VISION

### Serial Control
RS-232 control means the SP-1800P can be controlled by a control system such as Crestron or AMX, or by Vision's own Techconnect Control.

### Auto Standby
SP-1800P feature auto standby which saves power. This feature can be disabled via the remote control or a control system.

### Remote Control
A full range of options are presented on the IR remote control, including bass and treble adjustment.

### Bass Reflex
A bass reflex port allows greater excursion of the woofer, allowing the woofer to produce lower frequencies, and the phase-delayed movement of air from behind the woofer to the front reinforces the bass even more.

### 5.25" Woofer
They are 240mm tall and use a 5.25 inch woofer – the most popular size for classroom, meeting room, and boardroom applications.

### Horizontal C bracket
The adjustable brackets allow the installer to easily angle up 30º or down 30º. Or leave the brackets off and use as shelf speakers.

### Rugged Grille
Attractive and robust, the thick metal grille protects the drivers from physical interference.

### Big Sound
These loudspeakers use three drivers; a woofer, a squawker, and a tweeter. Asking a driver to produce a wide range of frequencies is always a compromise, so dividing the sonic range into three means each driver has a narrower range of frequencies to produce, resulting in less distortion and clearer sound.

### Memory
When power is connected the SP-1800P automatically comes on and remembers the previous volume setting. Restoring power brings the loudspeakers back to life automatically.
### Summed Inputs
The two inputs are summed to avoid the need to switch.

### Bluetooth
Connect from your phone or laptop wirelessly. Speakers can auto-switch from line-level input when Bluetooth is paired if user chooses.

### Rename Bluetooth
Connect to a PC via USB to rename and set the pin.
