common prayer. Investigation and critique of the Roman Liturgy of the Hours and other models of contemporary community prayer.

Components: Lecture

TRS 742C(3) Course ID:019206

Understanding the Bible from the Liturgy

"Sacred Scripture is of the greatest importance in the celebration of the liturgy" (SC 24). The Bible shapes the liturgy like no other book: OT and NT readings are intertextually combined. Psalms are often specifically chosen. Prayers and hymns are biblically permeated. Liturgical actions and symbols (e.g., the washing of feet on Holy Thursday, baptismal rites, etc.) are inspired by sacred Scripture. At the same time, the liturgy interprets sacred Scripture and makes the Bible, a written echo of the revelation, to the living Word of God, whom we encounter in the liturgy. The reception of Scripture (e.g., according to the literary reception theory) is part of the active participation in the liturgy. The course explores the rich relationships between Bible and liturgy. The first part examines liturgical elements within the OT and NT. The second part discusses the various ways in which liturgy uses Scripture (cf. SC 24). The course finally pays attention to systematic-theological dimensions of the liturgical hermeneutics of Scripture. The whole

The Cult of Saints in Liturgical Practice

History of the rise of a Christian cult of the saints: martyrs, bishops, and confessors. The medieval expansion of the liturgical devotion to saints in East and West. The liturgical celebration of the saints today. A liturgical theology and spirituality of the saints.

Components: Lecture

TRS 748(3) Course ID:019168

Rational Worship?: An Analysis of Byzantine Liturgy Today

Logikê latreia (Roman 12: 1) is how the Byzantine tradition describes what transpires in church during liturgy. At almost every Eucharist, during the heart of the anaphora, the presider twice proclaims: "We offer You this rational worship" and at Great Vespers every eighth week the assembly chants the words "We offer you, O Christ, an evening hymn and rational worship." Such explicit - and repeated - claims demand attention. After a detailed examination of contemporary scriptural exegesis of Romans 12:1, we will examine the interpretation of the phrase in the works of more than 100 Greek patristic authors. We will then apply this scriptural and patristic exegesis to an array of Byzantine liturgical practices, attitudes and texts to analyze their coherence with the biblical and patristic understandings of "rational worship" with a view to proposing avenues of renewal and reform of present-day Byzantine worship.

Marriage and Family Ministry

Respecting the rich life experience and ministerial experience of the participants, the professor collaborates with the other learners to create a learning environment that is conducive to the integration of theological and pastoral knowledge for the purpose of effective ministry. The three main trajectories of learning will entail the exploration of the concept of Christian marriage and family as ecclesia domestica, the application of the criterion of "family perspective" to the pastoral arenas of the participants, and the study of select controversial issues encountered by today's ministers.

Components: Lecture

TRS 753A(3) Course ID:006456

Dialogue Between Theology and Psychology

An examination of the evolving dialogue between theology and psychology, the theological uses of psychology, and prospects for the future of the dialogue. Implications for contemporary theological reflection and pastoral practice also will be considered.

Components: Lecture

TRS 753D(3) Course ID:014276

Spiritual Practices

This course will investigate some traditional spiritual practices as a means of shaping and forming a religious and virtuous self. Contributions of Michel Foucault, Michel de Certeau, Talal Assad, and others on the important role of spiritual practices will provide a theoretical perspective. Hospitality, forgiveness, fasting, lectio divina, confession, celibacy, and spiritual direction are among the practices to be examined.

Components: Lecture

TRS 753E(3) Course ID:003771

Personality and Religious Development

Examines the psychological foundations of religion in human development and the evolution of religion during the life cycle. An investigation of the contributions of Erikson, the object-relations theorists, Piaget, Kohlberg, Fowler, and adult developmental theorists. Implications of developmental psychology for religious education and spirituality are emphasized.

Components: Lecture

TRS 754(3) Course ID:006447

Mystical Theology

An introduction to the study of mysticism. Issues include the relationship of mystical experience and doctrine, the cross-cultural study of mysticism, and an analysis of various philosophical, theological, natural, and social scientific methods employed in the study of mysticism.

Components: Lecture

TRS 754B(3) Course ID:011647

Mystical Theology: Three Pivotal Texts of Bonaventure

An examination of the foundations of Christian Mysticism through the lens of Bonaventure's *summa mistica*, *Itinerarium Mentis in Deum*, *De Triplici Via*, and *Soliloquium*. Each of these texts relies on the writings of the earlier Christian tradition, especially those of Augustine, the Pseudo-Dionysius, Bernard of Clairvaux, the Victorines, and Francis of Assisi. Furthermore the first two of these texts influenced the subsequent tradition of mysticism. In order to grow sensitive to the nuances of these texts, a part of each class will be devoted to translation of a select Latin passage.

Components: Lecture

The Carmelite Tradition (Beginnings to 1500)

This course offers an overview of the main movements, representatives, and spiritualities of the medieval Carmelite tradition from its beginnings to the eve of the Teresian Reform (approximately 1200 to 1500). Topics include the tradition's biblical roots, its historical origins on Mount Carmel near the beginning of the 13th century, its Marian and Elijan heritage, the enduring impact of the Carmelite Rule, the move to Europe and assimilation to the ranks of the mendicants, important medieval texts such as The Fiery Arrow and The Book of the Institution of the First Monks, the inclusion of women and laity, early reform movements, the development of devotion to Our Lady of Mount Carmel and the brown scapular, and the Carmelite saints, scholars, heroes, and artists of this period, including Angelus of Jerusalem, John Baconthorpe, Andrew Corsini, Peter-Thomas, Nuno Pereira, Frances D'Amboise, Filippo Lippi, Thomas Netter, Baptist of Mantua, John Soreth, and many others. (A companion course, TRS 754F, continues the overview of the Carmelite tradition

Components: Lecture

TRS 754G(3) Course ID:015009

Franciscan Masters of Prayer

Prayer is at the heart of Francis of Assisi's writings, his Rules and his Canticle of Brother Sun. After considering these documents this course will then proceed to examine the sayings of Br. Giles of Assisi, the instruction on prayer provided by David of Augsburg between 1240 and 1270, the chapters of Bonaventure's Rule for Novices devoted to prayer. Considerable time will be devoted to a study of Bonaventure's Enkindling of Love [De triplici via]. The influences of the Devotio Moderna of the fourteenth and fifteenth century will be reviewed through the eyes of Hendrik Herp, Peter of Alcantara, and the controversial Francisco de Osuna, Bernabé de Palma, and Bernardino de Laredo. This will be followed examining the influences on Ignatius of Loyola's Spirituality exercises and the early Capuchin masters and, finally, by those of the mystic Padre Pio of Pietrelcina.

Components: Lecture

Hispanic/Latino Theology

Historical and cultural aspects of the Hispanic/Latino community in the United States. The development of Hispanic/Latino theology in the North American context by representative theologians (Aquino, De La Torre, Elizondo, Espín, Díaz, Goizueta, Isasi-Díaz, Pedraja, et al.).

Components: Lecture

TRS 755D(3) Course ID:015838

Spiritual Themes in Early Christianity

One of the most prominent themes in early Christian spiritual teaching was the pilgrimage of the soul. The goal of ascending to the divine dwelling-place appears already in scriptural commentaries such as those of Origen; in the interpretation of journeys to Jerusalem; and in accounts of the divine theophany to Abraham, Moses and others. This course explores early Christian discussions of the ascent of the mind, drawing upon both philosophical and scriptural sources, particularly as found in Origen, Augustine, Gregory of Nyssa, and several monastic authors.

Components: Lecture

TRS 756(3) Course ID:004355

Pastoral Approach to Adult Spiritual Formation

Using a participative approach, this course examines the characteristics of adult learning and explores the use of Scriptures, spiritual classics, methods of prayer, and spiritual direction in ongoing adult formation.

Components: Lecture

TRS 756B(3) Course ID:011649

Catholic Social Teaching in Religious Education

This course examines the historical development and current state of Catholic social thought with attention to key papal, conciliar and episcopal documents for the purpose of understanding their relationship to and enhancement of Catholic higher education, religious education and parish ministries. Methods of social analysis and theological reflection will be considered as well as current trends in service learning programs. Additionally, opportunities for exploring and creating innovative approaches to sharing CST at all levels of education are offered.

Components: Lecture

TRS 757(3) Course ID:010134

Interfaith Spirituality

Examines the sometimes controversial ways in which the understanding and practice of Christian spirituality has been affected by currents coming from other religious traditions. Readings will be drawn from ecclesial documents and from authors such as Thomas Merton, Bede Griffiths, Sara Grant, Raimon Panikkar, Diana Eck, and William Johnston.

Components: Lecture

TRS 758(3) Course ID:015475

The Formation of Christian Martyrdom

The early Christian understanding of martyrdom appeared in the second century and deepened quickly in nascent Christian communities. This course examines the earliest works -- from the first through the early fourth century, and in differing cultures -- to portray the sufferings and triumphs of Christian "witnesses" in conflict with the imperial regime of Rome. It considers the influence of earlier literary genres (letters, biographies, and other documentary sources) in the development of an ideal Christian spiritual life and death in imitation of the passion of Christ, visible in accounts of women and men alike. The class will read primary sources and recent scholarly discussions.

John of the Cross

This course offers an overview of the life, teaching, and enduring influence of John of the Cross, a doctor of the church, through the study of his poetry and major prose works: The Ascent of Mount Carmel / Dark Night, The Spiritual Canticle, and The Living Flame of Love. Topics covered include his biography and historical context, as well as his contributions in the areas of mysticism and spiritual theology. Attention will be given to his theological anthropology and epistemology; his treatment of desire, the "dark night," and human transformation; and the creative application of his insights by contemporary authors dealing with such issues as ecumenism and interfaith dialogue, the contemporary decline in religious affiliation, and the struggle for social justice.

Components: Lecture(In Person)
Room Requirements: DEPARTMENT SPACE(1)

TRS 760A(3) Course ID:003795

Theological Foundations

An introduction to the practice of Christian theology as human performance. Key moments in the genesis of theology as a discipline; its foundations, tasks, and purpose. Faculty.

Components: Lecture

TRS 760C(3) Course ID:017800 Department Consent Required

Theological Readings of Scripture

The course will introduce students to historical forms of theological exegesis of the Christian Scriptures with a focus on the Scripture commentaries of Thomas Aquinas, and it will introduce them to modern forms of theological exegesis, including Scriptural Reasoning and Comparative Theology.

Components: Lecture
Room Requirements: DEPARTMENT SPACE(1)

TRS 761B(3) Course ID:010163

Theological Anthropology in Cross-Cultural Perspective

This course explores the issues raised by and for theological anthropology in cross-cultural perspective. It aims to examine, critique, and enlarge Christian anthropologies in light of the emerging world church, of developments in cultural and indigenous psychologies, and of post-colonial critiques. It gives participants an opportunity to explore issues in their own theological anthropologies

Components: Lecture

TRS 761D(3) Course ID:012758

Character of God

Studies the differences between classical and contemporary treatments of the divine attributes and character. In dialogue with feminist theology and process thought, investigates questions concerning how God is appropriately named, and whether God changes or suffers, in an approach which affirms both the transcendence and immanence of God.

Components: Lecture

TRS 761F(3) Course ID:014614

Thomas Aquinas on the Triune God

Studies Aquinas' theology of the Triune God, looking particularly at QQ. 2-43 of the Prima pars of the Summa theologiae. Attention will also be given to contemporary scholarship on Aquinas.

Components: Lecture

TRS 761G(3) Course ID:014736

Aquinas on the Emotions

This course covers the philosophy and theology of Thomas Aquinas's theory of the emotions. The theory is considered in its historical context and with attention to modern questions and accounts of emotion.

Components: Lecture

TRS 761H(3) Course ID:016838

Dramatic Soteriology: Balthasar Schwager

A study of the dramatic soteriologies of Hans Urs von Balthasar and Raymond Schwager against the background of their overall theological projects.

Components: Seminar

The Catholic Univ of America

TRS 762(3) Course ID:015010

Victorine Theology

This course will be a survey of and introduction to one or more of the multi-faceted theological projects of the Victorines (Andrew, Hugh, Richard, etc.): biblical; mystical; systematic. We will choose one or more of the principal works of the Victorine theologians to study closely, situating their work within the broader context of the rapidly-evolving theology of the twelfth century.

Components: Lecture

TRS 762A(3) Course ID:016661

Abelard and Twelfth Century Thought

This course will focus upon the writings of Peter Abelard (1079-1142), chiefly the *Historia calamitatum*, the *Logica ingredientibus*, and several of the theological treatises, in particular the *Theologia scholarium*, and the *Theologia Christiana*. Situating Abelard into the various historical, cultural, and religious contexts that framed his life, we will explore the significance of his thought and its impact upon contemporary and subsequent twelfth-century figures. Reading knowledge of medieval Latin is required inasmuch as only a few of the texts are available in English translation. Please consult the instructors to determine whether or not your level of Latin is sufficient for taking the course.

Components: Lecture

TRS 763A(3) Course ID:008703

Soteriology

The soteriological theme: Christ's "work" and its effect. Scriptural data and patristic elaboration of biblical imagery. Anselm, satisfaction, and the Thomist synthesis. The modern problematic, Lonergan, and the Law of the Cross.

Components: Lecture

TRS 763B(3) Course ID:016858

Theology of Thomas Aquinas

1.) To introduce the theology of Thomas Aquinas, one of the most eminent and influential theologians of the Christian tradition
2.) To explore aspects of Aquinas's theological and philosophical anthropology in the *Prima Pars* of his *Summa Theologiae*
3.) To appreciate the centrality of the nature-grace distinction for Aquinas's theology
4.) To encounter and reflect upon Aquinas's complex theology of law and grace in the *Prima Secundae* of his *Summa Theologiae*
5.) To grasp the contours of Aquinas's theology of sin and salvation
6.) To understand the inherent relationship between Christ's passion and the sacraments, especially the Eucharist, in Aquinas's theology

Components: Lecture

TRS 763C(3) Course ID:014615

Divine Impassibility and Human Suffering

The course examines the question of whether God suffers and, if so, in what way does God's suffering touch human suffering. Students will read patristic and medieval debates about *patrippassionism* and divine impassibility to assist a critical analysis of 20th-century doctrinal debates on the topic.

Components: Lecture

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 763D(3) Course ID:015175

Original Sin

Considers the doctrine of original sin in its origins, historical development, and contemporary formulations. Covers patristic thought (with special attention to Augustine), high medieval discussions (with special attention to Thomas Aquinas), the Protestant Reformation, and the Council of Trent, and then turns to contemporary attempts at a synthesis

Components: Lecture

TRS 763E(3) Course ID:015338

Theology of Grace

A consideration of the major themes in the theology of grace. Particular attention will be paid to the elaboration of the theology of grace in the medieval period (esp. by Thomas Aquinas) and to later debates that focused on grace, for example those regarding merit and justification, election, and nature and grace.

Components: Lecture

TRS 764A(3) Course ID:003839

The Local Church

The local or particular Church from historical, systematic, ecumenical, and pastoral perspectives. Use of Vatican II. The local Church and the universal Church, the Eucharist, the local Church of Rome, the theology of the parish as related to the local Church. Seminar format: lecture and discussion.

Components: Lecture

TRS 764B(3) Course ID:003841

The Church as Communion

A study of the important concept of koinonia/communio: scriptural and historical background and ecclesiological application: communion of saints, local/universal Church, catholicity, collegiality, communication, and current ecumenical dialogues. Format: lecture and discussion.

Components: Lecture

TRS 764D(3) Course ID:013122

The Church as Catholic and Global

This course examines the shape of catholicity in a Church increasingly aware of its local and global character. Topics include: Vatican II as the emergence of a ¿World Church,¿ the relationship of evangelization and inculturation, and Christianity¿s enduring Greco-Roman-European heritage.

Components: Lecture

TRS 765B(3) Course ID:009581

Ecumenical Theology

In the course of the twentieth century, the unity and disunity of Christians emerged as a major theme within theology. This course will explore the nature of ecumenical theology and its major themes (the unity of the Church, doctrinal consensus, individual doctrinal issues that have been `church-dividing¿). Works by individual theologians (e.g., Yves Congar, George Lindbeck) and texts from ecumenical dialogues (e.g., the Joint Declaration on the Doctrine of Justification) will be examined.

Components: Lecture

TRS 766B(3) Course ID:003995

Introduction to Eastern Orthodox Theology

The Orthodox Church plays an important role in the ecumenical movement, not least through the impact of its own distinctive theology on the western churches. Eastern Orthodox theology builds upon the Greek Fathers and the Byzantine tradition. Yet, the 20th century has experienced a certain renewal of orthodox theology, due not least to Russian exile theologians. This course surveys main themes of today's orthodox theology and introduces authors like Lossky, Meyendorff, Staniloae and Zizioulas.

Catholic/Orthodox Dialogue
Catholic-Orthodox relations entered a new phase with the lifting in 1965 of the mutual anathemas dating back to 1054, which precipitated the great schism. Recent decades have subsequently seen a concerted effort at reconciliation by means of a dialogue of charity and a dialogue of truth. This course examines the strategy and major achievements of this dialogue, particularly the agreed statements that have been reached by the international and the north American theological dialogue commissions, respectively. It also considers the problems that have arisen and the issues still outstanding on the path towards the restoration of full eucharistic communion.

The book's original language, Hebrew fragments, Greek recensions, canonical history, literary forms. Exegesis of selected passages on theological themes. Prerequisites: Hebrew, Greek, Syriac, Latin.
Components: Seminar

TRS 804C(3) Course ID:010567
The Psalms
This seminar emphasizes the form-critical study of the Psalms, the determination and elements of specific genres, and the search for Sitz im Leben especially within the ritual life of Israel. Significant attention is also given to poetic features of the Psalms and the redactional and canonical shaping of the Psalter as a whole.
Components: Seminar

TRS 804D(3) Course ID:011394
Prophets of the Late Pre-Exilic Period
The seminar will concentrate on the historical-critical exegesis of selected texts from the Book of Amos. These texts will be considered in their canonical context, with a special focus on the theology of the prophet and the editor(s) of the book.
Components: Seminar

TRS 804E(3) Course ID:011879
The Book of Amos
This course begins with an overview of Amos, person and times, the book attributed to him, and its place within the Book of the 12 Prophets. It will then focus on a close reading of selected texts of the Book of Amos.
Components: Seminar

TRS 804F(3) Course ID:012765
The Book of Jeremiah
A close study of selected passages from Jeremiah with special attention to the differences between the Masoretic and Old Greek texts. Critical evaluation of various approaches to prophetic literature, Hebrew poetry, and the reconstruction of Jeremiah's life, circumstances, and message.
Components: Seminar

TRS 804G(3) Course ID:012775
The Book of Ezekiel
The course will begin with an orientation to the questions surrounding the person, times book, text and message of Ezekiel. It will then continue with a presentation and discussion of student papers concerning the various kinds of texts found in the Book of Ezekiel.
Components: Seminar

TRS 805A(3) Course ID:001369
Theology and Exegesis I Isaiah
Historical background of the period; treatment of major themes of the teaching of Isaiah; special attention to disputed questions of his relationship to Davidic, Zion, and holy-war traditions and to the wisdom movement; detailed exegesis of selected passages. Prerequisites: Hebrew, Greek.
Components: Seminar

The Catholic Univ of America
Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 805C(3) Course ID:018862

The Book of Isaiah

A study of the book of Isaiah within the context of Scripture and ancient Near Eastern prophecy. Close analysis of selected passages and discussion of textual, literary, and comparative methods.

Components: Seminar(In Person)
Room Requirements: DEPARTMENT SPACE(1)

TRS 806(3) Course ID:001363

Book of Daniel

The book's composition, unity, literary forms, historical framework. The languages in MT, the deuterocanonical sections. Detailed exegesis. Theological questions: Son of Man, angelology, eschatology, problem of evil. Prerequisites: Hebrew, Aramaic, Greek.

Components: Seminar

TRS 806A(3) Course ID:012959 Department Consent Required

The Megilloth

Study of selected texts from the Megilloth, or Festival Scrolls (Ruth, Song of Songs, Ecclesiastes, Lamentations, Esther) with evaluation of various approaches to biblical interpretation applied to the Scrolls. These books individually and as a collection within the Jewish canon present a number of particular issues of canonicity and interpretation. The course will integrate close reading of selected passages from the Megilloth and directed readings in scholarly discussion of biblical interpretive approaches.

Components: Seminar

TRS 806B(3) Course ID:014619

The Book of Job

A study of the book of Job including its place in Scripture and in the international tradition of ancient wisdom literature. Close analysis of selected passages and discussion of textual and philological methods.

Components: Seminar

TRS 807(3) Course ID:015523

The Book of Kings

Critical study of the books of Kings, with attention directed to particular sections that not only deal with important periods in the history of ancient Israel, but exemplify the character and techniques of biblical historiography. Focus on the Masoretic Hebrew text with ancient versions and archaeological and textual sources from elsewhere in the ancient Near East.

Components: Seminar

TRS 807A(3) Course ID:016994

Textual Criticism of the Bible

This course introduces students to the methods and practice of textual criticism for both the Old and New Testaments. Special attention will be given to the role of scribal practices in the transmission of biblical texts. Prerequisites: SEM 711 and GR 604 or equivalents.

Components: Seminar
Enrollment Requirements: SEM 711 & GR 604

TRS 808A(3) Course ID:000009

Textual Criticism of the Old Testament

The course introduces students to the practice of textual criticism of the Old Testament and how growing knowledge of scribal practice informs this work. It includes the application of comparative philology to textual problems. Prerequisites: SEM 711 or equivalent and GR101 or GR501.

Components: Seminar

TRS 808B(3) Course ID:001371

Old Testament Theology

Treats the problem and method of Old Testament theology. Suggests effective principles and methods to understand the full meaning of the biblical text in order to tackle and resolve issues at the leading edge of hermeneutics and biblical theology. Detailed study of heuristics, selected ideas (covenant, kingship, eschatology, etc.), canonical criticism, salvation history, dialectic and symbolic hermeneutics, communal reading/narratological approaches. Prerequisite: A background in the graduate study of the Old Testament. Also, Biblical Hebrew and at least one of the following: French or German.

Components: Seminar

The Catholic Univ of America
Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 809A(3) Course ID:006412

Textual Criticism of the New Testament

Intensive study of the methodology of textual criticism. Acquaintance with important manuscripts and witnesses of the New Testament text. Practical problems in textual criticism. History of the text of the New Testament.

(Previously BBSD 802)

Components: Seminar

TRS 809B(3) Course ID:006672

New Testament Theology

An investigation of the origin, nature, and method of New Testament theology. A critical discussion of the major works on New Testament theology. An exegetical study of selected topics: God, Christ, Church, the moral life. Prerequisite: Biblical Greek.

Components: Seminar

TRS 810B(3) Course ID:001377

The Parables of Jesus

Historical Jesus research has focused strongly upon the parables of Jesus, as they are recorded in the Synoptic Gospels, and in some parallel non-canonical literature, as perhaps the best evidence of Jesus' original teaching. However, they have been modified and used within the literary and theological agendas of the Synoptic Gospels. Within the parables the reader of the Gospels is also in close touch with the social setting of the birth of Christianity. The course will select from the parables of Jesus and analyze them under these major concerns of contemporary New Testament studies. Prerequisites Biblical Greek.

Components: Seminar

TRS 810C(3) Course ID:011880

Source and Redaction Criticism in the Synoptic Gospels

This seminar surveys the history of source critical theories proposed for solving the Synoptic Problem and the consequences of these theories for redaction criticism. Students will engage source theories that remain current today by considering how these theories explain the literary relationship of the Synoptic Gospel. They will then test two theories in addition to the currently dominant Two-Source Theory, by writing redaction-critical papers on specific Synoptic passages.

Components: Seminar

TRS 810D(3) Course ID:012226 Department Consent Required

Passion Narratives

This course is a doctoral seminar that studies the Passion Narratives of Matthew, Mark, Luke and John in terms of their historical setting, their theological meaning, and their literary relationships to each other. After a series of working sessions on the Markan Passion Narrative, each member of the seminar will present an exegetical study of a particular passage from one of the Passion Narratives.

Components: Seminar

TRS 811A(3) Course ID:006422

The Gospel According to Matthew

After a number of introductory sessions treating the synoptic problem and specific issues pertinent to Matthean scholarship, the overall structure and message of the Gospel will be discussed. The major focus of the seminar is the relationship of Matthew and his community to Judaism and the Gospel's use of Israel's scriptures. Prerequisite: Biblical Greek.

Components: Seminar

TRS 811B(3) Course ID:001379

The Gospel According to Mark

After a consideration of recent research on the Gospel of Mark, the participants of this seminar course will conduct an exegetical analysis of the Greek text, including the shorter and longer ending of the Gospel. Each student will be expected to lead the discussion of a seminar session, as well as write and present an exegetical paper. Each paper will then be revised in light of the critiques offered by the participants of the seminar. Prerequisite: Biblical Greek

Components: Seminar

Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 811C(3) Course ID:006423

The Gospel According to Luke

An introduction to the contemporary study of the Gospel of Luke: the use of the Gospel of Mark, the Q Source, the possibility of a "proto-Luke," and the literary and theological unity of the Gospel of Luke and the Acts of the Apostles. The overall structure and message of Luke-Acts. Detailed analysis of select passages from the Gospel of Luke, devoting special attention to the unique contribution of this Gospel to the early Church's Christology and Soteriology. Prerequisite: Biblical Greek.

Components: Seminar

TRS 812A(3) Course ID:001380

The Gospel According to John

Surveys major issues in both the classical and contemporary study of the Fourth Gospel, especially its literary unity and the theological point of view of its author(s). A discrete literary section of the Gospel will be subjected to detailed exegetical analysis, devoting detailed attention to the contribution of this Gospel to emerging Christian thought. Prerequisite: Biblical Greek.

Components: Seminar

TRS 812E(3) Course ID:006427

The Joannine Epistles

Considers the emergence of the Catholic Epistles (James, 1-2 Peter, Jude, 1-3 John) within the Christian Canon; and the origin, order, and authorship of 1-3 John. Key pericopes of 1 John and the whole of 2 and 3 John are exegeted in detail. Particular attention to the place of the Johannine Epistles within the Johannine tradition, and their relationship to the Fourth Gospel. Prerequisite: Biblical Greek.

Components: Seminar

TRS 813(3) Course ID:001382

Acts of the Apostles

A survey of exegetical and theological approaches to the interpretation of Acts; exegesis of selected passages. Prerequisite: Biblical Greek.

Components: Seminar

TRS 814A(3) Course ID:001397

Pauline Theology

After considering the nature of Pauline Theology, this seminar examines Paul's Christology, soteriology, ecclesiology, ethics, and eschatology. Students will read works on Pauline Theology and write an exegetical paper on an aspect of Pauline Theology. Prerequisite: Biblical Greek.

Components: Seminar

TRS 814B(3) Course ID:001393

The Thessalonian Correspondence

After a study of the Hellenistic letter, a detailed exegesis of portions of 1 Thessalonians as the oldest of Paul's letters and 2 Thessalonians as an example of early Christian pseudepigraphy will be made. Prerequisite: Biblical Greek.

Components: Seminar

TRS 814C(3) Course ID:001385

First Corinthians

After an introduction to problems related to the unity of the letter and the situation at Corinth, exegesis of individual passages will aid in discerning the nature of the struggles within the community and the apostle's response them. Prerequisite: Biblical Greek.

Components: Seminar

TRS 814D(3) Course ID:013575

The Corinthian Correspondence

This seminar considers the theological significance of Paul's Corinthian correspondence (1 & 2 Corinthians) in light of the historical situation that occasioned these letters. The seminar gives special attention to Paul's understanding of his apostleship, Christ's death, the resurrection of the dead, the church, and the moral life of believers.

Components: Seminar

The Catholic Univ of America
Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 814E(3) Course ID:006673

Second Corinthians

An investigation of the letter's historical background in light of Paul's dealings with the church at Corinth; a consideration of the letter's literary integrity; an exegetical study of major texts.

Prerequisite: Biblical Greek.

Components: Seminar

TRS 814F(3) Course ID:001384

Epistle to the Romans

After an introduction to the circumstances of composition and the literary structure of the epistle, key pericopes are exegeted with a view to grasping Paul's mature theology. Prerequisite: Biblical Greek.

Components: Seminar

TRS 814G(3) Course ID:006424

Galatians and Philippians

An exegetical study that focuses upon the Pauline concepts of law, justification, and righteousness.

Prerequisite: Biblical Greek.

Components: Seminar

TRS 814H(3) Course ID:001387

Colossians and Ephesians

A detailed exegetical study of the Greek text of Colossians and Ephesians, concentrating on their relation to the rest of the Pauline corpus and their specific theological teaching. Prerequisite: Biblical Greek.

Components: Seminar

TRS 814J(3) Course ID:006425

The Catholic Epistles

Considers the emergence of the Catholic Epistles (James, 1-2 Peter, Jude, 1-3 John) within the Christian canon. The background, setting, and overall argument of James and 1 Peter are studied in detail. Exegesis of major passages selected from these two letters. Prerequisite: Biblical Greek.

(Previously BBSD 882)

Components: Seminar

TRS 814K(3) Course ID:010154

Pastoral Epistles

An introduction into the problems of authenticity, place, and time of composition; the texts of the three Pastoral Epistles are exegeted in order. Prerequisite: Biblical Greek.

Components: Seminar

TRS 814L(3) Course ID:011393

The Letter to the Ephesians

A detailed exegetical study of the Greek text of Ephesians, concentrating on its relation to the rest of the Pauline corpus and its specific theological teaching.

Components: Seminar

TRS 814M(3) Course ID:012227 Department Consent Required

Epistle to the Hebrews

After a consideration of recent research on the Letter to the Hebrews, particularly with regard to its literary structure, the participants of this seminar course will conduct an exegetical analysis of the Greek text. Each student will be expected to lead the discussion of a seminar session, as well as write and present an exegetical paper. Each paper will then be revised in light of the critiques offered by the participants of the seminar. Prerequisite: Biblical Greek.

Components: Seminar

The Book of Revelation

After a consideration of recent research on the Book of Revelation, particularly with regard to its literary structure, the seminar participants will conduct an exegetical analysis of the Greek text. Each student will be expected to lead the discussion of a seminar session, as well as write and present an exegetical paper. Each paper will then be revised in light of the critiques offered by the participants of the seminar.

Components: Seminar

TRS 820(3) Course ID:015811

Augustine in the Middle Ages: Augustine and 12th Cent. Spirituality

If it is a truism that twelfth-century theology was Augustinian, nevertheless we still have insufficiently precise knowledge of how individual theologians made use of Augustine. This is especially true of twelfth-century mystical writers, whose reliance on Augustinian epistemology has gone largely unnoticed. In this class, after first reading key Augustinian epistemological texts -- we shall read these in Latin, so that we will recognize at once the use of Augustinian language by twelfth-century writers -- we shall focus on works of two justly-famous twelfth-century mystical theologians, William of St. Thierry and Richard of St. Victor, to examine their incorporation of Augustinian epistemology. A principal goal of the course is to see how mystical theology in the twelfth century was not a separate enterprise but was rather the culmination of an integrated theology, built on the Bible, founded on reason, and aimed at union with God.

Components: Seminar

Augustine's De trinitate

This course is a doctoral seminar on Augustine's De trinitate.

Components: Seminar(In Person)

Room Requirements: REGULAR ROOM - NO TECHNOLOGY(1)

TRS 821D(3) Course ID:013306

Latin Patristic Commentaries on Creed(s)

This seminar studies various Latin early Christian creeds (The Apostles' Creed and its local variations, the Nicene Creed, and the Athanasian Creed) and the commentaries on these by several authors, such as Augustine of Hippo, Rufinus of Aquileia, Peter Chrysologus, Niceta of Remesiana, and Quodvultdeus.

Components: Seminar

TRS 821E(3) Course ID:014016

Latin Patristic Commentaries on Paul

This course focuses on the 4th century Latin commentaries of the Pauline epistles, preeminently on Ambrosiaster, and studies these in their historical and theological contexts. Special attention will be on Paul's Letter to Galatians. Students are encouraged to take this course after TRS 721: Principles of Patristic Exegesis, which studies the hermeneutics of Latin fathers.

Components: Seminar

TRS 822D(3) Course ID:012490

Irenaeus and the Gnostics

An examination of the culture, historical context, and thought world of the second century theologian, Irenaeus of Lyon, including the confrontation with Valentianian Gnosticism, the interpretation of Scripture, eschatology, the Adam-Christ typology, the divine economy, baptism, salvation, and the spirit. The questions and directions he established for the future will also be considered.

Components: Seminar

TRS 822E(3) Course ID:015011

Maximus the Confessor and His World

An examination of the theology of Maximus the Confessor in the context of his world. The history of the Monothelete controversy, and Maximus's role in it, will be considered, as well as his Christology, cosmology, anthropology, and his theology of love and the Logos. Attention will also be given to Maximus's theological sources and to his legacy and direction for the future.

12th Century Evangelical Awakening

This course will survey the evangelical awakening that swept over twelfth century Europe, revivifying old institutions and making way for new ones. Reading many different genres of sources (such as letters, sermons and annals), we shall focus our attention particularly on those evangelical reforms (e.g. of the monastic orders; of the canons regular; of the secular clergy; of the papacy itself; and of the episcopate) that remade Christian life in the twelfth century.

Components: Seminar

TRS 824(3) Course ID:015012

Glossa ordinaria

This course will be an in-depth study of the biblical Glossa ordinaria. We shall focus on some book, some thinker, or some theme that illumines the great twelfth-century historical/theological project that produced multiple editions of the Gloss.

Components: Seminar

TRS 825B(3) Course ID:000423

The Catholic Reformation

Topics: The Papacy and the Renaissance; The Papacy and the Reformation; Issues in Controversialist Theology.

Components: Seminar

TRS 825G(3) Course ID:000435

Power in the Church, Gallican Model

Until the end of the nineteenth century, Gallican ecclesiology, although it offered a different "model" of the Church, was a tolerated alternative to the Roman perspective. How could these two different conceptions of authority, of "power in the Church," coexist for such a long time and why was the Gallican one finally condemned? Addresses these questions with a study based on major documents and the practices of that period.

Components: Seminar

TRS 825H(3) Course ID:006437

Aspects of Jansenism

Jansenism is a generic term used to describe a certain type of religious principles and social behavior in Europe during the seventeenth and eighteenth centuries. The usual chronological presentation suggests a coherent movement, evolving from mysticism to revolt and from resistance to organized revolution. The purpose of the seminar is to approach the question from a different angle, by reconstructing the different aspects of Jansenism as they can be observed in the religious history of the period.

TRS 825L(3) Course ID:000458

Americanism and Modernism

These late nineteenth-century developments were unified by the drive to construct a synthesis of religion and culture according to the dominant intellectual, social, and religious trends of the times. The historical topography of these isms will be explored with particular attention to the major and minor participants in the movements of reform and reaction, ca. 1870-1910.

Components: Seminar

TRS 825O(3) Course ID:009871

Selected Topics in Bonaventure

An investigation of Bonaventure's De triplici via, a compendium of medieval mystical theology centered on his theology of the spiritual life as a threefold process of maturation rooted in the practice of lectio divina and concomitant with medieval exegesis. Placing the text in the context of Bonaventure's Itinerarium mentis in Deum IV and the Prologue to his Commentary on the Gospel of Luke, the seminar will proceed to examine in detail his De triplici via. Knowledge of Medieval Latin will be helpful.

Components: Seminar

TRS 826(3) Course ID:000450

Sources of American Spirituality

Aimed at discerning the distinctively American manifestations of spirituality and devotionalism. Examines a wide variety of sources ranging from correspondence of prominent persons to fiction and material culture. With a focus on the Catholic experience of ultimate meanings, students' research papers will reflect the significance of contexts shaped by ethnicity, race, class, and gender.

Components: Seminar

TRS 826A(3) Course ID:012751

Patristic Seminar: Hilary of Poitiers De Trinitate

A study of the fourth century Trinitarian theology and controversies in light of a significant treatise of a pro-Nicene Latin theologian Hilary of Poitiers. Latin and a major research paper required.

Components: Seminar

TRS 827C(3) Course ID:012764

Bonaventure, Parisian Master: Context, Texts, Interpretation

Examines the context and thought of Saint Bonaventure during his Parisian period as a student and master of theology, c. 1248 - 1257. The course will also introduce the student to the many literary forms of scholastic theology, the key figures at the University of Paris who shaped Bonaventure's mind, including Alexander of Hales, and the hermeneutical challenges of interpreting Bonaventure due to the growth of medieval studies and the nineteenth century edition of his texts.

Components: Seminar

TRS 833C(3) Course ID:009603

Advanced Topics in Social Ethics

An in-depth study of a selected topic or topics in social ethics. Please consult the individual instructor for more details.

Spring 2014: This course explores the social question of religious freedom as a contemporary ethical challenge in a global political context. The course is organized around Vatican II's Declaration on Religious Freedom and the modern social encyclical tradition that both inspired and continues to develop Church teaching on the question. Readings will include relevant theological, philosophical, sociological, and historical literature addressing the topics of conscience, religious toleration, Church-state relations, secularism, human rights, democracy, and persecution.

Components: Seminar

Topics: The Social Ques of Rel Freedom

TRS 834(3) Course ID:007627

The Philosophy and Theology of Slavery

Many commentators note the ambiguous status of the slave. That ambiguous status is captured in Roman law, which simultaneously identified the slave as a human being (persona) and a thing (res). The social status of the slave becomes complicated by the adoption of the term in early Christianity, from the Gospels forward, where Christians willingly refer to themselves as slaves. The history of the Christian west reflects the ambiguity of the slave's status and the embrace of slavery rhetoric in the Christian scriptures. In this course we will study some of the philosophical and theological approaches to the institution of slavery looking to identify two things: an adequate notion of slavery, and the theological resources to construct a "theology of slavery" that adequately addresses this relationship of man to man.

Components: Seminar

The Catholic Univ of America
Course Catalog

Theology and Religious Studies - Theology and Religious Studies
Subject: Theology and Religious Studies

TRS 834A(3) Course ID:012974

Morality and Emotion

An examination of the role of the emotions in the moral life. Particular topics include the nature of emotion (or "passion"), the similarities and differences between human and animal emotional responses, the relationship between the emotions and distinctively human powers of rationality, the impact of emotions on moral decision-making, and the human capacity to shape not just actions arising out of emotion but emotional responses themselves. Sources for the course include Christian and non-Christian texts in the Western tradition, beginning with Greek and Roman thinkers, continuing through giants in the Christian tradition such as Augustine and Aquinas, and concluding with contemporary philosophical, theological and some neurobiological research.

Components: Seminar

TRS 835B(3) Course ID:004387

The Moral Theology of St. Thomas (MT/E Core #2)

An examination of original texts, with special attention to questions of fundamental moral theology.

Components: Seminar

TRS 836(3) Course ID:010262

Catholicism & The Marketplace

The course has as its purpose the introduction of students to significant themes in theological analysis of economic thought. The course briefly engages the history of economic thought, focusing some attention on scholastic economic reflection. The bulk of the course, however, will be applying that reflection to contemporary debates about the strengths and weaknesses of neoliberal economic and social policies.

Components: Seminar

TRS 837(3) Course ID:016424

Social & Spiritual Practices in Moral Formation

Examines debates over the role of social and individual practices in moral formation in contemporary moral theology. The first section will discuss the importance of social practices in shaping virtue theory through an analysis of positive and negative responses to Alasdair MacIntyre's influential account. The course will then investigate French social theorists; analysis of power, resistance, and the body in social practices. The last section of the course explores Michel Foucault's account of practices of the self in Hellenistic and early Christian ethics, and how his work has been used both historically, to understand Patristic ethics, and ethically, to address contemporary ethical problems.

Components: Seminar

TRS 840(3) Course ID:004368

Liturgical Theology

A review and critique of representative contemporary attempts to recover the classic dictum *lex orandi, lex credendi* in light of its earliest formulation and use in mystagogy and theology. Special attention will be given to questions of methodology.

Components: Seminar

TRS 841B(3) Course ID:004376

Contemporary Sacramental Method

Presentation, assessment, and critique of significant contemporary approaches to sacramental theology, including Louis-Marie Chauvet, Herbert Vorgrimler, Karl Rahner, Edward Schillebeeckx, and others.

Components: Seminar

TRS 841C(3) Course ID:007827

Sacramental Treatises

A study of selections from classical treatises on the sacraments from authors such as Tertullian, Augustine, Cyril of Jerusalem and Thomas Aquinas. Requirements include background reading for each text, the texts themselves, discussion of the texts in class and a final term paper.

Components: Seminar

TRS 841DM(3) Course ID:016105

Word and Sacrament in Pastoral Ministry

This course explores the dynamic between the Liturgy of the Word and the Liturgy of the Eucharist in mediating conversion and developing a liturgical spirituality. Liturgy is studied as symbolic, ritual action and conversion as a process of transformation which is personal and social. Scripture is studied as proclamation and presence of Christ within the assembly and a call to conversion.

Liturgical Catechesis in a Digital Age

This course focuses on liturgy as a source for catechesis. Emphasis is placed on inculturating the mystagogy of the sacraments of initiation and other selected sacramental and liturgical rites for a digital culture.

Components: Lecture

TRS 843(3) Course ID:010261

Liturgical Life in Jerusalem

An analysis of the 4th to 10th Century liturgical practices in Jerusalem as seen through the following documents: Egeria, Catechesis of St. Cyril of Jerusalem, the Armenian Lectionary, the homelies of Hesychius of Jerusalem, the Georgian Lectionary, and the Anastasis Typikon. The course will deal with principles of interpretation as well as demonstrating the changes and development through the centuries.

Components: Seminar

TRS 843A(3) Course ID:015538

Constantinople: The City and Its Liturgy

An analysis of the history of the Byzantine Rite up to present times in its context, the city of Constantinople and its cathedral, Hagia Sophia. Documents examined include the so-called Typikon of the Great Church, The Typikon of Evergetis Monastery, The Book of Ceremonies, and a selection of Byzantine liturgical commentaries. Attention will be placed on the interaction between ritual celebration, liturgical setting (architecture, iconography, city plan) and mystagogy. Sources will be read in the original Greek.

Components: Seminar

Foundations in Liturgical and Catechetical Documents

This blended online course studies major liturgical and catechetical documents promulgated before and after the Second Vatican Council. The purpose of the course is to gain a general knowledge of the content of the documents and to participate in class discussion in order to make appropriate application of the content to pastoral ministry.

Components: Lecture

Enrollment Requirements: Open to Doctor of Ministry students only

Room Requirements: NO CLASSROOM NEEDED(1)

TRS 846(3) Course ID:012465

Liturgies of Death and Dying

A seminar exploring the texts and rubrics of various medieval and modern liturgies of death and dying in the Christian East and West.

Components: Seminar

TRS 847(3) Course ID:012976

Liturgical Celebration of the Word of God

Origins of celebrating the word in scriptural and patristic witness, medieval development of the lectionary system in East and West, Tridentine codification of the lectionary, and recent reform of the liturgy of the word. Primary focus on the Word within the Eucharist. Foundations of a liturgical theology of the Word of God proclaimed.

Components: Seminar

TRS 847A(3) Course ID:019027

Spirituality of the Liturgy: Ritual and Theological Perspectives

This seminar explores the emergence of a liturgical spirituality in the early twentieth century. Historical consideration of the relationship between liturgy and spirituality provides a context for developing a more systematic and pastoral understanding of the liturgy as a form of spirituality.

Components: Seminar(In Person)

Course Equivalents: TRS 747

Room Requirements: DIGITAL PRESENTATION ROOM(1)

Mystagogy

This course will chart the various meanings, methodologies and praxis of mystagogia within the history of the Christian tradition beginning with the early Church witnesses. Contemporary scholars and liturgical/catechetical practices will also be studied so as to explore the possibilities for a twenty-first century understanding of mystagogy in faith formation and liturgical theology.

Components: Seminar

TRS 848DM(3) Course ID:016106

Liturgical Catechesis and the Liturgical Year

Liturgical Catechesis and the Liturgical Year explores the deep connections between liturgy, catechesis and liturgical time. These connections range from broad relating to the long cycle of the year to specific relating to particular days. The course will consider the long history of the liturgical year but will focus on its post-conciliar form. Given the pastoral nature of the degree program for which it is intended, the crux of the semester will be the application of insights gained throughout the course to professional pastoral ministry.

Components: Lecture

Enrollment Requirements: Open to Doctor of Ministry students only

Seminary Formation: Art of Accompaniment

The Holy Spirit, viewed through both a theological and spirituality lens, as the primary agent at work in seminary formation is explored to inform the formator's relationship with seminarians amid multicultural needs and influences. Understanding affective maturity through the integral role of Christian psychology and virtue-based behaviors is applied to the four pillars of formation for the priesthood: human, spiritual, intellectual, and pastoral. Accompaniment by the formator as a spiritual father is examined.

Reproposing the Good News: The New Evangelization

With Christ's words: Go and Make disciples of all Nations, his followers have a mandate to proclaim the Good News in word and in deed. This course will seek to understand evangelization in the Catholic Church. Through reviewing the history and literature of evangelization especially its current renaissance as the "new evangelization" from Popes Paul VI through Benedict XVI, participants will study papal documents, pastoral letters pertinent to the USA, current diocesan projects and programs with the ultimate goal of formalizing a project of the new evangelization for one's mission or ministry.

Components: Seminar

TRS 854DM(3) Course ID:012491

Theology of Pastoral Leadership

Pastoral leadership is directed at building up communities of faith and forming disciples. The focus of this course is both theological, looking at the theological and vocational foundations of leadership and practical, looking at best practices in leadership, management and collaboration. The course requirements include reading, theological reflection, discussion boards, class presentations and concrete application to participant's current ministerial situation.

Components: Seminar

TRS 855(3) Course ID:006468

Ministry of Spiritual Direction

Examines the history, principles, and practice of spiritual direction. This ministry is compared and contrasted with helping processes such as counseling and psychotherapy. The director's role and the dynamics and discernment are investigated as well as theological and psychological perspectives on the process. Scriptural and theological foundations for direction are considered. Pastoral guidelines for doing spiritual direction are presented.

Components: Seminar

Pastoral Planning: Spirituality and Praxis

This course will present participants with a long-term, systematic process of assessing needs, establishing goals and implementing a plan of action in ecclesial organizations. Participants will study the dynamics and application of a model for strategic planning and decision making. An essential component of the course will be spiritual reflection on how pastoral planning furthers the mission of the Church and is integral for leadership and development of staff personnel in organizations.

Components: Seminar

TRS 855DM(3) Course ID:016971

Evangelization and Emerging Adults

Disaffiliation of emerging adults is considered one of the greatest pastoral challenges facing the Catholic Church in the United States in the 21st Century. This course examines the challenges and opportunities before the Church in its ministry to young adults today. Our explorations will be both theological and pastoral. We will begin by exploring sociological studies which help us to understand young adults today. These studies will focus on young adults in the United States, with an eye to wider cultural trends in the Western world that shape the period often described using Arnett's term "emerging adulthood." We will pay some attention as well to the significant Hispanic presence in the U.S. Church, since now a majority of Catholics under 35 are Hispanic. The course will go on to ask theological and pastoral questions about ministry to young adults, with an eye to how the Church might more effectively minister to them.

Components: Seminar (Blended (in-person and online))

Enrollment Requirements: Open to Doctor of Ministry students only

TRS 855E(3) Course ID:011881

Doctor of Ministry Seminar

The online Doctor of Ministry seminar focuses on clarifying a significant issue in ministry suitable for doctoral-level pastoral research, researching relevant theological, biblical, and social science resources related to the issue, identifying and designing a practical project to address the issue using an appropriate pastoral methodology, outlining the parameters of the theological chapter(s) of the treatise, and completing the training for research involving human subjects. The goal of the course is to develop a Project in Ministry proposal that is ready to present to the Doctor of Ministry Proposal Committee.

Components: Seminar

TRS 855F(3) Course ID:016176

Ministry: Evangelizing and Catechetical Dimension

Examines the nature, history and principles of ministry, exploring its evangelizing and catechetical dimension. Focuses on two inter-related yet distinct ministries of the Word of God, catechesis and evangelization. Particular attention will be given to the role of catechesis in a collaborative approach to ministry as well as to the formation of ministers of catechesis and of the new evangelization.

Components: Seminar

TRS 856C(3) Course ID:010801

Spiritual Practices

This seminar will investigate some traditional spiritual practices as a means of shaping and forming a religious and virtuous self. Contributions of Michel Foucault, Michel de Certeau, Talal Assad, and others on the important role of spiritual practices will provide a theoretical perspective.

Components: Seminar

TRS 856DM(3) Course ID:015779

Spirituality in the Workplace

This course draws on the principles and practices of Ignatian spirituality as a resource for developing a spirituality for the work place. Topics to be studied include: The worldview of Ignatius of Loyola, the Spiritual Exercises, and the fundamental elements of Christian discipleship from an Ignatian point of view with a special focus on discernment and decision-making.

Components: Lecture

Enrollment Requirements: Open to Doctor of Ministry students only

Method for the Study/Teaching of Christian Spirituality

Christian Spirituality is an academic discipline that, of its nature, is interdisciplinary and, therefore, embraces biblical, historical-systematic, and liturgical disciplines. It is also seen as an essential part of a pastoral discipline that is also interdisciplinary and embraces a broad contemporary understanding of approaches and dynamics. This course will examine methods for studying and teaching the pastoral dimensions of this discipline.

Components: Seminar

TRS 858A(3) Course ID:009606

The Self: Theological and Psychological Perspectives

An investigation of the self as a focus of both psychological and spiritual development. Attention is given to both the spiritual traditions of the East and West on the self and of contemporary efforts to integrate insights of depth psychology and theology.

Components: Seminar

TRS 858B(3) Course ID:009607

Religion and Feelings

An exploration of the role of affectivity in religion along with considerations of recent contributions to the psychology of emotion and of studies on the way emotions shape personalities and cultures and guide behavior.

Components: Seminar

TRS 858C(3) Course ID:009608

Spiritual Practices

A study of some of the traditional spiritual practices as a means of shaping and forming a religious and virtuous self. Contributions of Michel Foucault, Michel de Certeau, Talal Assad, and others on the important role of practices will provide a theoretical perspective.

Components: Seminar

TRS 858D(3) Course ID:013597

Lectio Divina and Related Spiritual Practices

This seminar explores the evolving practice of lectio divina and various theological and psychological interpretations of that practice and then proceeds to examine other transformative spiritual practices closely intertwined with reading. Primary texts of major figures such as Origen, Augustine, Bernard, Hugh of St. Victor, and Guigo II will be examined as providing a foundation for lectio. Participants will also investigate the interrelationship of lectio with the practices of silence, meditation, prayer, contemplation, collation, and witness.

Components: Seminar

TRS 858DM(3) Course ID:016577

Spiritual Practices

This course will investigate some traditional spiritual practices as a means of shaping and forming a religious and virtuous self and developing a vibrant faith community. Contributions of theologians, religious educators, spiritual formators and others on the important role of spiritual practices will provide a theoretical perspective. Hospitality, forgiveness, fasting, lectio divina, confession, celibacy, and spiritual direction are some practices participants may choose to examine in more depth.

Components: Lecture

TRS 859(3) Course ID:010604

Method in Christian Spirituality

This seminar will examine the recent discussions about definitions of, approaches to, and the teaching of Christian spirituality. Participants will be expected to write and present a major seminar paper from one of the major perspectives on spirituality proposed by contemporary scholars and to participate actively in presentations by other students.

Peter Lombard

This course, for which reading Latin proficiently is a must and some proficiency working with manuscripts a great plus, will be team taught by Dr. Clark and Dr. Noone. History, philosophy, and theology will be attended to in equal measure. Reading widely in Peter Lombard's corpus, from his glosses on the Psalms and the Pauline Epistles, to his lectures on the Sentences and the Bible, our goal will be to situate Peter Lombard and his thought within the various twelfth-century contexts, historical, intellectual, institutional, and spiritual, within which his career should be understood. We will look as much backwards as forwards, so that students taking the course will have both a greater grasp of twelfth-century historical realities and an understanding of the continuity between the twelfth and thirteenth centuries.

Components: Seminar

TRS 870(3) Course ID:016839

Study of Bible in 12th Century

This course will look at the study of the Bible in the twelfth century, which represents the culmination and end of the long Christian tradition of studying the Bible in the mode begun by the Fathers and continued in monasteries for a millennium until it was displaced by the Schoolmen. Since most of the sources for this course are not translated into English, Latin will be required. If you are not sure whether your Latin is up to the level required for the course, please consult either Dr. Benson or Clark. This course will also provide training in how to read and interpret twelfth-century manuscripts.

Translating God(s): Comparative Theological Seminar

Advanced reading and research in Comparative Theology as a new field in historical and systematic theology. Emphasis is given to comparative projects on the Indic, Islamic and Christian theological traditions. Focus varies on topics and motifs such as God(s)/ultimate reality, tradition, revelation, scripture, nature, human condition, gender, sacred life, love, religious truth, etc. The course is required for students taking comparative theology as their Minor Area for the Ph.D. comprehensive examinations in Historical and Systematic Theology. Prerequisites: a course on method in comparative theology and evidence of closer study of one particular world religion.

Secularity and Its Discontents

Secularity and Its Discontents: An examination of how the recent global resurgence of religion has influenced understandings of secularity, secularism, and secularization. Accounts of post-secularity by such thinkers as Charles Taylor, Juergen Habermas, John Caputo, John Milbank, and Gianni Vattimo will be considered.

Components: Seminar

TRS 882B(3) Course ID:013599

Religion and Globalization

This seminar is an interdisciplinary and thematic approach to the topic of religion and globalization. Issues covered include the role of public religion in a post-secular world; theories and patterns of secularization; the rise of religious fundamentalism, Pentecostalism, and militant Islam; the shift in Christianity's center-of-gravity to the developing world; the role of religion in international relations; and the impact of market economy dynamics on global religious behaviors.

Ethics and Politics of Dignity

This course enquires into the rise to global prominence of discourses about human dignity since the mid-twentieth century in, for example, UN documents, national constitutions, Catholic teaching, and the activities of the President's Council on Bioethics in the U.S. Topics include the history of conceptions of dignity, the semantic structure of dignity language, philosophical and religious accounts of human dignity, applications of dignity in constitutional jurisprudence and human rights law, and invocations of dignity in political debates. Selected cases will be examined.

Philosophy of Religion Religious Epistemology

Philosophers belonging to nearly every religious tradition have offered arguments in support of their traditions' most basic religious doctrines. In this course we will consider, in detail, some of the epistemological frameworks within which these arguments have been (and continue to be) offered. More specifically, we will discuss (1) Reformed Epistemology; (2) Virtue Epistemology; (3) The Epistemology of Religious Experience; (4) Proper Function, (5) Islamic, (6) Hindu, and (7) Jaina Epistemologies.

Seminar in Zen

This seminar will explore the historical development of the tradition that was to become known as Zen Buddhism, making use of critical scholarship, primary texts in translation, and in-class discussion. Students will learn about the origins of the tradition in China, its development in other parts of East Asia, and its dissemination to the west. Jones.

Comparative Reading of the Qur'an

This seminar will concentrate on an interdisciplinary reading of selected chapters from the Qur'an in which the relationship between the "People of the Book" is addressed. The readings will pay attention to both Muslim and non-Muslim traditions of interpretation of the Qur'an, and it will include inter-textual exegesis and comparative theological approaches. While traditional qur'anic exegesis (tafsir) will be one of the major elements of the seminar, knowledge of the Arabic language is not a prerequisite, and the function of qur'anic texts in contemporary dialogues between Muslims and Christians will be explicitly addressed as well.
