ADDENDUM 1

CODE Lists.....54

Introduction

Organizationally, this ACE manual has an Introduction and five sections. The Introduction cites the regulations from which ACE derives authority. It then explains how to become an authorized user, describes the various roles, how to make personnel changes to those roles.

Section I provides the initial Logon steps to get into ACE, which are referred to throughout the manual. Then, the Section provides the steps to follow in order to enter data into

1. Emission Statement 'Processes,'
2. Contaminant Emissions associated with 'Processes,'
3. Emission Statement 'Fuels'
4. Validating Reports and
5. Flag Reports for Submission.

Section II provides the steps for the Responsible Official (RO) to submit completed reports to DAR. Only individuals designated as an RO can submit a report.

The Addendum is for the returning or on-going user. Within it are helpful suggestions on how to review data and use the Summary Reports for decision-making and provides suggestions FACILITY management to use ACE data results in assessment, problem-solving and decision-making.

Disclaimer

ACE is an electronic data transfer system. This means that a report submitted through ACE does not guarantee that the submittal is complete, correct or timely. DAR reviews all reports and issues the final compliance determination.

This ACE Emissions Manual complies with 6 NYCRR Subpart 202-2.4(d) Procedures section. Title V facility owners or operators are required, under 6 NYCRR Subpart 202-2.4(d), to base their emissions data on the method which results in the best possible emission estimate.

The emissions format used in this manual follows the same steps as the Title V Facility hard copy permit process. All data required to complete the forms, such as the Standard Classification Codes (SCC) can be accessed within ACE.

Once an application to use the Air Certification and Emissions electronic reporting system (ACE) is accepted by New York State Department of Environmental Conservation (NYSDEC) Division of Air (DAR), users are granted the rights to ACE and given a unique password and user identification name in the system. This information should be kept private and secure by facility owners or operators. Abuse or misuse of the system will automatically remove the applicant's rights to use the system.

Getting Started

Authorized Users and Roles

To become an authorized user of the system, facilities must apply to the Department, and be registered into the ACE system. Only authorized users will be allowed access to ACE. Use of ACE requires prior application to and registration with NYSDEC. The application can be found and downloaded at <http://www.dec.ny.gov/chemical/54266.html>.

Only individuals identified in the initial application will be granted rights to become authorized users although it is possible to replace, add or remove authorized users from the initial application. This process is discussed below under 'Personnel Changes.'

All authorized users have roles assigned to them by the Title V facility owner and/ or operator during the initial application process. The Air Emissions Electronic Reporting roles are emission statement editor, emission statement reviewer, and responsible official, as follows:

Emission Statement Editor (ESE)

The ESE is an Authorized User who enters and edits the data for a specific emission statement. The RO may also fulfill the role of and complete the tasks of the ESE.

Emission Statement Reviewer (ESR)

The ESR is an Authorized User assigned "read only" access to ACE in order to inspect data for accuracy. The Reviewer is not a required role. DAR highly recommends that a Reviewer be assigned, in order to provide the facility an opportunity to review the emission statement.

Responsible Official (RO)

The RO is a required Authorized User role. A facility must have at least one RO (there can be multiple ROs) on record with DAR for the ACE system at all times. Without an authorized RO, a facility cannot submit a report. The RO may fulfill the functions of the ESE and ESR.

The RO is any person(s) who performs policy or decision-making functions and is authorized to legally represent a corporation, partnership, sole proprietorship, or government entity that operates a facility subject to the provisions of 6 NYCRR 201-2(b)(28) regarding the accuracy of the electronically submitted reports.

The authorized RO is

1. Able to enter or edit data like a ESE
2. The only person who can sign off on all prior work,
3. Legally responsible for the accuracy of all information in the form, and
4. The only person with authority to submit compliance certification reports or emissions statements.

Personnel Changes

At any time a Title V facility may change their ESE, ESR, or RO. Changes should be submitted, in writing (whether by mail or electronic mail) to the DAR.

Requests to change or update existing Authorized Users or roles of CCE, ESE, CCR or ESR status can be done electronically using an email template. The email template is accessed as follows:

1. Logon to ACE using the instructions sent by email,
2. Go to the 'My Facilities' screen,
3. Select a facility (which takes the user to the 'Facility' screen),
4. Select the 'Need to add/modify user account? option listed at the bottom left side of the screen.' An email template appears,
5. Enter information and email the request to DAR.

The system only requires that a facility have an authorized RO. Other roles are optional. There must always be at least one authorized RO entered in the system at all times for a facility.

Requests to change or update an existing RO can only be done by informing DAR of the intent to change the RO, then completing and submitting a new application for the new RO in hard copy to DAR for authorization, following the same procedure above. The application is found at <http://www.dec.ny.gov/chemical/54266.html>.

DAR must accept and authorize the new RO user request before changes in the existing authorized RO will be allowed. To avoid potential submission delays, a facility may choose to assign more than one RO.

Section I

1.0 Initial Data Entry

Each new Authorized User will receive from the Department an initial confirmation email with the correct web address, a user name and password. This information should be kept private and secure by the facility. Abuse or misuse of the system will automatically remove the authorized user's rights to use the system.

If the user has not received a user name and password, or if any problem is experienced with ACE that cannot be resolved, please contact DAR by email at e-reporting.air@dec.ny.gov or by phone at 1-518-402-8507.

1.0.1 Logon by All Authorized Users

Initially, all users follow the same sequence of steps (through Step 3) for both Compliance Certification and Emissions Inventory reporting. At Step 3, the user decides to work on either Compliance Certification or Emissions Inventory reports. This manual provides step by step instruction for emissions reports.

Note: ACE locks the user out after 20 consecutive minutes of inactivity to protect data. Once ACE "locks" the interface, users are required to log back into the system. The user is prompted to re-login.

Step 1: Logon Go to the web address provided in the initial confirmation email from DAR to access initial login page for ACE (Picture 1).

Picture 1

The first time an Authorized User accesses ACE, they complete the login by using the user name and password provided in the confirmation email from DAR. Once logged into the system, first time users are prompted to change the initial password for security purposes and use their new password to enter ACE.

Entering the new password takes the user to the 'My Facilities' screen which lists the facility names and DEC ID#s associated with that the user.

The 'My Facilities' screen is the default program page. An Authorized User is automatically returned to this page after using the 'Help' option in the menu found under the Department logo.

Step 2: Select the DEC ID of the facility (Picture 2).

Picture 2

The 'Facility' screen appears showing the permit numbers issued to each facility (Picture 3).

1.1 Emission Statement 'Processes' Steps

1.1.1 'Processes' data entry

Step 3: Select the Emissions Statements tab (Picture 3).

Picture 3

The screenshot shows the 'Facility' page with the 'Emission Statements' tab selected. A red arrow points to the 'Emission Statements' tab. The page displays 'Permits By Facility' with a table of permits. The user is identified as James Hogan.

Permit Number	Effective from	Effective to	Renewal
9-1464	01/30/2009	01/29/2014	1
9-1464	10/29/2001	01/29/2009	0

Authorized Users:

User	Role
James E Hogan	AERO
	ACRO

Need to add/modify user account?

Step 4: Select 'Start' listed under the Action column (Picture 4).

Picture 4

The screenshot shows the 'Annual Emissions Statement' screen. A red arrow points to the 'Start' action in the 'Action' column of the table. The user is identified as James Hogan.

Report Start Date	Report End Date	Due Date	Submission Date	Status	Action
01/01/2010	12/31/2010	04/15/2011		Overdue	Start

The Annual Emissions Statement screen appears showing a 'Processes' tab and a 'Fuels' tab (Picture 5). On the left side of the screen a Report Summary includes the time frame for this data reporting period.

Step 5: Select 'Processes' (Picture 5).

Picture 5

The screenshot shows the 'Annual Emissions Statement' screen with the 'Processes' tab selected. A red arrow points to the 'Processes' tab. The page displays a 'Report Summary' on the left and a table of processes on the right. The user is identified as James Hogan, Air Emission Inventory Responsible Official.

Carbon Monoxide Season Averages (December, January, and February): Hours/Day Days/Week Total Days

Emission Point(s): 00002 [Need to correct emission point data? Contact us.](#)

Control Device(s): ELECTROSTATIC PRECIPITATOR [Need to correct control device data? Contact us.](#)

Contaminant Emissions

CF	CAS Number	Contaminant Name	Actual Emission (lb/yr)	How Determined	Emission Factor	Action
----	------------	------------------	-------------------------	----------------	-----------------	--------

NOTE: A facility may track 'Actual Emissions' using a monitoring program, in which case they have a specific numerical amount. Otherwise, ACE calculates Actual Emissions contaminants based, in part, upon Annual Throughputs. Further explanation is worthwhile.

When entering data for 'Annual Averages', 'Seasonal Operation (%)', 'Peak Ozone Season Averages (June, July, and August)', and 'Carbon Monoxide Season Averages (December, January, and February)' **whole number digits** is required. No decimal points or numerical representation of tenths, hundreds, etc. are accepted by the system. For example, if the through calculations the Hours/Day was determined to be 11.2 under the Annual Averages, the number to be used is 11.

'Actual Emissions,' found on page 10 in the Contaminant Emissions screen (Picture 15), is a required field in emission reporting. Actual Emissions can be determined by one of two methods and the method determines the choice of the 'How Determined' field in the 'Contaminant Emissions' screen.

One method is when emissions data is collected by the facility, such as with CEMS monitoring. 'Actual Emissions' based upon monitoring data is considered **direct** and emissions quantities are accurate.

The choice of the 'How Determined' field in the 'Contaminant Emissions' screen for **direct** entry requires a selection of either:

1. 'Best Engineering Judgment',
2. 'Continuous Stack Monitoring',
3. 'Modeling, Emission Estimation Software' or
4. 'Material Balance Calculation Or Fuel Analysis.'

Then, no data can be entered in the 'Emission Factor' and 'Source' fields.

The second method is when ACE calculates 'Actual Emissions' based on Annual Throughputs and data from, for example the EPA Clearinghouse for Inventories & Emission Factors. 'Actual Emissions' quantities based on ACE calculations are considered **indirect**. These quantities tend to be greater than direct monitoring results since EPA's inventory reflects data gathered from many sources which vary in age.

The choice of the 'How Determined' field in the 'Contaminant Emissions' screen for **indirect** ACE calculations requires a selection of either:

1. 'Manufacturers Guarantee',
2. 'Published Emission Factors',
3. 'Stack Test of Emissions',
4. 'Stack Test of Emissions from Geometrically Similar Emission Source', or
5. 'Stack Test of Emissions from Identical Emission Source'.

'Emission Factor' and 'Source' fields are required fields when using indirect methods of calculating emissions. Therefore, enter data for both fields.

This will be reviewed in Step 14, page 15.

Step 8: Select 'Save and Validate' (or 'Save' for quick storage without validating the data) when all fields are complete (Picture 8).

DAR highly recommends saving continuously using 'Save and Validate,' throughout the data entry process.

Picture 8

Process Summary

Process ID: 00A

1.1.2 'Contaminant Emissions' Data Entry

DAR knows the contaminants associated with all combustion processes. Therefore the Facility is not required to, although they can, enter that contaminant data into the 'Contaminant Emissions' portion of the report.

If the Facility does not enter contaminant data, DAR calculates the contaminate data based on Annual Throughputs and data from AP-42 (EPA Clearinghouse for Inventories & Emission Factors.)

All contaminant emissions associated with permit processes are reported to NYSDEC DAR by completing the ACE Contaminant Emissions section located at the bottom of the Process Summary screen (Picture 11).

Picture 11

The screenshot shows the 'Process Summary' screen with the following data:

- Process ID:** 00A
- Process Type:** Industrial
- Emission Unit:** U-00022
- Validated:** NO
- Known Errors:** 0

Annual Throughput: 10 TONS SOLVENT IN COATING

Annual Averages: 20 Hours/Day, 5 Days/Week, 49 Weeks/Year

Seasonal Operation (%): 19 Dec-Feb, 13 Mar-May, 30 Jun-Aug, 38 Sep-Nov

Peak Ozone Season Averages (June, July, and August): 18 Hours/Day, 5 Days/Week, 75 Total Days

Carbon Monoxide Season Averages (December, January, and February): 20 Hours/Day, 5 Days/Week, 55 Total Days

Emission Point(s): 00022

Control Device(s): No control device(s) found.

Contaminant Emissions: (Red arrow points to this section)

CF	CAS Number	Contaminant Name	Actual Emission (lbs/yr)	How Determined	Emission Factor	Action
----	------------	------------------	--------------------------	----------------	-----------------	--------

Before leaving this screen, please note the Show/Hide Details link, located on the left side under the Process Summary (Picture 12).

Show/Hide Details is useful to a first time user who may not know what contaminants to report (Picture 12).

Picture 12

The screenshot shows the 'Process Summary' screen with the following data:

- Process ID:** 00A
- Process Type:** Industrial
- Emission Unit:** U-00022
- Validated:** NO
- Known Errors:** 0

Annual Throughput: 10 TONS SOLVENT IN COATING

Annual Averages: 20 Hours/Day, 5 Days/Week, 49 Weeks/Year

Seasonal Operation (%): 19 Dec-Feb, 13 Mar-May, 30 Jun-Aug, 38 Sep-Nov

Peak Ozone Season Averages (June, July, and August): 18 Hours/Day, 5 Days/Week, 75 Total Days

Carbon Monoxide Season Averages (December, January, and February): 20 Hours/Day, 5 Days/Week, 55 Total Days

Show/Hide Details: (Red arrow points to this link)

'Show/Hide Details' provides (Picture 13)

1. A description of the process,
2. The SCC with description and the fuel type listed in the existing permit, and
3. An email contact to correct errors.

Picture 13

The screenshot shows a web interface for process management. On the left is a 'Process Summary' sidebar with fields for Process ID (00A), Process Name (Industrial), Emission Unit (L-00022), and Validated (NO). A green button with a plus sign and a red arrow points to it. Below the summary are sections for Process Description, SCC, SCC Description, and a link to correct process data. The main area contains input fields for Annual Throughput (10 TONS SOLVENT IN COATING), Annual Averages (20 Hours/Day, 5 Days/Week, 49 Weeks/Year), Seasonal Operation (%), Peak Ozone Season Averages, Carbon Monoxide Season Averages, Emission Point(s) (00022), and Control Device(s). A 'Process Not Reported' checkbox is also present.

These details may help a first time user complete the Contaminant Emissions fields located at the bottom of the screen (Picture 14).

Step 10: Select the green button located in the lower right of the Process Summary Screen (Picture 14).

Picture 14

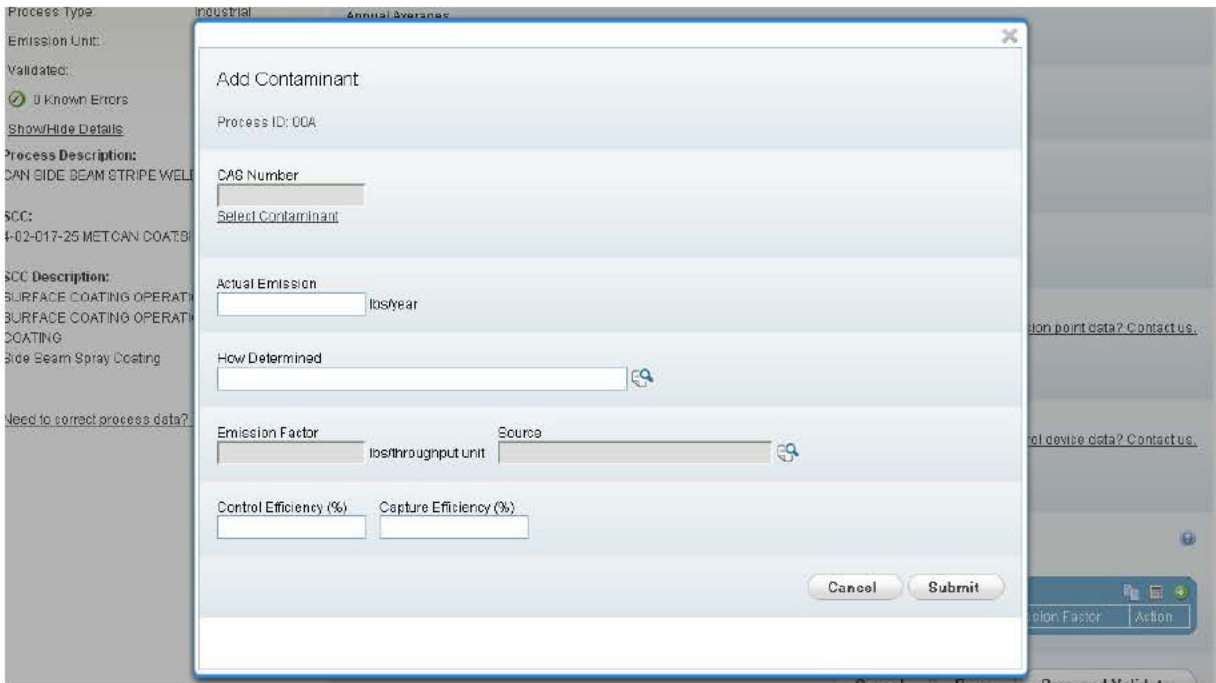

The screenshot shows the 'Contaminant Emissions' screen. It features a table with columns: CF, CAS Number, Contaminant Name, Actual Emission (lbs/yr), How Determined, Emission Factor, and Action. A green plus button in the top right corner of the table is highlighted with a red arrow. Below the table are 'Cancel', 'Save', and 'Save and Validate' buttons.

An 'Add Contaminant' screen opens (Picture 15).

Contaminant data is usually available at the facility and most first time users will find the 'Select Contaminant' choice provides them with what they want. Therefore step by step instructions are for using 'Select Contaminant.'

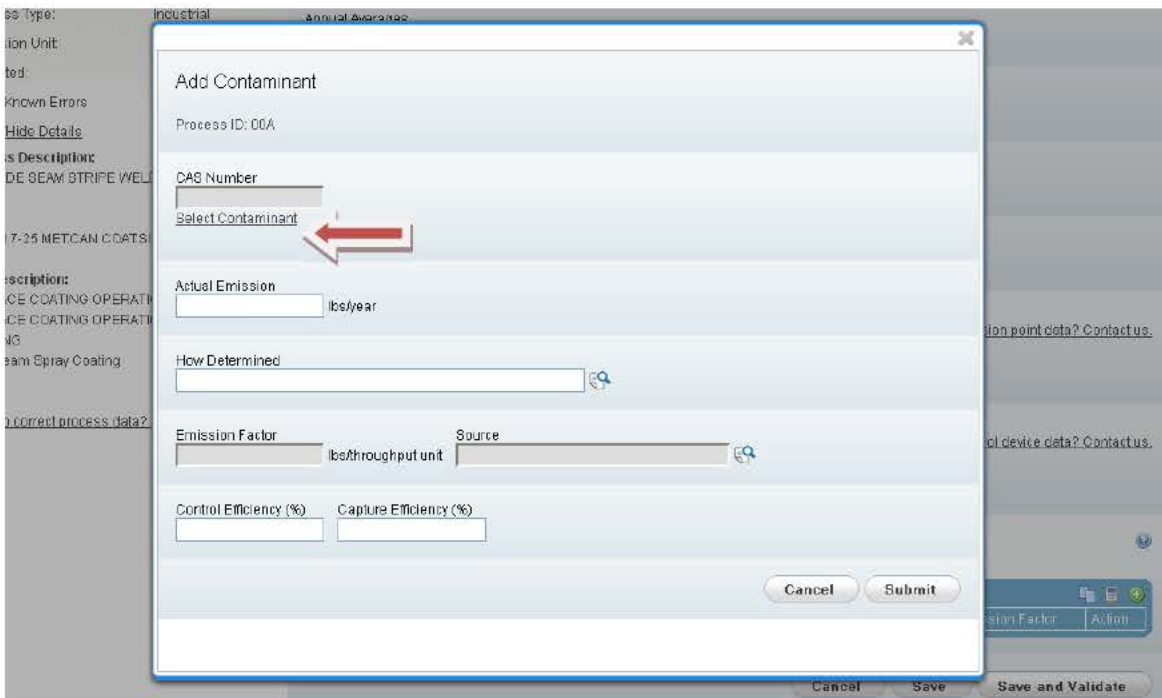

However, it is possible to search the database using the Contaminant Name or the Chemical Family name. The more experienced editor may want to use either of these methods on occasion.

Picture 15

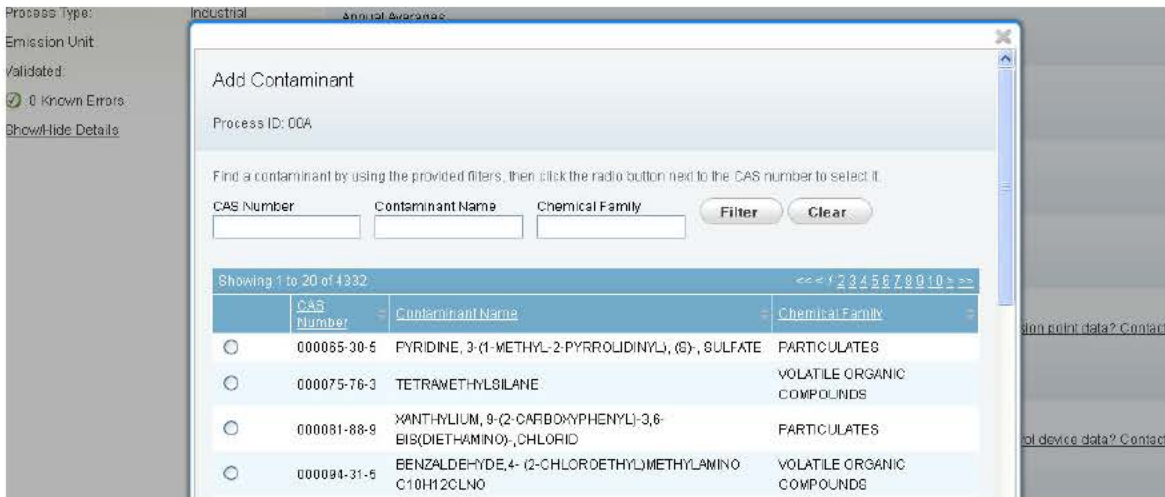

Step 11: Choose 'Select Contaminant' located under the CAS Number data field (Picture 16).

Picture 16

A screen appears listing the over 4300 contaminants in the AFS data base (Picture 17).

Picture 17

To find a specific contaminant in the ACE database, continue with Step 12.

Step 12:

A. Copy the contaminate name from the bulleted list into the 'Contaminant Name' field (Picture 18).

As the letters are typed, ACE fills in possible contaminate names that match what is entered into the field at that point. The more specific the contaminant name, the narrower the search.

B. Select 'Filter' (Picture 18).

A list of contaminants matching the entry appears.

Picture 18

Step 13: Select the bullet by the correct Contaminate Name (Picture 19).

Picture 19

0 Known Errors
[Show/Hide Details](#)

Add Contaminant

Process ID: 00A

Find a contaminant by using the provided filters, then click the radio button next to the CAS number to select it.

CAS Number:
Contaminant Name:

Actual Emission: lbs/year

How Determined:

Emission Factor: lbs/throughput unit Source:

Control Efficiency (%): Capture Efficiency (%):

Next, complete the '**How Determined**' field, temporarily skipping the 'Actual Emission' field. This 'How Determined' field is where the previous discussion after Step 7, page 15-16 applies.

Section 1.1.3 Completing the 'How Determined' Field

Recall that the 'Contaminant Emissions' screen is where the ESE establishes how the actual emissions are reported (direct monitoring or indirect ACE calculation) and then selects the appropriate 'How Determined' choice. Since the next few steps may be confusing to a first time user, the 'How Determined' steps are separated into 2 distinct and exclusive methods, 'direct' monitoring reporting and 'indirect' ACE calculation reporting. The steps being with direct monitoring reporting.

When a facility plans to use direct monitoring values, follow Step 14 'How Determined' through Step 18, page 17.

When a facility plans to use ACE to *indirectly* calculate the emissions amount go to Step 19 through 22, page 22.

1.1.3.1 Completing the 'How Determined' field using Direct Emissions Monitoring Reporting

The choice of the 'How Determined' field in the 'Contaminant Emissions' screen for **direct** entry requires a selection of either: 'Best Engineering Judgment', 'Continuous Stack Monitoring', 'Modeling, Emission Estimation Software' or 'Material Balance Calculation Or Fuel Analysis.'

Then, no data can be entered in the 'Emission Factor' and 'Source' fields.

Step 14: Enter one of the following direct methods into the field:

1. 'Best Engineering Judgment',
2. 'Continuous Stack Monitoring' or
3. 'Material Balance Calculation Or Fuel Analysis.'
4. 'Modeling, Emission Estimation Software' (Picture 21).

Picture 21

This completes the steps for direct contaminant data entry. To add additional Contaminant Emission data under the specific process ID you are currently in, repeat the previous steps.

Go to Step 26 (Page 25).

1.1.3.3 Completing the 'How Determined' field using Indirect ACE Calculated Contaminant Emissions Reporting

This Section provides the steps for when ACE calculates 'Actual Emissions.' Remember the calculated value is considered indirect and tends to be greater than direct monitoring results (Step 7, page MM). Actual data is not used.

The ESE completes the 'How Determined' field in the 'Contaminant Emissions' screen based upon **indirect** ACE calculations by selecting either: 'Manufacturers Guarantee', 'Published Emission Factors', 'Stack Test of Emissions', 'Stack Test of Emissions from Geometrically Similar Emission Source', or 'Stack Test of Emissions from Identical Emission Source'.

Step 19: Enter one of the following indirect methods into the field:

1. 'Manufacturers Guarantee',
2. 'Published Emission Factors',
3. 'Stack Test of Emissions',
4. 'Stack Test of Emissions from Geometrically Similar Emission Source', or
5. 'Stack Test of Emissions from Identical Emission Source' (Picture 26).

Picture 26

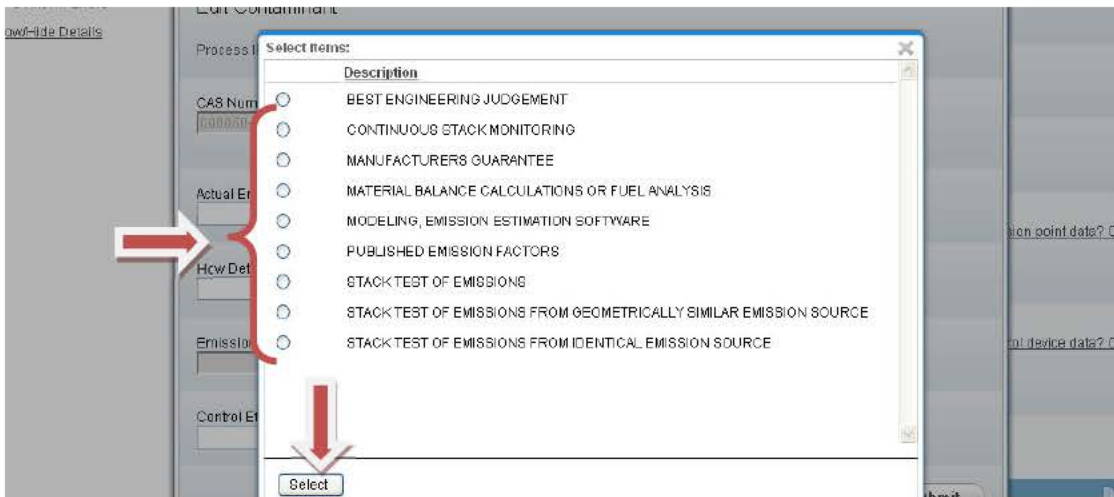

The screenshot shows a web-based form titled 'Add Contaminant'. At the top, it displays 'Process ID: 00A'. Below this, there is a 'CAS Number' field containing '000050-00-0' and a label 'FORMALDEHYDE (3-VOC AND HAP)'. A 'Select Contaminant' link is visible. The 'Actual Emission' field is empty, with the unit 'lbs/year'. The 'How Determined' field is a dropdown menu, and a red arrow points to it from the right. Below this are 'Emission Factor' (unit: lbs/throughput unit) and 'Source' fields, both with search icons. At the bottom, there are 'Control Efficiency (%)' and 'Capture Efficiency (%)' fields.

A drop down menu screen entitled 'Selected Items' appears (Picture 27).

Step 20: Complete both A and B

- A.) **Select the bullet left** of the 'Description' (picture 27). Again, these can only be either 'Manufacturers Guarantee', 'Published Emission Factors', 'Stack Test of Emissions', 'Stack Test of Emissions from Geometrically Similar Emission Source', or 'Stack Test of Emissions from Identical Emission Source.'
- B.) **Choose 'Select' at the bottom left of the screen** (Picture 27).

Picture 27

The Edit Contaminant screen reappears.

'Emission Factor' and 'Source' fields are required fields when using the indirect ACE calculated emissions. Therefore, enter data for both fields.

Step 21: Enter data in the 'Emissions Factor' field and the 'Source' field (Picture 28).

Picture 28

The 'Source' field can also be completed selecting the symbol to the right of the 'Source' field (Picture 29).

Picture 29

Edit Contaminant

The Process Summary screen reappears.

The next step is to complete the 'Actual Emissions' field. 'Actual Emissions' data is the last step before entering 'Contaminant Emissions' data or going to the 'Fuels' section.

Section 1.1.4 Indirect Calculated 'Actual Emission' Contaminant Data Entry for Emissions Reporting

This section provides the steps to complete 'Actual Emissions' when ACE is used to indirectly calculate 'Actual Emissions.'

Recall from Step 7 page 7 that ACE can indirectly calculate an 'Actual Emissions' amount based on Annual Throughputs and data from, for example, the EPA Clearinghouse for Inventories & Emission Factors.

The choice of the 'How Determined' field in the 'Contaminant Emissions' screen for **indirect** ACE calculations requires a selection of either:

1. 'Manufacturers Guarantee',
2. 'Published Emission Factors',
3. 'Stack Test of Emissions',
4. 'Stack Test of Emissions from Geometrically Similar Emission Source', or
5. 'Stack Test of Emissions from Identical Emission Source'.

A calculator symbol, located in the upper right corner of the Contaminant Emissions screen between the green circle and the image of two pages, is used to calculate emissions.

Step 23: Select the calculator symbol located between the page symbol and the green circle (Picture 32).

Picture 32

The Process Summary screen reappears (Picture 35).

This completes the steps for **indirect 'Actual Emission' Contaminant Data Entry** using calculated contaminant emissions values. To add more Contaminant Emission data under the specific process ID you are currently in using ACE calculation, repeat steps 19 A through 19 B until all Contaminate Emissions data entries for this specific process ID are complete.

When all contaminate data is entered, continue to Step 25.

Step 25: Select 'Report Home' in the top right corner of the Process screen (Picture 35).

00B	Industrial	4-02-017-25 METCAN COATSIDE SEAM SPRAY	U-00032	NO	NO	NO	
00D	Industrial	4-02-017-25 METCAN COATSIDE SEAM SPRAY	U-00042	NO	NO	NO	

Step 25 completes the series of steps to enter calculated emissions contaminant data in 'Processes.'

The next step is to enter data in 'Fuels.' Section 1.2, page 21 provides the steps to enter data in 'Fuels.'

Facilities that do not have combustion sources have no fuel data entry. Please continue to Section 1.3 Step 33, page 31 to validate the reports, correct any errors and notify the RO the reports are ready for submission.

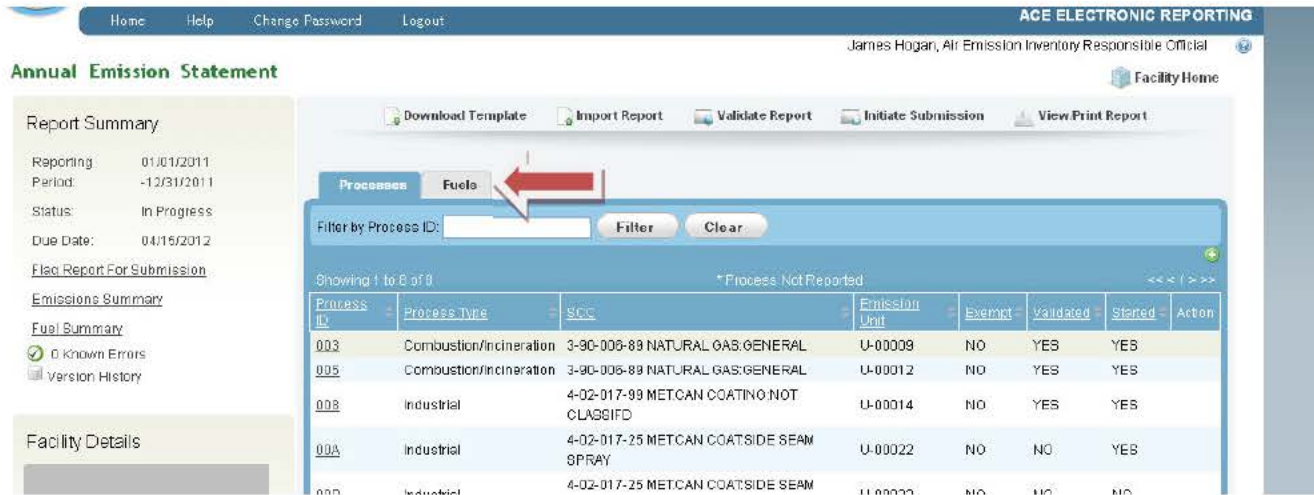

Section 1.2 Emission Statement 'Fuels' Data Entry Steps

A facility completes the Fuels section of the Emission Statement when a Combustion process is used during the reporting period. To begin data entry in 'Fuels,' follow Steps 1 to 4 from pages 3 to 5.

1.2.1 'Fuels' data entry

Step 26: Select 'Fuels' tab (Picture 37).

Picture 37

A report screen appears. 'No Records Found' indicates no information has been added to the selected report (Picture 38).

Picture 38

The next step will be to add fuel type data.

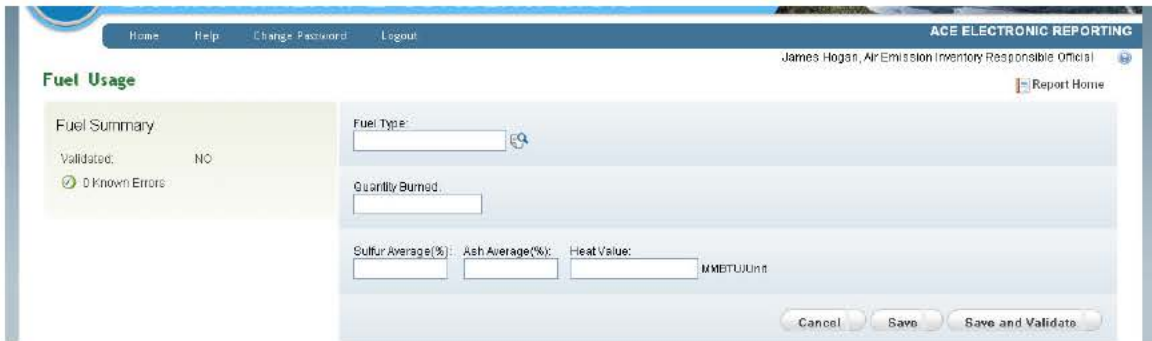

Step 27: Select the green circle under the arrow (Picture 39).

Picture 39

A Fuel Usage screen opens (Picture 40).

Picture 40

The next step is to enter 'Fuel Type'. There are two ways to enter Fuel Type. First time users may not recognize the terms used in ACE. Therefore, the manual provides the as if the fuel name is not known.

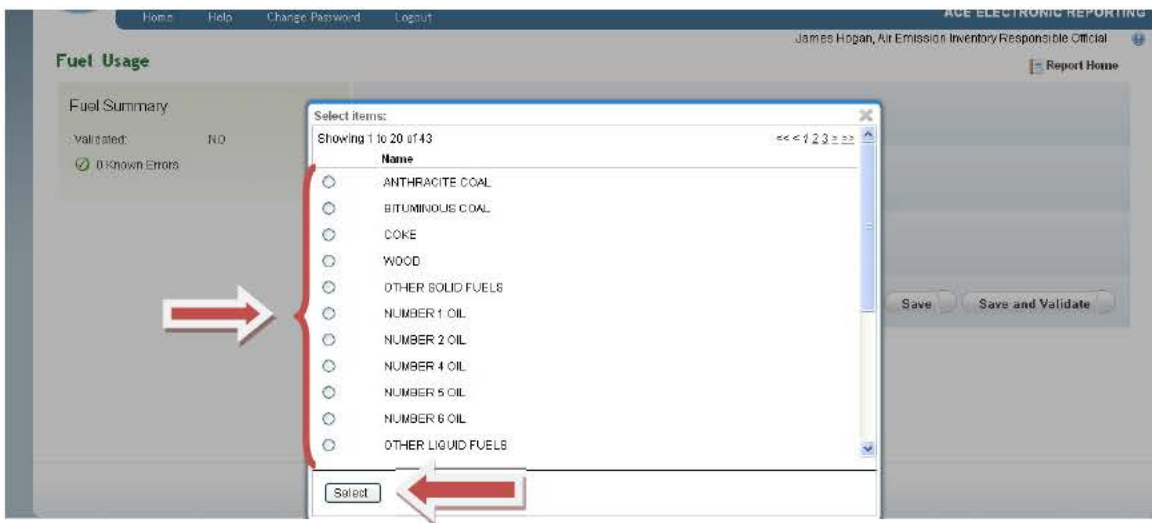

Step 28: Select the magnifying glass located to the right of the 'Fuel Type' field; (Picture 41)
 A screen listing forty-three classifications of fuels opens. ACE lists 20 types of fuels per page alphabetically.

Picture 41

Step 29: Complete both A and B.
A. Select the bullet associated with the fuel type (Picture 42),
B. Choose 'Select' located under the bullets (Picture 42).

Picture 42

A 'Fuel usage' screen opens again.

Alternatively, if the ESE knows the fuel name, the fuel name can be entered directly in the 'Fuel Type' field (Picture 43).

Picture 43

As the letters of the fuel name are typed, ACE fills in possible contaminate names that match what is entered into the field at that point. The more specific the fuel name, the narrower the search (Picture 44).

The ESE then selects one of the choices or finish entering the name.

Picture 44

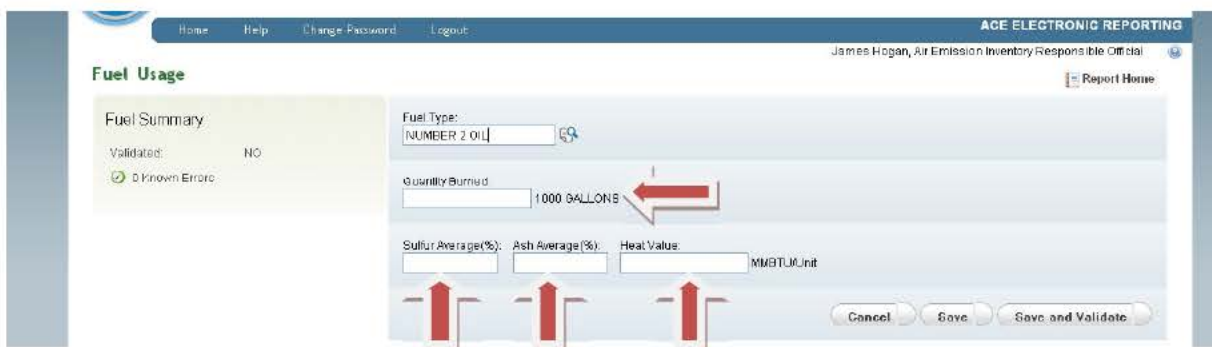

Step 24 information is based upon the fuel type selection.

Step 30: Complete the following fields

1. 'Quantity Burned',
2. 'Sulfur Average (%)',
3. 'Ash Average (%) and
4. 'Heat Value' (Picture 45).

Picture 45

ACE establishes set units of measure for Fuel types and therefore automatically generates the units associated with the fuel selected.

Step 31: 'Save and Validate' (Picture 46).

Version History

This completes the steps to enter 'Fuel Type' data to 'Fuels' reports. To add more 'Fuels' data under the specific process ID you are currently in, repeat steps 26 through 32 until all 'Fuels' data for this specific process ID are complete.

The next ESE step is to validate the report. DAR recommends the ESE validate the reports prior to contacting the R.O. for submitting.

Section 1.3 Validating a Report

DAR highly recommends the ESE validate all reports before sending them on for submission.

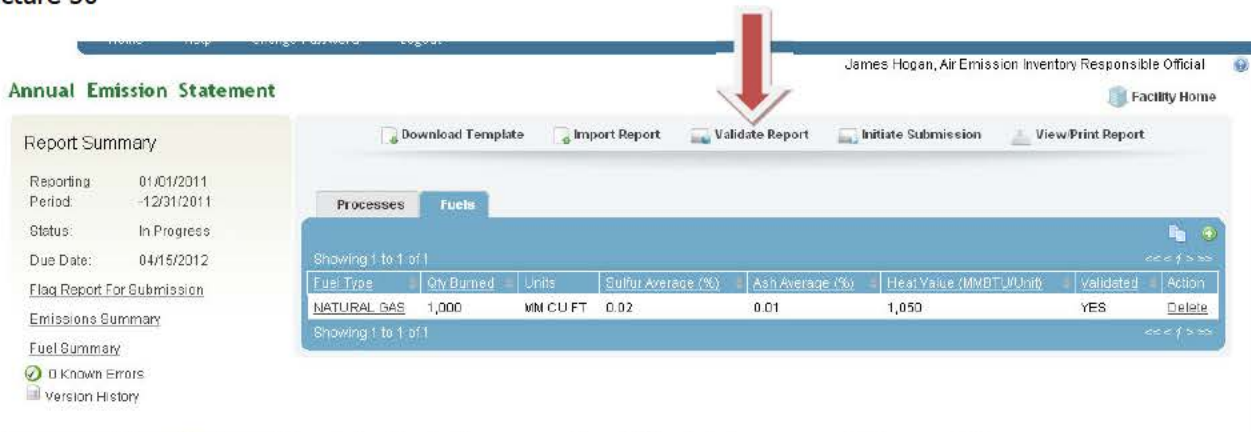

ACE automatically validates all reports during the RO Emission submission process. However, no report submission continues if, during the report validation, an error is found. This is a major reason why DAR highly recommends using 'Save and Validate' continuously throughout the data entry process for both 'Processes' and 'Fuels' reports.

Therefore, DAR recommends the ESE (or the RO) 'Validate Reports' prior to notifying the RO the report is ready for submission. The rationale is that it is easier to run the validation report to identify errors prior to the submission process than to have the RO find that processes and fuels contain multiple errors near the last few steps of submission.

To validate a report prior to notifying the RO a report is ready for submission, continue with Step 33.

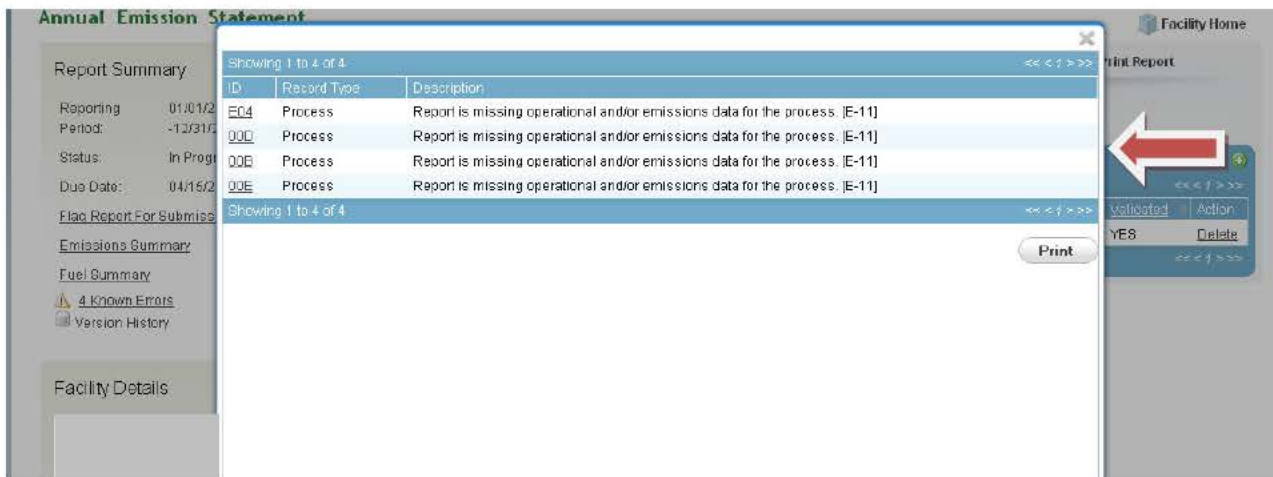

Step 33: Select the 'Validate Report' option (Picture 50).

Picture 50

Errors are identified and listed for both 'Processes' and 'Fuels' data entry (Picture 51).

Picture 51

All errors must be corrected before submitting the reports. If there are no errors, continue with Step 47.

If there are errors the ESE will want to edit the reports. Continue with **Section 1.4** page 25 to edit 'Processes' reports, **Section 1.4.1** page 29 to edit contaminant data and **1.4.2** page 30 to edit 'Fuels' reports.

Step 34: Edit the data to complete/resolve the appropriate errors identified from the 'Validate Reports'.

Section 1.4 Editing 'Processes'

On occasion, the ESE or RO will want to edit data in the 'Processes'. To edit existing data, complete Steps 1-3, pages 3 and 4 and continue with Step 4 below, page 31.

Step 35: Select 'Continue' under the Action column (Picture 52).

ACE Electronic Reporting

The Air Certification and Emissions Electronic Reporting (ACE e-reporting) system provides the regulated Title V community with tools that allow them to electronically report annual and semi-annual compliance certifications, capping certifications, and annual emissions statements to the New York Department of Environmental Conservation (DEC). This capability is provided through easy-to-use web interfaces that will improve the timeliness, efficiency, and accuracy of the reported data, while reducing the paperwork burden to the regulated community and DEC.

My Facilities

DEC ID	Facility Name
1-2820

4-1826	
4-3844	

Initiate Submission

Continue to Section II.

Section II

2.0 Responsible Official (RO) Report Submission

Report submissions can only be done by a RO. The RO accesses the report by completing Steps 1 through 4 on pages 2 through 4 of Section I in the manual.

Note: Only the RO can submit a report.

Reports are ready for submission when

1. The data is entered,
2. 'Save and Validate' is complete and the screen displays 'Condition Save and Validate Successful,'
3. 'Validate Reports' is finished and
4. All errors are corrected.

Step 52: The RO may review the data, and print or validate any reports before initiating a submission (Picture 69). Steps to review data are found on Section III, page

Picture 69

The screenshot shows the 'Annual Emission Statement' interface. On the left, there is a 'Report Summary' section with fields for Reporting (01/01/2010), Period (-12/31/2010), Status (Overdue), and Due Date (04/15/2011). Below this are links for 'Unfiled Report For Submission', 'Emissions Summary', and 'Fuel Summary'. The 'Facility Details' section shows a DEC ID of 2-6304. The main area features a navigation bar with 'Download Template', 'Import Report', 'Validate Report', 'Initiate Submission', and 'View Print Report'. A table titled 'Processes' is displayed, showing 7 processes. A red arrow points to the 'Initiate Submission' button in the top navigation bar. Another red arrow points to the 'Initiate Submission' link in the 'Action' column of the table for the first process (PBO).

Process ID	Process Type	SCC	Emission Unit	Exempt	Validated	Started	Action
PBO	Combustion/Incineration	1-03-006-02 Ctl/NAT GAS/10-100MMBTU/HR	1-STACK	NO	YES	YES	Initiate Submission
PBO	Combustion/Incineration	1-03-005-02 DISTILLAT OIL/10-100MMBTU/HR	1-STACK	NO	YES	YES	
PEO	Combustion/Incineration	2-03-002-01 INS/COM/NATURAL GAS-RECIPROC	1-STACK	NO	YES	YES	
PEO	Combustion/Incineration	2-03-001-01 COM/INS/DIST OIL-RECIPROCATE	1-STACK	NO	YES	YES	
X01*	Combustion/Incineration	1-03-005-04 INS/COM/DISTILLATE GRADE #4	E-10001	YES	YES	YES	
X02*	Combustion/Incineration	1-03-006-03 Ctl/NAT GAS/10 MMBTU/HR	E-10001	YES	YES	YES	
X03*	Combustion/Incineration	1-03-005-01 INS/COM/DISTILLATE, GRADES 1 & 2	E-10001	YES	YES	YES	

Step 50: Select the 'Initiate Submission' link (Picture 70).

Picture 70

The screenshot shows the 'ACE Electronic Reporting' interface. At the top, there is a header with the title and a brief description of the system. Below the header, there is a 'My Facilities' section. A table lists facilities with columns for 'DEC ID' and 'Facility Name'. A red arrow points to the 'Initiate Submission' link next to the first facility (DEC ID 1-3820).

DEC ID	Facility Name	Action
1-3820		Initiate Submission
1-4722		
2-6304		
2-6308		
2-6308		
4-1826		
4-3844		

A screen opens listing the reports ready for submission. 'Open' under the 'Action' column links to the report (Picture 71).

Picture 71

Step 51: Select 'Open' (Picture 72).

Picture 72

The Annual Emission Statement report page opens listing the reports ready for submission.

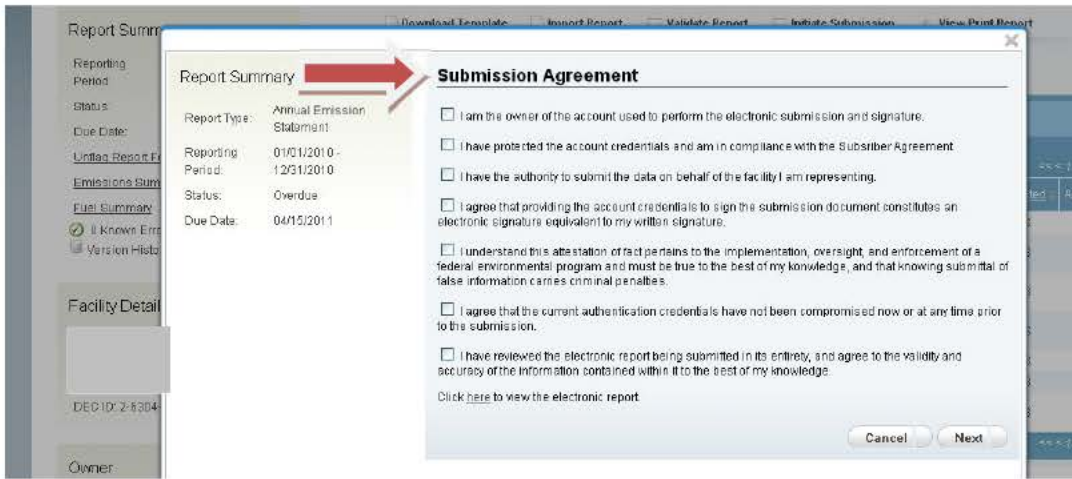

Step 53: Select 'Initiate Submission' on the top menu. (Picture 73)

Picture 73

A 'Submission Agreement' window appears (Picture 74).

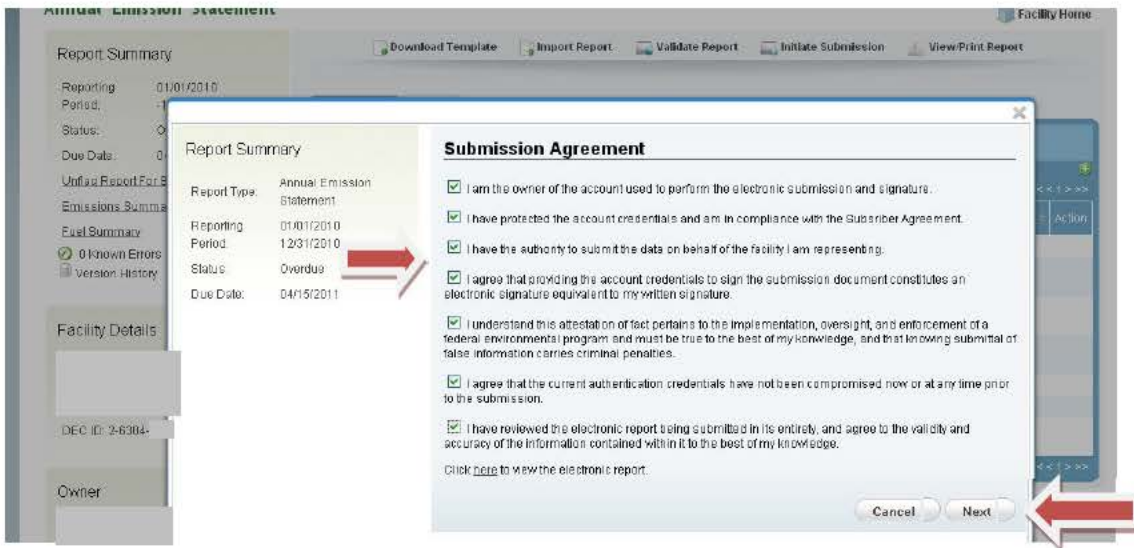

Picture 74

Step 54:

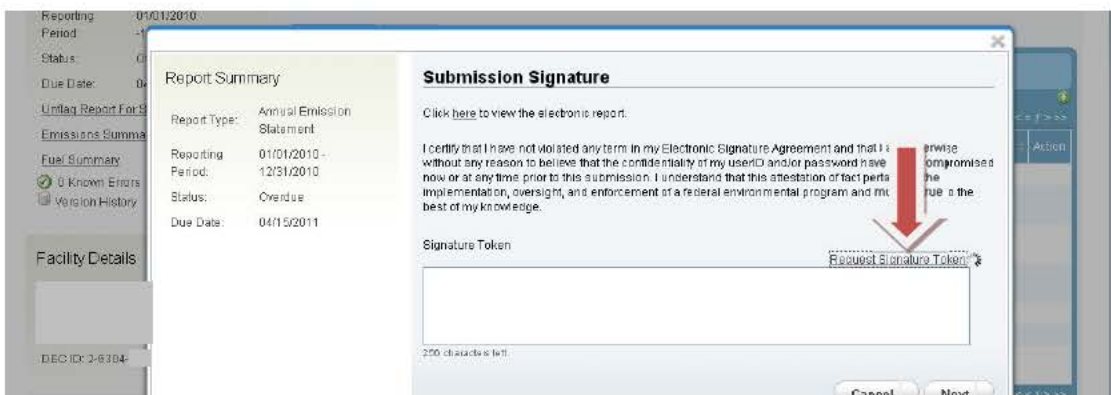

- 1. Read the Submission Agreement,**
- 2. Check each box to the left of the statements on the screen,**
- 3. Select 'Next' located at the bottom right hand of the screen (Picture 75).**

Picture 75

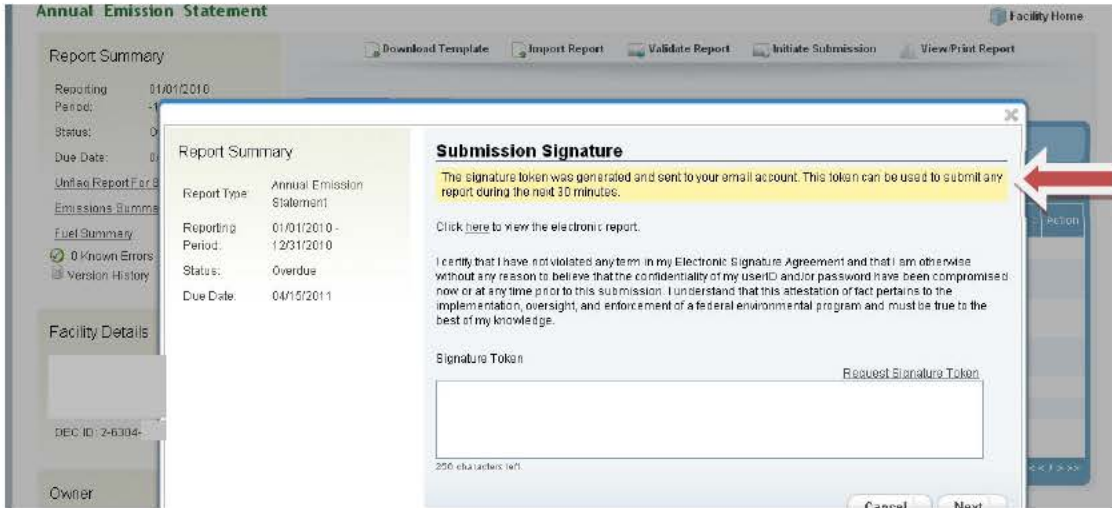

Step 55: Select 'Request Signature Token' (Picture 76)

(Picture 76)

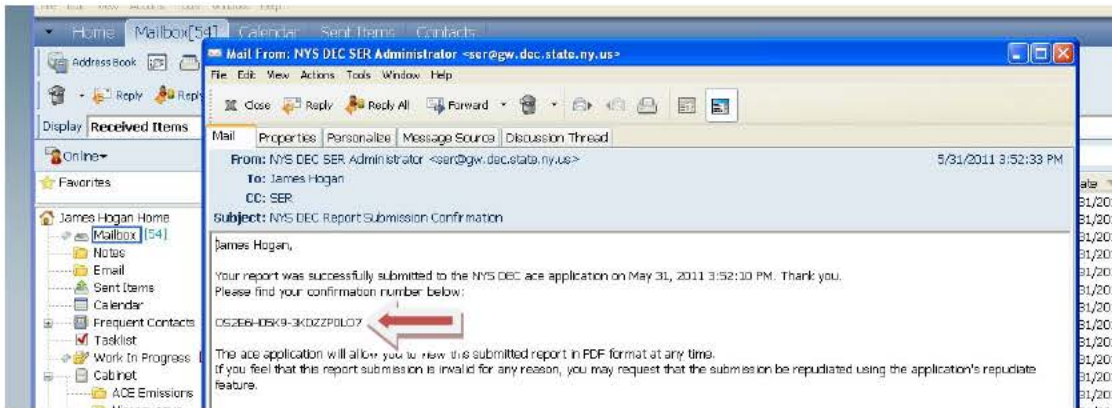

A yellow banner appears notifying the RO the signature token was sent to the email address listed on the initial application (Picture 77).

Picture 77

The token is a sting of characters ranging from 26 to 256 (Picture 78).

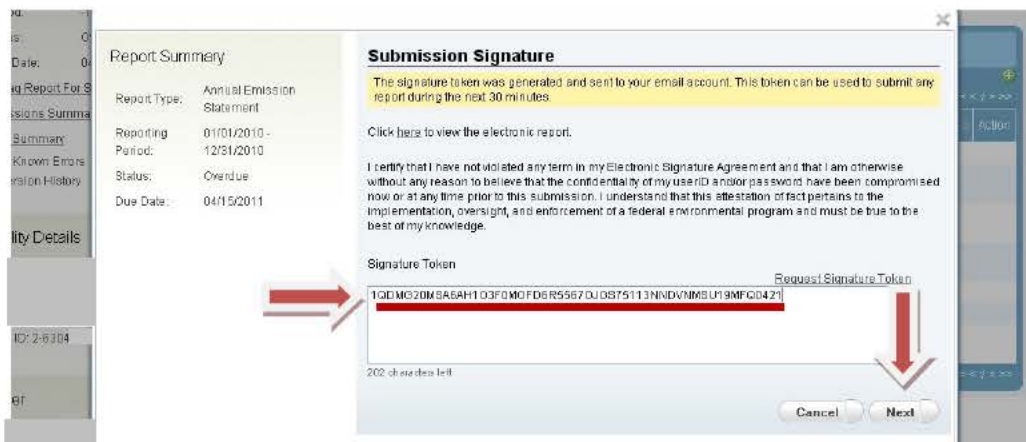

Picture 78

Step 56:

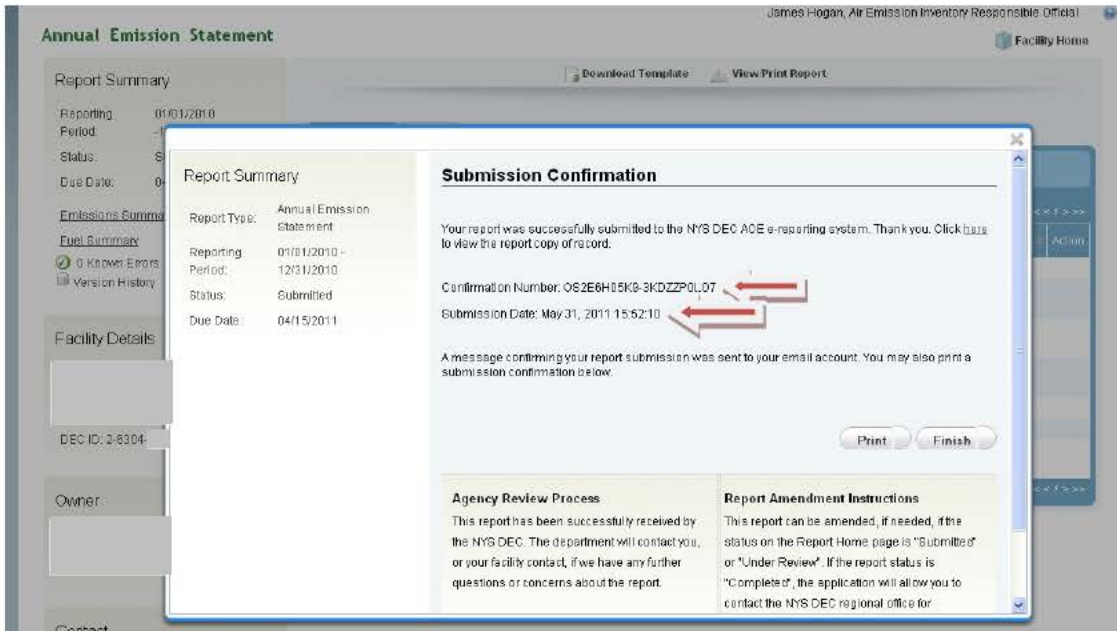

1. 'Cut and Paste' the token into the Signature Token text box (Picture 79) and
2. Select 'Next,' located at the bottom right of the screen (Picture 79).

Picture 79

'Submission Confirmation' including a Confirmation Number and Submission Date with time appears in a pop up window. If the email does not arrive, the user should contact DAR (Picture 80).

Picture 80

Submitting the report to the AFS system is the same as delivering a 'hard copy' to DAR. When the report is accepted, the Screen displays submitted under the 'Action' column (Picture 81)

Picture 81

The report can no longer be edited unless it is amended.

Section III

3.0 Mass Data Upload

Mass Data Upload can be a time saver for the experienced user. The ESE, or the RO completing the steps of a ESE, enters ACE by following steps 1 through 5 described on pages 7 to 8. Mass data entry is done at step 6 instead of entering the conditions manually.

Step 6: Select 'Download Template,' in the Report Summary, located at the top, left of center (Picture 91).

GT8	Combustion/Incineration	2-02-002-03 IND NATURAL GAS;TURB-COGENER	U-00002	NO	NO	NO	

A **Download Template** screen opens (Picture 92).

Step 7: Select 'Download,' located in the center of the screen (Picture 92)

Picture 92

James Hogan, Air Emission Inventory Responsible Official Report Home

Download Template

The download template page provides users with a way to download an annual emission statement import template. The generated comma-separated value file will contain process and facility fuel use defaults and allow users to enter annual emission statement data. Once complete, data in this file can be imported into the ACE e-reporting system.

Reporting Period: 01/01/2011 - 12/31/2011
Status: In Progress
Due Date: 04/15/2012

Download

A zip screen opens. Note the opportunity to verify the report period and report dates before download (Picture 92).

Depending on what browser/application that is being used, the template will download to the user's computer (Picture 93):

Step 8:

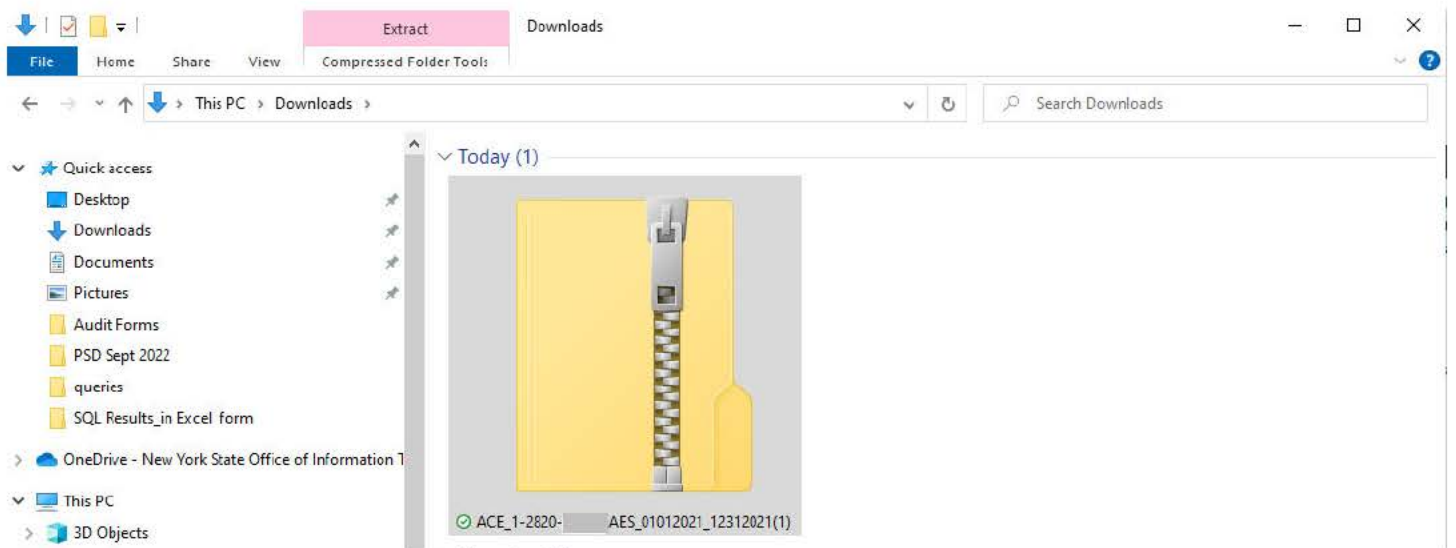

1. **Select 'Save File' to your desktop,** (DAR recommends always saving the compressed folder with the zip files to your desktop) and
2. **Select 'OK'** (Picture 93).

Picture 93

A compressed folder (zip icon shown in Picture 94) containing at least three zip spreadsheet files downloads to your desktop (Picture 94).

Picture 94

Step 9: Enter into the Win-zip folder.

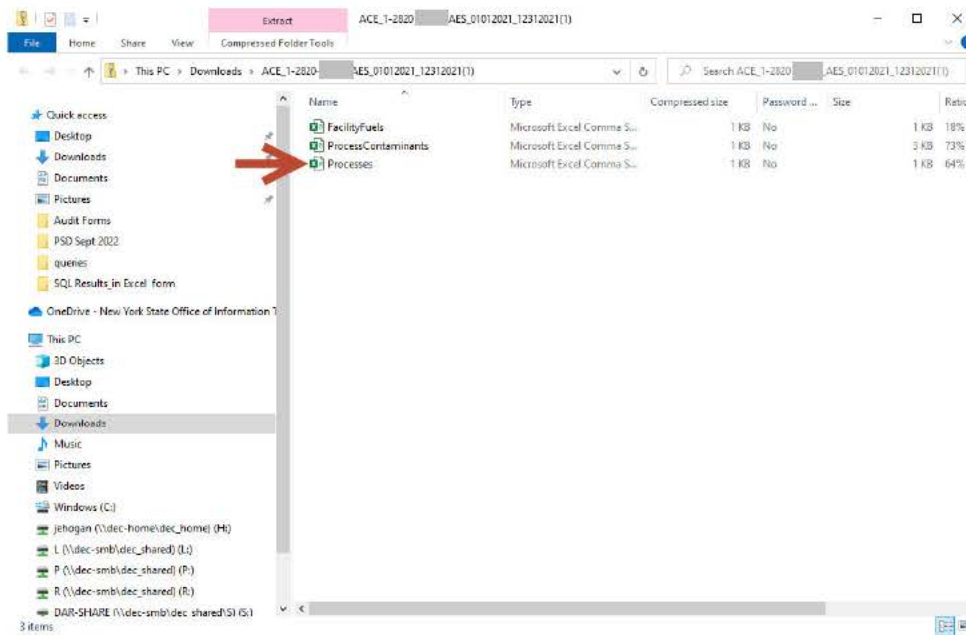

'Processes.CSV,' 'Processes Contaminants. CVS,' and 'FacilityFuels.CSV' are located in this folder (Picture 94). Note: This manual uses Microsoft Excel for this instruction however any spreadsheet program can be used.

Picture 95

Step 10: Open the 'Processes.CSV' spreadsheet (Picture 96)

Picture 96

Column A, (EPA Process Identifier) and Column P (Is Reported Indicator) contain existing operating information from the permit data and ASF (Picture 97).

When entering data for 'Annual Averages', 'Seasonal Operation (%)', 'Peak Ozone Season Averages (June, July, and August)', and 'Carbon Monoxide Season Averages (December, January, and February)' **whole number digits** is required. No decimal points or numerical representation of tenths, hundreds, etc. are accepted by the system. For example, if the through calculations the Hours/Day was determined to be 11.2 under the Annual Averages, the number to be used is 11.

Picture 97

EPAProce	TotalThro	JunToAug	JunToAug	JunToAug	DecToFeb	DecToFeb	DecToFeb	DecToFeb	MarToMay	JunToAug	SepToNov	AnnualAv	AnnualAv	AnnualAv	IsReportedIndicator
GT1	1000	8	7	90	8	7	90	25	25	25	25	24	7	52	TRUE
GT3															TRUE
GT5															TRUE
GT7															TRUE
GT2															TRUE
GT4															TRUE
GT6															TRUE
GT8															TRUE

Step 11: Enter all data for each "Process".

Alternatively, the ESE could also go through the processes *AFTER* uploading in order to change any data as. Picture 98 shows an example of data entered for a specific process.

Picture 98

EPAProce	TotalThro	JunToAug	JunToAug	JunToAug	DecToFeb	DecToFeb	DecToFeb	DecToFeb	MarToMay	JunToAug	SepToNov	AnnualAv	AnnualAv	AnnualAv	IsReportedIndicator
GT1	1000	8	7	90	8	7	90	25	25	25	25	24	7	52	TRUE
GT3															TRUE
GT5															TRUE
GT7															TRUE
GT2															TRUE
GT4															TRUE
GT6															TRUE
GT8															TRUE

Step 12: Save 'Processes.CSV' and leave open on the desktop for reference with "Process Contaminants.CVS.'

An error message may appear informing the ESE that saving in CSV form may result in loss data. A prompt asks if you want to save anyway. Select 'Yes.'

Step 13: Open the 'ProcessContaminants.CSV' spreadsheet (Picture 99)

Picture 99

EPAProce	Contamin	EmissionC	EmissionC	ActualEmi	HowDeter	EmissionF	EmissionFactor	SourceCode

Step 14: Enter physical emissions data for each of the columns.

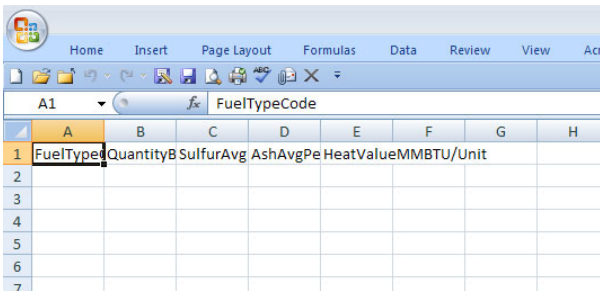

- a. The processes listed in the 'Processes' file (see Step 13) above must be entered into this file. Column A must include the process for which the contaminant will be associated with the active permit.
- b. This column, ContaminantCASNumber, includes all of the Contaminants associated with the process.
- c. This column, EmissionControlEfficiencyPercent, is associated with any controls that are placed on the process.
- d. This column, EmissionCaptureEfficiencyPercent, again is associated with any controls that are placed on the process.
- e. This column, ActualEmissionQuantity, requires the actual emitted quantities to be listed.
- f. This column, HowDeterminedCode, details how the emission quantities were calculated. This information corresponds to the data in Addendum 1.
- g. This column, EmissionFactor, is directly related the ActualEmissionQuantity column. This factor is used to calculate the emissions with the 'Annual Throughput'.
- h. This column, EmissionFactorSourceCode, details the source from where HowDeterminedCode came from This information corresponds to the data in Addendum 1.

Step 15: Complete both 15A and 15B.

- A. **Save to the desktop as 'ProcessContaminants.CSV' and**
- B. **Close the file.**

Step 16: Open the 'FacilityFuels.CSV' spreadsheet (Picture 100)

Picture 100

	A	B	C	D	E	F	G	H
1	FuelTypeCode	Quantity	SulfurAvg	AshAvgPe	HeatValueMMBTU/Unit			
2								
3								
4								
5								
6								
7								

Step 17: Enter data for each Fuel Type.

Step 18: Save the data in an Excel format.

Step 19: Then Save on the desktop as 'FacilityFuels.CSV' (Note: ACE only recognizes the CSV file type). Close out of the file.

Step 20: Re-zip each of the CSV spreadsheet files as follows:

- a.) Open WinZip Wizard by selecting the WinZip Folder on the desktop,
- b.) Select 'Next,'
- c.) Select Update 'ACE...' and select 'Next,'
- d.) Select 'Add files,' A window of the files on desktop appears;
 - a. Find the unzipped files,
 - b. Add each file,
- e.) Select 'Zip Now,'
- f.) Select 'Finish.'

NOTE: In order to process any submission, the user must submit all three files, 'Processes.CSV' and the 'FacilityFuels.CSV' regardless whether or not data has been entered. Therefore, even when the emissions report does not contain a 'fuel', the three files must be submitted together.

The ACE Report screen remains open throughout the mass data entry. Re-login if necessary.

Section IV

4.0 Processes Review

Once ACE is up and running, data summaries and reports provide the engineer who reviews the data with an opportunity to make sure the data is consistent with facility operations.

Step 1: Select a process from the Process ID column located on left side of the chart (Picture 101).

Picture 101

The screenshot shows the 'Annual Emission Statement' interface. On the left, there is a 'Report Summary' sidebar with fields for Reporting (01/01/2010), Period (-12/31/2010), Status (Overdue), and Due Date (04/15/2011). A red arrow points from the 'Emissions Summary' section to the 'Processes' tab in the main content area. The 'Processes' tab displays a table with columns: Process ID, Process Type, SCC, Emission Unit, Exempt, Validated, Started, and Action. The table contains three rows of process data.

Process ID	Process Type	SCC	Emission Unit	Exempt	Validated	Started	Action
E01	Industrial	3-05-016-13 LIME MFG:SILOS	E-10001	YES	NO	NO	
E02	Combustion/Incineration	2-02-002-02 IND NATURAL GAS REC/PROCATNG	E-10001	YES	NO	NO	
E03	Industrial	4-04-004-13 U-6ROUND FUEL #2.BREATH.LOBB	E-10001	YES	NO	NO	

A Process screen opens showing data entry fields (Picture 102).

Step 2: Review data in all fields (Picture 102).

Picture 102

The screenshot shows the 'Process' screen for 'Process 4 of 8'. The left sidebar contains 'Process Summary' with fields for Process ID (00A), Process Type (Industrial), Emission Unit (U-00022), and Validated (NO). The main content area has several sections with data entry fields and red arrows pointing to them:

- Annual Throughput:** 30 TONS SOLVENT IN COATING
- Annual Averages:** 20 Hours/Day, 5 Days/Week, 49 Weeks/Year
- Seasonal Operation (%):** 19 Dec-Feb, 13 Mar-May, 30 Jun-Aug, 38 Sep-Nov
- Peak Ozone Season Averages (June, July, and August):** 16 Hours/Day, 5 Days/Week, 75 Total Days
- Carbon Monoxide Season Averages (December, January, and February):** 20 Hours/Day, 5 Days/Week, 55 Total Days

Below these are sections for 'Emission Point(s):' (00022), 'Control Device(s):' (No control device(s) found), and 'Contaminant Emissions' table:

CF	CAS Number	Contaminant Name	Actual Emission (lb/yr)	How Determined	Emission Factor	Action
0	000050-00-0	FORMALDEHYDE		BEST ENGINEERING JUDGEMENT		Delete

Section 4.1 Contaminant Emissions Review

Review 'Contaminant Emissions' data associated with this process.

Step 1: Select the number in the CAS Number column (Picture 103). Remember to 'Save and Validate' all changes.

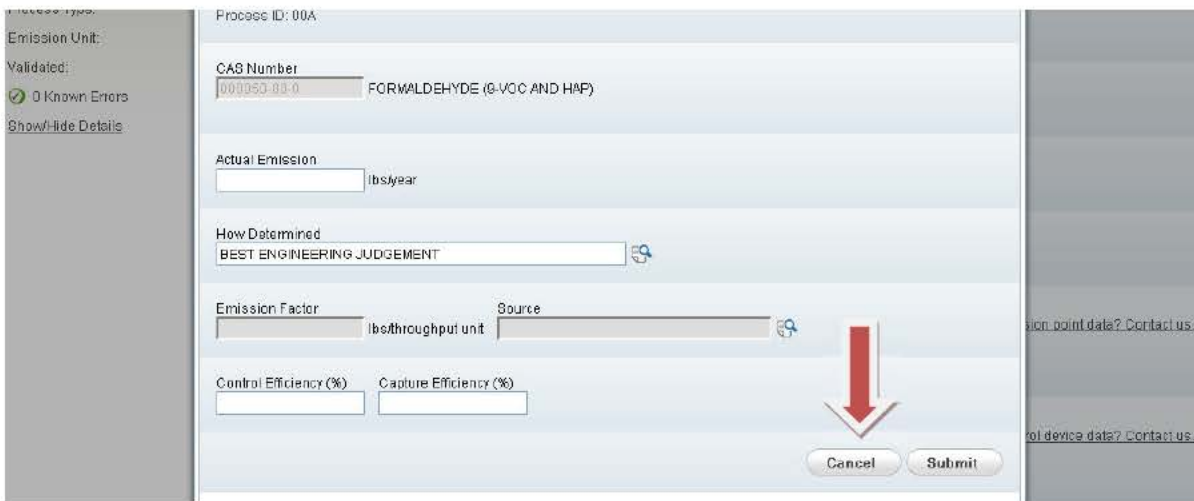

Picture 103

CF	CAS Number	Contaminant Name	Actual Emission (lb/yr)	How Determined	Emission Factor	Action
9	000050-00-0	FORMALDEHYDE		BEST ENGINEERING JUDGEMENT		Delete

Step 2: Select 'Cancel' when all the data has been reviewed (Picture 104).

Picture 104

Emissions Summary

CAS No.	Contaminant	Chemical Family	Emissions (lbs/year)
00Y210-00-0	OXIDES OF NITROGEN	3-NITROGEN OXIDES	1,000

This report displays the total pounds per year of all contaminants emitted throughout the reporting year by your facility across all processes. If the total quantities look incorrect, please confirm that emissions data has been accurately entered or imported for all processes.

The screen closes and the Annual Emission Statement screen reappears.

Addendum 1

Code Lists

When using a 'Template' to upload data, users will need the following codes in order to describe "How Determined" and "Emission Factor Sources" with the file.

In the 'ProcessContaminants.csv' file, the following columns need a code entered instead of a description: HowDeterminedCode and EmissionFactorSourceCode.

For HowDeterminedCode column please use the following codes:

How Determined Code	How Determined Description
01	STACK TEST OF EMISSIONS
02	MATERIAL BALANCE CALCULATIONS OR FUEL ANALYSIS
03	PUBLISHED EMISSION FACTORS
04	BEST ENGINEERING JUDGEMENT
05	STACK TEST OF EMISSIONS FROM IDENTICAL EMISSION SOURCE
06	STACK TEST OF EMISSIONS FROM GEOMETRICALLY SIMILAR EMISSION SOURCE
07	CONTINUOUS STACK MONITORING
08	MODELING, EMISSION ESTIMATION SOFTWARE
09	MANUFACTURERS GUARANTEE

For EmissionFactorSourceCode column please use the following codes:

Emission Factor Source Code	Emission Factor Source Description
1	FIRE
2	AP-42
A	PERMIT
C	CUSTOM
G	GREAT LAKES COMMISSION
